Mr. Ewing: Mr. Examiner, I haven't a calendar with me but that date you suggested is subject to a prior determination by the Commission, is it?

Trial Examiner Norwood: That is right.

Mr. Wright: May we go off the record?

Trial Examiner Norwood: Off the record.

(Discussion off the record.)

Trial Examiner Norwood: On the record.

I want to ask counsel, before ruling on this, if these motions have now been filed?

Mr. Ewing: They will be filed today.

Mr. Welch: They are ready for filing.

Trial Examiner Norwood: Have counsel applied for oral argument at an early date?

Mr. Ewing: We are asking for oral hearing at such time as may be convenient to the Commission.

Mr. Wood: I have one point in advance of adjournment, Your Honor, and that is this. I think that counsel for the Commission and counsel for the respondents all agree that the motion which I made with respect to the identification of discriminations, which motion Your 2111 Honor denied, is of substantial importance, that is, both in relation to the defense of this case, and possibly as a precedent in relation to other cases. I would like very much to have that certified to the Commission for hearing at the same time we argue this motion to dismiss.

Trial Examiner Norwood: I don't think it is necessary to do that. We have been elucidating these matters all the way through and to be candid with you I think that Commission counsel has made all the statement that he should be required to make. Counsel have the evidence here, they can study the evidence and read the charges. This charge is against a method and here is certain evidence or certain fragments of evidence, a great many, which will have to be studied. I will have to study them and everybody else will have to study them, and I think counsel should go into that for themselves.

Mr. Wood: As I say, there is a difference between the statements of individual trial attorneys for the Commission and a statement binding on the Commission. Now as I interpret it there is a difference between the opinion or the view of Mr. MacIntyre and Mr. Wright. Maybe I am wrong in that respect. But my point is that the statement of the individual trial attorney is in no wise binding on the Commission, according to Mr. Wright's statement in January. I think it should be.

Trial Examiner Norwood: I don't think it should
2112 be. Now if counsel wants to file his motion with the Commission that is all right, but I do not think that I should certify that question to the Commission. I think that we have made every effort to elucidate on the subject here, and will probably do something further along that line as the case proceeds. The administrative process isn't the same as the court process, and we clarify these matters as we go along, and the next time we meet to take further evidence there will probably be further clarification.

Mr. Wright: May I say to Mr. Wood in answer to his statement that I can't bind the Commission by my statements that that is probably true as far as it goes. However, I can assure Mr. Wood—and I believe Your Honor will bear me out in this—that any statement I make about the issues in this case the Commission would, I am sure, consider binding on itself until it had given the respondents an opportunity to come back or introduce evidence against any other interpretation of the issues of the case.

Mr. Wood: Thank you.

Trial Examiner Norwood: The motion is now for adjournment to the 21st of April. After discussion it has been decided to convene at an earlier date and accordingly this hearing is now adjourned to reconvene on Tuesday, April 8, 1947, at 10 o'clock a. m., Eastern Standard Time, in the Bar Association Hearing Room, 36 W. 44th Street, New York City.

2113 (Whereupon, at 3:25 p. m., February 25, 1947, the hearing was adjourned to April 8, 1947, at New York, N. Y.)

2114

Trial Room,
Bar Association Building,
36 West 44th Street,
New York, N. Y.,
April 22, 1947.

Met, pursuant to notice, at 10:00 a. m.

Before:

John W. Norwood, Trial Examiner.

Appearances:

Joseph S. Wright, Esq., Attorney for the Federal Trade Commission.

J. T. Welch, Esq. (Davies, Richberg, Beebe, Busick & Richardson, 15th Street, N. W., Washington, D. C.) appearing for Sherwin Williams Company.

Edmund P. Wood, Esq., 2801 Carew Tower, Cincinnati, Ohio, appearing for Eagle-Picher Lead Company and Eagle-Picher Sales Company.

Robert H. Ecker, (Chadbourne, Wallace, Parke & Whiteside, 25 Broadway, New York, N. Y.), appearing for Anaconda Copper Mining Company and International Smelting & Refining Company.

Roger Hinds, Union Commerce Bldg., Cleveland, Ohio, appearing for The Glidden Company.

2115 James D. Ewing, Esq., E. Z. DuBose, Esq. (Alexander & Green, 120 Broadway, New York, N. Y.), appearing for the National Lead Company.

2116 PROCEEDINGS.

Trial Examiner Norwood: The hearing will be in order. Pursuant to postponement and due notice served upon counsel, the hearing in Docket No. 5253 is now convened at 10 o'clock, a. m., Eastern Standard Time, in the Trial Room of the Bar Association Building at 36 West 44th Street.

Mr. Welch: Your Honor, may I make a statement off the record?

Trial Examiner Norwood: Off the record.

(Discussion off the record.)

Trial Examiner Norwood: On the record.

The appearances are as follows: Joseph S. Wright, appearing for the Federal Trade Commission.

J. T. Welch, appearing for the Sherwin Williams Company.

Edmund P. Wood, appearing for Eagle-Picher Lead Company and Eagle-Picher Sales Company.

Robert H. Ecker, appearing for Anaconda Copper Mining Company and International Smelting and Refining Company.

James D. Ewing and E. Z DuBose, appearing for the National Lead Company..

We are now ready to receive evidence from the Respondents.

2117 Mr. Ewing: I will call Felix Wormser.

Trial Examiner Norwood: Now, the motions filed for dismissal have been denied by the Commission and that is a matter of record in the case. I suppose there is no necessity for discussing it further.

Mr. Wood: May I be off the record?

Trial Examiner Norwood: Off the record.

(Discussion off the record.)

Trial Examiner Norwood: On the record. Proceed, please.

FELIX E. WORMSER was thereupon called as a witness for the Respondent and, having been first duly sworn, testified as follows:

Direct Examination by Mr. Ewing.

Q. Will you again state for the record your name and address, Mr. Wormser?

A. My name is Felix Edgar Wormser. I live at 1 Acorn Lane, Larchmont, New York and my business address is 420 Lexington Avenue, New York City.

Q. At the present time what is your business?

A. I am secretary-treasurer of the Lead Industries Association.

Q. And how long have you occupied that position?

A. Ever since its inception in 1928.

2118 Q. Prior to 1928, in what business were you engaged?

A. I was a consulting mining engineer.

Q. And how long have you been one?

A. I am a mining engineer by profession. As a matter of fact I am a registered professional engineer in the State of New York. I was educated at the Columbia School of Mines and received my degree there and prior to my position with the Lead Industries Association, I spent practically all my time connected with mining activities or in the Army of the United States.

Q. When did you graduate from the School of Mines?

A. In 1916.

Q. Are you connected with any technical society?

A. Yes, sir. I am connected with quite a few technical societies.

Q. Will you give us their names?

A. I am a member and former director of the American Institute of Mining and Metallurgical Engineers and counsellor to the Mining and Metallurgic Society of America; a member of the Institute of Metals of London; a Fellow of the American Association for the Advancement of Science; a Fellow of the American Public Health Association; a member of the American Academy of Political and Social Science; the American Economic Association; the American Institute for Economic Research; the American
2119 Marketing Association; a member of the Society of American Military Engineers; American Society of Agricultural Engineers; American Society for Metals; American Society for Testing Materials; American Statistical Association; Society of Automotive Engineers as an associate member.

I am also a member of the Electro-Chemical Society and the Academy of Political Science. There are a few others but I don't think it is necessary to put those in the record.

Q. Are you the author of any works or books with respect to mining and engineering?

A. Yes. I am the co-author with Mr. J. E. Spurr of the text "Marketing of Metals and Minerals."

Q. Mr. Wormser, I show you a printed copy of Commission's Exhibit 495 for identification and ask you what it is (showing same to witness)?

A. This is a copy of the original constitution and bylaws of the Lead Industries Association dated as of November 14, 1928, the day on which it was organized.

Q. Did you heretofore produce pursuant to subpoena a copy of that constitution and by-laws?

A. Yes, sir.

Mr. Ewing: I offer the exhibit for identification, Commission's Exhibit 495, as Respondent's Exhibit No. 1 in evidence.

2120 Trial Examiner Norwood: Is there any objection to the proffer of the exhibit?

Mr. Wright: I have no objection.

Trial Examiner Norwood: It will be received in evidence as Respondent's Exhibit No. 1.

(The paper referred to, heretofore marked for identification as Commission's Exhibit 495, was received in evidence as RESPONDENT'S EXHIBIT NO. 1.)

Trial Examiner Norwood: Proceed.

By Mr. Ewing: Q. Mr. Wormser, I show you a printed copy of the document which has heretofore been marked as Commission's Exhibit 496 for identification, and ask you what that is (handing same to witness)?

A. This is a revision of our constitution and by-laws revised as of January 19, 1934.

Q. And did you heretofore produce pursuant to subpoena the document which was marked heretofore Commission's Exhibit 496 for identification?

A. Yes, sir.

Mr. Ewing: I offer this in evidence as Respondent's Exhibit No. 2.

Mr. Wright: While I did not object to the previous exhibit, I will object to Exhibit 496 and say that they are irrelevant to the issues in this matter. The Lead Industries Association is not a party to the case and by no
2121 stretch of the imagination can I see that the constitution and by-laws of the association affect any of the issues involved.

Trial Examiner Norwood: They received honorable mention in here.

Mr. Ewing: They certainly did. The Lead Industries Association is charged with at least one of the mediums through which the conspiracy was carried out and it seems to me that we are entitled to show what the association was and how it operated.

Trial Examiner Norwood: It will be received as Respondent's Exhibit No. 2. Objection overruled.

(The paper referred to, heretofore marked for identification as Commission's Exhibit No. 496, was received in evidence as RESPONDENT'S EXHIBIT NO. 2.)

Trial Examiner Norwood: Proceed.

By Mr. Ewing:

Q. I show you a printed copy of a document heretofore marked as Commission's Exhibit 497 for identification, and ask you what it is (showing same to witness)?

A. This is a revision of our constitution and by-laws as of September 10, 1941.

Q. Was the document heretofore marked Commission's Exhibit 497 for identification produced by you pursuant to subpoena in this proceeding?

2122 A. Yes, sir.

Mr. Ewing: I offer the document Exhibit 497 for identification in evidence as Respondent's Exhibit No. 3.

Trial Examiner Norwood: Is there any objection?

Mr. Wright: The same objection as to lack of materiality and relevancy.

Trial Examiner Norwood: It will be received as Respondent's Exhibit No. 3. Objection overruled.

(The paper referred to, heretofore marked for identification as Commission's Exhibit No. 497, was received in evidence as RESPONDENT'S EXHIBIT NO. 3.)

Trial Examiner Norwood: Proceed.

By Mr. Ewing:

Q. I hand you the document which has been marked as Respondent's Exhibit No. 3 and direct your attention to article 6 relating to membership. Have you read the section?

A. Yes, sir.

Q. Will you state whether membership in the association includes individuals or companies engaged in the business of mining lead?

A. Yes, sir.

Q. Does it include companies or individuals engaged in smelting or refining lead?

A. Yes, sir.

2123 Q. Does it include companies or individuals engaged in the manufacture or production of various lead products?

A. Yes, sir.

Q. I notice that article 6-A refers to lead ore and lead concentrates. Will you state the differences between lead ore and lead concentrates?

A. Well, lead ore and lead concentrates are distinguished by the fact that lead ore is a mineral or a material which contains lead in sufficient quantity to make it commercial. Now, the ore may be rich enough to be smelted directly such as the specimen I have here (illustrating) which you can see is rich enough for the purpose, or it may be so low grade that it has to be concentrated in order to provide a product that is rich enough for smelting.

So that lead concentrates I would really consider a material that is an ore that has been mechanically treated so as to make it rich enough for smelting.

Q. Who produces lead concentrates?

A. Lead concentrates are produced by mining companies all over the United States.

Q. Will you tell us what the term "lead smelting" means?

A. Lead smelting is the art of extracting metallic lead from ores or concentrates.

Q. ~~And~~ how is that done?

A. That ~~is done~~ generally by fire methods which is a
rather interesting procedure. An ore such as this
2124 would be a direct smelting ore, but in any event the
sulphur is removed generally by roasting operations and then the sintered product is put in the blast furnace and by appropriate fluxing and the mixture of fuels, you get a crude bullion which it tapped from the blast furnace.

Mr. Wright: I would like to inquire if counsel for the Respondents are calling Mr. Wormser as a mining engineer and expert to testify with regard to these products?

Mr. Ewing: Yes, in this connection. Off the record.

Trial Examiner Norwood: Off the record.

(Discussion off the record.)

Trial Examiner Norwood: On the record. Complete your answer, Mr. Witness.

The Witness: Well, that briefly is the smelting operation.

By Mr. Ewing:

Q. Now, will you tell us what is the operation of refining?

A. Well, the product derived from blast furnace operations is used. It contains silver and perhaps some antimony and gold and other metals. And, of course, these impurities have to be removed and refining is the art of removing the impurities so as to leave a residual commercial pig lead.

Q. What is lead bearing scrap?

2125 A. Lead bearing scrap may be any kind of waste material derived from the use of a lead product such as a storage battery which furnishes the largest single source of scrap in the United States.

Q. You mean worn-out storage batteries?

A. Yes, worn-out storage batteries.

Q. What are extruded lead products?

A. The term "extruded lead products," applies to items such as lead pipe which are extruded in a machine more or less like spaghetti is made.

Q. What is antimonial lead?

A. Antimonial lead is an alloy of lead plus varying amounts of antimony.

Q. What is metallic antimony?

A. Metallic antimony is an element of nature.

Q. When you speak of metallic lead products, what do you mean?

A. By that I mean any lead product, pure or alloyed with other material that is commercially used today in industry such as lead pipe or solder or lead sheet or grid metal in storage batteries or type metal.

Q. Will you tell us, Mr. Wormser, generally how the lead industry operates from the mine to the ultimate consumer?

A. Yes, sir. The lead industry is fundamentally dependent upon mining operations in the United States 2126 and other parts of the world. The ore has to be found, in the first place, which involves a high degree of risk; the mines have to be developed and the ore then has to be produced and concentrated in the concentrating mill generally or sometimes, as I stated before, it may be rich enough to ship to a smelter.

It has to be shipped to the smelter where it is converted to a crude boullion and then it has to be shipped to the refinery to be refined and then the refined lead, which may be one of several commercial grades, is shipped to the various users. Each user in turn specifying what every grade may suit his own particular requirements.

The grades are of varying commercial purity and pigment producers, for example, demand a lead of very high impurity. Capable companies demand an impurity in it. Now, the battery companies require a pure lead in some cases but in other cases they may actually have an antimonial lead made for them.

So that in the final analysis, the refiners attempt to provide the industry with the kind of lead which would best serve their requirements. That is a brief description.

Q. Mr. Wormser, will you give us the geographical location of the principal lead mines in the United States?

A. Well, the largest source of lead in the United States is in Missouri where the ores are of a very low grade, but very important. The entire Rocky Mountain area
2127 from Colorado west contains lead mines. That applies to Colorado, Nevada, Utah, Idaho, California, Oregon, Washington and there is hardly a state in the west that doesn't have some lead mines.

The three largest sources of supply are Missouri, Utah and Idaho. Just offhand I would say that perhaps 75 per cent or 80 per cent of our domestic lead supply comes from those three states.

Q. Where does the principal production come from in Missouri?

A. The principal production from Missouri comes from Southern Missouri, in the so-called lead belt which is just south of St. Louis. They have derived some lead from the Joplin area which is the southwestern area, but essentially that entire southwestern belt is a zinc producing area; it is known as the tri-state zinc area and the lead recovered there is known as a by-product. In fact it takes eight tons of zinc to recover one ton of lead.

Q. Will you give us the geographical location of the principal smelters and refineries?

A. The principal smelters are—lead smelters, that is—are located from coast to coast. There are two, as a matter of fact, in Jersey. There is one in San Francisco which covers the far coast and there is one in Northern Idaho and there is another one in East Helena, Montana.
2128 There is one, or there was one in Chicago. There are—would you like them segregated into refineries and smelters?

Q. All right.

A. In some cases both operations are conducted in one spot but in other cases they are separated. I can give it to you either way you prefer.

Q. Well, you might state the refineries separately.

A. Well, to continue, there are three smelters in the Salt Lake Valley and I didn't indicate those. There is another lead smelter in Texas and also there is a refinery there. There is a refinery in Omaha. I think I have covered all—I am sorry—I have omitted one of the largest ones at East Alton, Illinois. There is a large one there, as well as at Herculaneum, Missouri. There is another one at Helena, Kansas. I think that covers them all.

Q. Have you covered the refineries?

A. Yes, sir.

Q. Is there a smelter in Chicago, do you know?

A. There is a smelter at East Chicago, Indiana.

Q. Is there a refinery in Chicago?

A. There is a refinery or two refineries, as a matter of fact, at East Chicago.

Trial Examiner Norwood: Do those two refineries belong to different companies?

The Witness: Yes, sir; they belong to two different companies. 2129

Trial Examiner Norwood: What are they, do you know?

The Witness: One is the Eagle-Picher Company and the other is the United States Smelting, Refining and Mining Company.

By Mr. Ewing:

Q. Do you know, and if so will you so state, the location of the principal producers of lead pigments?

A. The location of their plants I presume; is that right?

Q. Yes.

A. The plants are located in Newark, Newark and Perth Amboy, in Scranton, Pennsylvania—

Mr. Wright: Your Honor, I object to that testimony from this witness. He is testifying as an expert here on the location of the plants operated by these Respondents who are represented here.

Mr. Ewing: He is testifying as to the fact because I asked him if he knew the physical location.

Trial Examiner Norwood: Let him finish.

Mr. Ewing: Excuse me, I thought he had.

Mr. Wright: I don't think it is proper to bring out that evidence through this witness since there has been no proper foundation laid for his knowledge.

Mr. Ewing: If he knows where plants are phys-
2130 ically located—

Trial Examiner Norwood: He can state anything he knows. Testify from your own knowledge and if you are refreshing your memory from something, we want to know what that is and counsel, in support of the complaint, should be permitted to examine that.

Mr. Wright: Were you reading from something to refresh your memory?

The Witness: Just before the hearing I put down the locations that I had remembered with little pencil notations. Would you like to see this?

Trial Examiner Norwood: You made that yourself?

The Witness: Yes, that is my own writing. You are welcome to it.

Mr. Wright: What was the source of the information, Mr. Wormser?

The Witness: My own memory. I didn't want to rely entirely on my own memory on the stand so I put it down on a little piece of paper.

Trial Examiner Norwood: Proceed. Objection overruled.

The Witness: I believe I mentioned Jersey, Pennsylvania, Philadelphia and Scranton. In Illinois, there is Chicago and then at Hammond, Indiana and St. Louis, Cincinnati, Oakland, California. I think that about
2131 covers them all.

Trial Examiner Norwood: Off the record.

(Discussion off the record.)

Trial Examiner Norwood: On the record. Proceed.

By Mr. Ewing:

Q. In your answer as to the location of these plants producing lead pigments, you were not attempting to give us the complete list; is that right?

A. No, sir.

Q. You have heretofore produced, and there has been marked as Commission's Exhibit 498-A, a list of the members of the Lead Industries Association in the years 1929, 1930 and 1931, of which I show you a copy and I ask you in reading this—simply the names of the companies—to identify each member company by the type of business that it is in.

Trial Examiner Norwood: Is that already in evidence?

Mr. Ewing: That is already in evidence.

Trial Examiner Norwood: What is the exhibit number?

Mr. Ewing: Commission's Exhibit 497-A.

The Witness: The Humada Lead Company was a lead company which I believe is now defunct, which formerly mined lead in the State of New Mexico. The American Metal Company is a lead mining company, a lead smelting and refining company and makes a few manufactured lead products.

Mr. Wright: May I inquire as to whether the witness is testifying as to the dates of that exhibit at 2132 the time these companies were members, or as of the present time?

Mr. Ewing: As of the date of the exhibit. Some of these companies, of course, have been members continuously, and we are going to bring the membership down to date.

The Witness: The American Smelting and Refining Company operates mines, smelters, refineries and manufacturing operations. Anaconda Lead Products Company is a producer of lead pigments. Andrews Lead Company is a manufacturer of lead products, both metallic and pigments. The Bond Manufacturing Company is a producer of collapsible tubes. Bunker Hill and Sullivan Mining and Concentrating Company is a mining company, smelting and refining.

Cerro de Caspo Company is a lead mining, smelting and refining company, operating in South America. Chief Consolidated Mining Company is a lead mining company in Utah. The Eagle-Picher Lead Company is a lead mining, smelting, refining and manufacturing company.

El Potsi Mining Company is a mining company operating in Mexico. The Houston Lead Company, producing white lead in Scranton, Pennsylvania. Evans Lead Company of Charleston, West Virginia, producing lead oxides. Federal Mining and Smelting Company operating a lead mine in Northern Idaho. Federated Metals Corporation is a producer of various metallic lead products. Fleck 2133 Brothers Company, of Philadelphia, are producers of plumbing goods made of lead. W. P. Fuller and Company is a manufacturer of paints and various lead pigments.

General Lead Manufacturing Company of Denver, Colorado, producing metallic lead products and mainly going into plumbing. Hecla Mining Company of Idaho is a lead company. International Smelting Company and United Metals Selling Company Agents, operating a smelter in Idaho and a refinery in East Chicago, Indiana. The Lewin Metals Corporation of St. Louis, a smelter of secondary or scrap lead. Metals Refining Company of Hammond, Indiana, producing lead pigments and metallic lead products.

The National Lead Company, engaging in mining to a limited degree, smelting and refining and the manufacture of lead products, both metallic and in pigment form. North West Lead Company, producing manufactured metallic lead products in Seattle, Washington. Park-Utah Consolidated Mines Company is a lead mining company in the State of Utah.

The Remington Arms Company of Connecticut is a manufacturer of ammunition. The Rochester Lead Works is a manufacturer of lead plumbing goods. The St. Joseph Lead Company, operating lead mines, a smelter and refinery in Missouri. Sherwin Williams Company is a paint company, manufacturing also lead pigments. Silver
2134 King Coalition Mines Company is a lead mining company in Utah.

Tintic Standard Mining Company, that is another mining company in Utah. United States Smelting, Refining and Mining Company has leased mining operations in the western part of the United States and also operating a smelter and refinery. U. S. L. Battery Company, operating a storage battery plant in Niagara Falls. Winchester Repeating Arms Company, a manufacturer of small arms and ammunition in Connecticut.

Trial Examiner Norwood: Do they produce any of the lead?

The Witness: No, sir. They have to buy it in the open market, sir.

Trial Examiner Norwood: Do they do any refining or anything like that?

The Witness: They do no refining, sir.

Trial Examiner Norwood: All right, proceed.

By Mr. Ewing:

Q. I show you a copy of Commission's Exhibit 498-B, which is a list of the members of the Lead Industries Association in 1932, and direct your attention to those names noted by a pencil cross and ask you to give us the nature of the business of those companies (showing same to witness).

A. The Crown Metal Company of Milwaukee, Wis-
2135 consin, is a manufacturer of lead products. The
Globe Metal Company manufactures various metallic lead products. The Hudson Smelting and Refining Company is a smelter and refiner of scrap lead. Nathan Trotter and Company are merchants in pig lead and lead alloys. The National Bearing Metals Company are manufacturers of railway and other bearings made of lead.

Q. What is the United American Metals Corporation?

A. The United American Metals Corporation is a producer of various metallic lead products such as type metal and tube metal and various items.

Mr. Wright: May I inquire at this point of counsel whether these questions are being asked of the witness as an expert or as facts of his own knowledge?

Mr. Ewing: Facts of his own knowledge.

Mr. DuBose: As secretary of the Lead Industries Association for 19 years.

Mr. Wright: Thank you.

By Mr. Ewing:

Q. I show you copies of Commission's Exhibit 498-C and D covering membership in the association for 1933, and direct your attention to those names noted by the cross and ask you to tell us the business of those companies (showing same to witness).

A. The Alpha Metal and Rolling Mills manufac-
2136 tures various metallic lead products in Brooklyn,
New York. The Balbach Smelting and Refining Company was a smelter and a refiner of lead. The Cambridge Smelting Company manufactures metallic lead products in Cambridge, Massachusetts. The Columbia Smelting and Refining Company manufactures metallic lead products in Brooklyn, New York.

The Dayrock Mining Company is a mining company in Wallace, Idaho. The Division Lead Company of Chicago, Illinois, manufactures metallic lead products. The Flemm Lead Company manufactures metallic lead products in Long Island City. The Gardiner Metal Company of Chicago, Illinois, manufactures metallic lead products. The Girard Smelting and Refining Company was a smelter of secondary or scrap lead.

Goldsmith Brothers Smelting and Refining Company of Chicago, Illinois, operate a secondary lead smelter and refinery.

Mr. Wright: Your Honor, I object to so much of this testimony as is in the present tense. It is irrelevant and immaterial that these various people operate at the present time.

Mr. Ewing: He may be answering it in the present tense, but as I understand it, his testimony is giving the business of these companies as of the year.

Mr. Wright: The witness has not so testified.

2137 Mr. Ewing: When you raised that before, I thought he made it clear.

Mr. Wright: When I raised it before, counsel answered it but the witness has not made that clear.

Trial Examiner Norwood: I will ask the witness if he is answering it as of the time of the exhibit there?

The Witness: That is what I am trying to do, sir.

Trial Examiner Norwood: You may do that. Off the record.

(Discussion off the record.)

Trial Examiner Norwood: On the record. Complete your answer.

The Witness: Hammond Lead Products, producing oxides in Hammond, Indiana. Hercules Mining Company, a lead mining company in Idaho. Imperial Type Metal Company, producing type metals in Philadelphia, Pennsylvania. The Johnston Tin Foil and Metal Company, producing lead foil in St. Louis. Marks, Lissberger and Son, producing various metallic lead products in Long Island.

Nassau Smelting and Refining Company, operating a secondary smelter in Staten Island. North-Western Metal Manufacturing Company, operating a secondary smelter and producing various metallic lead products in Minneapolis.

By Mr. Ewing:

Q. I show you a copy of a document which has 2138 been marked Commission's Exhibit 498-E, being a list of the members of the Lead Industries Association in 1934, and ask you to state the business of the two companies marked with the pencil mark of "x" on that list as of 1934 (showing same to witness).

A. In 1934 the Dickson Weatherproof Nail Company manufactured lead covered nails. In 1934 Kahn Brothers Smelting and Refining Works produced some lead from scrap operations and some metallic lead products.

Q. I show you a copy of Commission's Exhibit 498-G, listing members of the Lead Industries Association in the years 1937, 1938 and 1939, and I direct your attention to the five noted by crosses and ask you to state the business of those five companies (showing same to witness).

A. In 1937, 1938 and 1939, the Baker Lead Manufacturing Company manufactured lead plumbing goods in Worcester, Massachusetts. The Division Lead Company manufactured metallic lead products in Chicago, Illinois. The Electric Auto-Light Company manufactured storage batteries in Toledo, Ohio. The General Lead Manufacturing Company manufactured metallic lead products in Denver, Colorado. The Kansas City Smelting Company manufactured metallic lead products in Kansas City, Missouri.

Q. I show you a copy of Commission's Exhibit 498-H,
listing membership in the Lead Industries Associa-
2139 tion in 1940 and 1941, and direct your attention to
the three marked by crosses and ask you the nature
of the business of those three companies (handing same
to witness).

A. In 1940 and 1941, John R. MacGregor Lead Company manufactured white lead in Chicago, Illinois. The Vulcan Lead Products Company manufactured metallic lead products in Milwaukee, Wisconsin. And the Wensley Metal Products Company manufactured metallic lead products in Denver, Colorado.

Q. I show you a copy of Commission's Exhibit 498-I, listing the membership in the Lead Industries Association in May 1942 and ask you to give us the nature of the business of the three companies on the list marked by "x".

A. In 1942 the Ethyl Gasoline Company manufactured Ethyl lead in Newark and Louisiana. The Pittsburgh White Metal Company of Brooklyn, New York, manufactured type metal and other alloys.

Q. I show you a copy of Commission's Exhibit 498-J, listing membership in the association in May 1943, and ask you to give us the nature of the business of the one company identified by the "x".

A. In 1943 the Lewin-Mathes Corporation produced pig lead from scrap metal.

Q. I show you a copy of Commission's Exhibit 498-K,
listing membership in the association in May 1944,
2140 and ask you to give us the nature of the business of
the five companies marked on the list with an "x"
(showing same to witness).

A. The Firestone Tire and Rubber Company is a manufacturer of lead storage batteries and, of course, an important manufacturer of tires and automobile accessories. The Mike Horse Mining and Milling Company is a lead mining operation in Montana.

The New Park Mining Company is a mining company in Utah. The Shattuck Den Mining Corporation operates lead mines in Arizona. The Western Electric Company is a manufacturer of lead covered cable among other telephone appliances, and has various plants in the United States.

Q. I notice that on a number of these lists of membership there is the notation "associate member." Will you tell us the distinction, if any, between regular members and associate members in the association?

A. The only distinction between associate and regular membership is that the associate members do not have a vote. That was brought about by the fact that in NRA days we were requested by the NRA to amend our constitution and by-laws so as to limit our regular membership to certain industries. That excluded some industries who were greatly interested in the work that we were doing, for example, storage batteries or cable manufacturers.
But they were eligible to become associate members
2141-2142 and they were granted associate membership on
that occasion.

Mr. Ewing: May I suggest a short recess, your Honor?

Trial Examiner Norwood: We will take a five-minute recess at this time.

(Whereupon, a short recess was taken.)

2143 Trial Examiner Norwood: Come to order, please.
Proceed.

By Mr. Ewing:

Q. I show you copies of Commission's Exhibits 499-A to H inclusive listing members of the Board of Directors of the Lead Industries Association in certain years and of the Executive Committee and officers, and ask you to identify from the standpoint of the principal business of the company the various representatives (showing to witness) by name?

A. Mr. Zimmer, mining, smelting and refining of lead; Mr. F. H. Brownell, mining, smelting, refining of lead and the manufacture of lead products; Mr. Glass, the sale of pig lead; Mr. Easton, mining, smelting and refining of lead; Mr. Bendealari, mining, smelting, refining of lead and the manufacture of lead pigments and metallic lead products; Mr. Schaefer, manufacturer of tetra-ethyl lead; Mr. Newhouser, a manufacturer of metallic lead products and a smelter and refiner of secondary lead; Mr. Hanley, mining of lead in Idaho; Mr. Sprague, manufacturer of paint and a producer of lead pigments; Mr. Rockwell, smelter and refiner of lead and a producer of metallic lead products and lead pigments; Mr. Friendly, mining of lead; Mr. Crane, mining, smelting and refining of lead; Mr. Ivers, mining of lead; Mr. Wade, mining of lead; Mr. Colcord, mining and smelting of lead.

Q. What was the principal business in which Mr. 2144 Reitler, Mr. Ivan Reitler was engaged?

A. The conversion of secondary lead into pig lead and the manufacture of various metallic lead products.

Mr. Wright: Your Honor, I object to further testimony on these exhibits along this line. It is all cumulative. These companies were all in the lists that were described heretofore in the testimony regarding exhibit 498.

It is simply cumulative as far as I can see.

Mr. Ewing: I want to show the representation on the Board and the Executive Committee at any particular time as shown by these exhibits. It is true that you may be able to get the information if you search around through other parts of the record but I would like to have it in an exact form.

Mr. Wright: Your Honor, it has just been testified to under the membership. Now all of these people who were directors were presumably members of the association and the business of all the members has been described in full here this morning.

Now we are apparently going ahead and redescribing the business of those people who are already in the record shown to be or have been directors of the association at that time. It is simply cumulative.

Trial Examiner Norwood: I think he is giving us 2145 some further particulars there. In a general way it is understood that everyone on that membership list has something to do with the production and sale of lead or lead products.

But, as I understand it, he is bringing out those who manufacture or produce or mine lead as distinguished from some of these battery manufacturers or some of these ammunition sellers or others who are on the list.

Mr. Wright: This same testimony about these same companies has been given not ten minutes ago.

Trial Examiner Norwood: What have you to say?

Mr. Ewing: My point is that you have this list of names of particular individuals. Now if you go to the list of companies and then go to his testimony you can tie up eventually what business these particular men were in.

The purpose of my questions now is to identify Mr. Brownell specifically as being a representative of a producer, smelter and refiner serving on the Board of the Lead Industries Association for clarification.

Mr. Wright: The exhibit itself shows, for instance, that Mr. Brownell is the chairman of the Board of the American Smelting and Refining Company. I assume that the witness' testimony is not what Mr. Brownell does but what the American Smelting and Refining Company does, and he has just testified within the last hour what the
2146 American Smelting and Refining Company's principal business is.

Trial Examiner Norwood: I will ask the counsel to confine himself to the additional information that would broaden the information that we already have. I think he should have some latitude as to what he wants to show here. I will overrule the objection here.

Mr. Ewing: It is simply to have a ready way of picking these things out and putting them together.

Trial Examiner Norwood: It may save us some work in searching the record. Objection overruled.

By Mr. Ewing:

Q. You answered the question with respect to Mr. Reitler?

A. Yes, sir.

Q. What was the principal business represented by Mr. J. F. McCarthy?

A. The mining of lead.

Q. What was the principal business represented by Mr. P. E. Sprague?

A. The production of paint and the manufacture of lead pigments.

Q. What was the business represented by Mr. F. N. Carter?

A. The principal business would be the manufacture of metallic lead products and lead pigments, I would say.

Q. What was the principal business represented by Mr. B. Montferry?

2147 A. The mining of lead.

Q. What was the principal business represented by Mr. R. S. Reynolds?

A. The manufacture of foil.

Q. What was the principal business represented by Mr. F. Y. Robertson?

A. The mining, smelting and refining of lead.

Q. What was the principal business represented by Mr. B. Y. Hunt?

A. The manufacture of lead foil.

Q. What was the principal business represented by Mr. R. M. Roosevelt?

A. Mining, smelting, refining of lead and the manufacture of lead pigments and metallic lead products.

Q. What was the principal business represented by Mr. G. W. Lambourne?

A. The mining of lead.

Q. What was the principal business represented by Mr. H. M. Brush?

A. The mining and smelting and refining of lead.

Q. What was the principal business represented by Mr. F. A. Easton?

A. The mining, smelting and refining of lead.

Q. What was the principal business represented by Mr. E. J. Cornish?

2148 A. The manufacture of metallic lead products and lead pigments.

Q. What was the principal business represented by Mr. A. A. MacLean?

A. The manufacture of storage batteries.

Q. What was the principal business represented by Mr. R. C. Swanson?

A. The manufacture of ammunition.

Q. What was the principal business represented by Mr. W. E. Chollar?

A. The manufacture of small-arms ammunition.

Q. What was the principal business represented by Mr. M. J. Dailey?

A. The mining of lead.

Q. What was the principal business represented by Mr. G. M. Loeb?

A. Mining, smelting and refining of lead.

Q. What was the principal business represented by Mr. R. M. Evans?

A. The manufacture of lead oxides.

Trial Examiner Norwood: Now those names appear on what exhibits?

Mr. Ewing: On Exhibits 499-A to H inclusive.

Trial Examiner Norwood: Thank you. That is Commission's Exhibit 499-A to H; is that right?

2149 Mr. Ewing: Yes, Your Honor.

By Mr. Ewing:

Q. I show you a copy of Commission's Exhibit 799, the minutes of a meeting of the Lead Pigments Division of the Lead Industries Association of July 20, 1933, and ask you whether you acted as secretary at that meeting (showing to witness)?

A. I did.

Q. For what purpose was that meeting of the Lead Pigments Division called, if you know?

A. This meeting was called to develop suitable trade practices to incorporate in a supplemental code of fair competition for the Lead Pigments Division.

Q. I call your attention to the paragraph stating three subjects as being presented for discussion and ask you to state with respect to each subject the purpose for which they were brought up for discussion?

Mr. Wright: Your Honor, I object. There has been no showing here that this witness is in possession of the knowledge of the purpose for which these things were called.

Mr. Ewing: He was their secretary. He was there as secretary of the committee. Of course, if he doesn't know, he can say so.

Trial Examiner Norwood: I will ask him to answer of his own knowledge. Did you issue the call for that meeting?

2150 The Witness: Yes, sir.

Trial Examiner Norwood: Objection overruled, the witness may answer.

The Witness: Some of the subjects presented at this meeting, according to the record here which goes back fourteen years, were three in number. The first was a discussion on the practice of mailing contracts for lead oxide signed by the seller but not subject to immediate acceptance. (2) To accepting contracts for delivery of oxides beyond thirty days after the acceptance of the order or beyond the period in which orders might be covered in the pig lead market.

(3) The selling at old prices on the date of advance in the pig lead market. According to this record no action was taken on any of these items.

By Mr. Ewing:

Q. What was the purpose, if you know, Mr. Wormser, of bringing those up for discussion?

A. The purpose of bringing those up was to decide whether or not they should be made recommendations for inclusion in the supplemental code of fair competition for the lead industry.

Q. And that proposed supplemental code was under consideration at that time; is that correct?

A. That supplemental code was under considera-
2151 tion at that time at the insistence of the NRA.

Q. I show you Commission's Exhibit 800-A to C inclusive, the minutes of the Dry Products Committee of the Lead Pigments Division of August 8, 1933, and ask you whether you acted as secretary at that meeting (showing to witness)?

A. I did, sir.

Q. You will not the reference to a summary of suggestions in the paragraph immediately following the listing of the attendance, and I ask you whether you have that summary of suggestions (showing to witness)?

You might read the minutes to yourself.

A. Yes. I would like to refresh my memory.

Q. All right. Have you the summary of suggestions referred to?

A. Yes, sir. They are incorporated in these minutes of August 8, 1933.

Q. For what purpose was the summary offered for the consideration of the meeting?

Mr. Wright: Your Honor, I object to that question. There is no showing on the face of the exhibit that this was a summary and counsel is putting words in the witness' mouth by his characterization of it in that fashion. I object to it.

Mr. Ewing: The exhibit states specifically that it was a summary. A summary of suggestions previously 2152 offered by members for consideration and a tentative draft of a code of fair competition for dry pigments compiled by Mr. Sprague was submitted for consideration.

Mr. Wright: I would like to point out, however, that the other suggestions were then considered in detail in the following paragraphs to be included in the code of fair competition and were tentatively adopted to apply to lead oxides. So that the material under that paragraph is not characterized as a summary on the face of the exhibit.

Mr. Ewing: I am not referring to that yet, I haven't gotten that far.

Trial Examiner Norwood: Now the purpose is a sort of a hidden thing and the question arises as to whose purpose. Now this witness may tell his purpose.

Mr. Ewing: He was acting as secretary of this committee.

Trial Examiner Norwood: And he can tell what somebody else said was the purpose that came to him in the course of his official action. But I don't think he can just say offhand what the general purpose of everything was.

Mr. Ewing: Well, I can withdraw the question, amend it and present it in slightly different form.

Trial Examiner Norwood: Yes, that would make it more satisfactory.

2153 By Mr. Ewing:

Q. I will ask Mr. Wormser to tell, if he knows, what brought up for the consideration of the Dry Products Committee of the Lead Pigments Division, the summary of suggestions referred to in the paragraph immediately following the attendance listing?

A. Recollecting what happened in the NRA days, this was an effort to meet the wishes of the NRA officials. I might state that our entire industry was very loath and very reluctant to enter into these NRA code formations and, as a matter of fact, as the code was first developed the code had practically no fair trade practices in it.

But at the insistence of NRA officials we were asked to provide some supplemental trade practices, and the industries which lent themselves or expressed themselves as being in a position to formulate a supplemental code along the lines of the NRA were the pigment industries.

And they agreed to endeavor to try to formulate a supplemental code. And this is one of the meetings at which this effort to develop a supplemental code satisfactory to the NRA authorities was considered.

Mr. Wright: Your Honor, I object and I move that that answer be stricken. In the first place, the witness has referred to the NRA as asking and they were asked and we did. There has been no characterization there from 2154 whom the request might have been made.

The NRA, you can take judicial notice, was a large governmental body. When the witness speaks of "we" and "they," there is no characterization of whom he is speaking and the whole statement was indefinite and improper.

Mr. Ewing: I will bring out whom Mr. Wormser means by we and they.

Trial Examiner Norwood: All right.

By Mr. Ewing:

Q. Who asked you?

A. Mr. Walter Jannsen, deputy administrator of the NRA.

Q. And you were the person asked?

A. I was the person asked repeatedly.

Mr. Wright: Your Honor, I still object to that. There has been no statement of what he was asked specifically.

Trial Examiner Norwood: Well, all that may come out.

Mr. DuBose: He stated what he was asked.

Mr. Wright: Now he doesn't speak of any request that might have been made by a governmental agency to the Lead Association for consideration of these matters.

Trial Examiner Norwood: Now you have put these minutes in here and they have a right to explain it.

Mr. Wright: I am not questioning their right to explain it but when he says the NRA asked us to do this 2155 without any indication as to who us is, it is obviously an improper statement.

Trial Examiner Norwood: He is telling about it. I will have to overrule your objection on that. Make it specific. Go ahead.

By Mr. Ewing:

Q. I direct your attention to that portion of the minutes which refers to a suggestion by Mr. Roosevelt and ask you whether at that time there was any decision on the point with respect to the inclusion of such matter in the proposed code?

A. "Mr. Roosevelt suggested—'reading from the minutes'—the simplest method would be to formulate a code requiring that each member file a price list of his selling practices with the secretary of the Lead Industries Association to be effective ten days after filing and immediately published to all members by the secretary, allowing other members to file a new list immediately, effective at the same time, if they so desired, and providing that any deviation from the filed list be violations from the code."

No action was taken on that nor at any time with regard to the activities of the Lead Industries Association was any price list gathered.

Mr. Wright: I object to the last part of that statement,
"No action was taken." It was a volunteer state-
2156 ment that was not responsive to the question.

Mr. Ewing: I will consent that that part will be stricken.

Trial Examiner Norwood: Strike that. Proceed.

By Mr. Ewing:

Q. The minutes recited a consideration of the suggestions made in connection with the sale of lead oxides listing by number some 19 matters. Was the consideration given these matters at that meeting directed at a decision as to whether such matters should be covered in the proposed code?

A. Those matters were considered for inclusion in the supplemental code of fair competition for the dry products producers.

Q. Now with respect to the recital in the minutes of a discussion of consignment accounts, was or did that discussion take place in connection with a consideration of that subject under the proposed code?

A. That was also one of the items that related to the drafting of a supplemental code of fair competition for the dry pigment producers.

Q. On the third page, Exhibit 800-C, there is also a reference to allowance on returnable packages and to off-grade material. Were those subjects considered in connection with the proposed code?

Mr. Wright: Your Honor, I object to these questions
as leading. After all, this witness is a representative
2157 of the respondents here and certainly he should not
be asked questions which merely ratify or don't ratify
counsel's questions on these things.

He may have some independent recollection of these matters and if he has they ought to be brought out by questions which are not leading.

Mr. Hinds: I would like to ask counsel in what respect that last question is proving. How can you possibly prove a negative without asking him if such a thing was done. By its very nature it couldn't possibly be leading. If a man is charged with doing something and you as did you do it, that is not leading.

Mr. Wright: The answer is suggestive. Yes, of course this was considered in connection with the proposed code.

Mr. Hinds: How can we negative a charge without asking him a question of that sort?

Mr. Wright: May I ask that the question be read?

Trial Examiner Norwood: Read the question.

(The reporter read the question as follows:

"Q. On the third page, Exhibit 800-C, there is also a reference to allowance on returnable packages and to off-grade material. Were those subjects considered in connection with the proposed code?")

Trial Examiner Norwood: Objection overruled.
2158 Answer the question.

The Witness: They were considered in connection with the drafting of a supplemental code of fair competition for the dry pigments producers.

By Mr. Ewing:

Q. Will you state whether the balance of the subjects considered at that meeting as set forth on Exhibit 800-C were subjects of discussion generally in connection with the consideration of the proposed supplementary code?

Mr. Wright: May I have that question again?

Trial Examiner Norwood: Read the question.

(The reporter read the question as follows:

"Q. Will you state whether the balance of the subjects considered at that meeting as set forth on Exhibit 800-C were subjects of discussion generally in connection with the consideration of the proposed supplementary code?")

Trial Examiner Norwood: Off the record.

(Discussion off the record.)

Trial Examiner Norwood: On the record.

Mr. Wright: I object to the question, Your Honor. These minutes are detailed and they state exactly what occurred and what subjects were under consideration. And it has not been shown that this witness has any independent recollection of what occurred there.

2159 He has been constantly referring in his answers, "Well, the minutes show that."

Trial Examiner Norwood: I am going to ask this witness not to answer with regard to what the minutes showed but you may answer that question and I will overrule the objection, and ask you to answer that question from your own recollection of it.

Now if you don't recollect it, just say so because the minutes of that speak for themselves.

Mr. Ewing: But he may refresh his recollection from the minutes.

Trial Examiner Norwood: Yes.

The Witness: I recollect vividly that all of those items at this meeting here were all for the purpose of drafting a supplemental code of fair competition for the pigment industry.

By Mr. Ewing:

Q. I show you photostatic copies of Commission's Exhibits 501-A to D, minutes of a meeting of the white lead in oil committee of the Lead Pigments Division of August 9, 1933, and ask you whether you acted as secretary at that meeting?

Trial Examiner Norwood: Is that exhibit in evidence?

Mr. Ewing: Yes, sir.

The Witness: No, sir; I did not act as secretary of that meeting.

2160 By Mr. Ewing:

Q. Will you tell us for what purpose the white lead in oil committee of the Lead Pigments Division was organized, if you know?

A. The white lead in oil committee was organized to draft a supplemental code of fair competition for white lead in oil.

Q. Will you tell us for what purpose the Dry Products

Committee of the Lead Pigments Division was organized, if you know?

A. The Dry Products Committee was also organized for the purpose of drafting a supplemental code of fair competition for dry products.

Q. You have stated that you were not present at this meeting. Will you state whether you, at that time, were familiar with the subjects discussed and actually informed yourself as to the subjects discussed at that meeting?

A. I did.

Q. I direct your attention to that portion of the minutes relating to the item of "reports" and ask you whether you know to what the item stated in the minutes refers to (showing to witness)?

A. I believe the item of "reports" referred to the statistics of the Lead Industries Association relating to white lead in oil.

2161 Mr. Wright: I object, Your Honor. By the answer he obviously doesn't know of his own knowledge.

By Mr. Ewing:

Q. Do you know?

A. I don't know exactly, but I think—

Trial Examiner Norwood: (Interposing.) The objection is sustained. The answer will be stricken.

By Mr. Ewing:

Q. Prior to this meeting of August 9, 1933, and prior to the passage of the National Recovery Act, was it the practice of the members of the Lead Industries Association to file with you individual reports of their respective production, stocks, shipments or sales?

A. Yes, sir.

Q. Were the reports of the individual members filed with you ever distributed by you to other individual members?

A. Never.

Q. You will note the suggestion which appears in that portion of the minutes relating to the item of "reports". Were individual reports of production, stocks and shipments or sales ever made available to other members of the white lead in oil group at periodic meetings?

A. Never.

Q. I direct your attention to that portion of the min-

2162 utes relating to price lists and ask you to read it (showing to witness).

A. Out loud?

Q. No, just to yourself.

A. I have read it (handing back to counsel).

Q. I also ask you to read the present membership of the white lead in oil group as indicated by the minutes?

A. I have read it.

Q. I now ask you to state whether members of the white lead in oil committee ever filed with you their price lists with terms and conditions of sale?

A. They never did.

Q. Did any of the companies represented in this group at any time ever file with you their price lists with terms or conditions of sale?

A. Never since the history of the founding of the Lead Industries Association to this very minute.

Q. State whether the individuals representing the companies in the white lead in oil group ever filed with you any change in price lists or terms to the trade?

A. Never.

Q. State whether the company members of the white lead in oil group or committee ever filed with you any change in price lists or terms of trade?

A. They never did.

2163 Q. Were there filed with you by either the company members or their representatives variances from price lists or terms of sale?

A. No, sir.

Mr. Wright: Your Honor, I object to any further testimony along this line. The complaint doesn't charge any price filing under that section. It has never made an issue of it in the case.

Mr. Ewing: The complaint charges that Lead Industries was one of the mediums through which the conspiracy and what not was effected and I propose to show that it was not.

Trial Examiner Norwood: Well, it does charge price fixing against all of these people.

Mr. DuBose: Certainly it does.

Trial Examiner Norwood: Proceed.

Mr. Ewing: It specifically charges that we exchanged directly and through the office of Lead Industries Association and with the cooperation of the officials of that Association price factors and information concerning price factors.

Trial Examiner Norwood: Objection overruled. Proceed.

By Mr. Ewing:

Q. I show you photostatic copies of Commission's Exhibit 502-A to C inclusive, the minutes of the white 2164 lead in oil committee, Pigments Division, of September, 6, 1933, and ask you whether you acted as secretary at that meeting?

A. Yes, sir; I did.

Q. State, if you know, in what connection the paragraphs in the proposed paint code referred to in these minutes were considered?

A. These paragraphs were considered for the preparation of a supplemental code of fair competition for the white lead in oil industry.

Q. You prepared these minutes?

A. Yes, sir.

Q. When you referred to those paragraphs in the proposed paint code as being adopted, for what purpose were they adopted?

A. They were adopted for incorporation in the proposed supplemental code for fair competition in the white lead in oil industry for submission to the administrator in Washington.

Q. Do you know whether these paragraphs were, in fact, ever included in a supplementary code?

A. I have to refresh my memory, sir, about that because it is a long time ago.

Q. I show you a copy of Commission's Exhibit 809, a printed copy of the code of fair competition for the lead industry, and direct your attention to Article 7, Sec-2165 tions 1, 2 and 3 thereto.

A. Yes, sir.

Q. And I ask you to compare the paragraphs referred to in the minutes of the September 6, 1933 meeting with Article 7 of the code and state which of the proposed paragraphs were in substance included in the code?

Mr. Wright: Your Honor, I object. The code as it was finally adopted is not reported in this copy. These minutes are in the record and it is a simple matter of comparison and that, in fact, is all that counsel is asking the witness to do.

His testimony can add nothing nor retract nothing.

Mr. Ewing: My point is that there may be a misinterpretation of the word "adopted" in these particular minutes.

Trial Examiner Norwood: It would appear in the code itself and they can be prepared. If there is any other matter that doesn't appear in the two exhibits that you may want to bring out you may do so, but in the face of an objection, I think that the objection should be sustained.

Mr. DuBose: May I make this statement before you make your ruling?

Trial Examiner Norwood: Yes.

Mr. DuBose: We object to all NRA documents, particularly at the hearings last June when most of these
2166 documents were introduced on the ground that they
were code documents and on the further ground that they were irrelevant.

You asked counsel for the Commission how they were relevant and his answer was that these meetings showed activities not sanctioned by the law. And that by engaging in these activities we were acting in violation of the law.

We know of no law which prohibited members from meeting to consider supplemental codes when such was required by the National Industrial Recovery Act. We are, therefore, led to the possible conclusion that what trial counsel has in mind is using these minutes in an attempt to prove agreements outside of the NRA activities or the code.

To that extent we must go into every one of these items mentioned in these minutes to see for what purpose those particular paragraphs were discussed.

Trial Examiner Norwood: You can bring out the purpose there. He is asking him what is the difference between two exhibits.

Mr. Wright: And that is obvious upon an examination of them by anyone connected with the case. The testimony of this witness as to the difference isn't going to establish any more than it is already established in the record.

Trial Examiner Norwood: Counsel may make his
2167 own statement about those differences and he can go
on the record right now if he wants to inasmuch as there is an objection to this witness testifying to it. I think I will have to sustain the objection in that regard.

Off the record.

(Discussion off the record.)

Trial Examiner Norwood: On the record. Proceed.

By Mr. Ewing:

Q. In what connection did the committee adopt the paragraph on taxes referred to in these minutes?

A. That was also, I believe, a part of the supplemental code of fair competition for the white lead in oil industry.

Mr. Wright: I move to strike the answer because he doesn't know from his own knowledge.

Trial Examiner Norwood: Read the question and answer.

(The reporter read the question and answer as follows:

"Q. In what connection did the committee adopt the paragraph on taxes referred to in these minutes?

"A. That was also, I believe, a part of the supplemental code of fair competition for the white lead in oil industry.")

Trial Examiner Norwood: What is your question directed to?

2168 Mr. Ewing: Well, it is not exactly—

Mr. Wright: (Interposing.) By the terms of the answer, it was a conclusion on the witness' part, a belief that he had.

Trial Examiner Norwood: Read the answer again.

(The reporter read the answer again as follows:

"A. That was also, I believe, a part of the supplemental code of fair competition for the white lead in oil industry.")

Trial Examiner Norwood: I think that counsel should be allowed some latitude about explaining this thing.

Mr. Wright: I have no objection to some latitude, Your Honor, but when it was obviously a conclusion of the witness, I mean he is testifying about things now that occurred some fourteen years ago.

Trial Examiner Norwood: Yes. Read the answer again.

(The reporter read the answer again as follows:

"A. That was also, I believe, a part of the supplemental code of fair competition for the white lead in oil industry.")

Trial Examiner Norwood: Objection sustained, the answer will be stricken.

By Mr. Ewing:

Q. I will ask you, Mr. Wormser, to refresh your 2169 recollection by reading the portion of the minutes referring to the paragraph on taxes (showing to witness)?

A. Yes.

Q. Having read that portion of the minutes, Mr. Wormser, will you state, if you know, in what connection the committee considered and took action on that paragraph?

Trial Examiner Norwood: Answer that from your own knowledge.

Mr. Wright: Before the witness answers that, Your Honor, I would like to examine him briefly on his recollection and refresh him by that document if I may.

Trial Examiner Norwood: I don't think that is necessary. You can cross-examine him on it.

Mr. Wright: I think I have a right to determine the extent of his independent recollection of this meeting and of what occurred there and to examine him.

Trial Examiner Norwood: I am going to ask him that now. You have examined that document and if you now have an independent recollection of it after examining the document, you can answer the question, and if you do not, then say so. I will overrule the objection.

The Witness: The minutes have refreshed my recollection, sir, and the paragraph on taxes was adopted as a part of the proposed supplemental code of fair competition for the white lead in oil industry.

2170 By Mr. Ewing:

Q. I direct your attention to the first paragraph of Exhibit 502-C and ask you to read it.

A. I have read it.

Q. Will you state, if you know, in what connection the resolution set forth in that paragraph was adopted?

A. That was a resolution to act upon a suggestion—again, specifically of Mr. Walter Jannsen, deputy administrator of the NRA—who wanted us to include in our supplemental code of fair competition a paragraph referring to a price listing or an exchange of price information. This was an attempt to meet his views.

Q. In what connection was the final paragraph of the minutes, appearing on Exhibit 502-C, adopted (showing to witness)?

A. This final paragraph was adopted for inclusion in the proposed supplemental code of fair competition for the white lead in oil industry.

Mr. Ewing: I believe, in accordance with Mr. Hinds' arrangement, that we recess at this time.

Trial Examiner Norwood: Is that all right with you?

Mr. Wright: Yes, Your Honor.

Trial Examiner Norwood: We will recess at this time until 2 o'clock.

2171 (Whereupon, at 12:25 p.m., a recess was taken until 2:00 p.m., this day.)

2172-2173 Afternoon Session.

Trial Examiner Norwood: Come to order. Let us proceed.

FELIX E. WORMSER, a witness called on behalf of the Respondent, having been previously sworn, resumed the stand and testified further as follows:

Direct Examination (continued) by Mr. Ewing.

Q. Mr. Wormser, I show you a photostatic copy of Commission's Exhibit 801-A and B, minutes of the Dry Products Committee of the Lead Pigments Division of September 7, 1933, and ask you if you acted as secretary at that meeting (showing same to witness)?

A. I did, sir.

Q. Was that the first meeting of the White Lead In Oil Committee of the Lead Pigments Division?

A. This is the Dry Products Committee, I believe.

Q. You are right, I withdraw that question. You will notice the reference to the dry lead group in the minutes. Will you tell us what the dry lead group was?

A. That referred to the producers of dry white lead who sold their product to the prepared paint companies.

Mr. Wright: Where is that reference?

Mr. DuBose: It is Exhibit 801-A and B.

Mr. Ewing: It is the third paragraph after the attendance.

2174 Mr. Wright: I see it.

The Witness: I might also add that that was to distinguish it from White Lead In Oil.

By Mr. Ewing:

Q. Were the members of the dry white lead group the members of the Dry Products Committee of the Lead Pigments Division?

A. Yes, sir.

Q. You will note the reference in these minutes to the request that you as secretary read the price list paragraph adopted by the dry lead group. In what connection was that paragraph adopted?

A. The paragraph was adopted to be incorporated in a supplemental code of fair competition for the lead in oil industry and then adopted by the dry products group.

Q. You will note the reference in these same minutes that this same paragraph be adopted for the lead oxide group of the Dry Products Committee. Will you tell us what the lead oxide group of the Dry Products Committee was?

A. That oxide group of the Dry Products Committee referred to the producers of red lead and litharge which are oxides of lead in dry form.

Q. Am I correct in my understanding that the Dry Products Committee consisted of two groups, the dry white lead group and the dry oxide group?

2175 A. That is correct, sir.

Mr. Wright: I object to the form of the question, your Honor. It is counsel's conclusion and whether or not he is correct in it is irrelevant and immaterial.

Trial Examiner Norwood: Objection sustained.

By Mr. Ewing:

Q. Of what groups was the Dry Products Committee comprised?

A. It was comprised of the producers or manufacturers of lead pigments in dry form. That is, white lead dry and red lead and litharge dry. The white lead group, as I recall, were the dry white lead group and the red lead and litharge section were the oxide group.

Q. I call your attention to the reference in these minutes to certain unfair trade practices accepted by the Dry Products Committee in earlier session and ask you in what connection they were adopted as applicable to oxide manufacturers?

A. They were adopted as being part of a supplemental code of fair competition to be submitted to the NRA.

Q. I call your attention to the reference in these minutes to a discussion with respect to uniform sales contracts and ask in what connection the resolution referred to was adopted?

A. This resolution was also adopted to provide another part of the supplemental code of fair competition for
2176 this industry, the Dry Products Division.

Q. State whether the resolutions and agreements referred to in those minutes related solely to the development of the supplementary code of fair competition.

A. They related solely to the development of a code, a supplemental code of fair competition for the Dry Products Committee or Dry Products Division.

Q. I show you a photostatic copy of Commission's Exhibit 802-A and B, bearing the date of September 26, 1933, headed "Second Draft Supplementary Code of Fair Competition for the Lead Pigments Division of the Lead Industries Association," and ask you if you are familiar with that draft at that time?

A. I am.

Q. Does the provision which was the subject of the resolution relating to uniform sales contracts referred to in Commission's Exhibits 801-A and B appear in that second draft in substance?

Mr. Wright: May I have the question read?

Trial Examiner Norwood: Read the question, Mr. Reporter.

(The reporter read the question.)

The Witness: It does.

By Mr. Ewing:

Q. I show you photostatic copies of Commission's
2177 Exhibits 504-A and B, minutes of Dry Products Committee, Lead Pigments Division of October 27, 1933, and ask you whether you acted as secretary at that meeting?

A. I did.

Q. You will note in the minutes the reference on page 2 thereof, namely, Exhibit 504-B, to existing statistics in the third from the last full paragraph.

A. Yes.

Q. To what statistics, if you know, did the minutes there refer?

A. That referred to the anti-trust laws.

Q. In the preceding paragraph in the same exhibit, I call your attention to the outlines referred to. State, if you know, what those outlines were.

A. Those outlines were again bases for developing, as a code, provisions to be embodied in a supplemental code of fair competition for the lead oxide and dry white lead groups.

Q. State, if you know, what the committee at that time concluded with respect to the inclusion in any proposed uniform contract relating to the sale of oxides and dry white lead of provisions relating to price fixing as to what determination there should be in regard to the question of price.

Mr. Wright: I object, your Honor. That obvi-
2178 ously calls for a number of conclusions on the part of
the witness so—

Mr. Ewing: It doesn't call for a conclusion at all.

Trial Examiner Norwood: Read the question.

(The reporter read the question.)

Trial Examiner Norwood: Did the committee take any action that would indicate to you what their conclusions were?

The Witness: You mean at that particular meeting, sir?

Trial Examiner Norwood: At any meeting. Would it throw any light upon this question that has been asked?

The Witness: Yes, sir.

Trial Examiner Norwood: I will sustain the objection and let him give the evidentiary facts about what they concluded. You tell what they said and did that would indicate to you their conclusions were with respect to that matter. Ask the question over again.

By Mr. Ewing:

Q. I call your attention to the third from the last full paragraph on the second page of the minutes which is Exhibit 504-B, and ask you whether that will refresh your recollection as to what conclusion the committee then
reached with respect to the inclusion in any proposed
2179 uniform contract of the sale of oxides and dry white
lead of price fixing provisions?

A. It does refresh my mind.

Q. What conclusion did the committee reach at that time?

A. It was agreed, the minutes read, in deference to existing statistics—

Trial Examiner Norwood: Wait a minute, don't read that.

Mr. Wright: I object, your Honor, if the only refreshment is what answer in the minutes themselves, this witness has nothing to add to what is already in the record.

Trial Examiner Norwood: Tell us anything else about it except what is in there.

The Witness: Well, by personal conversation with the members of this group, they told me they were against incorporating anything in the code which had any relation to price fixing or the exchange of price information and this merely expresses their former point of view.

Trial Examiner Norwood: Off the record.

(Discussion off the record.)

Trial Examiner Norwood: On the record.

By Mr. Ewing:

Q. I show you a photostatic copy of Commission's Exhibits 505-A and B, minutes of the White Lead in Oil Committee of the Lead Pigments Division of October 28,
2180 1933, and ask you if you acted as secretary at that meeting.

A. I did.

Q. Would you read those minutes, please, to yourself?

A. Yes. I have read them.

Q. You will note the reference in the minutes to the statement by Mr. Carter concerning National Lead's new agency system. Will you state whether the members of the White Lead in Oil Committee reached any agreement at that meeting to use any agency or consignment system?

A. They did not.

Q. You will note also in those minutes the reference to the discussion of the freight and zoning problems. Please state whether there was any understanding or agreement reached at that meeting on those subjects by the members of that committee.

A. No understanding or agreement was reached by the members at that meeting.

Mr. Wright: I object to that, your Honor. Obviously both of the last questions call for a conclusion on the part of the witness as to what is an agreement or what is an understanding and there has been no groundwork laid to show that he knew everything that went on at those meetings unless he heard every conversation that was made.

By Mr. Ewing:

Q. You attended but that meeting, did you not, Mr. Wormser?

2181 Trial Examiner Norwood: Read the question.

(The reporter read the question.)

Trial Examiner Norwood: I think that it would be more satisfactory if you bring it out like you did in the case of the other exhibit there. Just state what they said about it or give the evidentiary facts which would indicate to him what they concluded or what they agreed on.

Mr. Ewing: I will reframe the question.

By Mr. Ewing:

Q. What, if anything, was said about the members representing the white lead in oil committee at that meeting with respect to the agreement on freight and zoning problems?

A. Very little was said at that meeting about either freight or zoning problems. It was a matter of little significance to the group. So that as the minutes faithfully report here, no understanding was reached on the subject.

Trial Examiner Norwood: Off the record.

(Discussion off the record.)

Trial Examiner Norwood: On the record. Proceed.

By Mr. Ewing:

Q. I show you a photostatic copy of Commission's Exhibit 803, the minutes of the meeting of the Lead Pigments Division of January 23, 1934, and ask you whether you acted as secretary at that meeting?

2182 A. I did.

Q. Will you please read the minutes of that meeting?

A. To myself?

Q. Yes.

A. I have read them.

Q. In what connection did the meeting agree to submit the price schedule paragraph quoted in these minutes?

A. This is in connection with the drafting of a supplemental code of fair competition for the White Lead in Oil Division.

Q. I show you a photostatic copy of Commission's Exhibit 518-A and B, which is a copy of a letter dated January 18, 1934 from M. F. Carter to W. M. [illegible]aston and Harold Rowe, and call your attention to the paragraph headed

"Schedules" and to the first full paragraph following the quotation at the top of page 2. Will you state whether the price schedule paragraph referred to in the letter, Exhibit 518-A and B, was the previously drafted price schedule paragraph—that is, drafted by the code administration in Washington—schedule referred to in the minutes, Exhibit 803?

A. The one in Exhibit 518-B is the one that appears in Exhibit 803.

Q. I am referring now to this paragraph which is Exhibit 518-A under the heading "Schedules" and am asking
you whether that paragraph on schedules appearing
2183 on Exhibit 518-A, is the price scheduled paragraph
described in Exhibit 803 as having been previously
drafted in Washington by the administration?

A. This is different.

Q. You still don't understand my question. Exhibit 803 of the minutes refers to and quotes a paragraph to be submitted to the administration in lieu of a price schedule paragraph previously drafted in Washington by the administration.

A. Yes.

Q. Now, my question is, is the first paragraph headed "Schedules" on Exhibit 518-A the paragraph on schedules previously drafted in Washington?

A. Well, this one here, Exhibit 518-A is the one that was drafted in Washington.

Q. And this draft in Washington which appears on Exhibit 518-A, as to that, state whether that met with the approval of the Lead Pigments Division of the White Lead in Oil Committee.

A. That did not meet with the approval of the White Lead in Oil Committee of the Lead Pigments Division.

Q. And the paragraph quoted in the minutes of January 23rd, Commission's Exhibit 803, was the paragraph drafted by the White Lead in Oil Committee to be submitted in lieu of the administration's draft?

A. That's correct, sir.

2184 Q. In what connection did the committee propose to submit the price schedule paragraph quoted in the minutes, Exhibit 803?

A. It proposed to submit it in preparation of a supplemental code of fair competition for the white lead in oil industry.

Q. Now, I show you a photostatic copy of Commission's

Exhibit 804, bearing the date of January 27, 1934, and headed "Schedule A," and ask you to read it (handing same to witness.)

A. I have read it.

Q. Was that Schedule A drafted for inclusion in the proposed supplementary code?

A. It was.

Q. I show you photostatic copies of Commission's Exhibit 805-A, B and C, and ask you whether you acted as secretary at the meeting of the Dry Products Committee of the Lead Pigments Division of January 24, 1934?

A. I did.

Q. Will you read the minutes, please, to yourself?

A. Yes.

Q. State in what connection the price schedules previously adopted at the white lead in oil meeting were agreed upon at that meeting.

A. They were adopted in connection with prepara-
2185 tion of a supplemental code of fair competition for
the Dry Products Committee of the Lead Pigments
Division.

Q. State whether Schedule A annexed consisting of Exhibits 805-B and C was drafted for inclusion as a schedule in the proposed code.

A. It was also to be made part of the proposed code.

Q. I show you photostatic copies of Commission's Exhibits 524-A to E inclusive, headed "Supplementary Code of Fair Competition for the Lead Pigments Division of the Lead Industries Association Fourth Draft," and ask you whether prior to the date borne by that exhibit, November 11, 1933, there had been filed with the NRA, a master code covering the lead industry?

A. Yes.

Q. To what did the master code theretofore filed relate in the main, if you know?

A. It was mainly a labor code.

Q. State what you mean by labor code.

A. I mean it was a code designed to follow the wishes of the administration in creating more employment somewhat along the lines of the President's re-employment agreement which was the first general code promulgated by the administration.

Q. Did it relate to wages and hours?

A. Yes, it related to wages and hours.

2186 Q. I show you a photostatic copy of Commission's Exhibit 670 and ask you what it is (handing same to witness)?

A. This is a sample of the statistical reports issued by the Lead Industries Association. This one is dated February 16, 1943 and covering the domestic shipments, production in stocks in white lead by months for the years 1941, 1942 and the first month of 1943.

Q. State whether the Lead Industries Association receives from its membership producing white lead, reports relating to the domestic shipments, production and sales of each?

A. Shipments, production and stocks.

Q. Shipments, production and stocks of each?

A. It does with regard to production, shipments and stocks.

Q. State whether the information contained in the reports which you received from individual members is ever transmitted by you to other individual members.

Mr. Wright: Your Honor, I object to the leading character of these questions by counsel. After all, his witness stands in a very close relationship to him and certainly it seems to me that the questions could more properly be brought out by asking for the evidentiary facts. I object to that.

Trial Examiner Norwood: I think that is true.

2187 Mr. Ewing: I don't think that is a leading question, your Honor.

Mr. Wright: He was describing the kind of reports that the industry—counsel was describing the reports that the industry made to the Lead Industries Association and which in turn the association sent out to the members.

Trial Examiner Norwood: He told us this morning about some of that procedure there.

Mr. Wright: It has been testified to a number of times already in the case.

Trial Examiner Norwood: Read the last question.

(The reporter read the question.)

Trial Examiner Norwood: I think he could answer that either way. I don't think he is suggesting an answer there. He has specified very particularly the subject of the desired answer. I think he can do that. You can't get away from that in a question like that.

Mr. Ewing: And as you say, he can answer either way.

Trial Examiner Norwood: Objection overruled.

The Witness: The answer is never.

By Mr. Ewing:

Q. State whether the Lead Industries Association has ever collected from its individual members their prices on any commodity.

2188 A. It has never collected any price information from covering any product represented in the Lead Industries Association from mined to finished metal or the finished manufactured product.

Q. Has it ever collected from any of its members historical price information, historical in the sense of information relating to prices in the past?

A. It has never collected any historical price information from its members.

Q. Are the statistical reports which the Lead Industries Association issues to its members furnished to any persons or organizations outside of the membership?

A. The statistics—

Q. Just answer yes or no.

A. They are.

Q. Will you state in such detail as you may be able to, to what persons or organizations other than the members of the association your statistical reports are furnished?

A. Our statistical reports are furnished to various departments of the United States Government.

Q. For example.

A. The Department of Justice, the Federal Trade Commission, the Bureau of Mines, the Geological Survey, the United States Tariff Commission, the Bureau of Foreign and Domestic Commerce—there are some others

2189 that escape me for the moment.

Q. The reports to which you refer are reports similar in form to this Exhibit 770?

A. Yes, sir.

Q. How long have you been furnishing your statistical reports to the Federal Trade Commission?

A. Ever since the founding of the Lead Industries Association.

Q. How long did you furnish your statistical reports to the Department of Justice?

A. From the founding of the Lead Industries Association until a few years ago when we were specifically requested by the Department of Justice to cease sending them to them.

Q. You said, I believe, that you furnished statistical reports to the Bureau of Mines?

A. Yes, sir.

Q. Does the Bureau of Mines issue monthly statements of a similar nature?

A. On lead pigments?

Q. Yes.

A. Annually, sir; they are not monthly.

Q. They are not monthly?

A. That's right.

Q. For what reason, if you know, does the Bureau of Mines not issue monthly statistical statements of a
2190 similar nature?

A. They have come to us and told us they were so satisfied with the coverage of our reports and the public service that we are rendering, that they thought it would be in the interest to save the taxpayers money not to duplicate that service. So they have never duplicated it.

Trial Examiner Norwood: Off the record.

(Discussion off the record.)

Trial Examiner Norwood: On the record. Proceed.

By Mr. Ewing:

Q. I show you a photostatic copy of Commission's Exhibit 666 and ask you what it is (handing same to witness)?

A. This is a record of the shipments of white lead pigments comprising white dry lead, white lead in oil, basic lead sulphate and leaded zinc oxide from the period 1930 to 1940 plus eight months of 1941.

Trial Examiner Norwood: That is a composite picture?

The Witness: That is the total by years; yes, sir.

By Mr. Ewing:

Q. Under what circumstances, if you know, was that prepared?

A. I believe this was prepared at the request of
2191 the Federal Trade Commission.

Q. At whose request?

A. I think it was by Mr. Dunn or Mr. MacIntyre. I have forgotten who asked for this special compilation.

Q. I show you a photostatic copy of Commission's Exhibit 667 and ask you what it is?

A. This is a tabular statement of the volume of white lead pigments comprising dry lead, lead in oil, lead sulphate with the grand totals for the years 1930 to 1941 inclusive giving the annual price and the total values for each of those years. These figures were obtained from the Bureau of Mines' mineral yearbook.

2192 Mr. Ewing: Might we take a short recess, Your Honor?

Trial Examiner Norwood: We will take a short recess at this time.

(A short recess was taken.)

Trial Examiner Norwood: Come to order. Proceed.

By Mr. Ewing:

Q. I show you a photostatic copy of Commission's Exhibit 668 and ask you to state what that is?

A. This is a table showing the total sales of paint, varnish and lacquers and fillers as reported to the Bureau of Census, Department of Commerce, by 579 companies representing 87 per cent by volume of the industry from the years 1930 to 1941, only the first eight months of 1941 are included.

Q. Is that a statistical report prepared in the regular course of its business by the Association?

A. No, sir.

Q. Under what circumstances was it prepared?

A. I believe we were requested by the Commission to furnish this information.

Q. You didn't prepare it yourself, did you?

A. These are not our figures, sir.

Q. Well, I meant you yourself did not compile this information?

A. No, sir.

2193 Q. But it was prepared in your office; is that right?

A. It was prepared in our office.

Q. Referring back for the moment to Exhibit 666, I think you said that the figures there came from the Bureau of Mines; is that correct?

A. This is a combination report. Part of the date is from our own statistics—that is, the statistics of the Lead Industries Association and partly from the Bureau of Mines' statistics.

Q. And that was prepared by your office?

A. That was prepared by our office.

Q. I show you a photostatic copy of Commission's Exhibit 669 and ask you what it is?

A. This is a table showing the shipments of white lead, dry in oil by percentages for the years 1938, 1939, 1940 and 1941 of the National, Eagle Picher, the National Smelting and Refining, Fuller & McGregor and other companies. The others including Houston and Sherwin.

Q. Is that a regular statistical report prepared by your Association in the usual course of its business?

A. No, sir; it is not.

Q. Under what circumstances was it prepared?

A. Again, I believe this is a report which we were requested to make by the Federal Trade Commission.

Q. I show you Commission's Exhibits 507-A to M
2194 inclusive and ask you to read them over yourself
(handing to witness).

A. I have read them.

Q. I call your attention to your letters to Messrs. Carter and Roosevelt, Exhibits 507-A and B and ask you to state whether Mr. Carter and Mr. Roosevelt did, in fact, telephone you in response to your letters?

A. They did.

Q. What instructions did they give you with respect to your application for a proposed extension relating to the applicability of the price filing provisions?

A. They approved the move I made to request a continuation of the exemption of that particular paragraph from the administrator.

Q. Mr. Wormser--

Mr. Ewing: You have the original exhibits 519-A and B?

Mr. Wright: Yes, sir (handing to counsel).

By Mr. Ewing:

Q. Mr. Wormser, I show you Commission's Exhibits 519-A and B directing your attention first to 519-B and ask you to read them to yourself (handing to witness).

A. I have read them.

Q. Do you recall testifying with respect to those exhibits in June 1946?

A. I do.

2195 Q. I show you a transcript of your testimony appearing at page 1036 of the transcript and ask you
to read it insofar as it relates to Exhibit 519-B.

A. Yes.

Q. I show you pages 1189 and 1190 of the transcript giving a portion of Mr. Dunn's testimony with respect to Exhibits 519-A and B and ask you to read them.

A. I have read them.

Q. Have you had a list made of all the papers, letters and other documents which your office gave to Mr. Dunn at the time he called in the course of his investigation?

A. Yes, sir.

Q. I show you a document consisting of two sheets which I would like marked Respondent's Exhibit 4-A and B for identification.

Trial Examiner Norwood: It will be marked Respondents' Exhibit 4-A and B for identification.

(The document referred to was marked Respondents' Exhibit 4-A and 4-B for identification.)

By Mr. Ewing:

Q. And I ask you what that is (handing to witness)?

A. This is a list of the memoranda, correspondence records, data, documents of various description lifted from our files and given to Mr. Dunn.

Q. Was that list returned to you by Mr. Dunn?
2196 I will withdraw that. Were those documents returned to you by Mr. Dunn subsequent to the delivery thereof to him or by someone acting for the Federal Trade Commission?

A. They were returned by the Commission and checked off.

Mr. Ewing: Mark this Respondents' Exhibit 5 for identification.

Trial Examiner Norwood: It will be so marked as Respondents' Exhibit 5 for identification.

(The document referred to was marked Respondents' Exhibit 5 for identification.)

Trial Examiner Norwood: Proceed.

By Mr. Ewing:

Q. I show you a letter which has been marked Respondents' Exhibit 5 for identification and ask you whether that was received by you?

A. It was.

Q. At the same ~~time~~ did you receive from the Commission various documents theretofore furnished to Mr. Dunn?

A. Yes, sir.

Q. What examination, if any, did you cause to be made with respect to those documents upon their return to you?

A. We carefully checked on this list the items that had been submitted to the Federal Trade Commission to see whether they were all covered in the list we had made of the documents as they were originally given to the
2197 Commission and the checkmarks are shown here on this list.

Q. Indicating Respondents' Exhibit 4-A for identification?

A. That's right.

Q. Were all the documents that you had supplied Mr. Dunn returned to you on or about the date of Respondents' Exhibit 5 for identification, September 8, 1943?

A. Yes, sir.

Q. Will you examine Respondents' Exhibit 4-A and B for identification and ascertain what reference or references there are in it to any map furnished by you to Mr. Dunn?

Mr. Wright: Are you going to offer those in evidence?

Mr. Ewing: Yes, sir.

Mr. Wright: I submit that the list itself is the best evidence of what it contains.

Mr. Ewing: I offer Respondents' Exhibit 4-A and B for identification in evidence.

Trial Examiner Norwood: Is there any objection?

Mr. Wright: May I cross-examine the witness on the identification of this?

Trial Examiner Norwood: You may ask him voir dire questions on it.

Mr. Wright: Who prepared Respondents' Exhibit 4-A and B?

The Witness: That is the list you have there?

2198 Mr. Wright: Yes.

The Witness: My secretary, Mrs. Mayer.

Mr. Wright: At your request?

The Witness: Yes.

Mr. Wright: What was the approximate date that this list was prepared?

The Witness: Shortly after Mr. Dunn's first examination of our files.

Mr. Wright: Does this list purport to cover only the things that Mr. Dunn got from you the first time that he called on you?

The Witness: He made several visits to us. When you say the first time, I don't know whether you mean specifically the one day or the whole series of visits that he made.

Mr. Wright: Does this list purport to cover all of the documents that he got from you on the several times that he called on you?

The Witness: It does.

Mr. Wright: I have no objection.

Trial Examiner Norwood: Respondents' Exhibit 4-A and B for identification will be received in evidence.

(The documents referred to, heretofore marked for identification RESPONDENTS' EXHIBIT 4-A and 4-B were received in evidence.)

2199 Mr. Ewing: I offer in evidence Respondents' Exhibit 5 for identification.

Trial Examiner Norwood: Is there any objection?

Mr. Wright: Mr. Wormser, I direct your attention to the pencilled notes in the lower right-hand corner of Respondents' Exhibit 5. Do you know who put those on there?

The Witness: I do.

Mr. Wright: Will you state who it was?

The Witness: My secretary, Mrs. Mayer.

Mr. Wright: Are those her initials?

The Witness: Yes.

Mr. Wright: I have no objection.

Trial Examiner Norwood: It will be received in evidence as Respondents' Exhibit 5.

(The document referred to, heretofore marked for identification RESPONDENTS' EXHIBIT 5, was received in evidence.)

By Mr. Ewing:

Q. I direct your attention to Commission's Exhibit 513-A to E inclusive and I also direct your attention to Respondents' Exhibit 4-B and ask whether the list of differentials, Exhibit 513-C and D and the map, Commission's Exhibit 513-E were among the papers supplied by you to Mr. Dunn and later returned to you?

2200 A. Yes, sir.

Q. State, if you know, whether you furnished Mr. Dunn with the map referred to in Commission's Exhibit 519-B and 519-A?

A. No, sir.

Trial Examiner Norwood: What is the map marked?

Mr. Ewing: That map is not marked, sir. I am trying to clear up a confusion.

Off the record.

Trial Examiner Norwood: Off the record.

(Discussion off the record.)

Trial Examiner Norwood: On the record.

By Mr. Ewing:

Q. I ask you whether the map or any map such as that referred to in Mr. Mason's letter, Commission's Exhibit 519-B is in your possession?

A. No, sir.

Q. Have you had a search made for such a map?

A. Yes, sir.

Q. What did the search disclose?

A. No map.

Q. You only delivered one map then to Mr. Dunn?

A. Yes, sir.

Q. And that is the map which you have identified as Exhibit 513-E?

A. Correct.

2201 Q. Then I take it that you were in error in your testimony at page 1036 of the transcript when you said that the map referred to in Exhibit 519-B and 519-A had been delivered to Mr. Dunn?

A. Yes, sir; I was in error.

Mr. DuBose: Off the record.

Trial Examiner Norwood: Off the record.

(Discussion off the record.)

Trial Examiner Norwood: On the record.

Mr. Ewing: When photostats have been obtained, I take it that Mr. Wright will have no objection to our substituting photostats of the Respondents' Exhibit 4-A and B and Respondents' Exhibit 5 so that the original exhibits may be returned to the files of the lead industries.

Trial Examiner Norwood: Off the record.

(Discussion off the record.)

Trial Examiner Norwood: On the record. Respondents may have leave to substitute photostatic copies and withdraw the originals in the case of Respondents' Exhibit 4-A and B and Respondents' Exhibit 5.

By Mr. Ewing:

Q. Mr. Wormser, I direct your attention to the second paragraph of the letter, Commission's Exhibit 519-B and ask you whether new differential points were ever set up and passed through your office?

2202 A. No, sir.

Q. Were any suggested changes in the differential referred to in Exhibit 519-B passed through your office?

A. No, sir.

Q. Was there built up through your office an official freight arrangement for the white lead in oil industry?

A. No, sir.

Q. I show you photostatic copies of Commission's Exhibits 696 and 697 and ask you to read them.

A. Yes.

Q. Who was W. R. Dice?

A. Executive vice-president of the Eagle Picher Lead Company.

Q. Do you know yourself with what branch of Eagle Picher's business he was connected?

A. I don't recall in 1937 what branch he was connected with.

Q. Who was Mr. Wilson referred to in those exhibits?

A. Mr. Wilson was the sales manager of the Metallic Lead Products Division of the National Lead Company.

Q. And who was Mr. Martino?

A. Mr. Martino was in the comptroller's office of the National Lead Company at that time to the best of my knowledge. It was ten years ago.

Q. Do you recall the subject of the conversation referred to in Commission's Exhibits 696 and 697?

2203 A. No, sir.

Q. Had that conversation related to price fixing or production control or allocation of markets would you have recalled it?

Mr. Wright: I object to that question, Your Honor. He has already stated that he doesn't know what the conversation was. Now he is being asked for a conclusion that if it had related to some particular subject would he have recalled it.

Trial Examiner Norwood: I think that objection must be sustained.

By Mr. Ewing:

Q. At any time have you heard conversations relating to those subjects between representatives of Eagle Picher and National?

Mr. Wright: What subjects?

Mr. Ewing: The ones referred to in the preceding question.

The Witness: That is, price fixing and the agreements and so forth?

Mr. Ewing: Yes.

The Witness: The answer is no.

Trial Examiner Norwood: Read the question.

(The reporter read the question as follows:

"Q. At any time have you heard conversations 2204 relating to those subjects between representatives of Eagle Picher and National?")

Trial Examiner Norwood: I think he may answer that.

Mr. Wright: I object to that, Your Honor.

Trial Examiner Norwood: Off the record.

(Discussion off the record.)

Trial Examiner Norwood: On the record.

Objection overruled.

The Witness: No.

Trial Examiner Norwood: We will recess at this time until tomorrow morning at 10:00 o'clock, a. m.

(Whereupon, at 3:30 o'clock, p. m., the hearing in the above-entitled matter was adjourned.)

2205

Trial Room,
Bar Association Building,
36 West 44th Street,
New York, N. Y.,
April 23, 1947.

Met, pursuant to notice, at 10:00 a. m.

Before:

John W. Norwood, Trial Examiner.

Appearances:

Joseph S. Wright, Esq., appearing for the Federal Trade Commission.

J. T. Welch, Esq. (Davies, Richberg, Beebe, Busick & Richardson, 15th Street, N. W., Washington, D. C.), appearing for Sherwin Williams Company.

Edmund P. Wood, Esq., 2801 Carew Tower, Cincinnati, Ohio, appearing for Eagle-Picher Lead Company and Eagle-Picher Sales Company.

Robert H. Ecker (Chadbourne, Wallace, Parke & Whiteside, 25 Broadway, New York, N. Y.), appearing for Anaconda Copper Mining Company and International Smelting & Refining Company.

James D. Ewing, Esq. (Alexander & Green, 120 Broadway, New York, N. Y.), appearing for the National Lead Company.

2205-A E. Z. DuBose, Esq. (Alexander & Green, 120 Broadway, New York, N. Y.), appearing for the National Lead Company.

Roger Hinds, Union Commerce Building, Cleveland, Ohio, appearing for The Glidden Company.

2206

PROCEEDINGS.

Trial Examiner Norwood: Come to order.

Pursuant to adjournment on yesterday, the hearing in Docket No. 5253 is now convened for the taking of further evidence. I want to explain in a ruling I made yesterday that although I have not seen the record, as I recall it I stated that the question objected to was not leading because it could be answered either way. I merely said half of what I had in mind.

I meant it to be answered either way so far as any suggestions contained in the question would indicate.

Let the record show the following appearances:

J. T. Welch, appearing for the Sherwin Williams Company.

Edmund P. Wood, appearing for Eagle-Picher Lead Company and Eagle-Picher Sales Company.

Robert H. Ecker, appearing for Anaconda Copper Mining Company and International Smelting and Refining Company.

James D. Ewing and E. Z. DuBose, appearing for the National Lead Company.

Proceed.

FELIX E. WORMSER was thereupon recalled as a witness for the Respondent, and having been previously sworn, testified further as follows:

2207 *Direct Examination (Continued) by Mr. Ewing.*

Q. Mr. Wormser, under the NRA, was there a Code Authority established for the lead industry?

A. Yes, sir.

Q. Will you tell us what the Code Authority was?

A. The Code Authority acted as the body organized to carry out the provisions of the code of fair competition for the lead industry.

Q. Without refreshing your recollection, are you able to state who the members of the Code Authority were, not by name, necessarily?

A. The members of the Code Authority of the lead industry were, I believe, mainly the directors of the Lead Industries Association.

Q. I show you this book and ask you to tell us what it is (handing same to witness)?

A. This is the minutes of the meetings of the Code Authority for the lead industry.

Q. Were you the secretary of the Code Authority?

A. Yes, sir.

Q. And did you act as secretary at some, if not all, of the meetings of the Code Authority?

A. Yes, sir.

Q. Will you turn to the minutes of the third meet-
2208 ing of the Code Authority which was held on July 27, 1934?

Mr. DuBose: Off the record.

Trial Examiner Norwood: Off the record.

(Discussion off the record.)

Trial Examiner Norwood: On the record.

By Mr. Ewing:

Q. Who acted as secretary at that meeting?

A. I did.

Q. Am I correct, Mr. Wormser, in stating that the minutes of this meeting of July 27, 1934, appear on eight pages and that in addition there is an exhibit "B" on a separate page which is incorporated in those minutes?

A. Yes, sir.

Mr. Ewing: Your Honor, I have photostatic copies of the minutes and I propose to ask that the copies be marked for identification and I understand Mr. Wright will have no objection to that and that will permit Mr. Wormser to keep his records.

Mr. Wright: Providing Mr. Wormser will testify that the photostats are exact copies.

Mr. Ewing: I will ask him that.

By Mr. Ewing:

Q. I show you what purports to be photostatic copies of the minutes of that meeting and of Exhibit "B" and ask you to look at them and see whether they are in
2209 fact such (handing same to witness)?

A. They are.

Mr. Ewing: I ask that the photostatic copies be marked Respondent's Exhibit 6-A to I inclusive.

Trial Examiner Norwood: They will be so identified as Respondent's Exhibit 6-A to I inclusive.

(The documents referred to were marked Respondent's Exhibits 6-A, 6-B, 6-C, 6-D, 6-E, 6-F, 6-G, and 6-H and 6-I, for identification.)

Trial Examiner Norwood: Proceed.

By Mr. Ewing:

Q. Were these minutes prepared by you, Mr. Wormser, which have been marked Respondent's Exhibits 6-A to I for identification?

A. Yes, sir.

Q. Do they correctly state what transpired at the meeting of the Code Authority held on July 27, 1934?

A. Yes, sir.

Mr. Ewing: I offer that in evidence as Respondent's Exhibit 6-A to I.

Mr. Wright: I object to the receipt of Respondent's Exhibit 6-A to I in evidence, your Honor, on the ground that it is immaterial and irrelevant and doesn't relate to any issue in this matter. As it is obviously on the face
2210 of these minutes, they relate to a Code Authority for the entire lead industry and that at least 95 per cent of the material in it relates to metallic lead and metallic lead products which are entirely out of the scope of this proceeding or at least the matters contained in the minutes here are. Furthermore, what the Code Authority under the NRA and the NRA itself did is irrelevant to this proceeding. The charge in this case—off the record.

Trial Examiner Norwood: Off the record.

(Discussion off the record.)

Trial Examiner Norwood: On the record.

Mr. Wright: The charge in this case is that these Respondents combined and conspired between and among themselves to fix and maintain prices. Now, there is no allegation that this was done through the NRA. Only a very small portion of the combination in conspiracy of the practices which we allege were adopted by a conspiracy ever found their way into any NRA code or were subject to any jurisdiction of the Code Authority and as to those practices, namely, the prices which finally appeared as schedule A and schedule B of the Code which are in the record, our allegation of conspiracy is without reference to the NRA and as to the adoption of these things prior to the time the NRA code became effective and the continuation of them after the time the NRA became in-
2211 operative. So that what the Code Authority of the NRA did is entirely irrelevant to this proceeding.

Mr. Wood: If your Honor please, I am a little bit confused here because at the last session which we held in Washington, I asked directly for a clarification of the record as to when this conspiracy commenced according to the government's position. I haven't a transcript with me but as I remember it, Mr. Wright replied that it commenced under the NRA.

Now, that was my understanding and I am rather confused by Mr. Wright's statement now.

Mr. Wright: I will say in answer to that that I believe Mr. Wood misunderstood what I said. If he didn't misunderstand what I said at that time, I certainly want to make it clear at this time. I believe I stated then that we allege the principal part of this conspiracy, the one relating to the setting of these zone plans and various other matters to have occurred in the period of 1933 and 1934 when these Respondents were engaged in ostensibly drafting an NRA code. But as I said then, and I will repeat it now, most of those agreements never found their way into any NRA code.

Mr. Ewing: If your Honor please, we have been charged with conspiracy and one of the mediums of conspiracy is alleged to be the Lead Industries Association. The
2212 situation in this case is, we believe, quite different from what is contained in similar cases and we propose to show as nearly as may be, and without unduly encumbering the record, the activities of these Respondents in and of themselves and as members of the Lead Industries Association and through members of the Code Authority so that this Court will know exactly what we did and will not be compelled to draw inferences.

Counsel for the Commission has introduced such documents as he has seen fit taken from the records of the Lead Industries Association having had access to all that, and I think we should be allowed to introduce that.

Mr. Wright: I would like to have a short voir dire examination with regard to these documents.

Mr. Ewing: I object to it.

Trial Examiner Norwood: It goes to the identification only.

Mr. Ewing: He has identified them.

Trial Examiner Norwood: The voir dire questioning will be confined to the identification. I guess he can make the examination a little broader than that. It goes to its admissibility. You may do that. I see your point now.

Mr. Wright: Mr. Wormser, I call your attention to the list on Respondent's Exhibit 6-A of members and alternates present. What were the company affiliations
2213 of Clinton H. Crane, chairman?

The Witness: Chairman and president of the St. Joseph Lead Company.

Mr. Wright: Do you know whether that company produces lead pigments in any form?

The Witness: They do not.

Mr. Wright: What was the business connection of F. M. Carter?

The Witness: President of the National Lead Company.

Mr. Wright: What was the business connection of W. W. C. Hunt?

The Witness: Vice-president of the Reynolds Metals Company.

Mr. Wright: Does that company produce lead pigments?

The Witness: No, sir.

Mr. Wright: What was the company affiliation of F. Y. Robertson?

The Witness: Vice-president of the United States Smelting, Refining and Mining Company.

Mr. Wright: And P. E. Sprague is connected with the Glidden Company?

The Witness: Correct.

Mr. Wright: Who is Mr. H. M. Brush?

2214 The Witness: Vice-president of the American Smelting and Refining Company.

Mr. Wright: Does that company produce lead pigments?

The Witness: No, sir.

Mr. Wright: Who is Mr. D. A. Callahan?

The Witness: A mine operator from Northern Idaho.

Mr. Wright: Has he anything to do with the production and sale of lead pigments?

The Witness: No, sir.

Mr. Wright: Who is Mr. I. H. Cornell?

The Witness: Vice-president of the St. Joseph Lead Company.

Mr. Wright: Does that company have any connection with the sale or distribution of lead pigments?

The Witness: No, sir.

Mr. Wright: Who is Mr. Clarence Glass?

The Witness: Vice-president of Anaconda Sales Company.

Mr. Wright: Was that company at that time in the production and sale of lead pigments?

The Witness: Strictly speaking, The Anaconda Sales Company is a subsidiary of either the International Smelt-d

ing or the Anaconda Company, I don't know which.
2215 So that strictly speaking the sales company does not
have anything to do with it but broadly speaking, it is part of the Anaconda organization.

Trial Examiner Norwood: Let me ask just one question.

Mr. Wright: Yes, your Honor.

Trial Examiner Norwood: Some of these people that are mentioned in these minutes are representatives of lead producers, are they not?

The Witness: Yes, sir.

Trial Examiner Norwood: Are they connected with these Respondents?

The Witness: Some of them ~~are~~, sir; yes, sir.

Trial Examiner Norwood: The matter is simpler than we are making it out here because the issue is whether or not ~~a~~ method was employed, not whether it was employed on this or that, just so that it is shown that it was employed in some of these things which these companies were producing or selling. It is the method that we are after, and the Commission has introduced some of these minutes here showing these activities and these papers are admissible if they contain anything that reflects the attitude of these respondents towards any of these methods or practices alleged.

Inasmuch as the Commission has put in part of the
2216 story, the Respondents will be permitted to put in the
other part according to our practice.

Mr. Wright: Mr. Wormser, at this meeting at which this exhibit purports to be the minutes, were trade practices in the lead pigments industry discussed and considered?

Mr. Ewing: I object, your Honor. The document is offered for identification. It is not in evidence and this is no proper examination by the Commission's counsel.

Trial Examiner Norwood: I have already ruled. I will overrule the objection to this. You may cross-examine him on that, Mr. Wright. Respondent's Exhibit 6-A to I inclusive are received in evidence.

(The documents referred to, heretofore marked for identification as RESPONDENT'S EXHIBITS 6-A, 6-B, 6-C, 6-D, 6-E, 6-F, 6-G, 6-H, and 6-I, were received in evidence.)

Trial Examiner Norwood: Proceed.

By Mr. Ewing:

Q. Mr. Wormser—

Trial Examiner Norwood: On that point I can cite you two or three cases that go to that point of the Commission prohibiting a method and that the order may be broader than simply the mention of the means indicated in the complaint.

Mr. Wright: Your Honor, in that connection I say 2217 that I carefully avoided putting in any documents relating to the actual operation of the Code Authority into evidence as part of the Commission's case for the simple reason that I don't consider that that had anything to do with the conspiracy.

Mr. Ewing: That is slightly different from my view as to the reason why it was avoided.

Trial Examiner Norwood: I will cite the case of Dietzon against the Federal Trade Commission (142 Fed. 2nd 341) and the recent Muller case in the same volume, page 511, and the case there cited. Proceed.

By Mr. Ewing:

Q. Mr. Wormser—

Mr. Wright: I would like to note an exception to the ruling, your Honor.

Trial Examiner Norwood: Exception noted. Off the record.

(Discussion off the record.)

Trial Examiner Norwood: On the record. Proceed.

By Mr. Ewing:

Q. Will you examine the minutes of this meeting, Mr. Wormser, of July 27, 1934 and tell us whether you find anything therein relating to formal notification from the National Recovery Administration with respect to the by-laws of the Code Authority. I think you will find it 2218 on the second page.

A. I see it, yes.

Q. Was the statement in the minutes with respect to formal notification inserted therein by you pursuant to instructions given you at that meeting?

A. Yes, sir.

Q. Did you receive from the members of the Code Authority at that meeting any instructions with respect to formal notification from the National Recovery Administration in connection with Section II of Article 7 and Schedule "A" of the Code. You will find that on the same page immediately above that.

A. Yes, I have it.

Q. Well, did you receive any instructions? Just answer yes or no.

A. We did, yes.

Q. What instruction was given you by the members of the Code Authority?

A. By the members of the Code Authority?

Q. Yes, with respect to the formal notification from the National Recovery Administration.

A. The secretary was instructed to insert in the record the formal notification from the National Recovery Administration granting temporary exemption from Section II of Article 7 and Schedule "A" of the Lead Code.

2219 Q. Now, will you turn to Exhibit "B" in evidence as Respondent's Exhibit 6-I, and tell us what that is?

A. That is an order granting temporary exemptions from the trade and marketing provisions for the Lead Pigments Division of the lead industry.

Q. When you said "order," you mean a copy of an order?

A. Signed by Mr. C. E. Adams, Division Administrator.

Q. I show you a letter on the letterhead of the National Recovery Administration dated July 16, 1934 addressed to the Lead Industry Code Authority and attached documents and ask you whether you as secretary of the Lead Industry Code Authority received that letter and the attached documents (handing same to witness)?

A. I did.

Mr. Ewing: I will ask that the letter and the documents be marked Respondent's Exhibit 7-A, B and C for identification.

Trial Examiner Norwood: They will be so identified as Respondent's Exhibit 7-A, B and C.

(The documents referred to were marked Respondent's Exhibits 7-A, 7-B, and 7-C for identification.)

Trial Examiner Norwood: Proceed.

Mr. Ewing: I offer Respondent's Exhibits 7-A, B and C for identification in evidence.

Trial Examiner Norwood: Any objection?

2220 Mr. Wright: Mr. Wormser, what is Section II of Article 7, Schedule "A" of the Code?

Mr. Ewing: I object, your Honor. This is offered in evidence and this is no time for him to cross-examine as to what the section is.

Mr. Wright: He is identifying the document.

Mr. Ewing: He says it was received.

Trial Examiner Norwood: He has not said anything about the contents.

Mr. Wright: As I recall his testimony, he testified that this was a letter received from the National Recovery Administration with a certificate covering an exemption from that section of schedules.

Mr. Ewing: With documents attached. I didn't say what they were, they speak for themselves. I told you over there what they were.

Mr. Wright: Well—

Trial Examiner Norwood: Are they related documents?

Mr. Ewing: They were forwarded with the letter, your Honor. They were enclosures and that is all I asked him, as I recall.

Trial Examiner Norwood: Off the record.

(Discussion off the record.)

Trial Examiner Norwood: On the record. Proceed.

Mr. Wright: I object to the offer of Respondent's
2221 Exhibit 7-A, B and C, on the ground that it is imma-
terial and irrelevant. There is absolutely no issue with regard to the exemption under Section II of Article 7 of the Code. I stated on the record yesterday that there was no contention that the price filing provisions of the Code were ever actually put into operation through the Lead Industries Association, and that is what this section relates to.

Mr. Ewing; It also exempts Schedule "A" which was the contract form of terms and conditions of sale upon which Mr. Wright relies. Our position is the same with respect to this as with the other records at the time.

Trial Examiner Norwood: I think this is just as relevant as the other testimony we have received here. You may enlarge on it a little and you may cross-examine him on it, but I shall overrule the objection and receive Respondent's Exhibit 7-A, B and C in evidence.

(The documents referred to, heretofore marked RESPONDENT'S EXHIBITS 7-A, 7-B and 7-C for identification, were received in evidence.)

Mr. Ewing: We would like to have permission to have that photostated at the same time as we have the other exhibits photostated.

Trial Examiner Norwood: Is that agreeable, Mr. Wright?

Mr. Wright: Yes, your Honor: That is agreeable.

2222 Trial Examiner Norwood: You will have that photostated and they will be substituted and given to the reporter here.

Mr. Ewing: Yes, sir.

Trial Examiner Norwood: You may have permission to do that. Is that to be your procedure with respect to Respondent's Exhibits 4-A and 4-B and Exhibit 5, because if they are to be withdrawn here, I will have to write a memorandum about it?

Mr. Du Bose: We will have Exhibits 4-A and B and Exhibit 5 photostated today.

Trial Examiner Norwood: If you do that then they can go in as original exhibits by agreement.

By Mr. Ewing:

Q. Mr. Wormser, I show you a document consisting of—

Mr. Ewing: I will ask that these two pages be marked Respondent's Exhibit 8-A and 8-B for identification.

Trial Examiner Norwood: They will be so marked as Respondent's Exhibit 8-A and 8-B for identification.

(The documents referred to were marked Respondent's Exhibits 8-A and 8-B for identification.)

Trial Examiner Norwood: Proceed.

By Mr. Ewing:

Q. I show you the two pages which have been marked Respondent's Exhibits 8-A and 8-B for identifica-

2223 tion, and ask you whether you prepared Exhibit 8-A (handing same to witness)?

A. I did.

Q. What disposition, if any, did you make of Exhibit 8-A and 8-B?

A. This was circulated to the members of the Code Authority.

Q. When you say members of the Code Authority, whom do you mean?

A. Well, I mean the personnel who composed the Code Authority.

Q. That is, representatives of certain of the members of Lead Industries Association; is that right?

A. That's correct.

Mr. Ewing: I offer Respondent's Exhibits 8-A and 8-B for identification, in evidence.

Trial Examiner Norwood: Is there any objection?

Mr. Wright: I object, your Honor. This is the third straight exhibit containing the certificate dated June 27, 1934 by Janssen, and it is accumulative.

Mr. Ewing: It shows when the exemption was applied for and when it was distributed.

Trial Examiner Norwood: Objection overruled, and the exhibit will be received as Respondent's Exhibit 8-A and B.

(The documents above referred to, heretofore 2224 marked for identification as RESPONDENT'S EXHIBITS 8-A and 8-B, were received in evidence.)

Mr. Ewing: If we may, we would like to have this photostated too. You have no objection to that, have you, Mr. Wright?

Mr. Wright: No, sir.

Trial Examiner Norwood: Proceed.

By Mr. Ewing:

Q. Mr. Wormser, will you look at your minute book and turn to the minutes of the meeting of the Code Authority of September 25, 1934?

A. Yes, sir.

Q. Have you found those minutes?

A. Yes, sir.

Q. I direct your attention to that portion of the minutes commencing on the second page which relates to a petition for exemption from certain provisions of the Code and ask you to state—I will withdraw that question. I ask that you examine these six photostats and state whether they are correct copies of the minutes of the meeting of September 25, 1934 (handing same to witness)?

A. They are.

Mr. Ewing: I ask that the six photostats be marked Respondent's Exhibits 9-A to F inclusive.

2225 Trial Examiner Norwood: They will be so marked as Respondent's Exhibits 9-A to 9-F inclusive for identification.

(The documents referred to were marked Respondent's Exhibits 9-A, 9-B, 9-C, 9-D, 9-E, and 9-F, for identification.)

Trial Examiner Norwood: Proceed.

By Mr. Ewing:

Q. Did you act as secretary at that meeting of September 25, 1934 of the Code Authority?

A. Yes, sir.

Mr. Ewing: I offer Respondent's Exhibits 9-A to F inclusive for identification, in evidence.

Trial Examiner Norwood: Is there any objection?

Mr. Wright: I object, your Honor. They are incompetent and irrelevant.

Mr. Ewing: I call your attention, your Honor, specifically to the second page where reference is made to the further application for exemption from the provisions of the Code.

Trial Examiner Norwood: It will be received in evidence as Respondent's Exhibits 9-A to F inclusive. The objection is overruled.

(The documents referred to, heretofore marked for identification as RESPONDENT'S EXHIBITS 9-A,
2226 9-B, 9-C, 9-D, 9-E, and 9-F for identification, were
received in evidence.)

Trial Examiner Norwood: Off the record.

(Discussion off the record.)

Trial Examiner Norwood: On the record.

Mr. Wright: I have an exception on all this.

Mr. Ewing: My understanding is that we all have an automatic exception to any adverse rulings.

Trial Examiner Norwood: That's correct. Off the record.

(Discussion off the record.)

Trial Examiner Norwood: On the record. Proceed.

By Mr. Ewing:

Q. I direct your attention, Mr. Wormser, to that portion of these minutes headed "Petition for Exemption Lead Pigments Division," appearing on Respondent's Exhibit 9-B and C, and ask you to read it.

A. I have read it.

Q. Did you write the National Recovery Administration on September 18, 1934, the letter quoted in those minutes?

A. I did write such a letter.

Q. Was that letter which you wrote the National Recovery Administration the letter approved by telephone by Mr. F. M. Carter and Mr. Roosevelt, a draft of which
is in evidence as Commission's Exhibit 507-C which I
2227 show you and which, I believe, you saw yesterday?

Mr. Du Bose: That is Exhibit 507-C.

Trial Examiner Norwood: Read the question.

(The reporter read the question as follows:

"Was that letter which you wrote the National Recovery Administration the letter approved by telephone by Mr. F. M. Carter and Mr. Roosevelt, a draft of which is in evidence as Commission's Exhibit 507-C which I show you and which, I believe, you saw yesterday?")

Mr. Wright: I object to that question, your Honor. It puts words in the witness' mouth about telephone conversations and so forth.

Mr. Ewing: It doesn't put any words in his mouth at all. He testified yesterday that a letter to the Recovery Administration had been approved over the telephone.

Trial Examiner Norwood: Objection sustained. That is as leading as a question could be.

Mr. Du Bose: How could it be, your Honor? All we are trying to do is to find out whether this draft which he identified yesterday is the draft of the letter that is quoted in the minutes. It is a simple factual question.

Mr. Wright: I don't object to the factual question part as much as I do the characterization of Commission's Exhibit 507-C which is contained in the question.

2228 Mr. Ewing: If you only object to the characterization, then I won't characterize any of it.

Trial Examiner Norwood: Proceed.

By Mr. Ewing:

Q. I will ask you, Mr. Wormser, whether the letter set forth in Respondent's Exhibits 9-B and 9-C, in the minutes of the meeting of September 25, 1934, was the subject of your letter to Mr. Carter and your letter to Mr. Roosevelt, both dated September 17, 1934, in evidence as Commission's Exhibit 507-A and B which I show you (handing same to witness)?

A. Yes, sir; it was.

Q. Will you state whether the National Recovery Administration responded formally to your letter of Septemper 18th, if you know?

A. I don't recall, sir. I believe it did, though.

Mr. Wright: I move that the last part of the answer be stricken.

Trial Examiner Norwood: Motion allowed.

By Mr. Ewing:

Q. Did the provisions of Section II of Article 7 of the Code, Commission's Exhibit 809 and Schedule "A" ever become effective during the existence of the Code Authority?

A. No, sir.

Mr. Wright: I object to that. I think the question is
indefinite and that it is not susceptible to a yes or
2229 no answer in the form in which it is asked. It calls
for a conclusion on the part of the witness as to what
"effective" means.

Trial Examiner Norwood: Read the question.

(The reporter read the question as follows:

"Did the provisions of Section II of Article 7 of the Code, Commission's Exhibit 809 and Schedule "A" ever become effective during the existence of the Code Authority?")

Mr. Wright: Your Honor, it has already been testified to by Mr. Zoller and Mr. Merson that the trade practices covered by that Schedule "A" have been employed by the National Lead Company and the Eagle Picher Company over a period of time starting back in that time. Well, now, obviously—

Trial Examiner Norwood: You mean the practices are described?

Mr. Wright: Yes.

Trial Examiner Norwood: He is not asking about that.

Mr. Ewing: That is quite a different question.

Mr. Wright: I don't think the witness should be permitted to state yes or no to a question which so obviously calls for a conclusion on his part as to what "effective" means.

2230 Trial Examiner Norwood: He is asking him
whether or not—you see, they have got a code here,
and immediately this company here—I would like to know
the answer to that question myself—they had it suspended
with respect to them and while they had the suspension
continued—and he wants to ask this witness as an official
in this organization here who would know whether or
not at any time that code was effective with respect to
these people.

Mr. Wright: No, sir. It isn't a question as to whether that provision became operative as far as the Code Authority was concerned. The word "effective" is much broader than that. His answer might comprehend there and possibly be construed or Respondent's attempt to take an inference from it that no one of the Respondents ever put into practice the practices covered by that schedule.

Mr. Ewing: I am not asking him that question. I restricted it to the Code Authority.

Trial Examiner Norwood: Objection overruled. Answer the question. You may cross-examine him on it.

The Witness: No, sir.

By Mr. Ewing:

Q. Was the Code Authority charged with the duty of administering the provisions of the Code for the lead industry?

2231 A. Yes, sir.

Q. In the absence of permission from the administrator, would the Code Authority have been required to enforce the full provisions of the Code?

A. Yes, sir.

Q. And it is for that reason, is it, that the request for exemption was made?

Mr. Wright: I object to it as a leading question, your Honor.

Mr. Ewing: I will withdraw the question.

Trial Examiner Norwood: You are asking for somebody else's reason.

Mr. Ewing: Well, he made the request.

Mr. Wright: Counsel is testifying—

Mr. Ewing: I said I would withdraw the question.

Trial Examiner Norwood: The question is withdrawn. Proceed.

By Mr. Ewing:

Q. State your reason, Mr. Wormser, for requesting the exemption from the provisions of the Code in regard to Section II of Article 7 and Schedule "A".

Mr. Wright: I object to that question. It has not been shown that this witness ever did object to those provisions.

Mr. Ewing: I said asking for the exemption, Mr. 2232 Wright. He wrote the letter.

Mr. Wright: It has never been established that he has.

Mr. Ewing: He certainly has, he wrote the letter.

Trial Examiner Norwood: Objection overruled. Your own reason is what he is asking for now.

The Witness: May I have the question read to me?

Trial Examiner Norwood: Read the question.

(The reporter read the question as follows: "State your reason, Mr. Wormser, for requesting the exception from the provisions of the Code in regard to Section II of Article 7 and Schedule 'A'.")

The Witness: The reason was there was a general aversion to incorporating in the Code of fair competition for the lead industry, and that refers to all the divisions of it, anything that had any relation to monopolistic practices or trade restrictions or other practices that might be considered normally reprehensible.

Mr. Wright: I object to that and move that it be stricken, your Honor, as a self-serving hearsay declaration which is obviously not responsive to the question.

Trial Examiner Norwood: This witness may give us the facts on which he bases that conclusion. It is a very
2233 broad conclusion and goes to the heart of the issues
in this case and I am going to allow the motion to strike it.

Mr. Ewing: I will note an exception. I submit that this witness is not in a position to make any self-serving statement in the literal sense. He is not a respondent, the association is the Respondent. So that when he gives the reason Mr. Wright may regard it as self-serving.

Trial Examiner Norwood: He can't confine it to his reason.

Mr. Wright: This gentleman is an agent and employee of the Respondent.

Trial Examiner Norwood: He has attempted to give the reasons of the entire industry and I think it is a too serious matter to just treat it in that way.

Mr. Ewing: I will repeat the question limiting it to Mr. Wormser's own reasons for writing the letter.

Trial Examiner Norwood: Answer it from that point.

The Witness: I don't quite understand.

Mr. Ewing: I will rephrase the question.

By Mr. Ewing:

Q. Will you give us your own reason for writing the letter of September 18, 1934, requesting the National Recovery Administration to continue the exemption with

respect to Section II of Article 7 and Schedule "A"
2234 of the Lead Industry Code?

Q. I was instructed to do so by the pigment division, subject to the approval of our Code Authority members.

Q. Were you present at any discussion among the members of the Pigment Division at which that instruction was given to you?

A. Yes, sir.

Q. Did you hear what the representatives of the members said at that discussion?

A. Yes, sir.

Q. Will you state in words or in substance what was said in connection with the instruction?

A. Do you refer to the conversation leading up to the decision to instruct me to write this letter?

Q. That's correct, if you know.

A. I know this much—of course, what transpired 14 years ago—but the members were—

Trial Examiner Norwood: Now wait a minute. He just asked you to state what you remembered.

The Witness: I don't remember specifically.

Mr. Wright: May we take a short recess, your Honor?

Trial Examiner Norwood: We will take a short recess.

(Whereupon, a short recess was taken.)

2235 Trial Examiner Norwood: Come to order. Proceed.

Mr. Ewing: I will ask that these two sheets be marked Respondents' Exhibit 10-A and B for identification.

Trial Examiner Norwood: They will be so marked as Respondents' Exhibit 10-A and B.

(The documents referred to were marked Respondents' Exhibits 10-A and 10-B for identification.)

Trial Examiner Norwood: Proceed.

By Mr. Ewing:

Q. I show you the documents which have been marked 'Respondents' Exhibits 10-A and B for identification and ask you whether the originals thereof were received by you as secretary of the Code Authority?

A. Yes, sir; they were.

Mr. Ewing: I offer the two documents which have been marked Respondents' Exhibit 10-A and B for identification in evidence.

Trial Examiner Norwood: Is there any objection?

Mr. Wright: I object, Your Honor, on the ground that they are irrelevant and immaterial.

Trial Examiner Norwood: Objection overruled. They will be received in evidence as Respondents' Exhibits 10-A and B. Do you wish to substitute photostats for that?

Mr. Ewing: Yes, sir.

Trial Examiner Norwood: You may.

2236 (The documents referred to, heretofore marked RESPONDENTS' EXHIBITS 10-A AND 10-B for identification were received in evidence.)

By Mr. Ewing:

Q. I wish to direct your attention to that portion of the minutes of the meeting of September 25, 1934, of Respondents' Exhibit 9-E, and ask you to read to yourself the matter in the minutes under the heading "Executive order No. 6767.

A. Yes, sir.

Q. Did you advise Mr. Henderson as instructed by the Code Authority at that meeting in accordance with the statement in the minutes appearing under the heading "Executive order No. 6767"?

A. I did.

Q. I ask you to examine your minute book and see if it contains minutes of a meeting of the Code Authority held on November 16, 1934?

A. It does.

Q. I show seven photostats and ask you to examine them and state whether they are true copies of the minutes of that meeting (handing to witness)?

A. They are.

Mr. Ewing: I ask that they be marked Respondents' Exhibit 11-A to G for identification.

Trial Examiner Norwood: They will be marked
2237 Respondents' Exhibit 11-A to G for identification.

(The document referred to was marked Respondents' Exhibit 11-A, 11-B, 11-C, 11-D, 11-E, 11-F and 11-G for identification.)

Trial Examiner Norwood: Proceed.

Mr. Ewing: I offer Respondents' Exhibit 11-A to G for identification in evidence.

Trial Examiner Norwood: Is there any objection?

Mr. Wright: I object, your Honor. It is immaterial and irrelevant.

Mr. Ewing: Off the record.

Trial Examiner Norwood: Off the record.

(Discussion off the record.)

Trial Examiner Norwood: On the record. Objection overruled. They will be received in evidence as Respondents' Exhibit 11-A to G.

(The document referred to, heretofore marked for identification Respondents' Exhibit 11-A, 11-B, 11-C, 11-D, 11-E, 11-F and 11-G, was received in evidence.)

Trial Examiner Norwood: Proceed.

By Mr. Ewing:

Q. I show you a bound pamphlet issued by the Government Printing Office and ask you—I will withdraw that question.

Mr. Ewing: I will ask that this bound pamphlet be marked Respondents' Exhibit 12 for identification.

2238 Trial Examiner Norwood: It will be marked for identification as Respondents' Exhibit 12.

(The document referred to was marked Respondents' Exhibit 12 for identification.)

Trial Examiner Norwood: Proceed.

Mr. Ewing: I offer this pamphlet which is entitled "National Recovery Administration code of fair competition for the paint, varnish and lacquer manufacturing industry" in evidence.

Trial Examiner Norwood: Is there any objection?

Mr. Wright: I object on the ground that it is irrelevant and immaterial.

Trial Examiner Norwood: Objection overruled. It will be received in evidence as Respondents' Exhibit No. 12.

(The document referred to, heretofore marked for identification RESPONDENTS' EXHIBIT 12, was received in evidence.)

Trial Examiner Norwood: Proceed.

By Mr. Ewing:

Q. Now I direct your attention, Mr. Wormser, to that portion of the minutes of the meeting of November 16, 1934, of the Code Authority appearing on Respondents' Exhibit 11-C, 11-D, 11-E and 11-F headed "Consideration of action of Paint Recovery Board to procure transfer of lead 2239 in oil to paint code" and ask you to read to yourself those minutes.

A. I have read it.

Q. Directing your attention to that portion of the minutes which recites the authorization to you to write a letter to the National Recovery Administration, I ask you whether you wrote the letter so authorized?

A. I did.

Q. Was it sent to the National Recovery Administration?

A. Yes, sir.

Q. Directing your attention to the recital in the minutes to the effect that you stated that you had notified Mr. Janssen to the Paint Recovery Board's action quoting it, did you write such a letter to Mr. Janssen?

A. I did.

Q. Who was Mr. Janssen?

A. Deputy administrator of the National Recovery Administration and in charge of the lead code activities.

Q. When in your letter to the National Recovery Administration of November 19, 1934, appearing on Respondents' Exhibit 11-D and 11-E, you referred to "selling below cost provision" of the paint code, will you state whether Article 22 appearing on page 182 of Respondents' Exhibit 12 is the provision to which you referred (handing to witness)?

A. It is.

Q. Had the lead in oil industry been brought under
2240 the cost provisions of the paint code, what effect
would that have had, if any, in your opinion on the
price of white lead in oil?

Mr. Wright: I object to that question, Your Honor. It obviously calls for a conclusion on the part of the witness and he has not been established as a sufficient expert on the price of white lead in oil at that period to be able to make an intelligent answer to that question.

Trial Examiner Norwood: Read the question.

(The reporter read the question as follows:

"Q. Had the lead in oil industry been brought under the cost provisions of the paint code, what effect would that have had, if any, in your opinion on the price of white lead in oil?")

Mr. Wright: It obviously calls for an opinion and there has been no qualification of this witness as an expert.

Mr. Ewing: I submit there has been. He qualified himself yesterday as an expert.

Mr. Wright: He qualified himself yesterday as an expert engineer.

Mr. Ewing: Also as an expert in marketing and as the author of one of the outstanding texts on marketing.

Mr. Wright: He has not been qualified as an expert with regard to the conditions prevalent in the industry as of this period.

2241 Trial Examiner Norwood: I think he is an expert.

Mr. Wright: On prices?

Trial Examiner Norwood: Yes. Objection overruled. Answer the question.

The Witness: It would have raised the price of white lead.

Mr. Wright: I move that that answer be stricken, Your Honor, as an unsupported conclusion for which there is no foundation in the record.

Trial Examiner Norwood: Motion denied. He will ask him further about that.

By Mr. Ewing:

Q. Why would that have been the effect, in your opinion?

A. It would have brought the white lead in oil industry under the much stricter costing provisions of the paint code.

Mr. Wright: I move to strike that answer as not responsive.

Mr. Ewing: I think it is incomplete but it is certainly responsive.

Trial Examiner Norwood: Read the question and the answer.

(The reporter read the question and answer as follows:
"Q. Why would that have been the effect, in your
2242 opinion?"
"A. It would have brought the white lead in oil industry under the much stricter costing provisions of the paint code.")

Trial Examiner Norwood: Motion denied.

By Mr. Ewing:

Q. Are the provisions of Article 22 of the paint code, Respondents' Exhibit 12, those to which you have just referred (handing to witness)?

A. Yes, sir.

Q. Tell us how the application of those provisions to the white lead in oil industry would have increased the price of white lead in oil, in your opinion?

A. This particular provision of the paint code stipulated the specific inclusion of a great many items in the cost of selling those items that come under the paint code such as all direct costs, power and labor depreciation, figured in accordance with the provisions of the Federal income tax laws plus the proper proportion of all factory expenses and so on and so forth, quite a list of items here, all designed to increase the maximum price of paint.

White lead in oil is distinctly competitive with mixed paint and always has been. It was quite obvious to us in the white lead industry that if the paint people had been
successful in bringing white lead in oil under their
2243 own provisions they could have forced up the price
of white lead and thereby made their competitive position more secure.

Mr. Wright: I object and move that the last part of that answer be stricken as not responsive in a volunteer statement as to what the paint code authority might have had and as to the competitive situation between paint and white lead in oil.

Mr. Ewing: I have no objection to striking out the final reference to the competitive situation but the rest of the answer is perfectly responsive.

Trial Examiner Norwood: You agree that it may be stricken?

Mr. Ewing: The final reference to the competitive situation of the paint industry as distinguished from the white lead in oil.

Mr. Wright: Read the answer.

(The reporter read the answer as follows:

"A. This particular provision of the paint code stipulated the specific inclusion of a great many items in the cost of selling those items that come under the paint code such as all direct costs, power and labor depreciation, figured in accordance with the provisions of the Federal income tax laws plus the proper proportion of all factory expenses
and so on and so forth, quite a list of items here, all
2244 designed to increase the maximum price of paint.

"White lead in oil is distinctly competitive with mixed paint and always has been. It was quite obvious to us in the white lead industry that if the paint people had been successful in bringing white lead in oil under their own provisions they could have forced up the price of white lead and thereby made their competitive position more secure.")

Mr. Ewing: I have no objection to striking out "and thereby making their competitive position," etc.

Mr. Wright: It was beyond the scope of the question and it was a volunteer conclusion on the part of the witness for which there has been no proper basis laid.

Mr. Ewing: He was giving the reasons to what the effect would be.

Mr. Wright: He was stating what was in the minds of other people in his opinion.

Mr. Ewing: In his mind, it was his opinion.

Mr. Wright: It was his opinion as to what the paint people had in mind for the white lead people.

Mr. Ewing: It was the effect of the conclusion—

Trial Examiner Norwood: (Interposing) I think it can go in as this expert's opinion.

Mr. Wright: It isn't opinion evidence. That was a statement of fact of what was in the minds of people 2245 who are not involved in this case.

Trial Examiner Norwood: It is his reasons, as I understand it.

The Witness: Yes, sir.

Mr. Wright: It is obviously just a belief he had about a situation of facts according to his own answer on it.

Trial Examiner Norwood: I will deny the motion. This is received as his belief. This is his opinion about the situation.

By Mr. Ewing:

Q. Is there any other reason why bringing white lead in oil under the paint code would force the price up?

A. You mean outside—

Q. (Interposing) Of what you have just stated.

A. Well, there was another inclusion here of a sentence that I should like to read to you—

Q. (Interposing) You are reading from what?

A. I am reading from Article 22 of selling below the cost provision of the paint code.

Q. Which is Respondents' Exhibit 12.

A. "There shall also be included in the cost a proportion of the general and administrative expenses, such proportion to be determined and to be recommended by the Paint Industry Recovery Board to the administrator for approval."

2246 Mr. Ewing: Off the record.

Trial Examiner Norwood: Off the record.

(Discussion off the record.)

Trial Examiner Norwood: On the record. Proceed.

By Mr. Ewing:

Q. Will you look at the minute book, Mr. Wormser, and tell us whether there was any meeting of the Code Authority held after the Supreme Court declared the NRA unconstitutional?

A. What day, Mr. Ewing?

Q. May or early June 1935.

A. We had an informal meeting on June 11, 1935.

Q. Have you the minutes of that informal meeting?

A. Yes, sir.

Mr. Ewing: I ask that these photostats be marked Respondents' Exhibit 13-A to D for identification.

Trial Examiner Norwood: They will be marked for identification as Respondents' Exhibit 13-A to D for identification.

(The photostats referred to were marked Respondents' Exhibits 13-A, 13-B, 13-C and 13-D for identification.)

Trial Examiner Norwood: Proceed.

By Mr. Ewing:

Q. I show you these papers which have been marked Respondents' Exhibits 13-A to D inclusive for identification and ask you whether they are correct copies of the
minutes of the informal meeting of June 11, 1935
2247 and of the attached two letters (handing to witness)?

A. Yes, sir.

Mr. Ewing: I offer Respondents' Exhibits 13-A to D for identification in evidence.

Trial Examiner Norwood: Is there any objection?

Mr. Wright: I object, Your Honor, on the ground that they are immaterial and irrelevant. They contain nothing related even remotely to the issues in this matter.

Mr. Ewing: It is directly relevant on the charge that we commenced certain practices during code days and continued them afterwards.

Mr. Wright: If offered for that purpose then it is incompetent as well.

Trial Examiner Norwood: Off the record.

(Discussion off the record.)

Trial Examiner Norwood. On the record. What have you to say?

Mr. Du Bose: It shows that they agreed to wind up the affairs of the Code Authority and return the statistics theretofore that had been gathered. It certainly shows how they regarded the NRA as distinguished from the respondents in some of these other cases.

Mr. Wright: How does the fact that they sent back the documents to the Code Authority have any bearing
2248 on the issue as to whether or not the conspiracy was continued after the NRA? This doesn't mention anything about the NRA continuance or a non-continuance.

It has absolutely no bearing on the subject.

Mr. Du Bose: All of the documents tending to show conspiracy according to the Commission's allegations and contentions deal with meetings of committees which were called to consider the code. This shows that the Code Authority was wound up bang when the Schecter decision came down.

Mr. Wright: Your Honor, there is not one scintilla of evidence that I can recall at any rate on the conspiracy here which relates to the activities of the Code Authority. Now this is the Code Authority and the evidence of conspiracy relates to meetings of the various divisions of the Lead Industries Association.

There is no indication that the Lead Industries Association—

Trial Examiner Norwood: (Interposing) Does this substantially wind up this NRA angle?

Mr. Ewing: Yes, Your Honor.

Trial Examiner Norwood: I will overrule the objection and receive Respondents' Exhibit 13-A to D in evidence.

2249 (The photostats referred to, heretofore marked for identification RESPONDENTS' EXHIBITS 13-A, 13-B, 13-C and 13-D, were received in evidence.)

Trial Examiner Norwood: That was on June 27th?

Mr. Du Bose: May 27th.

By Mr. Ewing:

Q. I show you Respondents' Exhibit 13-C and ask you whether you received the original thereof (handing to witness)?

A. I did.

Q. I direct your attention to the last paragraph of the minutes appearing on Respondents' Exhibit 13-A and B and I ask you whether you did return to each member of the industry, the labor statistics furnished it, if any, from time to time at the request of the Code Authority?

A. I did.

Q. Other than the statistical matter about which you have already testified, what statistics or reports, if any, did the Code Authority require of its membership?

A. None other than labor statistics.

Q. Was the Code Authority liquidated subsequent to June 11, 1935?

A. Yes, sir.

Q. As far as you know was there at any time after June 11, 1935, any attempt made by members of the Lead Industries Association to continue any of the activities authorized by the code? 2250

A. None whatsoever.

Q. That is as far as you know?

A. As far as I know, yes.

Mr. Wright: Off the record.

Trial Examiner Norwood: Off the record.

(Discussion off the record.)

Trial Examiner Norwood: On the record. Proceed.

Mr. Ewing: I ask that this be marked Respondents' Exhibit 14 for identification.

Trial Examiner Norwood: It will be so marked as Respondents' Exhibit 14 for identification.

(The document referred to was marked Respondents' Exhibit 14 for identification.)

Mr. Ewing: I ask that you mark this as Respondents' Exhibit 15-A and B for identification.

Trial Examiner Norwood: It will be marked as Respondents' Exhibit 15-A and B for identification.

(The document referred to was marked Respondents' Exhibit 15-A and 15-B for identification.)

Trial Examiner Norwood: Proceed.

By Mr. Ewing:

Q. I show you this document marked Respondents' Exhibit 14 for identification and ask you if you received that (handing to witness)?

2251 A. Yes, sir.

Mr. Ewing: I offer Respondents' Exhibit 14 for identification in evidence.

Trial Examiner Norwood: Is there any objection?

Mr. Wright: I object to that, Your Honor. It is absolutely irrelevant and immaterial and incompetent. It can't prove anything that has anything to do with this case. On its face it is a letter.

Mr. Ewing: It is a letter from the Department of Justice with respect to the organization of the lead industries.

Mr. Wright: What the Department of Justice might have thought of the Lead Industries Association from 1928 or at any other time has no bearing with regard to a conspiracy in this matter.

Trial Examiner Norwood: Will this be connected up?

Mr. Ewing: Yes.

Mr. Wright: How can it possibly be connected up and made material?

Trial Examiner Norwood: I will overrule the objection and receive Respondents' Exhibit 14 for identification in evidence.

(The document referred to, heretofore marked for identification RESPONDENTS' EXHIBIT 14, was re- 2252 ceived in evidence.)

Mr. Wright: Is that subject to connection, Your Honor?

Trial Examiner Norwood: Yes.

By Mr. Ewing:

Q. Did you reply to the letter, Respondents' Exhibit 14 in evidence?

A. Yes, sir; I did.

Q. I show you Respondents' Exhibit 15-A and B for identification and ask you if that is a copy of your reply (handing to witness)?

A. It is.

Mr. Ewing: I offer Respondents' Exhibit 15-A and B for identification in evidence.

Trial Examiner Norwood: Is there any objection?

Mr. Wright: I made the same objection to this. It is a self-serving statement in the form of a letter which can have absolutely no materiality or relevancy to the issues in this case.

It is incompetent as proof relating to any issue in the matter. We already have in the record the constitution and by-laws of the Lead Industries Association.

Trial Examiner Norwood: Does this witness say anything here that he couldn't tell us directly?

Mr. DuBose: If Your Honor please, the complaint 2253 in count No. 1, paragraph 7, subdivision "B" says that these respondents used the Lead Industries Association as a medium to agree on certain practices which are in restraint of trade.

We believe that these documents as well as others that we will offer later show the complete background and activities of the Lead Industries Association, how it was organized, how from the beginning the facts were revealed to everybody in all governmental agencies, how it operated, and how it could not have been used by these respondents or any other group as a medium to engage in practices in restraint of trade.

There is a broad allegation in the complaint and we feel we are entitled to cut off any possible inference that might be drawn by our failure to show the complete record of the Lead Industries Association.

Trial Examiner Norwood: Is it necessary to show every activity of the Lead Industries in order to negative the charge as to one of its activities?

Mr. DuBose: No, sir. But this is a request from the Department of Justice which is engaged in prosecuting trade associations which foster restraint of trade. They asked us, "What are your purposes?"

We wrote them back and had a meeting with them. We sent them a statistical report and they gave us a reserve carte blanche.

2254 Mr. Wright: Your Honor, how in the world could a reserve carte blanche or any correspondence between this Association and the Department of Justice in 1928 relating to the general objectives of the Association have any effect or any bearing by any stretch of the imagination on a conspiracy which occurred in 1933 and 1934?

Trial Examiner Norwood: I think you are going too far along this line.

Mr. DuBose: If Your Honor please, there is in evidence by the Commission an Exhibit No. 92 which is a report of the Stockholders Committee of the American Smelting and Refining Company and which is not a respondent in this case, admitted for the purpose of showing background.

It was a majority report. There is also in evidence Commission's Exhibit 24 which is a history of the American Smelting and Refining Company that goes back—purports to be a history—as far as 1906 or 1900 which purports also to show some background. I say if those two documents are admissible all of this material is admissible on the ground of showing purpose of these respondents as well as others on the formation of the Lead Industries Association.

Mr. Wright: Your Honor, I don't really have any serious objection to this correspondence because I don't believe it proves anything. But if we are going to permit this record to be burdened with letters and statements
2255 from all the people who might say that they know of
no purpose on the part of these respondents or the Lead Industries Association to engage in any combination or conspiracy, it is going to be an endless proposition. It has no probative value and it has no relevance.

Trial Examiner Norwood: I don't see that this adds anything to what you have already put in with respect to the background.

Mr. Wright: I might say that the same considerations apply to Respondents' Exhibit 14.

Trial Examiner Norwood: I think I will reverse my ruling on Exhibit 14 and sustain the objection on this for the time being. If it appears to be relevant later on, we can take it in.

Mr. DuBose: Your Honor, in admitting Exhibit 24 and 92, Your Honor ruled that they were to be admitted subject to connection; that if they were not connected they would be subject to a motion to strike.

Trial Examiner Norwood: That is right.

Mr. DuBose: All we ask for is the same treatment with respect to these exhibits.

Trial Examiner Norwood: I think I will sustain the objection to that for the time being.

Mr. DuBose: Exception.

2256 Trial Examiner Norwood: And I will reverse the
ruling on Exhibit 14 which was merely a connecting paper here and leave that out now.

Mr. Ewing: I suggest a recess at this time until 2:00 o'clock, Your Honor.

Trial Examiner Norwood: We will recess at this time until 2:00 o'clock.

(Whereupon, at 12:20 o'clock p. m., a recess was taken until 2:00 p. m., this day.)

2257 Afternoon Session.

2:00 p. m.

Trial Examiner Norwood: Come to order. Proceed.

Mr. DuBose: Off the record.

Trial Examiner Norwood: Off the record.

(Discussion off the record.)

Trial Examiner Norwood: Proceed.

Mr. DuBose: I ask that this be marked Respondent's Exhibit 16 for identification.

Trial Examiner Norwood: It will be so marked.

(The document referred to was marked Respondent's Exhibit No. 16 for identification.)

Mr. DuBose: I ask that this document be marked Respondent's Exhibit 17 for identification.

Trial Examiner Norwood: It will be so marked for identification.

(The document referred to was marked Respondent's Exhibit 17 for identification.)

Mr. DuBose: And that these others be marked respectively Respondents' Exhibits 18, 19, 20, 21, 22 and 23 for identification.

Trial Examiner Norwood: They will be so marked.

(The documents above referred to were marked Respondents' Exhibits 18, 19, 20, 21, 22 and 23, for identification.)

Trial Examiner Norwood: Proceed.

2258 **FELIX E. WORMSER**, a witness called on behalf of the Respondent, having been previously sworn, resumed the stand and testified further as follows:

Direct Examination (Continued) by Mr. DuBose.

Q. Mr. Wormser, I show you Respondent's Exhibit 16 for identification and ask you what it is? Just identify it (handing same to witness).

A. It is a letter to me from the assistant to the Attorney General, Mr. William J. Donovan, dated October 2, 1928.

Q. I show you Respondent's Exhibit 17 for identification and ask you what that is (handing same to witness)?

A. It is a letter from me to Col. Donovan, Assistant

Attorney General of the United States, dated December 6, 1928.

Q. Is it a copy of a letter?

A. A copy of a letter, I am sorry.

Q. I show you Respondent's Exhibit 18 for identification and ask you what that is (handing same to witness)?

A. A letter from Col. Donovan to me dated December 8, 1928.

Q. I show you Respondent's Exhibit 19 for identification and ask you what that is?

A. A letter to me from Col. Donovan dated December 15, 1928.

Q. I show you Respondent's Exhibit 20 for identification and ask you what that is?

2259 A. This is a copy of a letter from me to Col. Donovan, Assistant to the Attorney General, dated December 20, 1928.

Q. I show you a document marked Respondent's Exhibit 21 for identification and ask you what that is?

A. This is a copy of a letter to Col. Donovan, Assistant to the Attorney General, from me dated January 18, 1929.

Q. I show you a document marked Respondent's Exhibit 22 for identification and ask you what that is?

A. This is a letter from Col. Donovan, Assistant to the Attorney General, to me, dated January 26, 1929.

Q. I show you a document marked Respondent's Exhibit 23 for identification and ask you what that is?

A. This is a copy of a letter from me to Col. Donovan, Assistant to the Attorney General, dated February 2, 1929.

Mr. DuBose: I offer in evidence Respondent's Exhibits for identification 16, 17, 18, 19, 20, 21, 22 and 23 and, at the same time, I reoffer Exhibits which were ruled upon prior to the noon recess, Respondent's Exhibit 14 for identification and 15-A and B for identification as being all part of the same general line of correspondence with the Department of Justice at or about the time of the formation of the Lead Industries Association.

In that connection, or rather, in connection with the reoffer of exhibits for identification 14 and 15-A and
2260 B, I should like to call your Honor's attention to the
second paragraph of Respondent's Exhibit 15-A for identification. May I ask one more question of the witness on these documents?

Trial Examiner Norwood: Yes.

By Mr. DuBose:

Q. Mr. Wormser, in connection with this correspondence of the Department of Justice which has been marked Respondent's Exhibits for identification 14 through 23 inclusive, are these records kept in the regular course of business by the Lead Industries Association?

A. They are.

Mr. DuBose: I now reoffer them along the same lines that I did before.

Mr. Wright: Your Honor, all of these exhibits are in the same category and I renew my objection to them on the same grounds that I stated before. I would like to call your attention to a statement which appears in Respondent's Exhibit 19 for identification, namely, in the letter which has been identified as being received by Mr. Wormser from the Assistant to the Attorney General William J. Donovan, dated December 15, 1928, where it is stated that the Department's—

Mr. DuBose: I don't think there should be any statement about what the exhibit shows until it is in
2261 evidence.

Mr. Wright: I submit that you are calling the attention of the Examiner to paragraphs in those earlier exhibits and I should have the same right. I am calling your Honor's attention to the third paragraph of Respondent's Exhibit 19, particularly which illustrates that these papers have absolutely no relevancy as to the question of whether or not there was at that time, or has ever been subsequently, any combination or conspiracy or unlawful purpose on the part of the Lead Industries Association or any member of it. It simply has no probative value and it is a waste of our time to receive it in the record.

Mr. DuBose: In connection with Mr. Wright's statement that these exhibits do not contravene any purpose that the Lead Industries Association might have had, I again call your Honor's attention to the second paragraph in Respondent's Exhibit 15-A.

Mr. Wright: I might say that the fact that the Lead Industries Association may have written letters to 130,000,000 people at the time of its organization stating what their purpose were, would have no probative value in the question that we have presented here, namely, as to what has been done by the association in subsequent years.

Mr. DuBose: Well, this, your Honor, is a con-
2262 temporaneous document kept in the regular course of business and for that purpose may be employed to show purpose of the minds of the members of the Lead Industries Association at the time of the formation of that association.

Mr. Wright: It is not a part of the res gestae. It doesn't qualify in that way at all if that is what counsel's intention is.

Trial Examiner Norwood: Off the record.

(Discussion off the record.)

Trial Examiner Norwood: On the record.

I will reserve the ruling on the last exhibits proffered here, Respondent's Exhibits 14 to 23 inclusive, until tomorrow morning and in the meantime I will study the papers and see if I can see any points of relevancy.

Mr. DuBose: May I state on the record that in the Sugar Institute case, the Respondents were permitted to prove the circumstances surrounding the formation and organization of the Sugar Institute where there it was claimed that the Institute was formed at the instigation of the Department of Justice.

Trial Examiner Norwood: How did they prove that? What kind of evidence did they use?

Mr. DuBose: I don't know. I never studied the record, but I know they were allowed to prove it.

2263 Trial Examiner Norwood: Well, you should be allowed to prove that here, certainly you should.

This goes to the character of this evidence.

Mr. Wright: There is a statement of the purposes of the organization in the constitution and by-laws which are already contained in the record.

Trial Examiner Norwood: Proceed with your exhibits.

Mr. DuBose: We have no other exhibits to offer at this time and I request that we go off the record as to the future procedure here.

Trial Examiner Norwood: Off the record.

(Discussion off the record.)

Trial Examiner Norwood: On the record.

Mr. DuBose: Your Honor, while the reporter is marking various documents at the request of counsel for the Respondent, National, for identification, I should like to make a motion to adjourn until 10 o'clock tomorrow morning.

Trial Examiner Norwood: The motion is allowed. We will now adjourn until 10 o'clock tomorrow morning.

(Whereupon, at 2:30 o'clock, p. m., a recess was taken until April 24, 1947, at 10:00 o'clock, a. m.)

2264

Trial Room,
Bar Association Building,
36 West 44th Street,
New York, N. Y.,
April 24, 1947.

Met, pursuant to adjournment, at 10:00 a. m.

Before:

John W. Norwood, Trial Examiner.

Appearances:

Joseph S. Wright, Esq., appearing for the Federal Trade Commission.

J. T. Welch, Esq., (Davies, Richberg, Beebe, Busick & Richardson, 15th Street, N. W., Washington, D. C.), appearing for Sherwin Williams Company.

Edmund P. Wood, Esq., 2801 Carew Tower, Cincinnati, Ohio, appearing for Eagle Picher Lead Company, and Eagle Picher Sales Company.

Robert H. Ecker, (Chadbourne, Wallace, Parke & Whiteside, 25 Broadway, New York, N. Y.), appearing for Anaconda Copper Mining Company and International Smelting & Refining Company.

James D. Ewing, Esq., (Alexander & Green, 120 Broadway, New York, N. Y.), appearing for the National Lead Company.

2264-A E. Z. DuBose, Esq., (Alexander & Green, 120 Broadway, New York, N. Y.), appearing for the National Lead Company.

Roger Hinds, Union Commerce Building, Cleveland, Ohio, appearing for the Glidden Company.

2265

PROCEEDINGS.

Trial Examiner Norwood: Come to order.

Pursuant to adjournment of yesterday, the hearing in Docket No. 5253 is now convened in Room 605, Bar Association Building, 38 West 44th Street, New York, N. Y., at 10 o'clock, a. m., April 24, 1947.

The appearances are as follows:

J. T. Welch, appearing for the Sherwin Williams Company.

Edmund P. Wood, appearing for Eagle Picher Lead Company and Eagle Picher Sales Company.

Robert H. Ecker, appearing for Anaconda Copper Mining Company and International Smelting and Refining Company.

James D. Ewing and E. Z. DuBose, appearing for the National Lead Company.

I have read these Respondent exhibits 14 to 23, and while I have not changed my opinion as to its relevancy to the vital issues in the case, I think in an investigation of this kind that counsel for the Respondents, if they insist, might be permitted to put that in. So I am overruling the objection and receiving those exhibits in evidence without setting any precedent for myself in case I think that the investigation is getting too broad.

Mr. Wright: Exception.

2266 Trial Examiner Norwood: Let the record show that Respondent's Exhibits 15-A and B, 16 to 23 inclusive are received in evidence.

(The documents referred to, heretofore marked RESPONDENT'S EXHIBITS 15-A, 15-B, 16, 17, 18, 19, 20, 21, 22, and 23 for identification, were received in evidence.)

Trial Examiner Norwood: Proceed.

FELIX E. WORMSER was thereupon recalled as a witness for the Respondent, and having been previously sworn, resumed the stand and testified further as follows:

Mr. Ewing: Mark this for identification as Respondent's Exhibits 24-A to 69-B inclusive.

Trial Examiner Norwood: They will be so marked.

(The documents referred to were marked RESPONDENT'S EXHIBITS 24-A, 24-B, 24-C; 25-A, 25-B, 25-C;

26-A, 26-B, 26-C, 26-D; 27-A, 27-B, 27-C, 27-D, 27-E; 28-A,
28-B, 28-C, 28-D; 29-A, 29-B; 30-A, 30-B, 30-C, 30-D, 30-E,
30-F, 30-G, 30-H, 30-I, 30-J; 31-A, 31-B, 31-C, 31-D,
31-E; 32; 33-A, 33-B, 33-C, 33-D, 33-E, 33-F, 33-G; 34-A,
34-B, 34-C, 34-D, 34-E, 34-F, 34-G, 34-H, 34-I; 35-A, 35-B,
35-C, 35-D, 35-E, 35-F, 35-G; 36; 37-A, 37-B; 38-A, 38-B,
38-C, 38-D, 38-E, 38-F, 38-G, 38-H, 38-I, 38-J, 38-K,
2267 38-L, 38-M, 38-N, 38-O, 38-P, 38-Q; 39-A, 39-B, 39-C,
39-D, 39-E, 39-F, 39-G, 39-H, 39-I, 39-J; 40-A, 40-B,
40-C, 40-D, 40-E, 40-F, 40-G, 40-H; 41-A, 41-B, 41-C;
42-A, 42-B, 42-C, 42-D, 42-E, 42-F, 42-G, 42-H, 42-I, 42-J,
42-K, 42-L; 43-A, 43-B, 43-C, 43-D; 44-A, 44-B, 44-C, 44-D,
44-E, 44-F; 45-A, 45-B, 45-C, 45-D, 45-E, 45-F, 45-G, 45-H,
45-I, 45-J; 46-A, 46-B; 47-A, 47-B, 47-C, 47-D, 47-E, 47-F,
47-G; 48-A, 48-B, 48-C, 48-D, 48-E; 49-A, 49-B, 49-C, 49-D,
49-E; 50-A, 50-B, 50-C, 50-D, 50-E, 50-F, 50-G, 50-H, 50-I,
50-J, 50-K, 50-L, 50-M, 50-N, 50-O, 50-P; 51-A, 51-B;
52-A, 52-B, 52-C, 52-D, 52-E, 52-F, 52-G, 52-H, 52-I,
52-J, 52-K, 52-L, 52-M, 52-N, 52-O; 53-A, 53-B; 54-A, 54-B,
54-C, 54-D, 54-E, 54-F, 54-G; 55; 56-A, 56-B, 56-C, 56-D,
56-E, 56-F, 56-G; 57-A, 57-B, 57-C, 57-D, 57-E, 57-F; 58-A,
58-B, 58-C, 58-D, 58-E, 58-F, 58-G, 58-H, 58-I, 58-J, 58-K,
58-L, 58-M, 58-N, 58-O; 59-A, 59-B, 59-C, 59-D, 59-E, 59-F,
59-G; 60-A, 60-B, 60-C, 60-D, 60-E, 60-F, 60-G, 60-H, 60-I,
60-J, 60-K; 61-A, 61-B, 61-C, 61-D, 61-E, 61-F, 61-G, 61-H,
61-I; 62-A, 62-B, 62-C, 62-D, 62-E, 62-F, 62-G, 62-H, 62-I,
62-J, 62-K, 62-L, 62-M, 62-N; 63-A, 63-B, 63-C, 63-D, 63-E,
63-F, 63-G, 63-H, 63-I, 63-J; 64-A, 64-B, 64-C, 64-D, 64-E,
64-F, 64-G, 64-H; 65-A, 65-B, 65-C, 65-D, 65-E, 65-F, 65-G,
65-H, 65-I, 65-J, 65-K, 65-L, 65-M, 65-N, 65-O; 66-A, 66-B,
66-C, 66-D, 66-E, 66-F; 67-A, 67-B, 67-C, 67-D, 67-E,
2268 67-F, 67-G; 68-A, 68-B, 68-C, 68-D, 68-E, 68-F, 68-G,
68-H, 68-I, 68-J; 69-A, 69-B for identification.)

Direct Examination (Continued) by Mr. Ewing.

Q. Mr. Wormser, I show you Respondent's Exhibit 15-A, and direct your attention to the second paragraph (handing same to witness).

A. Yes, sir.

Q. Were you present at any meeting leading up to the organization of the Lead Industries Association?

A. Yes, sir.

Mr. Wright: Off the record.

Trial Examiner Norwood: Off the record.

(Discussion off the record.)

Trial Examiner Norwood: On the record. Proceed.

By Mr. Ewing:

Q. Do you know of your own knowledge what the feeling among producers and consumers of lead was with respect to the matters referred to in the second paragraph of Respondent's Exhibit 15-A? That will call for a yes or no answer.

A. Yes.

Mr. Wright: I object to that, your Honor, and move that it may be stricken. What the producers of lead might have had in mind about the objectives of the association
has nothing to do with respect to these Respondents
2269 insofar as one of them, I believe, is also a producer
of lead.

Trial Examiner Norwood: The objection came after the answer and he is merely stating that he has that knowledge. I think that the question and the answer may stand. Now, what seems to be coming up is another question which we will consider when it does come. Proceed.

By Mr. Ewing:

Q. Is your answer still the same? That is, yes? If in using the word "producers" in my question I use it in the broad sense so as to include the miners, smelters and makers of lead products.

A. My answer still stands as yes.

Q. Will you state what the feeling was with respect to the matters referred to in the second paragraph of Respondent's Exhibit 15-A?

A. The feeling of producers with respect to the contents of the second paragraph of this letter was that the objectives outlined here were along their own personal ideas.

Q. I hand you the minute book of the Board of Directors' meeting of the Lead Industries Association, Mr. Wormser, and ask you to examine Respondent's Exhibit 24-A to C and state whether it is a correct copy of the minutes of the directors' meeting of the association held on November 14, 1928?

Mr. Wright; I object, y Honor. That has not been identified as the minute book 't except by counsel.

2270 Mr. Ewing: Do you want me to ask him if that is the minute book—I will be happy to do that.

Trial Examiner Norwood: The question is, are those the minutes?

Mr. Ewing: I understood that he wanted me to ask Mr. Wormser what this book is so that these would be a basis for comparison.

Mr. Wright: Your Honor, my purpose was that the minutes should be identified before there was testimony as to whether or not this was a true copy of the same. That is, those particular minutes.

By Mr. Ewing:

Q. Will you look at the minute book and state whether there was a directors' meeting on November 14, 1928 and if so, whether you have the minutes?

A. Yes, sir; there was a meeting of the directors on November 14, 1928. I have the minutes here.

Q. Will you compare the photostats, Respondent's Exhibit 24-A to C for identification with the original minutes of November 14, 1928 and state whether the photostats are correct copies?

A. They are.

Q. Who acted as secretary at that meeting?

A. I did.

Mr. Ewing: I offer Respondent's Exhibit 24-A to
2271 C for identification in evidence.

Trial Examiner Norwood: Is there any objection?

Mr. Wright: Your Honor, I object to the introduction of this exhibit into evidence since it is wholly irrelevant and immaterial to any issue involved in the case.

Mr. Ewing: Our position is the same with respect to these minutes as it was with regard to the Code Authority minutes. We wish to show, and I think we are entitled to show, the nature of the activities of the Lead Industries Association in some detail so as to indicate what it did and what its directors were trying to have it do.

Trial Examiner Norwood: It will be received in evidence as Respondent's Exhibit 24-A to C. Objection overruled.

(The documents referred to, heretofore marked RESPONDENT'S EXHIBIT 24-A, 24-B and 24-C for identification, was received in evidence.)

Trial Examiner Norwood: Proceed.

By Mr. Ewing:

Q. Will you state whether in determining the membership of the Board of Directors of the Lead Industries Association any consideration was given to geographic and product representation?

A. Yes, sir.

Q. What consideration was given to the question 2272 of representation?

A. Consideration was given to the wide scope of the membership so that all products represented in it would find representation on the board and also so that the geographical areas, inasmuch as we were a nation-wide organization, would have representation.

Q. Now, I ask you to look at the minute book and see if you have the minutes of the meeting of the Board of Directors of February 20, 1929?

A. Yes, sir.

Q. I show you three documents which have been marked Respondent's Exhibit 25-A to C for identification, and ask you whether they are correct copies of the minutes of that meeting?

A. They are.

Q. Who acted as secretary at that meeting?

A. I did.

Mr. Ewing: I offer Respondent's Exhibit 25-A to C for identification, in evidence.

Trial Examiner Norwood: Is there any objection?

Mr. Wright: I object, your Honor. There is absolutely nothing in this document in any way related to any issue in this case. There is no action by that association that is even remotely related to any issue in the case.

2273 Trial Examiner Norwood: What do you want to show by this?

Mr. Ewing: The same as before. We were faced with the problem in a sense of proving a negative and to establish the character of this association and what it did. We propose to show exactly what it did do.

Mr. Wright: Mr. Ewing, is it your intention to put in evidence the complete minutes of the Lead Industries Association from the date of its organization down to now?

Mr. Ewing: I propose to offer all the directors' minutes and the executive committee minutes and the annual meeting minutes. No, in some cases, as it appears on the face of this, they are blank as far as the direct bearing on the issues here are concerned but—

Mr. Wright: I object to that on the ground that it clutters the record. I am sure that the activities that we are talking about never did appear in the minutes of the whole organization which was not primarily concerned with pigments.

Mr. Ewing: You have put in certain minutes of pigments meetings and other meetings, and we have put in so far the meetings under the Code Authority. Your very statement just now suggests the kind of contention that we are going to have to meet that there were other minutes and
other meetings. Now, I say that a showing of the
2274 records of the association of its executive committee,
its Board of Directors and its annual meeting taken
with the meetings of the Code Authority and the offers made by the Commission at least enables us to meet, as far as possible as we can, the innuendo and inference which he has drawn.

As far as cluttering the record is concerned, the Commission has already put in thousands of papers and we are not going to have any substantial documentation as compared with theirs.

Trial Examiner Norwood: Off the record.

(Discussion off the record.)

Trial Examiner Norwood: On the record. Proceed.

Mr. Hinds: If your Honor please, on an issue of conspiracy where both the proponent and those having the negative necessarily are going to rely on inferences, although we shall also have definite negative testimony, it seems to me that we want to find out what sort of people these conspirators were.

As Mr. Du Bose says, you want to show that as far as there is any record, their acts show they are innocent of these charges and they show constructive purposes to show what type of men they are. Now, very fine men may rob a bank. Now, it renders this less probable and under that theory it seems to me that a negative showing is pertinent.

Mr. Wright: If it is the witness' intention or if
2275 it is counsel's intention to identify the whole minute
book and offer it in evidence, I would have no serious objection to that.

Mr. Ewing: I intend to identify all of the directors' minutes in this book from the first meeting, which is in already, to April 1946. We have photostats of all of them and we will have a complete set for Mr. Wright. Some of them will be the subject of comparatively few specific questions as far as I am concerned.

Trial Examiner Norwood: This proffer is pending here with regard to Respondent's Exhibit 25-A to C. The objection is overruled and they will be received in evidence.

(The documents referred to, ~~heretofore marked~~ RESPONDENT'S EXHIBITS 25-A, 25-B, and 25-C for identification, was received in evidence.)

Trial Examiner Norwood: Proceed.

By Mr. Du Bose:

Q. Mr. Wormser, I ~~show~~ you Respondent's Exhibit 26-A to 69-B inclusive for identification and I ask you to take these photostatic copies of the minutes and compare them with the minutes in the original minute book that you have and state first whether all of the minutes of all of the meetings are contained in this list of exhibits for identification which I have just referred to of the directors' meetings.

2276 Mr. Ewing: May we have a short recess, your Honor, to permit the witness to examine the exhibits?

Trial Examiner Norwood: We will take a short recess in order to permit the witness to examine the exhibits.

(Whereupon, a short recess was taken.)

Trial Examiner Norwood: On the record. Answer the question.

The Witness: They are.

By Mr. Du Bose:

Q. I offer in evidence Respondent's Exhibits for identification 26-A to D, 27-A to E, 28-A to D, 29-A and B, 30-A to J, 31-A to E, 32, 33-A to G, 34-A to I, 35-A to G, 37-A and B, 38-A to Q, 39-A to J, 40-A to H, 41-A to C, 42-A to L, 43-A to D, 44-A to F, 45-A to J, 46-A and B, 47-A to G, 48-A to E, 49-A to E, 50-A to P, 51-A and B, 52-A to O, 53-A and B, 54-A to G, 56-A to G, 57-A to F, 58-A to O, 59-A to G, 60-A to K, 61-A to I, 62-A to N, 63-A to J, 64-A to H, 65-A to O, 66-A to F, 67-A to G, 68-A to J, 69-A and B, which are photostatic copies of all of the minutes of the meetings of the Board of Directors of the Lead Industries Association from May 29, 1929 to and including April 26, 1946.

May I on the record amend the offer to eliminate Respondent's Exhibit 45-A to J for identification since that is already in the record.

Trial Examiner Norwood: It may be considered
2277 withdrawn but the other exhibit numbers will still retain the numbers as originally given to them. Proceed.

Mr. Wright: I would like to ask the witness one or two questions on the voir dire.

Trial Examiner Norwood: Proceed.

Mr. Wright: Did I understand you to state that these were all of the minutes of the Lead Industries Association from May 29, 1929 to April 26, 1946?

The Witness: Of the Board of Directors.

Mr. Wright: There were other organizations or divisions of the Lead Industries Association which kept minutes?

The Witness: Yes, sir.

Trial Examiner Norwood: That is exclusive of the one that was withdrawn there?

Mr. Du Bose: That is on the record, I believe, your Honor.

Mr. Wright: That was not one of the minutes.

Mr. Du Bose: That was annexed to one of the minutes.

Mr. Wright: Your Honor, I object to these exhibits on the ground that they are incompetent and immaterial and on the further ground that it is obvious from the face of them, by examining them, that they are not the best evidence of the activities of these Respondents in the Lead Industries Association.

2278 Now, I direct your attention to the minutes of the Board of Directors in the period from 1933 to 1934, which are barren of any of the activities which are shown to have been engaged in by the two committees of the Pigments Division during that period. In other words, these documents are a source of information which don't have any bearing on the issues. They are not the best evidence as to what was being done.

Mr. Du Bose: You mean they are not the best evidence of what you claim is being done.

Mr. Wright: Of what was being done by the association.

Mr. Hinds: It is the best evidence of what was not done.

Mr. Wright: They are good evidence of what was not done.

Mr. Hinds: Splendid evidence.

Trial Examiner Norwood: They are evidence of what was done with regard to these committees at these meetings.

Mr. Wright: No, sir. These are minutes of the Board of Directors, the governing body of the whole Lead Industries Association which has been testified here covers the mining and smelting and processing of lead in all its phases and not just the activities of the producers and sellers of pigments.

2279 The producers and sellers of pigments' activities are covered in the minutes of the Pigments Division and the sub-committees.

Trial Examiner Norwood: Counsel has the privilege to get those minutes and put them in evidence if he wants to. I said these minutes, in connection with my previous remarks, these are evidence of what happened at these meetings and I think they are as good evidence as you can get.

Mr. Wright: If your Honor please, if you will examine the minutes there of 1933 and 1934, it will appear obvious that it doesn't reflect what the pigments producers were doing at that time since we already have some minutes of that period of the Pigments Division. The minutes of the Board of Directors in that period are barren of any activities of the Pigments Division.

Trial Examiner Norwood: What have you to say to that, Mr. Ewing?

Mr. Ewing: I say in answer to that that it is true, of course, that there was a Pigments Division and that Mr. Wright has offered evidence in the form of minutes of meetings of the dry white lead group and the white lead in oil sub-committee. But it is also true that the Pigments Division is represented and the Board of Directors, as Mr. Wright says, is the governing body of the

2280 association and to show the nature of the association's work and its activities generally, I say as I have said before, that these minutes are pertinent.

Trial Examiner Norwood: Objection overruled. The exhibits will be received as marked. That is, Respondent's Exhibits for identification 26-A to 69-B, with the exception of Respondent's Exhibit 36, 45-A to J and Respondent's Exhibit 55.

(The documents above referred to, heretofore marked RESPONDENT'S EXHIBITS 26-A, 26-B, 26-C, 26-D;

27-A, 27-B, 27-C, 27-D, 27-E; 28-A, 28-B, 28-C, 28-D;
29-A, 29-B; 30-A, 30-B, 30-C, 30-D, 30-E, 30-F, 30-G,
30-H, 30-I, 30-J; 31-A, 31-B, 31-C, 31-D. 31-E; 32;
33-A, 33-B, 33-C, 33-D, 33-E, 33-F, 33-G; 34-A, 34-B,
34-C, 34-D, 34-E, 34-F, 34-G, 34-H, 34-I; 35-A, 35-B,
35-C, 35-D, 35-E, 35-F, 35-G; 37-A, 37-B; 38-A, 38-B,
38-C, 38-D, 38-E, 38-F, 38-G, 38-H, 38-I, 38-J, 38-K,

39-D, 39-E, 39-F, 39-G, 39-H, 39-I, 39-J; 40-A, 40-B,
40-C, 40-D, 40-E, 40-F, 40-G, 40-H; 41-A, 41-B, 41-C; 42-A,
42-B, 42-C, 42-D, 42-E, 42-F, 42-G, 42-H, 42-I, 42-J, 42-K,
42-L; 43-A, 43-B, 43-C, 43-D; 44-A, 44-B, 44-C, 44-D, 44-E,
44-F; 46-A, 46-B; 47-A, 47-B, 47-C, 47-D, 47-E, 47-F, 47-G;
48-A, 48-B, 48-C, 48-D, 48-E; 49-A, 49-B, 49-C, 49-D,
2281 49-E; 50-A, 50-B, 50-C, 50-D, 50-E, 50-F, 50-G, 50-H,
50-I, 50-J, 50-K, 50-L, 50-M, 50-N, 50-O, 50-P; 51-A,
51-B; 52-A, 52-B, 52-C, 52-D, 52-E, 52-F, 52-G, 52-H, 52-I,
52-J, 52-K, 52-L, 52-M, 52-N, 52-O; 53-A, 53-B; 54-A, 54-B,
54-C, 54-D, 54-E, 54-F, 54-G; 56-A, 56-B, 56-C, 56-D, 56-E,
56-F, 56-G; 57-A, 57-B, 57-C, 57-D, 57-E, 57-F; 58-A, 58-B,
58-C, 58-D, 58-E, 58-F, 58-G, 58-H, 58-I, 58-J, 58-K, 58-L,
58-M, 58-N, 58-O; 59-A, 59-B, 59-C, 59-D, 59-E, 59-F, 59-G;
60-A, 60-B, 60-C, 60-D, 60-E, 60-F, 60-G, 60-H, 60-I, 60-J,
60-K; 61-A, 61-B, 61-C, 61-D, 61-E, 61-F, 61-G, 61-H, 61-I;
62-A, 62-B, 62-C, 62-D, 62-E, 62-F, 62-G, 62-H, 62-I, 62-J,
62-K, 62-L, 62-M, 62-N; 63-A, 63-B, 63-C, 63-D, 63-E, 63-F,
63-G, 63-H, 63-I, 63-J; 64-A, 64-B, 64-C, 64-D, 64-E, 64-F,
64-G, 64-H; 65-A, 65-B, 65-C, 65-D, 65-E, 65-F, 65-G,
65-H, 65-I, 65-J, 65-K; 65-L, 65-M, 65-N, 65-O; 66-A, 66-B,
66-C, 66-D, 66-E, 66-F; 67-A, 67-B, 67-C, 67-D, 67-E, 67-F,
67-G; 68-A, 68-B, 68-C, 68-D, 68-E, 68-F, 68-G, 68-H, 68-I,
68-J; 69-A, 69-B, for identification, were received in
evidence.)

2282 Trial Examiner Norwood: Proceed.

By Mr. Ewing:

Q. Mr. Wormser, I ask you to turn to the minutes of the directors' meeting of October 1, 1930, photostatic copies of which are in evidence as Respondents' Exhibit 31-A to E inclusive.

A. I have it.

Q. And I ask you to state whether you acted as secretary at that meeting?

A. I did.

Q. I direct your attention to sub-paragraph 5 of your report as set forth in these minutes which appears on Respondents' Exhibit 31-C.

A. I have it.

Q. And ask you to read it to yourself.

A. I have read it.

Q. Where did you obtain the figures referred to in that paragraph?

A. From the statistics of the U. S. Bureau of Mines.

Q. I call your attention to the statement in that paragraph to the effect that the white lead business is an important outlet for lead, and ask you to explain what you meant by that statement?

A. I meant by that that the manufacture of white lead at this particular time was one of the most important
2283 outlets for the lead miner in the United States in the sale of pig lead.

At times it was the principal outlet. But during this period I think it was ranked second or third. But at any rate, it was and still is, as a matter of fact, one of the major outlets for the lead miners of the United States.

Q. I call your attention to your reference in that paragraph to the statement to the effect—I will withdraw the question.

I call your attention to the statement in that paragraph to the effect that one of the principal objects for which the Association was organized was to combat substitution of inferior articles for lead. What inferior articles were substituted for white lead in the manufacture of paint?

A. Inerts were generally the substitutes for white lead and by that I mean such materials as calcium carbonate or chalk or magnesium silicate which is a transparent material when mixed with linseed oil, and we have found from our survey that paint manufacturers in the United States were using vast amounts of material as that to, frankly speaking, adulterate their paints.

And I can just illustrate what I mean by citing some analyses from the North Dakota Regulatory Department which is an office in the State of North Dakota. In
2284 fact, this condition that I describe of the sale of inferior paints reached such a point in the State of North Dakota that the citizens of North Dakota passed strict paint laws which required the manufacturers to print the labels on the cans so the farmer would at least know what he was purchasing.

And the State of North Dakota periodically publishes an analysis of the paints that are made in their state. Now here is one of their bulletins and I should just like to quote this; Here is a paint that is made in Chicago, Illinois. It contains 25-7/10 per cent water which shouldn't belong in any paint because it evaporates the minute it is applied. It contains 4/6 per cent of lithopone; it contains 1/10 of a per cent of zinc oxide which is a fine pigment.

It does, however, contain 28-9/10 per cent of calcium carbonate which is perfectly transparent when mixed with linseed oil and brushed on a wall, and it contains 23.7 per cent of siliceous material.

Q. What is siliceous material?

A. Siliceous material is a material containing Sio$_2$ which is the chemical designation for silicate. It might be magnesium silicate of potassium silicate.

That happens to be an illustration of a paint that has no lead in it, and I would like to give you another one to show you what we were up against as lead producers in the
United States. Here is an exterior paint made by one
2285 of the largest companies in the United States.

This only contains 3.19 per cent water but let's skip that. It also contains lithopone, 31.06 per cent; zinc oxide, 8.95 per cent; titanium barium, 7 per cent; it contains 1.54—that is a little over ½ of 1 per cent of white lead presumably so that they could say they had some white lead in it.

And then they loaded the can with magnesium carbonate, 9.64 per cent and, again, insoluble siliceous material, 39 or 40 per cent.

Mr. Wright: May I inquire if the companies are designated in that document from which you are reading?

The Witness: This is the S. S. Kresge Company of Detroit, Michigan.

Trial Examiner Norwood: Is that the so-called dollar paint?

The Witness: No price is mentioned there. It is a very poor quality paint and the name is of no matter here, but to illustrate my point that that was going all over the United States. White lead happens to be one of the most expensive pigments that you can put in paint and naturally if a paint manufacturer can get away with using a cheaper material and an adulterant in excess of the amount of inerts and cheapening his product there is a great temptation to do so.

2286 By Mr. Ewing:

Q. Will you explain to us the difference between ready mixed paint and white lead in oil?

A. Ready-mixed paint is paint that is sold in cans and contains enough linseed oil and turpentine which are generally the two vehicles that are used to make it suitable for immediate application to the surface. White lead in oil, however, is sold in concentrated form.

It has to be diluted by the addition of linseed oil or turpentine before it can be made of the proper consistency to be applied to the surface.

Q. Ready-mixed paint is subject to application by a person having no particular technical skill, does that not hold true?

A. That is correct, sir.

Q. Whereas, the contrary is the case with the white lead in oil?

A. It requires some skill in the formulation of white lead in oil for whatever surface you happen to plan to use it upon or other factors such as exposure.

Q. I direct your attention to the minutes of the directors of December 7, 1931 which have been marked Respondents' Exhibit 35-A to G inclusive in evidence.

A. Yes, sir.

Q. And ask you whether you acted as secretary 2287 at that meeting?

A. I did.

Q. Will you look at item 3 of the secretary's report included in the minutes which appears on Respondents' Exhibit 35-C?

A. I have read it.

Trial Examiner Norwood: ~~Off the~~ record.

(Discussion off the record.)

Trial Examiner Norwood: On the record.

By Mr. Ewing:

Q. What was the purpose of adopting specifications for lead pipe, Mr. Wormser?

A. The purpose was to restore some semblance or some order out of the chaos which existed and the fact that there were several specifications in use throughout the U. S. The specifications had no uniformity.

In fact, they were a bit misleading. Unless a person was thoroughly aware of what he was buying because the thicknesses did not allow for varying pressures in the pipe

we decided that we would so adopt a standard so that anybody in the United States buying pipe, if he bought it of a certain "A" classification, would always stand 50 pounds pressure, and if he bought it double "A" it would stand 75, and if he bought it triple "A" it would stand 100
2288 pounds.

And the reason for ~~that~~ was that people not being familiar with the varying standards would very often buy a pipe which was not designed for their pressure and the home owner might have a failure in his line which would be very expensive.

So we established these standards of our own as the Lead Industries Association standards and subsequently at the suggestion of the Bureau of Standards established it as a commercial standard of the Bureau of Standards.

Q. Did the Department of Commerce approve for promulgation this standard adopted by the Lead Industries Association?

A. Yes, sir.

Q. Do you know when?

A. I don't recall the date.

Q. I direct your attention to the minutes of the meeting of the Board of Directors of June 15, 1933.

A. I have it.

Q. Did you act as secretary at that meeting?

A. Yes, sir.

Q. I direct your attention to the report made by you which appears in the minutes and in particular to item No. 1 which appears on Respondents' Exhibit 42-A and B.

A. Yes, sir.

2289 Q. I then call your attention to the resolutions—I will withdraw that.

I then call your attention to that portion of the minutes which appears in two paragraphs at the top of Respondents' Exhibit 42-F and ask you whether you yourself attended conferences and hearings in Washington in connection with the submission and subsequent approval of the proposed Lead Industry Code?

A. Yes, sir.

Q. I ask you to direct your attention at the minutes of the meeting of the Board of Directors of June 15, 1934.

A. Yes, sir.

Q. Did you act as secretary at that meeting?

A. Yes, sir.

Mr. Wright: What exhibit is that?

Mr. Ewing: Respondents' Exhibit 46-A and B.

By Mr. Ewing:

Q. I direct your attention to the paragraph which appears on Respondents' Exhibit 46-A immediately preceding the nominations for membership on the Executive Committee.

A. Yes, sir.

Q. You will note the reference to division chairmen.

A. Yes, sir.

Q. What divisions were represented on the Code Authority?

A. I recall the Mining Division, the Smelting and
2290 Refining Division, the Lead Pigments Division and the Metallic Lead Products Division.

Q. And the representatives of those divisions plus the Executive Committee together constituted the Code Authority; is that right?

Mr. Wright: I object to that as a leading question.

Trial Examiner Norwood: Read the question.

(The reporter read the question as follows:

"Q. And the representatives of those divisions plus the Executive Committee constituted the Code Authority; is that right?")

Mr. Ewing: I will withdraw the question.

Trial Examiner Norwood: Proceed.

By Mr. Ewing:

Q. I call to your attention the minutes of the Board meeting of January 9, 1934, Respondents' Exhibits 43-A to D inclusive and ask you whether you acted as secretary at that meeting?

A. I did.

Q. I direct your attention to the last page of the minutes where it sets forth the representation on the Code Authority by divisions and ask you whether a reading of that refreshes your recollection as to the divisions included?

A. It does.

Q. Will you now state the divisions represented
2291 on the Code Authority?

A. Mining Division, Smelting and Refining Division, Pigments Division, Metallic Lead Products Division and Foil Division. I forgot the Foil Division.

Q. I direct your attention to the minutes of the meeting of the Board of Directors of October 1, 1935.

A. Yes, sir.

Q. That is Respondents' Exhibit 50-A to P inclusive. I ask you whether you acted as secretary at that meeting?

A. I did.

Q. I ask you to read to yourself paragraph 1 of your report which appears on the second page of the minutes, Respondents' Exhibit 50-B.

A. Yes, sir. I have read it.

Q. Were you in charge of the activities referred to therein?

A. Yes, sir.

Q. To what is the reference to statistical reports to be returned to members?

A. That referred to labor records gathered by the Code Authority.

Q. I call your attention to pages 5 and 6 of the minutes, Respondents' Exhibit 50-E and F, and ask you to read the matter under the heading "Correspondence division of review NRA."

Mr. Wright: Your Sonor, I object to the witness
2292 simply reading so much material into the record which already appears in these exhibits.

Mr. Ewing: I can't ask him questions about it unless he familiarizes himself with it.

Trial Examiner Norwood: I don't think he should read from the minutes.

Mr. Ewing: I am just simply asking him to read to himself.

Trial Examiner Norwood: Go ahead.

The Witness: I have read it.

By Mr. Ewing:

Q. Was the letter from Dr. Marshall which appears as Respondent's Exhibit 50-F, the subject of discussion at that meeting?

A. Yes, sir.

Q. And did the members of the Board of Directors of the Association who were present at that meeting direct you to reply to Dr. Marshall?

A. They did.

Mr. Wright: I object, Your Honor, to this line of questioning. The minutes themselves show what was under discussion at the meeting and what the directions were to the secretary. This is simply a rehash of what is in the minutes.

Trial Examiner Norwood: He may give us any
2293 further information about those matters.

Mr. Wright: That is the point of my objection, Your Honor, that it isn't further information.

Trial Examiner Norwood: Objection overruled. Go ahead.

By Mr. Ewing:

Q. Did you send to Dr. Marshall the letter quoted in the minutes at page 7 and 8? That is, Respondents' Exhibit 50-K and L.

A. I did.

Q. Does that letter correctly set forth the statements and opinions expressed by the members of the Board of Directors of the Lead Industries Association present at that meeting?

A. Absolutely.

Q. I direct your attention to the statement which appears in the fourth paragraph of that letter.

A. I have it.

Q. To the effect that steps were being taken to draft a code for the industry pursuant to urgent representations by National Recovery Administration officials and ask you whether you know that statement to be correct of your own knowledge?

A. It is an absolutely true statement.

Q. State whether the opinion stated in the sixth paragraph of that letter which appears on page 8 of the
2294 minutes and on Respondents' Exhibit 50-L, was the
opinion expressed by the members of the Board of Directors of the Lead Industries Association present at that meeting?

A. It was.

Q. Was the feeling set forth in the last paragraph of the letter on page 8 of the minutes, Respondents' Exhibit 50-L, the feeling expressed and stated by the members of the Board of Directors of the Association present at that meeting?

A. It was distinctly their feeling.

Q. I direct your attention to page 10 of the minutes under the heading "Correspondence," Respondents' Exhibit 50-N.

A. I have it.

Q. Did you, in fact, receive the telephone request referred to in that portion of the minutes?

Mr. Wright: I object, Your Honor. The letter itself says so.

Mr. Ewing: The minutes reported that he received a telephonic request and I want him to testify here whether he did.

Trial Examiner Norwood: Read the question.

(The reporter read the question as follows:

"Q. Did you, in fact, receive the telephone request referred to in that portion of the minutes?")

2295 Mr. Wright: The exhibit that is in evidence already shows that he reported that he received a telephonic request.

Mr. Ewing: If you raise no question about that I will withdraw the question.

Trial Examiner Norwood: Objection overruled. Let him answer the question.

The Witness: I did.

By Mr. Ewing:

Q. Did you send to Mr. Janssen the letter set forth on page 11 of the minutes, Respondents' Exhibit 50-O?

A. I did.

Q. I direct your attention to the minutes of the meeting of December 23, 1936.

A. I have it.

Q. Did you act as secretary at that meeting?

A. I did.

Q. I direct your attention to your report, Exhibit A annexed to the minutes of the meeting, Respondents' Exhibit 52-G, and in particular to paragraph 2.

A. I have two paragraphs marked 2. To what page do you refer, Mr. Ewing?

Q. Page 4 of Exhibit A.

A. I have it.

Q. Will you tell us what the paint company referred to therein was?

2296 A. That was a company which was developed with the cooperation of the Principal Lumber Industries of the United States designed to do all we could mutually to correct this situation which I have previously described of the sale of paint which wasn't doing the public any good, wasn't doing the lumber industry any good, and wasn't doing us any good.

So we worked with the West Coast Lumbermen's Association, the Red Cedar Shingle Bureau, the Southern Pine Association, the Western Pine Association and numerous other lumber associations, even the Retail Lumber Associations, we all banded together to do what we could to correct this situation.

Q. I refer you to the minutes of the Board of Directors meeting of January 24, 1939, Respondents' Exhibit 58-A to O.

A. I have it.

Q. And I ask you whether you acted as secretary at that meeting?

A. I did.

Q. I direct your attention to Respondents' Exhibit 58-E, the first page of Exhibit A annexed to the minutes of the meeting.

A. I believe I have it.

Q. And ask you to read to yourself the second paragraph of paragraph 2.

2297 A. Yes.

Q. In what form, if you know, was the recommendation of the Federal Trade Commission referred to therein made?

Mr. Wright: I object, Your Honor. I don't see what materiality or relevancy the subject of that question has to this case.

Mr. Ewing: It appears to be a quotation.

Trial Examiner Norwood: Read the question.

(The reporter read the question as follows:

"Q. In what form, if you know, was the recommendation of the Federal Trade Commission referred to therein made?")

Mr. Wright: I might add that the exhibit refers to some statistical report which is not further identified in the exhibit.

Trial Examiner Norwood: He can tell what form it is in, can't he?

Mr. Wright: It has nothing to do with the issues in this case, Your Honor. That is the point of my objection. It is entirely unrelated.

Trial Examiner Norwood: Objection overruled. Go ahead.

The Witness: May I answer it?

Mr. Ewing: Yes.

The Witness: This was a public announcement of 2298 the Federal Trade Commission.

By Mr. Ewing:

Q. Do you know in what form?

A. I don't recall the exact form in which it was made.

Q. I direct your attention to the minutes of the meeting of May 16, 1939, Respondents' Exhibit 59-A to G and ask you whether you acted as secretary at that meeting?

A. I did.

Q. I call your attention to the first page of Exhibit A, Respondents' Exhibit 59-C to the matter under the heading "White lead promotion program" and ask you to state briefly what that program was?

A. That program was a joint cooperative effort sponsored by the mining companies and the white lead in oil companies to promote the use of white lead throughout the United States by pointing out its virtues to the American public by means of an advertising campaign, literature and through other means.

Mr. DuBose: Off the record.

Trial Examiner Norwood: Off the record.

(Discussion off the record.)

Trial Examiner Norwood: On the record. Proceed.

Mr. DuBose: Mark this for identification.

Trial Examiner Norwood: They will be marked with the appropriate numbers for identification.

2299 The documents referred to were marked Respondents' Exhibits 70-A, 70-B, 71-A, 71-B, 71-C, 72-A, 72-B, 72-C, 72-D, 73-A, 73-B, 73-C, 74-A, 74-B, 74-C, 75-A, 75-B, 75-C, 76-A, 76-B, 77-A, 77-B, 77-C, 77-D, 77-E, 77-F, 77-G, 77-H, 77-I, 77-J, 77-K, 77-L, 78-A, 78-B, 78-C, 78-D, 78-E, 79-A, 79-B, 79-C, 79-D, 80-A, 80-B, 80-C, 80-D, 80-E, 80-F, 80-G, 80-H, 80-I, 80-J, 80-K, 80-L, 80-M, 80-N, 80-O, 80-P, 81-A, 81-B, 81-C, 82-A, 82-B, 82-C, 82-D, 82-E, 83-A, 83-B, 83-C, 83-D, 83-E, 83-F, 83-G, 83-H, 83-I, 83-J, 83-K, 83-L, 83-M, 83-N, 83-O, 83-P, 83-Q, 83-R, 83-S, 83-T, 83-U, 83-V, 83-W, 83-X, 83-Y, 83-Z, 83-Z-1, 83-Z-2, 83-Z-3, 84-A, 84-B, 84-C, 84-D, 84-E, 84-F, 84-G, 84-H, 84-I, 84-J, 84-K, 84-L, 84-M, 84-N, 84-O, 84-P, 84-Q, 84-R, 84-S, 84-T, 84-U, 84-V, 84-W, 84-X, 84-Y, 84-Z, 84-Z-1, 84-Z-2, 84-Z-3, 84-Z-4, 84-Z-5, 84-Z-6, 84-Z-7, 84-Z-8, 84-Z-9, 84-Z-10, 84-Z-11, 84-Z-12, 85-A, 85-B, 85-C, 85-D, 85-E, 85-F, 85-G, 85-H, 85-I, 85-J, 85-K, 85-L, 85-M, 85-N, 85-O, 85-P, 85-Q, 85-R, 85-S, 85-T, 85-U, 85-V, 85-W, 85-X, 85-Y, 85-Z, 85-Z-1, 85-Z-2, 85-Z-3, 85-Z-4, 85-Z-5, 85-Z-6, 85-Z-7, 85-Z-8, 85-Z-9, 85-Z-10, 85-Z-11, 85-Z-12, 85-Z-13, 86-A, 86-B, 86-C, 86-D, 87-A, 87-B, 87-C, 87-D, 88, 89-A, 89-B, 89-C, 89-D, 89-E, 89-F, 89-G, 89-H, 89-I, 89-J, 89-K, 90, 91-A, 91-B, 91-C, 91-D, 91-E, 91-F, 91-G, 91-H, 91-I, 91-J, 91-K, 91-L, 91-M, 91-N, 2300 91-O, 91-P, 91-Q, 91-R, 91-S, 91-T, 91-U, 91-V, 92-A, 92-B, 92-C; 93; 94-A, 94-B, 94-C; 95-A, 95-B; 96-A, 96-B; 97-A, 97-B, 97-C, 97-D, 97-E, 97-F, 97-G, 97-H, 97-I; 98-A, 98-B, 98-C, 98-D, 98-E, 98-F, 98-G, 98-H, 98-I, 98-J, 98-K, 98-L, 98-M; 99-A, 99-B, 99-C, 99-D, 99-E, 99-F, 99-G, 99-H, 99-I, 99-J, 99-K, 99-L, 99-M, 99-N, 99-O, 99-P; 100-A, 100-B, 100-C, 100-D, 100-E, 100-F, 100-G, 100-H; 101; 102-A, 102-B, 102-C, 102-D, 102-E, 102-F, 102-G, 102-H, 102-I, 102-J; 103-A, 103-B, 103-C, 103-D, 103-E, 103-F, 103-G, 103-H, 103-I, 103-J, 103-K, 103-L, 103-M, 103-N, 103-O, 103-P, 103-Q, 103-R; 104-A, 104-B, 104-C, 104-D, 104-E, 104-F, 104-G, 104-H, 104-I, 104-J, 104-K, 104-L; 105-A, 105-B; 106-A, 106-B, 106-C, 106-D, 106-E, 106-F, 106-G, 106-H, 106-I, 106-J, 106-K, 106-L, 106-M, 106-N, 106-O, 106-P, 106-Q, 106-R, 106-S, 106-T, 106-U; 107-A, 107-B, 107-C, 107-D, 107-E, 107-F, 107-G, 107-H, 107-I, 107-J, 107-K, 107-L, 107-M, 107-N, 107-O, 107-P, 107-Q and 107-R for identification.

Trial Examiner Norwood: Proceed.

By Mr. DuBose:

Q. Mr. Wormser, I show you Respondents' Exhibits for identification marked 70-A to 107-R inclusive and I ask you to take the original Executive Committee minutes and compare those minutes with these photostatic copies 2301 and tell us whether all of the minutes of the Executive Committee of the Lead Industries Association from January 7, 1929 to and including April 16, 1946, are included therein?

Trial Examiner Norwood: We will take a short recess at this time to allow the witness to look over the exhibits.

(A short recess was taken.)

Trial Examiner Norwood: On the record. We will recess at this time until 1:45 p.m.

(Whereupon, at 12:10 p.m., a recess was taken until 1:45 p.m., this day.)

2302 Afternoon Session.

1:45 P. M.

Trial Examiner Norwood: Come to order. Proceed.

FELIX E. WORMSER, a witness called on behalf of the Respondent, having been previously sworn, resumed the stand and testified further as follows:

Direct Examination (continued) by Mr. Ewing.

Q. Have you examined the photostats marked Respondents' Exhibits 70-A and B, 71-A to C, 72-A to D, 73-A to C, 74-A to C, 75-A to C, 76-A to B, 77-A to I,—

Trial Examiner Norwood: Off the record.

(Discussion off the record.)

Trial Examiner Norwood: On the record.

By Mr. Ewing:

Q. Have you examined these to Respondent's Exhibit 107-R, and compared them with the original minutes of meetings of the Lead Industries Association from January 7, 1929 to April 16, 1946?

A. Yes, sir.

Q. Will you state whether the photostats are correct copies of the original minutes?

A. They are.

Mr. Ewing: I offer them in evidence.

Mr. Wright: Mr. Wormser, those are the complete minutes over that period of time of the executive committee?

2303 The Witness: Yes, sir.

Mr. Wright: Your Honor, I object to this unlimited offer of all these documents. In the first place, they contain a great deal of hearsay material and the reception of them in evidence will deprive me from the right of cross examination of the sources of the information which appear there. They don't come under any exceptions to the rule. They are papers which were prepared by parties having an interest in this proceeding and show on their face that a good many of them were prepared after the parties had notice of the Commission's interest in the practices which are the subject of this matter.

At least 99-9/10ths per cent of the information contained in the exhibits is wholly irrelevant and immaterial to any issue in this case. As illustrations of the highly irrelevant and immaterial information, I direct your Honor's attention to the document marked for identification as Respondent's Exhibit 73-A, Exhibit 106-A through various sub numbers, 104-G, which contains a great deal of material that has absolutely no part in this record.

Mr. Ewing: I don't think I have to add to what I have said before except to comment upon the fact that these are the minutes of the association showing what the association did, and that while it is true that some meetings were held and the minutes written after the Commission 2304 proceeding, and the proceeding may have been known from investigation earlier or later to any particular member; I think that is neither here nor there about them. They will show on their face what the parties were doing and intended to do and will show the attitude of the mind and the attempt of the association and the membership.

Mr. Wright: I might also state that at least one of the minutes appears on its face to be incomplete since it refers to exhibits which are not attached thereto. I am referring now to Respondent's Exhibit 94 for identification.

Trial Examiner Norwood: I want to say that with respect to these exhibits and also these other minutes that we received this morning and at other times, and minutes that we have received for the Commission, that they are conditioned in this respect that they are not to be considered as proving the truth of any of the hearsay statements which they contain. They are being received for the purpose of showing attitude and purpose. But if there are matters contained in those hearsay statements that you want to be considered on the issues in this case, you will have to furnish further evidence about them. So with that condition, I am overruling the objection and receiving Respondent's Exhibits 70-A to 107-R as variously lettered and shown in the reporter's list.

2305 (The documents referred to, heretofore marked RESPONDENTS' EXHIBITS 70-A, 70-B, 71-A, 71-B, 71-C, 72-A, 72-B, 72-C, 72-D, 73-A, 73-B, 73-C, 74-A, 74-B, 74-C, 75-A, 75-B, 75-C, 76-A, 76-B, 77-A, 77-B, 77-C, 77-D, 77-E, 77-F, 77-G, 77-H, 77-I, 77-J, 77-K, 77-L, 78-A, 78-B, 78-C, 78-D, 78-E, 79-A, 79-B, 79-C, 79-D, 80-A, 80-B, 80-C, 80-D, 80-E, 80-F, 80-G, 80-H, 80-I, 80-J, 80-K, 80-L, 80-M, 80-N, 80-O, 80-P,

105-B; 106-A, 106-B, 106-C, 106-D, 106-E, 106-F, 106-G,
106-H, 106-I, 106-J, 106-K, 106-L, 106-M, 106-N, 106-O,
106-P, 106-Q, 106R, 106-S, 106-T, 106-U; 107-A, 107-B,
107-C, 107-D, 107-E, 107-F, 107-G, 107-H, 107-I, 107-J,
107-K, 107-L, 107-M, 107-N, 107-O, 107-P, 107-Q, 107-R,
were received in evidence.

Mr. Ewing: That is a perfectly reasonable condition and, as a matter of fact, that is why I have asked certain questions with respect to certain of the exhibits.

Trial Examiner Norwood: It would show what the association received and acted on, but it is not to show the truth of any of those hearsay statements.

2307 By Mr. Ewing:

Q. Mr. Wormser, will you turn to the minutes of the meeting of June 30, 1933, in evidence as Respondent's

Exhibit 75-A to C and tell us whether you acted as secretary at that meeting?

A. I did.

Q. I call your attention to the last paragraph on the first page being Respondent's Exhibit 75-A and ask you whether the divisions which you listed this morning were the divisions contemplated in that statement in the minutes?

A. They were.

Mr. Wright: I would like to request your Honor to make a short statement there since you mentioned the minutes which had heretofore been received in support of the complaint. Now, it is my contention that those minutes insofar as they may contain hearsay statements which are directly related to what we consider acts of conspiracy are within the well recognized exceptions to the hearsay rule and that they were so received in that they were admissions by the parties themselves.

Trial Examiner Norwood: Well, that is different. I said as proving the truth of said statements. They do prove maybe that the statements were made but I said they were not received to prove the truth of the statements. We are not lifting ourselves up by our own boot straps because of that.

2308 Proceed.

By Mr. Ewing:

Q. I direct your attention, Mr. Wormser, to the minutes of the executive committee meeting of July 24, 1933, Respondent's Exhibit 76-A and B, and in particular to the telegram quoted—set forth at the bottom of Exhibit 76-A and the top of Exhibit 76-B and ask you to state whether that telegram was sent to the members of the association?

A. It was.

Q. I direct your attention to the minutes of the meeting of the executive committee of July 28, 1933, Respondent's Exhibit 77-A to L. I specifically direct your attention to Respondent's Exhibits 77-C, D, E and F, and ask you to state what they represent.

A. They represent the proposed code of fair competition for the lead industry as submitted on August 31, 1933.

Q. And when you say "proposed code," do you mean the proposed master code or the proposed supplementary code?

A. The proposed master code.

Q. Was the proposed code to which reference has just been made, submitted to the National Recovery Administration?

A. Yes.

Q. I ask you to look at the minutes of the executive committee meeting of August 3, 1933, Respondent's Ex-
hibit 78-A to E, and direct your attention particu-
2309 larly to the so-called President's re-employment
agreement referred to in those minutes, Respondent's Exhibit 78-D and E, and I ask you to state whether that so-called re-employment agreement was the agreement referred to in the minutes of the executive committee meetings of July 24 and 28, 1933?

A. It was.

Q. Directing your attention to the second page, Respondent's Exhibit 78-B, will you state whether the telegram there set forth was sent?

A. It was sent.

Q. I direct your attention to the third page of the minutes, Respondent's Exhibit 70-C and in particular to the matter under the heading "Article IX, President's Code," and ask you to read it to yourself.

A. I have read it.

Q. Was the letter of which the portion of the minutes just indicated formed a part, sent to the National Recovery Administration?

A. Yes, sir.

Q. Will you explain the statement in the letter to the effect that the price of lead is established by the open world market?

A. Well, lead is a world commodity just like wheat, corn and cotton; just like a great many other staple prod-
ucts, and at that time there was a free and open mar-
2310 ket in London and the London price was really the
governing price all over the world. The New York market here generally reflected the London price plus the influence of the tariff.

Q. In the reference in that portion of the minutes which you have just referred to, Article IX of the President's code, is the President's code the President's re-employment agreement?

A. It is synonymous.

Q. I call your attention to the fact that in the re-employment agreement the article is described not as Article IX, but as Section IX.

A. Section IX, yes.

Q. But that is the provision of the re-employment agreement to which this letter has reference?

A. Yes, sir.

Q. I direct your attention to the minutes of the meeting of August 17, 1933, Respondent's Exhibit 80-A to P inclusive, and ask whether you acted as secretary at that meeting?

A. I did.

Q. You will note the notice referred to on the first page, Respondent's Exhibit 80-A.

A. Yes.

Q. After the receipt of formal order signifying approval of the petition of the Lead Industries Association for substitution under the President's re-employ-
2311 ment agreement, was that notice issued?

A. Yes, sir.

Q. Directing your attention to the third page of the minutes, Respondent's Exhibit 80-C and the next page, Exhibit 80-D, was the telegram referred to there sent?

A. Yes, sir.

Q. Referring to the bottom of the fourth page, Respondent's Exhibit 80-D, and the fifth page, Exhibit 80-E, did you send the letter there set forth?

A. Yes, sir.

Q. I direct your attention to the meeting of the executive committee of November 6, 1933, Respondent's Exhibit 82-A to E.

A. Yes, sir.

Q. Did you act as secretary at this meeting?

A. Yes, sir.

Q. I direct your attention to the preceding meeting of September 21, 1933, Respondent's Exhibit 81-A to C, and ask you whether you acted as secretary at that meeting?

A. I did.

Q. Referring to the bottom of the first page and the top of the second page, Exhibit 81-A and B, was that letter sent?

A. Yes, sir; it was sent.

Q. Prior to that, had the letter quoted on the
2312 first page been received by the association from the Recovery Administration?

A. It had been received.

Q. Referring back to the meeting of November 6, 1933, was the third draft of the supplementary code of fair competition for the lead pigments division approved at that meeting? The supplementary code referred to by the Recovery Administration in its letter quoted in the minutes of the meeting of September 21, 1933, and in the reply quoted in the same minutes.

A. Yes, sir.

Q. I call your attention to the reference on page 2 of the minutes of the meeting of September 21, 1933, Respondent's Exhibits 81-B, to Mr. Carter's outline of the serious conflict of interest between the paint code and the position of the white lead in oil industry. In that controversy or conflict of interest the conflict of interest about which you testified yesterday?

A. Yes, sir.

Q. I direct your attention to the minutes of the executive committee meeting of November 22, 1933, Respondent's Exhibit 83-A to 83-Z-3 and, in particular, to Exhibit "A" thereto annexed, Respondent's Exhibit 83-C to 83-Q inclusive, and ask you whether that is the code or draft of the code—I will withdraw that question.

2313 I call your attention to the fact that annexed to the minutes of this meeting are Exhibit "A," Respondent's Exhibits 83-C to Q inclusive and Exhibit "B" and Respondent's Exhibit 83-R to Z-3 inclusive, the former being designated as Code "D" and the latter, Code "E," and ask you to state which code was the code discussed by you with Mr. Janssen in Washington as recited by the minutes on the first page?

A. Code "A" was the one I discussed.

Q. When you say "Code 'A'"—

A. I mean Code "D" of Exhibit "A," that is what I meant.

Q. And what does Code "E," Exhibit "B" represent?

A. That represents some of the changes suggested by Deputy Administrator Janssen.

Q. In other words, it is a revision of Code "D"?

A. Yes, a revision of Code "D."

Q. I direct your attention to the minutes of the meeting of the executive committee of February 6, 1934.

A. Yes, sir.

Q. It consists of Respondent's Exhibits 85-A to 85-Z-13 inclusive. I ask you whether Code "H" annexed thereto, consisting of Respondent's Exhibits "D" to Z-1-3 inclusive, was the code finally submitted for approval? I will withdraw the question.

2314 I direct your attention to Respondent's Exhibits "D" to "U" designated as Code "H" and Respondent's Exhibits "V" to "Z-13" designated as Code "I," and ask you which code was the one submitted for approval?

A. Code "I."

Q. I direct your attention to Article 7, Section 3, of Code "I," Respondent's Exhibit Z-6, page 11, Code "I."

A. I have it. What is the question?

Q. Are the reports referred to in that section the industrial reports furnished the Lead Industries Association by its members from its inception?

A. Yes, sir.

Q. I direct your attention to the executive committee meeting of February 8, 1934, Respondent's Exhibit 86-A to C.

A. Yes, sir.

Q. I direct your attention to page 3, Respondent's Exhibit 86-C, and page 4 of the minutes, Exhibit 86-D, and ask you whether the letter there set forth was written by you?

A. It was.

Q. And was it sent?

A. It was sent to Mr. Janssen.

Q. Was it prepared and sent to him at his solicitation?

A. Yes, sir.

2315 Q. Upon what facts did you base your statement appearing in the second paragraph on the last page of the minutes, Respondent's Exhibit 86-D, to the effect that employment had been increased 21 per cent in the manufacturing groups?

A. That was based upon the receipt of questionnaires from the manufacturers requesting their labor records and indicating specifically the increase in employment brought about by their cooperation with the National Recovery Administration.

Q. Is that the basis for the other statements in that same paragraph?

A. Yes, sir.

Q. Upon what facts did you base your statement or estimate that code wage increases would cost the members of the association a million and a half a year?

A. That statement was also based upon the results of a questionnaire circulated to the members of interest, specifically requesting that type of information.

Q. I direct your attention to the minutes of the meeting of March 14, 1934, Respondent's Exhibit 91-A to V inclusive.

A. Is that March 14, 1934?

Q. Yes, sir. And ask you when after March 14, 1934, the executive committee next met?

A. November 22, 1935.

Q. Do you know why the executive committee of the Lead Industries Association had no meetings during that interval?

A. Well, the meeting of March 14, 1934 was essen-
2316 tially in connection with NRA activities. In the inter-
val, the NRA had been terminated by action of the Supreme Court and there was no occasion for the executive committee to meet to transact any other business.

Q. The Supreme Court's decision in the Schechter case came down in late May or early June 1935, and up to that time after the code was adopted and until November 1935, there was no meeting of the executive committee?

A. That is right.

Q. During the interim period, the Code Authority up until the Supreme Court's decision supervised the members of the lead industry, did it not?

Mr. Wright: I object to that.

Mr. Ewing: It is in anyway.

Trial Examiner Norwood: Did you finish your question?

Mr. Ewing: Yes.

Trial Examiner Norwood: Read the question.

(The reporter read the question as follows:

"During the interim period, the Code Authority up until the Supreme Court's decision supervised the members of the lead industry, did it not?")

Mr. Ewing: I confess it is leading but it is in anyway. That is, the minutes of the Code Authority.

Trial Examiner Norwood: Do you insist on your
2317 objection?

Mr. Wright: Yes. I was not objecting so much to that phase of it. I know the minutes of the Code Authority meeting were in, but I still object to that question as leading. I think counsel can get at that information by a perfectly proper means.

Mr. Hinds: As a guidance for further Respondent's testimony, there cannot be an objection in an administrative hearing like when a man is examining his own informed witness and there is no jury that the question is leading. Isn't it a great advantage to have all the questions leading?

Trial Examiner Norwood: That is the one time that he cannot lead.

Mr. Hinds: Certainly in the judicial system they encourage leading questions. It helps to save time. That is the only reason not to lead a witness because you don't want to have mendacious testimony before a jury.

Trial Examiner Norwood: Read the question, please.

(Whereupon, the reporter repeated the question.)

Trial Examiner Norwood: Objection sustained. Off the record.

(Discussion off the record.)

Trial Examiner Norwood: On the record. Proceed.

By Mr. Ewing:

Q. I direct your attention, Mr. Wormser, to the
2318 minutes of the executive committee meeting of November 22, 1935.

A. Yes, sir.

Q. Did you act as secretary at that meeting?

A. I did.

Q. At the time of that meeting, did you know of the contents of the letter from Mr. George L. Berry dated November 7, 1935, referred to in the first paragraph of the minutes following the attendance listing?

A. Yes, sir.

Q. Does the statement in that first paragraph of the minutes of the meeting correctly set forth the substance of Mr. Berry's letter?

Mr. Wright: Your Honor, I object to questioning along this line. This is part of the material which I indicated before was wholly irrelevant and immaterial to the issues in this matter. It doesn't relate to the National Recovery Administration nor the issues in this case.

Mr. Ewing: In this particular instance, the question is directed at the letter which the association received from Mr. Berry advising of a conference scheduled in Washington designed to set up machinery to put the lead industry in

a position where it might sponsor in substance a continu-
ance unofficially of the NRA. I wanted to ask the witness
whether that statement here was a correct summary of
the substance of that letter and then bring out what
2319 attitude the association took with respect to such a
suggestion.

Mr. Du Bose: It is very pertinent.

Trial Examiner Norwood: And this was a letter that was written by whom?

Mr. Ewing: Mr. George L. Berry.

Trial Examiner Norwood: I think he can answer that.

Mr. Wright: It is a pious declaration of innocence by the parties involved.

Mr. Ewing: Not at all.

Trial Examiner Norwood: He is putting on his witness here to substantiate declarations of innocence. Objection overruled. Does that correctly state the situation?

The Witness: It does.

By Mr. Ewing:

Q. Who, if you now know, is Mr. George L. Berry?

A. As I recalled, he had an official capacity as the National Coordinator—was intimately involved with NRA activities.

Q. Was he coordinator for industrial cooperation?

A. I believe that was the title that he possessed.

Q. Now, I direct your attention to the preamble and
resolution following that first paragraph and ask you
2320 to read them to yourself over to the middle of the
next page.

A. I have read it.

Q. You were present at the executive committee's deliberations in connection with that resolution?

A. I was.

Q. Does the recital contained in the third paragraph of page 2 of the minutes, Respondent's Exhibit 92-B, correctly state the sentiments of the members of the executive committee as expressed by them at that meeting?

A. It does.

Q. Does the fourth paragraph on page 2 of the minutes, Respondent's Exhibit 92-B, correctly state the views of the members of the executive committee present at that meeting?

A. It does.

Q. Does the resolution immediately following, correctly state the views of the members of the executive committee present at that meeting?

Trial Examiner Norwood: I think he should confine this to the views they expressed. He can't read their minds.

Mr. Ewing: I intended to include that in subsequent questions. I had that in the first question.

The Witness: May I answer it?

Trial Examiner Norwood: Have you amended the question?

2321 Mr. Ewing: I amended the question accordingly.

Trial Examiner Norwood: You may answer it.

The Witness: It does.

By Mr. Ewing:

Q. I direct your attention to the minutes of the executive committee meeting of June 22, 1936, and ask you whether you acted as secretary at that meeting?

A. I did.

Q. Now, I direct your attention to page 2 of the minutes, being Respondent's Exhibit 94-B, and in particular, to the matter under the heading "Wheeler Anti-basing Point Brief" and ask you to read it.

A. I have read it.

Q. Was the brief which the minutes recited as attached as Exhibit "A" ever presented to Congress?

A. No, sir.

Mr. Ewing: I might say that while referred to in the minutes as Exhibit "A," we did not photostat it because it was not used.

Mr. Du Bose: May we take a short recess, your Honor?

Trial Examiner Norwood: We will take a short recess.

(Whereupon, a short recess was taken.)

2322 Trial Examiner Norwood: Come to order. Proceed.

By Mr. Ewing:

Q. I direct your attention to the meeting of the Executive Committee of May 11, 1942, Respondents' Exhibit 98-A to M and, in particular, to the seventh page of the document designated as Exhibit A.

A. I have it.

Q. Will you tell us where you obtained the statistical information setting forth the comparative prices of lead and other commodities?

A. Partly from the Bureau of Labor Statistics and partly from the statistics of the Engineering and Mining Journal.

Q. I direct your attention to the meeting of the Executive Committee of April 16, 1946, Respondents' Exhibit 107-A to R, and ask you to look at Exhibit A annexed and, in particular, to the appendix which is Respondents' Exhibit 107-N, and ask you to read to yourself sub-paragraphs A and C.

A. I have.

Q. With respect to sub-paragraph A, what is the basis for the statement that the average weight of the lead in a storage battery is 22 pounds?

A. That is based on statistics gathered by the American Bureau of Metal Statistics surveying the storage battery industry.

Q. And when you say "lead," to what do you refer?

2323 A. In that paragraph I refer to both pig lead plus the oxide lead, the total lead content of the storage battery.

Q. With respect to sub-paragraph C, what is the basis for your statement that the average exterior prepared paint contains about one and a half pounds of lead per gallon?

A. That is a statement based upon the expert opinion of laboratory men in our industry who deal with or who serve the prepared paint industry in paint formulation matters.

Q. From whom was the estimate obtained?

A. It was obtained from technicians in the National Lead Company and the Eagle Picher and the Glidden Company—I think that is about all.

Q. Is the same source or sources the basis for the statement in that sub-paragraph that pure white lead paint contains about 15 pounds of lead per gallon?

A. Yes, sir.

Mr. Du Bose: Your Honor, pursuant to the arrangement we made yesterday, I now substitute for the original of these exhibits, the photostatic copies which were made downstairs in the Photostatic Department of the City Bar Association.

These are Respondents' Exhibits 4-A and B, 5, 7-A, B and C, 8-A and B, 10-A and B.

Trial Examiner Norwood: They may be substituted and you may withdraw the originals by agreement with counsel.

Mr. Wright: I have no objection to that.

2324 Trial Examiner Norwood: Very well. Proceed.

By Mr. Du Bose:

Q. Mr. Wormser, I show you a bound volume and I ask you what that is (handing to witness)?

A. That is a record of the annual meeting, minutes of the Lead Industries Association from its beginning to date.

Mr. Du Bose: Mark this for identification Respondents' Exhibits 108-A to 126-L.

(The documents referred to were marked for identification Respondents' Exhibits 108-A, 108-B, 108-C, 108-D,
108-E, 108-F, 108-G, 108-H, 108-I, 108-J, 108-K, 108-L,
108-M, 108-N, 109-A, 109-B, 109-C, 109-D, 109-E,

126-L.)

By Mr. Du Bose:

Q. Mr. Wormser, I show you Respondents' Exhibits for identification marked 108-A to 126-L, and I ask you to compare these exhibits for identification with the minutes of the annual meetings in the bound volume. By the way, let me ask you one more question.

These are the minutes of the annual meetings of the Lead Industries Association; is that correct?

A. That is correct.

2326 Trial Examiner Norwood: Do you wish to have a short recess to allow him to do that?

Mr. Du Bose: Yes, sir.

Trial Examiner Norwood: We will take a five-minute recess to allow the witness to examine the documents.

(A short recess was taken.)

Trial Examiner Norwood. Come to order. Proceed.

Mr. Wright: Mr. Wormser, do those exhibits which have been marked constitute a complete set of all the minutes of the general annual meetings of the Lead Industries Association?

The Witness: Yes, sir.

Mr. Wright: From the time of its inception down to date?

The Witness: Yes, sir.

Mr. Wright: There are no omissions from that?

The Witness: No omissions.

Mr. Wood: Is this cross-examination of the witness?

Mr. Wright: No, sir; it was examination on the voir dire.

Mr. Wood: Very well.

Trial Examiner Norwood: Proceed.

By Mr. Du Bose:

Q. Mr. Wormser, have you compared Respondents' 2327 Exhibits for identification 108-A to 126-L inclusive with the minutes of the annual meetings in the bound volume?

A. I have.

Q. And are they correct copies of the minutes of all of the annual meetings?

A. They are.

Mr. Du Bose: I offer in evidence Respondents' Exhibits 108-A to 126-L inclusive being the minutes of the annual meetings of the members of the Lead Industries Association from November 14, 1928 to and including April 26, 1946.

Trial Examiner Norwood: Is there any objection?

Mr. Wright: Your Honor, I make the same objection to the offer of these that I made to the previous exhibits consisting of minutes of the Executive Committee and the Board of Directors of the Lead Industries Association for the reason that they contain a great many gratuitous and self-serving declarations which were made in contemplation of this proceeding and because of the Commission's investigation of the industry, and furthermore on the ground that they contain a great deal of hearsay material which is inadmissible on that ground.

For the most part it is irrelevant and immaterial.

Mr. Du Bose: If your Honor please, this is a supplement to the minutes of the meetings of the Executive
2328 Committee and the Board of Directors. It shows
what occurred at the annual meetings, which, of course, took place every year.

Trial Examiner Norwood: I shall receive them under the same condition as to the hearsay evidence that is contained in them. I will overrule the objection and receive Respondents' Exhibits 108-A to 126-L inclusive.

(The documents referred to, heretofore marked for identification RESPONDENTS' EXHIBITS 108-A, 108-B, 108-C,
108-D, 108-E, 108-F, 108-G, 108-H, 108-I, 108-J, 108-K,

122-H, 122-I, 122-J, 122-K, 122-L, 123-A, 123-B, 123-C,

123-D, 123-E, 123-F, 123-G, 123-H, 123-I, 123-J, 123-K, 123-L, 123-M, 123-N, 124-A, 124-B, 124-C, 124-D, 124-E, 124-F, 124-G, 124-H, 124-I, 124-J, 124-K, 124-L, 125-A, 125-B, 125-C, 125-D, 125-E, 125-F, 125-G, 125-H, 125-I, 125-J, 125-K, 125-L, 125-M, 126-A, 126-B, 126-C, 126-D, 126-E, 126-F, 126-G, 126-H, 126-I, 126-J, 126-K and 126-L, were received in evidence.)

Trial Examiner Norwood: Proceed.

By Mr. Wood:

Q. Mr. Wormser, you are familiar with the Eagle Picher Company?

A. Yes, sir.

Q. For how long have you been familiar with the Eagle Picher Company as a corporation?

A. Oh, since my mining days back in 1916.

Q. Now going back to the NRA period, what persons were acting on behalf of the Eagle Picher Company to your knowledge?

2330 A. Mr. Maston and Mr. Zoller, I believe—I think Mr. Bendelari.

Q. As a practical matter of dealing with them, what was your understanding of their authority?

A. Well, their authority was never made really clear to me, Mr. Wood. I don't know just how their authority stood.

In fact, at times there seemed to me that there was a little bit of divided authority if I may say so or a confusion of authority.

Q. Take Mr. Zoller, and again I direct your attention to the NRA days. What was Mr. Zoller's authority as you understood it at that time?

A. Mr. Zoller had charge of matters relating to the production of dry pigments as produced by the Eagle Picher Company and acted for the Eagle Picher Company, I believe, in the interests of those dry products.

Q. What was Mr. Zoller's age at that time, if you know?

A. I would say he must have been about forty years or thirty-five probably. It is just a guess.

Q. Was he an executive of the company at the time, do you know?

A. I think he was the manager of the Dry Products Division at the time.

Mr. Wright: Your Honor, I object. It is obvious that this witness is not fully informed of exactly the relationship that these men had to the company. He is being asked now by counsel for that company questions which he is obviously not in the proper position to testify to. 2331

The last answer showed on its face that it was a conclusion and a guess on his part and I move that it be stricken.

Trial Examiner Norwood: Were you answering that from your memory or your own knowledge?

The Witness: Yes, sir.

Trial Examiner Norwood: Motion denied. This witness may state as a secretary of these meetings and this Association what was represented to him as the basis of the authority of these members. He may state if he knows if it came to him in the course of his duty what positions they occupied in this company, and counsel may show that by this witness.

Mr. Wood: Obviously, Your Honor, this witness' opinion of these people is not the best evidence and I have that well in mind. I am not asking that in order to prove his opinion. I am trying to get how it appeared to him at the time.

Trial Examiner Norwood: You may do that.

By Mr. Wood:

Q. Who today in the Eagle Picher Company are you dealing with in your capacity as secretary of the Lead Industries Association? 2332

A. Mr. Wood, to answer that, I would have to ask you with what particular activity of it—to what particular activity of the company you refer. If it is the activities on the Board of Directors, Mr. Bendelari is the man I communicate with.

He has been appointed by your company to serve on the Board. If it is in connection with pigment activities it would be Mr. Zoller or Mr. Hayt. If it is in connection with the metallic lead products activities, it would be Mr. Murdock.

Q. Do you know Mr. Bowlby?

A. I do, yes, sir.

Q. How active is he in connection with Lead Industries?

A. I would say he is inactive.

Q. What is Mr. Bowlby's position as you understand it?

A. Mr. Bowlby is the president of the Eagle Picher Company.

Q. What is the position of Mr. Zoller and Mr. Hayt in relation to the position of Mr. Bowlby as you understand it?

A. Mr. Zoller, I believe, is a vice-president of the Eagle Picher Company and manager of their Dry Products Division. Mr. Hayt is the manager of the Lead in Oil Division.

Q. Now what was Mr. Zoller's position with the company, if you know, in 1933 and 1934?

2333 A. As I recall, he was manager of the Dry Products Division of the Eagle Picher operation.

Q. And what was Mr. Hayt's position in 1933 and 1934, if you know?

A. Manager of the white lead in oil activities of the Eagle Picher company.

Q. Are you sure of that?

A. Fairly sure, sir.

Q. What was Mr. Maston's position?

A. He was also connected with white lead in oil activities, I believe, as general sales manager.

Q. For how long a period did you know Mr. Maston?

A. From 1928 until his death.

Q. When was his death?

A. In 1939, I believe, or 1938, I am not quite certain about that.

Q. What was his position at the time of his death as you understood it?

A. I believe he was the sales manager of the White Lead in Oil Division.

Q. Are you sure of that?

A. Not positively.

Q. Or was he the New York representative?

A. He made his headquarters in New York and it might very well have been that he was the New York representative.

2334 Q. During the period in which you knew Mr. Maston, what was your impression of his authorization to speak for the company?

A. It was my belief that he had full authority to speak on those subjects on which he dealt with us in relation to Association activities and Code Authority activities.

Q. Did you recognize any diminution of authority during the period in which you knew him?

A. I believe before he died that there was some diminishment in his authority, but I can't say just what it amounted to, I can't recall.

Q. But you are under the impression that there was some change in his position in the company?

A. That is the impression I have, Mr. Wood, yes, sir.

Q. Were you ever told that he had been repudiated by the company?

A. No, sir.

Q. Now Mr. Maston wrote you a letter enclosing a map; is that correct?

A. Yes, sir.

Q. And do you know where that map is?

A. No, sir; I do not.

Mr. Ewing: There are two letters that refer to two maps. We know where one is.

Mr. Du Bose: One of them is in evidence as Exhibit 513-E.

2335 The Witness: All I recall is that he came to my office during Code Authority days and he said, "Felix, I think it would be wise for you to become acquainted with the manner in which white lead in oil is sold and how other pigments are sold, and I want to help you. Here is a zone map which should serve to help to educate you."

I received the map, I put it in my files and that was the end of it until the time that Mr. Dunn walked into my office and asked if I had a map and I told Mr. Dunn I had no map because it had completely escaped my memory, there having been no activity whatsoever in connection with a map.

I think I have already apologized to Mr. Dunn because I was mistaken. Mr. Dunn unearthed a map but I don't even know if that is the map that Mr. Maston supplied me with. It is so vague and so inconsequential that it seemed to me at that time and even today, so that is the complete history of the map until it was unearthed by Mr. Dunn or if it is the map.

I say the map although I don't really know whether it is the map that you refer to or whether it is the one that was attached to Mr. Maston's letter or what happened to, I don't know.

By Mr. Wood:

Q. What did Mr. Maston tell you about that map?
2336 Did he say that it was his own creation or what did he tell you about the map?

A. All I recall is that it was his map.

Q. His map?

A. It was his map.

Q. And you are familiar with the fact that the manufacturers of white lead in oil sell their products on a zone basis? Are you familiar with that?

A. I am familiar with that.

Q. To what extent did that map reflect the zone basis of the respondents?

A. Mr. Wood, I didn't even examine the map carefully. I just put it in the files and made just a blanket acknowledgment as I do most things that come to the office. I acknowledged it and thanked him for it.

That was the end of it because I had absolutely no use for it at that time. I was so immersed in so many other activities that I didn't want to take the time.

Q. Didn't Mr. Maston ask you to try to get the industry to adopt that map?

A. No, sir.

Q. He didn't?

A. No, sir.

Q. What was his purpose? What purpose did he state as his purpose in giving you the map?

2337 A. Merely to acquaint me with the customs of the trade, you might say.

Q. Well, what was his representation as to what the map was supposed to portray? Was it a new scheme or was it a codification of the way business was done?

A. I would say it was a codification of the way business was done at that time in the pigments industry.

Q. Did Mr. Maston make any effort to get that zone map incorporated in the NRA code?

A. No, sir.

Q. Was that map ever adopted?

A. No, sir.

Q. Well, I will ask this rather broadly: What was the connection, if any, between that map and the way the lead companies are doing business today as far as selling is concerned?

A. I haven't any idea.

Q. Well, as a matter of fact, wasn't Mr. Maston more or less carrying a torch trying to get the industry to adopt a particular system of zone selling?

Mr. Wright: I object.

Trial Examiner Norwood: Sustained. It is leading.

By Mr. Wood:

Q. Do you know, Mr. Wormser, of any agreement made on behalf of the Eagle Picher Company to do business in
any particular way as to the selling of white lead in
2338 oil? I mean as far as the zone system is concerned
during the NRA days?

A. I know nothing about it, sir.

Q. Do you know of anyone connected with the Eagle Picher Company at the present time with whom you discussed the zone selling system during NRA days?

A. The only one I ever discussed it with, sir, is Mr. Maston. I haven't discussed it with anybody else in the Eagle Picher Company outside of discussing it with you here.

Mr. Wood: That is all.

By Mr. Ecker:

Q. Mr. Wormser, you have been secretary and treasurer of the Lead Industries Association since its formation?

A. Yes, sir.

Q. Would you know whether or not a given company or corporation is or has been a member of the Lead Industries Association?

A. I would.

Q. Will you state whether or not Anaconda Copper Mining Company has ever been a member of the Lead Industries Association?

A. They never have.

Mr. Ecker: That is all.

Mr. Ewing: We have some more documents and a little
more oral testimony but is won't amount to very
2339 much. It was my thought that perhaps now is as
good a time as any to adjourn to the morning because
I am quite sure that Mr. Wright would like all the time he can to look at these papers that we have swamped him with, and I don't think that is an unfair statement, do you?

Mr. Wright: No, sir.

Mr. Ewing: So if I might make such a motion, I will.

Mr. Wright: Before we get into that, I had understood that counsel were going to give us some statement—

Mr. Ewing: (Interposing.) I thought I would talk to you about that now off the record.

Trial Examiner Norwood: Is it your idea to adjourn now and reconvene tomorrow morning?

Mr. Ewing: Yes, sir.

Trial Examiner Norwood: Off the record.

(Discussion off the record.)

Trial Examiner Norwood: On the record. We will adjourn at this time and reconvene at 10:00 o'clock tomorrow morning.

(Whereupon, at 3:50 p. m., the hearing in the above-entitled matter was adjourned to reconvene at 10:00 a. m., April 25, 1947.)

2340

Trial Room,
Bar Association Building,
36 West 44th Street,
New York, N. Y.,
April 25, 1947.

Met, pursuant to adjournment, at 10:00 a. m.

Before:

John W. Norwood, Trial Examiner.

Appearances:

Joseph S. Wright, Esq., appearing for the Federal Trade Commission.

J. T. Welch, Esq. (Davies, Richberg, Beebe, Busick & Richardson, 15th Street, N. W., Washington D. C.), appearing for Sherwin Williams Company.

Edmund P. Wood, Esq., 2801 Carew Tower, Cincinnati, Ohio, appearing for Eagle Picher Lead Company and Eagle Picher Sales Company.

Robert H. Ecker (Chadbourne, Wallace, Parke & Whiteside, 25 Broadway, New York, N. Y.), appearing for Anaconda Copper Mining Company and International Smelting & Refining Company.

James D. Ewing, Esq. (Alexander & Green, 120 Broadway, New York, N. Y.), appearing for the National Lead Company.

2340-A E. Z. Du Bose, Esq. (Alexander & Green, 120 Broadway, New York, N. Y.), appearing for the National Lead Company.

Roger Hinds, Union Commerce Building, Cleveland, Ohio, appearing for The Glidden Company.

2341 PROCEEDINGS.

Trial Examiner Norwood: Pursuant to adjournment on yesterday, the hearing in Docket 5253 is now convened at 10 o'clock a. m. on the 25th day of April, 1947 in room 605 of the Bar Association Building, 38 West 44th Street, New York City. The appearances are as follows:

J. T. Welch, appearing for the Sherwin Williams Company.

Edmund P. Wood, appearing for Eagle Picher Lead Company and Eagle Picher Sales Company.

Robert H. Ecker, appearing for Anaconda Copper Mining Company and International Smelting and Refining Company.

James D. Ewing and E. Z. Du Bose, appearing for the National Lead Company.

Proceed.

FELIX E. WORMSER, a witness called by the Respondent having been previously sworn, resumed the stand and testified further as follows:

Direct Examination (Continued) by Mr. Ewing.

Q. Mr. Wormser, you have already testified this week and identified the minutes of meetings of the Code Authority which took place on the 27th of July, 1934, the 25th of September 1934, the 16th of November, 1934, and
2342 the informal meeting of June 11, 1935.

Mr. Du Bose: Which are respectively Respondent's Exhibits 6-A to I, 9-A to F, 11-A to G and 13-A to D in evidence.

By Mr. Ewing:

Q. I now hand you herewith the minute book and direct your attention to the minutes of the first, second, fourth, sixth eight, ninth and tenth meetings and ask you to check against them the photostats which I also hand you (handing same to witnesss).

A. I have done so.

Mr. Ewing: I ask that the photostats be marked for identification as Respondent's Exhibits 127-A to 133-Z-7 inclusive.

Trial Examiner Norwood: They will be so marked for identification as Respondent's Exhibits 127-A through 133-Z-7.

(The documents referred to were marked Respondent's Exhibits 127-A, 127-B, 127-C, 127-D, 127-E, 127-F, 127-G; 128-A, 128-B, 128-C, 128-D, 128-E; 129-A, 129-B, 129-C, 129-D, 129-E, 129-F, 129-G, 129-H; 130-A, 130-B, 130-C, 130-D, 130-E, 130-F, 130-G, 130-H; 131-A, 131-B, 131-C, 131-D, 131-E, 131-F, 31-G; 132-A, 132-B, 132-C, 132-D, 132-E, 132-F, 132-G, 132-H, 132-I, 132-J, 132-K, 132-L, 132-M, 132-N, 132-O, 132-P, 132-Q, 132-R, 132-S, 132-T;
2343 133-A, 133-B, 133-C, 133-D, 133-E, 133-F. 133-G, 133-H, 133-I, 133-J, 133-K, 133-L, 133-M, 133-N, 133-O, 133-P, 133-Q, 133-R, 133-S, 133-T, 133-U, 133-V, 133-W, 133-X, 133-Y, 133-Z, 133-Z-1, 133-Z-2, 133-Z-3, 133-Z-4, 133-Z-5, 133-Z-6, 133-Z-7, for identification.)

Trial Examiner Norwood: Proceed.

Mr. Ewing: I now offer Respondent's Exhibits 127-A to 133-Z-7 for identification, in evidence.

Trial Examiner Norwood: Is there any objection?

Mr. Wright: I object, your Honor, on the same grounds that I made yesterday. They contain much that is hearsay and they are self-serving. And practically all of the exhibits are irrelevant and immaterial.

Mr. Ewing: Our position, of course, is the same as we have stated before.

Trial Examiner Norwood: What minutes are these?

Mr. Ewing: These are the balance of the minutes of the Code Authority with the exception that I will mention and which I will supply.

Mr. Wright: Furthermore, your Honor, some of the exhibits are obviously incomplete in that exhibits referred to in the main parts of the minutes which are not—

Mr. Ewing: One is and that is what we are going to complete.

Trial Examiner Norwood: You will complete that
2344 on another number later on?

Mr. Ewing: Right away. They skipped photostating it for some reason.

Trial Examiner Norwood: It may be included in our numbering here and you will supply it before we leave today.

Mr. DuBose: Off the record.

Trial Examiner Norwood: Off the record.

(Discussion off the record.)

Trial Examiner Norwood: On the record. I shall overrule the objection. I am allowing it so far as the hearsay is contained in the same manner that the other exhibits were conditioned. With that understanding, we will receive Respondent's Exhibits 127-A to 133-Z-7, inclusive.

(The documents referred to, heretofore marked RESPONDENT'S EXHIBITS 127-A, 127-B, 127-C, 127-D, 127-E, 127-F, 127-G; 128-A, 128-B, 128-C, 128-D, 128-E; 129-A, 129-B, 129-C, 129-D, 129-E, 129-F, 129-G, 129-H; 130-A, 130-B, 130-C, 130-D, 130-E, 130-F, 130-G, 130-H; 131-A, 131-B, 131-C, 131-D, 131-E, 131-F, 131-G; 132-A, 132-B, 132-C, 132-D, 132-E, 132-F, 132-G, 132-H, 132-I, 132-J, 132-K, 132-L, 132-M, 132-N, 132-O, 132-P, 132-Q, 132-R, 132-S, 132-T; 133-A, 133-B, 133-C, 133-D, 133-E, 133-F, 133-G, 133-H, 133-I, 133-J, 133-K, 133-L, 133-M, 133-N, 133-O, 133-P, 133-Q, 133-R, 133-S, 133-T, 133-U,
133-V, 133-W, 133-X, 133-Y, 133-Z, ~~133-Z-1,~~ 133-Z-2,
2345 133-Z-3, 133-Z-4, 133-Z-5, 133-Z-6, 133-Z-7 for identi-
fication were received in evidence.)

Trial Examiner Norwood: Proceed.

By Mr. Ewing:

Q. Mr. Wormser, I show you your minute book again and direct your attention to the minutes of the fourth meeting of August 20, 1934 (handing same to witness). I ask you whether you acted as secretary at that meeting?

A. I did.

Q. Now, following the minutes proper, there are a number of papers with exhibit headings.

A. Yes, sir.

Q. And these have been marked Respondent's Exhibits 129-I to X for identification. I ask you whether those documents were filed with the Code Authority, the fourth meeting minutes?

A. They were.

Mr. Ewing: I offer them in evidence and request permission to substitute photostats.

Mr. Wright: May I see them?

Mr. Ewing: Certainly.

Trial Examiner Norwood: Those are the missing exhibits that were mentioned a while ago in connection with Exhibit 129?

Mr. Ewing: Yes, your Honor.

2346 Mr. Wright: The same objection applies to these, but since the original exhibits have been received in evidence, I see no reason to object for that would make it incomplete.

Trial Examiner Norwood: Objection overruled. They will be received in evidence as Respondent's Exhibits 129-I to X.

(The documents referred to, heretofore marked for identification as RESPONDENT'S EXHIBITS 129-I, 129-J, 129-K, 129-L, 129-M, 129-N, 129-O, 129-P, 129-Q, 129-R, 129-S, 129-T, 129-U, 129-V, 129-W, 129-X, were received in evidence.)

Trial Examiner Norwood: Proceed.

By Mr. Ewing:

Q. Mr. Wormser, I show you the minute book entitled "Minutes of Divisions," and ask you whether therein contained you find the minutes of meetings of the lead pigments division of the Lead Industries Association (handing same to witness)?

A. Yes, sir.

Mr. Ewing: I ask that the minutes of the meeting of July 19, 1933, be marked Respondent's Exhibit 134-A to -E inclusive, and that the minutes of the meeting of the dry products committee of the lead pigments division of August 9, 1933, be marked Respondent's Exhibit 135-A and -B, and that the minutes of the dry products
2347 committee of the lead pigments division of December 6, 1933, be marked Respondent's Exhibit 136-A and -B for identification.

Trial Examiner Norwood: They will be so marked.

(The documents referred to were marked Respondent's Exhibits 134-A, 134-B, 134-C, 134-D, 134-E; 135-A, 135-B; 136-A, 136-B, for identification.)

Trial Examiner Norwood: Proceed.

Mr. Ewing: Mark the minutes of the meeting of the lead oxide committee of the lead pigments division, December 14-15, 1933 as Respondent's Exhibit 137-A and B for identification, and the minutes of the lead oxide committee, lead pigments division of December 27-28, 1933, should be marked Respondent's Exhibit 138-A and B for identification. That is with Exhibit "A" annexed thereto. Mark the minutes of the lead pigments division of the meeting of June 5, 1934, Respondent's Exhibit 139 for identification.

Trial Examiner Norwood: They will be so marked as Respondent's Exhibits 137-A to 139 for identification.

(The documents referred to were marked Respondent's Exhibits 137-A, 137-B, 138-A, 138-B, 139, for identification.)

Trial Examiner Norwood: Proceed.

By Mr. Ewing:

Q. I show you your minute book containing the
2348 minutes of the lead pigments division and its committees, and ask you to note as you go through the minutes those which have just been marked as Respondent's Exhibits for identification 134-A to 139. When you come to any meeting which has not been so marked, see if you find a photostatic copy of that meeting in this bunch of photostats and thereby determine all of the minutes are either in evidence or have been marked for identification (handing same to witness).

A. It is complete.

Q. State whether the documents which have been marked as Respondent's Exhibits 134-A to 139 inclusive are minutes of the lead pigments division meetings of its committees.

A. Yes, sir.

Mr. Ewing: I offer Respondent's Exhibits 134-A to 139 for identification in evidence subject to the same condition with which your Honor has received the other similar documents.

Trial Examiner Norwood: Is there any objection?

Mr. Wright: Providing these minutes are received under the same restrictions as the previous ones, I have no objection. I believe that these minutes are more closely related to the matters in issue than those which have been previously offered as Respondent's Exhibits.

Trial Examiner Norwood: They are offered subject to that condition. They will be received in evidence as
2349 Respondent's Exhibits 134-A to 139 inclusive.

(The documents referred to, heretofore marked RESPONDENT'S EXHIBITS 134-A, 134-B, 134-C, 134-D, 134-E; 135-A, 135-B; 136-A, 136-B; 137-A, 137-B; 138-A, 138-B; 139 for identification, were received in evidence.)

Mr. Ewing: I take it that we may substitute photostatic copies for the originals?

Mr. Wright: I have no objection to that procedure.

Trial Examiner Norwood: Proceed.

By Mr. Ewing:

Q. Now, in connection with the minutes of the Code Authority which have been received this morning as Respondent's Exhibits 127-A to 133-Z-7, will you state, Mr. Wormser, in what connection the discussions at those meetings took place and in what connection the action taken by the Code Authority at those meetings took place, generally?

A. The minutes of the Code Authority meetings reported the progress in drafting a code for the—I would like to just change that if I may.

Mr. Wright: Your Honor, I object to an answer to that question which states what the minutes report. The minutes on their face show what they report. Unless this can be added to from the witness' own knowledge—

Trial Examiner Norwood: Yes.

Mr. Ewing: I didn't mean him to paraphrase the 2350 contents. I was asking him, rather, in what connection or for what purpose these discussions took place and action was taken.

Trial Examiner Norwood: I will overrule the objection and ask him to answer it from that standpoint.

The Witness: These minutes were taken to cover the transactions of the Code Authority which had the responsibility of administering the code of fair competition for the lead industry.

By Mr. Ewing:

Q. Now, with respect to Respondent's Exhibits 134-A to 139 inclusive, representing minutes of meetings of the lead pigments division or its committees from July 1933 to and including June 5, 1934, will you state in what connection the subjects shown as being discussed by those minutes were discussed?

A. They were all discussed to draft a supplemental code of fair competition for the lead pigments division.

Q. And in what connection were the actions taken by those committees at their meetings during the same period, in evidence as Respondent's Exhibits 134-A to 139 inclusive, taken?

A. Did you say in what connection, Mr. Ewing?

Q. In what connection the actions taken by those committees—

A. They were all actions taken in connection with

2351 the code of fair competition for the lead industry plus the supplemental code of fair competition for the pigments division.

Mr. Ewing: I now offer in evidence—before I do that, Mr. Reporter, mark this for identification as Respondent's Exhibit 140.

Trial Examiner Norwood: It will be so marked.

(The document referred to was marked Respondent's Exhibit 140 for identification.)

Trial Examiner Norwood: Proceed.

Mr. Ewing: I offer in evidence page 4 of a pamphlet issued by the United States Department of Commerce, Census of Manufacturers in 1931, which is Respondent's Exhibit 140 for identification.

Mr. Wright: I would like to ask counsel the purpose for which that document is being offered. It doesn't appear to be relevant on its face.

Mr. Ewing: I am offering it to show the statistics as set forth with regard to the paint industry as a whole, showing the relative amount in this particular year of various forms of paint. The minutes of the executive committee which have been received show that the white lead use was decreasing and this shows the Department of Commerce figures in this particular year or years, I should say.

Trial Examiner Norwood: Is there any objection?
2352 Mr. Wright: I have no objection.
Trial Examiner Norwood: It will be received in evidence as Respondent's Exhibit 140.

(The document referred to, heretofore marked RESPONDENT'S EXHIBIT 140 for identification, was received in evidence.)

Mr. Ewing: Again we would like to substitute a photostatic copy of that.

Trial Examiner Norwood: Is there any objection?

Mr. Wright: No objection.

Trial Examiner Norwood: All right, then. Proceed.

By Mr. Ewing:

Q. I show you, Mr. Wormser, the constitution and by-laws of the Lead Industries Association revised as of January 19, 1934, and ask you to read to yourself Article 2 thereof (handing same to witness).

A. I have read it.

Q. Did the Lead Industries Association collect and publish statistical information relating to the production, distribution, marketing, consumption and use of lead and lead products?

A. Yes, sir.

Q. And did the association disseminate accurate information regarding lead products and how they may best be used?

A. Yes, sir.

2353 Q. Did it develop methods for the improvement of the welfare of those engaged in the lead industry or in the use of its product?

A Yes, sir.

Q. Was it operated so as in general to promote the serviceability of the lead industry to the community at large?

A. Yes, sir.

Q. Now, I direct your attention to Article 3 of the constitution and ask you to read it to yourself.

A. I have read it.

Q. As far as you know, did the Lead Industries Association permit any agreement, understanding, combination or arrangement or any other form of concerted action to curtail production except as such action may have been taken during the NRA days?

Mr. Wright: Read the question, please.

Trial Examiner Norwood: Read the question.

(The reporter read the question as follows:

"As far as you know, did the Lead Industries Association permit any agreement, understanding, combination or arrangement or any other form of concerted action to curtail production except as such action may have been taken during the NRA days?")

Trial Examiner Norwood: Answer the question.

The Witness: It never did.

2354 By Mr. Ewing:

Q. Did the Lead Industries Association, as far as you know, permit any agreement, understanding, combination or arrangement or any other form of concerted action to fix prices except as such action might have been taken during NRA days?

A. It never did.

Q. I ask you the same question with respect to the suppression of competition.

A. My answer is the same, it never did.

Q. I ask you the same question in connection with any attempt to restrain trade or commerce.

A. It never did anything of that description.

Q. I ask you the same question with respect to monopolization or attempts at monopolization.

A. It never did anything of that characterization.

Q. Will you state whether the objectives of the association as set forth in the constitution have, as far as you know, been followed by the association since its inception?

A. They have been religiously followed by the association ever since its inception.

Q. In your capacity as secretary of the Lead Industries Association having the duty under the by-laws of representing the executive committee as an administrative official, what action, if any, would you have taken had
2355 your attention been called to any attempt upon the
part of any line of the lead industry to fix and control prices?

A. I would have opposed it personally. I would have reported it to the executive committee. I would have called the attention to any party attempting that to Article 3 of our constitution which strictly forbids any such activity.

Q. I ask you the same question with respect to the curtailment of production with a view to attempted monopoly.

A. My answer is the same, I would have opposed it personally as against my own scruples and I would have reported it to the executive committee. As a matter of fact, I think I would have resigned from the association if anything like that had been attempted.

Q. I should have, in asking you, excluded from the question anything done during the NRA days.

A. Yes, sir; that is a reservation that I would also like to reserve to modify my statement to the extent that even in NRA days my executive committee was of the same mind. They wanted open competition and they have always had that stand. I personally have had that strong feeling.

Q. I ask you the same question with respect to the adoption of uniform terms and conditions of sale with the same qualification in regard to the NRA days.

A. My answer is the same on that; we would have resisted it.

2356 Q. Can you state of your own knowledge the attitude of the miners, smelters and refiners in the lead industry, with respect to any effort on the part of their consuming customers of lead products to secure a monopoly in any particular line of the business?

A. It would have meant—

Q. Just yes or no. Can you state of your own knowledge the attitude?

A. Yes, sir.

Q. Please state their attitude.

A. They would have raised violent objections to it for the obvious reason that they are dependent upon as broad a market as possible for the sale of their own production.

Mr. Wright: Your Honor, I move that that answer be stricken as so vague and indefinite as not to have any value.

Trial Examiner Norwood: Read the question and the answer.

(The reporter read the question and answer as follows:

Q. "Please state their attitude."

A. "They would have raised violent objections to it for the obvious reason that they are dependent upon as broad a market as possible for the sale of their own production.")

2357 Trial Examiner Norwood: I don't think—

Mr. Ewing: He answered the first question by saying that he could state of his own knowledge.

Mr. Wright: This answer wasn't a statement.

Trial Examiner Norwood: He can give us the facts relating to this policy or their actions and everything, but that is merely just speculation. I am going to allow the motion to strike that answer.

Mr. DuBose: Exception.

Mr. Ewing: Exception.

By Mr. Ewing:

Q. Were there a monopoly in the white lead or lead pigments industry, what would be the effect thereof on the lead outlets of the miners, smelters and refiners?

A. It would diminish the outlets for the lead miners, smelters and refiners.

Q. What, if you know, of your own knowledge, would be the attitude of miners, smelters and refiners in the lead industry with respect to a diminishing of their outlets?

Trial Examiner Norwood: I don't think that he can say what it would be.

Mr. Wright: I am not objecting to the question, but I am going to object to any answer which isn't based on evidentiary facts, however. I don't think that question could be answered by some broad general conclusion
2358 with the use of the word in such broad terms as "they."

Trial Examiner Norwood: Now, I will have to let it go by, but I am interested in maintaining a little consistency here.

Mr. Wright: Well, your Honor, then I will object to the question as calling for a broad conclusion.

Trial Examiner Norwood: I will sustain the objection.

By Mr. Ewing:

Q. What was the attitude of the lead miners, smelters and refiners in the lead industry with respect to any attempt to restrain trade on the part of their customers?

Mr. Wright: Objection.

Mr. Ewing: That is calling for a fact, what was their attitude, if he knows, of course.

Trial Examiner Norwood: I think that is a conclusion. He can state what they did or what they said that would indicate to him what their attitude was. After all, you are using the word "attitude" in the sense of their opinion, and I don't see how he can tell us what the other fellow thought.

Mr. DuBose: If he knows of his own knowledge.

Trial Examiner Norwood: How could he know of his own knowledge?

Mr. DuBose: If he knows of his own knowledge.
2359 These questions are predicated upon that. It is a question of fact.

Trial Examiner Norwood: I will sustain the objection. He can say as to what the policy of his association is as he knows it, and tell us why he knows it and give us any facts with regard to what their attitude would be.

By Mr. Ewing:

Q. What was the policy in your association of the miners, smelters and refiners in regard to practices in restraint of trade?

Mr. Wright: I object, your Honor. This question also calls for a broad general conclusion. I think that this subject is one that we can get to by getting at the evidentiary facts. I think it is susceptible of being proved in that way and since it can be proved in that way, one way or another, I don't think it should be proved by these broad general sweeping questions.

Trial Examiner Norwood: As secretary of this association—

Mr. Wright: He has already testified as to what the policy of the association was and I didn't object to those questions.

Trial Examiner Norwood: They are controlled all the time by their policy.

2360 Mr. Wright: This question goes to the attitude of individual smelters and miners and refiners and processors of lead.

Mr. Hinds: If your Honor please—

Trial Examiner Norwood: They are members of his association?

Mr. Ewing: That's right.

Mr. Hinds: If your Honor please, having in mind that this involves a charge of a conspiracy and that we are before an administrative tribunal, it occurs to me that even if this question should be the subject of some technical consideration, a little more latitude should be given to the people charged with conspiracy and the Court will not be properly influenced that is not evidentiary that has some probative value. But I bespeak a more broad view on the rules of evidence than is applied by our apponent's objection here.

Trial Examiner Norwood: Now, I think these matters come inside of the realm of opinion evidence, and I think we will have to confine this to the expressed policy of this organization.

Mr. Ewing: I confined this question following one of your suggestions, in part, to the expressed attitude of a certain portion of the membership of this association, and I submit that that is perfectly proper.

2361 Mr. Wright: I call your attention, your Honor, that this question goes to the attitude of individual companies and individual members, not to the collective attitude and policies of the association. That has already been testified to and I made no objections to this witness' testifying as to the policy of the association. But now we are getting into another realm which is the realm of the individual policies of a number of members who are all listed here and whose attitude, if it were pertinent to this issue, could certainly be proven—

Mr. Ewing: As expressed in their meetings which directed Mr. Wormser, in operating the association—

Trial Examiner Norwood: I was not sufficiently specific in my remarks a while ago. I didn't use the word "expressed," but counsel have clarified the thing in the discussion, and you must confine it to the expressed policy. I will allow that and overrule the objection with that understanding.

Mr. Wright: Do I understand, your Honor, that the policy as expressed in their activities to the Lead Industries Association—

Trial Examiner Norwood: Yes, expressed to him any time. He can tell what their policies are, if he knows.

Mr. Ewing: That is what my question asked for.

Trial Examiner Norwood: But he must base it on 2362 facts and not mere conclusions.

Mr. Ewing: I have forgotten my question actually, but my question was intended to call for a statement by Mr. Wormser, if he knows if there was any such thing showing the expressed attitude or position taken by miners, smelters and refiners in the Lead Industries Association with respect to the practices of any kind in restraint of trade.

Trial Examiner Norwood: If you will put in these expressions themselves and the factual matters on which he bases that, I think it would be more satisfactory to everybody including yourself.

Mr. DuBose: We have various expressions in the executive committee minutes and in the directors' minutes and this question would be in part based upon those.

Trial Examiner Norwood: I will permit him to answer this question but please don't take it as a precedent.

Mr. Wright: Exception.

Trial Examiner Norwood: Answer the question.

The Witness: May I have the question read?

By Mr. Ewing:

Q. I will rephrase the question and see if I can bring it within the confines.

Will you state the attitude of miners, smelters and 2363 refiners, members of the Lead Industries Association as expressed to you or in your presence with respect to any practices in restraint of trade?

Mr. Wright: The same objection, your Honor.

Trial Examiner Norwood: Overruled.

The Witness: Your Honor, may I go a little bit into the history of the association to answer that question?

Trial Examiner Norwood: Certainly.

The Witness: Well, from its very inception, being an organization comprised of lead mining, smelting, refining and manufacturing companies, the principle was always put to me that we must expand our markets to develop the national resources of the United States in lead to the utmost. It is quite obvious, therefore, that if the lead miners were to subscribe to any monopolistic practice of any of the consumers represented in their association, their own feelings, their own principles, would be distinctly violated and the association would disintegrate. By the same token, the manufacturers have a distinct interest in seeing that the price of lead is kept at as low a value as possible so as to keep their competitive position strong. And they would naturally be adverse to seeing any monopolistic practice among the miners or the smelters and refiners. And that very setup that we have had from the very start makes me walk a chalk line. The association cannot 2364 possibly engage in any monopolistic activity on any side of the fence without disintegrating.

Mr. Wright: I move to strike the answer as not responsive. It is the witness' own conclusion as to what the attitude of the members might have been.

Mr. Ewing: I would like to ask him one more question before your Honor rules.

Trial Examiner Norwood: Proceed.

By Mr. Ewing:

Q. Does what you have just stated, Mr. Wormser, represent actual expressions of the views of the miners, smelters and refiners made to you from time to time?

Mr. Wright: I object, your Honor. The witness has just stated that those are his own opinions.

Trial Examiner Norwood: I think that the previous answer was pure argument.

Mr. Wright: It was an expression by the witness himself.

Trial Examiner Norwood: Yes. I will allow the motion to strike it.

Mr. Ewing: May I have the question read to Mr. Wormser again and see if he can respond to it?

Trial Examiner Norwood: Yes. If you can answer that
in a factual way, do so. Let the Commission's counsel and
the rest of us try to put these facts together and see
2365 the reasons on it. We are asking you to give the facts
on which we can base our reasons. Read the question.

(The reporter read the question as follows:

Q. "Does what you have just stated, Mr. Wormser, represent actual expressions of the views of the miners, smelters and refiners made to you from time to time?")

The Witness: I don't know whether the factual statement I recently made before the Committee on Public Lands of the House might serve your purpose, your Honor, but in that I clearly stated that our association wants free, fair and open competition, or words to that effect. And I think that expresses the policy of the association.

Mr. Wright: I move to strike it as not responsive. Again it is a statement of the witness' own opinion as to what the association stands for and the policy of the association. The question went to what the individual members—

Trial Examiner Norwood: Motion denied. Go ahead.

By Mr. Ewing:

Q. Mr. Wormser, is the development of efficiency in production and distribution through technical research, technical advisory service, market and merchandising research, an objective of the Lead Industries Association?

Mr. Wright: I object.

2366 Trial Examiner Norwood: Sustained.

Mr. DuBose: Upon what ground, your Honor?

Trial Examiner Norwood: It is leading.

Mr. Wright: Presumably this witness knows what the objective of the Lead Industries Association are. I don't want the record to show him either ratifying or failing to ratify Respondent's statements.

By Mr. Ewing:

Q. What, in your opinion, was the principal objective of the Lead Industries Association?

A. The principal objective of the association was to promote a wider use of lead in all its forms throughout the United States.

Mr. Ewing: That concludes our cross examination.

Trial Examiner Norwood: Cross examine.

Mr. Wright: First of all, I want to make inquiry of counsel. Was Mr. Wormser called as a witness of the Respondent's as a whole or was he called as a witness of the National Lead Company?

Mr. Ewing: I don't know what the answer to that is. I called Mr. Wormser. Certainly he was called as my witness and I would take it that the evidence that he gives to the extent that it is in the record is binding on everybody.

Trial Examiner Norwood: Yes. That is binding as
2367 it may be connected by the whole record.

Mr. Ewing: That's right.

Mr. DuBose: As it may be connected against the other Respondents.

Mr. Ewing: For or against, or however it is.

Trial Examiner Norwood: He is the witness for the association to which all the Respondents belong.

Mr. Ewing: Well, that is not quite true because the association isn't a party here and neither is Mr. Wormser. And while we are represented in the association, there are as you know a great many others represented in the association, too. So that he is not here testifying for the association. He is here testifying as to the facts that he has known with respect to the association and what the association did except where he testified as an expert.

Trial Examiner Norwood: I think it is clear now. We will have a five-minute recess at this time.

(Whereupon, a five-minute recess was taken.)

Trial Examiner Norwood: Come to order. Proceed.

Cross-Examination by Mr. Wright.

Q. Mr. Wormser, will you state again for me the various divisions and sub-organizations of the Lead Industries Association?

2368 A. Yes, sir. We have a mining division, a smelting and refining division, a lead pigment division and a metallic lead products division.

Q. And then you have the executive committee and the Board of Directors?

A. Yes, sir.

Q. Now, these exhibits that we have received comprise all of the minutes, do they not, of the executive committee, the Board of Directors and the pigments division?

A. Yes, sir.

Q. What sub-divisions are there under the pigments division or other sub-organizations which would have anything to do with lead pigments?

A. Well, under the pigments division we had a white lead in oil section, if you will, and then—

Q. Those minutes of the white lead in oil section are all in; is that right?

A. Yes, sir; and also the dry products section which would cover dry white lead and the lead oxides.

Q. Well, now, on these minutes which have been received this morning, Respondent's Exhibits 135 and 136 and their sub-numbers, they were the dry products division, as I recall it?

Mr. DuBose: Not all of them, I don't think.

2369 By Mr. Wright:

Q. These two particular ones, whereas Exhibit 137 and 138 were the lead oxides.

A. I will have to refresh my memory on that.

Q. Yes. I am referring now to the meeting of July 19th. It was received as Respondent's Exhibit 135-A and B.

Mr. DuBose: Exhibit 134, I think it is.

By Mr. Wright:

Q. I am talking about July 9th. Excuse me, August 9th. August 9th and September 6th, those were the dry products sections?

A. August 6th was dry products—

Mr. DuBose: August 9th.

The Witness: August 9th was dry products but September 6th was white lead in oil. There were two for September 6th. There was also a dry products meeting on September 6th.

By Mr. Wright:

Q. Will you refer to the meeting on December 14th and 15th, 1933, which is in evidence as Respondent's Exhibit 137-A and B?

A. Yes, sir.

Q. What sub-divisions were those meetings?

A. That was the lead oxide committee of the lead pigments division.

2370 Q. Well, now; is that a sub-division of the dry products section?

A. Yes, sir; because we had dry white lead and dry oxides which had different problems.

Q. Well, now, the dry products committee then handled dry white lead; is that correct?

A. And also the dry oxides.

Q. And also the dry oxides?

A. Yes, sir.

Q. But there was a separate sub-division for dry oxides?

A. Yes, sir.

Q. And for dry white lead?

A. Yes, sir.

Q. All of the minutes of the meetings of those various sub-divisions are all in evidence?

A. Yes.

Q. Were there any other organizations in the period of time from the beginning of the Lead Industries Association to the present, which had anything to do with lead pigments?

A. When you say, "had anything to do," sir, I don't know whether you mean—for example, there was a paint industry and, of course, they have something to do. There is the National Paint, Varnish and Lacquer Association.

Q. I am talking about in the Lead Industries Association.

2371 A. I see what you mean, no, sir.

Q. Was there a red lead committee?

A. I would have to refresh my memory because we had red lead and litharge as part of the oxide activities of the association. And, of course, the litharge problems were different from the red lead problems. So I believe we set up both a red lead committee covering paint, and litharge for, say, storage batteries which was the largest outlet for litharge.

Q. Well, now, would the lead oxides committee cover the red lead activities of the association?

Mr. DuBose: What period are you talking about?

Mr. Wright: I am talking now about the period back in 1933 and 1934.

Mr. DuBose: You are referring to the code period then?

Mr. Wright: To the code period, but I want to bring it up to day.

The Witness: They were all, Mr. Wright, under the Lead Oxide activities of the association.

By Mr. Wright:

Q. Was there any separate organization dealing with red lead or litharge which met in that day?

7

A. No, sir.

Q. Has there been since any organization?

2372 A. We have a red lead technical committee but
that has no bearing on this matter at all.

Q. What was the function of that red lead technical committee?

A. That red lead technical committee is a committee composed of laboratory technicians designed to improve the formulation of red lead in metal protective paints.

Q. Has the Lead Industries Association had any red lead program as such?

A. When you say a "red lead program," do you mean a promotional program?

Q. Any sort of a program known as a red lead program.

A. During code days, or are you referring to any time in our history?

Q. No, sir. I am referring to any time in your history.

A. Yes, sir. We have a program under way right now which is designed to promote the use of red lead in paint.

Q. What is that program known as, or how is it carried on your records?

A. It is our red lead research program.

Q. How does that differ from your red lead technical committee? Are those activities combined?

A. It is the same; it is synonymous.

Q. When was that program initiated?

A. During the war. I would say 1943, without re-
2373 freshing my memory, but I think that is about the
time. It was designed to strengthen our competitive position against competitive materials made out of zinc chromate and aluminum and iron oxide and other competitive products.

Q. I direct your attention to a document which has heretofore been marked as Respondent's Exhibit 102-I, which purports to be a financial statement for the red lead division, 1943.

A. Yes, sir.

Q. Will you state what that red lead division was?

A. That is again the technical program in which our red lead division, with the assistance of the lead mining companies, has engaged in for this period January 1st to November 30th.

Q. When was that red lead division represented by that financial statement, started?

A. If I could refresh my memory on my annual report

—it is distinctly in the reports. I would say offhand, Mr. Wright, without it being held against me, that it must be 1943 or possibly 1942. It was during the war. It was no earlier than the war, I will put it that way, perhaps no earlier than 1942.

Q. Now, I understood your testimony, Mr. Wormser, to be that you were thoroughly conversant and familiar with the business of the various concerns listed in Com-
2374 mission's Exhibit 498, 499 about which you testified earlier in the week, namely, a list of members of the Lead Industries Association at various times and the directors and officers of the Lead Industries Association.

A. Did I say thoroughly conversant?

Q. That was my understanding of your testimony.

Mr. DuBose: He was just asked to identify them, Mr. Wright.

By Mr. Wright:

Q. As I recall your testimony, you identified them as members and also stated what their principal business was.

A. I correct that.

Q. And you also stated as to where a number of their plants were located.

A. Yes, sir.

Q. Now, I call your attention to 498-A, the evidence shows the Evans Lead Company of Charleston, West Virginia.

A. Yes, sir.

Q. What was the principal business of that company?

A. The manufacture of lead oxides.

Q. Where was that plant?

A. In Charleston, West Virginia.

Q. Do you know what the production in that plant was in that period, say, in 1933 and 1934?

A. I don't recall, Mr. Wright.

2375 Q. I notice that the Evans Lead Company is still carried as a member of the Lead Industries Association; is it not?

A. Evans Lead Division.

Q. I call your attention to the Evans Lead Division, National Lead Company, in Commission's Exhibit 498-Z. When did the change in that member's status occur?

Mr. DuBose: Mr. Wright, that is already in evidence. Last year Mr. Merson testified with respect to that. I don't see the purpose of this cross-examination. I object to the question.

Trial Examiner Norwood: Wait a minute, let him go ahead.

Mr. DuBose: I object to the question.

Trial Examiner Norwood: Read the question.

(The reporter read the question as follows: "Q. I call your attention to the Evans Lead Division, National Lead Company, in Commission's Exhibit 498-Z. When did the change in that member's status occur?")

Trial Examiner Norwood: Objection overruled. Answer that, if you know it.

The Witness: From our records it appears that it occurred in 1944.

By Mr. Wright:

Q. Do you know when the National Lead Company 2376 acquired the Evans Lead Company?

A. I don't recall.

Q. I call your attention to the Andrews Lead Company, Inc., of Long Island City, New York, on Commission's Exhibit 498-F and I see it does not appear on Commission's Exhibit 498-H. What happened to that company; can you tell us?

A. I think the Andrews Lead Company was absorbed by the American Smelting and Refining Company.

Q. What was the business of the Andrews Lead Company?

A. The Andrews Lead Company made metallic lead products and also some lead oxides.

Q. I call your attention in Commission's Exhibit 498-D, to Wetherill and Brother, Philadelphia, Pennsylvania. What was the business of that concern?

A. Manufacturers of white lead.

Q. Did they manufacture white lead in oil or dry white lead or both?

A. I believe they manufactured both.

Q. I call your attention to the subsequent list of members of the Lead Industries Association on which Wetherill and Brother does not appear. What happened to that company, do you know?

A. I think it was taken over by the National Lead Company.

Q. Do you know about when it was taken over?

2377 A. I would have to refresh my memory through a search of the records, Mr. Wright. I don't recall the exact year. It is quite a few years ago. There is not enough data here for me to indicate what it was.

Q. Mr. Wormser, in the past few days you testified as to a good many statements of facts regarding these meetings of the various divisions of the Lead Industries Association during the period 1933 and 1934. Just how clear is your recollection of those meetings?

A. None too clear, I am frank to confess, Mr. Wright, but clear enough to get a pretty good idea of what transpired during that period.

Q. Can you recall any specific conversations as to these meetings? Has your recollection been sufficiently refreshed by reading these minutes to picture those minutes and to have independent recollection of who was there and what went on?

A. I can't answer yes to that, Mr. Wright.

Q. In other words, the answer would be no?

A. Well, I have certain episodes that stand out vividly in my memory and also will stand out and others that are very vague indeed.

Q. Well, now, as to specific meetings that occurred back in that time, could you, without consulting the minutes,
tell where they were held and who was there and the
2378 subjects that were discussed?

A. No, sir; I could not.

Q. In other words, most of your information comes from reading the minutes; is that correct?

A. Yes, sir.

Q. And not from any independent recollection of what occurred?

A. Oh, vague as it may be, I have recollections of what went on refreshed by a perusal of the minutes.

Mr. Wright: May we go off the record, your Honor?

Trial Examiner Norwood: Off the record.

(Discussion off the record.)

Trial Examiner Norwood: On the record.

Mr. Wright: Your Honor, we have run practically four days here and received a mass of documents, quite a good many of which I would like to examine with respect to this witness, and I respectfully request that the cross examination be deferred until May 7th and 8th in Washington, I believe was the time suggested by the counsel, and it would be convenient to them and the witnesses.

Mr. Ewing: That is quite satisfactory subject to the acts of God and so forth.

Trial Examiner Norwood: It is out tentative plans, then, to go ahead with the reception of further evidence with the Respondents beginning in Washington on 2379 the 13th of May.

Mr. Ewing: That's correct.

Trial Examiner Norwood: And that we will make plans at that time for future activities. The motion is allowed and by agreement of counsel we will now adjourn to reconvene in Washington, D. C. in Room 332, Office of the Federal Trade Commission at 10 o'clock a.m., whatever time is prevailing in the City, on the 7th day of May.

It is understood that the witness is now excused and directed to appear in Washington to give further testimony.

(Witness excused.)

(Whereupon, at 2:10 o'clock p.m., the hearing was adjourned to May 7, 1947 at 10 o'clock, a.m. in Washington, D. C.)

2380

Room 532, Federal Trade
Commission Building,
Washington, D. C.,
Wednesday, May 7, 1947.

Met, pursuant to adjournment, at 10:00 a.m.

Before:

John W. Norwood, Trial Examiner.

Appearances:

Joseph S. Wright, Esq., appearing for the Federal Trade Commission.

Edmund P. Wood, Esq., 2801 Carew Tower, Cincinnati, Ohio, appearing for Eagle Picher Lead Company and Eagle Picher Sales Company.

Robert H. Ecker, (Chadbourne, Wallace, Parke & Whiteside, 25 Broadway, New York, N. Y.) appearing for Anaconda Copper Mining Company and International Smelting & Refining Company.

James D. Ewing, Esq., and E. Z. DuBose, Esq. (Alexander & Green, 120 Broadway, New York, N. Y.), appearing for the National Lead Company.

John A. Duncan, 1649 Union Commercial Building, Cleveland 14, Ohio, appearing for the Glidden Company.

2381 PROCEEDINGS.

Trial Examiner Norwood: Pursuant to adjournment in New York on the 25th of April, the hearing in Docket 5253 is now convened in Room 532 of the Federal Trade Commission Building, Washington, D. C., at ten o'clock a.m., on the 7th day of May, 1947.

The appearances are as follows:

Joseph S. Wright, appearing for the Federal Trade Commission.

Edmund P. Wood, appearing for Eagle Picher Lead Company and Eagle Picher Sales Company.

Robert H. Ecker, appearing for Anaconda Copper Mining Company and International Smelting & Refining Company.

James D. Ewing and E. Z. DuBose, appearing for the National Lead Company.

John A. Duncan, appearing for the Glidden Company.

Mr. Felix E. Wormser will resume the stand for cross-examination.

Mr. Duncan: If your Honor please, may I say, on behalf of the Glidden Company and the other respondents, we are making an application to the Examiner at this time to change the schedule for the May 13 hearing which was to begin in Washington, so that it will begin in Cleveland rather than Washington, for this reason:

The testimony to be offered at the May 13 hearing
2382 will be testimony, I believe, on behalf of the Glidden Company, and it really would be a great accommodation to those witnesses if the hearings were to be held in Cleveland rather than in Washington, starting May 13th. I realize that today, being the 7th of May, this is pretty short notice to counsel representing the Federal Trade Commission and to you, but I do feel that in as much as your Honor came to Cleveland when the government was putting on its case that, in the circumstances, if May 13 is too short a notice, I suggest then that the date be put off say until the following week, say May 20, in order to accommodate the witnesses who will testify on behalf of Glidden.

I realize that this is a discretionary matter on the part of the Examiner, but I do feel that in the circumstances it would be a great accommodation to the witnesses.

Trial Examiner Norwood: How many witnesses do you have there?

Mr. Duncan: I don't want to say exactly because I don't know at this time, but I know that there will be more than two witnesses, and I feel that, with the exhibits which have been made up, and which will be offered, and the fact that Cleveland is the home office for the Glidden Company, that, frankly, it would really be of great benefit to us if you would have the May 13 hearing in Cleveland rather than here in Washington.

Mr. Wright: I have no objection, your Honor, to 2383 that. I appreciate it would be a convenience to respondents in the matter. I also have no objection to going ahead on the 13th rather than postponing it to the 20th. As a matter of fact, I would rather have it on the 13th than the 20th, so far as my personal plans are concerned.

Trial Examiner Norwood: We have come to an understanding about this hearing and it is absolutely impossible for me to go to Cleveland on the 13th and I don't want to postpone the case any further. Inasmuch as you have only three or four witnesses it will be much less expensive to the other respondents and to the government people to have the hearing in Washington as appointed. I don't want to change our arrangements on that.

Mr. Duncan: I see.

Trial Examiner Norwood: I don't think it is necessary to go over there for two or three witnesses and to move the whole hearing over there. Now, it is different when we arranged a series of hearings outside of Washington and stopped in Cleveland a couple of days on the way to Chicago, and so on, as we did before. That is a different matter.

Mr. Duncan: Of course, I realize it is discretionary with you, but I feel—we are not trying to stall the matter.

Trial Examiner Norwood: I understand. It is a matter of your coming to Washington or our taking the lawyers and reporters, and everybody, over there to Cleveland 2384 to hear two or three witnesses.

Mr. Duncan: We have Attorney Ed Wood who comes from Cincinnati. Cleveland is nearer for him than Washington. From the standpoint of Mr. Ewing and Mr. DuBose, who come from New York, I frankly don't think it makes a particle of difference to them.

Trial Examiner Norwood: I cannot accede to counsel's request.

Mr. Duncan: Am I to understand that May 13 is the date and that you will proceed in Washington?

Trial Examiner Norwood: In Washington, D. C., unless we come to some further arrangement about it. We will talk about it off the record.

Mr. Wormser, will you resume the stand.

Proceed wit the cross examination.

FELIX E. WORMSER, a witness called by the respondents, having been previously sworn, resumed the stand and testified further as follows:

Cross-Examination by Mr. Wright.

Q. Mr. Wormser, you testified on direct examination regarding the location of the smelters and refiners of pig lead in the United States. You mentioned a plant at Galena, Kansas, as I recall. What is that plant at Galena?

A. That is a lead smelter owned by the Eagle
2385 Picher Company for handling the local concentrates
from the tri-state and surrounding mining areas.

Q. What is the tri-state area?

A. The tri-state area is essentially a zinc producing area, comprising—comprised of the corners of three states, Missouri, Oklahoma, and Kansas, coming together. That happens to be the largest single source of zinc in the United States and they get some lead as by-product.

Q. The area falls into the corners of those three states?

A. That is correct, sir.

Q. Does the National Lead Company have any processing plant at Galena?

A. No, sir.

Q. Are any pigments produced at Galena?

A. Yes. Some sublime pigments are produced there. That is sulphates from treating the concentrates, the lead concentrates, directly in specially designed furnaces to produce a lead sulphate.

Q. That is basic lead sulphate?

A. Yes.

Q. Who produces the pigments?

A. Eagle Picher.

Q. Will you tell us how pig lead is priced in the United States?

A. Well, I think I can explain it best to you by
2386 stating that it is a world,—it is a commodity that is produced in various parts of the world.

Q. May I interrupt there? I don't think you understand what I have in mind. How are prices for pig lead at different localities in the United States calculated?

A. Well, I think even to—we have two markets in the United States, two major markets, New York and St. Louis, but then there are many other markets which reflect the principal consuming centers of pig lead, particularly along the eastern seaboard, where the greatest amount of lead in the United States is used, so that I might also say there is a market in the Philadelphia area, in Cleveland, Buffalo, dozens of points all over the United States.

Q. You say there is a market. What do you mean by that?

A. Well, I mean that there is a price of lead which represents today, for example, what it would cost to buy lead in that particular point.

Q. What is the price of lead in St. Louis today?

A. The price of lead in St. Louis today would be 14.80 cents per pound.

Q. What is the price of lead in New York?

A. Fifteen cents per pound.

Q. Then there is a 20-cent spread at the present time?

A. Yes, sir.

Q. What is the corresponding quotation in Chicago?
2387 A. I think it is 14.85 or ninety, I am not certain. It varies a bit. I say 14.80. Probably if you picked up trade papers today you would find several quotations reflecting the St. Louis market.

Q. Several quotations?

A. Yes, sir, several different quotations. I would say in Chicago it is five to ten points higher, although Chicago also has its market.

Q. Five or ten cents higher than St. Louis?

A. That is right.

Q. But below New York?

A. Yes, sir, below New York.

Q. What is the present relation between the market in Philadelphia and New York?

A. I think Philadelphia and New York are about on parity.

Q. Has that been the case over a considerable period of years?

A. For quite some time, I should say, because Philadelphia and New York, and Baltimore and Boston, and other points along the seaboard, are ports of entry for foreign lead, that is, Mexican lead, Peruvian lead, Australian lead, and other foreign lead coming into the United States.

Q. Back in the period say from 1933 to 1936, what was the relation between those ports and New York?

2388 A. Well, I would say they were very close together, Mr. Wright. I would hate to rely on my memory to give you exact figures.

Q. In that period was there any considerable amount of Peruvian or Mexican lead coming into the United States for consumption here?

A. No, in those days a comparatively moderate amount compared with the tonnage we have to import now.

Q. Was that ordinary pig lead consumed from foreign sources in those times, or was that a special variety?

A. No, sir, that was commercial pig lead, mainly from Mexico.

Q. What are the different common grades of pig lead?

A. We have a common desilverized lead which I would say would be the lead that was quoted in these markets that we are discussing.

Q. Is that the base lead?

A. Yes, that is the base lead, because the other grades generally command a premium of maybe a dollar or $2 a ton. We have a corroding grade of lead which is a very pure form of lead and does command a premium over common lead.

Q. What is that premium customarily?

A. Two dollars a ton, I would say on the average. Then we have chemical lead, which is a natural copper-bearing lead. That comes from Missouri, and is very popular where high corrosion resistance is demanded. Wherever sulfuric acid, for example, is used.

2389 Q. Does that command a premium?

A. Yes, sir, of $1 to $2 a ton. Then we have synthetic copper-bearing lead corresponding to the chemical grade and which commands a premium. Of course, we have antimonial lead, but we need not consider that, that is more or less a specialty. I would say common lead, corroding and chemical are the there great leads.

Q. On the antimonial lead, how are prices quoted?

A. That varies, Mr. Wright. I would say it depends on the market, how strong a demand there is for it. Currently, with antimony so scarce, it is difficult to obtain antimonial ~~lead,~~ and it commands a price reflecting the cost of the lead in the antimonial lead plus the antimony, but there have been times in the past when antimonial lead has been a drug on the market and has been sold at a price equal to lead and I believe at times even lower.

Q. What times are you referring to?

A. Well, I would say back in around the thirties, early thirties. At the time of the depression in 1931 to 1934, thereabouts.

Q. Well, was the customary way of selling antimonial lead in the period subsequent to 1934 to compute the price by taking the price of the pig lead contained in the alloy plus ~~the price~~ of the antimony?

A. That is the way the seller would prefer to sell
2390 it if he could get that price, ~~but the~~ market will often not permit him to do that and he has to sell it substantially below that.

Q. Now, in the period from 1934 to 1941, what was the customary differential between New York and St. Louis on pig lead?

A. I would say it was about 15 points. $3 a ton, Mr Wright.

Q. That would mean 15 cents a hundred pounds?

A. Yes, sir. .15 cents per pound.

Q. Is there is a market in Dallas, Texas?

A. Yes, sir.

Q. What is the relation of that market to the St. Louis market?

A. Well, I can't trust my memory to that. I think I can answer in just a moment, referring to a paper, some records I have here.

Dallas, Texas, takes the New York market.

Q. What is the Atlanta, Georgia, market?

A. Atlanta, Georgia, .05 cents per pound above New York.

What is that document to which you are referring?

A. This is the official order of the Office of Price Administration issued on June 3, 1946, covering its revised price schedule 69 on primary lead.

Q. Is that order still in effect?

A. No, sir.

Q. Over what period of time was it in effect?

A. Well, this particular order is a revision of an

earlier order that was in effect on the establishment
2391 of the OPA in the early days of the war, I would say
1942 to 1946, say four years, and this order reflected an increase in price granted by the OPA raising the official ceiling from six and a half cents to eight and a quarter cents.

Q. Now, under that order, what was the differential between New York and St. Louis?

A. Fifteen points, I believe. Fifteen points.

Q. What was the differential at Chicago over St. Louis?

A. Five points.

Q. When you speak of five points, do you mean five cents per hundredweight?

A. I mean .05 cents per pound.

Q. .05 cents?

A. Yes.

Q. What was the market in Cincinnati?

A. In Cincinnati—it took the New York market.

Q. How about Scranton?

A. Scranton took the New York market.

Q. What was the market at San Francisco?

A. As I recall it was also—no. Yes, also New York.

Q. Well, then, am I correct in my understanding that St. Louis has the lowest price customarily for lead in the country?

A. Well, when you say the lowest price you mean the lowest price of the refined metal?

Q. Yes, sir.

2392 A. I think that is correct, although theoretically,
sir, there are refineries in the west who might be shipping to the eastern points and if you figure their net price it would still be less than St. Louis, but for all practical purposes the St. Louis price is the lowest.

Q. What is the market price in Great Falls, Montana?

A. The market price a Black Eagle, which is close to Great Falls, that is also New York.

Q. Are there any markets in Idaho?

A. Idaho, at Bradley, where the Bunker Hill Smelter is located, that also is the New York price; eight and a quarter.

Q. When they ship back to the eastern refineries their net would be considerably less—or to the eastern processors, their net would be considerably less on the refined lead than the market price at that point?

A. If they deduct this cost of delivering and consider that they sell on that market, that is true.

Q. Do you know what the freight rates are on pig lead per hundredweight from St. Louis to New York?

A. I think it is about 35 points. I am not certain of that, though, I haven't looked it up recently.

Q. Thirty-five points of a cent per pound?

A. Thirty-five one-hundredths of a cent per pound.

Q. Or 35 cents per hundredweight?

A. Yes; 35 one-hundredths. But there again I
2393 would hate to trust to my memory. I could easily
verify that for you, sir, if you would like to have it.

Q. On this 15-cent differential between St. Louis and New York, was that a customary differential over a long period of time prior to the maximum price order?

A. It has been rather uniform, Mr. Wright, yes.

Q. Back to what period?

A. There again I would hate to trust to my memory, Mr. Wright. I would say at least in the late twenties.

Q. It has obtained since approximately that time?

A. That is my feeling.

Q. You mentioned in your direct testimony, I believe, either a smelter or refinery in Houston, Texas. Am I correct in my recollection of that?

A. I don't think I did, Mr. Wright. There is a secondary refinery there working on scrap lead. No primary refinery.

Q. I see.

A. There is a primary refinery at El Paso. Perhaps that is what you had in mind.

Q. Mr. Wormser, I recall that you testified on direct regarding the London market on pig lead and the American market. I call your attention to a document appearing as Respondents' Exhibit 28-D, which is part of a directors meeting of the Lead Industries Association on November 26, 1929, indicating that the Association exchanged statistics with the Lead Producers' Reporting Asso-
2394 ciation in London. Did the Associations exchange
data?

A. No, sir; that was never put into effect.

Q. Were you familiar with the market in London on pig lead?

A. I was familiar with the fluctuations in the market, yes, sir, and the forces acting on the London market.

Q. Are you familiar with the quotations of prices on the London market that appear from time to time in the Engineering and Mining Journal?

A. Yes, sir.

Q. Is that a reputable and reliable source of information on market prices for metal products?

A. It is.

Q. Do you recall the characteristics of the quotations in the period from 1933 to 1939 on—spot quotations—on the London Exchange on pig lead?

A. Mr. Wright, I don't without refreshing my memory.

Q. Mr. Wormser, I show you some photostats of some documents and ask you if those will refresh your recollection of those matters.

During the year 1936 was the London market, spot market for pig lead, one which fluctuated up and down from day to day?

A. Yes, sir.

Q. So that very seldom there would be a price which would hold for more than two or three days?

2395 A. That is correct, sir.

Q. During that same period what was the characteristic of the New York and St. Louis market on pig lead?

A. They were very steady according to these figures. In fact, it looks from the record here that in February there was a little fluctuation up and down from a 4.50 New York price to a 4.60 price, which held until September.

Q. Of 1936?

A. Yes.

Q. Without any further fluctuation?

A. Without any further fluctuations.

Q. Do I understand you to state that pig lead was sold on a highly competitive market both in the United States and on the world market?

A. Yes, sir.

Q. Is it your idea of competition that a spot quotation price on basic commodities should stay without change over a long period of time?

A. Well—

Mr. Ewing: I will object to that, if your Honor please.

Mr. Wright: On what ground?

Mr. Ewing: His "idea of competition."

Mr. Wright: Your Honor, this witness has been qualified as an expert in the marketing of all of these 2396 products and has testified about competitive conditions generally and has expressed his opinion. I believe on cross-examination I should have equal latitude.

Mr. Du Bose: The form of the question is hardly asking for his opinion. It asks for his "idea."

Trial Examiner Norwood: I think that is pretty good. Overruled.

Do you want the question read?

The Witness: Yes, sir.

Trial Examiner Norwood: Read the question.

(The question was read as follows:

"Is it your idea of competition that a spot quotation price on basic commodities should stay without change over a long period of time?")

Mr. Du Bose: That is argumentative, if your Honor please.

Trial Examiner Norwood: Let him answer.

The Witness: I still think you can have a highly competitive market, even under those conditions.

By Mr. Wright:

Q. Now, wasn't the year 1936 one of general economic distress?

A. It was.

Q. Were conditions the same throughout the whole year?

A. That I wouldn't be able to answer offhand, Mr. Wright.

2397 Q. You would consider it competition if a price be maintained without fluctuation over a period of months in time of economic distress?

A. Well, Mr. Wright, to get behind that question, if you are asking for my opinion, talking about distress, I have in mind the distress of miners in the west, who operated all sorts of properties, little properties, medium-sized properties, and so forth. With men thrown out of work, that was distress. These men wanted to get as much as they could for their lead. To ask them to go down, up and down, on a fluctuating market, would be just chaotic.

Q. That lead then was mined under many different types of operation?

A. Yes, sir.

Q. And the costs of the mining were widely different, too?

A. Very widely fluctuating.

Q. Mr. Wormser, at the hearing on April 22nd in New York, you testified according to the record at page 2153. I direct your attention to your answer that appears from line 7 through line 21 on that page. (Handing transcript to the witness.)

A. I have read it, Mr. Wright.

Q. What was the basis of your answer to the effect that the industry was very loath and reluctant to enter into a NRA Code and that you were asked by the officials of the NRA to provide some supplemental trade practices?

A. Simply that my Executive Committee and
2398 Board of Directors entered with no enthusiasm what-
soever into the whole NRA idea. We were one of the last industries I believe that even considered the idea of formulating a Code. After we had gotten under way it looked as if we should only have a labor code. Thereupon Mr. Janssen, then the Deputy Administrator, and Mr. McFarland of the legal department, came to me and talked to some of the board members and insisted that we have some trade practices.

Q. Who insisted that?

A. Mr. Janssen and Mr. McFarland of the legal department at that time. They were quite insistent that we have some trade practice or some supplementary code, put it that way, which would, presumably, give us something in return for our going along with this labor idea of the Administration.

Q. What do you mean, "give you something in return"?

A. Well, it was quite obvious in those days that industry was by acceding to the desires of the Administration to limit hours in order to spread work, and to have other labor privileges recognized by code, that industry in return should have an opportunity to do things which normally would be frowned upon by the authorities, in the way of getting together for, if you will, putting it brutally, price fixing, or devising trade practices that would stabilize industry, and so forth.

Q. When did the matter of possible NRA code first come up in any division of the lead industries association?

2399 A. Mr. Wright, I would have to look through the records to answer that question, sir. I don't recall offhand.

Q. I direct your attention to Respondents' Exhibit 42-A, directors meeting minutes of June 15, 1933, paragraph headed, "1. National Industrial Recovery Act." Do you recall that meeting?

A. Yes, sir.

Q. It appears from the minutes that the National Industrial Recovery Act had not yet been enacted into law at the time of that meeting.

A. That is right.

Q. Yet the board of directors was at that time contemplating the drafting of a code.

A. Well, it was quite obvious that we as an industry, if Congress choosed to pass the National Recovery Act, would be expected to do our part, and of course, one of the first things that was promulgated was this, as I recall it, President's Reemployment Agreement, which involved the accumulation of labor, hours worked, and wages paid, and so forth, under the theory that the Recovery Act would spread employment. So that was our effort to go along with the wishes of Congress.

Q. At that meeting you were directed to contact the officials in Washington for the purpose of discussing a program which the Lead Industries Association might adopt as appears in the minutes of that meeting?

2400 A. Yes, sir.

Q. Exhibit 42-F.

A. Yes.

Q. You went to Washington, did you, in response to that direction?

A. Yes, sir.

Q. Who prepared the first draft of the NRA Code, Mr. Wormser?

Mr. Du Bose: Are you talking about the supplemental code?

Mr. Wright: The supplemental code, yes.

The Witness: I don't recall, Mr. Wright. I think a group of us sat down to draft it at one of those meetings that we had.

By Mr. Wright:

Q. When was that, in the summer or was it in the fall?

A. That I wouldn't be able to help you on either without referring to the records. It is all in our records, whatever it was that we did.

Q. Then there is a complete story in here of what was done in regard to the various drafts?

A. Yes, sir; that is a complete record.

Q. Including the insistence of NRA officials that you adopt supplemental provisions?

A. I think you will find that may be indirectly referred
to in the letter that we wrote to one of the—I think
2401 it was a Major Barry, who, after the NRA was de-
clared illegal, wanted to revive interest in it and asked
for our opinion, and we wrote him quite frankly how we
felt about it.

Q. Was Mr. Barry connected with the NRA at that time?

Trial Examiner Norwood: We will take a five-minute recess.

(A short recess was taken.)

Trial Examiner Norwood: Proceed.

Mr. Wright: May we have the last question read?

(Question read.)

The Witness: I believe he was.

By Mr. Wright:

Q. At the time he wrote you?

A. Yes, sir.

Q. Hadn't the NRA been terminated by the Schecter decision at that time?

A. I believe he had some status, however, that enabled him to speak with some authority.

Q. You don't know what that authority might have been?

A. No, sir.

Q. But it was after the decision?

A. Yes, sir.

Q. So that wouldn't have anything to do with the Code period?

A. No, it was an effort on his part, presumably because
there was some sentiment by industry in the United
2402 States, to revive the NRA. He acted as the spear-
head for that movement.

Q. Now, on the mechanics of the operation of the Lead Industries Association in that NRA and pre-NRA period, were drafts of supplemental codes submitted to the Executive Committee from the various subdivisions?

A. For final approval?

Q. For final approval.

A. Prior to submission to the Washington authorities.

Q. And the Executive Committee then had the final approval of the Association on this?

A. Yes.

Q. There was no further action necessary?

A. No, sir.

Q. Beyond that?

A. No, sir.

Q. Do I recall your testimony on direct examination correctly to the effect that Schedule A of the Code as finally adopted was never made operative officially?

A. That is correct. That is the Schedule A was the one of the supplemental code, as I recall,

Q. Yes, sir.

A. That was never made operative.

Q. Then the only portion of the code which actually was operative was the code without the schedule except for Section 2 of Article 7 relating to price violations?

2403 A. I look back upon it as merely a labor code, that is all we had, all the rest of the verbiage was out the window, as it were.

Q. I see. Now, I direct your attention to Respondents' Exhibit 82-D and E, which appears to be attached o the minutes of the Executive Committee meeting on November 6, 1933. Would you refresh your recollection on that? (Handing document to the witness.)

A. Yes.

Q. Now, did that draft of that code represent the work of the Pigments Division up to that date, October 5, 1933?

A. Yes, sir.

Q. And that includes all that was adopted for submission to NRA up to that point?

A. Up to that point, that is correct, sir.

Q. When was the final draft of the code submitted to NRA?

A. You mean the master code with the supplement?

Q. The supplement code, when was that finally submitted?

A. I would again have to refer to the record, Mr. Wright; I don't recall when that was.

Q. It was after the 1st of January, wasn't it, 1934?

A. I believe so, because this was November 6, 1933.

Q. Now, you testified that all of the matters which were taken up at these meetings of the Pigments Division, and various sub-organizations during the fall of 1933 and 2404 early part of 1934, were for discussing subjects for adoption and inclusion in the supplemental code; is that correct?

A. Yes.

Q. So that whenever the minutes show that the matter was adopted that was adopted for inclusion in a proposed code, so far as you know?

A. So far as I know, that is correct.

Q. How do you account for the fact that some of these things are shown by the minutes to have been adopted when comparison of drafts of the codes which were prepared do not contain any reference to them?

Mr. DuBose: I object, if your Honor please. He doesn't have to account for anything. The form of the question is bad.

Trial Examiner Norwood: I take it he is asking him to explain it, if he knows the explanation.

Mr. Wright: That is correct, and I will so amend the question.

The Witness: May I have the question?

(Question read.)

The Witness: My feeling, Mr. Wright, is that in between these episodes that you describe there were frequent conferences in Washington with the NRA officials or there were telephone calls to us repeatedly prodding us to get the job done, and I dare say it was a conflict of viewpoint
2405 as to what should go in and what should not go in.

By Mr. Wright:

Q. Then were there conferences between the respondents and pigments producers which were not reported in these minutes?

A. Oh, no, sir. I refer to conversations between myself and Mr. Janssen and his counsel in the NRA:

Q. Did you have authority to change the drafts of the code on consultation with Mr. Janssen without taking that matter up again with the Division?

A. No, sir. Whenever changes were suggested I would submit it to the people at interest and let them pass on the advisability.

Q. Were some changes made in the drafts by that means, by your contacting individual producers?

A. I think, Mr. Wright, various drafts speak for themselves. In our minutes we had several drafts of the code before they were satisfactory for submission to Washington. I think we have all the drafts, as a matter of fact, in the record.

Q. Did any reference to any zone system or zone differential ever appear in any draft of a code in that period?

A. No, sir; to the best of my knowledge nothing was ever done on a zone system.

Q. In so far as the code—

A. So far as the code is concerned.

Q. Now, with reference to adoption of consign-
2406 ment contracts, was anything ever in any draft of a
code relating to either selling or not selling on consignment—of the lead code I am speaking now.

A. I believe there is some stipulation about it, Mr. Wright, but again my memory would have to be refreshed by reference to these minutes because the white lead people were very desirous of selling—

Q. Who do you mean by the white lead people?

A. The white lead-in-oil producers.

Q. Does that include all of the white lead-in-oil producers?

A. Not all because some didn't care to sell on consignment and there was some division of opinion there, but the paint industry wanted to prohibit the sale of merchandise on consignment, and there—

Q. Who do you mean, the paint industry?

A. I mean the prepared paint industry, as represented by the National Paint, Varnish and Lacquer Association.

Q. Mr. Wormser, I take it that all of your testimony relating to agreements and understandings as to what should go into the code—or, it is limited as to what should go in code. I believe that was your testimony, that all of these discussions related to what should go in the code?

A. Exclusively to code provisions, yes, sir.

Q. Are you familiar with the marketing practices of each of the individual producers of pigments?

2407 A. No, sir.

Q. Were you at that time familiar?

A. Only sufficiently to be aware of a service I could be in the drafting of their supplemental codes. I tried to become familiar with it.

Q. In other words, you wouldn't know at any particular time whether the National Lead Company was quoting an lcl differential on dry white lead or not?

A. No, sir.

Q. In these discussions that we have been speaking of as to what should go in the code, did they involve discussions of industry practices in connection with marketing and sale of lead pigments that had applied in the past?

A. Well, they involved discussions which are indicated right in the minutes themselves.

Q. In other words, they involved all the marketing practices that were then employed in the industry, I take it?

A. You say all. I wouldn't be able to answer whether it involved 100 per cent of the practices.

Q. Principal marketing practices?

A. Even there I don't know whether I could go along because I don't know whether those would be the principal ones or not, but I will say they were the practices that the group was desirous of having covered by those supplemental codes.

Q. Did the discussions also involve what changes
2408 would be desirable in existing practices under the code, what improvements could be made in industry practice?

A. Yes; again, limited to the code.

Q. You state you do not know what the practices of individual producers are from time to time?

A. That is right.

Q. So then you wouldn't know whether following one of these discussions the producers might make, each of them, a change in his existing practice regarding something that had been discussed at one of these meetings?

A. I have no knowledge of it.

Q. Then it is entirely possible that the respondents could have left these meetings after having discussed these matters and put the practices into effect that they had been discussing?

Mr. Ewing: I would object to that, your Honor. It is purely speculative.

Mr. Wright: I submit that the witness has testified there was no agreement or understanding at these meetings. I want to bring out clearly the extent of his knowledge as to what happened.

Mr. Ewing: The question states, "It is entirely possible."

Trial Examiner Norwood: Read the question.

Mr. Wright: I am asking for his opinion on whether it is possible.

2409 Trial Examiner Norwood: Read the question.

(Question read as follows:

"Then it is entirely possible that the respondents could have left these meetings after having discussed these matters and put the practices into effect that they had been discussing?")

Trial Examiner Norwood: Overruled.

The Witness: It is entirely possible that they could have jumped out of the window or done anything.

Trial Examiner Norwood: Answer the question directly.

The Witness: May I have it read once again?

(Question read as follows:

"Then it is entirely possible that the respondents could have left these meetings after having discussed these matters and put the practices into effect that they had been discussing?")

The Witness: Yes, it is possible.

Mr. DuBose: I move to strike the answer as being based on a purely speculative question. I do that so that there will be no question as to our position.

Trial Examiner Norwood: Counsel may so move. The motion is denied.

Mr. DuBose: Exception.

By Mr. Wright:

2410 Q. Mr. Wormser, you state that you are not familiar with their pricing and marketing practices, those of individual companies, from time to time. I believe that was your testimony a moment ago.

A. Yes, sir.

Q. Are you familiar with the costs of production of lead pigments of the various individual respondents?

A. No, sir.

Q. From time to time?

A. No, sir.

Q. Didn't you state on direct examination that one effect of the paint code would have been to raise the price of white lead because it would have put the lead producers under the stricter costing provisions of the paint code?

A. Yes, but that has nothing to do with the cost of production of the individuals. That has no direct relationship.

Q. Well, if you don't know what the cost of production is how would you know what costing provisions—how it would affect the individual producers?

Mr. Ewing: I object to that, your Honor, as being purely argumentative.

Trial Examiner Norwood: Read the question.

(Question read.)

Trial Examiner Norwood: I think that is all right on cross-examination.

Mr. Wright: May I withdraw the question? It is
2411 clumsily put. I will reframe it.

By Mr. Wright:

Q. Mr. Wormser, in view of your statement that you do not know the costs of the individual producers, will you explain how you know that application of the costing provisions in the paint code would have raised the price of white lead-in-oil?

A. As I recall, Mr. Wright, the cost provisions of the paint code contained a lot of items which would have raised the costs theoretically to a greater level than if those particular items were taken out of the calculations of cost.

Q. I hand you a copy of the paint code and direct your attention to Article 22, "Selling below cost."

Mr. DuBose: Do you have the exhibit number of that?

Mr. Wright: I don't have it. Off the record.

Trial Examiner Norwood: Off the record.

(Discussion off the record.)

Mr. DuBose: I think it is Respondents' Exhibit 12.

By Mr. Wright:

Q. What costing provisions are you referring to now that would have operated to raise the price of white lead-in-oil?

A. Well, here is an item, the very first one that catches my eye, it says, "The cost of all other products shall include the following: The seller's total market replacement
cost of raw materials (based on costs furnished
2412 monthly, or oftener, if necessary, by authority of the
Paint Industry Recovery Board through Association
Headquarters, subject to approval by the Administrator)—"

Now, the Paint Industry Recovery Board was that paint association, in large measure, and if they could arbitrarily decide what they wanted to put in for a basic cost obviously that would raise the costs of the white lead-in-oil people.

Q. If you don't know the costing practices and costs of the lead pigments producers, can you state with certainty that the same measures might not have been applied with them?

A. Again, Mr. Wright, I fail to see the connection between the two. I think it is a matter of principle involved. Whether you are going to proceed in getting your costs on what you absolutely consider are your costs of production, or whether you use the arbitrary formula such as developed by the paint industry. I don't think it has any bearing on what the actual costs are, or any knowledge of the costs, because I actually haven't got any.

Q. You have no knowledge of what the individual costs were?

A. No, sir.

Q. You speak of the paint industry, paint, varnish and lacquer code authority. I assume you are speaking of the paint industry collectively now?

A. Yes, sir.

Q. Who were the largest producers of paint in that industry?

2413 A. I would say DuPont and Sears Roebuck and Sherwin-Williams—I would say those are the three largest, but there again, in that period, I would hate to trust my memory.

Q. Does the Eagle Picher Company produce mixed paint?

A. No, sir.

Q. Does the National Lead Company produce mixed paint?

A. Speaking of that particular time?

Q. I will speak of it now.

A. No, sir.

Q. Did they at that time?

A. No, sir.

Q. Have they ever been a factor in the mixed paint business?

A. They have a branch on the Pacific Coast that makes prepared paints.

Q. What is the name of that enterprise? Is that National Lead Company, or does that carry a different name?

A. It carries another.

Q. Is it the Bass-Heutter?

A. Bass-Heutter Company, although I think by now—I think it is all part of the parent organization.

Q. How large an operation is that, do you know?

A. No, I don't know, Mr. Wright; comparatively small, I would say.

Q. Mr. Wormser, I call your attention to Commission's Exhibit 505-A, which is the minutes of the meeting of the White Lead-in-Oil Committee, Lead Pigments
2414 Division, on October 28, 1933. The statement appears therein, "Freight and zoning problems were discussed without any understanding or agreement being made." Was it customary to note after discussions when no agreement or understanding was made in the minutes?

A. I don't know how to answer that, Mr. Wright. All the minutes were designed to do was to give an accurate record of the business taken up and transacted at these various meetings.

Q. Aren't there many instances in the minutes—are there many instances in the minutes where subjects are noted as having been discussed without any mention of whether or not an agreement was reached?

A. I think you will find some, Mr. Wright, but again I would have to look through the record to see what cases there were that would fall in that class.

Q. I direct your attention, Mr. Wormser, to Commission's Exhibit 508-B, which is a letter from Mr. F. O. Case, manager, Anaconda Zinc Oxide Department, to you, under date of July 24, to the Class 2 paragraphs of that letter.

A. Yes.

Q. Do you recall whether that matter was discussed at the meeting of—

Mr. Wright: Withdraw that question.

By Mr. Wright:

Q. I also direct your attention to Commission's
2415 Exhibit 508-A, which is a reply to that letter of Mr. Case.

A. Yes.

Q. Do you recall whether that matter of l.c.l. differential on dry white lead was discussed at the next meeting?

A. Again, I would have to refer to the record, Mr. Wright. That would be the answer that I would have to give you because it is all in the record if it was discussed.

Q. I direct your attention to this meeting of August 8—

Mr. DuBose: Of the dry products?

Mr. Wright: Yes.

By Mr. Wright:

Q. Are you familiar with what the practice was in 1933 with reference to having an l.c.l., or less than carload, differential on dry white lead?

A. No, sir.

Q. You do not know whether any of the manufacturers had such a differential or did not have such a differential?

A. No, sir.

Q. Nor whether they had at any subsequent time?

A. No, sir.

Q. Was there ever any discussion in that period of practices which it was contemplated that the individual producer would put into effect in their own marketing of lead pigments?

A. Again I must refer to the record, Mr. Wright.

Q. Beyond the record you have no recollection of
2416 whether there were or not?

A. Beyond the record I have no recollection of any discussions that relate to this particular point.

Q. Do you recall any discussions regarding putting into practice any of these matters which were discussed as going into the code, regarding the material which later appeared in Schedule A of the code, regarding the differentials between grades on red lead or the differential contracts?

A. No, sir.

Q. Or the dry white lead contracts?

A. No, sir.

Q. Are you familiar with the practice of quoting oxides on a differential over the price of pig lead?

A. Only vaguely, Mr. Wright. Not being in my backyard, as it were, I have never made an attempt to get thoroughly familiar with it. It hasn't been a problem that we have ever had to deal with at all, prior to the time the NRA law was passed, or after it was terminated.

Q. You don't know, then, what the practices of the individual companies were with reference to that type of quotation prior to the NRA?

A. Nor do I know what it is today.

Q. Then you are not an expert in the marketing practices of these respondents in the pigments field, I take it?

A. I am not an expert in marketing of those products.

2417 Q. Then the statement which appears in Respondents' Exhibit 137-A and B to the effect that it was the opinion of all present at that meeting of the Oxide Committee that the practice of selling oxide at a differential over pig lead had spread to such an extent that it had become one of the most serious abuses in the trade, you have no knowledge then of that situation?

A. No, sir.

Q. And no recollection of the discussion which took place at that time?

A. No, sir.

Q. Are you familiar with the differential points under which the keg products of the industry were sold prior to the NRA?

A. No, sir.

Q. Are you familiar with the market quotations on lead pigments that appear in the Oil Paint and Drug Reporter?

A. You mean as of today?

Q. Well, as of today, yes.

A. No, sir.

Q. Are you familiar with them at any period of time back to 1930?

A. When you say familiar, Mr. Wright, I don't really know what you mean. I know that the Oil Paint and Drug Reporter has that information. If I want to refer to it I can go to it so I don't need to keep it in my mind. 2418 So in that respect I consider that I am familiar with it.

Q. Then, as I understand it, you have no recollection of particular marketing practices in that time that might be employed by the pigments producers?

A. That is correct.

Mr. Wright: Off the record.

Trial Examiner Norwood: Off the record.

(Discussion off the record.)

Trial Examiner Norwood: We will have a three-minute recess and then continue the examination.

(A short recess was taken.)

Trial Examiner Norwood: The hearing will come to order.

By Mr. Wright:

Q. Mr. Wormser, you testified about the pricing practices in the pig lead industry. Do you not know similar information regarding lead pigments during the OPA period?

A. I have a general idea, Mr. Wright. Of course, in the NRA days I made it a point to get familiar with as much as I could of the problem that the producers faced, and especially in connection with the preparation of the supplemental code of fair competition. But the minute that was over I lost all interest in it and my own responsibilities went far afield.

Q. I assume you knew what Mr. Case was talking about when you replied to his letter there in your letter to 2419 him on July 27, 1933, Commission's Exhibit 508-A, when you said, "I shall see that the point you bring out for discussion about the l.c.l. differential is placed before the meeting."

A. Yes. That merely brings out what I tried to make clear, that in those days whenever any trade custom or trade practice was an item on the agenda for discussion among the people at interest, I saw to it that that was placed on the agenda, and that was one point that was brought up, I believe, by Mr. Case.

Q. You appreciated the problem that Mr. Case was raising there, did you not?

A. At that time, yes, sir.

Q. What was that problem—or that matter, rather?

A. It related to the proper differential to adopt in a supplemental code of fair competition on dry lead.

Q. Dry white lead?

A. Dry white lead, for shipments under five tons.

Q. Was that ever adopted in any proposed code or code as finally adopted?

A. I would have to refresh my memory, Mr. Wright, by reference to the records and to the supplemental code as it was finally drafted.

Q. Do you know what the practice was during the OPA with regard to less than carload differential for dry white lead?

A. Again I don't recall, Mr. Wright.

Q. Do you have a paper there which would re-2420 fresh your recollection as to that differential?

A. No, sir; the papers I have related to pig lead entirely.

Q. I want to show you several documents and ask if they refresh your recollection any as to times at which l.c.l. differentials for dry white lead were established and put into practice for the industry.

Mr. Ewing: I object to the question. He refers to the industry generally. There is no proof to show there is any industry response on the subject. I think it should be directed specifically to some individual respondent.

Trial Examiner Norwood: Read that question.

Mr. Ewing: He testified he doesn't know the practice of the individuals.

Mr. Wright: Your Honor, this gentleman has just finished testifying that he was familiar with this matter which relates to this differential.

Mr. DuBose: During NRA.

Mr. Wright: This document relates to that time.

Mr. Ewing: He testified that Mr. Case's letter related to a problem concerning l.c.l. differentials that Mr. Case wished presented to this particular committee for consideration in connection with the code. That is a quite different matter from that to which the present question is directed.

2421 Mr. Wright: Your Honor, if these documents do refresh his recollection, certainly his recollection is a matter that is pertinent and relevant and admissible in this examination. I don't think any objection to an attempt to refresh his recollection can be entertained.

Trial Examiner Norwood: Read the question.

(Question read as follows:

"I want to show you several documents and ask if they refresh your recollection any as to times at which l.c.l. differentials for dry white lead were established and put into practice for the industry.")

Trial Examiner Norwood: I will overrule the objection and ask him to answer the question as it has been clarified by the discussion.

The Witness: Mr. Wright, this would indicate that at this particular period—

Mr. Ewing: May I interrupt and suggest that the answer be confined to whether the document refreshes the witness' recollection? That was the question.

Trial Examiner Norwood: The point is well taken. You may study the documents, and then if they refresh your recollection you may answer independently of any reference to the documents.

The Witness: My answer is no.

By Mr. Wright:

Q. At the time the code was finally put into operation, I believe it was early in June, 1934, were 2422 there any—do you recall any announcement of changes in trade practice by the individual pigments producers?

A. I don't recall, Mr. Wright.

Q. Do you recall whether at that time they announced the quoting of prices on a zone basis?

A. I don't know, Mr. Wright.

Q. Mr. Wormser, you testified on direct, as I recall it, that there were no agreements or understandings reached as to any of these trade practices at the meetings of the various divisions of the lead Industries Association other than that they were adopted for inclusion in a proposed code. Am I correct in that statement?

A. Yes, sir.

Q. What is your understanding of the term "agreement and understanding"?

A. You mean the legal definition?

Q. What was in your mind when you answered that question?

A. Well, I had in mind a mental vision of a group getting together and perhaps agreeing on a certain course of action with relation to marketing practices, or even, in those days, according to prices, because the sky was the limit in NRA days, it seemed to me.

Q. Would you consider it an agreement if a group of men met together and discussed the advisability of 2423 changes in industry practice without formally spreading it on the minutes that they were in agreement, left the meeting, all announced individually that practices which had been discussed—as exemplary, as improvements?

Mr. Ewing: I object. It calls for the witness' conclusion as to the operation of his mind.

Mr. Wright: Obviously it does. I am trying to find out what is in his mind when he answered the questions.

Trial Examiner Norwood: He is developing the witness' definition of the term which he used in the direct examination.

Mr. Wright: He expressed a conclusion when he answered those questions. I am trying to find out what that conclusion is.

Mr. Ewing: Could I have that question read? The way it was phrased I don't think that it would accomplish the end Mr. Wright has in mind.

(Question read as follows:

"Would you consider it an agreement if a group of men met together and discussed the advisability of changes in industry practice without formally spreading it on the minutes that they were in agreement, left the meeting, all announced individually that practices which had been discussed—as exemplary, as improvements?")

Mr. Duncan: That asks him whether or not he would draw an inference; not whether or not he would con-
2424 sider that an agreement.

Mr. DuBose: Moreover, if it is a hypothetical question it contains statements as to which there has been no proof.

Trial Examiner Norwood: But it is not a hypothetical question—although it carries a hypothesis.

Mr. DuBose: That is speculative.

Trial Examiner Norwood: Objections overruled. Answer the question.

The Witness: Mr. Wright, may I have it repeated once more? It is such a long question.

(Question read as follows:

"Would you consider it an agreement if a group of men met together and discussed the advisability of changes in industry practice without formally spreading it on the minutes that they were in agreement, left the meeting, all announced individually that practices which had been discussed—as exemplary, as improvements?")

Mr. Duncan: If your Honor please, may I object for the added reason: I think the question asks of the witness, whether he poses as an expert or not, for a conclusion which only the Commission can reach, as to whether or not under those circumstances it would be violative of anything in this complaint.

Mr. Wright: The original question, your Honor,
2425 to which this goes, directly called for the same sort of conclusion and was objected to on the same ground.

Trial Examiner Norwood: Answer the question.

The Witness: Mr. Wright, if I understand your question correctly, you ask me if it is an agreement if a group meet outside the facilities of the Lead Industries Association, come to some common understanding. Well, not knowing what the—

Mr. Wright: No, that wasn't the question.

The Witness: I am afraid I don't grasp what your—what the significance of your question is—it is so long. It just says, "Is it an agreement if," and then comes a long series of reservations that, frankly, confuse me. I would like to answer the question. If you could put it some way that would bring out the point you have in mind, perhaps I could answer it.

Mr. Wright: I shall try to reframe the question for you.

By Mr. Wright:

Q. Would you consider it an agreement or understanding if a group of men were to meet together and discuss their existing marketing practices, the possibility of improving those marketing practices by taking certain specific steps, and then without expressing themselves as in agreement at the meeting, individually left the meeting and announced through their own companies the trade practices, changes in trade practices which had been discussed
2426 at the meeting as desirable?

Mr. DuBose: Same objections—all of them.

Trial Examiner Norwood: Yes.

The Witness: Discussed at this meeting outside?

Mr. Wright: No. This is a hypothetical question. We are not talking about any particular meeting of any particular group now.

Mr. DuBose: It has been admitted that this is a hypothetical question. Since it is so, and since it is based on facts as to which there has been no proof, then I submit it is an improper question.

Mr. Wright: I submit the record is replete of proof of exactly this.

Trial Examiner Norwood: I didn't agree that it was a hypothetical question. He has made a condition there, but I think the question is not hypothetical, but is a question on cross examination intended to elicit the witness' understanding of the word he used, the word "agreement".

Mr. Wright: That is correct, but the situation stated doesn't apply to any definite, specific instance.

Trial Examiner Norwood: No.

Mr. Wright: It is a hypothetical question for the purpose of testing the witness' understanding.

Mr. DuBose: Not as proof of any fact in this proceeding except as to his understanding?

2427 Mr. Wright: Except as to his understanding.

Mr. Duncan: Hasn't government counsel already elicited from this witness what he meant by the term "agreement", so that when he now questions him with respect to what, perhaps, the Commissioner has in mind, the term "agreement", he goes afield?

Trial Examiner Norwood: It goes to what he meant when he used that word.

Mr. Duncan: He has answered that.

Trial Examiner Norwood: He can answer it again. I don't know that he has, but we will allow him to answer it again if he has, and to further clarify the denotation of the word "agreement" as he understands and his using it.

Answer the question.

The Witness: May I have the latest version of Mr. Wright's question read to me, please?

(Question read as follows:

"Would you consider it an agreement or understanding if a group of men were to meet together and discuss their existing marketing practices, the possibility of improving those marketing practices by taking certain specific steps, and then without expressing themselves as in agreement at the meeting, individually left the meeting and announced through their own companies the trade practices, changes in trade practices which had been discussed at the
2428 meeting as desirable?")

The Witness: Your Honor, I think that is, if I may say so, I feel that is a legal question which I am not competent to answer.

Trial Examiner Norwood: Answer that question or say you can't answer it. Make what answer you can on that, throwing light on your understanding of the word "agreement" as you have heretofore used it in your testimony. In the circumstances he named, would you consider that that constituted agreement?

The Witness: I think it would be an agreement.

Mr. DuBose: I move to strike the answer upon the ground that this is an answer as to a legal conclusion as to which the witness has not been qualified as an expert; and in addition upon all the other grounds heretofore stated.

Trial Examiner Norwood: Motion denied.

Mr. Wright: Off the record for just a minute.

Trial Examiner Norwood: Off the record.

(Discussion off the record.)

Trial Examiner Norwood: On the record.

By Mr. Wright:

Q. Your answer is that you would consider that an agreement?

A. Under those circumstances.

Mr. DuBose: Same objection to that.

Trial Examiner Norwood: Same ruling.

2429 By Mr. Wright:

Q. You have stated that you do not know what the individual marketing practices of the producers on lead pigments were in that period or in any other period.

Mr. Duncan: Objection. He has already answered that.

Trial Examiner Norwood: This is cross examination. He can answer it again.

Mr. Duncan: I thought there was some limit as to the number of times you could ask the same question.

Trial Examiner Norwood: There is a limit, but I think it is a matter of discretion for me to determine when we reach that limit. I don't recall that he has answered—brought out exactly this. Go ahead.

By Mr. Wright:

Q. Was it your testimony on direct—withdraw that.

Your own knowledge then as to what was in the minds of the people who attended these pigment division meetings was as they expressed themselves at the meeting; is that correct?

Mr. Wood: I object to that, your Honor, for the reason that I do not know how one can ask the witness what would be in the minds of people. How would anyone know other than what they expressed.

Trial Examiner Norwood: He is asking him as to his knowledge; not as to the mind of somebody else.

Mr. Wood: I thought his question was as to the 2430 mind of the other.

Trial Examiner Norwood: No.

Mr. Wood: May we have the question?

Trial Examiner Norwood: Read the question.

(Question read as follows:

"Your own knowledge then as to what was in the minds of the people who attended these pigment division meetings was as they expressed themselves at the meeting; is that correct?")

Trial Examiner Norwood: Objection overruled. Answer that question..

The Witness: Of course, I had supplementary knowledge of fragmentary nature, to be sure, of the pigments and how they were used, and knew where quotations were made, so I can't truthfully say all my information was developed out of what was expressed at the meetings.

Mr. Duncan: Object to the answer, and ask that it go out of the record.

Trial Examiner Norwood: Motion denied.

Mr. Duncan: Exception.

By Mr. Wright:

Q. What was your knowledge then, on what specific subjects did you have knowledge beyond what was said at the meetings on these points that were raised at the meet-
ings regarding the adoption of zones or less than
2431 carload differentials, or agency contracts?

A. Well, I had in mind the competitive position of white lead and red lead, Mr. Wright. The competition that it had to meet with other materials and the stake that the mining industry had in developing the market for white lead to the utmost.

Mr. Wright: Your Honor, I move that that answer be stricken as not responsive.

Mr. Ewing: I submit it is responsive.

Trial Examiner Norwood: Read the question and the answer.

Mr. Wright: Your Honor, the question was directed to specific information regarding specific subjects.

(Record read as follows:

"Q. What was your knowledge then, on what specific subjects did you have knowledge what was said at the meetings on these points that were raised at the meetings regarding the adoption of zones or less than carload differentials, or agency contracts?

"A. Well, I had in mind the competitive position of white lead and red lead, Mr. Wright. The competition that it had to meet with other materials and the stake that the mining industry had in developing the market for white lead to the utmost.")

Trial Examiner Norwood: You may question him fur-
ther, but I think that is in an effort to answer your
2432 question. Motion denied.

By Mr. Wright:

Q. Do you have any specific information regarding zoning other than the expressions that up here in the minutes of these meetings?

A. No, sir.

Q. Do you have any specific information regarding less than carload or carload differentials beyond what appears in these minutes?

A. No, sir.

Q. Do you have any specific information regarding uniform contracts covering sales of lead pigments other than what appears in these minutes?

A. No, sir.

Trial Examiner Norwood: Off the record.

(Discussion off the record.)

Trial Examiner Norwood: We will recess until two o'clock.

(Whereupon, at 12:20 p. m., a recess was taken until 2:00 p. m., this day.)

2433 Afternoon Session.

2:00 p. m.

Trial Examiner Norwood: Proceed.

FELIX E. WORMSER, resumed the stand and testified further as follows:

Cross-Examination (Continued) by Mr. Wright.

Q. Mr. Wormser, you testified earlier that you were not familiar at that time with the trade practices, marketing practices employed by the individual companies in selling lead pigments and that you are not familiar with the changes that might have been made in those practices up to the present time; is that correct?

A. That is correct.

Q. But at that time, during these code meetings, you were present at discussions of those practices?

A. Yes, sir.

Q. Are you acquainted with Mr. Harold Rowe of the National Lead Company?

A. Yes, sir.

Q. He was present during a good many of those discussions, was he not, back in the code period?

A. I believe he was.

Q. Are you acquainted with Mr. Zoller of the 2434 Eagle Picher Company?

A. I am.

Q. Now, it was testified to by Mr. Rowe that the zones used by the National Lead Company on quoting on their pigments had been employed by that company since some time in the period between the fall of 1933 and the summer of 1934. It was testified to by Mr. Zoller of the Eagle Picher Company that most of the provisions which appeared in the Schedule A of the code had been employed by the Eagle Picher Company in its marketing of oxides since, approximately, the period of the code. I want to call your attention to Commission's Exhibit 808-E, which is copy of page 30 of the Oil, Paint and Drug Reporter for June 4, 1934, to the statement that appears there:

"With the lead industry's code becoming effective today, it is understood that other changes are taking place in the style of pricing lead oxides. Prices are to be established on a zone basis with the former Eastern prices applying in the New England, Middle Atlantic States and Midwestern areas. Southern and Gulf States delivered prices may be a quarter cent per pound higher than the basic prices, and the Pacific Coast and Rocky Mountain area will also carry a price differential, but the differentials have not been definitely established as this is written."

And also to the issue of the Oil, Paint and Drug 2435 Reporter of June 11, 1934, which appears in the record as Commission's Exhibit 808-H, the statement:

"Following the inauguration of the lead industry's code, corroders of white lead and lead oxides revised price schedules last week. There is no basic change in the prices, but differentials for certain delivery points have been changed, and at some few delivery points in the Rocky Mountain area, the revised prices represent a fractional change in favor of the buyer."

Does that refresh your recollection as to any change in the trade practices which occurred in that period on the part of individual producers of lead pigments?

A. No, sir.

Mr. Wood: I object, your Honor. I object to the summary of Mr. Zoller's testimony. I am perfectly willing for the witness to be shown the testimony and asked the same question.

Trial Examiner Norwood: Well he has pointed out the particulars in which he expects the exhibit to refresh. I think he may do that on cross-examination.

Mr. Wood: I do not know that the summary of Mr. Zoller's testimony is correct or incorrect. On principle I object to the use of his own summary of what some witness testified as grounds for attempting to refresh the recollection of the witness. The question has been answered,
2436 so it is a dead issue, you might say.

Trial Examiner Norwood: Well, I will give counsel the benefit of an exception on that. Overrule it.

Off the record.

(Discussion off the record.)

Trial Examiner Norwood: Go ahead.

By Mr. Wright:

Q. Mr. Wormser, at the date of Commission's Exhibit 808-H you were in what capacity with the Code Authority, June 11, 1934?

A. Was that after the code had been approved by the NRA?

Q. I believe it is, Yes, sir.

A. If it is, I was secretary of the code authority.

Q. And also secretary of the Lead Industries?

A. Secretary of the Lead Industries Association.

Q. And your testimony is, then, that, occupying these positions, with these occurrences in the industry, you were unaware of them?

A. I was unaware of them. I don't know where Oil, Paint and Drug Reporter got that.

Q. I direct your attention to Respondent's Exhibit No. 94-B, wherein reference is made to Exhibit A attached to the minutes of the meeting of June 23, 1936.

A. Yes.

Q. Are you familiar with that brief which is men-
2437 tioned in that portion?

A. Yes, sir.

Q. Of Exhibit 94-B?

A. Yes, sir.

Q. Do you have that document in your possession?

A. Yes, sir. (Handing document to counsel.)

Q. Do you recall the provisions of that proposed legislation to which this document was addressed?

A. Only vaguely, Mr. Wright.

Q. Did this document state the position of the Lead Industries Association with reference to the provisions of that legislation?

A. I would say that it did, but it never was formally approved for submission to the Senate Committee, I believe.

Q. It was approved then, according to those minutes, was it not, as the expression of the industry?

Mr. Ewing: I object. The minutes speak for themselves and my recollection is that the secretary was directed to prepare a brief to be used subsequently if it seemed advisable.

Trial Examiner Norwood: How was that question?

(Question read.)

Mr. Ewing: I object further on the ground that the question relates to a document which is not identified except as being produced by the witness and not in evidence.

2438 Mr. Wright: On that point, your Honor, this document was omitted from an offer of the minutes of this particular meeting, although it was discussed in the minutes which are in evidence, and referred to as attached and a part of the minutes.

Mr. Ewing: It was omitted from the offer, as I stated at the time, for the reason it had not the formal approval of the Association, and was never used. We therefore did not feel justified in offering it. If Mr. Wright wants to offer it, all right.

Trial Examiner Norwood: He can direct questions to it, to the identification of that paper.

Mr. Ewing: It has already been identified. This question goes to the relationship of its contents to the intent or the attitude of the Association.

Trial Examiner Norwood: You are asking about a paper?

Mr. Wright: I am asking about a paper in evidence, namely, Respondent's Exhibit 94-B. I am examining him with reference to what that action purports to be which is reported in the minutes. The question didn't go to the contents.

Trial Examiner Norwood: But you mentioned Exhibit A to this exhibit.

Mr. Wright: That is right.

Trial Examiner Norwood: You are basing a question on that Exhibit A to this exhibit is not in evidence at this time.

2439 Mr. Wright: Right now, but it is discussed in a document already in evidence, as being drafted by the Lead Industries Association.

Mr. Ewing: Not by the Lead Industries Association, by Mr. Wormser individually.

Trial Examiner Norwood: I think you will have to read the last question, Mr. Reporter.

(Question read as follows:

"It was approved then, according to those minutes, was it not, as the expression of the industry?")

Trial Examiner Norwood: "It" being this exhibit A which is not in evidence?

Mr. Wright: Yes, sir, as stated on Respondent's Exhibit 94-B.

Trial Examiner Norwood: You are asking whether that paper was approved by the committee?

Mr. Wright: I am asking him whether the document referred to in that minute was adopted as an expression of the Lead Industries Association.

Trial Examiner Norwood: I think he can answer that question. He is not referring to the contents of it in any way.

Mr. Ewing: What meaning has the question without the contents being before the Commission?

Trial Examiner Norwood: He has a right to do 2440 that by way of identifying the paper.

Mr. Ewing: There is no dispute about the identification of the paper.

Trial Examiner Norwood: I will overrule the objection. Let him answer the question.

The Witness: What is the question?

(Question read as follows:

"It was approved then, according to those minutes, was it not, as the expression of the industry?")

The Witness: My answer is no.

Mr. Wright: I would like for this document to be marked for identification as Commission's Exhibit 855-A, B, C, D, and E.

(The document referred to was marked Commission's Exhibit 855-A through 855-E, both inclusive, for identification.)

By Mr. Wright:

Q. I show you document marked Commission's Exhibit 855-A, B, C, D, and E, and ask you if that is the document referred to on Respondent's Exhibit 94-B as Exhibit A attached to the minutes of the executive meeting of Lead Industries Association on June 22, 1936.

A. It is.

Mr. Wright: Off the record.

Trial Examiner Norwood: Off the record.

2441 (Discussion off the record.)

Mr. Wright: I offer Commission's Exhibit 855, with sub-numbers, in evidence.

Mr. Duncan: We object, on behalf of Glidden, on the ground that it is not binding on the Glidden Company.

Trial Examiner Norwood: Objection overruled.

Mr. Du Bose: May the same objection run to all respondents?

Trial Examiner Norwood: Yes.

Mr. Ewing: Based on the proposition that this brief was prepared by Mr. Wormser at the direction of the executive committee as shown by the minutes of the executive committee's meeting of April 10, 1936, Respondents' Exhibit 93, and that it was never in fact formally adopted or used.

Mr. Du Bose: And that it represented Mr. Wormser's personal thoughts on the subject, but has not been approved, and therefore was not binding upon any of the respondents.

Mr. Wright: Your Honor, counsel are identifying this document when it properly—those aspects ought to be gone into by the evidence.

Mr. Du Bose: It is already in evidence that it wasn't formally approved—in answer to your question, Mr. Wright.

Trial Examiner Norwood: It is in evidence that the paper was discussed and it is referred to in this exhibit.

Mr. Wright: It is a part of the exhibit which is in 2442 evidence.

Trial Examiner Norwood: Part of that exhibit, and in keeping with our policy heretofore about permitting the other side to complete the picture, I think it is only right to proceed with the paper. Counsel will have the benefit of their exceptions and Commission's Exhibit 855-A, B, C, D, and E is received in evidence.

(The documents referred to, heretofore marked for identification COMMISSION'S EXHIBITS 855-A through 855-E, both inclusive, were received in evidence.)

By Mr. Wright:

Q. Mr. Wormser, I call your attention to Respondents' Exhibit 93, the minutes of the executive committee, stating, "The committee was unanimously opposed to the bill S. 4055 * * *" Did you follow the instructions that appear there in Respondents' Exhibit 93?

A. I did.

Q. Then this brief is, as stated there, drawn up in accordance with the—based upon the discussion which took place at that meeting; is that correct?

A. Yes.

Q. It did represent the views which were expressed at that meeting?

A. As nearly as I could reflect them with my own composition.

Q. Mr. Wormser, I direct your attention to Re-
2443 spondents' Exhibit 129-X, which is Exhibit G to the
minutes of the Code Authority meeting of August
20, 1934.

A. Yes.

Q. And also to 129-G, where that letter from the Oxidite Battery Manufacturing Company is discussed in the minutes. Do you have any recollection of that situation?

A. No, sir.

Q. Do you have any recollection of the situation about which the letter 129-X speaks?

A. Only what is contained in the record, Mr. Wright.

Q. You have no knowledge, then, of any discount based on carload purchases of oxides as discussed in that letter?

A. No, sir.

Q. I direct your attention to the fact that the letter 129-X refers to the fact that "we are now compelled to buy this carload in one shipment, or pay a penalty of approximately 20 per cent." That is dated July 27, 1934. And that the minute, 129-G, directs, authorizes you to call the attention of that company to the fact that Schedule A of the Code had been suspended. How do you account for the fact—can you explain the fact that if that Schedule A was never made operative, nevertheless a complaint was received as to trade practices which were covered by that Schedule A?

Mr. Du Bose: When you say that the minutes there
show that the secretary was authorized to direct the
2444 battery company's attention to the fact that Sched-
ule A had been suspended, I believe the minutes state
that the secretary was directed to pass it along to the
Lead Pigments Division, calling their attention to the
fact that Schedule A had been suspended.

Mr. Ewing: Furthermore, the letter 129-X shows on its face that it does not refer to a specific complaint with respect to a specific transaction, because it starts by saying, "we wish to comment on one of the terms of the Lead Industries Code which is a big handicap to us." In other words, it is a reference to the code alone and not to any imposition of the terms of the code, as the question implies.

Mr. Wright: In answer to that I may say, your Honor, it says on its face, "We are now compelled to * * *".

Mr. Ewing: That is under the terms of the code, which is the first sentence, and it says, "Under the terms of this code, we are now compelled." It doesn't refer to anybody having compelled them.

Trial Examiner Norwood: What is the question?

(Question read as follows:

"I direct your attention to the fact that the letter 129-X
refers to the fact that 'we are now compelled to buy this
carload in one shipment, or pay a penalty of approxi-
mately 20 per cent.' That is dated July 27, 1934. And that
the minute, 129-G, directs, authorizes you to call the
2445 attention of that company to the fact that Sched-
ule A of the Code had been suspended. How do you
account for the fact—can you explain the fact that if that
Schedule A was never made operative, nevertheless a
complaint was received as to trade practices which were
covered by that Schedule A?")

Trial Examiner Norwood: Objection overruled.

Mr. Ewing: The question implies, "How does this witness account for the fact that this particular company could make a complaint if the terms of the code never became operative?" Now, it is implicit in that the suggestion that somebody was enforcing the terms of the code.

Mr. Wright: That is correct.

Mr. Ewing: And the letter plainly shows that it was not in connection with any attempt to enforce one of the terms of the code. The complaint was directed against the code itself.

Trial Examiner Norwood: Here is some evidence in the record, Respondents' Exhibit 129-X. Here is some evidence, in the code, which might indicate that the complaint was made. You haven't laid the grounds here for this witness' knowledge of that or made the situation such that it is incumbent upon him to account for it.

Mr. Wright: Your Honor, he was secretary of the Code Authority. The letter is addressed to him. The ques-
2446 tion asks him to account for the fact that the letter
refers to an existing injury in view of the statement in the exhibits and in his testimony that that never was made operative.

Mr. Ewing: The letter refers to no existing injury whatever. You are reading something into it.

Trial Examiner Norwood: Ask him if there was in fact such a complaint.

Mr. Wright: It is in the record already as such a complaint.

Mr. Ewing: The record shows specifically, "We wish to comment on one of the terms of the Lead Industries Code, which is a big handicap to us."

Trial Examiner Norwood: He is under cross-examination, and he may be asked to explain that.

Mr. Ewing: I object to the form of a question which carries with it the implication that it does in this case.

Trial Examiner Norwood: I sustain the objection to the question in its present form, but he may be asked about this thing and he may be asked to reconcile this with some of his own testimony.

Mr. Ewing: Certainly.

Mr. Wright: That, your Honor, was the sole purpose of the question.

Trial Examiner Norwood: I think so. I think counsel can ask more directly.

2447 By Mr. Wright:

Q. I believe you stated you had no independent recollection of that correspondence, Mr. Wormser; is that correct?

A. Yes, sir.

Q. So far as you know Schedule A of the code was never made operative?

A. Never made operative.

Q. Do you have any recollection that this indicated to you a complaint received about a differential which was under Schedule A of the Code?

A. I believe the explanation might be, Mr. Wright, that this gentleman, of this battery company, may have seen published reports.

Q. Do you know that that is the explanation?

A. No, I don't. You asked for my explanation. I am trying to arrive at an explanation.

Q. When you received that, did you consider that was a complaint about practices which were then current?

A. No, sir. I considered it, however, information which the Lead Pigments Division should have.

Q. If that were a complaint about practices which were in existence at that time would that indicate to you that the provisions covered in Schedule A of the Code had been put into effect by the Pigments producers themselves?

Mr. Du Bose: That is argumentative.

2448 Trial Examiner Norwood: I think he may answer that, on cross-examination.

Mr. Du Bose: Purely argumentative.

Trial Examiner Norwood: I don't agree with counsel fully in its being pure argument.

The Witness: What is the question?

(Question read.)

The Witness: Not necessarily, because the fact that the code, or that particular provision of the code was suspended, might not have been knowledge possessed by this man who wrote this letter.

Mr. Wright: No further cross-examination.

Trial Examiner Norwood: Redirect.

Mr. Ewing: We have no redirect, Mr. Examiner. We would like to reserve, and I don't suppose it is necessary, the right to recall at some future time for further direct, if we should deem it advisable, Mr. Wormser, but as far as redirect in the proper sense of the word is concerned, we have none.

Trial Examiner Norwood: You may recall him at any time.

Mr. Ewing: Yes.

Trial Examiner Norwood: Well, what is your further pleasure, gentlemen?

Mr. Ewing: Now, I suppose we should go off the 2449 record.

Trial Examiner Norwood: Off the record.

(Discussion off the record.)

Trial Examiner Norwood: Back on the record.

The motion is allowed for adjournment at this time to reconvene in Room 332, of the Federal Trade Commission, Washington, D. C., at ten o'clock a. m., whatever is the prevailing time, on Tuesday, May 13, 1947, and it is further contemplated that we hold a session thereafter beginning on June 10th in Washington.

(Whereupon, at 2:45 p. m., Wednesday, May 7, 1947, the hearing in the above-entitled matter was adjourned.)

2450

Room 332, Federal Trade
Commission Building,
Washington, D. C.,
Tuesday, May 13, 1947.

Met, pursuant to adjournment, at 9:00 a.m., E.S.T.

Before:

John W. Norwood, Trial Examiner.

Appearances:

Joseph S. Wright, Esq., appearing for the Federal Trade Commission.

J. T. Welch, Esq., (Davies, Richberg, Beebe, Busick, & Richardson, 815—15th St., N. W., Washington, D. C.), appearing for Sherwin-Williams Company.

Edmund P. Wood, Esq., (2801 Carew Tower, Cincinnati, Ohio), appearing for Eagle-Picher Lead Company and Eagle-Picher Sales Company.

Henry E. Gardiner, Esq., (Chadbourne, Wallace, Parke & Whiteside, 25 Broadway, New York, N. Y.), appearing for Anaconda Copper Mining Company and International Smelting & Refining Company.

James D. Ewing, Esq., and E. Z. DuBose, Esq. (Alexander & Green, 120 Broadway, New York, N. Y.), appearing for the National Lead Company.

2451 John A. Duncan, Esq., (1649 Union Commercial Building, Cleveland 14, Ohio), and

Roger Hinds, Esq., (165 Broadway, New York, N. Y.), appearing for The Glidden Company.

2452 PROCEEDINGS.

Trial Examiner Norwood: The hearing will come to order.

Pursuant to adjournment on the 7th day of May, the hearing in Docket 5253 is now convened in Room 332, Office of the Federal Trade Commission, Washington, D. C., at 9 o'clock E.S.T., on the 13th day of May, 1947.

The reporter will please note the appearances.

Proceed, gentlemen.

Mr. Duncan: Mr. Sprague, will you come forward and be sworn.

PAUL E. SPRAGUE was thereupon called as a witness for the respondents and, having been first duly sworn, testified as follows:

Direct Examination by Mr. Duncan.

Q. Please state your name and address.

A. Paul E. Sprague, Cleveland, Ohio.

Q. Are you a Vice President of The Glidden Company?

A. Yes, sir.

Q. How long have you been with The Glidden Company?

A. Since 1915.

Q. Then you were with the old Glidden Paint & Varnish Company?

A. That is right.

2453 Q. That was the predecessor of The Glidden Company which was formed in 1917?

A. That is correct.

Q. Will you tell us what your duties are at the present time?

A. I am in charge of the operations of the soya bean business, the feed business, and part of the food business.

Q. How long have you been so employed by The Glidden Company?

A. Since 1945.

Trial Examiner Norwood: Off the record just a minute.

(Discussion off the record.)

Trial Examiner Norwood: On the record.

Mr. Wright: Your Honor, I would like to request a segregation of witnesses if there are any other witnesses.

Mr. Duncan: Well, Your Honor, in the room at this time are Mr. Arthur Knight of The Glidden Company, he is in charge of the Lead Division of The Glidden Company and he is from Scranton; also in the room is Mr. David N. Burruss, Jr., who is in charge of the Metals Refining Division of The Glidden Company, and he is from Hammond, Indiana. We intend to put on Mr. Burruss as a witness, and we may put Mr. Knight on. But it is our contention that these gentlemen are sufficiently high up in The Glidden Company so that frankly, an order of separation of witnesses should not be granted at this time.

Mr. Wright: I don't see what their position in the company has to do with the propriety of separating
2454 the witnesses.

Trial Examiner Norwood: They are parties to the suit.

Mr. Hinds: May I add that each of these gentlemen is the highest official next to the top executives, with respect to the industry which is under charge here, and without their presence here in court we would be greatly handicapped. I will be consulting Mr. Knight continuously, we will be consulting Mr. Burruss, they are clients, they are the accused in this case.

Trial Examiner Norwood: Are there any other witnesses in here? I don't see how it is practicable to exclude them, Mr. Wright. In any other circumstances I always exclude the witnesses if anyone makes such a motion, but in a case like that it is different.

Mr. Wright: Your Honor, I don't see how, when counsel for The Glidden Company are examining one of their witnesses, the other witnesses are necessary for consultation while they are examining a witness of their own.

Mr. Gardiner: If Your Honor please, you asked if there were any other witnesses present. It is possible that one of the gentlemen present here may testify for the International Smelting & Refining Company. That hasn't been determined yet.

Trial Examiner Norwood: One of the officials of these respondents?

2455 Mr. Gardiner: He is an employee of one of the respondents, he is not an official.

Trial Examiner Norwood: Well, I think—

Mr. Gardiner (Interposing) He would not testify this week, and may not testify at all. I merely mention that because you asked if there were any other witnesses present. It is not contemplated that at the present time he will be called, but he might be.

Trial Examiner Norwood: Under the circumstances I deny the motion. Go ahead.

By Mr. Duncan:

Q. Mr. Sprague, have you ever been in charge of the sales of the Chemical, Pigment, Lead and Material Divisions of Glidden?

A. Yes, I have.

Q. For how long?

A. For a period from 1935 to 1945.

Q. Were you ever in charge of the production and marketing of lead pigments for Glidden?

A. Yes.

Q. Since what time?

A. About 1925 to 1935.

Q. And when did the Glidden Company acquire the Euston Lead Company?

A. My recollection is that it was 1924.

2456 Q. Before that time, did Glidden sell white lead-in-oil?

A. Yes.

Q. To whom?

A. White lead-in-oil was sold by the Paint Divisions of The Glidden Company prior to that time, to the general trade that their salesmen contacted.

Q. Can you give us a date as to about when The Glidden Company started to job white lead-in-oil?

Mr. Wright: Objection, Your Honor. That is a leading question, and it contains a conclusion that is not in the record.

Mr. Duncan: This is preliminary, Your Honor.

Trial Examiner Norwood: I think it is more or less a preliminary question. Counsel will please refrain from leading on the main issue. The objection is overruled. Answer the question.

A. Glidden sold white lead-in-oil as early as 1921, and probably earlier.

By Mr. Duncan:

Q. And whose white lead-in-oil did it job?

A. Glidden sold white lead-in-oil as a jobber handling the brands of the principal producers at that time; specifically, the National Lead Company and Eagle-Picher Company, and also manufactured and sold white lead-in-oil of its own.

Q. What was the product called?

2457 A. Glidden's manufactured product was sold under the trade name of Endurance White Lead-in-Oil.

Q. How was it priced at that time?

A. It was priced according to schedules similar to those employed by competitors, but at a price concession under that charged by its competitors, usually a half a cent per pound under the schedules of the market, and with premiums or increases over the base schedules applicable to various distribution points that were found to be in effect in the trade.

Q. Why were the base schedules and the discounts and differentials set up?

A. The position of The Glidden Company as a jobber was that of attempting to earn for itself the resale margin provided in the jobbers' schedules, and the schedules were used for that purpose and to conform to the competition found in the market.

Q. Was National Lead Company then a predominant factor in the white lead-in-oil business?

A. It was.

Q. Well, when Glidden acquired Euston Lead Company in 1924, who was put in charge of it?

A. The former owner and founder of the business, Mr. Edwin Euston.

Q. When did you assume charge of the Euston Lead Company?

A. When Mr. Euston retired.

2458 Q. And when was that?

A. In 1925.

Q. Did you, yourself, have any prior experience in the white lead business?

A. No, I was entirely without experience in the business.

Q. Well, how did you find the business?

A. I found that the business of the Euston Lead Company had been in general an unprofitable business, largely because the product was inferior in quality and Mr. Euston had either failed or been unable to develop any substantial distribution. He depended upon price-cutting methods in order to secure orders.

Q. Well, did Mr. Euston give you any pointers when you took over this business?

A. Yes, he gave me many ideas that he had ~~about~~ how the business should be operated, both from a manufacturing and from a sales point of view, and about the purchases of raw materials, pig lead and so on.

Q. Well, what were they?

A. The principal thing that he pointed out to me in my recollection, was the importance of watching the pig lead market and of keeping purchases of pig lead closely related to sales of white lead.

Q. Well, did you, as a result of that pointer, do anything yourself to determine whether or not the pig lead
2459 market was a governing factor?

A. Yes, I started watching the market daily, and I kept a daily record of the market on pig lead, the market on white lead, and on white lead-in-oil.

Mr. Duncan: I ask that this be marked for identification as Respondents' Exhibit No. 141.

(The paper referred to was marked Respondents' Exhibit 141 for identification.)

By Mr. Duncan:

Q. I will hand you, Mr. Sprague what has been marked Respondents' Exhibit 141, and ask you to identify this, if you will?

A. This is the original of a chart that I kept, covering the period from 1922 on, until I discontinued it sometime in 1929, and it is the daily record to which I previously referred.

Q. The exhibit is the result of your own checking, is that right?

A. Yes, I kept this chart and made it myself.

Q. You started to mark the chart, did you, in 1925 when you were in charge of the Euston Lead?

A. Yes, at the time I assumed charge of the Euston Lead Company in 1925.

Q. Yet I notice that the chart starts at 1922. Did you go back for 3 years, is that the answer?

A. Yes, when I started to keep the daily record
2460 myself, I changed the method that had been employed by Mr. Euston, who kept his record in a series of books, and I started to keep it in the form of a chart or graph, and in order to have a background I checked up and

worked it back to the beginning of 1922. That is the reason the chart begins in the year 1922.

Mr. Duncan: We offer Respondents' Exhibit 141 in evidence, Your Honor, and have a photostatic copy thereof which we would like to substitute in lieu of the original.

Trial Examiner Norwood: Show it to Mr. Wright.

(Respondents' Exhibit 141 for identification shown to Mr. Wright.)

Trial Examiner Norwood: Is there any objection, Mr. Wright?

Mr. Wright: I haven't had an opportunity to examine it, Your Honor. (Examines document.)

I would like to cross-examine briefly on the identification of the document before making my objection.

Trial Examiner Norwood: You may.

Mr. Wright: Mr. Sprague, I call your attention to the typed material at the far left margin. When was that typing placed on the document, and by whom?

The Witness: It was placed on the document three or four weeks ago by my secretary in accordance with my request for her to put it down so that it would identify the source of the data.

2461 Mr. Wright: Was that in contemplation of its offer as evidence in this matter?

The Witness: Yes, sir.

Mr. Wright: I call your attention to the small dotted lines near the middle of the exhibit, in the middle of the page. Did you place those dots on there?

The Witness: Yes, those dots were placed on there in the year shown, 1925.

Mr. Wright: When was this document itself prepared, the original of this document?

The Witness: Originally I kept the chart in a series of graphs, each representing a year, and then in 1929 I stuck them together in the form in which they now appear.

Mr. Wright: Then the original of this document was prepared in the years shown on the face?

The Witness: Each yearly graph was prepared during each of the years indicated, and then they were stuck together in a continuous chart as you have it there.

Trial Examiner Norwood: What do the dotted lines represent there in the 1926 section?

The Witness: I do not recall.

Mr. Wright: What are the dotted lines to which I called your attention, appearing in the years 1924 and 1925, the broken lines?

The Witness: I do not recall the significance of
2462 those dotted lines, in 1925 or 1926, shown on the
chart.

Mr. Wright: What is the source of the figures that you used in preparing this chart?

The Witness: They were prepared or obtained principally from the quotations in the New York Journal of Commerce and from other currently available sources, but every day, every morning, I opened the New York Journal of Commerce every day and made a note of the markets that were there reported.

Mr. Wright: Does that apply to all the commodities that purport to be listed on here?

The Witness: It applies to each of the three commodities shown.

Mr. Wright: Are they currently reported, all three of those commodities, in the New York Journal of Commerce?

The Witness: They were at the time, and insofar as I know they still are.

Trial Examiner Norwood: I think the counsel should confine his voir dire questions to an explanation of what it is bearing on its admissibility. You may cross-examine him later.

Mr. Wright: Before I can perfect my objection, I would like to know some more about the source of these figures; that goes to the very heart of this question.

Mr. Duncan: I object to any further questioning
2463 along the line that Mr. Wright has been questioning,
because I feel he has exhausted his voir dire inquiry
as to whether or not this particular document is sufficiently identified so as to be received in evidence. I therefore object to further questioning.

Trial Examiner Norwood: You may ask him anything further so as to satisfy yourself as to how it was made, or any explanation bearing on its admissibility.

Mr. Wright: I have one more question that I would like to ask the witness along the same line.

Trial Examiner Norwood: Go ahead.

Mr. Wright: But there are other sources than the Journal of Commerce for the statistics which were graphed in here, is that correct?

The Witness: Why, yes, those statistics were published in various places. I couldn't get them daily in any other way than the Journal of Commerce every morning when I took them.

Mr. Wright: Did those prices reflect the actual prices at which transactions of sale were made?

The Witness: They reflected the markets as shown in the New York Journal of Commerce.

Mr. Wright: Your Honor, I object to the offer of this in evidence. In the first place, as shown, there are nota-
tions and captions on it that were made very recently
2464 for the purpose of this proceeding. In the second
place, there is no showing that the figures that were used in the matter are comparable. It is hearsay, it is not the best evidence of what prices were on these various commodities at that time. If Respondents wish to prove what prices were in the quotations of recognized market sources, they can bring those sources in.

Mr. Duncan: If Your Honor please, I don't know how the Commission could get better evidence than what we are trying to introduce through this exhibit. Here is an official of The Glidden Company who, from 1925 through 1929, personally charted this on a daily basis to see whether or not the pig lead market would govern the white lead-in-oil and the dry white lead markets.

Trial Examiner Norwood: This witness testified that he entered these things in from the data which he has described. I shall have to overrule the objection and receive this in evidence. The photostatic copy may be received, and the original returned.

(The paper referred to, heretofore marked for identification RESPONDENTS' EXHIBIT 141, was received in evidence.)

By Mr. Duncan:

Q. Mr. Sprague, did you use this chart, now referred to as Respondents' Exhibit No. 141, in operating the Euston Lead business?

A. Yes, I found it of significant value in dis-
2465 charging my position as manager of that business.

Q. What did you find?

A. I learned from the chart a number of things that might be called the facts of life of the white lead business. In the first place, the chart showed and confirmed statements that had been made to me by Mr. Euston that the price of white lead moved responsibly up and down with the market price of pig lead. Usually, however, with a time lag in each case. The chart illustrated that that was true. The chart also illustrated that the difference between the market price of white lead and the market price of pig lead was, over an average period of 3 or 5-year stretches, fairly constant, although there were rather extended periods when the difference was narrow and there were extended periods when the difference was wide. That fact became one of the keystones that we had to recognize in the management of that business, because it was obvious that if we were going to be able to operate the white lead business it would apparently have to be done within the margins or spread that those curves illustrated.

Those were some of the significant things that arose from and which we learned from this chart.

Q. Did you use this chart to advantage in handling pig lead purchases?

A. Yes, we did, because one of the things the chart portrayed was the trends in the pig lead market.

2466 Q. Did you watch the London lead market?

A. Yes, I watched the London lead market in the daily quotations that were available, although I did not chart the London market.

Q. What else did the chart, referred to as Respondents' Exhibit No. 141, teach you in addition to the other advantages which you have already related?

Mr. Wright: Objection. He hasn't testified that it taught him anything yet.

Trial Examiner Norwood: That is a manner of expression. I think he knows what counsel means, which is—what does it portray.

You may answer it in that sense, if counsel will adopt my language.

The Witness: What was your question?

Mr. Duncan: Will you read the question?

(The reporter read the question as follows:

"Q. What else did the chart, referred to as Respondents' Exhibit No. 141, teach you in addition to the other advantages which you have already related?")

A. One of the significant things, to me, was that by watching the chart it became possible to do some prognosticating as to the trend and the probable changes in the price of white lead. For example, over substantial periods of time I observed that the difference between the price of white lead and the market of pig lead was around 2

2467 cents per pound, and I was able to use that with a great deal of benefit at times, because obviously it indicated that whenever the difference between the pig lead market and the going white lead market became less than 2 cents a pound, that the next movement in the white lead price would be a decline; and conversely, when that difference became wider than 2 cents a pound, the next movement to be expected was an advance in the price of white lead.

By Mr. Duncan:

Q. In discovering that fact, did you consult or receive any suggestion or intimation from any of your competitors?

A. No, none.

Q. In other words, that was exclusively your own discovery from the charts?

A. It was exclusively my own deduction, and I kept very quiet about it because I thought I had something.

Mr. Duncan: Mr. Reporter, will you read the fairly long answer of the witness just preceding his last few answers?

(The reporter read the answer as follows:

"A. One of the significant things, to me, was that by watching the chart it became possible to do some prognosticating as to the trend and the probable changes in the price of white lead. For example, over substantial periods of time I observed that the difference between the price of white lead and the market of pig lead was 2468 around 2 cents per pound, and I was able to use that with a great deal of benefit at times, because obviously it indicated that whenever the difference between the pig lead market and the going white lead market became less than 2 cents a pound, that the next movement in the white lead price would be a decline; and conversely, when that difference became wider than 2 cents a pound, the next movement to be expected was an advance in the price of white lead.")

By Mr. Duncan:

Q. With respect to the answer which has just been read, do you care to change your answer?

A. I would like to correct my answer, which was obviously in the reverse. When the difference between the pig lead market and the white lead market was less than 2 cents, the next change in white lead to be expected was an advance rather than a decline, as I stated originally.

Q. Then in discovering that fact, did you consult or receive any suggestion or intimation from any of your competitors?

A. None whatever.

Q. Will you please explain the words and figures, year by year, at the bottom of the chart? I am referring to Respondents' Exhibit No. 141.

A. The figures that I wrote in each year are explained in this manner: The figure after the letters "Avg.
2469 Dry" is the daily average for that year of the market quotations for dry white lead. The figures after "Avg. Pig" are the daily average for that year of the pig lead market, all of these figures being in cents per pound. The figures after the words "Over Pig" are the difference between the average daily dry white lead market and the average daily pig lead market. The figure after the word "Spread" is a calculated figure comprising the difference between the average daily dry white lead market and 80% of the average daily pig lead market.

Q. Why did you select 80%?

A. That was a calculated figure which I used for my guidance in indicating to me what the spread was between the cost of lead contained in a unit quantity of white lead—

Q. (Interposing.) That is dry white lead?

A. Dry white lead. (Continuing.) —and the average market for dry white lead.

Q. Per pound, is that right?

A. Per pound.

Q. Well, what is the significance of that fact?

A. Well, I regarded that as of particular significance, because the actual cost of the lead contained in white lead on any market situation was represented by that 80% figure, since the analysis of dry white lead is approximately 80% lead.

Mr. Duncan: I will ask the reporter to mark this as Respondents' Exhibit 142.

2470 (The paper referred to was marked Respondents' Exhibit 142 for identification.)

Trial Examiner Norwood: We will take a five-minute recess.

(A short recess was taken.)

Trial Examiner Norwood: The hearing will come to order.

By Mr. Duncan:

Q. I hand you what has been marked Respondents' Exhibit 142, and ask you what it is?

A. This is a simple graph that I had prepared, showing the approximate lead content, by analysis, of the commercial lead pigments—dry white lead (basic carbonate), litharge, red lead, and also white lead-in-oil.

Q. When you speak of lead content, do you mean metallic lead content as distinguished from white lead?

A. Yes, I refer to the amount of metallic lead that is found upon analysis of these pigments.

Mr. Duncan: We offer this exhibit, Your Honor, in evidence. We would like to substitute the photostatic copy of the exhibit for the original.

Trial Examiner Norwood: That may be done.

Mr. Wright: May I examine briefly on this?

Trial Examiner Norwood: Yes.

Mr. Wright: Did you state this was based on an
2471 analysis of commercial lead pigments, Mr. Sprague?

The Witness: Yes, the chart portrays the approximate chemical analysis of the commercial pigments.

Mr. Wright: Who made the analyses represented on this chart?

The Witness: One of the men in our office computed them from the information I gave him and the chemical formula of the pigments.

Mr. Wright: What information did you give him?

The Witness: I told him what the formula was.

Mr. Wright: In other words, you told him what the lead content was?

The Witness: No, sir, I told him what the chemical formula was, and in the case of the white lead-in-oil I told him what the average amount of white lead and turpentine was in commercial white lead-in-oil.

Mr. Wright: In other words, it wasn't based on an actual analysis chemically of products which were on the market?

The Witness: Yes, sir, it was based on an actual chemical analysis of the various products.

Mr. Wright: Who made that analysis?

The Witness: Well, any chemist can calculate the analytical composition of a substance whose formula he has, from the atomic and molecular weight ratios.

2472 Mr. Wright: Well, then, it was made from that sort of calculation rather than a chemical analysis of a physical substance?

The Witness: Yes, the chemical analysis of the physical substance is found to exactly duplicate the results shown from the chemical formula.

Mr. Wright: Then you gave him a formula which you considered was the formula of the commercial pigments on the market, and he made that calculation from that; is that correct?

The Witness: We regarded as typical of the commercial pigments on the market, white lead as the basic lead carbonate; litharge as Pbo lead oxide; and red lead as the higher oxide, Pb_3O_4; and calculated the lead content from that.

Mr. Wright: As to the red lead, what grade of red lead was it that you gave him the formula for?

The Witness: The standard grade of red lead, Pb_3O_4. We used that as typical because of the various grades of red leads, the variance in the lead content is very slight.

Mr. Wright: What is that grade known as commercially? Is that the 95%?

The Witness: Yes, the 95% standard red lead.

Trial Examiner Norwood: Off the record.

(Discussion off the record.)

Trial Examiner Norwood: On the record.

2473 Mr. Wright: What figures did you give him as to white lead-in-oil for purposes of this calculation?

The Witness: For purposes of the calculation, I gave him the composition of the stiff paste grade of white lead-in-oil, which is approximately 8% oil and 92% white lead.

Mr. Wright: That is basic carbonate?

The Witness: Yes. From that the lead content was computed. You will note that the chart is headed "Approximate", which was for the purpose of allowing for the very slight variations that may exist in various commercial grades.

Mr. Wright: In other words, then, this doesn't represent an exact percentage of any particular commercial product that is on the market?

The Witness: Exact to within 1 or 2 percent.

Mr. Wright: I have no objection to this exhibit.

Trial Examiner Norwood: Received.

(The paper referred to, heretofore marked for identification RESPONDENTS' EXHIBIT 142, was received in evidence.)

2474 By Mr. Duncan:

Q. Mr. Sprague, what are the relative percentages, approximately, of pig lead as a cost element in white lead products and lead oxide products?

Mr. Wright: Objection, Your Honor. There has been no time element stated there and it is obviously impossible to answer it by a general statement.

Trial Examiner Norwood: Read the question.

(The reporter read the question as follows:

"Q. Mr. Sprague, what are the relative percentages, approximately, of pig lead as a cost element in white lead products and lead oxide products?")

Trial Examiner Norwood: Do you want to fix a time when that formula prevailed?

Mr. Duncan: I will try to give a time if Your Honor wants the time element in there. I thought it was timeless.

Mr. Wright: Otherwise it calls for a conclusion on the part of the witness. It hasn't been established that these things bear any stable relation.

By Mr. Duncan:

Q. For example, in 1942 what were the relative percentages, approximately, of pig lead as a cost element in white lead products and lead oxide products?

A. In 1942, or at any other time—it makes no difference—the preponderating cost element in these products is the cost of pig lead. 2475

Q. Does the oxygen or the carbon amount to much?

A. It is inconsequential.

Q. Does the white lead—and when you have referred to white lead I assume you have meant dry lead during the entire examination this morning—

A. When I refer to white lead I refer to dry white lead.

Q. Now does that white lead contain approximately 80 per cent lead?

A. Yes, sir.

Q. And do the lead oxides contain approximately 90 per cent of lead?

A. Ninety per cent or higher.

Q. Are you speaking of percentages or by weight?

A. Percentage by weight.

Q. How does that bear on the relation of cost of lead to cost of the pigment?

A. The cost of lead used in manufacturing any of the lead pigments is the dominating cost element in preparing it.

Trial Examiner Norwood: He wants to know how would the percentage by weight compare with the percentage of cost—isn't that right?

Mr. Duncan: Precisely.

The Witness: The percentage of lead by weight contained in the lead pigments would be close to the
2476 percentage of the cost of the lead pigment at any
given time.

Mr. Wright: Objection, Your Honor. That is very vague. It hasn't been stated what pigment is referred to in the answer, and I move it be stricken.

Trial Examiner Norwood: The motion is denied. You can examine him and render this thing more definite.

By Mr. Duncan:

Q. When you referred to "cost" in answering that last question, did you refer to material cost?

A. No, I referred to the manufactured cost.

Q. Well, is the cost at any given time correspondingly preponderant in the cost of the finished product?

A. It is always preponderant.

Q. Have you prepared a study showing the pig lead market averaged over longer periods beyond the 1929 period that was referred to in the chart, Respondents' Exhibit 141?

A. Yes, sir.

Mr. Duncan: I will ask the reporter to mark this as Respondents' Exhibit 143 for identification.

(The chart referred to was marked Respondents' Exhibit 143 for identification.)

By Mr. Duncan:

Q. I will hand you what has been marked as Respondents' Exhibit 143 for identification and ask you what it is, Mr. Sprague?

2477 A. This is a chart or graph showing the monthly
average New York pig lead market, the monthly average dry white lead market at New York, and the monthly average card price for white lead-in-oil. It is a chart similar to the one that I prepared earlier, but instead of being a daily record it is a monthly average record, beginning the latter part of 1929 and extending through 1944.

Q. Was that chart prepared under your supervision and control?

A. Under my supervision and at my direction, yes.

Mr. Duncan: We offer in evidence, Your Honor, Respondents' Exhibit No. 143.

Mr. Wright: Mr. Sprague, when was this document prepared?

The Witness: My recollection is that it was prepared in 1945.

Mr. Wright: And the sources of the information are those listed at the bottom of the document, are they?

The Witness: Yes, sir.

Mr. Wright: In other words, the top line on the chart was compiled from data published in the American Paint Journal, issues of October 26 1938 and of October 31, 1944, is that correct?

The Witness: If that is what the chart states it is correct.

2478 Mr. Wright: Will you tell us the process of compiling this; what was done in compiling this chart?

The Witness: The chart was plotted from the data that was shown in the American Paint Journals referred to there.

Mr. Wright: And would your answer be the same with respect to the lines on the graph marked B and C?

The Witness: No, my answer would correspond exactly to what is shown on that graph. My recollection is that the pig lead market shown there was not obtained from the American Paint Journal.

Mr. Wright: You state that these are monthly average prices as they appeared in those publications?

The Witness: Yes, sir, they are.

Mr. Wright: Do you know from what sources those publications listed secured that information, or how they compiled that monthly average that they published?

The Witness: I did not inquire from these journals what their source practices were. I simply used the data that have been generally recognized in the trade as being correctly portrayed by these publications.

Trial Examiner Norwood: Did the publications give the monthly averages or did you figure out the monthly averages from data given in the publications?

The Witness: The publications published these
2479 charts showing the monthly average. There was no

calculation done by me in any way in connection with the chart.

Mr. Wright: Your Honor, I object to the reception of this document in evidence. It is obviously hearsay; it was prepared by an organization and there is nothing in the record about the sources of those statistics or how they arrived at the averages, or where they got them. It is plain that this witness prepared this chart from those sources in contemplation of this proceeding. The figures are not shown to be in any way reliable and I am deprived of any right of cross-examination as to the source of those figures.

Mr. Duncan: If Your Honor please—

Mr. Wright: (Interposing.) It is incompetent as proof of the matters for which it is offered. Certainly the American Paint Journal can't be used through this witness to prove what the prices of these various products were on any average basis in this manner. These respondents were engaged in the business of marketing all three of these products; they are obviously in possession of much better facts and figures as to the prices of these articles than some third party that is not in any way connected with this proceeding.

Mr. Duncan: Your Honor, I submit that this chart is admissible. It is a continuation of the first chart, Respondents' Exhibit No. 141. Now this Commission, I do believe, wants the entire picture. We have tried to trace this
2480 chronologically. We started off in 1922 and that
chart stopped at 1929. Now this picks it up in 1930, true on a monthly basis rather than daily, but it carries it right up to 1944. I submit that it would be very unfair if this document were not received in evidence for what it is worth.

Mr. Wright: Your Honor, counsel has characterized this as a continuation of Respondents' Exhibit 141, but it is obvious on its face that it is not. I assume that Your Honor when he admitted Respondents' Exhibit 141 did so perhaps as an exception to the hearsay rule on the basis of entries kept in the regular course of business by this man in connection with his official duties. This document, on the other hand, is something which was plucked out of a publication about which we have heard nothing before in this proceeding, and it is on a monthly average basis. There is no testimony as to how that average was compiled or from where the figures were obtained.

Trial Examiner Norwood: Well, I think there is a distinction between this and the other chart, but it has long been accepted as good practice to receive daily records from newspapers and periodicals showing fluctuations in the market price. Now this is removed from that because this is a tabulation of what this witness says those records showed. Our custom in receiving material of this kind is to condition its receipt on the data on which it is
2481 based being made available to the other side. If this data is available we can receive this for our convenience and counsel in support of the allegations of the complaint may then offer that in evidence if he wants to; he is privileged to do so if it isn't a true reflection of what those market quotations were. That has been our practice here and it is the practice in other governmental agencies to follow that principle of administrative procedure. I will ask counsel if that data is available?

Mr. Duncan: I will have to ask the witness that because I don't know. Are the data on which this is based available?

The Witness: The data are available and have been regularly published and the graphs charted from it adequately portray the trends of the market involved.

Mr. Duncan: We offer the exhibit in evidence, Your Honor.

Trial Examiner Norwood: That data is accessible to the Commission, I believe.

Mr. Wright: If this were an offer of the original data that would be something else, but even in that event I don't think it could properly be offered through this witness.

Trial Examiner Norwood: I think so.

Mr. Wright: There is absolutely nothing available to us on the source of this information. It is not market quotations; it is some third party's idea of what the
2482 average of market quotations was.

Trial Examiner Norwood: It is taken from the figures, he says, and he has testified when; it is taken from these trade-journals and from the market information that is regularly recorded in those journals, and I think copies of them are available and the Commission could find out whether this is a true reflection of that material; and I think it is sufficiently reliable to come in for consideration, at least.

Mr. Wright: Well, Your Honor, I don't think I should have the burden of calling the publisher of some document, some journal. That burden properly is on the respondents to establish the authenticity of this as a source of information and to bring in the original information. Here an attempt is being made to prove the market prices of the products which this witness sells.

Trial Examiner Norwood: This is something we are going to have to go into anyway, and we are going to have to get exact data on it, and I don't think it is going to prejudice anybody to receive this, so as to have something to start from, and then to go on. It is just a practical way of looking at it to start this study. It is not going to be taken as the final word here. It is received in evidence for whatever probative value it may have.

Mr. Wright: Well obviously, Your Honor, on the
2483 face of it, it has no probative value.

Mr. Duncan: Of course we take exception to that statement of counsel. We think it has a lot of probative value.

Trial Examiner Norwood: We will hear from counsel in support of the allegations of the complaint if these are incorrect in any way. The objection is overruled and the document is received, subject to the data on which it is based being available. If that is not available and cannot be obtained I will entertain a motion to strike the exhibit from the record. In this case also, a photostatic copy may be substituted for the original.

(The document referred to, heretofore marked for identification RESPONDENTS' EXHIBIT 143, was received in evidence.)

By Mr. Duncan:

Q. Mr. Sprague, from the standpoint of your sales and sales policies respecting white lead, what is the significant fact shown by Respondents' Exhibit 143, the monthly graph, which has just been received in evidence?

A. This chart portrays the relationship between the pig lead and the white lead and the white lead-in-oil markets, and from it the same conclusions may be drawn regarding those relationships and their significance that are obvious from the first daily chart that I kept myself.

Q. The chart received as Respondents' Exhibit 141?

2484 A. Yes. Respondents' Exhibit 143 shows that the same significant relationships maintained themselves through these years 1929 to 1944 as were shown in the years 1922 to 1929, and they were capable of the same uses as the first chart.

Q. Now to go back to what you call the "first chart", which we know as Respondents' Exhibit 141, did you actually use that chart in connection with your conduct of the business of the Euston Lead Division on behalf of the Glidden Company?

A. It was used constantly.

Q. By whom?

A. By myself.

Q. Will you describe more fully to what use you put Respondents' Exhibit No. 141?

A. Well, I have described a number of the uses and the significant things which it taught me. One of the significant things was that if I expected to be able to earn the same average gross profit in my white lead business as was earned by the market leader, I would have to adjust my prices of dry white lead up and down as rapidly as the market moved up and down. Obviously, the gross margin obtainable in the business is roughly measurable by these spreads between the two graphs. It showed me that if I cut under one I simply cut into my possible gross margin.

Q. Referring to Respondents' Exhibit 141 there appears on the chart the legend "E & M J". Will you 2485 explain what you meant by that?

A. Yes. For the purpose of checking myself in my computation of the daily average pig lead market, I recorded, during certain of these years, what that average was as it was reported by the Engineering & Mining Journal.

Q. And will you tell us what significance that has?

A. Well, it had these significant points. First, I wanted to see how comparable my calculation was, and then it was particularly interesting because in the years prior to 1925 I had found that Mr. Euston had purchased all of his pig lead on an average market price contract governed by the E. & M. J. average, and that then showed me what his average cost of pig lead had been in the years prior to 1925, and it was interesting to me to see for a year or two, I forget how many years it was continued—no, I guess it was not continued beyond 1925 because we ceased at that time to secure our pig lead on that kind of a contract.

Q. Had Mr. Euston suggested that you might be able to beat the lead market?

A. Mr. Euston warned me not to try it.

Q. What were the results of your efforts to beat the lead market?

Mr. Wright: Objection, Your Honor.

Trial Examiner Norwood: The objection is overruled.

Mr. Wright: It hasn't been established that he
2486 did try to beat the lead market; counsel is leading the witness.

Mr. Duncan: I will withdraw the question.

By Mr. Duncan:

Q. Did you follow Mr. Euston's suggestion?

A. No; like all newcomers we had to learn by experience.

Q. And what did experience teach you?

A. Our experience was very unsatisfactory in efforts to try to outguess the lead market.

Q. In addition to the daily markets being indicated by Respondents' Exhibit 141, which showed you the underlying trends up and down, did the chart prove to be of any value in the timing of your purchases of pig lead?

A. Yes, it did.

Q. And did you constantly use that chart for that purpose, among others?

Mr. Wright: Objection, Your Honor.

Mr. Duncan: I think this goes to the practice—

Trial Examiner Norwood: (Interposing.) He has given us that information before anyway; objection sustained.

Mr. Duncan: I will withdraw the question and put it this way.

By Mr. Duncan:

Q. Why did you stop keeping the daily chart record in 1929?

A. I left my immediate work and residence at the Euston Lead Company in Scranton at that time, and
2487 I ceased keeping the daily chart.

Q. Did you follow, however, the averages as published in various sources?

A. Yes, I did. I thought I had learned pretty much the lessons that the chart had taught me and I watched the lead market daily, but I did not chart it down daily.

Q. You stated earlier that in order to conduct the white lead business profitably you would have to do it either within the spreads shown on your chart, or else by being successful in producing a product far superior to National Lead's Dutch Boy so that it could be sold at a premium over National Lead Company's market, or be successful in finding out how to consistently purchase pig lead at below the average New York market. Did you endeavor to accomplish these results?

Mr. Wright: May I have the first part of that question read, please?

(The reporter read the portion of the question requested as follows:

"Q. You stated earlier that in order to conduct the white lead business profitably you would have to do it either within the spreads shown on your chart" etc.)

Mr. Wright: That is sufficient. Objection, Your Honor. That is putting words and conclusions in the mouth of the witness which his testimony doesn't warrant. It is in
2488 the form of a leading question.

Trial Examiner Norwood: I am inclined to think that it is pretty leading.

Mr. Wright: There was no such statement about the National Lead Company in the testimony of this witness, I don't believe.

Trial Examiner Norwood: I will sustain the objection. We will take a three-minute recess.

(A short recess was taken.)

Trial Examiner Norwood: Proceed, Mr. Duncan.

By Mr. Duncan:

Q. Mr. Sprague, what results did you try to accomplish when you were in charge of the Euston Lead Division of The Glidden Company?

A. Well, I tried to bring the business into a profitable position and it was obvious that this could be done in various ways. One of them would be to be able to purchase pig lead at an advantage by outguessing the market. Another would be to make a better product, sufficiently better so as to enable it to be sold in the market at a premium. If either one or both of those could be accomplished it would be possible to operate at a better profit margin than the market averages shown by the charts.

Q. Did you try to do both of those?

Mr. Wright: I object to that as irrelevant and im-
2489 material.

Mr. Duncan: I think it has relevancy.

Trial Examiner Norwood: Objection overruled.

The Witness: We tried very hard to do both of those things.

By Mr. Duncan:

Q. Did Euston Lead have any advantage in cost of manufacture?

A. We regarded our process of making white lead as one that was more economical than those usually employed.

Q. Well, was it of any consequence?

A. No. The manufacturing cost, according to our experience, of white lead, was such a minor factor in the total cost of the finished white lead that an advantage in the manufacturing process cost itself was inconsequential.

Q. Between 1924 and 1929 did Euston Lead develop and improve its product?

A. Our constant endeavor was to improve the quality of Euston white lead, and we succeeded in making improvements and in realizing those improvements irregularly all through the years. By 1929 there had been substantial improvement realized in the quality of the product.

Q. Was there any change in its color?

A. Yes, the improvement consisted of an improvement in the color or the whiteness of the product, which was of importance in the white pigment.

2490 Q. Who were Euston's customers on white lead-in-oil during that period of development and improvement?

A. On white lead-in-oil the sales were made principally to public purchasing agencies on bids, and I recollect to a few important industrial buyers of white lead-in-oil. Those sales were made always at cut prices, or rather at prices below the market for white-lead-in-oil because of the necessity to recognize the questionable quality of the merchandise.

Q. Well eventually did you depend on fortuitous pig lead purchases in order to make a profit in the white lead and white lead-in-oil business?

A. We depended upon our skill in that for a while but we had to abandon it because our skill didn't produce results. We couldn't successfully beat the market.

Q. Were you able to get a product better than National Lead's so that you could sell at a premium, and by "you" I mean the Euston Lead Division of The Glidden Company?

A. We thought we had attained a product that was superior to that of National Lead or other suppliers—

Q. (Interposing.) When did you think you had achieved that?

A. My recollection is that we thought we had done that about 1939.

Q. '39 or '29?

A. '39.

Q. Well, back along about 1929 did you have oc-
2491 casion to develop sales?

A. After we had made our first substantial improvements in the product during the period between 1925 and 1929, we thought we had gotten something that was good enough to compete with the market leader, Dutch Boy White Lead-in-Oil, and we undertook then, with hopes of success, to develop a distribution and a business on it.

Q. Well, what methods did you employ?

A. We employed about every method that could be conceived of as a means of accomplishing that result. The first method which we stressed was to attempt to interest the paint divisions of The Glidden Company in aggressively taking hold of the sale of white lead-in-oil, which we merchandised under the trade name of Euston White Lead-in-Oil.

Q. Was that successful?

A. We tried for some time to arouse successful results but we failed in doing so.

Q. For about how long a time was it that the Euston White Lead-in-Oil was sold by the paint divisions of The Glidden Company?

A. I will have to refer to some notes that I have, if I may, in that connection.

Trial Examiner Norwood: What are those notes to which you are referring?

The Witness: These are some notes that I pre-
2492 pared of some points that I wanted to bring out in
my testimony.

Mr. Wright: When were they prepared, Mr. Sprague?

The Witness: These notes were prepared yesterday.

Mr. Wright: From what sources were they prepared?

The Witness: These are notes that arose from quite a long period of time, to bring together my recollection and that of others with respect to the various matters that occurred during these years.

Mr. Wright: Do they include matters that were the recollection of others than yourself?

The Witness: They are the result of many discussions that I have had with others who were identified in one phase or another with these activities.

Mr. Wright: In other words, those notes contain information which yu secured recently from others in the organization?

The Witness: No.

Mr. Duncan: I object to that.

Mr. Hinds: I object to having the examination interrupted by this cross-examination. The witness is obviously permitted to refer to anything that will refresh his recollection, including a telephone book if that would serve his purpose, and it is improper cross-examination at this time.

Trial Examiner Norwood: It isn't cross-examination at all. He is asking a few questions on voir dire covering
2493 this material which the witness is using to refresh his memory. It occurs to me that it is such a document as may be used, so I think we may proceed. When you made those notes you knew them to be true, did you?

The Witness: Yes, sir.

Trial Examiner Norwood: Go ahead.

By Mr. Duncan:

Q. About how many years did The Glidden Company, through its sales division, attempt to sell Euston White Lead-in-Oil?

A. This first effort that I attempted to get The Glidden Paint divisions to undertake extended over a period of four or five years.

Q. Can you tell us why that was unsuccessful?

A. Yes, it was unsuccessful for a couple of fundamental reasons. The first one was that I was desirous of showing a profit in the Euston Lead Division, and my argument with the paint people was that they ought to be willing and able to build a sales distribution of Euston White Lead-in-Oil, functioning as a jobber, purchasing the white lead-in-oil, so to speak, from the producing plant on a jobbing basis, and operating on the jobber's margin. The objection to that was that the paint people didn't have enough of a margin to pay the kind of commissions to the sales force that they could afford to pay and did pay on the sales of other types of paint products. But the real difficulty was that the

2494 sale of white lead-in-oil by a paint organization was asking them to pull in both directions at the same time. They had no enthusiasm for selling white lead-in-oil, and none could be inculcated by the sort of incentive that was provided. The paint salesman reported that his job was to sell ready-mixed paint in competition with white lead-in-oil, or sell white lead-in-oil in competition with ready-mixed paint, and he didn't know how he was going to do both at the same time—and the effort failed for that fundamental reason.

Q. What was the pricing policy followed by the paint divisions over such sales as they were able to make?

A. The pricing policy at that time was that the paint divisions priced the white lead-in-oil at a concession of one-half cent per pound under the competitive market schedules and selling bases of the Dutch Boy White Lead-in-Oil.

Q. Now will you tell us what other method Euston Lead Division employed with respect to the sale of Euston White Lead-in-Oil?

A. Another method that we tried was to see if it could be accomplished by a direct mail selling policy.

Q. To whom?

A. By a direct mail presentation to large painters, painting contractors, distributors and important dealers.

Q. What result did you get from that?

A. The results from that effort were entirely
2495 unsatisfactory although at first there did seem to be some sizeable response, but it petered out and washed up.

Q. Did you apply any other methods on behalf of Euston?

A. Yes, sir, we made an extensive plan of bringing our Euston White Lead-in-Oil to the attention of buyers by direct sales methods, by the employment of salesmen who were to devote their time and attention in an endeavor to build the business. We couldn't afford to hire a lot of salesmen but we selected those territories where we thought the cream of the white lead-in-oil business would be found, and we provided the salesmen with promotional matter and with sales support, and turned them loose in the hopes that they could make the thing go by that method.

Q. Why did you think you could sell at Dutch Boy prices?

A. We tried on more than one occasion to bring our price level to that of the Dutch Boy White Lead-in-Oil.

During the time that this was done with our own direct salesmen we did it because we had made further improvements in the product, and we thought we were about to the place where we might expect on a quality basis, to be able to compete on a price equality basis with them.

Q. Did you attempt to prove the improvement to the trade?

A. Oh yes, we provided the salesmen with demonstration panels and celluloid exhibits that were designed to portray the color advantage of the product, and
2496 instructed them in testing methods, making comparative
tests with competitive white lead-in-oil, designed to show what we thought the advantage was.

Q. What was the result of the direct presentation program?

A. We were obliged to abandon it for the simple reason that the cost was prohibitive and the results were too long in coming. Our competition was just too good for us.

Q. Did you consider any other method?

A. Yes, we did. We again thought that we might be able to put the merchandise across by having it handled through the Glidden Paint divisions, and setting up a different basis for doing it. There were other methods employed among which I can remember that we attempted to locate large buyers of white lead-in-oil with the intent of using the method of making an attractive price to secure tonnage in isolated spots, that would justify the price, and would enable a backlog of volume to be obtained.

Q. What happened to that?

A. That idea was found to be not feasible at the time we tried it because the distribution pattern of white lead-in-oil had apparently changed from what it had been in some of the earlier years because we couldn't find any substantial volume of white lead-in-oil business in any one spot. White lead-in-oil is a maintenance item and a large volume does'nt exist in one spot as far as actual consumption
2497 of white lead-in-oil is concerned. We couldn't dent the
large distributors who were handling white lead-in-oil because our competition was too strong for us. We had to abandon the idea that we could build volume by finding a dozen or more spots where there was large volume and making a price to get it.

Trial Examiner Norwood: We will now recess for lunch until 1:00 o'clock, Eastern Standard Time.

(Whereupon, at 11:25 a.m., E. S. T., a recess was taken until 1:00 p. m., E. S. T., this day.)

2498 Afternoon Session.

2:00 p.m. E. S. T.

Trial Examiner Norwood: The hearing will come to order. Proceed, Mr. Duncan.

PAUL E. SPRAGUE resumed the stand and testified further as follows:

Direct Examination (continued) by Mr. Duncan.

Q. Mr. Sprague, did Euston Lead try any other methods?
A. Do you refer now to the sale of white lead-in-oil?
Q. Yes.
A. I explained a number of methods that were employed. One thing I did not describe was the program we tried of buttressing the efforts of directly employed salesmen by authorizing the holding and putting on of a series of painter meetings, where we would invite painters to a meeting place in the evening and entertain them and put on a demonstration of the qualities and properties of our white lead-in-oil. The men thought that since that method apparently had been so successfully employed by their competitors, and since they had a product that was better than it had been in the past, that that method ought to be employed to demonstrate it, and that was employed.

Q. And what results did that method have?

2499 A. Well, the result was that while it had a modicum of effectiveness, the cost of it and the results from it, again, were such that we couldn't afford to continue it. The trade acceptance of the Dutch Boy brand was not to be overcome quickly by those methods.

Q. And it was National Lead that had as its product the Dutch Boy White Lead?
A. Yes, that was the trade name of the National Lead Company which had been developed by a long period of years of advertising and promotion. It was extremely well regarded and the product was satisfactory, and the National Lead Company had the cream of the distribution of white lead-in-oil in terms of the dealers and distributors that were the better ones.

Q. Why did National Lead have this advantage? Can you assign any reasons as to why National Lead had this advantage?

A. Yes. We found that it sprang from the fact that they had, through the years, secured consumer acceptance, painter acceptance, to a remarkable and extraordinary degree. The acceptance of Dutch Boy White Lead as an article of quality was a matter of painter feeling that had been handed down from grandfather to grandson, and the consumer acceptance, or the painter acceptance was one of the main factors.

Another factor was that the Dutch Boy product was backed up by excellent service in the sense that adequate stocks were available and there was good distribution. Any time a painter wanted to get a keg of Dutch Boy White Lead he could go to his nearest dealer, as a rule, and get it. 2500

Another factor, which was a fundamental one, was that the multiple producing points of the National Lead Company and their facilities for production were at all times adequate to satisfy the entire market demand for white lead-in-oil. In other words, no one needed to wait a while to get Dutch Boy White Lead, it was always available.

As I recall it those three basic factors were wherein the strength of the Dutch Boy product lay, and where the tough bucking of competition had to be faced.

Q. Now after all these efforts, what did you conclude that Euston would have to do?

A. It was obvious to us that our methods had not been successful and in studying the situation and studying our experiences it seemed to us that there were several fundamental factors that had to come into play if we were ever going to get a reasonable distribution of Euston White Lead-in-Oil.

Q. What were those basic factors?

Mr. Wright: Your Honor, I would like to object to this whole line of testimony. I objected to it earlier on the ground that it was irrelevant.

Trial Examiner Norwood: The objection is overruled. Tell us about this competition, the nature and extent of it.

2501 The Witness: Well, the factors, as we saw them, were these. First, the price of our product could not exceed that of the market leader to any class of buyer. We were thoroughly convinced that it was hopeless to attempt to demonstate enough superiority in quality to get any class of buyer to pay an enhanced price over the price prevailing for Dutch Boy White Lead-in-Oil. One reason for that was the nature of the superiority that we thought we had attained, namely, one of odor and hiding power in the paint made from our white lead-in-oil. Well, we did have an advantage in color and it could be demonstrated that it was there, but we found that when it got on the side of a house alongside of Dutch Boy, in a matter of four or five or six months there was no difference in color to be seen, and it was an evanescent advantage.

The question of other characteristics of the product that we thought advantageous with regard to such things as the ease of spreading and the ease of breaking up for use were really minor points that couldn't be given a dollar value. We just found, time and again, that painters would say, "Well, maybe this is a little better but it is not worth any more money, I get the same results on the side of a house and I am not interested in any premium". That was the point that we had to accept, that it was fruitless to attempt to get a higher price at any stage of our efforts.

2502 Then the next thing that we recognized that had to be taken into account and accepted was that we certainly would have to abandon the idea of offering our merchandise to painters or consumers at a lower price than the market leader.

By Mr. Duncan:

Q. What led you to that conclusion?

A. Well, we had had by this time considerable experience in trying to sell our product at various lower prices, and we encountered a fundamental merchandising fact that an article that the consumer can't visualize and judge immediately as to its quality is injured by being offered in the market place at a cut price. It reacts against the product, injures it. We found that to be true and it was particularly true with Euston White Lead for these reasons: First, in our case such painter recollection as existed of our product that had been offered, was bad. Whatever they could remember about Euston White Lead was bad because the product wasn't up to competitive quality. Then we had to face the very special situation that resulted from the early history of the white lead-in-oil business.

Q. What was that?

A. That was reflected in this way. In the early history of the paint business in this country white lead-in-oil was the principal and the basic paint material, it was the only recognized quality white paint. And as the ready-mixed
paint business developed in competition with that,
2503 there also developed the various imitation and spuri-
ous white leads that were put on the market as white lead—Green Seal White Lead, for example, or XYZ White Lead, which in too many cases turned out to be adulterated merchandise.

Q. Was that suspicion cast on Euston's product?

A. That suspicion was cast upon Euston White Lead-in-Oil as well as any other white lead-in-oil that was exposed to the painter at a cut price. It lingered in their minds, these experiences in the past that they had had with low-priced white leads which were adulterated and inferior. Those things combined to convince us that we never were going to get anywhere with cut prices to the consumer and the painter.

Q. Did you ever attempt to overcome that situation, that is to overcome this suspicion that had been cast on your product?

A. We tried every method within reason that we could think of. At one time we advertised and we put on our kegs that we would pay one hundred dollars in gold to anybody that could prove that there was anything in one of those kegs except pure white lead and pure linseed oil.

Q. Did you ever have to make good on that guarantee?

A. No, we never did because our product was pure. We later placed on our kegs, and it is my recollection that we still do, a metal tab to the effect that it is guaranteed to be
pure white lead, pure linseed oil and nothing else, in
2504 the case of the stiff paste grade; and in the case of
the soft paste grade, nothing but pure linseed oil, pure turpentine and pure white lead.

Q. Did you apply a test known as the blow-torch test?

A. Yes, we gave our sales people, and we told our distributors and dealers to apply the blow-torch test to our white lead-in-oil for the purpose of proving its purity.

Q. Now you spoke of these basic factors and you have given us two of them, I think. What is a third basic factor which you found must govern a program for the successful sale of Euston White Lead-in-Oil?

A. The third factor was that we would have to get the sale of our white lead-in-oil into the hands of a sales organization who could handle it along with other items so that the sales expense that could be charged against the white lead-in-oil would be low.

Q. Why did you have to keep your sales cost so low?

A. Well, we were compelled to keep our sales expense low because in the first place we had a plant whose volume was limited and our job was to produce a profit within the scope of the volume of production attainable. Secondly, and more importantly, we learned from our chart of relationships between the price of white lead-in-oil less the discounts applicable, and the cost of pig lead, that it was more or less constant and that it was more or less
2505 narrow. So if we were going to undertake a sales
program that gave us a high cost per unit of white lead-in-oil sold, the only result would be to subtract too much from the attainable margin. We always had to operate in between the ceiling and the floor, the ceiling of the National Lead Company and the floor of the pig lead market. Now, if we increased our sales expense too high, or conversely, if we dropped our competitive price too low, we squeezed the life out of ourselves, and we couldn't live that way.

So I decided, and I convinced The Glidden Company, that we were not going to get the Euston White Lead-in-Oil marketed unless we could do it at a low unit sales cost, and I proposed a scheme by which it could be done.

Q. What was your scheme, and how did it result?

A. My scheme was that the paint sales divisions of the company take over the responsibility for the sale and distribution of Euston White Lead-in-Oil in those markets where the largest volume lay, namely, in sales to painters and painter-contractors and distributors and dealers, and where the sales cost was high. Now economically that was practical from The Glidden Company's point of view, because each year the company has grown, the sales organization has increased in numbers, and the intensity of its coverage of prospective white lead-in-oil users was enlarged, and the only thing that was necessary was to be
able to realize some enthusiasm on the part of that
2506 organization to take over the sale of the product.

Q. About when did the paint divisions of The Glidden Company take over the sale of the Euston White Lead-in-Oil?

A. My recollection is that it was in 1933 or 1932.

Q. Was that change in policy the result of action taken by the management of The Glidden Company?

A. Oh yes; the people in charge of our paint business were no more interested in doing a bang-up job of white-lead-in-oil distribution then than they had been before, and for the same reasons, and I proposed that we overcome one of the reasons by making it more profitable to the paint divisions to undertake it, and that was done by turning over the white lead-in-oil business or rather product by the Euston Producing Division of the company, to the Paint Sales Divisions at actual cost, so that they earned the entire gross margin that existed in the business.

Q. Well, did the attitude of the paint divisions of Glidden change as a result of this policy?

A. No, it didn't. The fundamentals were still there. The sale of white lead-in-oil was in opposition to the sale of ready-mixed paint, and it was a fundamental difference.

Q. Did The Glidden Company, in furthering its policy, take any other mandatory steps with regard to the sale of white lead-in-oil through its paint divisions?

A. Yes, it took every step that would be within
2507 the practical power of management. First it made it
mandatory that the company stop handling Dutch Boy lead or Eagle-Picher lead or any other kind that they had been distributing as jobbers. Then they went further and set up a quota for every salesman in the paint divisions every month, of white lead-in-oil business that he was to produce.

Q. Are you familiar with the pricing practices of the paint divisions of Glidden in carrying out these activities?

A. Yes, I am in general familiar with the pricing policies although I was not in charge of them.

Q. What was the pricing practice used in the sale of white lead-in-oil at this time, that is the selling price basis—

A. (Interposing.) I will have to check up on that and see. At the beginning of that period of what I will call mandatory distribution, the pricing was on the basis of the Dutch Boy schedules as we knew them, less a concession to the dealer or the distributor of a half a cent a pound, with the encouragement and desire of the company that the dealer maintain the market price to his painter and the painter-contractor customers, so that he would have the benefit of that additional margin to justify him for sales efforts of his own.

2508 Q. What was the practice with regard to prices charged for delivery at distant points?

A. Well, there were added premiums to the base schedules for deliveries at distant points, either related to equalization points that were in existence on the part of competition, or whatever competitive prices at those points were found.

Q. Were price cards or price lists used?

Trial Examiner Norwood: Off the record a minute.

(Discussion off the record.)

Trial Examiner Norwood: On the record.

By Mr. Duncan:

Q. The last question I asked was: Were price cards or price lists used? I didn't hear the answer.

A. Yes, the use of price cards, according to my recollection, was started at the time that Glidden took over—that the Glidden Paint Divisions took over that responsibility.

Q. Over how wide an area was it endeavored to secure distribution of Euston white lead-in-oil?

A. We didn't know how wide an area would be required ultimately to result in the volume of sales that the white lead plant could handle. So white lead-in-oil was put into the hands of all of the Glidden Paint Divisions' sales organization at all parts of the country other than on the Coast.

Q. Will you state whether or not Euston followed National Lead Company's prices and differentials?

2509 A. I think I answered that a minute ago.

Q. Well, if you did, then why did—

Trial Examiner Norwood: (Interposing.) Let him answer the question.

Mr. Duncan: The Examiner says he wants you to answer the question.

Trial Examiner Norwood: Read the question.

(The reporter read the question as follows:

"Q. Will you state whether or not Euston followed National Lead Company's prices and differentials?")

A. The pricing policy for the Euston white lead-in-oil and the prices made were similar to those of the National Lead Company with allowance for the deduction of a half a cent per pound to the dealer or distributor, which I referred to.

By Mr. Duncan:

Q. Why were National Lead's prices and differentials followed?

A. Because, for the reasons that have been mentioned, the Dutch Boy product of the National Lead Company was the market leader, we couldn't sell our merchandise at higher prices and we were unwilling to sell it, insofar as we could control it, to the painter and the consumer at lower prices, and we had to operate within the range of margins that existed between our pig lead cost and our white lead price; and we also were confronted, for the first
time, with the fact that Euston white lead-in-oil was
2510 in the hands of a nation-wide sales organization.
That made it necessary to price the material as carefully and as accurately as we could learn what the competition was in these various parts of the country.

Q. How were the price schedules of the National Lead Company obtained?

A. Well, it was easy to obtain the National Lead Company's price schedule, because it was their practice to mail out cards to the trade, the prices and the changes were published in the newspapers, in trade journals, and more importantly, the sales reports from salesmen contacting the trade, those things combined to enable a quick and close knowledge of the market to be obtained; and that, in connection with watching the trend of our chart, enabled me to keep, from my point of view, pretty well abreast of developments.

Q. Were continued efforts made to further improve the quality of Euston white lead-in-oil?

A. Yes, we constantly strove, throughout the entire period of our operation of the business, to do that.

Q. And what effect did that have on the current pricing policy?

A. Well, the farther we could effect improvements, the stronger became our feeling that we could either eliminate or reduce the price advantage that we had given to our
dealer or distributor. In other words, if we could
2511 reduce the sales resistance on the part of the painter,
we could reasonably ask our distributor to handle our white lead on the same margin as he could afford to handle the market leader.

By Mr. Hinds:

Q. Were there any selling practices that you found employed by National that you were unwilling to meet?

A. Yes, we were quite unwilling to—although we had to—meet some of the price declines at various times, when our own lead position was quite adverse and we suffered.

Another thing that we were unwilling to meet was the consignment setup that was put into effect by Dutch Boy, by National Lead, and also by Eagle-Picher.

Q. About when?

A. That I will have to refer to my notes to get about what that date is.

Q. Can you answer that without referring to your notes?

A. Not on an approximate date.

Q. Then please do so, if that will refresh your recollection as to when National and any other company put into effect the consignment plan.

A. About 1934.

Q. Did you learn of any change in competitive practices with respect to quantity discounts?

A. Oh, yes, we would hear reports from the trade here
and there about different discounts given for different
2512 quantities purchased at one time, or by different
classes of purchasers.

Q. How did you get that information?

A. From the same type of source as I described before in connection with base price schedules.

Q. What did you do about it?

A. When we found changes and those matters had been made by the National Lead Company, we met them as promptly as we could be certain what they were. When they occurred on the part of others, we were not so fast and we held off until we actually lost business and felt something had to be done.

Q. What about quantity discounts, when you learned of any changes in those by National Lead, what did you do about that?

Mr. Wright: Your Honor, I object to these questions that refer to conclusions as to what they did about facts that aren't in evidence here. I think this sort of testimony should be brought out by specific instances that are within the witness' recollection, rather than by these broad conclusions as to what they did. Or are these questions directed solely to what the policy of the company was, rather than what the company actually did?

Mr. Hinds: Both.

Trial Examiner Norwood: I think they are directed to both. Read the question.

(The reporter read the question as follows:

"Q. What about quantity discounts, when you
2513 learned of any changes in those by National Lead,
what did you do about that?")

Trial Examiner Norwood: The objection is overruled.

A. We met them as quickly as we could check and determine their accuracy.

By Mr. Hinds:

Q. What other competitive sales practices did you learn of in that connection?

A. We learned of changes made at various times in respect to the premiums charged over the base schedules for deliveries at distant points. The use of equalization points was changed and premiums were charged on the basis of deliveries in various areas; and as fast as we could establish that, we met them.

Q. Why did you do that?

A. We did that because we had found in the past, in respect to equalization points, and found in respect to the areas, that our average costs of delivery in those areas were substantially higher than the premiums that competition established for those areas, and in order for us to realize the maximum gross profit from those sales that competitive conditions would permit, we had to follow them promptly.

Q. Did you become a member of the NRA Code Authority for the lead industries?

A. Yes, sir, I did.

Q. What were the circumstances which led to your
2514 being appointed, if you know?

A. Well, the lead Code provided that the Code Authority was to consist of the Executive Committee of the Lead Industries Association and the chairmen of some of the various divisions of that Association, and I became automatically a member of the Code Authority because I functioned as a chairman of one of the divisions.

Q. What did your contribution consist of in that organization?

A. Which organization?

Q. As a member of the Executive Committee of the Lead Industries Association.

A. I was not a member of the Executive Committee of the Lead Industries Association. I said that my membership on the Code Authority was automatically the result of the fact that I had been a chairman of one of the divisions.

Q. What was your activity on the Code Authority?

A. I had very little activity on the Code Authority as such. I was active in serving on some of the various committees in connection with the development of the Codes. As I recall it, the Code Authority met usually in New York, and my recollection of participation in those meetings is very meager.

Q: Did you have any particular interest or purpose to serve in connection with the Code Authority?

A. I was very much concerned about the develop-
2515 ment of the Codes or the consideration of the development of Codes from the standpoint of a small producer of lead pigments, both lead oxides and of white lead and of white lead-in-oil, because I realized that if the industry were going to function under the NRA Act and were going to develop Codes that were to be improved by the NRA, that the interest of the small producer might be very much affected by the type of Codes that were developed, and I was quite anxious to participate in that work.

Q. When the Robinson-Patman Act was enacted in 1936, did that have any effect on your policy of pricing Euston Dry White Lead?

A. Yes.

Q. What was it?

A. Most of my testimony so far has related to white lead-in-oil, but you ask me now about dry white lead?

Q. Yes.

A. At the time you speak of, Euston Dry White Lead was priced at the ceiling of the National Lead Company on sales made to buyers other than those engaged in the manufacture of paint, and the paint manufacturers were sold at a price less than was charged the other industrial consumers, and while we were not certain that the requirements of the Robinson-Patman Act would affect that program, yet we thought it would be more consistent to
2516 render any question out of the picture by raising our price to the paint trade to the same level as we

charged others, and that was done and Euston Dry White Lead was sold thereafter at the same price to all classes of buyers.

Trial Examiner Norwood: What do you mean by the "paint trade" there, the dealers?

The Witness: No, dry white lead is used principally by paint manufacturers who make ready-mixed paints, and we had found and had proven, over all the years of our operation of the Euston Lead Company, that we encountered continual resistance in the sale of our dry white lead to the paint manufacturers, and since they were the largest single outlet for dry white lead we had to recognize that, and all through the years did it by offering them dry white lead at a lower price than prevailed in general to other consumers, and in recognition of that we were able to command some volume from the paint industry. The Robinson-Patman Act and the conception that our company had of it brought an end to that practice.

By Mr. Hinds:

Q. And that was a uniform delivered price, or were there some exceptions?

A. A uniform delivered price to all customers wherever they might be located. On the Pacific Coast, my recollection is that there was a different price, but we very rarely sold on the Coast. I believe only on two periods in the 20 years or more did we ever make any sales on the Coast.

2517 Q. When you did in those exceptional cases make sales, how did you price this product on the Coast?

A. We priced it at the competition for dry white lead on the Coast.

Q. What effect, if any, did the enactment of the Robinson-Patman Act have on your policy of pricing white lead-in-oil in 1936?

A. It didn't have any effect upon our policy of pricing white lead-in-oil, although it did affect—no, not with regard to white lead-in-oil, it didn't have any effect upon it.

Q. You are now speaking of 1936 when the Act was enacted?

A. The Robinson-Patman Act, yes.

Q. Why was that?

A. Well, we observed first that there had been no changes that reached our attention on the part of competitors in pricing white lead-in-oil, and we were confronted then, as we had been before and as we have been since, with the fact that we had to meet our competition as and where we found it; and furthermore, it was not our view that our pricing practice on white lead-in-oil in any way involved any violation of the Robinson-Patman Act as we saw it.

Q. Well, later did you discern any effect of the Robinson-Patman Act on your pricing of white lead-in-oil, or did it have any such effect?

A. I do not recall that it had any effect.

2518 Q. Did it affect your policy toward instructions, and so on, to your subordinates?

A. Oh, yes, we instructed our sales managers and the company instructed all of its sales executives to observe the requirements of the Robinson-Patman Act particularly with respect to pricing that would involve discrimination as between competitors.

Q. Now you have spoken of certain differentials. In your judgment were they sufficient in amount to have any effect on competition between your customers?

A. No, we didn't regard that the differences in premium prices for materials delivered at distant destinations would have any effect at all upon the competition as between jobbers and dealers and distributors, or any other class of buyer.

Q. Following the enactment of the Robinson-Patman Act, did you give any instructions to the Paint Divisions' sales managers in your retail stores?

A. Yes. They received instructions, as did all of those in charge of sales, to particularly avoid discrimination between competing buyers who came to the retail stores for merchandise.

Q. Did Glidden at length make available to its customers a consignment plan of selling?

A. Yes, with reluctance.

Q. What product was that?

A. On Euston White Lead-in-Oil only.

2519 Q. When was that? Can you answer that without referring to your notes?

A. I will have to get my notes again.

Q. If that will serve to refresh your recollection, please do so.

Mr. Wright: At this point, your Honor, I don't believe it is proper for him to read dates from his notes; that is, unless the paper will refresh an independent recollection he has as to that time.

Trial Examiner Norwood: You may refer to that and then put the paper away and give us your recollection if it is correct.

The Witness: That is correct. My recollection is refreshed, and the consignment plan was authorized about 1939.

By Mr. Hinds:

Q. Was that plan exclusive or did you make available any other plan to your customers?

A. You mean was white lead-in-oil sold only on consignment?

Q. Yes.

A. No. The consignment plan was a tool that was put in the hands of those salesmen and sales managers who said they had to have it; but the company continued to stress the desirability of making outside sales of white
2520 lead-in-oil as against consignment sales.

Q. What were the circumstances leading to your making available this consignment plan of selling white lead-in-oil?

A. The circumstances were these: In following up and in putting continual pressure on the paint divisions' sales organization to maintain and expand their sales of Euston White Lead-in-Oil the sales reports from many of the principal white lead-in-oil territories stressed that the men would have to have the consignment plan out there, and if they were to be expected to maintain or increase the sales volume.

In response to that continued pressure the company decided to permit the handling of Euston White Lead-in-Oil via the consignment route of an alternate method with the direct selling program for the use of those salesmen who said they had to have it to produce sales.

Mr. Welch: Your Honor, may we have a short recess?

Trial Examiner Norwood: We will take a short recess.

(Short recess.)

By Mr. Hinds:

Q. Did you emphasize either that plan or the outright sale plan?

2521 A. We strongly emphasized and preferred the outright sale as against consignment distribution.

Q. What were the advantages that you offered in outright sales?

A. We offered a price advantage to the dealer or distributor as a means of again attempting to offset the competitive pressure of the consignment method of distribution.

I might add that during the period that we bucked the consignment plan, which was four or five years—

Q. (Interposing.) You mean "bucked"? You mean resisted it and refused to introduce it?

A. Refused to do it. We made as careful a study as we could from the distributors and dealers as to what the consignment plan was worth in terms of dollars and cents per hundred pounds or per pound of white lead-in-oil.

Q. To the consignee?

A. To the distributor. The purpose of that was to attempt to find a figure that would be a sales off-set to consignment distribution and that would induce the dealer to make an outright purchase rather than to deal through consignment.

Q. What was your objection to the consignment plan? Why did you resist it so long?

A. Our company had experienced a great deal of difficulty and other troubles with consignment methods 2522 of selling paint products, and white lead-in-oil was a paint item. In the case of our company many, many of the white lead-in-oil sales were made in conjunction with other paint items, invoiced on the same invoice—or it would have been convenient to invoice them on the same invoice—and obviously that was out of the picture if one was to be sold outright and the other delivery on consignment.

There were other fundamental difficulties with consignment in paint items that had to do with the spoilage of goods in storage and with the marring up and rendering unsalable the package, and with changes in the quality and colors and shades of items, so that the Glidden Company as a paint manufacturer was unalterably opposed to consigning anything of that sort.

Q. What was your experience with the consignment plan after you made it available?

A. We had the experience that so often happens when pressure is put on a sales organization to produce orders, and they give a reason for failure, and you meet the reason, and you sell— We found, regardless, that the consignment method did not produce the volume of sales that had been represented it would.

Q. How long did you continue with it?

A. My recollection is that we continued that until 1941 or 1942 and then abandoned it.

2523 Q. You offered a printed form, did you, as contracts?

A. Oh, yes. Our Legal Department prepared a consignment agreement, which has already been introduced in this case.

Q. I show you Exhibit No. 650-A, introduced by the Commission, and can you state whether or not that is the form that you used when you did make such consignment transactions?

A. Yes, this is an actual Glidden consignment contract and has been signed by the customer.

Q. The terms were those therein stated, were they, when you used it?

A. Yes.

Trial Examiner Norwood: Is that in evidence?

Mr. Hinds: Yes, sir.

Trial Examiner Norwood: What exhibit is it?

Mr. Hinds: There are several of them, but this one is No. 650-A. Your Honor will recall several actual contracts were introduced, all on this same printed form.

Trial Examiner Norwood: Commission's?

Mr. Hinds: Yes, sir.

By Mr. Hinds:

Q. Did you follow the printed form of any of your competitors or did you get up your own form?

A. Our Legal Department prepared a consignment agreement that was our own.

2524 Q. When did you abandon this plan, did you say?

A. I said my recollection was 1941 or 1942.

Q. What were the circumstances that led to your abandonment of that plan?

A. Not only did the plan fail to produce the volume of sales that was expected of it, but it also produced some of the difficulties that we knew were inherent in the consignment method of distribution.

For example, it entailed reports of inventories on hand, and it entailed constant correspondence with the people who had consigned stocks and verifying inventories. It entailed maintaining an investment on the part of the Glidden Company in this consigned stock.

It generally fell of its own weight. There was continued opposition throughout the company to consignment, and the pressure of that group of sales people who wanted it wasn't enough to continue it when they didn't produce with it.

Q. During the period Euston and Glidden were producing white lead-in-oil, what other companies were selling that product?

A. The National Lead Company, Eagle-Picher Lead Company, McGregor Lead Company, John Wetherell and Brother, Sherwin-Williams Company, and the Anaconda
Company. Then, if you meant to include the entire
2525 period of Glidden's activities, there were many other
paint manufacturers who purchased dry white lead and ground lead-in-oil themselves and put it on the market under their own brand.

From Glidden's standpoint what one or more of those were the effective factors in the competition?

A. We regarded the National Lead Company's Dutch Boy White Lead as the criterion of competition. Secondly, the Eagle-Picher Lead Company product, although that was, according to our observations, not a close second.

Q. What were the total results of your ~~efforts~~ to promote sales of Euston White Lead-in-Oil over these years?

A. We finally succeeded at the top of securing the maximum of about 8.2 per cent of the white lead-in-oil business during any one year.

Mr. Hinds: May this be marked for identification as Respondents' Exhibit No. 144.

(The document referred to was marked as Respondents' Exhibit 144 for identification.)

By Mr. Hinds:

Q. I show you Exhibit 144 for identification and ask you if you prepared that or caused it to be prepared?

A. Yes, sir. I had one of my assistants prepare this chart.

Q. What does it purport to show?

A. It shows in the form of a graph the percentage
2526 of the sales of white lead-in-oil made by Glidden in
relation to the entire industry's sales of white lead-in-oil made during the same year plotted by years and

taken from the Glidden Company sales records and the statistics of the Lead Industry Association for the entire industry.

Mr. Hinds: Your Honor, I offer that in evidence. I would like to substitute the photostatic copy for the original.

Mr. Wright: I would like a pre-cross on the identification.

Trial Examiner Norwood: Very well.

Mr. Wright: You say the figures that are represented on the line were arrived at by the figures from the Glidden Sales Department in white lead-in-oil?

The Witness: They were derived from the Glidden Company's records of its sales of white lead-in-oil during those years.

Mr. Wright: Those are total sales of white lead-in-oil?

The Witness: Total sales.

Mr. Wright: And the figures against which they were compared were what?

The Witness: Total sales of all white lead-in-oil producers for the same year plotted as a percent, one to the other.

2527 Mr. Wright: Those were as reported by the Lead Industries Association?

The Witness: Totals for all producers as reported by the Lead Industries Association for those years.

Mr. Wright: I have no objection.

Trial Examiner Norwood: It is received in evidence, and the photostat will be substituted for the original.

(The document referred to, heretofore marked for identification RESPONDENTS' EXHIBIT 144, was received in evidence.)

By Mr. Hinds:

Q. Did you prepare a similar chart with respect to dry white lead or basic carbonate?

A. Yes, sir.

Mr. Hinds: May this be marked for identification?

(The chart referred to was marked as Respondents' Exhibit 145, for identification.)

By Mr. Hinds:

Q. I show you Exhibit No. 145 and ask you if that is the chart that you prepared with respect to dry white lead?

A. This is the chart that my assistant prepared at my direction.

Q. What does that purport to show?

A. This shows the sales by years of dry white lead basic carbonate by Glidden expressed as a per cent 2528 of the total sales of all dry white lead producers by years.

Mr. Hinds: I offer that in evidence, and I would like to substitute the photostat for the original.

Mr. Wright: Mr. Sprague, how are these percentages expressed—in tons or dollar volume.

The Witness: They are expressed in per cent. I will explain it to you, Mr. Wright.

For example, the year 1935, Glidden sold just under 18 per cent of all the white lead that was sold in that year, according to the Lead Industries' statistics.

Mr. Wright: Is that 18 per cent by value or is it expressed in volume?

The Witness: By weight.

Mr. Wright: That has nothing to do with sales price?

The Witness: No.

Mr. Wright: Were the figures on dry basic carbonate comparable figures reported by the Lead Industries Association?

The Witness: I don't understand.

Mr. Wright: Were the figures with which you compared the Glidden sales in this chart comparable figures to those which you mentioned in connection with Respondents' Exhibit 144?

The Witness: They were the figures as reported 2529 by Lead Industries Association.

Mr. Wright: Total figures?

The Witness: Yes.

Mr. Wright: And comparable to the Glidden Company organization?

The Witness: Yes.

Mr. Wright: No objetion.

Trial Examiner Norwood: The exhibit is received in evidence and the photostat will be substituted for the original.

(The chart referred to, heretofore marked for identification RESPONDENTS' EXHIBIT 145, was received in evidence.)

By Mr. Hinds:

Q. Did you also cause to be prepared a chart relating by percentage to the sales of Glidden lead oxides in relation to those of the total industry?

A. Yes, sir.

Mr. Hinds: May this be marked for identification?

(The chart referred to was marked as Respondents' Exhibit 146, for identification.)

By Mr. Hinds:

Q. I show you Exhibit No. 146, for identification. Is that the chart you caused to be prepared?

A. Yes.

2530 Q. What does that purport to show?

A. This is a chart which portrays by years the percentage by years of the amount by weight of lead oxides sold by Glidden as compared to the total amount by weight of lead oxides sold by all other producers combined, as reported by the Lead Industries Association.

Mr. Hinds: I will offer that in evidence.

Mr. Wright: What products specifically do you mean to include in the term "lead oxides" in this exhibit?

The Witness: All lead oxides.

Mr. Wright: Does that include various grades of red lead and litharge?

The Witness: Red lead and litharge combined.

Mr. Wright: It doesn't include orange mineral or any of the other—

The Witness: The production of orange mineral was so small I do not recall with certainty whether that was included; whether it was or not would not amount to a fraction of a per cent. However, I would have to check as to whether orange mineral is in there.

Mr. Wright: As to these figures, I call your attention to the fact that they purport to relate to sales. Do they include in there these products that might be used by the Glidden Company in the manufacture of other articles?

2531 The Witness: I believe they do.

Mr. Wright: Do you have anything more than a belief as to that?

The Witness: No, I can't go further than that.

Mr. Wright: Were the figures on this exhibit, No. 146, comparable figures published by the Lead Industries Association, comparable to those that you testified about on Exhibit No. 144 and Exhibit No. 145?

The Witness: Yes, they are.

Mr. Wright: No objection.

Trial Examiner Norwood: It is received.

Mr. Hinds: I would like to substitute the photostat, if I may.

Trial Examiner Norwood: The photostat may be received as the exhibit.

(The chart referred to, heretofore marked for identification RESPONDENTS' EXHIBIT 146, was received in evidence.)

By Mr. Hinds:

Q. In your judgment was there anything that your company did or could have done or refrained from doing which would have had any effect on competitive prices or pricing methods?

Mr. Wright: I object, your Honor, to that question. It obviously calls for broad general conclusions on the part of the witness and no evidentiary facts.

2532 Mr. Hinds: Your Honor, we are asking for his judgment. His company is charged with conspiracy and improper motives, and so on; and we have shown this gentleman to be a man of broad judgment and experience in the field. It would be in the nature of opinion. I think we have qualified him for opinion evidence within that field.

Trial Examiner Norwood: Read the question.

(The question was read by the reporter.)

Mr. Hinds: In the industry, of course.

Trial Examiner Norwood: I think he may answer that. You may cross-examine on it. Objection overruled.

The Witness: Nothing whatever.

By Mr. Hinds:

Q. What was Glidden's policy with respect to the gross margin on these lead pigments?

A. We evolved the policy of attempting to price our pigments at the ceiling competitive market so as to enjoy the maximum attainable gross margin from our sales volume. That was done because we had learned again and again that we were limited within a very narrow range of margin between our cost of lead and our selling price, and we had to live within that; the more we sliced at it from either direction, the more severe was our problem and the more difficult it was for us to survive.

2533 Q. Now, take up dry white lead. What is the technical name for that?

A. White lead basic carbonate.

Q. What is the formula?

A. No, I would have to refer to the textbook on that complete formula.

Q. But it is known as basic carbonate?

A. Basic lead carbonate.

Q. How did your company's relationship to that industry compare with its relationship to the white lead-in-oil industry, which you have previously described?

A. We attained in the sale of dry white lead a somewhat larger share of the total industry through these years than we had in the case of white lead-in-oil or in the case of oxides.

The reason for that was that the differences of quality in white lead when sold dry to the industrial concerns who are the buyers was more readily discernible and more readily salable, and we succeeded in making a creditable showing because we did improve our quality materially through the years.

In fact, we were the first to initiate the manufacture and sale of some types of white lead in this country.

Q. What was Glidden's role in the dry white lead industry, substantially?

2534 A. Just as in the case of the other lead pigments, we were essentially a follower in the industry, a minor and a small part of the industry.

Q. How did your prices for that product compare with those of National Lead?

A. That requires a bit of explanation. At the time—

Trial Examiner Norwood: (Interposing.) Just answer the question and let the explanation come out later.

The Witness: What was the question?

Trial Examiner Norwood: Read it.

(The question was read by the reporter.)

The Witness: Our prices compared with National Lead's prices in that, as our quality improved our price relationship approach that of National Lead. In the early years when our quality was low, our prices were correspondingly low, and as we went on and, as I have explained before, we eventually ceased to make any price concession at all on dry white lead.

By Mr. Hinds:

Q. Just prior to 1936 and in 1936 what was your policy in selling dry white lead?

A. We sold our dry white lead at the same competitive levels as that of the National Lead Company to all purchasers other than paint manufacturers.

Q. What about those?

2535 A. They received a concession or a set-in price of 1/8th cent per pound.

Q. Why did you give them that concession?

A. We found there was antagonism to purchasing white lead from the Glidden Company on the part of its competitors. They felt that the more they sustained the Glidden Company's activities, the more difficult would the Glidden Company competition be in the paint industry; and the tendency was to prefer to purchase dry white lead from other sellers.

Q. You told us about changes in prices of white lead-in-oil. How did they compare with changes in the prices of dry white lead?

A. We learned from the start that changes in the price of white lead-in-oil, market price, very closely corresponded to the average movements in the cost of pig lead to the same extent as they responded to average movements in the price of white lead.

Q. What, if any, role did you have in the Lead Industries Association?

A. I was a director of the Lead Industries Association for many years.

Q. What knowledge did you have as to the views and attitudes of its officers and directors?

A. I had a good knowledge of their views.

2536 Q. What were the activities of the Lead Industries Association in respect to prices, pricing, conditions of sale, or methods of sale of lead pigments?

A. No activities in regard to those matters.

Q. What was the attitude of the officers and directors toward any such activities?

A. They were opposed to it, and the Lead Industries Association officers and directors for the most part were not interested in the pigment business particularly.

Q. What were the predominant interests of the Lead Industries Association?

A. The mining and smelting interests.

Q. What was their attitude toward methods of selling and pricing products made from lead?

A. They were not concerned with the minutiae of those matters that pertained to all the products made from lead.

Q. What were the circumstances which led Glidden to lend its support to that Association?

A. We felt that Glidden owed support to the Association because of some very excellent work that it did. We were a very small part of the lead industry, and that support could be accorded at a fee that was also in proportion to the amount of Glidden's business, and the Association conducted some work in which we were interested and
2537 which we thought was of great value to the industry and to us.

Q. What, if anything, did the lead industries do or contribute with respect to lead pigments?

A. The most outstanding work conducted by the Association was research in connection with lead toxicity as an industrial hazard, particularly with respect to the lead pigments. That has a very significant value to the lead pigment business.

The Association supported researches at Harvard over a long period of years and took an active part in the Public Health Association work and in efforts to have a sound scientific knowledge of the true facts about the toxicity of lead about which there was a great deal of misinformation current in the public press and in the public mind.

I think the Association's work in that is the outstanding contribution to industrial hygiene and toxicity work that I know of.

In addition to that, the Association represented the industry in matters relating to tariff hearings and various legislative matters that came up in Congress, and they provided a means for promotional activities in respect to the sale of white lead and of red lead.

The Glidden Company did not participate in the white lead-in-oil promotion program of the Association;
2538 but, nevertheless, it was a very comprehensive scheme designed to promote the use of white lead-in-oil.

Q. What, if any, part did the Association play in connection with the activity of the manufacturers of dry white lead in connection with the Federal Specifications Board?

A. None.

Q. What, if any, information or service did Glidden receive from the Association with respect to the prices or pricing methods?

A. Nothing.

Q. Did you ever see any evidence of any activities of that sort by or between the Association or any of its members?

A. None whatever.

Q. Where was Glidden's manufacture of lead oxides handled?

A. At the Metals Refining Company, Hammond, Indiana.

Q. Where was the sale of lead oxides handled?

A. The sales were handled in their details at the office at Hammond, Indiana.

Q. What was your connection with Metals Refining Company?

A. I became the Vice President and General Manager of the Metals Refining Company about 1930 and was in charge of the operation of that business for a period of years thereafter until 1935.

After that I was in general charge of the sales of
2539 chemicals, pigments, and metal products of the company, which included an administrative responsibility for the sale of lead oxides.

Q. How much of a factor of the total operations of Metals Refining Company was its production of lead oxides?

A. The lead oxide business was a minor factor.

Q. What else did it make?

A. Metals Refining Company at that time were primarily engaged in the smelting and refining of non-ferrous metals, particularly lead and lead-bearing metals, and the so-called white metals such as lead, antimony, tin alloys.

Metals Refining Company was also a manufacturer of type metal and babbitt metal, and in that period developed the production and manufacture of various metal powders.

Q. What metals?

A. Powdered metals?

Q. Yes, sir.

A. Lead, copper, iron, and tin principally. Also developed a large production of the various oxides of copper.

Q. Had its production of lead oxides been a recent thing or a long-established thing at the time you took over?

A. No. The Metals Refining business when sold to Glidden in 1929 had but recently completed the erection of a plant for the manufacture of red lead and litharge and had not been far established in the business.

2540 Q. When you took over, what price policy did you
find was in effect with that concern with respect to
the lead oxides?

A. I found that the price policy of the former management was very similar indeed to that of the Euston Lead Company. The lead oxides produced were of irregular quality. They were sold at sub-market prices. The management explained to me that they had the theory that they could maintain a profitable operation in that area by laying less stress upon uniformity in quality than they did on cost, and by cutting—

Q. (Interposing.) You mean price?

A. Cost.

Q. Pardon me.

A. And by cutting the price under established market levels they could get sufficient volume within areas reasonably contiguous to Hammond to make their business go.

Q. Well, did you inaugurate any changes in that policy when you took over Metals Refining?

A. Yes, I did, because I had been through the mill and learned in the hard way some of the facts of life about this lead pigment business.

Q. What changes did you inaugurate?

A. In the first place, I was convinced after study-
2541 ing the margins that were possible in the sale of lead
oxides in respect to competitive price levels that we
would have no more chance of success in developing profit-
able sales there at cut prices than we found we had been
successful in developing them in the Euston Lead
Company.

2542 I also realized that I couldn't expect to bring my
prices up to competitive ceilings until I had gotten
my product ~~in~~ quality up to or approaching competitive
ceilings.

So we undertook a program of improving the quality of our lead oxides, and also a program whereby we could produce a number of additional grades of lead oxides that were originally produced, thus to enable us to command activities in a wider market and a better chance to bring our volume to the point where we could earn a profit.

Q. Turning back to white lead for a moment—from your experience in the white lead business, what was the relationship, if any, between costs and prices and profits in promoting that commodity?

A. The relationship between costs and prices and profits was a very simple one because the cost phase was so completely dominated by the cost of lead. So the position that the producer could maintain in his business, the relation between his lead cost and his product sales largely determined what margin he could earn and how he could come out.

Q. Coming back again to the lead oxides—was that substantially the same relationship or was there something different?

A. The same relationship, only much more so, because the margins were still narrower in connection with the lead oxides and the methods of sale, which provided that the
price was determined in terms of a fixed differential
2543 over your cost of lead gave you very much less leeway
than was the case if prices didn't move so quickly with respect to the cost of lead. You had to be right on the button.

Q. When you took over Metals Refining, what was your program respecting lead oxides?

A. Well, our first program was to improve the quality of our product, and we made plant investments to that end.

The second part of the program was to see if we could better our cost of lead position, not by trying to beat the lead market, but by trying to utilize scrap lead.

One of the principal activities of that plant, which was at that time one of the largest secondary lead smelters in that area, was to recover lead from scrap and residue sources, which contained lead, such as drosses, old storage batteries, and any type of junk that contained lead, antimony, or tin. At that time there was a large tonnage of battery scrap that flowed into the Chicago market from very far-distant points, points as far west as Spokane, as far south as Nashville, or as far east as Pittsburgh.

Trial Examiner Norwood: What time was that?

The Witness: That was the time I went to Hammond as the general manager in 1930. There were at that time in Chicago only a few smelters equipped to handle that volume of lead scrap. Our plant was one. We normally handled
upwards of 2,000 tons per month.

2544 Up to that time the basis upon which the lead-bearing residues in scrap could be purchased was such as to enable it to be refined and lead recovered at a cost somewhat less than the prevailing St. Louis lead market deliverable at Chicago. Obviously, if we could succeed in making from such scrap sources a variety of recovered lead that was pure enough to use in producing red lead and litharge, we would then have an advantage over those of our competitors who depend upon the purchase of pig lead upon the open market to make into lead oxides. We tried that plan, and we invested in a series of equipment and developed a process designed to continuously produce corroding grade of lead from scrap.

We put that plant into operation and thought we had gotten somewhere, but our advantage was short lived, less than a year. By that time the relationship between the cost of lead in scrap and the cost of scrap itself and the pig lead market was such that it was no longer profitable to produce a high quality of lead from such scrap was compared to buying it again in the open market, and we were back where we started from, having made our investment for naught.

I knew then that we were not going to be able to get any advantage over the other fellow as far as our lead cost was concerned, and I had learned before that we couldn't get any sales at higher prices than competitive levels unless we could succeed in making again some type of lead
2545 oxide that had properties or characteristics that would enable it to sell at a premium in the lead oxide market.

So we repeated our experience at Euston. We strove to accomplish that, and the result of our striving was that we did make some special types of lead oxides with some unusually careful controls and classifications, so they would command a preference in the market, but never would they command a premium in the market because the standard quality of lead oxides produced was in general high. Corroding lead was available on the market in large tonnage, and that is one of the most pure metals that exists in large tonnage anywhere. It is a very pure form of lead, and with it a very high grade pure form of lead oxide can be produced.

So our realization of our effort to get a higher margin through premium prices failed for the same reason that it did in white lead, but we ultimately did command some market preference so that we could sell at competitive ceilings. That process with us was gradual. We approached it from all angles at once, and it took a period of years to evolve some success from it.

Q. Did you distinguish between your read lead business and your litharge business with respect to the gross margin there?

A. Yes. The market prices for red lead, according to our costs, provided a somewhat wider margin for use than
litharge, and was more profitable for us to sell a ton
2546 of red lead than to sell a ton of litharge.

Q Did you have any separate policy with respect to the promotion of red lead?

A. Yes, sir.

Q. What was that?

A. As soon as I realized we had a greater profit in red lead, we naturally stressed the sale of red lead and we went further and installed some equipment by which we could make red lead at topnotch quality.

Q. After you became more familiar with the lead oxide business generally, what did you find was required for successful operation in that field?

A. Well, it was very simple and almost determinable by mathematics. Our lead cost was so much, we had such a maximum market, our production was such a tonnage, and now we had to price our product so as to enjoy the maximum gross return that we could get for the sales volume that we could figure within the framework of the volume capacity of the plant. Our problem was identical with what it was at Euston lead plant on white lead in its economic fundamentals.

Q. What was the result of maintaining the balance between lead purchases and lead oxide sales?

A. The result of maintaining a balance in the lead oxide business is that you enjoy neither losses nor gains from
market movements.
2547 Q. You mean speculative inventory gains or losses?
A. Losses or gains from market movements on the sales that you make. Of course, you can't avoid a loss or a gain on a working inventory with market changes. That is unavoidable.

Q. Was there anything else you inaugurated there besides what you told us after you became familiar with the lead oxide business?

A. Yes, we undertook as a part of our efforts to qualify our product for acceptance in uses where special care would provide a preference for the product among the trade, we cultivated those types of outlets and tried to get ourselves independent of doing business with the storage battery industry, which was the largest consumer of red lead and litharge, and with which industry we could earn the least profit.

Q. How did you cultivate those outlets?

A. In the manner that I have mentioned. We studied the requirements of the customer. We endeavored to arrive jointly with him at a specification which we could maintain by special care in our processing. The result was that he could use our litharge—usually that pertained to litharge more than to red lead—he could use our litharge with greater uniformity of results to him.

For instance, it was used in such things as processing litharge into chrome yellows and chrome greens, or such things as sweetening gasoline in the petroleum industry where litharge provided distinct factors to those consumers. 2548

Q. Did you have any local competition with lead oxides in Hammond?

A. At the time we acquired that business, there was no production of red lead and litharge, to my knowledg, in that area. However, a year or two after we got started, the former owners of the Metals Refining Company—

Q. (Interposing.) About 1932?

A. I think about 1932. The former owners decided to reenter the business of making and selling red lead and litharge. They put a plant up almost across the street from ours—not quite that close.

Q. What was the result of that?

A. That created a very difficult competitive situation for me because my new competitors knew all my customers and their preferences and their prices, and I had a great brake placed upon my effort to try to improve my position.

Q. You spell that b-r-a-k-e?

A. B-r-a-k-e.

Q. Now, when the Robinson-Patman Act was enacted in 1936, how did that affect your lead oxide policy?

A. That affected our pricing policy in the lead oxide business both directly and indirectly. The first effect that

I recall after we all had come to some understanding of just what the Robinson-Patman Act meant—in that 2549 connection, I recall going to Chicago and listening to Mr. Patman at a symposium explaining what the Act meant, and I have been astonished about what has come out of it since as compared to what he said then his law meant—that one thing we did was, as we had done all through our company, was to instruct our sales managers to comply with the Robinson-Patman Act.

In order to comply with it, as we saw it, we had to be a great deal more careful to determine what our competition was in order to be sure that we were as accurate as we could get, and weren't shooting in the dark. It placed a greater responsibility upon the management of the company in regard to meeting price competition than had existed heretofore.

That was constantly a problem that confronted us because we had a very difficult competitive situation. We had our former—the former proprietor of our company—

Q. (Interposing.) What was his name?

A. Hammond Lead Products Company—doing business next to us with a price policy similar to that which those men had employed when they sold their business to Glidden. Their concept was that secondary quality—first question, low cost of manufacture, low price to the consumer, and let it go.

Well, we would never know exactly what we were going to meet by way of competition in the lead oxide market in that area from day to day until we encountered it. It was a very severe problem to place enough restraint upon 2550 our sales people to really ascertain what their competition was, because, obviously, that condition creates a buyers' field.

Q. You have used the expression "what the competition was." You mean the exact competitive price you had to meet at a time and place?

A. I am speaking of competitive prices, yes.

Q. As the basis of your experience, what in your opinion is the principal factor in the sale of lead oxides?

A. It is perfectly obvious that the dominating factor in the sale of lead oxides is the cost of lead.

Q. What is the principal outlet for lead oxides?

A. The largest single group of consumers is the storage battery industry.

Q. How is that made up? How is it constituted?

A. During the period in which I was in contact with it, which we have been discussing here, the storage battery industry consisted of two groups of units. One group was large in number, poor in financial stature, weak in credit, and short on technical knowledge. The other, and smaller group, were large manufacturers, large consumers of oxides, excellent financial standing, good credit risks, and very ably staffed technically.

Q. Did you have any experience in selling to the large battery manufacturers?

A. Yes, but limited experience.

Q. Just tell us what that experience was, even 2551 though limited. Tell us why it was limited.

A. The first thing I found was the large storage battery manufacturer was getting pretty low prices from my competitors on his requirements of red lead and litharge, and then the next thing I found out was that if anyone tried to improve that situation he was told that the battery man would make his own oxides. I found both of those things were true.

Q. Could he make his own oxides practically?

A. Yes. As soon as the consumption of lead oxides reaches a practical manufacturing point, anyone who has that consumption can economically make them, themselves, and that is particularly true with litharge because the investment required in equipment to enter the litharge was relatively small.

Q. Now, what was your experience in selling to the smaller battery manufacturers, particularly insofar as it contrasted with the largest ones?

A. We got it in just the reverse fashion. The smaller battery manufacturer was salable at higher prices, but the cost of selling him was sufficiently high to end up in an offset.

Q. What is meant by black oxide?

A. Black oxide is a form of lead sub-oxide that was discovered to have excellent applicability in the manufacture of negative plates for a storage battery.

Q. Is that an advantage to any type of purchasers of lead oxides?

2552 A. Oh, yes, sir. It is an advantage to any battery manufacturer to develop the technique of making a negative plate from black oxide, and it is of great advantage to the large battery manufacturer who uses enough tonnage to justify his own manufacture of black oxide.

Q. Now, let us take up your policy of pricing lead oxides. What were the factors underlying your policy there?

A. Cost and competition.

Q. Were you successful in your program of pricing lead oxides, which you had?

A. Only moderately so.

Q. Why do you qualify it?

A. I qualify that because the margins were so narrow and the time factor that was involved in establishing the relationship with those various groups of consumers with whom we should deal satisfactorily at the ceiling prices was long, and while we did pull the read lead and litharge business out of the read, we never had anything to write home about.

Q. By "time factor," you mean it took long to get their confidence?

A. A long period of time, yes.

Q. What has your policy been in pricing lead oxides? You told us about the factors.

A. The policy has been to price lead oxides as close to
the ceiling maintained by competition, principally
2553 National Lead Company and the Eagle-Picher Lead
Company, as we possibly could, and to name our
prices for the most part at those ceiling levels.

Q. Now, the Glidden Company, of course, is engaged in producing and selling other products besides these various lead pigments, is it not?

A. The Glidden Company has a very widely diversified business, yes.

Q. Will you just roughly tell us what the other products are and how generally they relate in importance to these lead pigment products?

A. Well, the lead pigment business of the Glidden Company is relatively small, both in weight or tonnage and in dollars, compared to many of the other company's products. However, the purpose of the Glidden Company in acquiring these lead-pigment producing units arose first from its policy of developing a diversified chemical business, and, secondly, from its policy of desiring to protect its position in respect to the principal raw materials used in its paint manufacture, since paint was one of the large phases of Glidden's business.

Q. By "raw materials," you mean in this instance manufactured raw materials, such as oxides, dry white lead?

A. Whatever the raw materials are that go into the production of paint, of which white lead was an important factor, read lead a less important factor, and, of
2554 course, lead-in-oil, which we have discussed.

I think the important point in regard to Glidden's position, if I understand your question, is that whereas Glidden in both of these operations; namely, red lead and litharge business at one location and white lead business at another location, while those were small, a very small part of the total industry of which they were a part, yet the proportion of the production of those units that was used by the Glidden Company in its other operations was always small.

The result was that while Euston was a small producer of white lead and Metals Refining a small producer of lead oxides, yet we had to maintain a satisfactory consumer acceptance, and we had to sell the preponderating proportion of our production in the open competitive market, and we were not sustained in any way in those operations by the requirements taken by Glidden, itself.

Q. In other words, you had to sell most of it rather than use it yourself?

A. By far the preponderating proportion we had to sell in the open market in competition with the trade.

Trial Examiner Norwood: Off the record.

(Discussion off the record.)

Trial Examiner Norwood: We will recess at this time until 9 o'clock, Eastern Standard Time, tomorrow morning.

(Thereupon, at 3:10 o'clock p. m., Eastern Standard Time a recess was taken until Wednesday, May 14, 1947, at 9 o'clock a. m., Eastern Standard Time.)

2555 Room 332, Federal Trade
Commission Building,
Washington, D. C.,
Wednesday, May 14, 1947.

Met, pursuant to adjournment, at 10:00 a. m., E. D. S. T.

Before:

John W. Norwood, Trial Examiner.

Appearances:

Joseph S. Wright, Esq., appearing for the Federal Trade Commission.

J. T. Welch, Esq. (Davies, Richberg, Beebe, Busick & Richardson, 815—15th St., N. W., Washington, D. C.), appearing for Sherwin-Williams Company.

Edmund P. Wood, Esq. (2801 Carew Tower, Cincinnati, Ohio), appearing for Eagle-Picher Lead Company and Eagle-Picher Sales Company.

James D. Ewing, Esq., and E. Z. DuBose, Esq. (Alexander & Green, 120 Broadway, New York, N. Y.), appearing for the National Lead Company.

John A. Duncan, Esq. (1649 Union Commercial Building, Cleveland 14, Ohio), and Roger Hinds, Esq. (165 Broadway, New York, N. Y.), appearing for The Glidden Company.

2556 PROCEEDINGS.

Trial Examiner Norwood: Pursuant to adjournment on yesterday, the hearing in Docket 5253 is now reconvened in Room 332, Federal Trade Commission Building, Washington, D. C., at 10 o'clock a. m., Eastern Daylight Saving Time, on the 14th day of May, 1947.

Mr. Sprague will please resume the stand for further direct examination.

PAUL E. SPRAGUE resumed the stand and testified further as follows:

Direct Examination (Continued) by Mr. Hinds.

Q. Mr. Sprague, except during the period when the Code was being developed, did you or your company ever give or receive any price information or any reports or any data whatsoever from the Lead Industries Association concerning prices of lead pigments or any of those products?

A. No, sir.

Q. Did you ever give or receive from the Lead Industries Association any information about differential zones relating to lead pigments whether used by Glidden or by any other producers?

A. No, none, other than during the period of the NRA.

Q. Did you ever give or receive from the Lead
2557 Industries Association any information about freight
rates concerning lead pigments?

A. No, sir, at no time.

Q. Did you ever give to or receive from the Lead Industries Association, except during the period when the Code was being developed, any information or data regarding any other so-called cost factors or price factors with regard to lead pigments?

A. No.

Q. When Glidden has reduced its price of lead pigments, what have been the circumstances which have led to such a reduction?

A. The dominating circumstance was that we found we could make no sales unless we promptly reduced our prices to respond to competitive reductions. Therefore, the only consequence of failing to reduce was to go out of the market.

Q. You have already stated what you had observed as to circumstances which led to a reduction, but as far as you were concerned you reduced when your competitors reduced, is that it?

A. We reduced when competitors reduced, in order to stay in business.

Q. Well, now, what has Glidden's practice been with respect to inventories of your raw materials, goods in process and finished goods in the lead pigment field?

A. We learned from our experience that the only
2558 way to keep our market losses, our inventory losses,
low was to maintain the minimum practical working
inventory, both of raw material and of finished product.
In that manner we could avoid the market gains and losses,
which we sought to do.

Q. When you have reduced your price on a lead pigment, what effect has that had on the percentage cost of your raw materials as a percentage of your lead pigment?

A. Well, of course, as soon as prices are reduced, the percentage cost of the pigment sold thereafter in relation to the selling price becomes higher.

Q. Until you work it off?

A. Until the inventory has been brought to the prevailing market on which the sales are made.

Q. Well, now, when Glidden has increased its price of any lead pigment, what have been the circumstances that have led it to such increase?

A. Well, I endeavored to explain in my testimony here yesterday the reasons for Glidden's immediate increasing of prices to follow the market, which rested upon the necessity of doing so in order thereby to earn the maximum average gross on the sales. In other words, if we failed to increase the price as the market advanced, we would in effect cut off a portion of the attainable average gross margin.

Q. In so doing, was the fact of the inevitable losses
when the market declined, that you have already
2559 spoken about, a factor?

A. Well, of course I spoke of the over-all average position. The immediate consequence of an advance would be to recoup, theoretically, from the advance the same loss that was sustained on a decline, provided the inventories were the same at both times.

Q. Has Glidden, to your knowledge, or any of its divisions, at any time been under any constraint or obligation, express or implied, which has prevented it from charging any price or adopting any pricing practices or methods that it has regarded as best suited to its own commercial interests?

A. Not in the least.

Q. What fundamental motive has actuated Glidden in charging its prices and adopting its pricing and selling methods?

A. Well, the fundamental motive in doing that was to survive and earn a profit within the framework of the maximum price obtainable and the cost of lead required to produce the merchandise. If I understand your question correctly, that is a subject that I covered rather thoroughly yesterday in explaining why it was necessary to raise prices and why it was necessary to lower prices.

Q. Now so far as you personally are concerned, or so far as any other Glidden man is concerned that you know

of, has there ever been any sense of moral obligation or
esprit de corps or feeling of fellowship or solidarity
2560 with any of your competitors which has determined to
any degree Glidden's prices or pricing methods?

A. No.

Q. From your observation, what is the competitive condition which exists in the lead pigment industry and has existed prior to the filing of this complaint?

A. Do you mean as to the intensity of competition?

Q. Yes, the conditions with respect to competition or the lack of it.

Mr. Wright: Objection. It calls for a conclusion on the part of the witness.

Trial Examiner Norwood: Read the question.

(The reporter read the record as follows:

"Q. From your observation, what is the competitive condition which exists in the lead pigment industry and has existed prior to the filing of this complaint?

"A. Do you mean as to the intensity of competition?

"Q. Yes, the conditions with respect to competition or the lack of it.")

Trial Examiner Norwood: The objection is overruled.

A. My observation is very definite that through the
entire period of my contact, the competition in the industry
has been keen as among the units in the industry, and
2561 certainly as between Glidden and the industry.

By Mr. Hinds:

Q. Has there ever, during your knowledge of the situation, been any time when you regarded it as being in Glidden's commercial interests to initiate a price change of lead pigments, either up or down?

A. Very rarely. I should say no, it has never been to Glidden's commercial interest to initiate a change in prices.

Q. Why is that?

A. The reason is as I have described. If Glidden attempted to raise prices, it priced itself out of sales. If Glidden did not reduce prices, the result was the same.

Q. Have you, or to your knowledge has any other representative of The Glidden Company, ever received any request, any suggestion or any intimation, from any of your competitors, as to what role Glidden should follow with respect to Glidden's pricing and pricing methods?

A. No, I recall of none.

Q. During the period of your knowledge with relation to the lead pigment business of Glidden, has there been, or in your opinion could there ever have been at any time, any important adoption or change of policy or negotiation or agreement made with anybody outside of your company, with respect to lead pigments or the pricing of lead pigments, which you would not have known about promptly?

2562 A. No, I don't think that could have been done.

Q. Well, then, did your company at any time, to your knowledge, enter into any agreement or understanding or arrangement with any other producer or seller of any lead pigments, with respect to the fixing of prices or with respect to any pricing method?

A. No, sir.

Q. Has any such arrangement or understanding or agreement come to your knowledge?

A. On the part of Glidden?

Q. Yes, sir, that is what I meant.

A. None.

Q. Have you ever heard of any?

A. No.

Q. Did anyone in your company have any authority to enter into any such agreement, understanding or arrangement?

A. Well, there were people in our company who had authority to make agreements, but no such agreements were made that I know of.

Q. Did they have authority to make such an agreement, if you know?

A. Well, the corporate officers no doubt have authority to make any type of agreement that is legal on behalf of the company. The power was certainly there to do that if someone desired to do it and thought it was legal to do it.

2563 Q. Well, did your company, either through you
2564 or anybody else, to your knowledge, at any time enter into any such agreement, understanding or arrangement?

A. No.

Q. You understand that in these previous questions I have been including oral as well as written understandings, agreements or arrangements, do you?

A. Yes.

Q. Have you found the relationship between pig lead prices and the prices of lead oxides to be more sensitive or to be less sensitive than the relationship between pig lead prices and prices of white lead and white lead-in-oil?

A. Well, very much more sensitive, because the major tonnage of the lead oxides sold are sold in carload lots, and they are priced directly on the pig market each day.

Q. From the standpoint of your economic relationship to the industry, what is the role of a manufacturer of lead oxides, what does he do in the economic field?

A. Well, in effect he is a converter of metallic lead to lead oxide at what is in effect a toll charge.

Q. What attitude did you and your company take during the period of the development of the Code, with respect to the suggestion that the assembling and distributing of price reporting might be engaged in?

A. Well, I think I represented the company's attitude, 2565 it was left to me in that matter, and my own view was, at the start of the Code discussions, that price reporting might be a constructive method of accomplishing the purposes of the NRA, but I changed my views after consideration of the question and what was involved in preparing to do adequate price reporting, to the point where I questioned that it was a good thing to do, and I was opposed to it.

Q. You have spoken of areas with respect to distribution of white lead-in-oil where the differentials were different. What have been the factors in your own delineation of the boundaries of those areas?

A. Well, the principal factor and determining factor in our delineation was the competitive practices of the market leaders in the sale of those products. We also had to take into account the necessity of recognizing localized areas where a question of selling to people who directly competed with each other in those areas was involved.

Q. Taking into account those differentials, have your sales in the remote, the more remote regions from your plant been more or less profitable to Glidden as compared to the sales in regions near your plants? I am talking about the sales of lead pigments.

A. The sales in the more remote delivery destination points have been in general less profitable to us, because we were obliged to make shipments from one producing point in each case.

2566 Q. Why have you continued to offer your goods in those regions, then?

A. Well, the situation that led us to do that and which leads us to continue to do that, rests upon the requirement, fundamentally, that we obtain as much volume in those plants as we can within the scope of their capacity, and all through the years I can never recall a time when we had volume sufficient to fully occupy the capacity of the lead oxide plant, and very rarely a volume sufficient to occupy the capacity of the white lead plant. Now when we couldn't get volume within the nearby areas, we had to get volume further and further away, up to the point where we sustained an actual loss.

Q. Have you ever heard the suggestion from any source that for your uniform delivered prices you might consider substituting uniform f. o. b. mill prices? Have you heard of such a suggestion from any source?

A. Well, I have heard that suggestion in connection with some of the Federal Trade Commission matters that have been discussed with me in connection with this case. I never heard it from anybody in the trade, either buyer or seller.

2567 Q. Exactly. Have you given any consideration—yes or no—to what in your opinion would be the consequences of carrying out any such plan from the standpoint of Glidden—yes or no?

Mr. Wright: Objection, Your Honor. By the witness' own testimony he has never employed such a method for marketing and obviously it calls for suppositions and guesses and conclusions of the most unreliable sort.

Mr. Hinds: I merely asked him if he had considered it. The sixty-four dollar question would presumably come lated. Maybe he will say that he hasn't considered it, and in that case I wouldn't be able to ask him what the result of his consideration had been.

Trial Examiner Norwood: I think we must draw the line somewhere. I want this witness to give us the full details about his business, but this is purely speculative here. I think we have come to the point when we must stop this line of testimony.

Mr. Hinds: I would like to make a proffer—

Trial Examiner Norwood (Interposing.): I will sustain the objection, and counsel may make his proffer.

Mr. Hinds: We proffer this witness as an expert in

marketing and pricing problems, pricing method problems,
in connection with the lead pigments industry, and that
he would testify that in his opinion, for what it may
2568 be worth, in view of those qualifications, an f. o. b.
uniform price system in the lead pigments industry
so far as this single plant producer is concerned would put
them promptly out of business.

Trial Examiner Norwood: Now counsel may show any factual conditions which would bear on that question of whether or not it would be practicable or profitable for him to confine himself to the f. o. b. mill price. But put it in on that basis.

Mr. Wright: I would like to add to my objection, Your Honor, and also state for clarification of counsel that there is no suggestion in this complaint that the effect would be to require this respondent or any other respondent to establish a uniform mill net system of pricing or any other system of pricing. So the whole matter is an irrelevancy.

Trial Examiner Norwood: I thought, in connection with my ruling, that it was of doubtful relevancy, even the fact that I stated that if you had some factual material to put in on that point you might do so, but that is going as far as I think we should go in this investigation.

Mr. DuBose: Well, Your Honor, Mr. Wright has made
the statement that there is no suggestion in this complaint
that any respondent should be required to go on an f. o. b.
mill net. It seems to me that the necessary result of the
allegations of Count II would lead to the conclusion that
any other system under the Commission's theory is
2569 discriminatory unless the delivered price makes, in
the Commission's mind, only due allowance for transportation.

Mr. Wright: Your Honor, as to Count II I want to state right here that the theory of Count II is systematic discrimination, that is the principal theory, systematic discrimination for the purpose of matching and meeting prices as between these respondents.

Mr. Hinds: I must respectfully differ from my opponent as to what the Commission is claiming and what the complaint claims, because we have it on very high authority, including some of the Commissioner's published statements, and Mr. Woodin in many of his statements, interpreting this complaint, that this complaint indeed among other things seeks to proclaim as illegal per se under the Robinson-Patman Act, entirely apart from collusion or anything else with other producers, the mere charging of the same price to two competing customers at different distances from the mill. So we are obliged, unless we can have a very authoritative disclaimer of that to us very fantastic contention, to assume that the fantastic contention confronts us, and that was one of the reasons for my seeking to bring out from this witness what the results would immediately be to his company.

Mr. Wright: I want to say that Count II of that complaint goes to any method of pricing which systematically makes differences in real prices for the purpose of
2570 matching prices, whether it be a delivered pricing system or a mill net system, or whatever other type of system.

Mr. Hinds: The word "matching" being a word which has recently been judicially condemned from a very high source.

Trial Examiner Norwood: Counsel's statement there about what the Commission has held and stated I don't think is very well based. I remember a recent case which returned the order requiring them to cease and desist from applying the delivered price method for the addition to the order of the words "through agreement and collusion". What was the name of that case, do you remember?

Mr. Wright: I can't recall it offhand, Your Honor.

Mr. Hinds: Your Honor has already ruled on this question and I merely made a proffer. I am not arguing further against Your Honor's ruling. I made the proffer.

Trial Examiner Norwood: The ruling will stand. If you can show any facts which bear on this subject of whether or not people living nearer the mill are disadvantaged or discriminated against, we will receive that.

Mr. Hinds: I think I shall avail myself of the opportunity which seems to be suggested by Your Honor, to explore those factors a little more, without asking the sixty-four dollar question, as I might call it.

Mr. Wood: If Your Honor please, I have been
2571 trying repeatedly all through this case to find out just what the Commission's position is as to Count II. I know I have made a nuisance of myself, I have argued it before the Commission and I have brought it up over and over again. But according to Mr. Wright's statement this morning I have been misinforming my client as to what

the case was all about, all the way through. I thought that it involved the legality of selling at a delivered price, and that the Commission, in accordance with its own statements and publicity, was attempting to outlaw this so-called delivered price selling.

Mr. Hinds: Uniform delivered price selling.

Mr. Wood: Yes, uniform delivered price selling. Am I now to understand that that is all out the window and that nothing is involved here except conspiracy?

Mr. Wright: All I can do in that connection is to refer counsel back to the complaint itself. If there have been any official statements regarding the issues in this case, made either by the Commission or other people on the staff of the Commission, they have not come to my attention. I think the principal issues of Count II are very plain.

Mr. Wood: In other words, do they involve uniform delivered price selling, or do they involve only conspiracy?

Mr. Wright: They involve discriminations alleged to have been conducted for the purpose and with the effect of
eliminating competition in the primary line in which
2572 respondents are engaged.

Mr. Wood: By collective action rather than individual action?

Mr. Wright: No, sir.

Mr. Wood: That is what I am trying to get at. Does the complaint, in Count II, involve individual action as well as collective action, or only individual action?

Mr. Wright: I might say as to that, that Count II involves only individual action by each of the respondents.

Mr. Wood: And it doesn't involve uniform delivered price selling?

Mr. Wright: In so far as the manifestation of the uniform delivered price selling presents discriminations under the allegations of the complaint, of course it involves uniform delivered price selling.

Mr. Hinds: In other words, we discriminate between two competing purchasers by charging them the same price if they are at different distances, if that is what you mean.

Mr. Wright: I think the complaint is perfectly clear as to that, and I believe counsel have stated that there was no issue that they did not understand with reference to Count II of the complaint which related to this pricing method.

Mr. Hinds: It is only because of what you said this morning that we are again put in the condition of quandary.

Mr. Wood: I must have misunderstood counsel 2573 this morning because I understood him to say at an earlier time, in objecting to a question, that Count II involved a system of matching prices, which of course would necessarily involve more than one company. I don't care what the issues are but I would like to see them clear.

Trial Examiner Norwood: I want to explain, with respect to my remarks just made, which were more or less tentative, that I had in mind only the first Count, that I was speaking of it being based on agreement and collusion.

Mr. Hinds: Well, I had in mind more the second count in my question. But I will avail myself of the opportunity offered by Your Honor. I would first like to perhaps bring out more details as to Mr. Sprague's qualifications—

Trial Examiner Norwood: (Interposing.) I will be glad to hold an informal conference at any time for the purpose of clarifying the issues. We can go into each and every one of those things off the record so that we may speak very freely without being afraid of committing ourselves, and we will hold just as long a session as you want for the purpose of clarifying the issues, and that will be done at any time that counsel may request it. Proceed with the examination.

By Mr. Hinds:

Q. Mr. Sprague, a little more as to your qualifications. What has been your formal education?

A. Well, I am a graduate chemical engineer and 2574 have the degree of master of science in chemistry.

Q. You have had a diversified industrial experience?

A. Yes sir, I have been in charge of sales of the paint department of The Glidden Company in the East, have been a chemist in the laboratory, have been purchasing agent, and have had the various positions that are described in my earlier testimony yesterday in connection with lead pigments.

Q. I think you said that the lead pigments industry is a very small factor, relatively, in Glidden's business and in your experience, is that true?

A. The lead pigments business is a small part of the

Glidden Company's overall sales, but my experience in it has been a large part of my business experience.

Q. Has your experience included any f.o.b. uniform plant prices in any product?

A. Did you say uniform f.o.b. plant prices?

Q. Well, I mean a price which, considering the same grade and quality and quantity of goods is the same to each purchaser f.o.b. your plant—that is what I meant by being uniform.

A. Yes. One of the lines that our company handles and which I have had sales responsibility for, embodies sales on an f.o.b. plant basis.

Q. Has your experience covered both multiple plant production and single plant production?

A. Yes, it has, particularly in the pigments business.

2575 Q. Has your experience required you to keep informed as to the marketing practices of other producers than the one by whom you were at any given time employed?

A. Oh yes, it is constantly necessary, in connection with handling sales of raw materials, tonnage raw materials of the type that I speak, where those materials are in competition with others that may be alternately used, to keep very closely in touch with competitive developments.

Q. Will you give us the benefit of your judgment and informed opinion with respect to any difference that may exist between the position of a single plant producer and a multiple plant producer where prices are f.o.b. plant?

Mr. Wright: Objection. It is immaterial and irrelevant and is not a proper subject of this sort of testimony.

Trial Examiner Norwood: That is the type of question that is asked of economists.

Mr. Hinds: Don't you think that I have qualified this gentleman as an economist to the extent that he is a marketing, pricing and producing expert in the field in which he is engaged? He certainly knows the difference between the position of a single-plant producer and a multiple-plant producer. Otherwise he wouldn't be occupying the position he does, and his company would have gone out of business.

Mr. Wright: The fact that this gentleman is a vice president of The Glidden Company who has been in
2576 their employ for many years, doesn't qualify him as

a marketing expert to speak on such broad and general subjects as counsel has asked him about.

Mr. DuBose: He has already stated that his own personal experience includes single plant operation.

Mr. Wright: The question was very vague and general. It related to no product and there were no circumstances given in the question except a one-plant operation and a multiple-plant operation.

Mr. Hinds: If that is the only objection, I will be glad to reframe the question. It seems to me that these go to the weight rather than to their admissibility.

Trial Examiner Norwood: I will sustain the objection, but you may ask this witness to give the conditions in his business upon which an economist might base an opinion, and you may ask him his reasons, his practical reasons, why he sells this way or why he sells that way, based upon the requirements of his particular business.

Mr. Hinds: That will be quite satsifactory; that is really what I had intended to do.

By Mr. Hinds:

Q. Mr. Sprague, in your lead pigments business will you state the difference, if any, between the single plant producer and the multiple plant producer, with respect to f.o.b. prices?

Mr. Wright: Objection, Your Honor.

2577 Trial Examiner Norwood: That is the same question, isn't it?

Mr. Wright: It has already been brought out in the record that the company for which this witness is an executive is a single-plant producer as to each of these pigments involved, and he has not been qualified to speak of the operations of the multiple-plant producers.

Mr. Hinds: I think counsel fails to recollect that I particularly asked him if it had been part of his business to keep himself informed about the multiple-plant producer, whether his own company or the others—and in lead pigments it would be others of course—and he said that it had been part of his business to keep himself informed about marketing practices and conditions of competing multiple-plant producers. So I think, while Your Honor may have a different view from ours as to the weight of this testimony, certainly its admissibility, I submit, has been established because it is within the sphere of his knowledge.

Trial Examiner Norwood: Read the question.

(The reporter read the question as follows:

"Q. Mr. Sprague, in your lead pigments business will you state the difference, if any, between the single plant producer and the multiple plant producer, with respect to f.o.b. prices?")

Trial Examiner Norwood: That is an economic 2578 question pure and simple. I think you can bring out the factual basis for such questions as that from this witness, and then we can go into that with qualified experts.

By Mr. Hinds:

Q. Having in mind, Mr. Sprague, the conditions in the lead pigments industry that you have observed, including the fact that some of your competitors have more than a single plant, why have you not adopted an f.o.b. pricing system?

Mr. Wright: Objection, Your Honor. This witness has already testified that he took the prices of the market leader as he found them and attempted to compete on that level; and he has already testified that the Glidden Company has never been in a position to initiate a price change on these lead pigments, has never felt itself in a position to do so. Now this is an attempt to bring out testimony inconsistent with his previous answers.

Trial Examiner Norwood: Well, he may correct his testimony or qualify it in any way he wants to, or confirm it.

The Witness: Your Honor, may I speak to our counsel, please?

Trial Examiner Norwood: No.

Mr. Hinds: Was there a ruling on that objection?

Trial Examiner Norwood: The objection is overruled.

Mr. Hinds: Please read the question to the witness, Mr. Reporter?

2579 (The reporter read the question, as follows:

"Q. Having in mind, Mr. Sprague, the conditions in the lead pigments industry that you have observed, including the fact that some of your competitors have more than a single plant, why have you not adopted an f.o.b. pricing system?")

Trial Examiner Norwood: Answer the question.

The Witness: We have not adopted an f.o.b. plant basis of pricing either in white lead or in lead oxides, be-

cause by doing so we would automatically circumscribe ourselves and make an isolated island of ourselves in the geographic area where our plant is located, and that would be fatal for our particular situation at the location point of these plants, more seriously with respect to the lead oxide plant at Hammond, possibly, than with respect to the white lead plant at Noranton. I have found that the trade relations aspect of f.o.b. selling pigments is the same whether you sell white lead or whether you sell lithopone or titanium oxide. I have been in charge of sales of lithopone from multiple producing plant points to the same classes of customers as I have sold white lead and red lead to from single producing plant points. I learned early in the white lead business, in respect to the sale of dry white lead now—the factors I am mentioning do not pertain, in my opinion, particularly to the white lead-in-oil sales which end at a different class of consumer—but I learned
2580 fundamentally that our trade relations and our customer
relations with the people who purchased our lead pigments and our zinc pigments, and our titanium pigments, were much happier when those purchasers all knew that they paid us the same price for our goods laid down at their door, ready for their use, than they were when we sold merchandise under my direction from a single producing plant on an f.o.b. plant basis, where each consumer had for himself a different cost for our merchandise when he started to use it.

I learned throughout my experience that it was a sounder position for a seller of bulk raw materials to be in, who was selling a product that the customer processed and used in preparing the article that he ultimately exposed for sale, to have those customers each know that I was selling them on the same basis. They had no quarrels then between themselves and no quarrels with me.

Now in selling mixed feeds, which is one of my present responsibilities with The Glidden Company, which is sold on an f.o.b. plant basis out of a single producing plant, one of our problems today in that business—which has been one of the first large businesses in this country to encounter the drop-off in volume that we will all hit some of these days, and which we have had in the feed business for the past six months—is that the volume in the industry
2581 has dropped off about 45 per cent. Now what has
happened to us in our single producing plant with an

f.o.b. plant basis of pricing? What happens is that our market area begins to contract and it is measured solely by the freight rate from our plant out, and from the other fellows's plant in, and the actual thing that has happened and is now happening in that business, our business, the Glidden Company's business there, is that whereas we for some years merchandised that material in the New England States, in Delaware, Maryland and Virginia, we now find our area constricted to within two or three states around our plant. Now that is the actual fact of what happens, and we are going to have to operate that business now profitably on sales within that area closely contiguous to the point of production.

Now the serious thing about that to my view, and it applies very particularly to the pigment business, is that since competition is an inherent urge in men and business, they have to compete somewhere on something, so if they can't compete on quality, which is the result when a uniform delivered price to the customer is in effect, competition then changes from price competition to quality competition, to competition on service, to competition on factors other than price, and that is, to my way of thinking, wholesome throughout. But when that type of competition ceases, and competition takes other forms, then the benefit
of improvements in quality, the urge to conduct re-
2582 search, and the desire of demonstrating to your cus-
tomer something superior for him, becomes sec-
ondary.

Now we find in our f.o.b. plant pricing point plant that our energy is now centered not on improving the quality of our merchandise, but our energy is now centered on getting low cost transportation out of that plant so that we can reach further out and have a delivered cost to the buyer now that is in competition with the other fellow who can reach him. What will be the effect? I don't know. We may have to acquire some truck lines and go into the transportation business in order to expand that market. The pressure of competition changes from that of quality, on a uniform delivered price method of pricing, to other phases of the business than quality of merchandise, and that, I think, is serious.

Trial Examiner Norwood: We will have a five minute recess.

(A short recess was taken.)

2583 By Mr. Hinds:

Q. Mr. Sprague, has Glidden Company and other producers of lead pigments any competitors outside of the field of lead pigments?

A. White lead is a white pigment, and it must compete with other white pigments in trade acceptance and use in the paint industry, which is the largest consumer of white pigments. There is always a relationship between the various white pigments.

The ceiling of one is related to the ceiling of another in terms of the price that the paint manufacturer can pay for those pigments. I don't want to mislead you by indicating that the relationship is entirely one of cost between the white pigments because there is, in addition to the cost relationship, factors that relate to the properties and characteristics that the various white pigments possess, and those are unique to the individual pigments.

Q. What are some of the other pigments other than lead pigments which compete within the limits you mention?

A. In the case of white lead, the competing pigments are lithopone, zinc oxide, titanium oxide and, most importantly, leaded zinc oxide.

Q. Are any of those competing pigments used by concerns other than those that are named as respondents in this case?

A. Oh, yes.

2584 Q. Name some of them.

A. The New Jersey Zinc Company, the Dupont Company, the Titanium Pigment Company, the American Cyanamide Company, St. Joseph Lead Company. There may be others, but I recall those.

Q. When you refer to the St. Joseph Lead Company, are you referring to its production of pigments other than lead pigments?

A. I am referring to zinc oxide.

Q. You said, I believe, you were a member of the White Lead-in-Oil Committee of the Lead Industries Association.

A. I don't recall that I ever said so, but I was.

Q. You were?

A. Yes, sir.

Q. I thought it had already been brought out. Did you attend the meetings of that Committee?

A. Yes, sir.

Q. What was the purpose of that Committee?

A. The Lead-in-Oil Committee or group was put together for the purpose of providing means and a way of expressing the opinions and the recommendations of the white lead-in-oil industry with respect to the formulation of codes.

Q. Did that Committee even consider the fixing of prices?

Mr. Wright: I object, your Honor. It calls for a conclusion of the witness.

2585 Trial Examiner Norwood: He was on the Committee, was he not?

Mr. Wright: Yes, sir.

Mr. Hinds: Yes, sir.

Mr. Wright: But I mean it calls for a conclusion on the part of the witness, a broad general conclusion as to what price-fixing was.

Mr. Hinds: There is no ambiguity. The word "consider" is an unambiguous word.

Trial Examiner Norwood: He can clarify that, if you think it is ambiguous. Objection overruled.

Mr. Hinds: You may answer.

The Witness: Not to my knowledge.

By Mr. Hinds:

Q. Did that Committee recommend that members of the Association report their prices and price lists to the Association for the use of other members?

A. My recollection is that the Committee gave consideration to the development of the methods by which price reporting could be accomplished, but that the Committee did not recommend such reporting.

Q. What were some of the methods to which they gave consideration in view of the possibility that they might recommend price reporting?

A. It was necessary in attempting to develop 2586 means by which price reporting could be done to design the manner in which the prices were to be named, and in such a manner that they could be reported and could be understood by those receiving the reports.

Q. What were suggested as possibilities for discussion as a means of making this price reporting feasible?

A. One of the difficulties, as I recall it, in trying to develop a system arose from the fact that there were so many price equalization or freight equalization points, and as a means of trying to improve that situation for reporting purposes, or to make it intelligible, the consideration of the zones was inaugurated.

Q. Well, when the Committee decided that it would not recommend price reporting at all, what, if any, action was taken with respect to this zoning suggestion?

A. None.

Q. I show you what appear to be the minutes of the Lead Pigments Division, White Lead-in-Oil Committee, of August 9, 1933. That is in evidence as Commission's Exhibit 501-A to -D. Without consulting these minutes, can you testify as to whether you were present or what occurred there, or do you require this to refresh your recollection?

A. No, I cannot. I attend many meetings, not only of the White Lead-in-Oil Committee but of the others.

Q. Please refresh your recollection and tell us
2587 whether you were present there.

Mr. Wright: Your Honor, I object to that. How can the minutes refresh his recollection as to whether he was there or not. He either recalls being there or he doesn't recall being there. If his information is going to be from the fact that the minutes said he was there, it isn't his own recollection.

Trial Examiner Norwood: You look at the minutes there and see if you recall by seeing the matters recorded there, see if it brings the whole picture of that meeting back to you and then lay aside the minutes and tell us what you remember about it.

Off the record.

(Discussion off the record.)

Trial Examiner Norwood: Lay the minutes aside, and then answer the question.

By Mr. Hines:

Q. Do you recall whether at that meeting there was any reference to the possibility—

Trial Examiner Norwood (Interposing): Do you remember that you were present at that meeting?

The Witness: Yes, sir.

Trial Examiner Norwood: Go ahead.

By Mr. Hines:

Q. A moment ago you referred to minutes which
2588 were discussed for possible if you should decide, your
Committee should decide, to recommend price report-

ing. Do those not refresh your recollection as to what particular means discussed in the contingency that you should adopt price reporting?

A. Yes, they do.

Q. What?

A. The means that were required in that Committee and in all the other committees where we were attempting to develop a basis of price reporting was just that—to get a basis that was intelligible.

Now, my recollection of that meeting, as refreshed from the minutes, is this, that in order to get a basis for the reporting of prices for white lead-in-oil, it was necessary to know what the prices were and where they applied, and there were a huge number, a large number of freight equalization points that had come into being in that industry, and there wasn't any practical way that I can recall, and as far as that meeting and discussions, as to how price reporting could actually be accomplished with all of the equalization points.

Q. Were there any suggestions made—

A. (Interposing) Mr. Maston pointed that out, or it was pointed out in the meetings, just as the minutes state, and he undertook to try to make some recommendations.

2589 Q. Do you remember what they were?

A. Recommendations to solve the problem. Yes, sir, I remember this, that he developed a map. I remember seeing more than one map that he had in the course of that work, and he had the various areas of the country in colors as a means of simplifying a method or producing a method by which cost reporting would be intelligible and would be simple.

Q. Do you remember whether or not he was a proponent of having zone maps or that he merely raised it for consideration and discussion?

A. I would presume he was a proponent of it, as he volunteered to make some suggestions, but I do not recall any strong position on the matter that was taken by any members of the Committee.

Q. I show you Commission's Exhibit 513-B. Did you receive a copy of that letter, or does that refresh your recollection concerning any matters referred to therein?

A. Yes, sir, I received a copy of that.

Q. I notice that refers to a map. What was the map referred to therein by Mr. Maston?

A. I don't know what map it was except it was one of the maps that he prepared in connection with this work of the Committee. I paid no attention to the map because there wasn't anything I could do about it.

2590 Q. What, if any, action or decision or conclusions was reached by the Committee with respect to that or any other map?

A. My recollection is that there were no conclusions reached by the Committee, but the thing dropped out because the whole price reporting idea was abandoned.

Q. Did Glidden ever have or use a map, a so-called zone map, as far as you know?

A. No.

Q. You referred to these equalization points and differentials. Did you discover them to be in existence when you first entered the industry, or were they something that grew up after you came in there?

A. They were in existence when I first became familiar with pricing white lead-in-oil.

Q. Did you observe any change in these practices in that regard which developed only during the N.R.A. period or for the first time during the N.R.A. period?

In other words, did you observe any change in that regard following the enactment of the N.R.A.?

A. Our sales reports and information were that the use of premium prices on deliveries of white lead-in-oil at distant points instead of by equalization points, but by zones, occurred in the trade—I do not recall just when, but I think after the N.R.A. period.

2591 Q. What, if anything, did Glidden do in that connection after the N.R.A. was declared unconstitutional with respect to quoting differentials?

A. Glidden continued all through its period in the white lead-in-oil business of adjusting itself to its competition, whatever it was.

Q. Did you at any time consciously follow or feel restrained by any zone differentials or zones as such, or was your naming of prices at different points merely a matter of discovering what your competitors were doing?

A. We discovered what our competitors, and we initiated competitive pricing in accordance therewith.

Q. I show you what appears to be a mimeographed paper marked "Commission's Exhibit 593" and ask you if you have seen that before or know what it is.

A. Yes, I testified regarding that at the hearing in Cleveland.

Q. What is that?

A. That is a sheet taken from a bulletin that was issued by the paint divisions of the Glidden Company relating to white lead-in-oil pricing dated October, 1941.

Q. Now, did you give the original of that exhibit to anyone connected with the Federal Trade Commission?

A. Yes, my recollection is that I gave it to Mr. Dunn.

Q. When was that—about?

2592 A. I do not recall the time. It was the time he came to Cleveland to call on me in connection with matters relating to white lead-in-oil prices.

Q. Did he at that time or any other time ask you for a zone map?

A. He may have. I do not recall specifically that he asked for a zone map, but he asked me what were the prices of the Glidden Company on white lead-in-oil and how they might be defined, and in connection with answering his question I gave him that sheet.

Q. That Exhibit 593 that you just mentioned? You gave him No. 593?

A. Yes.

Q. Did you tell him that since 1935 Glidden had adopted National Lead Company's differential zones or anything to that effect?

A. No, I don't think I told him Glidden had adopted National Lead zones in 1935. I don't believe that was the case. What Glidden was to adjust to the competitive practices of the National Lead Company as they found them.

Q. Did Mr. Dunn in your presence write on the top of Exhibit No. 593 the lead pencil words, "Since 1935 adopted National"?

A. I do not recall his writing anything.

Trial Examiner Norwood: May I see that a minute?

2593 (Book handed to Trial Examiner.)

Trial Examiner Norwood: Thank you.

By Mr. Hines:

Q. Did you at anytime have any understanding or arrangement with National Lead that from 1935 you would adopt their differential zones?

A. No, not from 1935 or any other time.

Q. Did you ever discuss the matter of your adopting their differential zones with any representative of National Lead Company?

A. Not that I know of.

Mr. Hines: You may cross-examine.

Mr. Wright: Your Honor, it is almost 12 o'clock. I suggest we recess for lunch.

Trial Examiner Norwood: Off the record.

(Discussion off the record.)

Trial Examiner Norwood: Please proceed, Mr. Ewing.

Cross-Examination by Mr. Ewing.

Q. Mr. Sprague, I show you the original document, a photostatic of which has been marked "Respondents' Exhibit 138-A, and ask you to read it to yourself.

Were you present at that meeting, Mr. Sprague?

A. Yes, sir.

Q. Do you recall discussion with respect to the
2594 question of establishing zones in the South and West
at that meeting?

A. Yes, I do.

Q. Will you state whether the members of the Lead Oxide Committee of the Lead Pigments Division of Lead Industries Association—I withdraw that.

Will you state in what connection the subjects considered at the meeting of the Lead Oxide Committee of the Lead Pigments Division of Lead Industries Association, Respondents' Exhibit 138-A and subletters, were given consideration?

A. Could I have that repeated, please?

Trial Examiner Norwood: Read the question.

(The question was read by the reporter.)

The Witness: I cannot recall much, if anything, about the duration of that meeting or length of discussions. I do recall the general character of the points that those minutes portray in connection with the Committee.

By Mr. Ewing:

Q. I think you may have misunderstood me. What I meant to ask you was: For what purpose did the Committee consider the subjects? What brought up the consideration?

Mr. Wright: Objection, your Honor. He has already testified that he can't recall this particular meeting.

Mr. Ewing: He didn't say that.

Mr. Wright: Read the witness' last answer.

Trial Examiner Norwood: Let the witness explain

2595 there whether or not he does recall the meeting.

The Witness: Yes, sir.

Trial Examiner Norwood: Off the record.

(Discussion off the record.)

Trial Examiner Norwood: He says he does recall it. I think that makes the question valid. Do you want the question read?

The Witness: I have answered the question.

Mr. Ewing: There was an objection.

Trial Examiner Norwood: Read the question.

(The question was read by the reporter.)

The Witness: Those meetings were all held, that one and all the rest of them, for the purpose of considering the development of the code work of the N. R. A.

By Mr. Ewing:

Q. Now, will you tell us whether members of the Lead Oxide Committee, meeting as such, ever agreed on the establishment of zones, which subject was discussed at this meeting of December 27 and 28, 1933?

A. Not to my knowledge.

Q. Will you tell us, if you know, whether at any period subsequent to this meeting and prior to the effective date of the code in June, 1934, the members of the Lead Oxide Committee ever agreed on the establishment of zones?

A. I know of no agreement among the members

2596 of the Lead Oxide group at any time on zones.

Q. Did you ever hear of any agreement?

A. No, sir.

Q. I direct your attention to the last paragraph of the minutes, Respondents' Exhibit 138-A, and ask you to look at Article II of Schedule A of the Code of Fair Competition for the Lead Industry, Commission's Exhibit 809.

Does Article II of Schedule A include the basis for sale at differentials referred to in the minutes of the meeting of December 28, 1933, Respondents' Exhibit 138?

I direct your attention particularly to paragraph (b) of the article, subparagraph (5), subparagraph (a).

A. I understand that. This schedule A defines how sales at a differential are to be conducted. I don't know what you mean exactly by a basis of sale, but says nothing about the differential, if that is the point you mean.

Q. What I meant was that the minutes referred to a discussion with respect to a basis for sale at differentials in connection with the consideration being given the code by the Lead Oxide Committee.

A. That is right.

Q. In the code we find this provision of Article II, which I have made reference to, paragraph (b), subparagraph (5), subparagraph (a). My question was—I believe you answered it—if that provision of the code was the
2597 basis of sale at differentials theretofore generally discussed and eventually finding its way—

Mr. Wright: Objection, your Honor. Counsel has characterized what appears in these minutes and has put a lot of conclusions in his question, obviously in an attempt to lead the witness.

Mr. Ewing: I haven't characterized it at all.

Mr. Wright: There is nothing in the minutes that this thing in the last paragraph had anything to do with. It was stated in that that it wasn't to be filed with the code.

Mr. Ewing: The whole subject of discussion, according to this witness, and according to Mr. Wormser, was all with reference to the code.

Now, this particular reference in these particular minutes, as Mr. Wright said—there was no need for filing it with the code. That was the judgment of the Committee at that point. I have tried to bring out, and I believe I have brought out from Mr. Sprague, that when the code appeared in final form, it did include a provision relating to sale at differentials over lead in the case of lead oxides; and I simply want to show that provision did go into the code even though by that December 27 and 28, 1933, meeting the Committee then apparently felt no necessity for such a provision.

2598 Trial Examiner Norwood: Read the question.

(The question was read by the reporter.)

Trial Examiner Norwood: Please restate the question.

By Mr. Ewing:

Q. Was a basis for sale at differentials over lead in the case of lead oxide the subject of a provision in the code as finally adopted?

A. Yes, sir.

Q. What provision in the code, Schedule A, contains such a provision?

A. It is contained in Schedule A, Article II, paragraph (5) with its subparagraphs. That was the result of the consideration given to the question by this Oxide Committee at some length.

Q. Will you state whether you had anything to do yourself with the drafting of that provision of the code?

A. Yes, I think I drafted it.

Mr. Ewing: I have no further questions.

Mr. Wood: Your Honor, I have just one question.

Trial Examiner Norwood: Very well, proceed.

Cross-Examination by Mr. Wood.

Q. Mr. Sprague, in your testimony with respect to the
sale of lead-in-oil you used the term "freight equaliza-
2599 tion points", didn't you?

A. Yes, sir.

Q. Will you explain thoroughly just what you meant by freight equalization points as you used the term in your testimony?

A. As I understand that term, the meaning of the freight equalization point meant that white lead-in-oil sold with respect to that freight equalization point would be charged to the buyer at the base price in effect otherwise, plus the freight cost from the equalization point to that buyer.

Q. In what sense do you use the term "base price" there?

A. I used the base price in this sense, that as I recall those schedules, the published price of white lead-in-oil or the card price was what I used as the base. Then a purchaser at a distant point would be charged the base price and an added charge in respect to that equalization point. It is a little complicated, and it has been some time since I have analyzed that.

Q. Why do you characterize it as complicated, Mr. Sprague? I am just trying to get on the record a complete statement of the system.

A. I think I have given you about as complete a statement of it as I can.

Trial Examiner Norwood: What would be added to the base price for the ultimate price which the purchaser pays?

2600 The Witness: I will need to use an illustration to explain my recollection of that. Is that satisfactory?

Mr. Wood: Surely.

The Witness: Assuming that the base price of white lead-in-oil was 12 cents and the sale was made in Boulder, Colorado, and the freight equalization point was Denver, and the premium applicable to Denver was 1/8th of a cent, then my recollection is that the buyer in Boulder would pay the 12 cents plus—He would be equalized at Denver at 1/8th, plus 1/8th of a cent, plus freight from the shipping point equalized at Denver.

By Mr. Wood:

Q. Did you use the term "Differential point" in your testimony in regard to that method of pricing white lead-in-oil?

A. I may have used the term "equalization point" as well as "differential point."

Q. What was the differential point?

A. The differential point was the destination point at which a certain premium applied to the price from the base.

Q. In figuring the price of any given commodity at any given point, was considerable computation necessary in those days?

A. Yes, the computation was not a severe problem. The real problem was to find out where these equalization 2601 points were and which they were from the standpoint of the Glidden Company now.

Q. Were they the same for all companies—equalization points?

A. I can't answer what the siuation was for all companies. My knowledge of this situation rests upon what Glidden discovered concerning the practices of National Lead and Glidden's efforts thereafter, but I can say that our observation was that in general similar competitive prices were quoted by others.

Mr. Wood: That is all.

Mr. Hinds: No further questions at this time.

Trial Examiner Norwood: Off the record.

(Discussion off the record.)

Trial Examiner Norwood: We will recess at this time until 2 o'clock.

(Whereupon, at 12:10 p.m., E.D.S.T., a recess was taken until 2:00 p.m., E.D.S.T., of the same day.)

2602 **Afternoon Session.**

2:00 p.m. E.D.S.T.

Trial Examiner Norwood: The hearing will come to order.

Proceed with cross-examination.

PAUL E. SPRAGUE resumed the stand and testified further as follows:

Cross-Examination by Mr. Wright.

Q. Mr. Sprague, I show you some documents, and ask you if these are the documents from which you prepared Respondents' Exhibit 143?

A. Yes, sir, those are the source material that my assistant used in respect to the graphs for dry white lead prices and white lead-in-oil prices, but not for the pig lead prices. This book (indicating) is the source of the data for the pig lead prices.

Mr. Wright: I request the reporter to mark for identification as Commission's Exhibit 856 and sub-numbers, the sheets purporting to be from the American Paint Journal Convention Daily of October 26th and 28th, 1938, and the Convention-at-Home Daily of October 31, 1944, being pages 36 and 38 of the Convention-at-Home Daily, and pages 20 and 24 of the American Paint Journal Convention
2603 Daily. I also request that the reporter mark for identification as Commission's Exhibit 857, page 497 of the book entitled, "Metal Statistics—1945" published by the American Metal Market.

(The papers referred to were marked Commission's Exhibits 856-A, 856-B, 856-C, 856-D and 857 for identification.)

Mr. Wright: I would like to request counsel, if it becomes necessary to introduce these into evidence, that we have an agreement that photostats be substituted for the originals, and the originals can then be returned to counsel.

Mr. Duncan: It is so understood. We have no objection to that.

By Mr. Wright:

Q. I show you documents marked for identification as Commission's Exhibits 856-A to D, inclusive, Mr. Sprague, and ask you if those are the source material from which were prepared the graph lines A and B appearing on Respondents' Exhibit 143?

A. Just a moment.

Trial Examiner Norwood: Off the record.

(Discussion off the record.)

Trial Examiner Norwood: On the record.

By Mr. Wright:

Q. What was your answer?

A. May I have the question again?

(The reporter read the question as follows:

2604 "Q. I show you documents marked for identification as Commission's Exhibits 856-A to D, inclusive, Mr. Sprague, and ask you if those are the source material from which were prepared the graph lines A and B appearing on Respondents' Exhibit 143?")

A. Yes, sir.

By Mr. Wright:

Q. I show you a document marked for identification as Commission's Exhibit 857, and ask you if that is the source material from which line C in Respondents' Exhibit 143 was constructed?

A. Yes, sir, that is the source material which my assistant used in preparing that.

Mr. Wright: Your Honor, I offer Commission's Exhibits 856-A to D, inclusive, and 857, in evidence for the limited purpose of showing the source materials and the manner of constructing Respondents' Exhibit 143, and not as evidence of the truth of any matters that appear therein.

Mr. Duncan: No objection.

Mr. Hinds: No objection.

Trial Examiner Norwood: Received for the purposes stated.

(The papers referred to, heretofore marked for identification COMMISSION'S EXHIBITS 856-A, 856-B, 856-C, 856-D, and 857, were received in evidence.)

By Mr. Wright:

2605 Q. I call your attention now to Commission's Exhibit 857, and to the statement appearing at the top thereof, "Monthly Average Prices of Pig Lead—New York Delivery, based on American Smelting & Refining Company's quotations—50-Ton Lots". Do you consider that that accurately reflects the market of pig lead?

A. Yes, I always regarded the quotations of the American Smelting & Refining Company as most accurately reflecting the pig lead market of any current quotable figures.

Q. Then for the purposes of this chart, you accepted as the going price of lead the quotations of the American Smelting & Refining Company, is that correct?

A. We used in that chart the figures taken from the Metal Statistics book, and used those believing that they adequately reflected the pig lead market for the purposes of the chart.

Q. Now I call your attention to Commission's Exhibit 856-A under the heading "Ten Years' Prices of Some Raw Materials—White Lead, Basic Carbonate—Dry Casks, Per Lb.", and to the fact that under each year there appear two columns, one under "H." and one under "L." What is the significance of the two set of quotations each year?

A. Those figures are, as stated in the title here, the monthly high and low prices during each month for these materials.

Q. Do you know to what class of customers those
2606 were prices as of that time? Were those the retail
list prices; were those wholesale prices; were those
selling prices of the pigments manufacturers in carloads,
or less than carloads; or what prices were those?

A. These are stated here to be the monthly high and low prices of products used in paint and varnish manufacture.

Q. Do you know whether those prices are the lowest prices quoted by the pigments manufacturers or the highest prices quoted by them on those products to particular classes of trade?

A. When we sought to find material with which to prepare those graphs, I referred to this compilation because I had recalled, in previous years, that it was the habit of the American Paint Journal to show these ten-year averages. I know of nowhere else that I might secure that, and we accordingly used this information as—

Q. (Interposing.) Mr. Sprague, do you understand my question? I asked you to what class of trade that price was applicable as it appears there.

A. I will answer that this way. We know nothing about the origin of these quotations except as they are stated here to have been compiled by the Eastern Market Editor, and so forth. Beyond these figures we have no knowledge.

Q. As far as you know they could be, then, the keg price on dry white lead in 100-pound kegs to consumers, or they could be the carload price to manufacturers?

2607 A. If they were prices of that type, and in such packages, and for such consumers, then they would violate the subject of the prices as they are shown and would not meet the title shown on the table.

Q. What is the title there?

A. The title here says that these are the "Monthly High and Low Prices of Major Products Used in Paint and Varnish Manufacture—Compiled by Maurice W. Butler, Eastern Market Editor, American Paint Journal Co."

Q. But you don't know exactly to what class of trade those prices are applicable of your own knowledge, do you?

A. Of my knowledge we know nothing more than the title and the printed figures.

Q. Now I direct your attention to the fact that Respondents' Exhibit 143, in line B, Basic Carbonate Dry White Lead, is explained as monthly average price. Is there a monthly average price reported in the American Paint Journal, Commission's Exhibit 856-A?

A. No. The price shown here is high and low, and in the great preponderating number of months for which these prices are shown there is no difference between the high and the low. Where there was a difference in a given month, I told Mr. Stadder, my assistant, to use the average of those two figures.

Q. So that was a simple arithmetic average of the high and low?

2608 A. That is right.

Q. It didn't refer to the length of time at which one price might have obtained during the month? For instance, the high price might have obtained one day during the month, for all you know?

A. That is right, it was a simple arithmetic average, and that was satisfactory to me.

Q. It didn't reflect, so far as you know, though, an actual average price at which those products were sold during that month?

A. No. Such an actual average price would have been impossible to obtain on our part, or indeed on the part of anybody else, without knowledge of the tonnage of products that were sold from day to day.

Q. Would it not be a more accurate figure if there were in the basic data the length of time in the month at which each the high and the low price obtained?

A. Not unless the basic data also showed the volume of materials sold each day at those respective prices. This was the most accurate source of information and the most accurate information that I knew of to find for this purpose.

Q. Is that more accurate than would have been the records of the Glidden Company as to what they sold dry white lead for during these periods?

A. Those figures are not The Glidden Company's 2609 prices at all. Those are the market prices reported there. Glidden could have secured, if their sales records by months, and so on, still existed, a precise, actual average. But I was not using Glidden's prices in the chart.

Mr. Wright: Your Honor, I move that Respondents' Exhibit 143 be stricken from the record, on the ground that the figures have no value or relevancy. As has been stated by this witness, it was a simple arithmetic average taken from data which showed a high and low price during the period, and there is no indication in the basic data as to the class of customers or what price was being calculated; and it is already in the record that there are different prices for different classes of trade in different quantities and in different containers as to these various products which are covered by it.

Trial Examiner Norwood: Is that tabulation supposed to cover all classes of customers?

Mr. Wright: The witness has stated that he doesn't know what those prices are that appear in Commission's Exhibit 856-A, which has been stated by him to be the sole source of information of the material which is in Respondents' Exhibit 143.

Trial Examiner Norwood: Will you answer my question?

The Witness: May I have that again, please?

Trial Examiner Norwood: Read my question to the witness.

2610 (The reporter read the question as follows:

"Trial Examiner Norwood: Is that tabulation supposed to cover all classes of customers?")

The Witness: The tabulation states that it covers prices of dry white lead in casks. My recollection is that whenever dry white lead prices were quoted in casks in the New York or other publications that showed white lead prices, they referred to the price in barrels or casks, and that was the type of package and represented the type of price that pertained to the sales of dry white lead when made to the paint manufacturers and other large consumers.

Mr. Hinds: Before Your Honor rules on this motion, I would like to have an opportunity to further examine this witness on the identification of the document.

Trial Examiner Norwood: Yes.

Mr. Hinds: Mr. Sprague, you say that the only purpose of this graph was to show in ~~a~~ general way, over the years, the parallelism of the pig lead price, market price, to the price of the lead pigments referred to in the graph; is that right?

The Witness: That is correct; and also to show, as I testified, the general similarity over these time intervals of the situation portrayed in the chart I first kept myself by daily records.

Mr. Hinds: By contrast to the earlier exhibit 2611 which showed up to 1929 the daily market prices, you show here the monthly averages, is that right, rather than the daily prices?

The Witness: In this chart the monthly average, arrived at as described.

Trial Examiner Norwood: For that average you take the high and the low. Did you just divide that by two to get the common factor?

The Witness: I would like to call your attention, Your Honor, to this data. You will notice there that the figures given under the headings "H." and "L." are, in the preponderating number of months, the same, which meant undoubtedly that during those months there was no change in the price and the high and the low were the same. As I stated, during those months where there was a difference between the high and low, I instructed my assistant to take the arithmetical average and so use it in the graph, that being the most accurate available method to me to arrive at what the average was.

Mr. Hinds: Now, Mr. Sprague, I will ask you, in your opinion, in view of your experience, assuming it had been humanly possible, in those months where the price did change and where the high was different from the low, if you had been able to learn the tonnages and the periods where these different prices occurred and had been able to reflect that onto your graph, whether the difference between that and what you have given us would be visible to the naked eye on the graph?

2612 The Witness: I doubt it.

Mr. Wright: Objection, Your Honor. That calls for a conclusion.

Mr. Hinds: That is what I am asking for.

Mr. Wright: It hasn't been stated that he had any means or way of making such a weighted average, so how is it possible for him to make such a conclusion?

Mr. Hinds: It seems that it is possible.

Trial Examiner Norwood: You may cross-examine him on that.

Mr. Hinds: I haven't quite finished, however.

Trial Examiner Norwood: Go ahead.

Mr. Hinds: You were asked what would have been the situation had you been able to get Glidden's prices for the corresponding product that appears in one of the lines of your graph—.

Trial Examiner Norwood: (Interposing.) That question doesn't go to this motion here, I don't think. I think you are just referring to some of his evidence. Let's postpone that for re-direct.

Mr. Hinds: Well, the purpose of my question was prefatory to Your Honor's ruling on the motion, by way of redirect examination with respect to the preliminary cross-examination directed solely to that purpose. That is all I had in mind. It wasn't general.

2613 Trial Examiner Norwood: Go ahead.

Mr. Hinds: I will rephrase the question in this way. Were Glidden's prices, at the time you prepared that chart, available to you for more than a few years back, their sales records?

The Witness: No, sir.

Mr. Hinds: Do you know about how far back they were available?

The Witness: I haven't the least idea.

Mr. Hinds: In your judgment, from your experience in the business, would it have been practicable to have prepared that portion of your chart on the basis of Glidden's sales records?

The Witness: It would have been meaningless. My purpose was an entirely different one in preparing the chart.

Mr. Hinds: Do you know of any source of data or any method of graphically demonstrating the fact that you hope to demonstrate, better than this means or as good as this means or as accurate as this means?

The Witness: I have already stated that that was the only and the best source I knew of to get the information.

Mr. Hinds: If Your Honor please, regardless of the weight of this testimony, as to which honest minds may perhaps differ and which will be the subject of argument later, it seems to me that by a considerable margin, in this sort of a proceeding, we have demonstrated that it
2614 is entitled to be admitted in evidence for what weight it may have, in considering the limited purpose of it, which is to prove trends over a long period.

Mr. Duncan: Your Honor, in opposing the motion that has just been made by the Commission counsel to strike from the record Respondent's Exhibit 143, I submit, on behalf of Glidden, that the motion should be denied, first, for the reason that all of this goes to weight rather than to admissibility; and second, because I think it is apparent to Your Honor that The Glidden Company has not only complied with the suggested procedure made by you earlier in this proceeding, to give to the Commission's attorney whatever material we had in our possession which in any way related to this particular exhibit, but Mr. Sprague has testified that it was the best available source that he could find.

Now were not these particular exhibits—Commission's Exhibits 856-A and B, which were printed in 1938 long before the complaint was ever filed in this case—in evidence, I would say that there would be some reason for the Court to strike from the files this particular exhibit.

Trial Examiner Norwood: I shouldn't strike it on the ground that you hadn't furnished the supporting data, but the reason for making the supporting data available was in order that opposing counsel might examine it and verify the other and see whether or not the exhibit has evidentiary value.

2615 Mr. Duncan: And we submit that it does have evidentiary value.

Mr. Wright: Your Honor, it is plain, in spite of the statements that the witness has made about this, that he knows absolutely nothing more about the sources of these figures which appear in this Journal than appears on the face of the Journal. He obviously does not know from whom the figures were obtained or what the figures mean. He doesn't know as to white lead-in-oil, which is quoted at per pound New York, what price that is, whether it is a dealer price, a retail price, an agent's price, or whether it is a manufacturer's selling price. The same is true of white lead basic carbonate from which it comes.

Now they have constructed Respondents' Exhibit 143 as monthly average prices. We see now from this basic data how that average was obtained. It is an average which has absolutely no standing statistically or any other way. It is a simple arithmetical average of two figures about which the witness knows nothing.

Mr. Hinds: He said in most cases it was a single figure.

Trial Examiner Norwood: I have looked at the exhibit, and in most cases the high and low have the same figures.

Mr. Wright: I am willing to concede that in a good many instances that is the case, but that doesn't alter 2616 the fact that it is defective in those places where there is a difference. But more important and fundamental, it is defective in that we do not know—

Trial Examiner Norwood: (Interposing.) It is not denied that these documents are what they purport to be, and that this is information that was published to the trade at the times indicated there, is it?

Mr. Wright: It is information that was reported in another trade, not this trade. This is an association journal in the paint trade. There is nothing here that would indicate that these figures are probative or recognized in this industry as being accurate or reliable figures.

Mr. Hinds: I overlooked asking him that. Thank you for reminding me. I was about to ask him, I had it in my notes.

Mr. Sprague, are these two sources which you say you resorted to in preparing these graphs, sources that are generally accepted in the industry as representing facts as accurately as can be obtained?

The Witness: The American Paint Journal is a privately-owned publication, and one of the principal if not the principally recognized trade paper of the paint industry. It has nothing to do with any trade association, to my best knowledge and belief. It is customary in the paint industry, in referring to published sources of market information, to refer to those recognized sources that 2617 are customarily and currently used, of which the

American Paint Journal is typical and one of the leaders, although not the only one. It happened that that was the only one I recalled that published these ten-year averages or figures where I could quickly get that long range of years.

Mr. Hinds: I would like to ask one more question, if I may.

Mr. Sprague, I notice that on this graph, the period of one month is only a small fraction of an inch. Would you agree with me that it was perhaps a fifteenth or a twentieth of an inch? What would you say one month was?

The Witness: Yes, about 1/16 or 1/32 of an inch.

Mr. Hinds: I will ask you to assume that in every case where the price was different during the months, you left out any change in the graph and made your graph solely on the basis of those months where the price was unchanged so that there would be no averaging at all and simply leave it out entirely. Would the curve be perceptibly different as a representation of the comparison between pig lead prices and the lead pigment prices?

The Witness: It would not interfere in any way with the trend of the curve or the direction of the curve. Theoretically there might be an occasional spot where pig lead was very active where there would be a blank.

2618 Mr. Hinds: I notice here that for two or three years, from 1933 on to well into 1935 on your graph, line A, there seems to be an absolute straight line.

The Witness: Yes, sir.

Mr. Hinds: Suppose you had left out of the months, here and there, exceptional months, would that have been appreciably different?

The Witness: That straight line was unchanged regardless of whether it was in or out, because there were frozen prices on the OPA.

Mr. Hinds: Similarly on the B line, would the elimination of those exceptional months where there were two prices have affected the curve, so far as it represented the general point that you are trying to bring out?

The Witness: No, sir.

Mr. Hinds: And is that true also with respect to the pig lead line in its general contours?

The Witness: It is true with respect to each of the three graphs.

Mr. Wright: May I have some more cross-examination, in the light of Mr. Hinds' redirect? There is one point I want to bring out here.

Trial Examiner Norwood: All right.

By Mr. Wright:

Q. Mr. Sprague, I call your attention to the fact
2619 that on Respondents' Exhibit 143, on the left-hand
margin, one cent per pound is approximately one-half an inch on the graph, is it not? In other words, a difference of one cent a pound up or down in the price of any one of these three articles would make a difference of approximately a half-inch?

A. Yes, a little less than a half-inch, but close.

Q. Now I call your attention to the fact that the white lead-in-oil prices are simply listed as "Per Lb., New York."

A. Yes, sir.

Q. What is the difference between the suggested retail price of white lead-in-oil and the lowest price at which the Glidden Company sells it to any customer?

Mr. Hinds: Objected to as immaterial for the purposes of this chart, which are to show trends. It doesn't make any difference—

Trial Examiner Norwood: (Interposing.) Let him answer.

A. Mr. Wright, the difference between the suggested resale price of Glidden's white lead-in-oil and the price at which it was sold to a dealer—

By Mr. Wright:

Q. (Interposing.) The class of customer to which you sell at the lowest price.

A. (Continuing.) —would vary from time to time ac-
cording to the schedules. If you will pick out one
2620 of the Glidden schedules you have in evidence, we can
compute the difference to get at your question.

Q. Well, can you tell us what the difference was under OPA, from the early part of 1942?

A. No, I cannot.

Q. Was it as much as 3 cents?

A. I cannot tell you what it was.

Q. You know there was such a difference between your selling price to your dealers and the suggested resale price?

A. Oh, yes.

Q. You have no idea what that was?

A. I cannot tell you what it was, no. There are many of those schedules in evidence.

Mr. Wright: Yes, I want to put my finger on one, if you will pardon me just a moment.

Trial Examiner Norwood: All right.

By Mr. Wright:

Q. Let me call your attention to Commission's Exhibit 663-K, which is a price list, in 100 pound kegs under date of April 26, 1941, and the fact that your lowest price to the dealer appearing on that exhibit was 11¼ cents a pound, and your suggested retail price was 13¼ cents a pound. There is a two-cent spread. That would make approximately a one-inch difference in the levels of these lines on the chart, Respondents' Exhibit 143, as between the two—

2621 Mr. Hinds: (Interposing.) Objected to, on the ground that the materiality is not the level, but it is the comparison between two levels.

Mr. Wright: I will withdraw the question.

Now, Your Honor, it appears, first of all that this witness does not know what price was used in that publication under line A. One cent per pound makes a difference of almost a half inch. It is already established in the record that there is as much as two cents per pound difference in these different prices. So that, without establishing what prices is shown on this chart, the whole thing is absolutely misleading and valueless, it has no probative value whatever.

Trial Examiner Norwood: You have asked me to strike this as having absolutely no evidentiary value whatsoever.

Mr. Wright: As incompetent. It is hearsay.

Trial Examiner Norwood: I think that these matters that have been brought out go to the weight of this evidence, and if it appears otherwise I might strike it in the future, but it isn't clear to me—

Mr. Wright: (Interposing.) Your Honor, this witness has based a good deal of testimony on the basis of this chart. If this chart is absolutely valueless and misleading and has not been properly established as competent evidence, then properly this testimony should be stricken.

Trial Examiner Norwood: He has put it in here, 2622 and he stated the bases on which this was made. Now it is in a very good shape for you to direct any contrary evidence to, and I shall deny the motion for the time being at least.

By Mr. Wright:

Q. Mr. Sprague, as I recall your testimony, you first went with the Euston Division of Glidden in 1925, did you not say?

A. Yes, sir.

Q. And you remained there in that Division until 1929?

A. Approximately so.

Q. 1929 or 1930, right in that period?

A. 1929, I think

Q. During that time your duties were devoted exclusively to the practices and problems of the Euston Division of The Glidden Company, is that correct?

A. That is correct.

Q. Now in 1930, you went with the Metals Refining Division of Glidden, is that correct?

A. I changed my residence from Scranton to Hammond, and became, in 1930 or approximately then, the Vice President and General Manager of the Metals Refining Company, and from there on I devoted my time principally to the problems of the Metals Refining Company but also, and concurrently, to the general administrative responsibility for the Euston Lead Company.

Q. You divided your responsibilities, then, in that period?

2623 A. That is correct.

Q. Between Metals Refining and Euston?

A. Yes.

Q. Did you spend a portion of your time in Scranton?

A. Yes. I made regular trips to Scranton, perhaps I should better say irregular trips, but sufficient to keep in touch with what needed to have my own attention at Scranton.

Q. Were you consulted by the succeeding General Manager as to the problems of the business at Scranton?

A. Oh, yes, I was in constant contact with the manager at Scranton, and that continued up through until 1945.

Q. Now you left the Metals Refining Division, then, in 1935, did you not?

A. That is right.

Q. And then your duties encompassed the entire pigments production and sales of the Glidden Company?

A. No, not the production. I was in charge of the sales and distribution of those products from '35 to '45, but not in charge of the production or operation of the plants.

Q. Going back, now, to the period from 1925 to 1929 when you were General Manager of the Euston Division, how was dry white lead sold to the paint trade in those days, what was the price basis?

A. The price basis of Euston dry white lead to the paint trade, as well as to other trades, was probably de-
2624 scribable as one of getting the best price we could for the product in relation to the market price of white lead dry.

Q. Now geographically, did you sell dry white lead in those days in casks on differential points or equalization points, similar to those or in any way related to those about which you testified this morning?

A. I do not recall that there were any equalization points at any time in connection with dry white lead sales. You asked your question with respect to the period 1925 to 1929?

Q. Yes, sir.

A. During that period the Euston dry white lead was sold at a stated price agreed upon with the buyer, f. o. b. Scranton, freight allowed to the buyer's destination.

Q. Wherever located?

A. Wherever located.

Q. Including the Pacific Coast?

A. No, there were no sales made—well, let's see, 1925 to 1929, there may have been during a short period in those years some sales made on the Coast, in which case the price was a delivered price to the buyer on the Coast.

Q. Based on what?

A. Based on agreement between the buyer and seller.

Q. How did it relate to your prices in the Eastern part of the country?

A. I do not recall what the relation was at that time.

2625 Q. Do you know what the selling practices—

A. (Interposing:) I do not know what the relation was there as between our Eastern and Western prices, but I do recall that the price was related to the competitive schedules on the Pacific Coast.

Q. What were those competitive schedules, do you recall?

A. They were the schedules of the National Lead Company.

Q. Do you know what they were with regard to delivery in the Pacific Coast as against delivery in the Eastern part of the United States?

A. My recollection is that the price was higher on the Coast by a quarter of a cent per pound.

Q. Do you wish that to be your testimony, then?

A. That is my recollection.

Q. Are you sure of that?

A. Yes, sir.

Q. At that time, Mr. Sprague, what were the quantity differentials applicable to dry white lead in casks?

Mr. Hinds: Do you mean Glidden's?

Mr. Wright: Yes, sir.

A. We did not have any quantity differentials at that time to my best recollection, because we were obliged to sell our product at the best price we could get. I do not recall any quantity differentials.

By Mr. Wright:

2626 Q. Well, now, as I recall your testimony yesterday, you said that when you first went with the Euston Division, that you found them with an inferior product for which they couldn't get the full market price, is that correct?

A. That is correct.

Q. That within a period of years you had improved the quality to a point where you could sell at the same price as the market leader?

A. That is correct.

Q. About how long did it take for you to reach that position?

A. It took us until the action that we took around 1936 in response to the Robinson-Patman Act aspects, when we discarded the cut in price then given to the paint manufacturers. My recollection is that from that date forward we had no differences in our price as among the different types of buyers.

Q. Then when you stated that you were not up to the market leader in that early period, were you referring to that ½ cent differential to the paint manufacturers?

A. Oh, no, in the early days our price was as much as one cent per pound below the market leader.

Q. At what period of time did it get to the point where, as to other industrial purchasers than paint companies, you were on a competitive level, as you would say, with the National Lead Company?

A. That occurred, as I testified, after the Robin-
2627 son-Patman Act, I believe in 1936.

Q. No, I meant, discounting now the ½ cent differential to paint manufacturers, I believe you stated that in 1936 you were already on a level with National as to other than paint manufacturers. What I wanted to know was when you reached that level with National on other than paint manufacturers.

A. I would be unable to answer that as to the time that occurred. I can tell you the reasons why it occurred.

Q. No, I want your recollection of the time.

A. I do not recall the time.

Q. You have no rough idea of how long prior to 1936 it might have been?

A. It seems to me we had about reached that point before I left Scranton, I would guess around 1930.

2628 Q. Did you feel at that time that the quality of your dry white lead was equal to that of the National Lead Company?

A. Yes. Now bear this in mind. The quality of Euston White Lead should be discussed in terms of the type of use to which it was put. My remarks about quality have been related to the use requirements and preferences of the paint manufacturers. However, I found quickly in Scranton that my white lead, poor though it was as compared to the market leader, was perfectly satisfactory as a chemical, it was basic lead carbonate and it was pure. It lacked color and it lacked hiding power and lacked this and that that the paint manufacturers wanted, but it was a perfectly good chemical. So I discovered that people who bought white lead for use as a chemical were quite pleased with Euston White Lead once they had an opportunity to demonstrate that it would successfully function. And of those users, my first customers were the pottery people who used white lead as an ingredient for glaze, and there they didn't care whether it was the kind of white lead the paint men liked, or what, they used it as a chemical substance. And I was able to narrow my cuts in price first with respect to sales to that class of buyer, but that did not enable me to effect any change with respect to sales to the paint manufacturers—who were the largest consumers of the product.

Q. That was, as you stated yesterday, was it, be-
2629 cause of the position of Glidden in the paint industry,
rather than any intrinsic quality or lack of quality of your pigments?

A. There were two factors, both of importance. One, the one I described regarding the reluctance of paint manufacturers to go out of their way to deal with their competitor; and the second one, the question of the defective quality of the Euston White Lead for their use.

Q. Which was, as you stated, corrected by 1930 when you left?

A. No, I stated that the quality difficulties with regard to the paint manufacturer had not been completely corrected by 1930. I think it was later than that that we felt that had been accomplished.

Q. Do you have any idea when that was?

A. The only idea I can give you, sir, is that it would be some time between that date and the time that we did away with the paint manufacturers' discount in 1936.

Q. What was the effect of doing away with the paint manufacturers' discount in 1936, on your business with paint manufacturers?

A. I recall that there was no effect other than the temporary complaint from customers who had long had a preference, that they didn't like having it withdrawn.

Q. You stated that in the period in which you were with
Euston there was no quantitative, no quantity differ-
2630 erential on dry white lead, is that correct?

Mr. Hinds: I would like to have it noted that this is not cross-examination. I don't think we went into quantity differential with this witness. If you want to make him your witness I suppose we would have no objection.

Mr. Wright: At that point, Your Honor, I want to say that the direct examination of this witness covered everything in this case and a good many things in addition.

Mr. Hinds: But it particularly didn't cover that. I won't comment on the rest of the statement.

Mr. Wright: It covered discounts and marketing prices generally. I can make specific references to—

Trial Examiner Norwood (Interposing.): You covered the subject generally—objection overruled.

The Witness: Will you read the question?

(The reporter read the question as follows:

"Q. You stated that in the period in which you were with Euston there was no quantitative, no quantity differential on dry white lead, is that correct?")

The Witness: I don't believe I stated that.

By Mr. Wright:

Q. Well, I asked you if there was such a differential in that period prior to 1930, and it is my understanding of your answer that you said there was not. If I am wrong I would like to be corrected.

2631 A. Well, my answer is in the record. I would be glad to refer to it.

Q. Well, I will put the question to you again and ask you for your answer now, then. What quantity differentials were there in the period from 1925 to 1930 in dry white lead?

A. What I stated was that—pardon me, what period?

Q. From 1925 to 1930.

A. In that period we had to get the best price we could get for our white lead from each customer that we sold it to, and there were no relations that I can recall between the price that we got and the quantity that we sold.

Q. Did you offer purchasers in carload quantities a better price than you did purchasers in less-than-carload quantities?

A. We always did.

Q. You always did?

A. That is my recollection.

Q. Was that a part of your published price policy?

Mr. Hinds: Your Honor, I object to that on the grounds that the question implies there was a published pricing policy. I don't think that has been shown; I don't think there has been any such evidence.

Trial Examiner Norwood: Objection overruled.

The Witness: I don't recall that there were any prices published by Euston Lead, there may have been but I don't recall that there were. The practice we followed in pricing lead, white lead, then, when we got an inquiry or a chance to sell it, was to name a price, always with an eye to the prevailing white lead market. 2632

By Mr. Wright:

Q. Do you know whether or not at that time the National Lead Company quoted and offered to sell to carload purchasers at a differential under the price to less-than-carload purchasers, on dry white lead?

A. You are speaking now of a differential between carloads and less-than-carloads?

Q. Yes, prior to 1930, between 1925 and 1930.

A. I do not recall whether they did or not.

Q. Does The Glidden Company now offer a carload discount to dry white lead purchasers?

Mr. Hinds: Do you mean prior to the filing of this complaint?

Mr. Wright: I mean now.

A. I think so, but Mr. Knight can perhaps be more accurate on that than I can because I haven't seen the schedules for the last year or year and a half.

Q. Well, there is evidence in the record, I believe, that it has been customary in the period at least from 1937, on, to quote a quarter of a cent differential for purchases in carload lots on dry white lead, on the part of The Glidden Company.

A. For quite a long period of time that was done,
2633 and the cards that you have—

Q. (Interposing.) Do you know when that differential was first established by Glidden?

A. I do not recall the time. It was done as soon as competition was encountered.

Q. In other words, if the National Lead Company initiated that as a part of their regular policy, then The Glidden Company followed?

A. As soon as Glidden learned that that was the basis on which the National Lead product was available, Glidden Company's prices were made to meet it.

Q. Do you recall discussing the question of a differential between l.c.l. and carload purchases of dry white lead in any meeting of the lead industries association, pigments division?

A. Unless I could see the minutes I wouldn't recall such a discussion at a specific time, but certainly discussions of that question were a part of the overall discussions during the period of the Code.

Q. Now getting to those discussions in the Code period, I assume now you are referring to the meetings of the various branches of the Pigments Division. At those meetings did the members present discuss fully the practices which were then and had been in the past employed in marketing these various pigments?

2634 A. Well, the meetings that I attended discussed quite thoroughly all phases that related to the problems of the industry in the light of the situation in those days—everything we could think of.

Q. Did those discussions include suggestions by those present as to improvements which could be made in the marketing practices of the industry?

A. Very definitely, sir, they did.

Q. And those were full and complete discussions of those problems?

A. I can recall of no limits that were placed on anybody in those discussions.

Q. Were those people in general agreement as to many of the things which were discussed as improvements, as to the value of them in the industry?

A. Well, the history of those meetings was this, that there were many differences of opinion and as they met further and wrestled with problems they probably had the same situation as confronted General Marshall, they finally threshed them out to a point where they could agree on recommendations for the Code.

Q. This morning you described or gave an illustration of how the differential in equalization points on white lead-in-oil worked out in the period prior to 1933. As I recall it you gave an illustration of an order for delivery at
2635 Boulder, Colorado, which would take the price at the nearest differential point, plus the equalization of the freight from the shipping point to the differential point and the destination. Will you explain again how an order of that type would be priced under that method? Take again your illustration of an order at Boulder, Colorado, and a differential point at Denver.

A. Well, I don't claim to be up on the details of that, but I can repeat the illustration that I gave this morning which was that if the base price of white lead-in-oil was 12 cents, and Denver was a one-eighth cent premium equalization point, then it was my recollection that the price applicable to a sale in Boulder would be 12 cents, plus one-eighth cent, plus the equalized rate from the point of origin to Boulder, Colorado.

Trial Examiner Norwood: That is from Denver to Boulder, is it?

The Witness: The freight equalized from point of origin to Boulder against Denver.

Trial Examiner Norwood: It would be from Denver to Boulder, regardless of point of shipment?

The Witness: I don't believe there were any limitations in that method as to what the shipping point should be.

By Mr. Wright:

Q. What do you mean by "equalized with Den-
2636 ver"? What process do you go through to equalize
with Denver, in that situation?

A. My conception of that was this, that if the shipment originated at St. Louis, say, and the freight rate from St. Louis to Boulder was 15 cents, and the freight rate from St. Louis to Denver was ten cents, that the price would then be 12 cents, plus one-eighth cent, plus five cents per cwt. delivered at Boulder. Now as I say, I am not up on the details of that and I may be wrong, but that is my conception of it at this moment.

Trial Examiner Norwood: The five cents being the freight from Denver to Boulder?

The Witness: I don't know whether that is the freight from Denver to Boulder or not, it may not be, but it is the ratio of equalization of Denver against Boulder out of St. Louis.

By Mr. Wright:

Q. It required, in making a price by that method, did it not, a knowledge of the freight rate from the equalization point to the destination point, and from the shipping point to the destination point, for comparative purposes?

A. Not in making the price. The price was quoted to the buyer at 12 cents plus one-eighth cent, equalized Boulder against Denver. The buyer probably didn't know what that equalization was and probably the seller didn't; it had
to be computed, I imagine, at the time it was invoiced.
2637 A knowledge of freight rates would be involved in
that particular situation when the invoicing was done,
but as I understand it, not when the quoting was done.

Q. Well, the customer wouldn't know what the price was until that computation had been made, would he; he wouldn't know what his cost was?

A. He knew his price, 12 cents and one-eighth cent, Boulder equalized Denver. But the ultimate cost to him he wouldn't know until he got his invoice and checked his freight rates.

Trial Examiner Norwood: We will have a five minute recess.

(A short recess was taken.)

2638 Trial Examiner Norwood: The hearing will come to order.

Mr. Hinds: If Your Honor please, my attention has been called to an inadvertent statement by Mr. Sprague when he referred to the period from 1933 to 1935 as being the OPA period, and I move to strike that portion of his previous answer as unresponsive, besides being an inadvertence. Do you consent to that?

Mr. Wright: Yes, I have no objection.

Trial Examiner Norwood: Off the record.

(Discussion off the record.)

Trial Examiner Norwood: On the record. You can take that up in the morning and call my attention to the particular part of the record that you desire to be stricken.

Proceed, Mr. Wright.

By Mr. Wright:

Q. Do you recall in that period that we have been talking about, in the very early 30's and the late 20's, Mr. Sprague, whether the other pigments in kegs, 100 pounds, 50 pounds, 25 pounds, and 12½ pounds, were also sold on those differential and equalization points?

A. Except in one or two instances where special contracts were taken on a public bid that called for some small barrel, I recall of no sales of dry white lead by Euston in anything less than barrel lots.

2639 Q. When did The Glidden Company first begin quoting prices on white lead-in-oil on the basis of zones or territories within which a flat price applied?

A. After The Glidden Company discovered that was the basis of competition on white lead-in-oil.

Q. When was that?

A. I can't recall the date. I would have to refer to my notes and even then I am not sure that I have it. If you want me to see what I can find; I have my notes here.

Q. Mr. Harold Rowe testified earlier in this proceeding—are you acquainted with Mr. Rowe?

A. Yes, I am.

Q. He is one of the gentlemen with whom you conferred in these meetings of the Pigments Division?

A. Yes, he was a member and I think the chairman of one of them.

Q. He testified here that it was his best recollection that the National Lead Company first began quoting and selling on the zone basis in the latter part of 1933 or the early part of 1934. Do you have any recollection as to that?

A. No, I have no specific recollection of that although those dates seem to be about what I would expect. When National Lead started that I would be unable to say.

Q. Then as soon as you learned that National Lead was quoting on that basis The Glidden Company began
2640 quoting on a similar basis, is that correct?

A. That is correct.

Q. Do you recall anything of the geographical extent of the territories and the differentials between them, which were involved in the first quotations under the zone method by National?

A. No, only in so far as Glidden's meeting of that competition might throw light on it. We had to learn what National had done, either from their—

Q. (Interposing.) Wait a minute. I asked you if you knew what the extent of those was. I am not asking you why. Please tell me simply what the extent of those zones was, and the differentials between them?

Mr. Hinds: Territorial—

Mr. Wright: (Interposing.) The territorial zones and the differentials between them on white lead-in-oil?

The Witness: Well, our knowledge of the use of zones occurred after Glidden had put white lead-in-oil in the hands of the paint divisions, with responsibility to develop distribution, and—

By Mr. Wright:

Q. (Interposing.) When did that occur?

A. I testified on that yesterday. I can refer to my notes but I can't remember the date. Do you want me to refer to my notes and give it to you?

2641 Q. I would like your independent recollection—it was refreshed yesterday—about that.

A. Well, it is in my testimony of yesterday; you have the record here.

Q. But you don't know what you testified yesterday with regard to that?

A. I can't repeat all of the dates in every respect that

I testified to yesterday, without again refreshing my memory. I can give you my impression, if you wish that.

Q. Well, give us your impression and we will see what it is based on.

A. I think it was around '33 or '34.

Q. Now what are you referring to, the transfer of the sales to the paint divisions?

A. When the Glidden paint divisions began actively to take that over.

Q. Are you familiar with the geographical territories comprising the so-called par or base zone on white lead-in-oil which were employed by The Glidden Company during OPA?

A. I would only be familiar with that to the extent that my memory could be refreshed by seeing some of our bulletins, but it does seem to me that that didn't occur during OPA. It seems to me that we learned of zone activities after that.

Q. I am speaking now of OPA, when your ceilings were held during the OPA period, 1942 to 1945.

2642 A. Oh—will you ask that again, please, sir?

Q. Can you describe generally the geographical territory comprising your par zone on white lead-in-oil during the OPA period?

A. I think I can describe it generally, but not with particularity.

Q. Roughly what states did it consist of, or how was it bounded?

A. Roughly it was bounded by the Ohio River on the South, the Mississippi River on the West, and the Great Lakes and St. Lawrence on the North, and there was a line somewhere across the Mississippi River, in Wisconsin, I think, or somewhere.

Q. And that ran all the way to the Atlantic Ocean?

A. Yes.

Q. I believe it is already in the record that there were territories in which you charged one-eighth cent per pound over the par price, and other territories, with one-quarter, three-eighths, one-half and three-quarters?

A. Yes, sir.

Q. You are familiar generally with those zones, are you not?

A. I am familiar with the fact that there were those areas that we encountered, but I can't describe them with any degree of particularity.

Q. That is satisfactory. Can you tell me now over
2643 how long a period of time The Glidden Company had
employed those territories and those differentials
prior to 1942—

Mr. Hinds: (Interposing.) I object to the use of the word "employed" because the witness' expression was "encountered". He didn't say that they employed them.

Trial Examiner Norwood: The objection is overruled.

The Witness: What period of time prior to 1942?

By Mr. Wright:

Q. Yes.

A. From 1942 back to the time that they were first encountered.

Q. Well, now, were the territories of those zones and the differentials between them as they appear in the OPA period substantially as they were when you first encountered them? In other words, have there been any significant changes since you first encountered the zone method of quoting, in that zone method?

A. I would not regard that significant changes had occurred, but there were changes in the trade areas, boundary trade areas, as I recall it.

Q. When did those changes occur?

A. I couldn't tell you.

Q. I call your attention to Commission's Exhibit 593
which is in evidence—Announcement of Premium Zones
and Price Differentials Applicable to Sales of Euston
2644 White Lead-in-Oil, dated October 10, 1941, and to the
areas listed there in the par territory, and the various
differential zones. Is that substantially the same delineation of territories and differentials which was first employed by The Glidden Company?

A. I would regard that it is. On its face it indicates that it supersedes a previous schedule, indicating that there was a previous schedule and that it was different than this one.

Q. But you have no knowledge of that previous schedule, have you?

A. No specific recollection, no.

Q. No recollection of it?

A. No specific recollection of it, no.

Q. Do your records in The Glidden Company encompass any documents, historical documents, which would set out chronologically the changes in territories or differentials which have occurred from time to time?

A. I don't think so. We tried very hard to locate that information at the time this matter came up, and my recollection is that most, if not all, of the type of document or paper that would show that, were destroyed in the ordinary course of the company's business, which now turns out to be regrettable.

Q. Then you know nothing of the origin of that pencil statement on the top of Commission's Exhibit 593, "Since 1935 adopted National"?

A. I am familiar with that, Mr. Wright. I know, 2645 though, nothing of my own knowledge of the origin of it. I have heard considerable about the origin of it.

Q. Of that particular notation?

A. Of that particular notation.

Q. Will you tell us what you know about the origin of that notation?

Mr. Hinds: What he has heard, do you mean?

The Witness: It is just what I have heard in this case.

By Mr. Wright:

Q. I want to know what you know of your own knowledge?

A. I know nothing of my own knowledge about it.

Q. Did you discuss this document with Mr. Dunn when you gave it to him?

A. I think I did.

Q. Do you recall what you stated to him regarding that document?

A. No, I can't tell you what I stated to him, but I can tell you what I undoubtedly did state to him.

Q. No, I want your recollection of what you stated to him.

A. Well, I do not recall the words I used in talking with Mr. Dunn back at that time, other than to say that he was inquiring for information about these matters from me, he had been referred to me, and I gave him, to the best of my ability, the information he wanted.

2646 Did you state to him at that time that similar territories and differentials had been adopted by National Lead in 1935 and had been put into effect by Glidden after that, and followed since that time?

A. I didn't say to him, to my best recollection, anything about what National adopted in 1935, but I said to him, as I have said in this hearing repeatedly, that Glidden did follow the competition of the National Lead Company in regard to this pricing matter as promptly as they could.

Q. So that National may have adopted something like this in 1935, and if so you undoubtedly followed it, is that correct?

A. If National adopted—

Mr. Hinds (Interposing): Objected to. He hasn't made it clear whether he is asking what he said or what the fact was. I won't object on either ground if he makes the question clear. Does he want the fact or the conversation with Mr. Dunn?

Mr. Wright: I want the fact.

Mr. Hinds: There is no objection, then.

Mr. DuBose: I would like to object on the ground that the question is hypothetical and speculative and doesn't deal with facts.

Mr. Wright: We have dealt with many hypothetical matters heretofore in this gentleman's testimony.

Mr. DuBose: We are now making an objection on
2647 that ground.

Trial Examiner Norwood: Read the question.

(The reporter read the question as follows:

"Q. So that National may have adopted something like this in 1935, and if so you undoubtedly followed it, is that correct?")

Trial Examiner Norwood: Objection overruled. This is cross examination. Answer the question.

The Witness: If National adopted something like that in 1945, Glidden would have desired and undoubtedly did attempt to meet it as quickly as they could establish it.

By Mr. Wright:

Q. You said 1945—did you mean that?

A. I meant 1935.

Q. Mr. Sprague, you mentioned, as one of the factors in your business the competition with other pigments as far as basic carbonate white lead is concerned. You mentioned lithopone and zinc oxide and titanium pigments and leaded zinc oxide as the principal competition of white lead. Does The Glidden Company produce or market any of those pigments?

A. Yes, sir, it produces and markets titanium oxide and lithopone, in addition to white lead carbonate.

Q. Is Glidden a large producer of either of those pigments, percentagewise, in the respective industries?

2648 A. Glidden's business in titanium oxide is a very small proportion of the total—I refer to the production and sale of titanium oxide. Glidden's business in lithopone is the exception that proves the rule. It is probably the largest in the United States, produced at multiple producing points.

Q. Who are the principal producers of titanium pigments?

A. The Titanium Pigment Company, the duPont Company, and The American Cyanamid Company—I believe they operate their titanium business under that name, but if not it is a subsidiary of that company, formerly the Interchemical Company's operation.

Q. Under what name does The Glidden Company produce titanium pigments, under its own name or under an operating division with another name?

A. As The Glidden Company.

Q. Does the National Lead Company produce titanium pigments?

A. I am unable to state as I do not know the corporate relationship between National Lead Company and the Titanium Pigment Company.

Q. Do you know that there is a corporate relationship between those two companies?

A. Yes, sir, I think there is.

Q. How large a factor in the titanium pigments business is the Titanium Pigment Company?

A. One of the principal factors.

Q. Is it a dominant factor in the industry?

2649 Mr. DuBose: I object to that, if Your Honor please. He is going far afield and this witness has not been qualified as an expert in the field of titanium pigments and the relationship of other companies to that industry.

Trial Examiner Norwood: Objection overruled.

Mr. DuBose: I object also to the form of the question.

Trial Examiner Norwood: The objection is overruled. Answer the question.

The Witness: I was very actively in touch with matters of that sort up to the middle of 1945. I was a member of the

Titanium Pigment Industry Advisory Committee of the War Production Board, and it was my impression—although the statistics of production of the titanium pigments were never publicized—that the Titanium Pigment Company was a large or the largest producer of the so-called "let-down" titanium pigment, and that the duPont Company was the largest producer of the pure titanium oxide, but the difference there was not, in my judgment from what I was able to learn, very great.

By Mr. Wright:

Q. Would it be fair to say that the duPont Company and the National Lead Company between them control most of the production of titanium pigments?

Mr. DuBose: I would like to object on the ground that it is incompetent, irrelevant and immaterial.

2650 Trial Examiner Norwood: Objection overruled.

A. Over what period do you wish to apply that question?

By Mr. Wright:

Q. I wish to apply the question as of 1941.

A. I think the major part of the production of titanium pigment at that time was conducted by those two organizations.

Q. Are titanium pigments principally produced under patented processes?

Mr. DuBose: May we have a blanket objection to this whole line of questioning?

Trial Examiner Norwood: You may.

Mr. DuBose: And an exception?

Trial Examiner Norwood: Yes.

A. There are so many patents in connection with the manufacture of titanium pigments that I should imagine the principal production has something to do somewhere with some patents. I got lost years ago trying to keep up with titanium oxide patents.

Q. What concerns control the principal patents in that business?

A. Well, I think The Glidden Company has the principal patents.

Q. At the present time?

A. At the present time, and it had patents in 1941.

Q. Were those patents in that industry in litigation?

2651 A. I don't think Glidden's patents were in litigation.

Q. Is that an industry in which prices and terms are fairly well controlled through patent licenses?

Mr. DuBose: I again would like to renew my objection upon the ground that this whole line of questioning is irrelevant and immaterial to this proceeding.

Mr. Wright: Your Honor, the point has been raised several times in this proceeding that one of the distressing factors in the white lead business has been the competition of titanium pigments, and this witness went into it on direct and I think I should have a nopportunity of cross examining him regarding it.

Trial Examiner Norwood: I think that he should be allowed to proceed. We have gone into the matter of competition, and this touches on that, on the nature of the competition.

Mr. Wright: I will frankly state that the purpose of my questions is to bring out that this is the right hand competing with the left hand.

Mr. Hinds: Is there anything wrong about that?

Mr. Wright: No sir, but I want it in the record.

Trial Examiner Norwood: The objection is overruled. Answer the question.

The Witness: May I have the question?

Trial Examiner Norwood: Read the question.

2652 (The reporter read the question as follows:

"Q. Is that an industry in which prices and terms are fairly well controlled through patent licenses?")

The Witness: I don't believe the prices and terms are in any way concerned with the patent licenses that I know anything about.

Mr. Ewing: I don't know whether Mr. Wright wants this concession from me or not but I am perfectly willing to concede, as far as National is concerned, that its left hand, white lead, is competing with its right hand, titanium—there isn't any doubt about it.

Trial Examiner Norwood: Proceed.

By Mr. Wright:

Q. Do you know whether any of the other respondents in this matter, including the Eagle-Picher Company, Sherwin-

Williams, the Anaconda Copper Mining Company, International Smelting & Refining Company, and the National Lead Company, produce and market lithopone?

A. The Sherwin-Williams Company produces lithopone, but to my best knowledge does not market it at this time. Eagle-Picher Lead Company produces, and I believe markets, lithopone. I do not believe any of the others in this action are involved in lithopone, other than Glidden.

Q. Does your company produce any zinc oxide?

A. No zinc oxide.

2653 Q. Does the Eagle-Picher Lead Company to your knowledge produce zinc oxide?

A. You mean zinc oxide as distinguished from leaded zinc oxide?

Q. Yes.

A. I believe they do.

Q. How about the National Lead Company?

A. I do not believe National produces a zinc oxide.

Q. Sherwin-Williams?

A. Not to my knowledge.

Q. How about International or Anaconda?

A. You will have to state your time period because there has been a change in their situation.

Q. Prior to the time that the complaint was issued in this matter.

A. Prior to the time of the complaint—yes, the International Smelting & Refining Company produced zinc oxide during years prior to the issuance of the complaint.

Q. Do they now produce it?

A. It is my understanding that they are out of business and have disposed of their properties.

Q. On zinc oxide?

A. On lead pigments and zinc oxide.

Q. Does your company produce leaded zinc oxide?

A. No, sir.

2654 Q. Who are the largest producers of leaded zinc oxide?

A. In my opinion the Eagle-Picher Lead Company are the largest producers.

Q. Of what is leaded zinc oxide composed, generally?

A. Leaded zinc oxide is a composite pigment that chemically is a blend, or it may not be a blend, it may be a composite of zinc oxide and basic lead sulphate.

Q. Is that sold in varying proportions of zinc oxide and basic lead sulphate?

A. Yes, the pigment has been marketed in more than one form. For example, there is per cent leaded zinc oxide and 25 per cent leaded zinc oxide, and so forth, depending upon the ratio of the basic lead sulphate and the zinc oxide contained in the product.

Q. In a five per cent leaded zinc oxide to what would the five per cent refer, would that be lead content or the zinc oxide content?

A. It is a long time since anyone has asked me that, but it is my idea that the product would be roughly 95 per cent zinc oxide and 5 per cent basic lead sulphate—that is my impression.

Q. Does the National Lead Company produce that?

A. Not to my knowledge.

Q. Does Sherwin-Williams produce it?

A. Yes.

2655 Q. Do they market it, do you know?

A. They have at times. If you will be specific as to time I can be more specific as to answer.

Q. Say in the period from 1936 to 1940, did they market it?

A. Yes.

Q. I believe you stated a while back that you did not know at what time the differential for carload over less-than-carload shipments of basic carbonate was first quoted generally in the industry—is that correct?

A. That is correct.

Q. Do you recall any discussion of the question of the desirability or undesirability of such an l.c.l. differential during the pre-Code days by members of the industry?

A. I know of no discussions by members of the industry on anything during the pre-Code days.

Q. When I say "pre-Code" I mean prior to the time that the Code was actually approved. I mean to include in there—

A. (Interposing.) I am distinguishing the time in my answer as between the time that the Code discussions began. I know of no discussions prior to that in the industry.

Q. Do you recall any discussion during the Code time, then, concerning that?

A. No, not without refreshing my memory. I couldn't recall a specific discussion or a specific meeting, but I
should expect that there was such a discussion along
2656 with all of the other considerations of those matters
incident to the Codes.

Q. I show you, Mr. Sprague, a document for the purpose of refreshing your recollection, and ask you if you will read this and then state to me whether your recollection is refreshed about any quotation of less-than-carload differential on dry white lead?

A. No, that does not refresh my recollection.

Mr. Wright: I have no further questions this evening, Your Honor.

Trial Examiner Norwood: Off the record.

(Discussion off the record.)

Trial Examiner Norwood: On the record.

We will recess now until ten o'clock tomorrow morning, Eastern Daylight Saving Time.

(Whereupon, at 4:10 p. m., EDST, May 14, 1947, the hearing was adjourned to Thursday morning, May 15, 1947, at 10:00 a. m., EDST.)

2657

Room 332, Federal Trade
Commission Building,
Washington, D. C.,
Thursday, May 15, 1947.

Met, pursuant to adjournment, at 10:00 a. m., E. D. S. T.

Before:

John W. Norwood, Trial Examiner.

Appearances:

Joseph S. Wright, Esq., appearing for the Federal Trade Commission.

J. T. Welch, Esq., (Davies, Richberg, Beebe, Busick, & Richardson, 815 15th St., N. W., Washington, D. C.), appearing for Sherwin-Williams Company.

Edmund P. Wood, Esq., (2801 Carew Tower, Cincinnati, Ohio), appearing for Eagle-Picher Lead Company and Eagle-Picher Sales Company.

James D. Ewing, Esq., and

E. Z. DuBose, Esq., (Alexander & Green, 120 Broadway, New York, N. Y.), appearing for the National Lead Company.

John A. Duncan, Esq., (1649 Union Commerce Building, Cleveland 14, Ohio, and

Roger Hinds, Esq., (165 Broadway, New York, N. Y.), appearing for The Glidden Company.

2658 PROCEEDINGS.

Trial Examiner Norwood: The hearing will come to order.

Pursuant to adjournment on yesterday, the hearing is now reconvened in Docket 5253, in room 332, Federal Trade Commission Building, Washington, D. C., at 10 o'clock a. m., Eastern Daylight Saving Time, on the 15th day of May, 1947.

I want to bring up a ruling that I made the day before yesterday, which appears on page 2531 beginning on line 20 of that page. After seeing the question in the record it is entirely different from what I had in mind at the time as to its purport, and I think that counsel for the Commission should have been sustained in his objection, and I am reversing my ruling and sustaining his objection, and striking the answer.

Mr. DuBose: What page is that, if Your Honor please?

Trial Examiner Norwood: 2531.

Mr. Wright: That is the answer that appears on line 13 of page 2532?

Trial Examiner Norwood: Yes, line 13 of page 2532. The objection is sustained for the reason given by the Commission's counsel.

Mr. Hinds: I assume we can reframe our question when it comes to redirect, but I will not interrupt at this time.

2659 Trial Examiner Norwood: That is right.

Proceed.

PAUL E. SPRAGUE resumed the stand and testified further as follows:

Cross-Examination (Continued) by Mr. Wright.

Q. Mr. Sprague, The Glidden Company is, I understand from your testimony, a very large producer of mixed paint; is that correct?

A. One of the largest producers, yes, sir.

Q. Is it among the first ten producers of mixed paint?

A. I think so.

Q. What is the attitude of the paint industry generally on the matter of selling on consignment?

A. My understanding of the attitude of the paint industry generally is that it is opposed to consignment selling.

Q. Do you recall the provisions of the Code of Fair Competition for the Paint, Varnish and Lacquer Industry generally?

A. No, I do not.

Q. Do you recall whether that had anything in it regarding the practice of selling on consignment of mixed paint?

A. No, I left the paint industry in 1925 in my active work, and I never even read the paint Code.

Q. When was it you stated that your company
2660 first began to employ consignment contracts in marketing white lead-in-oil?

A. My recollection is that it was about four or five years after that method of distributing white lead-in-oil had been adopted or started by our competitors.

Q. I believe you stated that you did not adopt your competitors' consignment contracts when you decided to embark on that practice, is that correct?

A. That is correct. I stated that our company prepared its own consignment agreement.

Q. By whom was that prepared, do you recall, by what department?

A. It was prepared by the Legal Department of our company.

Q. Do you recall what their instructions were?

A. No, it was handled entirely by our Paint Divisions.

Q. Do you know whether or not they had before them, when they drew those contracts, the contracts of your competitors?

A. I do not know whether they had competitors' contracts before them or not, but I surmise that they did.

Q. You were generally familiar with the paint business in the period 1933 and 1934, were you not, Mr. Sprague?

A. Well, I think I should answer that I was generally familiar with it in very rough outlines.

Q. You knew generally what the policies of The Glidden Company were in the marketing of paint?

A. No, I didn't follow that. The only paint item
2661 that I followed with any degree of interest was the white lead-in-oil.

Q. But you were in considerable contact with the Paint

Divisions of Glidden, weren't you, in connection with the transfer of marketing of that product to the Paint Divisions?

A. Not a great deal.

Q. Well, you first were employed by Glidden, as I recall, in 1915, did you say?

A. That is right.

Q. You had been with the company for 18 years by 1933, then, had you not?

A. That is right.

Q. Was the company then a large producer of paint?

A. In what year?

Q. 1933.

A. Yes.

Q. Relatively, in the industry?

A. Yes.

Q. Did you know of any plot or scheme by the paint industry to raise the price of white lead-in-oil in 1933 and 1934?

A. A plot or scheme by the paint industry to raise the price of white lead-in-oil?

Q. Yes, sir.

A. No, such a scheme would have been impossible.

Q. It has been testified here in this proceeding that it was the intention of the paint industry, through the 2662 provisions of the Paint, Varnish and Lacquer Code, to hamper the white lead-in-oil industry and to raise the prices of white lead-in-oil—

Mr. Hinds: (Interposing.) I object, particularly to the portion of the question which purports to state testimony, but I will withdraw my objection—

Mr. Wright: (Interposing.) I will withdraw the question.

Trial Examiner Norwood: All right.

By Mr. Wright:

Q. If it had been stated that there was a plot or plan on the part of the paint industry to raise the price of white lead-in-oil during the 1933 and 1934 period, would you say that was a correct statement of fact?

Mr. Hinds: I object to the form of the question. The fact exists independently of whether it had been stated or not. The hypothesis is entirely unnecessary in the question.

Trial Examiner Norwood: Read the question.

(The reporter read the question as follows:

"Q. If it had been stated that there was a plot or plan on the part of the paint industry to raise the price of white lead-in-oil during the 1933 and 1934 period, would you say that was a correct statement of fact?")

Trial Examiner Norwood: I think he may ask it that way. That is just a manner of speaking.

2663 Mr. Hinds: Well, it isn't a proper method of ascertaining evidentiary facts. Why not ask him what the fact was, if he knows? I am not sure that he knows.

Trial Examiner Norwood: You mean change it from a hypothetical to a categorical question?

Mr. Hinds: Yes.

Trial Examiner Norwood: I think the witness so understands it.

Mr. Hinds: My objection was to the form of the question, not to the relevancy of the subject matter.

Trial Examiner Norwood: Objection overruled. Answer the question.

The Witness: I will have to ask you to read it again, please.

(The reporter again read the question.)

A. I have no knowledge of any such plot or plan. I do recall that during the period of the Code development, there was a great deal of discussion and difference between the paint industry and the lead industry as to where white lead-in-oil should go in the Codes. But the features and the details of that controversy I do not recall very much about.

By Mr. Wright:

Q. Do you recall that that controversy had as an aspect the raising of the price of white lead-in-oil?

A. No, I have no recollection of that aspect, if
2664 there was such an aspect.

Q. Now if there had been any such move by the paint industry generally at that time, Glidden Company would certainly have known about it, would they not?

A. It is impossible for me to give you a categorical answer to that, because The Glidden Company has at times been in and out of the Paint Association's industry activities.

Q. You made the statement, as I recall it, on your direct-examination, and particularly with reference to lead oxides, that the producer was in effect a converter, and that the margin between the cost of pig lead and the price at which you could sell it was, in effect, a toll charge; is that correct?

A. That is correct.

Q. Now in the early days of your association with Metals Refining Company, you stated that you attempted to produce your own pig lead through secondary smelting, is that correct?

A. Yes, sir.

Q. Did that plan prove successful?

A. It proved unsuccessful economically.

Q. Well, then, following that you have relied upon outside purchases of pig lead, have you?

A. Entirely.

Q. Entirely?

A. Yes.

Q. You buy that on the regular market, I take it?

2665 A. Yes, sir.

Q. What pig lead price does Hammond take, is that the Chicago price of pig lead?

A. My recollection is that the cost of pig lead delivered at Hammond is 10 cents per hundredweight over the St. Louis lead market. If that is in error, I can correct it.

Q. Do you recall what the Chicago base is for pig lead?

A. My recollection is that that is the Chicago base.

Q. Now when you make litharge in your process of production, how many pounds of litharge do you produce out of 100 pounds of pig lead, do you know?

A. There are always process losses in handling lead, converting it, and there are weight gains due to the addition of the oxygen to the weight of the finished product. So the precise figures I couldn't give you, but you could calculate them—

Q. (Interposing) I believe Mr. Zoller and Mr. Merson testified—are you acquainted with either of those gentlemen?

A. Yes, I have met them.

Mr. Hinds: I think the witness hadn't finished his previous answer before the next question came.

Trial Examiner Norwood: Had you finished your answer?

The Witness: No, I hadn't. I said the amount produced could be very easily calculated from an analysis of the charts introduced earlier in the testimony.

2666 By Mr. Wright:

Q. Mr. Zoller and Mr. Merson testified, as I recall, that they produced about 107 pounds of litharge for 100 pounds of pig lead. Does that figure seem correct to you?

A. That is about right.

Q. Do you generally—I don't mean in all instances—but do you generally, or have you generally in the period, say, from 1936 to 1942, quoted carload litharge at $1.50 per hundred over the New York price of pig lead?

A. Yes, sir, and also on the basis of the St. Louis market.

Q. So that assuming now, that pig lead is 8½ cents a pound and your differential on litharge is a cent and a half, your price, then, is 10 cents per pound for litharge in carload quantities; is that correct?

A. That is right, delivered to destination.

Q. So that, assuming that you get approximately 107 pounds of litharge from 100 pounds of pig lead, your margin, then, between the price and the cost of your basic raw material, would be $1.50 plus 7 pounds at 10 cents, which would be picked up in the process of manufacture, or $2.20?

A. Well, the margin is the difference between the actual cost to produce the litharge and the selling price of the litharge. Now—

Q. (Interposing) I am talking about your gross margin between the price and the cost.

2667 A. That is correct, so am I. Now that gross margin consists of the factors involving the weight gain as an addition, the factors involving the process losses as a subtraction, and whatever they all are in the washout, the difference is the actual cost on the one hand and the selling price on the other.

Q. Assuming, now, that including your losses in production your overage was 7 pounds, at 10 cents a pound, you would add that to your $1.50 which would be your differential, and that would give you a figure of $2.20 a hundred pounds, would it not?

A. Well, I will have to do a little figuring here. I see what you are arriving at. I just want to check a little.

Will you say that again, Mr. Wright?

Trial Examiner Norwood: Let the reporter read the question.

(The reporter read the question as follows:

"Q. Assuming, now, that including your losses in production your overage was 7 pounds, at 10 cents a pound, you would add that to your $1.50 which would be your differential, and that would give you a figure of $2.20 a hundred pounds, would it not?")

A. I believe that is correct, provided you take into account that you secured 107 pounds; and the $2.20 then should be divided by 107 to produce a figure representing the differential at that point. In other words, it is
2668 not $2.20, but it is $2.20 divided by 107, if you assume that as the weight.

By Mr. Wright:

Q. But that $2.20 is the gross margin that you have to work with on that 107 pounds of litharge, that is your gross toll?

A. That is correct, minus the process losses, which you have not taken into account.

Q. I said to assume that it was 107 pounds; that you would already have deducted the losses, so we would have something to talk about.

A. All right. And that also assumes completely oxidized litharge to PbO.

Q. Will you explain that?

A. Yes. If we make sub-oxide, the black oxide or a brown oxide, or any other oxide that is not PbO, you do not get that 7 pounds weight gain that you are calculating. The weight gain becomes lower as the degree of oxidation of the lead falls.

Q. So that it is closer to a metallic lead content in the brown and black oxides than in the other litharges?

A. That is correct.

Q. Brown and black oxides are a part of the litharge category, though, is that correct?

A. Well, I regard them as such.

Q. You bill, now, to a customer, this litharge at 10 cents a pound, under this hypothetical calculation that we have made here?

2669 A. Yes.

Q. But the real thing is that $2.20, is it not?

A. Well, it is hard for me to tell what you mean by the "real thing". The present spread is that.

Q. In other words, it is out of that $2.20 that all your operating costs, every expense connected with the manufacture, and depreciatic and profit, come?

A. That is correct. You should not use the term $2.20 in that light, however, Mr. Wright, because that is $2.20 divided by 107 only when your selling price of litharge is 10 cents and your lead market is 8½ cents. The minute you get other relationships, then the spread changes.

Q. The relationship of that overage will then change and it will vary that figure up and down?

A. That is right.

Q. When the price of lead is low, your overage will be less in dollars and cents than when it is high?

A. That is right. You cannot assume there is a spread of $2.20 divided by 107 in the litharge business. That is only true when pig lead is 8½ cents.

Q. That is true. We were assuming that for the purpose of getting this out.

Now when you ship that litharge to a customer, is it your general practice to bill that freight collect, or to ship it freight collect, I mean?

2670 A. Our practice was to the greatest possible extent to ship freight allowed, we to pay the freight. Now that is my recollection. There has been a great deal of study made on that particular point at various times in our company. The result, fundamentally, at the end is the same, but there are questions of traffic matters involved as to whether you allow the freight or whether you ship collect.

Q. When you ship collect, you allow the freight on the invoice, is that correct?

A. That is correct.

Q. And when you have used the term "allow freight", you mean that you would prepay freight, did you?

A. When you bill freight allowed, it is my recollection that we pay the freight and then allow it as a deduction on the invoice.

Q. That requires an increase in your working capital, doesn't it, to have that tied up in prepaid freight?

A. The amount of money that is necessary to pay the freight bills is a necessary part of your working capital.

Q. You are not prepared to state what the general practice has been of the company with regard to oxides?

A. No, that is a detail that slips my memory. I do remember considerable attention being given to it at various times, by us, and I remember there was attention given to that point in connection with some of the

2671 Code discussions, although I do not recall whether they were in litharge or whether it pertained to the shipment of antimonial lead. But the factor of the capital involved, and the traffic aspect of who makes freight claims and who audits the freight bills, are the determining factors.

Q. Would the records of your company, or would officials in your traffic department, have readily available information on what the general practice had been with regard to these various products?

A. I don't believe that could be obtained other than through the extent to which invoices could be found.

Q. Well, now, the extent that you prepay the freight on a particular transaction would reduce that margin that you have to work on in that business by that amount, would it not?

A. Yes, it would, but it would make no difference whether we prepaid it or whether we didn't—

Q. (Interposing.) In either event, it would shrink it by that amount?

A. Yes.

Q. Do you know what your average freight and shipping costs are in any period in the last ten years on oxides?

A. No, I do not know precisely what the average is, because such an average would be a meaningless thing. We use various methods of transportation in order to effect
delivery, and any average would have to be an av-
2672 erage of trucking charges, an average of less-than-
carload freight charges, and an average of carload
freight charges, so that it would be relatively meaningless,
as I see it, and I know of no such figures.

Q. In this hypothetical situation that we have given here, with the 8½ cent pig lead and selling litharge at $1.50 over, and picking up your 7 pounds in the process of manufacture, giving you the total of $2.20, that $2.20 less whatever transportation charges are involved, then, is the real price at which you sell your product, is it not?

Mr. Hinds: Objected to on the ground that the witness said the figure was $2.20 divided by 107, which, if you would like to have me give it to you, I have just divided out; 2.056 is my rough calculation.

Trial Examiner Norwood: I don't see that that is ground for objection.

Mr. Hinds: My objection is that the question presupposes a fact which is contrary to what the witness has said. He said it is $2.20 divided by 107.

Mr. Wright: I am willing to concede that it is that, and the record will be plain as to just what this situation is.

Trial Examiner Norwood: I think it is clear. Objection overruled.

A. The price at which we sold the litharge is 10 cents per pound, in that hypothetical case.

2673 By Mr. Wright:

Q. But what you receive, actually, over the inescapable cost of your basic raw material, is that $2.20 less the transportation charge?

A. You asked me the price at which we sold the litharge, and it was 10 cents, and we received 10 cents.

Q. But you figure your working inventory of pig lead, do you not, at the then market price of pig lead?

A. I believe we are required to figure our inventories—what kind of figures? I assume you refer to those that we use in our accounting. We have to figure our inventories at their actual cost, and at the close of our tax year they have to be adjusted to cost or market, whichever is lower, and we have a variety of figuring, inventory figuring factors to consider.

Q. Figuring them at market replacement cost—

A. (Interposing.) Market replacement at inventory date,—whichever is lower.

Q. Now in selling litharge in less-than-carload quantities, I direct your attention to Commission's Exhibit 810-i, which contains the so-called card prices of litharge and red lead and orange minerals of the Metals Refining Company. What relation does the price of 8½ cents there, on shipments of less-than-five-tons of litharge, bear to the New York price of pig lead?

A. Our card price of litharge was that which we 2674 found necessary to meet the competition in the litharge market. We did not set it, we followed it. But we observed, and I believe that some of the cards will show, that there was a relationship there, on an average relationship, of a higher difference or a higher spread than applied to carloads, and that the spread followed closely the movements of the pig lead market.

Q. Do you recall what that spread was, generally?

A. There is a five-ton price in that card that you showed me—

Q. (Interposing.) There are two prices, 5 tons and less than 5 tons.

A. Yes, and my recollection is that that spread was 2½ cents, on an average.

Q. Over pig lead for less than 5 tons?

A. I am not certain of the detail on that.

Mr. Hinds: I would like to have it noted that this is not cross-examination, of course.

Mr. Wright: May I inquire the basis for counsel's—

Mr. Hinds: (Interposing.) There was no direct examination about quantity differentials, not from this witness.

Trial Examiner Norwood: He was asked about pricing, he went into that.

Mr. Hinds: The differences between prices of carloads or less than carloads or less than 500 pounds were
2675 not even hinted at by this witness. He discussed price on a different basis. I am not saying that it is not relevant in the case; I am just noting that it is not cross-examination.

Mr. Wright: I differ with counsel in that respect. I believe that this whole matter of these prices and the things to which I am about to allude were opened up on direct examination.

Mr. Hinds: I am sure counsel will not be able to point to anything in the direct examination which even remotely touches on quantity differentials.

Trial Examiner Norwood: Well, that is a part of this general subject. The objection is overruled.

Mr. Duncan: Please note an exception.

Trial Examiner Norwood: Proceed.

By Mr. Wright:

Q. You stated that there was a differential on that less-than-5-ton price of approximately 2½ cents over the pig lead price?

A. I think that is correct, that is my recollection. Mr. Burruss is here, who has been very much closer to that than I, and I think perhaps he could give you more reliable testimony on that.

Q. Then the differential of 1½ cents in carload lots that was generally employed as compared to a differential of

2½ cents on less-than-carload lots, represented ap-
2676 proximately a 66⅔% larger margin over the price of
pig lead to you, did it not?

A. You are still using this particular hypothetical position of pig lead?

Q. Using any position of pig lead, if the difference over pig lead on the card is 2½ cents and the difference in pig lead on the carload price is 1½ cents, that differential on the less-than-5-ton price is ⅔ higher than the differential on the carload price, is that not correct?

Trial Examiner Norwood: Off the record.

(Discussion off the record.)

Trial Examiner Norwood: On the record.

We will have a five-minute recess.

(A short recess was taken.)

Trial Examiner Norwood: Proceed.

By Mr. Wright:

Q. Do you recall the last question that we were on, Mr. Sprague?

A. Yes, sir. The answer is yes, it is a 66⅔% increase in the manufacturer's spread; and it is also a 10% increase in the selling price to the customer on that hypothetical case.

Q. In what the customer pays, at any rate?

A. That is correct.

Q. Red lead is likewise customarily sold in carload lots at a differential over the price of pig lead, is it not?

2677 A. Our sales, and I believe those of others, are made that way.

Q. What does the differential on red lead generally run as compared with that on litharge—95% red lead I am talking about?

A. Two and one-half cents as against one and one-half cents.

Q. And there is customarily the same relative difference on the so-called card prices of one cent higher for red lead than litharge?

A. Yes.

Q. The card prices, then, also bear a similar relationship as to red lead now, to the price of pig lead, as do the card prices of litharge; is that correct?

A. Yes, sir.

Q. How do you customarily move your card prices, in what fractions or amounts?

A. We watch for the announcement of changes in the card price of either the National Lead or the Eagle-Picher Company and immediately follow them.

Q. Well, what has been your observation as to the multiples or fractions in which those card prices of National and Eagle-Picher move?

A. We have found as a rule that they were adjusted with one-quarter cent movements of the pig lead market.

Q. I believe it has been testified here that the pig
2678 lead market customarily moves in fractions of a 20th of a cent a pound, or 5 cents a hundred; is that correct?

A. I have observed violent movements of the pig lead market in larger amounts.

Q. That is the smallest fraction that it moves in, is it not?

A. I don't recall any smaller movement than 5 cents a hundredweight.

Q. Now in your differential selling, you did not mean to indicate, did you, that when the price of pig lead moves up or down you need to see the carload price announcements of your competitors before you knew what the effect would be?

A. No, not with respect to the sales at a differential over lead. The only thing we needed to know was the lead market. I thought you were referring to the less-than-carload selling.

Q. No, sir, I am referring to carload now. So that you know when the price of lead moves up and down by any amount, that your carload prices on a differential are going to be up or down by the same relative amount?

A. We make every effort to learn that instantly, and at times have had a wire service to attempt to keep up with it.

Q. Now on your card prices of your oxides, do you wait until you see a card, when you know the price of pig lead has gone up to the next quarter of a cent on pig lead, do you always watch and see a card of National or Eagle-Picher before you change your card?

2679 A. The cards usually come to our attention somewhat later. The main source of information that I recall is the daily paper, the daily Metal Market, or the Journal of Commerce, which has that as of the day that it becomes known.

Q. It has been testified here by officials of the National Lead Company and the Eagle-Picher Company that generally speaking, the cards always move in fractions of a quarter of a cent with the pig lead market. Is that your understanding of the situation in the industry?

A. That was our observation, as I stated a few minutes ago.

Q. So that actually, then, you know, as a practical matter, that when the pig lead market moves up or down a quarter of a cent, there is going to be a card change with the pig lead market; is that correct?

A. I expect such a change.

Q. You would probably be very much surprised, would you not, if there were no such change?

A. That would be unusual.

Q. Would there be any precedent for it in the last 10 or 15 years that you can recall offhand?

Mr. Hinds: Will you read the question, please?

Trial Examiner Norwood: Read the question.

(The reporter read the question as follows:

"Q. Would there be any precedent for it in the last 10 or 15 years that you can recall offhand?")

2680 A. I recall that there have been times when those changes did not appear, but I cannot recall when or what the circumstances may have been.

By Mr. Wright:

Q. When you first went to the Metals Refining Company in 1930, you made, I presume, a thorough study of the marketing practices of that company and of competitors in the industry to determine how the product was sold at that time?

A. I knew how lead oxides were generally sold by the market leaders, because I had been selling them for a couple of years prior to going to Hammond. I didn't know anything much about what the Metals Refining Company had been doing in a broad way until I got there.

Q. But you knew what the general industry practices of the leaders were at that time?

A. That is correct.

Q. Do you recall in 1930 what the general practice was as far as quoting delivered prices? Were there any differentials added for delivery in certain areas or territories, or was there any equalization or differential point method employed?

A. I didn't know about that, because the sales that I had been making prior to 1930 were all carload sales. What I did was to purchase litharge and red lead in carloads and resell it for the Euston Lead Company.

Q. Now after you went with Metals Refining, did 2681 you become aware of the practices that obtained with regard to differentials for delivery, I mean differentials on account of the customer's location, now?

A. We had general sales information from the field to the extent of our contacts at that time, and we certainly knew something about the practices there.

Q. What were those practices?

A. I do not recall any more than that the differences that we have discussed, between carloads and less-than-carloads, were in general used in the trade. I don't recall that there were any sales made at that time for delivery at distant points, because the practice had been to attempt to develop a business on material deliverable close to Hammond.

Q. On which sales you made considerably larger margins than at distant points?

A. Well, that was the theory that I found was held there, that prices could be reduced under the prevailing market and a part of the reduction offset by a shorter freight haul to the customer.

Q. Now do you recall discussions during the Code period, of making differentials for delivery in certain areas of the South and the West on sales of oxides?

A. Yes, I recall there were such discussions relating to that. About all the detail that I can give you of those discussions is that the high costs of transportation into 2682 those distant areas was a tremendous factor in the cost of doing business, and the question of developing a means of meeting that problem in connection with the Codes was discussed.

Q. Now there are at present, are there not, differentials for delivery in card quantities of oxides in the West and the South?

A. Yes, I believe there are, and my recollection is both as regards carloads and less than carloads.

Q. Well, the ones for less carload are different, are they not, than those for carload? In other words, they are different territories and different differentials applying to them?

A. I do not recall for certain, but I don't think so.

Q. I direct your attention to Commission's Exhibit 762-A, and sub-numbers, which is in evidence as a bulletin of The Glidden Company to its branch offices, and I call your attention to the statement on Exhibit 762-B under "Red Lead and Litharge in Drums", and ask you to read that.

A. Yes, sir. It refers to Schedule AA.

Q. You will note that Schedule AA is the zone for those less-than-carload shipments.

Mr. Hinds: If Your Honor please, merely to save time if for no other reason, I object on the ground that this testimony is not within the issues in this case, because The Glidden Company's answer admits certain allegations of
the complaint with respect to carload and less-than-
2683 carload zonings, and therefore, besides not being
cross-examination, is not even in issue in the case,
and we are just wasting time.

Mr. Wright: This witness has been on the stand before, he was on the stand on direct-examination in Cleveland, and we have discussed these zones, and I have found it necessary to go through considerable preliminary questioning to get to the points I want. I tried to get at this particular point by my preliminary questions, and I am now refreshing his recollection from official papers of The Glidden Company which are in the record, so that we can establish in his mind what these zones were so that I can then question him about them. I am trying to use the shortest method of getting the information that we want.

Mr. Hinds: I would like to ask whether counsel disputes my statement that these facts are not in issue. Do you claim they are in issue in this case?

Mr. Wright: I claim that the questions relating to this zone system and how it arose, and the circumstances attending its origin and the manifestations of it, as far as price discrimination is concerned, are at issue in this case. I think counsel will agree as to that.

Mr. Hinds: I am asking whether these particular facts are in issue. I understood that they are not in issue; that they are admitted in the answer.

Mr. Wright: Whether The Glidden Company
2684 used zones or not is not in issue, but the other facts
attendant upon the use of those zones are in issue.

Mr. Hinds: If you will look in our answer, you will see that we agreed to your statement of facts in that connection.

Trial Examiner Norwood: There are issues there respecting motives and effects, and so on, and I think it is very clear that counsel is within his rights, and I shall overrule the objection.

By Mr. Wright:

Q. Can you tell me over how long a period of time The Glidden Company has quoted those particular products in those quantities on the basis of those differentials and zones as appearing in Schedule AA?

A. They were quoted from the period beginning January 29, 1942, and on until the next bulletin, whatever it was, was issued, which superseded it. I notice this bulletin in itself supersedes a previous one that was dated in May of 1941. These bulletins were issued by the Paint Divisions from time to time as they had price change instructions to give to their salesmen.

Q. Mr. Sprague, what I am trying to get at by my question—maybe I can explain it a little more clearly to you—is for how long a period of time prior to January 1942 did The Glidden Company quote on the basis of 2685 those zones and those differentials on those products, not on the basis of that document.

A. That I cannot answer, because this Schedule AA defining the areas is a part of this bulletin, which superseded a previous one. They may have been changed at this time, as far as I know.

Q. Then you don't know what those zones may have been prior to 1942?

A. Not of my memory, no. These are the zones in effect at this time, that is certain. But how much before that—

Q. (Interposing.) Do you know that there were zones in effect prior to that?

A. I cannot be certain that there were zones in effect prior to that. I would have to see the prior bulletins. I cannot fix in my mind the date of the usage of zones.

Q. Does The Glidden Company have in its records a set of those bulletins going back over any considerable period of time, from which it could be determined when they first began to use that zone method?

A. I do not think so. As I stated yesterday, we made a very thorough search for everything we could locate of this sort, but our practice of disposing of things in general in the company at two-year intervals makes it virtually impossible. We did think we could find some by checking some of the various offices, and so forth, but we were not, as far as I can recall, ever able to get a consistent sequential record of those things.

2686 Q. Then you don't know what changes might have been made in the period from 1930 to 1942 in the style or method of quoting on geographical differentials by The Glidden Company on oxides?

A. I can answer you in this way. Yes, we made changes in such style and methods as we had to to follow the competition that we had in the field. That applied to oxides as well as to the other lead products.

Mr. Wright: I move that that answer be stricken, Your Honor, as not responsive. I asked him if he knew.

Mr. Duncan: I ask that it stand, Your Honor. I think it is responsive. This is cross-examination.

Trial Examiner Norwood: Read the question and the answer.

(The reporter read the record as follows:

"Q. Then you don't know what changes might have been made in the period from 1930 to 1942 in the style or method of quoting on geographical differentials by The Glidden Company on oxides?

"A. I can answer you in this way. Yes, we made changes in such style and methods as we had to to follow the competition that we had in the field. That applied to oxides as well as to the other lead products.")

Mr. Hinds: If Your Honor please, inasmuch as it has appeared without dispute that the only style and method that this respondent ever had was to discover competition and to meet it when and where it found it, to ask him— 2687

Trial Examiner Norwood: (Interposing.) That doesn't come in—

Mr. Wright: (Interposing.) Your Honor, the question asked what changes his company had made, did he or didn't he know of them, and I want him to state on the record either that he does or doesn't know them.

Trial Examiner Norwood: The counsel will ask the direct question as to that, and he may bring that out, but he didn't ask it just that way.

Mr. Wright: It was a direct question—do you know what changes—

Trial Examiner Norwood: (Interposing.) You said, "Then you don't know". It makes a little difference there. I will deny the motion.

By Mr. Wright:

Q. What changes did the Glidden Company itself make in its method of quoting on oxides with regard to geographical areas in which differentials applied and the differentials applicable between them, in the period from 1930 to the date of that bulletin, January 1942?

Mr. Hinds: Objected to on the ground that it has not appeared that they made any changes in their method, their method having followed competition—

Trial Examiner Norwood: (Interposing.) Objection overruled. Let the witness answer the question so as to give us those facts. 2688

Mr. Hinds: I was making an objection that the question implies something that hasn't been shown.

Trial Examiner Norwood: If counsel is going to discuss the evidence and make statements here that might be construed as carrying a suggestion to the witness, I will ask the witness to withdraw while you discuss the matter. I don't think that it is good practice, and I will overrule the objection. Answer the question.

Mr. Wright: May we go off the record a minute?

Trial Examiner Norwood: Off the record.

(Discussion off the record.)

Trial Examiner Norwood: On the record.

Read the question.

(The reporter read the question as follows:

"Q. What changes did the Glidden Company itself make in its method of quoting on oxides with regard to geographical areas in which differentials applied and the differentials applicable between them, in the period from 1930 to the date of that bulletin, January 1942?")

Trial Examiner Norwood: Give us the information as to those changes, if any. Objection overruled.

The Witness: The question is: What changes in method were used? There were no changes in method used.

2689 By Mr. Wright:

Q. In other words, The Glidden Company made no changes in the territories to which differentials applied and the differentials themselves?

A. There were undoubtedly changes in territories and in differentials, but not in method.

Q. What were those changes in territories and differentials, do you recall any of them?

A. I do not recall any specific ones.

Q. Now it has been testified to here by Mr. Harold Rowe of the National Lead Company that the territories and differentials applicable to these oxides have been used by the National Lead Company in quoting since sometime around 1934. Do you recall the first employment of those territories and differentials by the National Lead Company?

A. As I testified yesterday, the only recollection that I have is that the employment of the zones, and so forth, occurred sometime after the Code period. I do not recall when that was.

Q. Wouldn't any large change in the territories and differentials applicable to them have been an important matter which would have engaged your attention at the time it occurred in the industry?

A. Yes, I think it would.

Q. Isn't that one of the matters, those differentials,
which was discussed at some length by the members
2690 of the industry at the meetings of the pigment divisions when they were considering the Codes?

A. There were discussions at the meetings of the Pigment Committee, but there were more extensive discussions at the meetings of the Lead and Oil Committee, I recall that it happened in both cases; but you must remember that that is 14 years ago, and I can't get pinned down too close on the dates and the months.

Q. Now you have been testifying about those meetings on direct-examination.

Mr. Hinds: I object to that statement, and ask that it be stricken out as a comment, and a very unfair one, because this witness has been testifying, refreshing his recollection when necessary, on a subject matter quite remote from what he is now being examined on.

Mr. Wright: I am willing to withdraw the statement.

Trial Examiner Norwood: The objection is overruled. He is within the province of legitimate cross-examination.

Mr. Hinds: I didn't make that objection. I objected to the comment by counsel, which he has been gracious enough to withdraw.

Mr. Wright: I said I would withdraw it, because the record will be perfectly plain as to what his testimony was on direct and on cross.

Trial Examiner Norwood: He has the right to refer 2691 to the witness' previous testimony, and comment on it and ask him to explain it.

By Mr. Wright:

Q. I recall your testifying on direct about what was discussed at a meeting of the Oxide Committee of the Lead Pigments Division on December 27th and 28th, 1933, on direct-examination, Mr. Sprague. Do you recall where that meeting was held?

A. I believe that meeting was held in Chicago.

Q. Do you recall a meeting of the Oxide Committee of the Lead Pigments Division on December 14th and 15th, 1933, at which Mr. Harold Rowe occupied the chair, and there were present Mr. MacGregor and Mr. Butzow, Mr. Erwin Willkie and Mr. William Willkie and yourself, Mr. Carroll, Mr. Coolidge, and Mr. Wormser?

A. I recall such a meeting, and that I attended such a meeting. I would need to refresh my memory as to the details of it.

Q. Would examining these minutes of that meeting, which appear as Respondents' Exhibit 137-A and B, refresh your recollection about that meeting? Do you recall that meeting?

A. Yes, sir.

Q. Do you recall the discussions that were carried on at that meeting?

A. In a general way only.

2692 Q. What was the discussion relating to the differential over pig lead being one of the most serious abuses in the trade, do you recall that?

A. Yes, I recall a few phases of that matter.

Q. What was the situation which was then considered to be an abuse?

A. Well, I recall one or two very specifically that I thought, and I think the others thought also, were a distinct abuse or difficulty, that arose out of the pressure, economic pressure, of that period of depression, and one of them was that there was a willingness on the part of the sellers of lead oxides who sold on a differential to accord the buyer some protection against market declines, and that was a very serious abuse to me, because I didn't have the background of sufficient pig lead inventories to have low averages or averages other than the market, and when I had sold a carload of lead oxide on a 6-cent market, for example, and the market dropped to four or five cents, I couldn't afford to protect my customer and finally deliver the litharge at a 4 or 5-cent market. That was one—

Q. (Interposing) I recall—

Mr. Hinds: (Interposing) I object to interrupting.

Trial Examiner Norwood: Just a moment. Mr. Wright will conduct the cross-examination.

Mr. DuBose: Your Honor, I believe he was continu-
2693 ing his answer.

Mr. Hinds: He said there were several abuses, and he was in the middle of the first one when counsel interrupted him.

Mr. Wright: The abuse that he is talking about as an abuse is a matter that is entirely unrelated to the question that was asked him, and I would like to ask—

Trial Examiner Norwood: (Interposing) Do you move to strike the answer?

Mr. Wright: I move that it be stricken, and I intend to reframe the question and get an answer to it.

Trial Examiner Norwood: Read the question and the answer.

Mr. Wright: I will withdraw the motion to strike, but I want to stand on my right to interrupt the witness on what I conceive to be an irrelevant answer, and reframe the question.

Mr. Hinds: I would like to have it ascertained whether the answer was irresponsive. It seems to me that it was perfectly responsive, and it had only just begun.

Trial Examiner Norwood: Well, we will get along faster if we will let counsel conduct the cross-examination without interruptions, unless there is something very serious.

Mr. Hinds: If it hadn't been for counsel's interruption, the question would have now been fully answered.

2694 Mr. Wright: Your Honor, I renew my motion to strike that answer as not responsive.

Trial Examiner Norwood: Read the question and the answer.

(The reporter read the record as follows:

"Q. What was the discussion relating to the differential over pig lead being one of the most serious abuses in the trade, do you recall that?

"A. Yes, I recall a few phases of that matter.

"Q. What was the situation which was then considered to be an abuse?

"A. Well, I recall one or two very specifically that I thought, and I think the others thought also, were a distinct abuse or difficulty, that arose out of the pressure, economic pressure, of the period of depression, and one of them was that there was a willingness on the part of the sellers of lead oxides who sold on a differential to accord the buyer some protection against market declines, and that was a very serious abuse to me, because I didn't have the background of sufficient pig lead inventories to have low averages or averages other than the market, and when I had sold a carload of lead oxide on a 6-cent market, for example, and the market dropped to four or five cents, I couldn't
afford to protect my customer and finally deliver the
2695 litharge at a 4 or 5-cent market. That was one—".)
Mr. Wright: Your Honor, the question related to *the* abuse, not *an* abuse, and it is the abuse mentioned specifically in the minutes, that of selling oxides at a differential over pig lead. The witness' answer related to the practice of protecting the buyer against a price decline on pig lead, which is an unrelated matter.

Trial Examiner Norwood: I think counsel is right.

Mr. Hinds: May I be heard on that? The witness was asked in connection with those minutes what abuses arose from this practice of quoting differentials over the pig lead market, and he said there was more than one abuse arising from that practice, and he was starting to relate the first one of the abuses, of which there are several, which arise from the practice of quoting differentials over the pig lead market. I understand there were several such abuses.

Trial Examiner Norwood: He asked for this one abuse, and he asked him for one thing, and the witness discussed another, and the answer is stricken.

Mr. Hinds: I respectfully ask for an exception, because these are several abuses arising from the one matter mentioned in the minutes.

Trial Examiner Norwood: Proceed.

By Mr. Wright:

Q. Will you state to us, Mr. Sprague, what was the
2696 specific abuse that is referred to in the first sentence
of this paragraph of the minutes to which I have directed your attention?

Mr. Hinds: I object on the ground that the minutes themselves say that there were several serious abuses; that one of the most serious—

Mr. Wright: (Interposing) Counsel is coaching the witness by these objections.

Trial Examiner Norwood: I think counsel is out of order.

Mr. Hinds: I except to that ruling, also.

A. I must be reading the wrong place here.

(Mr. Wright indicates sentence to the witness.)

A. (Reading): "The practice of selling at a differential over pig lead had spread to such an extent that it had become one of the most serious abuses in the trade."

Your question, now, if I understand it, relates to what is this one most serious abuse?

By Mr. Wright:

Q. The abuse that is mentioned in that particular sentence.

A. That refers, in a generic sense, to practices arising from the method of selling at a differential over pig lead that was injurious to the industry.

Q. Then it doesn't relate to the practice of selling oxides at a differential over pig lead itself; it relates to other matters?

2697 A. It relates to abuses that flowed out of that practice.

Q. Well, now, I call your attention to the fact that the sentence in the minutes states that "The practice of selling oxides at a differential over pig lead had spread to such an extent that it had become one of the most serious abuses in the trade."

A. I have an advantage over you, Mr. Wright, because I was at the meeting and I know what was discussed, and the minutes are not of so much importance.

Q. In other words, the minutes, then, in that instance, don't accurately reflect what was discussed?

A. There is not an inaccuracy in the minutes, I think the minutes are fairly accurate. He was attempting to, in a short way, describe what happened at the meeting, and he referred to those abuses, and I know what the abuses were because I suffered from them.

Q. Well, now, had the practice of selling oxides at a differential over the price of pig lead been employed on a large scale and customarily in the industry prior to that period?

A. That practice was in effect as far back as I can remember.

Q. Only in the carload quantities, is that correct?

A. Well, I know of some contracts for the sale of lead oxides at a differential that were not specific as to

2698 whether the delivery should be in carload or less carload.

Q. Was the fact that it had been the practice of some producers prior to that time to accept at the carload differential price an order which was not delivered in a carload at one time, one of the things that was discussed in that connection?

A. Yes, very much so.

Q. You testified on direct that there were a great many battery manufacturers, numerically, did you not?

A. I said there were two groups of battery manufacturers; one was a large group, much larger than the other; and I didn't say how many of the battery manufacturers there were, but it was a fairly sizable industry.

Q. In connection with your duties, have you had any opportunity to study the battery business and the competitive conditions and practices that are extant in that industry?

A. Yes, I tried to be quite well informed on that matter during the period that I was in residence at Hammond.

Q. Is it a customary practice for the producers of oxides to furnish technical service to battery manufacturers in connection with the sale of their oxides?

A. Yes, it has been the custom for the oxide manufacturers to furnish that service during the period of my familiarity with the lead oxide business.

Q. The Glidden Company has furnished that service to its customers, is that correct?

2699 A. One of the things I tried to do was to strengthen our sales position by providing and supplying that service, and we did so for a period of time.

Q. What would be your estimate of the number of battery manufacturers presently in business in the United States at this time?

A. Well, I hate to pull a figure out of thin air, because I haven't a thing to put back of it. It was 1935 when I stopped my particular interest in watching that closely. But if you want just an estimate, it would be 150 or 175.

Q. You said there were two groups there. Will you explain those groups again?

A. Yes. That was a peculiar industry because there was a sharp line of demarcation between the small group of well-financed and large manufacturers, and the other group, which was all the rest.

Q. What is the minimum capital, do you think, that would be necessary to get into the manufacture of batteries?

A. To get into the manufacture of batteries? Well, based on what I saw among this large group of small manufacturers, it could be done in a basement with a drum of oxides and a keg of sulphuric acid and some plates purchased from somebody else, and I would say it was a very low investment required to get into the business, but I wouldn't want to say much about the kind of batteries that were made and what their worth was.

2700 Q. Is the battery business one which is characterized principally by small manufacturers in matter of numbers?

A. Yes. Like most other industries, there are very many more in number of the smaller battery manufacturers than there are of the larger ones.

Q. Who are the principal battery manufacturers?

A. My recollection is that that group would comprise the Electric Storage Battery Company; the U. S. L.—I believe that is now the Electric Auto-Lite Company, they have changed since I knew them; the Delco-Remy Company; National Battery Company; the Globe Union Company; the Solar Corporation.

Q. Does Solar produce the S. L. I. type?

A. There may be others, but that is as far as my memory serves me now.

Trial Examiner Norwood: Off the record.

(Discussion off the record.)

Trial Examiner Norwood: On the record.

We will recess until 1:15.

(Whereupon, at 12:15 p. m., a recess was taken until 1:15 p. m., this day.)

2701 Afternoon Session.

1:15 p. m.

Trial Examiner Norwood: The hearing will come to order. Proceed, Mr. Wright.

PAUL E. SPRAGUE resumed the stand and testified further as follows:

Cross-Examination (Continued) by Mr. Wright.

Q. You were describing, I believe, the small and the large battery manufacturers at the time of recess.

A. Yes, sir.

Q. Are these products sold uniformly in drums or barrels of 600 pounds, whether to large or to small battery manufacturers?

A. Our sales to battery manufacturers have almost universally been in drums or barrels. But you asked me about the battery industry generally. I think some of the large battery manufacturers obtained deliveries in large returnable drums, and some without package at all, in bulk.

Q. Over how long a period of time has it been your practice to ship lead oxides in bulk?

A. That type of shipment is extremely limited and if it is practiced at the present time it is my recollection that it did not start until close to the time that I left Hammond.

2702 Q. Hasn't there been a general feeling in the industry against shipping these products in bulk or in paper bags?

A. Yes.

Q. For health reasons?

A. Yes, there has, because the oxides of lead are toxic or poisonous if taken into the digestive tract, and that fact mitigates against bulk shipments, and they are only justified where special arrangements exist between buyer and seller to load and unload the cars by suitable mechanical methods.

Q. Do you sell oxides in the usual 600 pound drums both to carload and less-than-carload purchasers?

A. Yes, sir.

Q. Now on the technical services that the company performs for battery manufacturer customers, are those performed by the sales personnel?

A. No, we found that the type of technical service that was needed and was valuable could not be expected of the sales personnel. It required the services of specialized, trained men in that technique.

Q. Were they under the sales department or in the sales organization?

A. Well, I would say that in our case it was a question of them being available at the command of the sales department, but those people also actually worked in laboratory experiments and occupied a general position.

Q. By what means do you make their services
2703 available to battery manufacturers; is it at the request of the customer or do you have some program for that?

A. Both on the request of the customer and as a means of sales service in the nature of check-up calls, and in the nature of sales promotion.

Q. Do you customarily, through that service, check up on the experiences of your customers in using your oxides?

A. That is correct, and we also found it was necessary, particularly in respect to that service to small battery manufacturers, to maintain facilities whereby we received and tested for those manufacturers the batteries that represented typical samples of their production.

Q. And you did that for all customers who requested it or wanted that service?

A. And up to the limit of our capacity to do that. It requires quite a substantial lot of equipment, and particularly a lot of time, to run those tests—they are time tests.

Q. How does your sales organization on oxides cover the battery business? Is it a matter of regular calls at frequent intervals on all customers, or just how do you handle it?

A. Yes, our experience was that you had to call on the battery manufacturer and talk with him direct.

Q. And you customarily call on all your customers, then, at regular intervals, is that correct?

A. Well, I am not sure that I get the full import
2704 of your use of the word "regular". In selling merchandise you have to call as often as you find it necessary to maintain the right relationship and to maintain the business. Sometimes that is irregular and in many cases it is more frequent.

Q. Do you have regular sales personnel whose principal duties are in the battery business?

A. The sales personnel of the lead oxide division were in general distributed geographically, and some of the men had more battery trade in their travelling areas than others.

Q. They were salesmen not alone of these oxides, but of other products as well, is that true?

A. That is true. We attempted to handle the sale of all of our products through a salesman covering a territory area.

Q. He would cover paint—

A. (Interposing.) No, I am speaking entirely of the products of the Metals Refining Company Division. The Metals Refining Company salesmen at no time attempted to sell anything that was produced by any other division except during one period when we attempted to enlarge our distribution of white lead-in-oil through the use of the sales force of the Metals Refining organization.

Q. Approximately how many salesmen are actually employed at the present time by Metals Refining Company?

A. I can't answer as to the number employed today. I think Mr. Burruss can give you that.

2705 Q. What was it at the time you were there?

A. During the period I was familiar with it, the number of salesmen was approximately eight to ten.

Q. You spoke of the large battery manufacturers being in a position to produce their own oxides. What battery manufacturers are now producing their own oxides?

A. I am unable to state what the battery manufacturers are doing now, but at the time I was familiar with it I knew that oxides were being produced for consumption in the making of batteries by the Electric Storage Battery Company; the U. S. L. Battery Company; and at that time the Willard Storage Battery Company, which was then an independent concern—

Q. (Interposing.) Is that now connected with the Electric Storage Battery Company?

A. Excuse me, I believe I should correct my statement. During my experience Willard was always a part of the Electric Storage Battery Company, but I meant to say that the Willard plant in Cleveland produced some oxides as well as the plant in Philadelphia, of the parent company. Oxides were produced also during that period by other battery manufacturers whose names I do not recall, in connection with a promotion scheme of a concern that had some equipment to sell that they alleged could be very easily used for making battery oxides. But I don't think that was a permanent phase of operation.

Q. What would you say would be the minimum
2706 total tonnage that a battery manufacturer could economically operate on, and produce his own oxides?

A. All I could do would be to estimate that because the question of fixed expense and overhead is quite an important one in determining at what point a manufacturer of standard articles can afford to start in as an additional effort to manufacture raw materials. But I will give you a guess, which would be a consumption annually of 4000 tons.

Q. Approximately what investment would be necessary to set up a production of 4000 tons of oxides per year, at the present time?

A. That would depend entirely upon the availability of housing.

Q. Speaking now as to the plant and equipment only, rather than as to the actual housing—I am talking about the machinery and plant.

A. I don't feel that I am qualified to answer that.

Q. Would you say that it would be quite a considerable investment?

A. No. The investment in that or any other manufacturing equipment today is so tremendously higher than it was during my experience here that it is probably safe to say that it would cost today nearly one and one-half or nearly two times what it would cost then.

Q. What would you say it would cost then?

2707 A. My guess would be, then, an investment, exclusive of housing, of $20,000.

Q. How many battery manufacturers, numerically, consume in excess of 4000 tons of oxides annually?

A. I couldn't answer that.

Q. Would it be very many?

A. Well, I would consider that it would be all of those whose names I gave you this morning, and quite some others in addition to that.

Q. But of that 150 or 175 battery manufacturers, the number would be quite small, would it not, who could profitably use 4000 tons of oxides a year?

A. It would be a small portion of the group but a large portion of the total tonnage consumed in storage batteries.

Q. As I understand your testimony, the lead pigments industry is constantly under the pressure of the possibility of production of oxides by the storage battery manufacturers?

A. That is correct.

Q. But that is not the case with the smaller battery manufacturers, is it?

A. Not where their consumption is less than the amount that would be attractive for them to produce the oxides themselves.

Q. Has it been your observation that the storage battery industry is one which is characterized in ordinary times by very sharp price competition?

2708 A. Yes, I think that is an industry that has been particularly characterized by sharp competition in all phases of competition, not only price but quality and service and guarantees and all those things that go into the merchandising program of storage batteries.

Q. During the period of the '30's, from, say, 1934 to 1940, was it an industry that generally operated on small margins, do you know?

A. During what period?

Q. From 1934 to 1940?

A. No, I have no way of characterizing or having knowledge of anything about that particular period as against others in that industry.

Q. Was there a fairly high rate of mortality among the smaller battery manufacturers during that period, or do you know?

A. That was immediately after the depression of '32. I would think there was a high rate of mortality in every industry during that period. I don't know that I could characterize the battery people as being worse.

Q. Has your company made any cost studies relating to sales in the battery business, showing relative cost of doing business with the various types of customers?

Mr. Hinds: Objected to as not proper cross examination, Your Honor.

2709 Trial Examiner Norwood: Read the question.

(The reporter read the question as follows:

"Q. Has your company made any cost studies relating to sales in the battery business, showing relative cost of doing business with the various types of customers?")

Mr. Hinds: That, if it is material at all, is so as a part of respondents' case. It certainly is not cross examination.

Mr. Wright: Your Honor, I will direct your attention to a statement that this witness made on direct examination with regard to sales to various types of battery manufacturers, where he indicated that they suffered a loss on their sales—and I certainly can inquire into this matter.

Trial Examiner Norwood: Objection overruled.

Mr. Hinds: After being reminded of that, I will withdraw my objection; I had overlooked that.

Mr. Wright: I don't know what the purpose of the statement was—

Mr. Hinds: I have withdrawn my objection; I think you are right on that.

Trial Examiner Norwood: Answer the question.

The Witness: What do you mean by "cost studies"?

By Mr. Wright:

Q. Have you made an analysis of the various 2710 operating costs so that you can allocate them as to sales to the various classes of customers in the battery business?

A. I can recall that we made studies of this sort—to answer your question first, if you mean to keep accounting reports that do show that, the answer is no. But facing the problem in its broad aspects I recall one time that we made quite an analysis of the losses that we had sustained in our sales to the storage battery industry. This was some years ago, but I recall it because I used it as an argument on one of my visits to our headquarters office to see if I could persuade the company to adopt a more liberal credit attitude towards sales to the battery industry, and I had some data showing our costs in regard to credit losses. We also maintained for a period of years a plan whereby we tried to show our selling costs as among products by having our salesmen make daily reports allocating, on such reports, the time that they had spent in attempting to sell the battery manufacturer and some seven or eight categories of trade that those men sought to sell. I remember that was done.

Q. When was that done, do you know?

A. Sometime during the period 1930 to 1935.

Q. But you do not have any study, then, from which you could state with any authority, on the basis of statistics or studies of your costs, that you suffer a loss in your sales to small battery manufacturers?

2711 A. I can state, with the authority of the observation and belief of a manager of the business who is watching the expenses and the costs which he sustains in doing business, but I couldn't show it from an accounting study in cents per pound.

Q. Do you have in mind, when you are saying that, credit losses?

A. I have in mind all of the factors that would be involved in showing a loss.

Q. Is credit loss one of those factors?

A. It is one of them.

Q. Is it the principal one that is in your mind?

Mr. Hinds: Do you mean the largest, or occupying the majority position. The word "principal" is ambiguous.

Mr. Wright: I asked him if it was a principal one.

Mr. Hinds: Pardon me, I thought you said the principal.

A. I would regard actual cash credit losses as one of the intermediate factors in size, of dollar value, among those factors that would contribute to a loss in soliciting that business, based on our experience only.

By Mr. Wright:

Q. Over what period of time is that experience that you are referring to? Is that in the 1930-1935 period now?

A. During the period that I was right there every day.
Perhaps I could explain for you a little more than
2712 the matter of credit losses in the battery industry in
our experience developed in this manner, that we would have these bankruptcies or these failures, and then of course there would be a receivership and there would be settlements, and the actual realization of the loss was usually a year or two further ahead than the time the difficulty occurred. But it was a notorious situation that not only the Metals Refining Company but the other producers, and more particularly the Eagle-Picher Company, were always present at a bankrupt battery manufacturer's meeting.

Q. Going back now to the zone differentials, particularly in the South and the West, on the oxides, do I understand that you don't know when those differentials in substantially the form that they now exist, were first employed either by yourself or by any other competitor in the business?

A. I cannot recall that in respect to time, but I can recall it in respect to competitive conditions, as I have testified before.

Q. What do you mean by that?

A. I mean that that type of handling the pricing for sales at distant destinations was put into effect after it was encountered in the field.

Q. I show you Commission's Exhibit 808-H, which is in evidence, a portion of the Oil, Paint & Drug Reporter
under date of June 11, 1934, and ask you to read the
2713 first couple of paragraphs there in fine print.

A. All right.

Q. Does that refresh your recollection any as to the time at which those differentials were first employed?

A. It does not refresh my recollection, but it indicates to me very strongly that this is evidently about the time that the source of information obtainable in New York from the Oil, Paint & Drug Reporter made such an announcement.

Q. Has it been your observation that that is a reliable source of information regarding market changes and marketing practices in the pigments industry?

Mr. Hinds: Now if Your Honor please—

Mr. Wright (Interposing): I would like to request, before this happens, that if counsel in making his objection is going to state an opinion about what the record reflects, that it be done without the presence of the witness.

Mr. Hinds: I would be perfectly willing to have the witness withdraw. I think it is somewhat of a slur on the veracity of the witness—

Mr. Wright (Interposing): I don't mean it in that sense at all.

Trial Examiner Norwood: He is evidently making this suggestion out of an abundance of caution.

Mr. Hinds: Certainly. I might say that all of my objections will be based on a sincere belief that they
2714 are supportable on their merits. If they have any
collateral effect it will be due entirely, in my judgment, to the nature of the question which is asked, rather than to the character of my objection. However, I am very glad to have the witness withdrawn from the room.

Trial Examiner Norwood: Let counsel state the legal grounds for his objection, and then it will be clear to me as to whether the witness ought to be excused.

Mr. Hinds: The legal ground is that while the reliability of a statistical source such as this magazine, or a daily record of market conditions, is material—

Mr. Wright (Interposing): Right at this point—

Mr. Hinds (Continuing): —the reliability of a hearsay statement—

Trial Examiner Norwood: Off the record.

(Discussion off the record).

Trial Examiner Norwood: On the record. Will you kindly step outside, Mr. Sprague.

(The witness was temporarily excused from the room.)

Trial Examiner Norwood: Read the question.

(The reporter read the question as follows:

"Q. Has it been your observation that that is a reliable source of information regarding market changes and marketing practices in the pigments industry?")

Trial Examiner Norwood: You mean that that 2715 exhibit was?

Mr. Wright: That magazine, the Oil, Paint & Drug Reporter.

Trial Examiner Norwood: Why can't he ask him whether that is his impression or not?

Mr. Hinds: That is not the basis of my objection. It has nothing to do with whether he has an impression or whether he can form an opinion, which I will concede that he can. The point of my objection is that whether or not the source of hearsay evidence is reliable, is immaterial. Now if this were a statistical fact, if it were average sales per month, or daily sales, and the question were, "Does that reliably report the lead market?"—then such a question would probably be material because then we would get away from the hearsay rule. But this thing that the attention of the witness has been called to, I think if I saw correctly, was not a statistical statement, it was a hearsay bit of commercial gossip. Now whether the gossiper is a reliable gossiper or an unreliable gossiper is entirely immaterial. I think probably this witness might know whether he is a reliable gossiper or an unreliable gossiper. But what has that got to do with it?

Trial Examiner Norwood: You introduced an exhibit based on that type of testimony.

Mr. Hinds: No sir. We have introduced that sort of

magazine, maybe that very magazine, for all I know,
2716 as to statistical matters.

Trial Examiner Norwood: He is cross examining this witness and he certainly has a right to test his information and test his attitude on this entire subject.

Mr. Wright: The witness' previous answer was that this would indicate to him that the source in New York from which the Oil, Paint & Drug Reporter got its information thought that the zones were put into effect at that time. Now it follows—

Mr. Hinds: (Interposing.) May I be shown the portion of the exhibit to which your question is directed? If it is statistical, I will withdraw my objection, but I don't think it is; I think it is gossip.

(Exhibit shown to Mr. Hinds.)

Trial Examiner Norwood: I don't think we need to discuss this any further. I am going to overrule the objection, ask the witness to come back and answer the question, and the cross-examination may proceed on any of these sources of information which we have referred to heretofore.

Mr. Hinds: Exception.

Trial Examiner Norwood: Counsel has his exception in each and every case to the entire line, as he may desire.

Mr. Hinds: In answer to my request that I be shown the portion of the exhibit to which the question refers, counsel points to some text, not statistics.

2717 (The witness resumed the stand.)

Trial Examiner Norwood: Proceed.

Mr. Wright: Will you read the question.

(The reporter again read the question.)

The Witness: Yes, I think that should be regarded as a fairly reliable source of information of that sort, particularly the type of information that is readily obtainable in New York.

By Mr. Wright:

Q. Mr. Sprague, you used some notes to refresh your recollection on direct examination. Do you have those notes with you?

A. Yes, sir.

Q. In whose handwriting are those notes?

A. My own.

Q. Will you tell me the circumstances under which they were prepared?

Mr. Hinds: I have no objection.

A. Yes, I prepared the notes just prior to coming down here, in the form of very brief references to the testimony that I expected to give, for the purpose of enabling me to refresh my memory in case I was asked about dates beyond the point where I could keep them active in my mind—and other pertinent features.

By Mr. Wright.

2718 Q. Did you confer with others in the Glidden organization in preparing those notes?

A. No. As a matter of fact I didn't have an opportunity to do that; I prepared them after I left the office, and on the train coming down.

Q. So you prepared those notes, then, in your own handwriting from your own recollection?

A. I prepared the notes in my own handwriting and I prepared them furthermore from a memorandum that I had prepared for myself, reviewing what I could recall in connection with the sequence of events relating to the Euston Lead Company and the Metals Refining Company.

Q. You prepared that memorandum yourself, did you?

A. I prepared it myself, yes, sir.

Q. Didn't you say yesterday that others conferred with you in the preparation of those notes?

A. No, I did not. I said that I had conferred with others over a period of time in refreshing my mind as to what had happened in this sequence of events, but I had no help in preparing the notes.

Q. Well, then, in consulting with others regarding the sequence of events, you obtained information then, did you, regarding those events, from them?

A. I received assistance in bringing back to my mind some of the various things that had happened over 2719 that period, particularly with respect to white lead-in-oil activities.

Mr. Wright: I have no further cross-examination.

Redirect Examination by Mr. Hinds.

Q. Mr. Sprague, I call your attention to your testimony on page 2618 of the record, and ask you if you desire to correct it. You were asked concerning a certain graph which was introduced in evidence, and you were asked this question:

"Mr. Hinds: Suppose you had left out of the months, here and there, exceptional months, would that have been appreciably different?"

The previous question was:

"Mr. Hinds: I notice here that for two or three years, from 1933 on to well into 1935 on your graph, line A, there seems to be an absolute straight line."

Then your answer to the subsequent question was:

"The Witness: That straight line was unchanged regardless of whether it was in or out, because those were frozen prices of the OPA."

Do you desire to correct that?

A. Yes, that is an inadvertent statement. I associated in my mind the straight line with the one that resulted from OPA price fixing, whereas I notice that the question related to a straight line period in earlier years, and therefore my answer relating that to the OPA is inaccurate.

2720 Q. Do you desire to correct the following testimony which appears at page 2650 of the record:

"Q. What concerns control the principal patents in that business? (You were referring to the titanium oxide business.)

"A. Well, I think The Glidden Company has the principal patents."

A. Yes, I would like to correct that. I am not convinced that I made that statement but apparently everyone else agrees that I did, and I wish to see that the record is corrected.

Q. What should be the answer?

A. I should have stated that The Glidden Company had some patents in the titanium oxide field. I did not wish to state that Glidden had the controlling patents in that field, and I still doubt that I said it.

Q. You spoke of servicing the battery oxide business. Would you say that servicing was more a requirement in your sales to the large battery manufacturers or to the smaller ones?

A. The servicing was very much more a requirement to the smaller battery manufacturers. It was almost a sine qua non in order to sell them and in order for them to operate.

Q. Why do you say that in contrast with your sales, such as they were, to the large battery manufacturers?

A. Well, I believe I explained that—no, I did not explain it—but the technique of making a storage battery requires considerable experience and "know-how" in the compounding of the oxide paste that goes into the plates and in the forming and curing of those plates in preparation for putting the lead-acid cell in shape to function and ready to be sold. That required, furthermore, testing facilities and equipment to test the life and the performance characteristics of a storage battery after it had been built. We found that many, many of the small battery manufacturers did not have those facilities, and as a means, then, of getting their goodwill and their business it was offered to them by the seller of the battery oxides. That practice arose from the desire to make sales and also from the fact that—well, they all simmer back to the same end, the desire to make sales and the need for sales. 2721

Q. What about the large ones? You haven't answered my question with respect to the large ones?

A. The large battery manufacturers did not require anything like that kind of attention because they had their own facilities and even much more adequate and complete facilities than we had.

Q. With respect to the expense of collections, credit collections and investigations, from your experience was there any difference between such expenses in connection with sales to small battery manufacturers as contrasted with the larger ones?

A. Oh, yes; there was no expense of that sort in connection with the large battery industry. 2722

Q. What about the small ones?

Mr. Wright: Your Honor, I object to this line of testimony if it is by this means that counsel intends to prove any justification in the difference in prices to the different classes, because certainly this is incompetent evidence as to costs.

Mr. Hinds: It is sufficient to justify these questions at the present time, I think, if I say merely that I am having redirect examination on matters which counsel brought out on supposed cross, over an objection which I later withdrew.

Trial Examiner Norwood: As to the use to which this evidence will be put, that is a matter of argument and discussion later on—but I think it should be received at this time.

Mr. Hinds: Will you read the question?

(The reporter read the question as follows:

"Q. What about the small ones?")

Trial Examiner Norwood: The objection is overruled.

The Witness: Those expenses with regard to the small manufacturers were high.

By Mr. Hinds:

Q. Now as to the expense, if any, of warehousing, was
there any difference between the expense there on
2723 sales to the large manufacturers and sales to the
small manufacturers of batteries?

A. Well, the matter of—

Q. (Interposing.) Yes or no? My question calls for a yes or no answer—was there any difference?

A. Very much difference when you sell the small manufacturer whom you serve through a warehouse stock.

Q. Why was that?

A. Because of the expense of moving the goods into stock and out of stock, and the storage and the delivery costs.

Q. Now was there any difference in your sales to large battery manufacturers contrasted to small ones, as to cash discounts?

A. Yes, we accorded a cash discount for payment within ten days on sales of less-than-carloads to that trade and to other trade.

Q. Do you remember what the amount of that discount was that you gave to l. c. l. buyers?

A. One per cent.

Q. You have referred to selling and travelling. How did the expense there compare as between sales to small battery manufacturers and sales to large battery manufacturers?

A. Well, the per ton cost of selling was very high.

Q. On which?

A. On the sales to the small consumers.

2724 Q. What about the actual transportation? First I will ask you by what means did you transport to the purchasers of lead oxides, the said product?

A. We used the means of public transportation that gave the quickest service available to the customer, freight or truck.

Q. Was there any difference per ton in shipping by rail, in carload lots, as contrasted with less-than-carload lots, of lead oxides?

A. Certainly, the less-than-carload rate, either by freight or truck, is higher than the carload rate.

Q. Was there any difference in the truck rate as between the larger shipments and the smaller shipments?

A. My recollection is that the trucking rates broke, that is to say, a higher and lower, at a certain tonnage.

Q. Do you happen to remember what that breaking point was?

A. No, I do not recall, but I think it varied with different truck lines, and so forth. I don't think we had uniform truck rates in effect during the period with which I was familiar with this.

Q. As to the expense of invoicing, bookkeeping, billing, correspondence, postage and other clerical items, can you say whether there would be any substantial difference per ton in selling a carload or in splitting that up into, say 20 different smaller shipments of lead oxides?

A. Well, the cost of invoicing per invoice is in 2725 general the same, and the more invoices you have per ton of goods sold, the higher the cost. In our case we had a cost system whereby we costed each sale and multiplied, of course, the paper work in connection with sales because of that.

Trial Examiner Norwood: He asked if there would be any substantial difference. I don't think you answered that.

The Witness: I thought I had. The difference is that the cost is greater for—

Trial Examiner Norwood: (Interposing.) Would there be any substantial difference between the two classes of business?

The Witness: I think there would.

By Mr. Hinds:

Q. Mr. Sprague, you gave, as what you called a guess, 4000 tons as the minimum you thought it would have been practicable, when you were still in the business, for a battery manufacturer to profitably make his own lead oxides. In so stating did you have in mind the factor of price, or were you making an absolute statement?

Mr. Wright: Objection, Your Honor. The witness is on the record as to what he stated.

Trial Examiner Norwood: He can explain it or change it if he wants to. The objection is overruled.

By Mr. Hinds:

Q. The price of the oxides, I mean.

A. I am not sure that I understand your question,
2726 but I meant to say that it was my opinion that when
a consumer reached the point where he required over
a year 4000 tons of oxides, he then could well consider installing the equipment to produce that himself, for the purpose of having a better cost than were he to buy the material.

Q. Well, suppose he had reached that point, namely that he was consuming over 4000 tons of oxides a year, what would in your judgment be the deciding factor as to whether he would make his own or buy the oxides?

A. I think he would decide on the kind of a deal he could make with the lead oxide manufacturers, and how far he could beat them down.

Mr. Hinds: No further questions.

Trial Examiner Norwood: Do you have any further questions, Mr. Wright?

Mr. Wright: Yes, sir.

Recross Examination by Mr. Wright.

Q. Now on this matter of credit investigations, have you made any accounting surveys to show what your costs are as allocated to the various types of customers which you serve?

A. What do you mean by "surveys", Mr. Wright?

Q. I mean have you actually determined from your day
by day costs, by an accounting study, what the cost of
credit investigations is for battery manufacturers in
2727 the various different price classifications in which you
quote?

A. No sir, not in the sense you mean. We had another method of giving us our ideas on that.

Q. Do you have such information as to the cost of warehousing?

A. I think not.

Mr. Wright: No further questions.

Redirect Examination by Mr. Hinds.

Q. Mr. Sprague, when you say you have not made any survey within the meaning Mr. Wright gave to that word, have you given any consideration and business judgment to the extent to which members of your local and your headquarters credit departments and your various salesmen and other executives have been obliged to spend their time on credit investigations in the lead oxide, small lead oxide field, as contrasted with other selling fields of your company?

Mr. Wright: Objection.

Trial Examiner Norwood: Objection sustained.

Mr. Hinds: Exception.

By Mr. Hinds:

Q. Have you made such study and consideration of that and the other factors where you say the costs have been greater in selling to the small battery manufacturer than to the large battery manufacturer, to enable you to say with considerable positiveness whether or not in
2728 the aggregate they considerably exceed any quantity differential that you have allowed?

Mr. Wright: Objection.

Trial Examiner Norwood: Objection sustained. You shouldn't lead the witness in that way.

Mr. Hinds: I respectfully state that I didn't intend to lead him, and I didn't regard the questions as leading. It was an unintentional offense if I did.

By Mr. Hinds:

Q. Now Mr. Sprague, you did state, and you have been reminded of it on cross-examination, that the sales to the smaller battery manufacturers, even with the differential, were substantially less profitable than those to the larger ones. Why did you say that, what was the basis of your statement?

Mr. Wright: Objection.

Trial Examiner Norwood: On what ground?

Mr. Wright: The witness didn't make any such statement.

Mr. Hinds: I would like to make an argument, if there is any question on that, and I have no objection to the witness leaving the room. I am very earnest in this question.

Trial Examiner Norwood: I am going to sustain the objection to that question. You may bring out his recollection of what he did say and then you may base some question on that if you desire.

2729 By Mr. Hinds:

Q. What, if any, study and consideration have you given to the question of contrasting the profit or lack of profit on your sales to the larger battery manufacturers, buying in carload lots, and those sales in less-than-carload lots or less than 500 pound lots, to the smaller battery manufacturers, for the purpose of ascertaining whether or not, despite the differential, the one is less profitable than the other?

Trial Examiner Norwood: Read the question.

(The reporter read the question as follows:

"Q. What, if any, study and consideration have you given to the question of contrasting the profit or lack of profit on your sales to the larger battery manufacturers, buying in carload lots, and those sales in less-than-carload lots or less than 500 pound lots, to the smaller battery manufacturers, for the purpose of ascertaining whether or not, despite the differential, the one is less profitable than the other?")

Mr. Wright: Objection. That is a long narrative statement to the witness, rather than a question.

Trial Examiner Norwood: The objection is overruled; answer the question.

A. We gave considerable attention to the cost of doing business as among customers of various sizes and customers of various kinds, and customers at various
2730 locations, out of which we realized, as I stated earlier
in my testimony, that we had to do certain things in respect to the type of trade we sold in order to make a profit. Now we found that the cost of selling the small customers, and particularly the small battery manufacturer, was inordinately high, and I gave, or rather responded to a number of reasons for that, that we had ob-

served in our business by a common observation. It was there for all to see. But there was no accounting study prepared to reduce it to a specific figure.

By Mr. Hinds:

Q. In your judgment would it or would it not have been practicable to classify your accounts so as to allocate the time spent by various executives, salesmen and others to these different classes of customers?

A. It would not have been practicable nor would it have been prudent. We were obliged to operate with a minimum of fixed expense of that sort.

Mr. Hinds: That is all.

Mr. Wright: I have no further examination.

Trial Examiner Norwood: Mr. Sprague, you are excused.

(Witness excused.)

Trial Examiner Norwood: We will take a short recess.

(A short recess was taken.)

Trial Examiner Norwood: The hearing will come
2731 to order.

Mr. Duncan: Mr. Burruss, will you be sworn.

DAVID N. BURRUSS, JR., was thereupon called as a witness for the Respondents and, having been first duly sworn, testified as follows:

Direct Examination by Mr. Duncan.

Q. Will you state your full name and address?

A. David N. Burruss, Jr., Hammond, Indiana.

Q. And by whom are you employed?

A. The Glidden Company.

Q. And what are your present duties?

A. General Manager of the Metals Refining Division.

Q. That is located where?

A. Hammond, Indiana.

Q. When were you first employed by The Glidden Company?

A. In 1926.

Q. And where was that?

A. At Collinsville, Illinois.

Q. Will you tell us what your duties were at that time, in 1926?

A. I was manager of the Chemical and Pigment Divisions Plant located at Collinsville, Illinois.

Q. Will you relate to us your subsequent places
2732 and assignments, with the approximate dates, and
tell us your duties?

A. In 1933 I was in charge of the Nelio-Resin Division or Corporation and the Southern Pine Chemical Company, partially owned by The Glidden Company at that time, and they are now wholly owned divisions of The Glidden Company. I was also Assistant to the President of The Glidden Company. In 1935 I went to Hammond, Indiana, as General Manager of that Division.

Q. That is of the Metals Refining Division?

A. Of the Metals Refining Division.

Q. What have your functions included as general manager?

A. All the functions of management—sales, production, personnel.

Q. Do you remember when Glidden took over Metals Refining Company?

A. That was in 1929, I believe.

Q. And was it then a wholly-owned subsidiary of Glidden?

A. Yes.

Q. And how long did it continue as a wholly-owned subsidiary of Glidden before it became a division of Glidden, if you remember?

A. I think that was sometime in 1926, I don't recall the exact date.

Q. I don't think you understood my question. How long did Metals Refining Company continue as a corporation
before it became a Division of Glidden?

2733 A. I think it continued as a corporation from 1929
until sometime in 1936, but I am not sure as to the
exact time it was made a Division.

Q. At any rate it is now a Division of The Glidden Company?

A. Yes.

Q. Will you tell us what was produced by Metals Refining Company when Glidden took it over in 1929?

A. Antimonial lead, lead oxides and type metal.

Q. And did Glidden continue to produce all those products?

A. We continued to produce those products up until the war period, when we discontinued antimonial lead.

Q. What did Glidden produce at the Hammond plant in 1944?

A. Lead oxides and type metal, copper powder, iron powder, lead powder, cuprous oxide and cupric oxide.

Q. There is a distinction, is there, between cuprous oxide and cupric oxide?

A. They are both oxides of copper but they are different products.

Q. Now to what classes of customers does Glidden sell lead oxides?

A. To battery manufacturers, the oil refiners, fungicide manufacturers, dry color manufacturers and paint and varnish manufacturers.

Q. Do you include insecticide manufacturers in that?

A. Yes.

2734 Q. What percentage of lead oxides produced by Glidden is sold to the battery trade?

A. Over the period that I have been at Hammond, probably not over 30 per cent.

Q. Sold to battery manufacturers?

A. Sold to battery manufacturers.

Q. Let's take the battery manufacturers to whom Glidden has been selling lead oxides. Can you state approximately the percentage of your lead oxides that you have been selling in carload lots, and the percentage in less-than-carload lots?

A. Battery oxides would run approximately 60 per cent in carload lots and about 40 per cent in less-than-carload lots.

Q. And how would the 60 per cent carload figures be divided between the large and the small battery manufacturers?

A. Well, it would be a very small amount of that which ever went to a large battery manufacturer.

Q. Can you give us the percentage on that?

A. Probably not over ten per cent went to the large battery manufacturers.

Q. Will you tell us what difficulties, if any, have been encountered by Metals Refining Division in selling to the large battery manufacturers?

A. Well, having only one plant, there have been a number of factors that have affected our sales, or our ability

to sell the large battery manufacturers, such as our
2735 ability to properly service an account that is located some distance away from Hammond, to supply a battery manufacturer which has multiple plants. Our limited production of oxides was in some cases smaller than the total requirements of a large battery manufacturer. Then there is another difficulty in the fact that a large battery manufacturer is more or less standardized on the type of battery that he builds in his various plants, and he wants identically the same raw material in each one of those plants so as to have uniform specifications for their batteries. That made it difficult for us to sell even one plant, even though it were located in our own district, of a large battery manufacturer.

Q. In other words you had gained some experience then, from that, had you, that you didn't want to have all of your eggs in one basket?

Mr. Wright: Objection, Your Honor.

Trial Examiner Norwood: Objection sustained.

By Mr. Duncan:

Q. Were there any other factors that you can think of that you encountered in addition to the ones that you have already mentioned?

A. Well, to sell to some of these larger battery manufacturers it would take practically the entire output of our plant, which would mean that we would be having only one customer, and if we lost that customer we would be
2736 in a very bad position then for future business.

Q. Who have been your principal competitors in selling to the larger battery manufacturers?

A. National Lead and Eagle-Picher.

Q. Will you state the location and number of the lead oxide plants of each of your larger competitors?

A. National Lead has nine lead oxide plants distributed across the country—Brooklyn, Philadelphia, Atlanta, Charleston, West Virginia, Chicago, St. Louis, Dallas and two in California. Eagle-Picher has a plant in Joplin, Missouri, and one in Newark, New Jersey.

Q. Does Sherwin-Williams have but one plant?

A. Sherwin-Williams has a plant in Chicago.

Q. And Metals Refining only has the one plant and that is at Hammond?

A. It only has the plant at Hammond.

Q. Will you tell us approximately what the gross margin is between the cost of the pig lead and the price you ordinarily get for lead oxides?

A. In carloads, a cent and a half over pig lead on litharge, and 2½ cents over pig lead on red lead.

Q. And what is the principal factor in competing for the lead oxide business of the larger battery manufacturer?

A. It is largely a matter of being able to render service to the large manufacturer, rather than a question of price.

2737 Q. Relative to your principal competitors, have you been able to compete successfully on that basis?

A. No, we have not been able to render service to the larger battery manufacturers because of having only one plant and being, in most cases, quite some distance from the larger manufacturers.

2738 Q. About what per cent would you say you have been to sell to such buyers?

A. I think I estimated that around 10 per cent of our production, of our battery production.

Q. From your experience, Mr. Burruss, which part of your battery oxide business yields you the greater net profit?

A. Carload business.

Q. How do you explain that?

A. Carload business—Our expenses in connection with making those sales are much less than they are in making sales to the small battery manufacturer, the less-than-carload buyers. There are a number of factors that enter into that difference in freight and the clerical work in connection with handling of the orders through the plant.

Q. What has been your preference? Will you tell us whether you have had any preference with reference to selling?

A. We prefer to sell the carload buyers.

Q. You started to tell us the selling factors which you found made your sales to—was it less-than-carload buyers?—more expensive, or have you yet told us that?

A. I told you part of that.

Q. This is with reference to less-than-carload buyers of lead oxides. I want to know if you can tell us what selling factors you have found have entered into the picture as distinguished from selling lead oxides to carload buyers?

A. It affected our cost to those accounts—Did you 2739 mean the soliciting of that business?

Q. The cost.

A. In the selling to a small battery manufacturer or oxide user there were several additional costs: additional freight, additional cost of clerical work in handling the billing of the account, and so on, warehousing in connection with it, credit investigation being most if it, and credit losses in connection with that particular class of trade made up most of our expense in that connection.

Q. Is there an additional expense; namely, selling expense, that you include as a factor?

A. You refer to the solicitation of the account?

Q. That is right.

A. Yes; the more accounts you solicit in that case, the calls made by the salesman for the tonnage you obtain, your selling expenses are much higher.

Q. Will you explain, then, each of these items of additional cost more fully, if you can?

A. Well, your difference of shipping expense is the difference between the carload freight rate and the l. c. l. or truck rate. On the average that will run about 25 cents a hundred more. Then in the case of making out invoices, it takes the same amount of paper work to bill one drum of oxides or bill a carload of oxides. It is a multiplicity of paper work in connection with the handling of the order.

2740 The l. c. l. buyer is sometimes serviced out of a warehouse, and then you have additional warehouse expenses in and out in that connection.

Then the credit investigation, in the case of the large buyer simply means we refer to Dun & Bradstreet rating, and that is about all. The small fellow, we have to get special reports on him and sometimes even our Credit Department makes personal contact with him before we pass credit.

Q. In that instance, is there any necessity to make investigation of the l. c. l. buyer and to continue the investigation even after you have once sold him?

Mr. Wright: Objection, Your Honor.

Trial Examiner Norwood: On what ground?

Mr. Wright: It is a very leading question, suggesting the information which counsel wishes brought out.

Trial Examiner Norwood: Read the question.

Mr. Duncan: I will withdraw that.

By Mr. Duncan:

Q. With reference to l. c. l. buyers of lead oxides, what has been your experience with reference to checking on their credit?

A. In the first place, before we can sell them as a class— Of course, there are some that are perfectly all right, but a lot of them we have to go a point where we have to make special investigation. As I said, for instance, we 2741 have to send a man from our Credit Department or have the salesman come back and get additional information.

Then, on a repeat order from that customer, there have been cases where we had to spend an awful lot of time in following up those accounts in order to keep them in such shape that we could continue to sell them.

Q. What has been your credit experience with reference to the carload buyers as a class?

A. As a class we have been able to handle those accounts with a very small amount of credit investigation. Generally, the Dun & Bradstreet rating is sufficient and occasionally a special report. It seldom has to be followed up.

Q. Generally speaking, what has been the differential of your price by carloads and your price by less than carloads?

A. A half cent on five-ton shipments, and a cent on less than five-ton shipments over the carload price.

Q. Have you made a detailed cost analysis of the exact differences between the selling cost factors in the case of carload buyers and those in the case of less-than-carload buyers?

A. No, we haven't made any detailed analysis of that. Our records are not kept that way at all. Our entire selling expenses is lumped against the entire oxides sales.

Q. Now, in preparation for your testimony here, have you made a study for the purpose of giving us a rea- 2742 sonable approximation of those differences?

A. Yes. We checked on sales that we have made to some of these l. c. l. accounts.

Q. What have you found?

A. We find our expenses in that connection are considerably higher than they are in connection with the carload buyer. We estimate it about offsets the difference in price that is charged.

Q. What has been your experience in the case of buyers of less than five tons of battery oxides?

A. We have only sold a very small amount of those as a class. They have been comparatively poor credit risks and entailed an awful lot of follow-up in order to collect on sales we have made, and our expenses in connection with those have been much greater than in connection with the larger buyers.

Q. Does that additional or second half-cent differential that you charge the l. c. l. buyer who buys less than five tons of lead oxides cover the additional credit losses and credit investigation expense in that class of buyer?

A. I haven't any detailed—

Mr. Wright: Your Honor, I object to questions along this line which go to the matter of costs and expenses, and unless there is some more proper basis for a legal establishing of what those costs and expenses were. So far
2743 we are only having opinion evidence by this witness.

Trial Examiner Norwood: We are having estimates from these men who conduct the business and who have to do business, or at least who do business on these estimates, and I think they may come in for whatever they are worth. Any objection to their not being accurate surveys would go to the weight. I shall overrule the objection.

By Mr. Duncan:

Q. Did you understand my question?

Trial Examiner Norwood: Off the record.

(Discussion off the record.)

By Mr. Duncan:

Q. Did you understand the question?

A. Would you repeat it, please?

Trial Examiner Norwood: Read the question.

(The question was read by the reporter.)

The Witness: When you take into consideration the amount of time spent by our local Credit Department and our general Credit Department in Cleveland on that class of buyer, I would say that the added differential did not compensate for the expense in connection with handling that business.

By Mr. Duncan:

Q. Did you make any study of the expense of credit investigation?

A. I made no detailed study of the expense of 2744 credit investigation. That is, to be able to furnish you with any accurate figures as to the cost of handling any particular account.

Q. Can you tell us what your credit investigation and credit loss is in your sales from Metals Refining Division of lead oxides to carload buyers as a class?

A. As a class it has been relatively low as compared with the smaller buyers of oxides.

Q. What are the facts on the less-than-carload buyers? I am talking about the period before 1942.

A. Most of our losses on lead oxides were confined to the less-than-carload buyers, and most of our expense during that period was in connection with the smaller buyers. That is, prior to 1942. Since 1942 we have not been making very much lead oxide and have sold very few of those accounts.

Q. Before 1942, can you tell us about how many l. c. l. customers you had on your books, that is, approximately?

A. I can't give you an accurate figure, but I would estimate somewhere between 75 to 100.

Q. Have you been able to state exactly how much that expense has been in any typical period?

A. No.

Q. Would it be possible to give an exact figure?

A. No, our records are not kept—nor do we subdivide the expense of our Credit Department between our lead oxide business and all other lines.

2745 Q. What is your judgment on the matter generally?

A. Our losses in connection with the smaller accounts have been very much larger than with the larger buyers of oxides. Also our expenses in connection with servicing those accounts have been much larger. By "service", I mean collections and following them up on the part of our Credit Department.

Q. Will you state whether or not you have any warehousing expenses with respect to your sales of carload lots?

A. No, they were all shipped direct from Hammond.

Q. In other words, you didn't have to split up any carloads?

A. No.

Q. For local distribution, is that it?

A. Not to a carload buyer. It went direct from Hammond to the carload buyer's plant.

Q. Have you any way of showing your warehousing expense and what you call the moving-in-and-out-of-warehouse expense in relation to your less-than-carload sales in any typical period?

A. No, we have not kept any records on that in connection with our lead oxide sales, but we did make such a survey in connection with the handling of our lithopone business, and where we charge an extra quarter of a cent for ex-warehouse delivery. The result of that survey indicated the quarter-cent did not cover expense of in and out of
warehouse, and we added drayage charges to the
2746 customer's plant. I assume that would be applicable
also to lead oxides.

Mr. Wright: Your Honor, I move to strike all of that answer after "No, we have not". He is referring now to warehouse expense and dealing with customers on an entirely unrelated product.

Trial Examiner Norwood: It is clear that that final assumption should come out, I think.

Mr. Duncan: Your Honor, I have no objection to the assumption being stricken.

Mr. Wright: After he said he didn't know in answer to counsel's question should also come out.

Trial Examiner Norwood: Read the answer.

Mr. Duncan: That is just by way of comparison to lithopone.

(The answer was read by the reporter.)

Mr. Duncan: No objection to the last part. That should go out, but I think the balance—

Trial Examiner Norwood: (Interposing) The first part was not responsive to your question.

Mr. Wright: No, sir, and what the first part was related to directly was that assumption. If the assumption was invalid so also was the first.

Trial Examiner Norwood: He may lay the ground for this lithopone expense being approximately the same as
the other. Then, after he lays that ground, he may
2747 bring out what he did there, but in the present situa-
tion I shall allow the motion to strike everything after the first denial, "No, we have not".

By Mr. Duncan:

Q. Mr. Burruss, did you have occasion to check on in-and-out expense with respect to lithopone warehouse stocks?

Mr. Wright: Objection, your Honor.

He hasn't established any similarity.

Mr. Duncan: I am about to do that. I can't do it any other way.

Trial Examiner Norwood: I think you should lay your ground first as to the similarity in the cost of handling lithopone and the commodity with which this proceeding is concerned.

Mr. Duncan: All right.

By Mr. Duncan:

Q. Mr. Burruss, is there any comparison between lithopone products and lead products with respect to the handling of the products?

A. They are both handled in carload lots and l. c. l. lots and warehouse lots.

Q. Is it your judgment that the products can be compared with one another with respect to their warehousing expenses?

A. Most of those expenses are on a tonnage basis and a fixed charge per ton for in and out.

2748 Q. Is your answer in the affirmative then?

A. Yes.

Q. Will you tell us whether you made any study of the lithopone warehouse expense?

Mr. Wright: Objection, your Honor. All the witness said was that the lithopone was sold in carload lots and less than carloads and in warehouse quantities. That applies to almost any commodity in the whole United States. There is no indication here of the class of trade or the users or the similarity of the methods of handling it. All that answer went to was the quantities in which it was delivered. Obviously everything that is traded in is handled in those quantities from corn syrup to Wheaties.

Trial Examiner Norwood: My understanding is that he has indicated by his testimony that the cost of handling these two commodities are similar or practically the same. You may question him further about that if it isn't clear.

Mr. Wright: There has been no indication that they sold the same class of customers or that the hauls or circumstances under which they are sold and delivered are the same.

Trial Examiner Norwood: I don't think that is necessary here in showing these costs of handling.

Mr. Wright: Obviously the location of customers and the factors that are involved in the delivery are of the 2749 essence in determining the comparable basis of the two commodities. As I understand it, lithopone is sold to the paint industry. We are talking now about a product sold to the battery industry.

Trial Examiner Norwood: This question is directed to the cost of in and out of the warehouses.

Mr. Duncan: That is right, your Honor. I think the witness has shown the comparison of the products so that he can, at least, merely for the purpose of weight, attempt to tell your Honor that he has a study of the lithopone warehouse expenses and then it is up to your Honor to determine whether or not the assumption should be made that the results that he has reached with reference to his study of the warehouse expense in connection with lithopone should be applied to lead oxides.

Mr. Wright: Your Honor, on the same basis the warehousing expenses of the paint divisions of Glidden would be evidence of what their warehousing costs were for metallic leads or any other commodity, but still it has no relevancy to the warehousing costs of these different oxides.

Trial Examiner Norwood: If it were paint or anything else he wants to use as a basis of comparison, if he will show they are practically the same—counsel has some doubt as to whether grounds have been laid?

Mr. Wright: That was the sole purpose of my objection on that, that there hadn't been such grounds.

2750 Trial Examiner Norwood: I don't want to take the time to read the record back here. I will sustain the objection to the present question and ask counsel to make sure that the witness has answered as to these comparative costs between the two commodities.

2751 By Mr. Duncan:

Q. Mr. Burruss, in respect to warehousing expenses, do you regard the lithopone product in the same category as lead oxides?

Mr. Wright: Objection, Your Honor. That question is so broad and general that it is not specific, it doesn't relate—

Mr. Duncan (interposing): Specific reference was made.

Trial Examiner Norwood: Do you mean with regard to the cost of handling it in the warehouse, in and out?

Mr. Duncan: Yes.

Trial Examiner Norwood: You may answer that. I will overrule the objection.

The Witness: Both of those items are pigments, and they take approximately the same warehouse expense. I haven't checked that exactly one way or the other, but they are approximately the same.

By Mr. Duncan:

Q. Now, have you made any study of the expense, warehouse expense, with respect to lithopone?

A. Yes.

Q. Will you tell us what you found?

Mr. Wright: I object, Your Honor. The witness just stated he hasn't checked whether they are the same 2752 one way or the other. He has a belief.

Trial Examiner Norwood. Objection overruled.

By Mr. Duncan:

Q. Will you answer the question?

A. Will you repeat it, please?

Trial Examiner Norwood: Read the question.

(Question read by reporter.)

The Witness: The survey we made on lithopone indicated that our warehouse expense exceeded ¼ cent per pound.

By Mr. Duncan:

Q. Mr. Burruss, in your judgment what effect do price differences have in competition in selling lead oxides?

A. Service rather than the small difference in price controls the sales to the larger battery manufacturer. In case of the smaller manufacturer, price is apt to be competitive, but the main factor in making a sale to that class of account is a liberal credit policy.

Q. Did you find that Metals Refining Division was in the same position as its competitors to give service to the large battery manufacturers?

A. No. With one plant we were not in as good a position to service a large battery manufacturer having multiple plants.

Q. To what extent is price a factor, in your judgment, in selling to the small battery manufacturer?

A. It must be competitive on price to the smaller 2753 battery manufacturer.

Q. Have you been talking about the period since World War II started?

A. No, we haven't made much oxide since World War II.

Q. Will you explain the circumstances which have led Glidden to keep on selling lead oxides to a class of purchasers with greater credit losses and expenses?

A. We had to maintain a volume of production in our plant that would enable us to realize a profit on that operation, and where that was not obtainable from a source of good credit, we had to take on the less profitable business.

Q. In that regard how does your position compare with your competing producers of lead oxides?

A. We are in somewhat of a different position from our competitors because of having only one plant and not being able to enjoy or even to supply the larger battery manufacturers. We have had to confine ourselves more to the smaller users, and in that way we are in a different position than our competitors. The only other manufacturer that compares with us in size is Sherwin-Williams, and they consume most of their own oxides.

Q. Have you charged any higher delivered price to buyers at a distance from your single plant?

A. We charge a competitive price on oxides wherever we have sold them.

2754 Trial Examiner Norwood: Does that answer the question?

The Witness: We have charged differentials in those territories distant from our plant where it was possible to charge them.

By Mr. Duncan:

Q. Have you made any detailed differential analysis of the added cost of charging to delivery points, say, in the West?

A. No, I haven't made any detailed analysis of it.

Q. Why is that?

A. Our records are not kept so that we can obtain that information.

Q. But from your experience can you make a fairly reliable approximation?

A. The difference between the less carload and the carload freight rate to the distant points is generally sufficient to absorb the differential that is charged on shipments made from Hammond.

Q. Would you say that the distant buyers have been favored or not favored?

Mr. Wright: Objection, Your Honor.

Trial Examiner Norwood: Sustained.

Mr. Duncan: I will put it this way:

Q. As a result of that, what is the effect, then, on the distant buyer?

2755 A. The effect on the distant buyer and the effect on ourselves is that we have taken a less margin of profit on a sale to that buyer than we have on one close by. He has been able to get his oxides at competitive prices.

Q. Why have you been willing to do that?

A. Mainly to maintain volume of production in order to have an over-all profitable operation.

Q. To what extent have you sold your lead oxides in territories where the territorial differential has been added?

A. We sold a very small amount in those territories.

Q. Will you explain that, please?

A. Business is more expensive for us to handle because of the higher freight rates, and it hasn't been attractive, and we have only taken it when it is necessary to maintain volume.

Q. In the more remote regions, do you feel competition from other plants that are nearer?

A. Having only one plant in Hammond and going to the southwest or to the west or to the south, we have the competition of plants of our competitors who are located close by.

Q. How does that affect you?

A. That competition prevents us from realizing as much gross profit on those sales as we would if we were able to charge the higher differential without the competition.

Q. Why do you sell at all in those remote regions?

A. As I said, simply to maintain volume.

2756 Q. Have you ever had or used a zone map?

A. No.

Q. On those cases where you have before the war—that is, World War II—made sales in remote regions, how did you name your price?

A. We met the competitive price in the district, in the part of the country in which the sale was made.

Mr. Wright: Objection, Your Honor. It is not responsive.

Mr. Duncan: I think it is.

Trial Examiner Norwood: I think it is.

Mr. Duncan: Absolutely.

Trial Examiner Norwood: Overruled.

By Mr. Duncan:

Q. On those occasions when Metals Refining had decreased its price on lead oxides, what have been the circumstances leading to such a decrease?

A. Following the drop in the lead market and decrease in price of oxides on the part of our competitors, our price was lowered accordingly.

Q. What was the economic effect then upon your business?

A. Until the inventory that we had on hand was disposed of, we realized a smaller margin of profit on the tonnage produced from that inventory until it could be replaced at a lower market.

2757 Q. What have been the circumstances which have led you to increase your price of lead oxides when you have done that?

A. When there was an advance in the lead market and competition advanced their prices, we advanced ours also.

Q. Have you ever made lead oxides on any other basis other than the sale of the finished product?

A. Yes, we have made them on a toll basis.

Q. Will you describe that?

A. On that basis of sale the purchaser supplied us with lead and we converted it into lead oxides for him at a toll charge, which is the same differential as we would charge if we had bought the lead ourselves.

Q. In substance what is the economic effect of that practice in your business as distinguished from the economic effect of buying the lead and then selling the finished product to the customers at an agreed price?

Mr. Wright: Objection, Your Honor. This witness hasn't been qualified as an economist.

Mr. Duncan: He is running the business.

Trial Examiner Norwood: Read the Question.

(Question read by reporter.)

Trial Examiner Norwood: I think you could ask him questions that would bring that out in a factual way. I think you are asking him for an expert economist's opinion. You may ask him how that is reflected in his profits and

2758 losses and things like that, but I wouldn't couch it in the scientific language. Objection sustained.

By Mr. Duncan:

Q. Mr. Burruss, will you tell us how that was reflected in your profit and loss?

A. There is no difference between the sale of that kind and the sale made where we purchased the lead and sold it at a fixed price. We are simply converters in the first place, and all we have is the differential to work on.

Q. Now, Mr. Burruss, have you ever received any request or any suggestion or intimation from any of your competitors as to what role Metals Refining Division of the Glidden Company should follow with respect to Glidden's pricing and pricing methods?

A. No, sir.

Q. Did your company at any time to your knowledge ever enter into any agreement or understanding or arrangement with any other producer or seller of any lead pigments with respect to the fixing of prices?

A. No, sir.

Q. Has any such agreement or understanding or arrangement come to your knowledge?

A. It has not.

Q. Have you ever heard of any?

A. No, I never heard of any.

2759 Q. Did anybody in the company have any authority to enter into any such agreement, understanding or arrangement?

Mr. Wright: Objection, Your Honor. There is no showing that this witness has knowledge of the authority the people in the Glidden organization might have.

Trial Examiner Norwood: Read the question.

Mr. Duncan: If Your Honor please, this witness is in charge of the Metals Refining Division of the company. He was Assistant to the President for some years. He isn't just an employee.

Mr. Wright: He is not an officer of the corporation, however.

Mr. Duncan: He is manager of the Metals Refining Division.

Trial Examiner Norwood: Lay the ground for that or else ask him if he has knowledge of that.

Mr. Wright: I will withdraw the objection.

Trial Examiner Norwood: All right.

Mr. Duncan: Will you repeat the question?

(Question read by reporter.)

Trial Examiner Norwood: Answer from your own knowledge.

The Witness: Not to my knowledge.

By Mr. Duncan:

Q. Did the company either through you or anybody else at any time enter into any such agreement, understanding or arrangement? 2760

Mr. Wright: Objection, Your Honor. This is cumulative and leading.

Trial Examiner Norwood: Objection sustained.

Mr. Duncan: Note an exception.

Trial Examiner Norwood: Your qualification there—did the company do this through anybody else—renders the question objectionable. Ask him if he knows about it.

Mr. Duncan: All right.

By Mr. Duncan:

Q. Did the company through you at any time enter into any such agreement, understanding, or arrangement?

A. No, sir.

Q. You understand that when I refer to "agreement, understanding or arrangement" in these questions which I have just asked you, I have been referring to oral as well as written agreements, understandings or arrangements?

A. Yes, I understand that.

Mr. Duncan: That is all. You may have the witness.

Trial Examiner Norwood: Cross examine.

Cross-Examination by Mr. Wright.

Q. What is your definition of an agreement or understanding, Mr. Burruss?

A. A meeting of the minds of two parties.

2761 Q. In other words, if A and B met—I will withdraw that. How long have you been with Metals Refining Division, did you say, Mr. Burruss?

A. Since the Fall of 1935.

Q. You had nothing to do with the negotiations then under the Pigments Division of the Lead Industries Association?

A. No.

Q. You have been speaking of your prices being competitive and of competitive prices in your direct testimony. What do you mean by the word "competitive" in that sense?

A. By that I mean that we have sold our products at the highest price we could get for the products, meeting the competition we encountered in the price.

Q. The same as the price of the market leader in that area?

A. Wherever it was possible or wherever it was possible to ascertain that price.

Q. You stated that 30 per cent of the oxides went to the battery business. Where, roughly, are your sales percentagewise of the remaining 70 per cent?

A. Largely to the dry colors, insecticides, fungicides, oil refiners, paint and varnish trade.

Q. Did you sell in carloads to the paint and varnish trade generally?

A. Yes.

2762 Q. To what customers do you generally sell in carloads in the paint and varnish trade?

A. I can't give you the names of those accounts. They are on the tip of my tongue, but I can't think of them.

Q. What per cent of your business in oxides goes to the paint and varnish trade, roughly?

A. Including our own plants?

Q. No, sir. Sales to others.

A. That is the paint and varnish trade?

Q. I meant to exclude Glidden's own consumption.

A. That would be, roughly—I have no basis of making this estimate—I have made no analysis, but I would guess between 10 and 15 per cent.

Q. Of that somewhere between 10 and 15 per cent sold to the paint and varnish trade, how must of it was sold in carloads at the carload price?

A. To companies that I haven't been able to remember the names of are carload buyers and make up the biggest portion of that tonnage.

Q. When you were giving these figures, 30 per cent to battery manufacturers, you were combining the various litharges and red leads together, were you not?

A. Yes.

Q. Is there much litharge sold to the paint and varnish trade?

A. The varnish manufacturer, yes.

2763 Q. About how much of that 10 or 15 per cent of the oxide business to paint and varnish manufacturers is litharge?

A. That is small compared to the total of red lead business. There again it is probably 20 per cent or less.

2764 Q. Red lead makes up by far the biggest bulk of that?

A. Yes.

Q. How about the dry color industry? How is that divided between litharge and red lead?

A. Dry colors, I don't believe take any appreciable amount of red lead, if any at all, because those sales are litharge.

Q. In that industry are those products further processed?

A. Into chrome yellow and chrome greens.

Q. Made directly from the litharge?

A. Made directly from the litharge.

Q. How are those customarily purchased in the dry color business, carloads, five-ton—

A. Practically all in carload lots.

Q. How about the insecticide and fungicide portion of your business? How much does that account for outside of Glidden's own consumption?

A. That is approximately the same as the dry color business. It is all carload business.

Q. About how much of the total is it, roughly—five, ten percent?

A. That will run somewhere between 10 and 15 percent of the total oxide business.

Q. Do you sell any to the petroleum refining industry?

A. Yes.

Q. About how much of your production goes there?

2765 A. I would be guessing on that, but that particular tonnage is declining at the present time, owing to the fact that the oil refiners have put in recovery systems, and over a period there again I think we have somewhere around 10 percent, I would guess.

Q. What product of the oxides is principally used in the oil refining business?

A. Litharge.

Q. Is that used in making leaded gasoline?

A. No, that is used in sweetening gasoline, the removing of sulphur from gasoline.

Q. You stated on direct examination that 60 percent of your battery sales were to carload customers, that only 10 percent of them were large manufacturers. What do you mean by "large"?

A. In the case of a large manufacturer I was referring to those companies that have multiple manufacturing plants. A battery manufacturer who operated more than one battery plant.

Q. Aren't there some battery companies that are pretty large operations with only one plant?

A. Yes, there are several.

Q. Were you including any of those in there?

A. I guess you would include one in there, yes.

Q. Approximately what annual tonnage would you refer to as being large in point of consumption of these oxides?

A. Well, as a large battery manufacturer, I would
2766 say someone consuming 7,000 to 10,000 tons or more.

Q. A year?

A. A year. Maybe I am a little high on the lower figure.

Q. Would you consider Bowers Battery Company a large battery company?

A. A fairly large battery company. That is why I started to revise my figure when I thought of him.

Q. You spoke of the difficulty that you had in supplying the type of service necessary to keep the large battery companies as accounts. What kind of service do they require?

A. I was referring to our ability to deliver material to them in regular quantities and have it in their plants at the times they want it so there would be no interruption in their operations. That was what I meant by "service" there.

Q. Now, with reference to the exact control of oxides to specifications, you mentioned that as being one of the requirements of selling to a large account. What processes are necessary to control specifications and what specifications do you mean there?

A. I don't recall that I used that particular term. I was referring to, I believe, the specifications of the large manufacturer operating several plants in the manufacture of batteries, where he has the same formula in each plant for making a given type of battery. It requires the same oxides as the raw material in making that battery.

2767 Q. Does that require a uniformity of grind so there is a uniform particle size?

A. Not necessarily uniformity of grind, no. It is the way the oxide reacts in the formation of a battery plate, either positive or negative.

Q. What formula differences are you speaking of now? I want to find that out.

A. Formula differences?

Q. Yes.

A. Formation differences.

Q. You spoke of the different formulas that a battery manufacturer used in each of his plants.

A. Yes.

Q. What are those formula differences? What do you mean by that?

A. The specifications that he had for forming his batteries, what percentage of oxides, the time it took to form that plate or that battery into—that is, to finish off and convert it into an operating battery, the strength of acids that were used, and so on.

Q. What did that require on your part in supplying them?

A. Oxides from different plants react somewhat differently, depending on the process used in making the battery. Adjustments can be made in the battery plants to compensate for it, but where a man has a standard procedure
2768 set up for doing a job, and you change the type of raw material he uses, he has to change his method of processing the raw material.

Q. Those are factors which you can't control in the manufacture of the oxides, then?

A. We can't change our oxides to absolutely duplicate the products made by our competitors.

Q. You have a variety of different grades for performing different functions in accordance with the different tastes of different battery manufacturers; do you not?

A. Yes, we have a variation of oxides, but they don't necessarily conform to the same grades of oxides as made by competitors.

Q. You referred to the fact on direct, I believe, that the carload shipments were always made direct from the plant in carloads and the cost was, therefore, less.

I direct your attention to a series of exhibits which are in the record as Commission's Exhibit 831 with sub numbers. I call your attention to Exhibit 831-A, which is an invoice to the Federal Storage Battery Company, Chicago, showing 10 drums in September, 1941.

That is, apparently, the carload price in effect at that time. I believe it was testified here that the pig lead price then was 5.85 New York.

Mr. Duncan: You are referring to No. 736?

Mr. Wright: 735.

2769 By Mr. Wright:

Q. Is that the carload price? Do you recognize that as being the carload price?

A. 5.85 was the lead market.

Q. Yes.

A. That would be the carload price.

Q. That is the product, Metrox Plumbarge 95-X?

A. Yes.

Q. That is a litharge, is it?

A. That is battery oxide.

Q. This Metrox RM oxide No. 2 at 7.60—does that have 25 percent red lead, 75 percent litharge, for positive plate manufacture?

A. Yes.

Q. It customarily sells at a differential of 25 cents per hundred above the strict litharge price?

A. That is correct.

Q. That 831-A shows shipment of 20 drums. 831-D—

A. (interposing) Doesn't it all refer to the same order?

Q. Different shipping dates on these invoices.

Trial Examiner Norwood: Off the record.

(Discussion off the record.)

The Witness: I think that all refers to an order of the Federal Storage Battery Company, one carload order delivered to them over a period, during the period at
2770 least when we were definitely short on oxide production. Our stocks were down, and we delivered them over a period. I think that was what you are referring to.

By Mr. Wright:

Q. I note on No. 831-G, "applies on standing order." Was it customary to put a standing order in that way? With delivery periodically from day to day in less than carload quantities?

A. In truck shipments to Chicago. A customer would place an order, whether for truckload or carload. It would be trucked up there and we would try to deliver those as rapidly as we could. Sometimes we weren't able to get transportation in order to deliver those for days at a time.

Q. I call your attention to the fact that 831-O is an invoice of December 1 of 20 drums, which still refers to "applies on standing order of October 2, 1941."

A. I recall those and the time they were made up. There were some in there where we applied shipments to the wrong orders in our Accounting Department because we made shipments against one order and then came back and made shipments against the other as far as the invoicing was concerned. I think this is the account.

Q. Please just answer my questions now and don't volunteer.

I show you Commission's Exhibit 831-Z-26, which is an invoice of December 13, 1941, to the Illinois Battery & Electric Company of 11 drums of oxides. Is that
2771 the card price that appears for those positive and negative oxides there?

A. I wouldn't know unless I saw the card. Have you got the card for that time?

Q. I call your attention to the fact that on Commission's Exhibit 831-R to the Federal Storage Battery Company in what you said was the carload price, within three days of that, that the price on the same materials—

A. (interposing) This was the carload price if the lead market was 5.85. I qualified my answer that way.

Q. I understand it is established in the record that that was the price of lead during that period.

A. It depends on whether this price applies to that lead market, as to when that order was accepted in our plant. I don't know whether this—whether there had been a delay in it or not.

Q. Please don't explain these things unless you are asked a question about them.

A. I am sorry.

Q. Was it your custom in making these sales to make a price at the time you accepted the order and to continue shipping over a period of months at that same price irrespective of movement, pig lead market?

A. If we accepted an order for a definite amount of oxide for delivery to a given point, we would make delivery on that tonnage of oxide where we accepted the order at a given price.

2772 Q. On the date that the order was accepted?

A. On the date that the order was accepted.

Q. That is a contractual relationship which is common in the industry?

A. That is right.

Q. Well, now, calling your attention again to this invoice, Commission's Exhibit 831-Z-26, you will notice the Metrox Plumbarge there is $8.25 per ton.

A. Yes.

Q. And $8.50 is for the positive oxide. What transportation differential was there, if you know, involved in shipping 20 drums by truck to the Federal Storage Battery Company and 11 drums by truck to the Illinois Battery & Electric Company?

A. Difference in transportation—they are both located in Chicago?

Q. Yes. What was the cost difference involved in those two transactions?

A. I don't know what the actual cost was on either one of these shipments.

Q. I notice that on 831-O and 831-Z-26 the "via" is by Welch in both instances.

A. I think the freight rate on both of them is identically the same, but you asked me if I knew, and I don't know.

Q. That is the same carrier?

A. Yes.

2773 Q. Does that refer to a local trucking company?

A. Yes.

Q. And they had a set rule for delivery per hundredweight cartage in the city of Chicago?

A. That is right.

Q. Would there be any substantial difference between per hundredweight cartage rate in Chicago between 20 drums and 11 drums?

A. I don't recall the schedule of that trucking contract, but it has breaks in it as to the tonnage that is delivered.

Q. Would it be more than 5 cents a hundredweight difference on those two quantities, in your recollection?

A. I just don't know. I don't think so, but I don't know what it actually was.

Q. You don't know what the local cartage rate is in Chicago from Hammond?

A. No, I don't.

Q. I call your attention now to a shipment indicated as December 3, 1941, on Commission's Exhibit 841-Z-45 to the Bowers Battery Manufacturing Company, Inc., Reading, Pennsylvania, on 63 drums. That, likewise, is the carload price, assuming that 5.85 was the pig lead price at that time. Is that correct?

Mr. Duncan: Off the record.

Trial Examiner Norwood: Off the record.

(Discussion off the record.)

2774 The Witness: Assuming that would be the carload price on the date this order was accepted.

By Mr. Wright:

Q. I call your attention to the fact that the bill of lading or freight bill that is attached to that invoice and appears as No. 831-Z-46 shows the freight rate there of 38 cents per hundredweight on that shipment of Bowers. Do you know whether this particular shipment went prepaid freight or collect?

A. Not unless it shows here on the bill of lading. I don't know which way it went.

Q. In either event, it came out of the price there of 38 cents, did it not?

A. It states on the invoice.

Q. That it was sent freight collect?

A. Freight collect.

Q. In that event, do you have some means of allowing the freight that was paid by the buyer when he received such a shipment as that? The invoice doesn't show any payment of freight back to the buyer.

A. We ship, if it is all right to give you this without a question, we ship on two bases: f. o. b. Hammond, with freight allowance to the customer, and we prepay the freight in those cases where it is difficult for the customer to pay his freight bill and get delivery. We credit the customer's account with the actual amount of the freight.

2775 Q. That he pays as shown by the freight bill?

A. That he pays, and it is returned.

Q. Presumably, you made a credit memorandum for Bowers in the amount of the freight shown on this freight bill as being paid per hundredweight of this material.

A. Yes.

Q. Is there any saving to you in your transportation costs in doing business with Bowers as shown on Commission's Exhibit 831-Z-45 as against 831-Z-26, the transaction with the Illinois Battery & Electric Company?

Mr. Hinds: That is objected to, Your Honor, on the assumption that counsel is sticking to his commitment that we are not going into individual discriminations, and that he is considering discriminations by classes, and in this case I assume between classes of customers, until it first be shown in which general class each of these customers is. I understand that when you justify by classes, you take people as a whole and not as individuals.

Trial Examiner Norwood: Objection overruled. He may answer.

The Witness: Will you read the question, please?

(Question read by reporter.)

The Witness: The carload freight rate from Hammond to Reading in this particular case, which applies to the
Bowers shipment, is higher than the truck rate from
2776 Hammond to nearby Chicago.

By Mr. Wright:

Q. In less than carload quantities?

A. In less than carload quantities.

Q. In such instances then, in your sales to the carload customer you actually incur a larger transportation cost than you do in sales to nearby less-than-carload purchasers?

A. I can sell across the street to a man an L. C. L. shipment and the cartage expense on that would be much less than a shipment of a carload of oxides to New York. I don't think there is any comparison.

Q. Isn't it a fact that some of your less-than-carload accounts paid cash on delivery when they purchased oxides from you?

A. I can't answer that question directly. I would say that if that was done, it was because we would not advance him any credit.

Q. In cases of those people who are sold on a cash basis your Credit Department has no further expense in connection with them because there is no credit investigation any more?

Mr. Hinds: Just a moment. That is objected to on the same ground, that where quantity differentials are involved, the customer must be taken by classes, and when you take any other base differential on any other kind of
classes, one particular customer may involve very lit-
2777 tle expense, buit if it comes in an expensive class, the
differential will apply to him.

In other words, on the class differential you have to take them by classes. I therefore object that the question is immaterial.

Mr. Wright: Your Honor, right there, that is the second objection Mr. Hinds made on the same ground in the last few minutes. I refuse to be jockeyed into the position that we are taking these discriminations by broad general classes. We have gone into that before, and that just isn't the case.

Trial Examiner Norwood: In any case, that is a question of application which we will have to resolve after a great deal of study, maybe, and discussion.

Mr. Wright: I think it ought to be plain on the record, before counsel finish putting in their defense I want the record to show that he has any thought that I contend only that these are broad general class discriminations and that by the testimony of this witness and Mr. Sprague he can say we found we had larger costs in doing business with less-than-carload customers; therefore, they are justified under the Robinson-Patman Act.

Trial Examiner Norwood: I feel you have a right to bring out this testimony here as to the matters which are brought up by matters of law which will be settled later.

We are bringing out all matters that apply here to
2778 bona fide contentions of either side. It is just a broad
investigation. Objection overruled. Please read the question.

(Question read by reporter.)

The Witness: That is correct.

By Mr. Wright:

Q. Regarding this matter of freight and cartage and the different types of customers, I call your attention to Commission's Exhibit 852-B and C, which is a list of storage battery manufacturers purchasing lead oxides from Metals Refining Company from October 1, 1941 to December 31, 1941. Did you have anything to do with preparing that document, Mr. Burruss?

A. I personally had nothing to do with preparing it.

Q. I will tell you that it is in evidence as furnished by the Glidden Company in answer to specific inquiries.

Now, I direct your attention to the fact that the truck rates there on deliveries from Hammond to Chicago and Berwyn and in that local metropolitan area appear to be 15 cents in less-than-carload and in 5-ton lots, and 11 cents in carload lots.

A. That is right.

Q. I also call your attention to the fact that in many instances the transportation charges per hundredweight involved in the less than 5-ton transactions are less than the transportation charges in either the carload or 5-ton lots.

2779 A. Where they are close by.

Q. Where they are close by your plant.

A. Yes.

Q. Now, you stated that you made a survey of some less-than-carload accounts. Was that your testimony?

A. We checked less-than-carload accounts.

Q. How did you check them? What did you do?

A. As far as our shipping expenses or selling expenses were, delivering to the less-than-carload accounts, if that is what you are referring to.

Q. Yes. I am referring now to the matters about which you testified on direct in answer to Mr. Duncan about checking the less-than-carload accounts on various items of expense.

A. Oh, yes.

Q. How did you select the accounts that were subject to that check?

A. I didn't check individual accounts.

Q. What did you do?

A. That is, in making this survey. I inquired of our credit department how much of their expense was involved and applicable to the smaller accounts, the 5-ton, and to the carload buyer.

Q. Do you know how they got that information for you?

A. I don't know exactly how they got it. I assume it was on the basis of the number of calls that were made on a particular account, the amount of correspondence involved.

2780 Q. For all you know it might have been someone's guess or opinion as to what—

Mr. Duncan (interposing): I object to the form of the question. It is in the alternative, either guessing or opinion.

Trial Examiner Norwood: Read the question.

Mr. Wright: I withdraw it.

By Mr. Wright:

Q. As far as you know, it might have been someone's opinion in the credit department as to how much of the time was spent in the various accounts?

A. I think we have reliable employees, and they give me the information that I ask for rather than a guess.

Q. You don't know how they might have obtained that information, do you?

A. No.

Q. Or what processes they might have gone through to get it?

A. I do not.

Q. Or what records they had available from which it could be secured?

A. No.

Q. Was that in the form of a written report?

A. No, that was in the form of a verbal statement from our credit department.

Q. And that purported to cover all your L. C. L. 2781 accounts both the 5-ton lots and less than 5-ton lots—those customers?

A. Yes.

Q. Do you make any distinction between the two as to the expenses between the two?

A. I don't recall that they made any distinction between the 5-ton and the less than 5-ton.

Q. Your information about selling expense—is that in the same category?

A. Selling expense is the same way.

Q. In other words, the basis of your information is the same?

A. That is right.

Q. And the expense of servicing the accounts—is that in the same category?

A. Yes.

Q. And as to warehousing expense on the lead oxides—is that in the same category?

A. That was a report that we had in our Chemical and Pigment Division.

Q. You are referring to lithopone reports?

A. The lithopone report.

Q. But as to any information on oxides, you have no more specific information than that which you referred to from the credit department and from the sales department?

2782 A. That is right.

Q. In what industry is lithopone sold?

A. Largely the paint industry.

Q. And your L.C.L. customers for oxides are primarily in the battery industry?

A. Largely, yes.

Mr. Wright: I have no further examination.

Mr. Duncan: I have no redirect, Your Honor.

Trial Examiner Norwood: Thank you Mr. Burruss. You are excused.

(Witness excused.)

Mr. Duncan: We have no further evidence to offer on behalf of the Glidden Company at this time, Your Honor, but we want to reserve on behalf of Glidden the right to introduce further testimony or recall the witnesses whom we have already produced here. We also reserve the right to introduce further exhibits.

Trial Examiner Norwood: You have that right under our procedure.

Mr. Duncan: Thank you.

Trial Examiner Norwood: What is your further pleasure?

Mr. Ewing: As we discussed last week, our plan would be to proceed here on the 10th of June, acts of God and public enemy excepted.

2783 Trial Examiner Norwood: Off the record.

(Discussion off the record.)

Trial Examiner Norwood: The hearing is recessed until 9:00 o'clock a.m., Eastern Standard Time, 10:00 o'clock District Time, on June 10, 1947, in room 332, office of the Federal Trade Commission, Washington, D. C.

(Whereupon, at 4:10 p.m., the hearing was recessed until 9:00 a.m. Eastern Standard Time, 10:00 a.m. District Time, June 10, 1947.)

2784 Room 332, Federal Trade
Commission Building,
Washington, D. C.,
Tuesday, June 10, 1947.

Met, pursuant to adjournment, at 10:00 a.m., E. D. S. T.

Before:

John W. Norwood, Trial Examiner.

Appearances:

Joseph S. Wright, Esq., and
Paul R. Dixon, Esq., appearing for the Federal Trade Commission.

J. T. Welch, Esq. (Davies, Richberg, Beebe, Busick, & Richardson, 815 15th St., N. W., Washington, D. C.), appearing for Sherwin-Williams Company.

Edmund P. Wood, Esq. (2801 Carew Tower, Cincinnati, Ohio), appearing for Eagle-Picher Lead Company and Eagle-Picher Sales Company.

Henry E. Gardiner, Esq. (Chadbourne, Wallace, Parke & Whiteside, 25 Broadway, New York, N. Y.), appearing for Anaconda Copper Mining Company and International Smelting & Refining Company.

James D. Ewing, Esq., and
E. Z. DuBose, Esq. (Alexander & Green, 120 Broadway, New York, N. Y.), appearing for the National Lead Company.

2785 PROCEEDINGS.

Trial Examiner Norwood: Pursuant to adjournment on May 15, the hearing in Docket 5253, National Lead Company, et al., is now reconvened in Room 332, Office of the Federal Trade Commission, Washington, D. C., at 10:00 a.m., Eastern Daylight Saving Time, on the 10th day of June, 1947.

The reporter will note the appearances.

I suppose that it is in order this morning for me to rule on the motion to strike. Both Mr. Wright and the counsel for Glidden have filed memorandum arguments with me, and I suppose that it is agreeable to counsel not to put those documents in the record.

Mr. Wright: Well, won't those briefs go in the record under the new Rules, Your Honor?

Trial Examiner Norwood: They can be left out by agreement. You may make your motion for the record here.

Mr. Wright: May we go off the record a moment?

Trial Examiner Norwood: Off the record.

(Discussion off the record.)

Trial Examiner Norwood: On the record.

Mr. Wright: Your Honor, I move that the testimony of the witness David N. Burruss, Jr., beginning in the transcript at line 5, on page 2738, and continuing through line 18 on page 2754, which is the direct testimony, and the testimony of the same witness on cross-examination 2786 beginning at line 4, page 2779, and ending at line 6 on page 2782, be stricken from the record.

I would also like to move that the testimony of the witness Sprague, lines 17, 18 and 19 on page 2551; and the further testimony of the witness Sprague beginning with the words, "But facing", on line 5 of page 2710 and continuing through line 19 of the same page; and the further testimony of the witness Sprague beginning at line 21 of page 2721 and continuing through line 4 of page 2725; and the further testimony of the witness Sprague beginning at line 2 of page 2729 and continuing through line 9 of page 2730, be stricken from the record.

The grounds of the motion are that this testimony was improperly admitted, being incompetent to prove justification for discriminations under Section 2(a) in the record, and that it was hearsay, opinion testimony based upon facts and records which were not available for purposes of cross-examination, and which were not within the personal knowledge of the witnesses.

Trial Examiner Norwood: This motion to strike the testimony of the witness Sprague is a new motion.

Mr. Ewing: That is correct.

Trial Examiner Norwood: We will have to take that under consideration, and we can discuss it further when I have seen the record and seen the particular lines 2787 involved. But counsel may go ahead now and discuss his motion to strike the testimony of the witness Burruss.

Mr. Wright: Your Honor, I want to say—

Trial Examiner Norwood: (Interposing.) The two memorandum briefs that have been filed here, one by counsel in support of the complaint and one by counsel for Glidden, may go in the record. I do not think it is necessary to copy them in the transcript here. But I would like counsel to state the substance of their contentions for the record here so as to bring the matter forward.

Mr. Wright: Your Honor, I would like to say first of all that while the motion as I originally filed it did not relate to the testimony of the witness Sprague, on reexamination of the record I have found that the testimony of the witness Sprague was in exactly the same category, so that my contentions in the memorandum brief in support of the motion as to the testimony of the witness Burruss are equally applicable to the testimony of the witness Sprague. In both instances the record is perfectly clear that neither of these gentlemen had any firsthand knowledge of the records and books of the company to know definitely that the costs of doing business with the various categories of customers were as was testified.

Now I will call your attention to the statement of Mr. Burruss on cross-examination, on page 2779 through 2788 2781, where he stated that he did not check any individual accounts in determining these costs. He inquired of the Credit Department and of the other departments as to what their costs were. He did not know the basis of the information which he received then from the Credit and other departments, to the effect that the costs of doing business with the less-than-carload customers were higher than with the carload customers.

In answer to a question as to whether he knew that it might have been someone's guess or opinion in the Credit Department as to how much time was spent in checking the various accounts, the best answer he could make was, "I think we have reliable employees, and they give me the information that I ask for rather than a guess." But in answer to the specific question as to whether he knew how they obtained the information, he said no; and he stated, with reference to all the other items of expense, that they were in exactly the same category as the credit information, excepting as to warehousing expense, and there he vaguely testified that there had been a specific study made as to lithophone. He did not have that study in his possession, and there was no showing in the record that the warehousing expense as to lithopone was in the same category as it was as to the products involved in this case.

Trial Examiner Norwood: Just make your general argument, because we will go over the items—

Mr. Wright: (Interposing.) It did not appear 2789 until this cross-examination came up that this was outright hearsay and that the witness had no direct knowledge of his own upon which to base that testimony. For that reason, I am seriously urging this motion to strike.

We have in this instance a peculiar statutory provision which places a positive burden on the respondents, having possession of the records from which these facts may be determined, to come forward and prove any justification on a cost basis, if they have one. To permit this testimony to remain in the record will be to wrongfully, on the basis of hearsay and opinion testimony, shift that burden back to counsel for the Commission to prove that there was no justification, from records which are in the possession of the Glidden Company. Now there was some testimony that the Glidden Company has no records from which it could be determined what their costs were. Well, it is a matter of common knowledge that a large corporation such as The Glidden Company has very accurate and complete records of its daily transactions, and certainly there should be a more substantial showing of an impossibility of producing those records and bringing in this information.

Mr. Ewing: As Your Honor has said, it was not the intention of counsel for Glidden to make any argument on this motion or in opposition to it, but since I am acting for them in this particular regard I think perhaps I should state for the record the basic grounds of their opposition 2790 which appear in the brief, and these are:

Glidden submits that the motion should be denied for the following reasons:

(1) The testimony (Appendix A) sought to be stricken was properly and fairly admitted inasmuch as it was competent and met the three practical and fundamental tests of the logical relevancy, reliability, and fairness.

(2) To strike such testimony would work irreparable injury to respondent Glidden, and would be highly prejudicial and would not make for a fair hearing.

(3) Even if such evidence was hearsay, which we deny, Burruss' testimony (Appendix A) possessed a moderate degree of reliability required for its admission, and its reception by the Examiner was entirely proper.

(4) Complainant's counsel was not deprived of his right to fully cross-examine the witness Burruss.

(5) The evidence should be permitted to remain in the record inasmuch as the estimates are, to use the words of the Examiner, "from these men who conduct the business and who have to do business, or at least who do business on these estimates * * * they may come in for whatever they are worth. Any objection to their not being accurate surveys would go to the weight."

And on the further ground, as supported by the decision of the Circuit Court of Appeals for the 7th Circuit
2791 in the Morton Salt case, decided on May 27, 1947,
with which Your Honor is familiar.

I take it that as far as the motion with respect to Mr. Sprague's testimony is concerned, we will be given an appropriate opportunity to answer it after we have had a chance to look at the portions of the record objected to.

Trial Examiner Norwood: That is right.

Mr. Wright: Your Honor, I fail to see what there is in the Morton Salt Company case which relates to this particular problem here. The essence of my objection is that I have been completely deprived of my right to cross-examine as to the factors and the basis of this testimony. These witnesses had no facts on which they could be tested. As Your Honor stated in his paper on Administrative Evidence in the George Washington Law Review, "General statements and incomplete data as to costs, profits, sales, and the like, offered by a party who has custody of complete records, not available to the opposing party, should be rejected as unreliable, for it may be inferred that the entire story would be against the offerer."

Trial Examiner Norwood: I have read both memorandum briefs, and read the motion, and the material that went with it, of Mr. Wright, and also the very thorough and well gotten up brief of Mr. Duncan. I have also read
the record covered by the motion, and we will con-
2792 sider these items as we come to them.

At page 2738, line 5, I see nothing to strike there—

Mr. Wright: (Interposing.) Your Honor, I don't know what your ruling is on the motion, but the questions and answers beginning on line 5 of page 2738 presumably all were based upon the estimates that the witness Burruss got from the heads of the various departments of Glidden, as the answer which continues on in line 9 will show, so that the whole statement, his whole answer that the carload business yielded the greater net profit, was apparently based on this—

Trial Examiner Norwood: (Interposing.) Well, the point I am considering in this thing is that this is general information which this witness would know as to whether or not—in fact, I think anybody knows it without listening to a witness saying that he gets more profit out of a carload than the less-than-carload, and that the freight per pound is less on carload business than on less-than-carload business.

Mr. Wright: There is no question about that. I would be willing to stipulate that the expenses on the carload business are probably less than they are on the less-than-carload business. But here is a question that went to the net profit on the various lines, and the witness has already testified that they made no examination of their books of account to determine that.

Trial Examiner Norwood: I understand that, but 2793 he has a right to give us these details about his business, and I shall accept that and consider it as going to his motivation for meeting the other fellow's price, and as going to the question of whether or not he named his prices by agreement or named them because of competitive situations, and so on. I wouldn't strike that testimony there. He has a right to tell us that, and he has a right to have us consider it, and I see nothing here that could be taken as justifying an alleged price discrimination. So I will deny the motion as to that passage.

Now coming down to page 2742, beginning at line 5—

Mr. Wright: (Interposing) Your Honor, I direct your attention to the answer that appears beginning at line 3 on page 2739. In addition to relating that there were several additional costs, including freight and clerical work, warehousing and credit investigations being most of it, where he stated, "credit losses in connection with that particular class of trade made up most of our" credit expenses —now that is something which can be determined by the records of the company. As shown by his cross-examination, he had no information on that subject except what the credit manager told him. Now there he is allocating all the credit costs to the less-than-carload accounts.

Now what the credit costs of the company were over
any period, and to what customers they could prop-
2794 erly be allocated, is something which can be deter-
mined by competent evidence and without any undue
burden on the respondent.

Trial Examiner Norwood: All he is doing is comparing these two classes of business. He isn't giving anything definite that could be taken into our calculations as justifying cost discrimination. He is testifying, as between the two classes, which one costs the most—

Mr. Wright: (Interposing.) After detailing all of the various items of additional expense in connection with smaller customers, he said credit investigation is most of it. In other words, that is most of the additional expense. And "in connection with that particular class of trade * * * most of our expense in that connection." In other words, credit investigation is the largest items of expense, and that class of customers accounts for most of it. There is an allocation or a purported allocation.

Now these are things which can be determined with a degree of certainty. I had no opportunity of cross-examining as to what their credit expenses were. This witness didn't know, he had no figures on credit expense, credit investigations,—on nothing. As soon as he answered, on the stand, that he had no information, there was no further cross-examination possible.

Trial Examiner Norwood: Now on page 2779, beginning
there, that refers to this item here.
2795 Mr. Wright: Yes, sir.
Trial Examiner Norwood: I will allow the motion
to strike lines 3 to 9 on page 2739, in view of the state-
ments of this witness contained on page 2779, and follow-
ing, respecting these costs.

Now on page 2742—do you have anything prior to that?

Mr. Wright: Yes, sir.

Trial Examiner Norwood: What is it?

Mr. Wright: The answer which appears on lines 14, 15 and 16 of page 2739, "Yes, the more accounts you solicit in that case", and following, winding up with the statement, "your selling expenses are much higher." This witness had no factual basis for stating that selling expenses were much higher.

Trial Examiner Norwood: I will allow the motion to strike lines 14 to 16 on page 2739.

What is your next item?

Mr. Wright: I would like to strike the material appearing in the answer starting at line 19 and running through line 25 of page 2739. You will note there a statement that the difference between the LCL and the carload freight rate runs on the average 25 cents a hundred. Now obviously this witness had no information on that, as appears in his
cross-examination. It appeared in the cross-examina-
2796 tion that he didn't know the difference between vari-
ous freight rates, even the local cartage rates in the
City of Chicago. That answer purports to account for 50% of the difference between the carload and the 5-ton price.

Trial Examiner Norwood: Is that covered by statements following page 2779?

Mr. Wright: It is covered by his answer that appears on line 17, that he didn't check any individual accounts; and there are other portions of the cross-examination which I can find, in which the witness didn't know what freight rates were, wasn't aware of what the difference in the cartage rate to the City of Chicago between less carload, and carload, was. And he had no basis there for any study which would determine on the basis of the business that Glidden did, that their costs on LCL shipments were 25 cents a hundredweight higher.

Trial Examiner Norwood: I see. The motion is allowed, to strike lines 19 to 25 on page 2739.

Mr. Ewing: I would like to direct Your Honor's attention to the fact that there was no objection to this testimony that you are striking, at the time it was given.

Trial Examiner Norwood: It was not until cross-examination that it appeared that the witness had no basis for the statement.

Mr. Ewing: We had some basis, because page 2779 shows
he made some check. And after all, he is running the
2797 business, he knows something about it, even though
he may not know exact figures. You can't run a business and not know something about the business.

Trial Examiner Norwood: He tells down here how he made this. He said he "inquired of our credit department how much of their expense was involved and applicable to the smaller accounts".

Mr. Ewing: I think that all goes to the weight and not to the admissibility. I think, as you said at the time, it is admissible for what it is worth.

Trial Examiner: But this shows on the face of it that they do have some information that these people who reported this to him could come here and tell us about. That didn't appear to me until just before we adjourned, in the last few pages, and I don't see how I can—

Mr. Wright: (Interposing) I will say it didn't appear to me what the purpose of this testimony was, either, until we got down, as appears on page 2742 of the transcript, where I made an objection to the whole line of testimony if it were for the purpose of showing costs of the company, beginning at line 22. Your Honor overruled that objection on the ground that they were estimates that these witnesses themselves knew about, as appears on page 2743. It didn't appear until cross-examination that they were estimates by other people which were related to the witness.

2798 Trial Examiner Norwood: I am going to make a correction there, as to the last material struck. Make it line 24, that is, that part of line 24 which ends with "carload of oxides." Everything there above that is struck, up to line 19. This other material, I see no harm in leaving it in, because it is material which the witness would know.

Mr. Wright: Off the record.

Trial Examiner Norwood: Off the record.

(Discussion off the record.)

Trial Examiner Norwood: On the record.

What is the next one, Mr. Wright?

Mr. Wright: I would like to strike everything now starting at line 24 on page 2741, and continuing on through. You will notice that on page 2742, the witness said, on line 2, "Yes. We checked on sales that we have made to some of these LCL accounts."

And then, on his cross-examination, he stated that he didn't check any LCL accounts; and all of the subsequent testimony there is based upon that purported checking of accounts.

Mr. Ewing: He testified on page 2779, in answer to your question, "We checked less-than-carload accounts." That is on line 6.

Mr. Wright: And then he stated immediately afterwards, "I didn't check individual accounts."

2799 Mr. Ewing: He said, "I didn't check individual accounts." He certainly testified that he checked less-than-carload accounts.

Trial Examiner Norwood: We are skipping now to page 2742, line 3; is that what you want struck?

Mr. Wright: No, sir. I want to start striking at page

2741, line 24, on through continuously until we get over to page 2754.

Trial Examiner Norwood: Well, I will not strike his statement there that they checked, because that is necessary to explain what comes afterwards; but I am going to strike that from line 5 to line 8.

Mr. Wright: That is satisfactory, Your Honor.

Trial Examiner Norwood: In view of his subsequent statements there as to the basis of that information, that is, I am considering that.

Mr. Wright: That is page 2742, lines 5 through 8, inclusive?

Trial Examiner Norwood: Yes.

Mr. Wright: The next answer is in the same category, the one beginning at line 11 and continuing through line 16, of page 2742, including the statement, "our expenses in connection with those have been much greater than in connection with the large buyers."

Mr. Ewing: I would say that a witness in Mr.
2800 Burruss' position would obviously know in a general way, and that is all he is testifying, in a general way that the expenses to a certain class are much greater than they are to another class.

Mr. Wright: Well, Your Honor, what their expenses were can be determined from their books and records. I can't cross-examine the witness as to what their expenses were, because he didn't know.

Mr. Ewing: He knew they were much greater.

Trial Examiner Norwood: Did you bring out anything on cross about those expenses?

Mr. Wright: Yes, sir. Now this sentence refers to credit investigations again, about which Your Honor has already granted the motion. You can see it reads, "they have been comparatively poor credit risks and entailed an awful lot of follow-up in order to collect on sales we have made, and our expenses in connection with those have been much greater than in connection with the ~~larger~~ buyers". Then immediately counsel asked him whether that overcame and justified the differential which they made, the next question. The purpose of this, we had to infer until counsel for respondents filed a brief in which they contended that this evidence constitutes a valid cost justification for the discriminations shown in the record. They stated that it was their feeling that the Commission could make findings on the basis of it.

2801 Trial Examiner Norwood: Well, in view of the witness' subsequent statement, I will grant the motion to strike, beginning in line 14 on page 2742; strike that portion reading "and our expenses in connection with those have been much greater than in connection with the larger buyers."

2802 Mr. Wright: Your Honor, with reference to the material now which starts at line 11 here, this is what must be opinion evidence, it can't be anything else since the man testified on cross examination that he didn't know what the actual facts were from the records of the company—

Trial Examiner Norwood: (Interposing): This man was in charge of sales, wasn't he?

Mr. Ewing: That is what my point was before, that here is a man running this particular branch of the business, and he knows something about it. Obviously he knows something about it.

Trial Examiner Norwood: It is difficult just where to draw the line.

Mr. Ewing: He may not know the figures to a penny but he certainly knows about what part of his business is expensive and what part isn't.

Trial Examiner Norwood: I shouldn't permit him to say that these expenses just about offset those other expenses when he testifies that he doesn't know either one.

We will take a two minute recess.

(A short recess was taken.)

Trial Examiner Norwood: All right, proceed.

Mr. Wright: The material beginning at line 17 and running through line 21 of page 2743 should be stricken.

2803 Trial Examiner Norwood: That is merely a question there which he didn't answer.

Mr. Wright: Page 2743, Your Honor. On 2742 the question from 17 to 20 was asked, and the answer appears on 2743, lines 17 through 21, where it was stated that the "added differential did not compensate for the expense in connection with handling that business."

Trial Examiner Norwood: The motion is allowed. Strike lines 17 through 21 on page 2743. What is the next?

Mr. Wright: Lines 6 and 7 on page 2744. That answer must have been based on some factual analysis by the credit department which certainly wasn't available for cross examination.

Mr. Ewing: It wouldn't have taken much factual analysis to know that a loss in a certain class of business existed.

Trial Examiner Norwood: The question asked him what his investigation disclosed, and his testimony on cross examination is that he made no investigation personally. That comes under the same category as the others.

Mr. Ewing: Well, he testified on cross-examination, Judge, that he checked less-than-carload lots.

Trial Examiner Norwood: I think when you run it out you will find that the foundation gives away.

Mr. Wright: How could he check less-than-carload accounts when he didn't check individual accounts. In order to get to the whole you have got to start with the parts.

2804 Mr. Ewing: Not necessarily, if you know something about the business.

Trial Examiner Norwood: Do you want the question and the answer stricken?

Mr. Wright: Yes sir.

Trial Examiner Norwood: Motion allowed. On page 2744 strike lines 3 to 7 inclusive. What is the next?

Mr. Wright: The question and answer beginning at line 8 and extending through line 14.

Trial Examiner Norwood: Is that covered by the witness' statements following page 2779?

Mr. Wright: Yes sir. That deals with the item of credit losses about which he was particularly examined there to determine what his investigation had been.

Trial Examiner Norwood: The motion is allowed. On the same page, 2744, strike lines 8 throug 14, inclusive.

Mr. Wright: The next is on page 2745, lines 1 through 6. In that connection you will note that the witness at the bottom of page 2744 said he had no exact figures or nothing from the records, and the next question requested his judgment.

Trial Examiner Norwood: The motion is allowed. On page 2745 strike lines 1 through 6.

Mr. Ewing: I would like to note there again, Your
Honor, that the question which was "What is your
2805 judgment on the matter generally?" was not objected
to, and certainly that question could have been objected to on the ground now indicated, if counsel had wished to, at the time, and in this case it was made very clear at the beginning that objections had to be taken at the time. Here is a mass of testimony to which no objection was

taken in large part, and now later a motion is made to strike it.

Mr. Wright: There was an objection to the whole line of testimony as being an improper way of putting in this cost material.

Mr. Ewing: It bears on the question of the intent in this company in doing business, and it bears on the question of how they arrived at these figures.

Trial Examiner Norwood: This will have to come out because in view of his subsequent statements he couldn't make any definite statement about that.

Mr. Wright: I would like to strike from line 15, on page 2746—

Trial Examiner Norwood (Interposing): I don't see anything there to strike. Do you mean from line 15 to the remainder of the page?

Mr. Wright: No sir. I think we can handle all this next part together, since it all relates to one subject, from line 15 on page 2746, down through line 10 on page 2752. All
of that testimony related to some sort of survey which
2806 the witness stated had been made on the warehousing
expenses for lithopone, and there were no supporting
data, there was nothing available for cross examination on that study. The witness was not familiar with the details of it; he didn't have any written study available for purposes of cross examination and he had not made the study himself personally. It all relates to that one point.

Trial Examiner Norwood: What line did you specify on page 2752?

Mr. Wright: I said line 10, but it should be line 9, I believe. Following that the witness was examined on another subject.

Mr. Ewing: In order not to prolong this particular phase I simply make the comment now that it would seem to me to be wholly improper to strike the questions in any event. I submit that none of this testimony with respect to lithopone should be stricken, but certainly it is not proper to strike the questions as well as the answers. Counsel was entitled to put the questions and there were objections to some of this lithopone testimony and they were ruled on at the time, and that is one thing depending on how they were ruled on, but certainly the questions shouldn't be stricken.

Trial Examiner Norwood: That point wasn't raised a while ago, but I had it in the back of my head at the time.

Mr. Ewing: This particular subject of lithopone
2807 was given some detailed consideration at the time.

Mr. Wright: As I understand it, under our procedure the material is not stricken physically from the record so that all the basic data upon which the ruling is based is preserved in the record; so it seems immaterial whether the questions are included in the stricken material or not. They will remain in the record.

Trial Examiner Norwood: I think the questions may stand on the ground that some men may ask questions that wise men can't answer.

Mr. Wright: I have no objection to leaving the questions in the record.

Trial Examiner Norwood: I will allow the motion to strike all the answers of the witness appearing in the transcript from line 15 on page 2745 through line 9 on page 2752.

Now as to this cross examination I don't think that should be stricken. Is there any reason why you want that stricken?

Mr. Wright: Your Honor, there is a further objection before coming to that. On 2754, the answer appearing at lines 15 through 18 is in the same category.

Mr. Ewing: I would suggest that the question there is, "But from your experience can you make a fairly reliable approximation?"

Mr. Wright: Well, it appeared on cross exami-
2808 nation later that the witness had no information on freight rates and he couldn't be cross examined about that.

Trial Examiner Norwood: The point about that is that he is making a comparison between amounts or figures or costs there and he doesn't know either one, so I think that that will have to come out, the answer appearing from lines 15 through 18 on page 2754.

Unless there is some good reason I shall deny the motion to strike the rest of it, that is, line 4, page 2779 through page 2782, line 6.

Mr. Wright: I have no objection to permitting the cross examination to remain in the record in the present state.

Trial Examiner Norwood: Call your witness.

Mr. Ewing: Might I note for the record an exception on behalf of Glidden to your rulings adverse to Glidden?

Trial Examiner Norwood: Yes.

Mr. Ewing: Mr. Tibbets.

ALBERT B. TIBBETS was thereupon called as a witness for the respondent National Lead Company, and having been first duly sworn, testified as follows:

Trial Examiner Norwod: State your full name.
The Witness: Albert B. Tibbets.

2809 *Direct Examination by Mr. Ewing.*

Q. Mr. Tibbets, by whom are you employed?
A. National Lead Company.
Q. In what capacity are you now employed by National Lead?
A. Sales Promotion Manager.
Q. When were you first employed by National Lead?
A. January, 1919.
Q. What was the nature of your first employment?
A. Assistant in the Advertising Department.
Q. How long did you continue to work in that capacity?
A. About seven years.
Q. In what capacity were you employed at the termination of that period?
A. The same, Assistant in the Advertising Department.
Q. How long did you remain in the Advertising Department?
A. About seven years.
Q. What was your next connection with the company?
A. Well, I was away a year as Sales Promotion Manager of the Butterick Publishing Company, and then I returned to do promotion work.
Q. In what department?
A. Well, I served under the Vice President in promotion work.
Q. What connection, if any, have you had with National Lead Company's white lead-in-oil business?
A. Well, I have served of course in the Advertis-
2810 ing Department in helping advertising promotion, and promoting and Secretary of the Sales Committee.
Q. When did you become Secretary of the Sales Committee, approximately?
A. I think I have my experience record here. 1928.
Q. Are you still connected with the Sales Committee?
A. Yes sir, in the same capacity.

Q. What connection, if any, have you had with the National Lead Company's business relating to lead oxides?

A. As Secretary of the Oxide Committee.

Q. How long have you been Secretary of the Oxide Committee?

A. I dont' know. Offhand, since about 1934—no, wait a minute, pardon me, I will change that. At the time that I was made Secretary of the Sales Committee that took in the Oxide Committee, and later on it was split into two committees and I don't remember just the date that was.

Q. I show you a copy of a map which has been marked in evidence as Commission's Exhibit 580, and ask you whether you are familiar with that map?

A. Yes sir.

Q. I show you photostatic copies of 14 pages which have been marked in evidence in this case as Commission's Exhibit 659-C to -P, inclusive, and ask you if you are familiar with that document?

A. Yes sir.

2811 Mr. Ewing: I ask that this document be marked Respondents' Exhibit 147 for identification.

Trial Examiner Norwood: It may be so marked.

(The document referred to was marked Respondents' Exhibit 147 for identification.)

By Mr. Ewing:

Q. Now Mr. Tibbets, I show you this map of the United States in which certain areas are colored, and upon which certain legends appear, and which has just been marked Respondents' Exhibit 147 for identification, and ask you to state whether you prepared this map at my request?

A. Yes sir.

Q. Do the territorial areas depicted on this map portray the territories which are set forth in color on Commission's Exhibit 580?

A. Yes sir.

2812 Q. In preparing the large map in your hands which has been marked Respondents' Exhibit 147 for identification, if you use as a basis the small map which is a copy of Commission's Exhibit 580 for the purpose of portraying on Respondents' Exhibit 147 for identification the territorial divisions shown on Commission's Exhibit 580?

Mr. Wright: Objection, your Honor. I believe the witness can be asked the circumstances of his preparation without being led by counsel.

Trial Examiner Norwood: I think that is more or less preliminary.

Mr. Ewing: It is all preliminary.

Trial Examiner Norwood: I think so.

Mr. Ewing: There is no peculiar significance or anything magical or mysterious about it. I just want the record to show in brief form.

The Witness: Yes, sir.

By Mr. Ewing:

Q. Now, I direct your attention to the large map which has been marked Respondents' Exhibit 147 for identification and, in particular, to the legends which appear thereon in the white square boxes.

They are not white on your Honor's copy, but they are square boxes.

I ask you to state what those legends represent.

2813. A. Those are the freight differentials in each zone.

Q. What?

A. Freight differentials.

Q. Do you mean by that that they are the differentials shown on Commission's Exhibit 580 for the territories in the particular color to which they are attached?

A. Yes, sir.

Q. Are the differentials portrayed on the large map, Respondents' Exhibit No. 147 for identification, the same as those shown on Commission's Exhibit 580, of which you have a copy?

A. Yes, sir.

Q. Now, I direct your attention again to Commission's Exhibit 659-C to -P, inclusive, and ask you to state whether the differential points shown on that exhibit are identified on Respondents' Exhibit 147 for identification in any way?

A. Yes, these ~~are~~ shown in red ink and the points are indicated by ~~the~~ red ink, underscored.

Q. Are all of the points shown as differential points on Commission's Exhibit 659-C to -P, inclusive, identified upon Respondents' Exhibit 147 for identification?

A. That is this large map?

Q. That is correct.

A. Yes, sir.

Q. Now, I call your attention to the fact that on
2814 the large map, Respondents' Exhibit 147 for identification, alongside each of the differential points iden-

tified, I believe you said, by underscoring, is a legend such as "1/4th" or "1/8th", as the case may be; and I ask you to state what those legends represent.

A. Freight differentials.

Q. For what purpose did you prepare Respondents' Exhibit 147 for identification?—The large map.

A. To show the differentials in effect some years ago as compared to the present differentials in colored zones, that is, indicated here by colors.

Q. Now, are the differentials and differential points shown on the large map which you prepared, Respondents' Exhibit 147 for identification, the same differential points and differentials set forth in Commission's Exhibit 659-C to -P, inclusive?

A. Now, I am making comparison between the red inks and the colored sections?

Q. No. Are these differential points which are underscored towns or cities and the accompanying fractional differentials the same differential points and fractional differentials as are contained in Commission's Exhibit 659-C to -P, inclusive?

A. Yes, sir.

Mr. Ewing: I offer Respondents' Exhibit 147 for 2815 identification, in evidence.

Mr. Wright: Your Honor, this is a derivation of two exhibits which are already in the record. I don't see that it adds anything to the record. It is really something which is more a briefing matter. I have no objection, however.

Trial Examiner Norwood: He is to make that the basis of his further testimony, is he not?

Mr. Ewing: That is correct.

Trial Examiner Norwood: Received as marked. Objection overruled.

(The paper referred to, heretofore marked for identification RESPONDENTS' EXHIBIT 147, was received in evidence.)

Mr. Ewing: I might say off the record—

Trial Examiner Norwood: Off the record.

(Discussion off the record.)

Mr. Ewing: Now, I ask that the three sheets be marked Respondents' Exhibit 148-A to -C for identification.

(The papers referred to were marked Respondents' Exhibit 148-A through 148-C for identification.)

By Mr. Ewing:

Q. I show you Respondents' Exhibit 148-A to -C for identification, Mr. Tibbets, and ask whether that was 2816 prepared by you or under your direction?

A. That was prepared by me.

Q. Now, I call your attention again to Commission's Exhibit 659-C to -P, inclusive, and ask you to state whether you prepared Respondents' Exhibit 148-A to -C for identification from the information contained in Commission's Exhibit 659-C to -P, inclusive.

A. Yes, sir.

Q. Are all of the delivery and equalization points shown in Commission's Exhibit 659-C to -P, inclusive, shown on these three documents which you have prepared and which have been marked Respondents' Exhibit 148-A to -C, inclusive, for identification?

A. Yes, sir.

Q. Will you tell us whether you show on Respondents' Exhibit 148-A to -C, for identification, the differential per hundredweight under the sales methods employed by National Lead Company prior to the use by National Lead Company of the present zone may substantially similar to Commission's Exhibit 580 for identification in connection with the sale and distribution of white lead-in-oil?

Mr. Wright: May I have that question read?

Trial Examiner Norwood: Read it.

(The reporter read the question.)

Mr. Wright: I object to that question, your 2817 Honor, for the reason that it calls for several conclusions from the witness.

Now, as I had understood these questions they related only to whether the information was derived from these other two exhibits here; and insofar as the questions were based on a relation of those exhibits—580, 659, 147—to this, I have no objection to it; but counsel has characterized several things there regarding the method of selling which I object to.

Mr. Ewing: I only want to identify the point of time. It doesn't call for any conclusion; simply calls for him to state whether this exhibit shows the differential—that is, Your Honor, the so-called old system, or not.

Mr. Wright: I object to that characterization, your Honor. I have no objection to this, showing the differentials as they appear in Commission's Exhibit 659 and the differentials as they appear in Commission's Exhibit 580, but I do object at this point, under the qualification of this witness, to his characterizing what National did then and what they do now.

Mr. Ewing: I am perfectly content to have the record show that what he calls my characterization is simply a method of identification which has no significance whatever.

Trial Examiner Norwood: I think the question is involved. I should be much happier for counsel to reframe it.

2818 Mr. Ewing: I should be glad to rephrase it.

By Mr. Ewing:

Q. On these three sheets which you prepared and which have been marked Respondents' Exhibit 148-A to -C for identification, there is a heading in the middle, "Differential per cwt." and underneath that the words, "Old System." Will you tell us what the figures in that column are?

A. They are freight differentials at differential points, taken from this—whatever—What is this? 659-C—

Q. -C to -P, inclusive.

Now, will you tell us, Mr. Tibbets, what you mean when you say "freight differential"?

A. It is the freight differential charged the customer at those points or in those zones.

Q. Does it represent actual freight with respect to any particular customer or any particular shipment?

A. No.

Q. Now, I call your attention to the same exhibit and to the column headed "Differential per cwt." under which there appears the quoted words "Zone System" and ask you what those figures represent?

A. Those are freight differentials in the zones shown on this, whatever exhibit this is.

Mr. Ewing: Commission's Exhibit 580.

I offer Respondents' Exhibit 148-A to -C for identi-2819 fication in evidence.

Mr. Wright: I should like to request a short voir dire on the identification here.

I call your attention to the heading under "National Lead Company." "The following shows the differential charged at all delivery and equalization points under the old system of selling," et cetera.

From where did you get that information, Mr. Tibbets?

The Witness: From this exhibit here.

Mr. Ewing: Indicating Commission's Exhibit 659-C to -P, inclusive.

Mr. Wright: You made no independent check of any other records to determine whether or not these were all the delivery points quoted by the National Lead Company prior to going on the zone method?

The Witness: They were all the differential points.

Mr. Wright: You know that, do you?

The Witness: From this record.

Mr. Wright: From that record; but you examined no other records, did you, to determine whether or not they might be all—

The Witness: No, sir.

2820 Mr. Wright: So that the sole source of your information is as appears on the exhibits themselves?

The Witness: That is right.

Mr. Wright: Now, I direct your attention to the statement on 148-C, average differential per hundredweight, 123 cities and the figures following. From where did you get that?

The Witness: From my own calculation of counting up this.

Mr. Wright: In other words, you made a calculation from these figures then?

The Witness: Yes, sir.

Mr. Wright: How about the material directly below that on 148-C, in changing over to present zone system differentials charged, 71 at 123 cities, et cetera? From where did you obtain that information?

The Witness: From this same information.

Mr. Wright: That was your own conclusion?

The Witness: That is right. That is calculation.

Mr. Wright: Your Honor, I object to the reception of this document in evidence since it obviously contains conclusions and characterizations by this witness which he has not been qualified to make, and it is a misleading document to have in the record with these characterizations which appear upon it.

2821 Mr. Ewing: The characterizations are solely for the purpose of making available an easy way of seeing what the material is. The purpose of the offer is to set forth in concise form the information which is already in the record in these other exhibits so that at a glance you may compare the differentials based upon the territorial divisions that this company has employed.

Mr. Wright: Your Honor, I direct your attention—

Mr. Ewing: We are charged with a conspiracy commenced in 1933, and I propose to show that substantially the same method of distributing white lead-in-oil has been used since the inception of the company.

Mr. Wright: Your Honor, I am objecting at this point to these averages.

Mr. Ewing: That is a matter of arithmetic.

Mr. Wright: He has put some averages in here which are a very misleading proposition. It has not been established that there was any weighting of these averages to show any significance of them. These are points on 148-C that are properly part of Respondents' brief. They are contentions which can be made from the basic evidence.

Mr. Ewing: It is simply arithmetical calculations.

Trial Examiner Norwood: That has its basis in the record?

Mr. Ewing: That is correct.

Mr. Wright: It is in the record, except these 2822 conclusions.

Mr. Ewing: The conclusions are a matter of arithmetic.

Trial Examiner Norwood: Do you mean the conclusions contained in the headlines and some of the terms there?

Mr. Wright: At the bottom of it, where the witness has added his conclusion: "The average differential per hundredweight in 123 cities under the old system was .397."

Mr. Ewing: He added up a column and divided by 123.

Trial Examiner Norwood: I have never taken one of these tabulations—and they are so useful, ordinarily; the majority of them are very useful—I have never taken a one of them without limiting the use of those characterizations. They are always objectionable to the other side.

Mr. Wright: I have not checked the accuracy of this man's work. Obviously, what he has done is taken two exhibits—which anyone can do—and set down some figures.

Mr. Ewing: If there are any mistakes, we should be happy to correct them.

Mr. Wright: They can be checked for accuracy afterwards. I do object to conclusions.

Trial Examiner Norwood: This is just the same question that comes up in almost every case of this kind.
2823 I will receive this with the conditions that those characterizations not be accepted as evidence or considered in any way.

Mr. Ewing: They are not offered as such.

Trial Examiner Norwood: And also with another condition that no information be considered in the exhibit the basis of which does no appear somewhere in the evidence; that no information like that will be considered.

Mr. Wright: There is a further objection to this. I want to direct your attention to the fact that Commission's Exhibit 659 is dated September 10, 1924. Commission's Exhibit 580 was something which I believe was supplied sometime in the late '40's. There has been testimony that it was used, I believe since sometime in the mid-Thirties. Now, here is an exhibit which attempts by its heading and characterization to close the gap of 10 or more years.

Mr. Ewing: You forget, Mr. Wright, that Commission's Exhibit 659-C to -P, inclusive, runs down to 1930, as shown on it.

Mr. DuBose: It shows modifications.

Mr. Ewing: It shows modifications. As far as statements, characterizations or whatever you call them, we are not offering them to prove anything. All we are offering is a tabulation which shows the facts and figures that are already in with respect to this particular subject.

Mr. Wright: There is not one of these documents
2824 which has any date later than 1921 on it except for certain penciled notes.

Mr. Ewing: There is '21 (indicating); there is '21 (indicating); '21; '20—

Mr. Wright: '21; '20; '21; '21. There is no document on there dated later than 1921.

Mr. Ewing: I am not trying to bridge any gap. I am not saying that—

Mr. Wright: This heading here can be cited in briefs from now on out as showing that—

Mr. Ewing: I assure you—I have already stated three times at least that I attach no significance to the heading whatever. I don't know how I could make it any plainer.

Trial Examiner Norwood: Now, I think that—

Mr. Wright: Under that circumstance—

Trial Examiner Norwood: All that I require is that the material on which that is based is all in the evidence.

Mr. Ewing: That is correct.

Mr. Wright: In view of counsel's last statement, I have no objection to the reception of it in evidence.

Trial Examiner Norwood: Received as marked.

Mr. Wright: Subject, of course, to my further check as to accuracy, which I have had no opportunity to do.

2825 Trial Examiner Norwood: Yes.

(The papers referred to, heretofore marked for identification RESPONDENTS' EXHIBIT 148-A through 148-C, were received in evidence.)

Mr. Ewing: I will ask that these two sheets be marked Respondents' Exhibit 149-A and -B for identification.

(The sheets referred to were marked Respondents' Exhibit 149-A through 149-B for identification.)

By Mr. Ewing:

Q. I show you two sheets which have been marked Respondents' Exhibit 149-A and -B for identification and ask you whether you prepared those sheets?

A. Yes, sir.

Q. I show you a copy of Commission's Exhibit 749 and ask you whether the selected cities shown on Respondents' Exhibit 149-A and -B for identification, which you have testified you have prepared, are the same as those shown on Commission's Exhibit 749.

A. Yes, sir.

Q. Now, on Respondents' Exhibit 149-A and -B for identification, I call your attention to the column of figures headed "Differential per cwt." under which there appears in quotes "Old System" and ask you to state from what source you obtained the figures in that column.

A. From this other exhibit over there.

2826 Q. Referring to Commission's Exhibit 659-C to -P, inclusive?

A. Yes, sir.

Q. I also call your attention to the fact that on Respondent's Exhibit 149-A to -B, for identification, you have a column headed "Differential per cwt." and underneath it the words quoted "Zone System", and ask you to state the source from which you obtained those figures?

A. From our—this—Commission's Exhibit 580—

Q. 659.

A. The cities located in the zones indicated on Commission's Exhibit 580.

Q. Now, I call your attention to the fact that in Respondents' Exhibit 149-A and -B for identification, in the column headed "Differential per cwt."—"Old System"—the word "par" sometimes appears. Will you state what meaning attaches to that description?

A. There is no freight differential charged.

Q. Now, I call your attention to the last column headed "Differential per hundredweight"—"Zone System", in which the word "par" appears and ask you what meaning attaches to that description in that column?

A. No freight differential charged.

Q. Is it correct to say with reference to Commission's Exhibit 580 that the cities in the exhibit, Respondents' Exhibit 149-A and -B, opposite which the word "par" appears, in either differential column, were located
2827 in the purely white territory?

A. That is right, yes, sir.

Mr. Ewing: May I have that question read back.

Trial Examiner Norwood: Read it.

(The reporter read the record as follows:

"Question: Is it correct to say with reference to Commission's Exhibit 580 that the cities in the exhibit, Respondents' Exhibit 149-A and -B, opposite which the word "par" appears, in either differential column"—)

Mr. Ewing: I should have said "in the last differential column."

Trial Examiner Norwood: Correct that.

Answer the question.

The Witness: Yes, sir.

Mr. Ewing: I offer Respondents' Exhibit 149-A and -B in evidence.

Trial Examiner Norwood: Objection?

Mr. Ewing: And again I state that any material appearing on it by way of description, characterization, or otherwise is not offered for any purpose whatever as proof in this case of anything.

Mr. Wright: Mr. Tibbets, I call your attention on 149-B to the average differential per hundredweight, 37 cities, and so forth. How did you arrive at those
2828 figures that appear?

The Witness: By arithmetical calculation.

Mr. Wright: They are simply averages, then?

They aren't weighted to show how much was sold in any particular territory?

The Witness: No, sir.

Mr. Wright: So they would not show, then, would they, the actual average differential on sales of the company—being an arithmetical average?

The Witness: Based on these figures.

Mr. Wright: Now, I call your attention to the statement there, "Cities designated by asterisks are located in our Pacific Coast branch and since there is no record to show whether or not the old method was followed in that branch territory, no comparison was possible."

Will you explain that designation there?

The Witness: It is simply that I did not have any record on that—anything on the Pacific Coast branch, so I left is out.

Mr. Wright: You mean the National Lead Company has no records in its possession showing the—

The Witness: In that branch?

Mr. Wright: —practices of that territory?

The Witness: On the old method.

Mr. Wright: Did you make a determination of 2829 what records were available?

The Witness: Yes, sir.

Mr. Wright: Then you were looking for other documents to include in that comparison?

The Witness: Yes, sir.

Mr. Wright: Then it was not just a comparison of these two exhibits, 749 and 659?

The Witness: You will have to let me get these for you now. 659? Which one is that?

Mr. Dixon: The list on the table.

The Witness: I based on these two records, yes, sir.

Mr. Wright: What I am getting at is now, did you mean by that statement on 149-A that there was no record in this case of what the practices were on the Pacific Coast?

The Witness: No, we had no record of the procedure or the differential procedure, as what I call the old method. We have no record of that in the Pacific Coast branch.

Mr. Wright: Your Honor, I object to the offer of this in evidence with the final characterizations which appear at the end of it. Pursuant to counsel's statement of qualification as to the heading, I have no objection to the basic data which are listed here under the columns, but I do object to the material appearing on 149-B relating to a search of records of the National Lead Company to 2830 determine what practices were on the Pacific Coast.

Mr. Ewing: I would like to ask one question that I think would clear that up.

Trial Examiner Norwood: Certainly.

By Mr. Ewing:

Q. In Commission's Exhibit 659-C to -P, inclusive, which was the basis from which you obtained, as I understand it, the figures given in the left-hand differential column, was there any information with respect to differentials obtaining in territory covered by the Pacific Coast branch?

A. No, sir.

Q. And, therefore, when you prepared this, based upon that exhibit, no Pacific Coast branch differential data were included, is that correct?

A. That is right.

Q. And your asterisk is simply to indicate why in giving the data you did not have any for those particular Pacific Coast so-called cities?

A. That is right.

Mr. Wright: Your Honor, I don't believe that entirely clears it up, because the witness stated that he meant by that, that he had examined the records of the National Lead Company to determine whether they had any records on the Pacific Coast. I am trying to get straight whether
this exhibit is simply a comparison of two documents
2831 already in the record, or whether they are something
else that is being brought in.

Mr. Ewing: I will ask the direct question:

By Mr. Ewing:

Q. Is the data which appears on Respondents' Exhibit 149-A and B, for identification, data derived wholly from Commission's Exhibit 580, the small amount, and Commission's Exhibit 659-C to P, inclusive?

A. Yes, sir.

Mr. Wright: I object to this evidence as not being proper since it is more properly briefing material which is cumulative in the record and serves no useful purpose. The basic data are here and already available. I see no point in receiving it in evidence.

Trial Examiner Norwood: The objection is overruled. The exhibit is received subject to the understanding and conditions respecting these others we have just received.

(The document heretofore marked as RESPONDENTS' EXHIBIT NO. 149-A and 149-B was received in evidence.)

Mr. Ewing: I ask that these two sheets be marked Respondents' Exhibit 150-A and B, for identification.

(The document referred to was marked for identification as Respondents' Exhibit 150-A and 150-B.)

By Mr. Ewing:

Q. Mr. Tibbets, in the regular course of your business and having no relation to this procedure, did 2832 you ever have occasion to study the sales by National Lead of white lead-in-oil from the standpoint of such sales as made by States and by branches?

A. Yes, sir.

Mr. Wright: I object, Your Honor. It is a very leading question. I think if the witness has made any study, counsel can bring out properly how he made it and how he kept those records.

Mr. Ewing: I asked him if he made a study.

Trial Examiner Norwood: He may ask—

Mr. Wright: In the regular course of business.

Mr. Ewing: I want to show it wasn't done for this case, it was done prior.

Trial Examiner Norwood: Objection overruled.

Answer the question.

The Witness: Yes, sir.

By Mr. Ewing:

Q. When did you have occasion to make such a study?

A. In 1943.

Q. Of what did your study consist?

A. Well, we used—we tried to establish potential markets in each case, and then we compared what we were doing in each State, that is, the sales in each State. We used Government figures on paintable surfaces, and 2833 I won't go into all details but ability to—purchasing power, and so forth. We got up a factor which compared with the—then we made a comparison of what sales we had in each State.

Q. Now, I show you these two sheets of paper which have been marked Respondents' Exhibit 150-A and B, for identification, and ask you whether you compiled the data shown thereon?

A. Yes, sir.

Q. Was the data shown on those sheets compiled in connection with the study which you have described?

A. Yes, sir.

Q. Based upon that study, have you at my request made a compilation showing sales by National Lead Company of white lead-in-oil by branches and by States, setting forth the percentage of total white lead-in-oil business done in each State and by each branch, exclusive of the Pacific Coast branch or San Francisco branch and the States served by it?

A. Yes, sir.

Mr. Ewing: I ask that these two sheets be marked Respondents' Exhibit 151-A and B, for identification.

(The document referred to was marked for identification as Respondents' Exhibit No. 151-A and 151-B.)

By Mr. Ewing:

Q. Now I show you these two sheets that have been marked Respondents' Exhibit 151-A and B, for identification, and ask you to tell us what they are.

2834 A. That was the percentage of sales by States and branches, excluding the Pacific Coast branch.

Q. Sales of what?

A. Sales of white lead-in-oil.

Q. In what year?

A. In 1942.

Trial Examiner Norwood: By whom was that?

The Witness: I got this—what do you mean?

Trial Examiner Norwood: By National?

The Witness: By National Lead Company, I beg your pardon.

By Mr. Ewing:

Q. And this is the data that you stated a few moments ago you compiled at my request?

A. Yes, sir.

Mr. Ewing: I offer Respondents' Exhibit 151-A and B in evidence.

Trial Examiner Norwood: Any objection?

Mr. Wright: Just a moment.

Off the record.

Trial Examiner Norwood: Off the record.

(Discussion off the record.)

Mr. Wright: Mr. Tibbets, is 151 a derivation of the study which is represented by 150?

The Witness: It is the same.

2835 Mr. Wright: It is the same?

The Witness: Yes, sir.

Mr. Wright: They are identical documents?

The Witness: Yes, sir. Well, let me see it just a minute. I have forgotten.

No, this is tonnage figures and these are percentage figures.

Mr. Wright: Are they percentage based on tonnage or percentage based on dollar value of sales?

The Witness: Based on tonnage.

Mr. Wright: Who made the calculations at each of the branches?

The Witness: The branches—you mean the giving of the tonnage report?

Mr. Wright: Giving the percentages in for each one.

The Witness: The percentages, I made that myself.

Mr. Wright: From data furnished you by the various branches?

The Witness: That is right.

Mr. Wright: How did they furnish that data?

The Witness: At my request.

Mr. Wright: I mean, in what form did they furnish it?

The Witness: They sent it to me in tonnage figures for each State they operated in.

2836 Mr. Wright: Tonnage figures for each State?

The Witness: Yes, sir; taken from the sales figures.

Mr. Wright: You mean arithmetical computation, turning those into percentages?

The Witness: That is right.

Mr. Wright: You didn't calculate the sales? Each State furnished that to you?

The Witness: They furnished to me at my request.

Mr. Wright: Is that a customary practice with the National Lead Company to make such studies of its sales in the various States?

The Witness: Well, it was part of this survey, yes. We keep it by States; yes, sir.

Mr. Wright: Was such a study made on the Pacific Coast?

The Witness: No. We didn't make this study on the Pacific Coast.

Mr. Wright: Why did you omit the Pacific Coast?

The Witness: Well, because they handle—have a mixed paint line out there and it is thrown in; it doesn't make a clear picture that we wanted to get west—east of the Pacific Coast branch.

Mr. Wright: Does this include any keg products outside of white lead-in-oil?

The Witness: Not those figures; no, sir.

2837 Mr. Wright: It doesn't include any red lead-in-oil?

The Witness: No, sir.

Mr. Wright: Or any other paint products?

The Witness: Just paste lead—white lead-in-oil; paste white lead

Mr. Wright: Do you have the basic data available from which these figures were compiled?

The Witness: You mean the letters of this? No, I didn't keep that. After I had made this transcript, I didn't need it.

Mr. Ewing: Referring to Respondents' Exhibit 150-A and B, for identification.

The Witness: You mean 150, don't you?

Mr. Wright: No, sir. All I have before me is 151.

The Witness: I thought you were asking about the white lead tonnage figures from the branches. I did not keep those letters.

Mr. Wright: Do you have the request which you made of the branch managers showing how they were to get the figures?

The Witness: No, sir. It is simple enough. I simply asked for their sales in each State, of their white lead-in-oil sales by tonnage.

Mr. Wright: They reported the tonnage back?

The Witness: Yes, sir.

2838 Mr. Wright: Do you know whether the letters and correspondence relating to this are still preserved in your files; could be produced?

The Witness: I wouldn't know that—not in my files.

Mr. Wright: Would they be in the files of the company?

The Witness: I wouldn't know that. That would be a branch file, and I wouldn't know whether they kept them or not.

Mr. Wright: I am talking about the correspondence he received back.

The Witness: That is what I say. I have nothing in my files on the original letters reporting this.

Mr. Wright: Is it possible to determine whether those records are in the files of the National Lead Company?

The Witness: Well, I looked for them; I couldn't find them.

Mr. Wright: You did look for them?

The Witness: Yes, sir.

Mr. Wright: How are these files kept?

Mr. Ewing: Now I am going to object, Your Honor. I think this has gone far enough as far as identification is concerned.

Trial Examiner Norwood: I think he has been inquiring as to that supporting data only.

Mr. Wright: How in the world am I going to
2839 perfect an objection unless I have an opportunity to
examine the witness.

Mr. Ewing: He has testified that 151-A and B was prepared by him in connection with this study and he has testified as to how he got the underlying data, and he says he has not the records from which he compiled them.

Mr. Wright: He said the underlying data was reported—

Mr. Ewing: —by the branches, and that he hasn't got it.

Trial Examiner Norwood: I think he may inquire about that; anything that goes to the reliability of that underlying data there.

Go ahead.

Mr. Wright: How is correspondence customarily filed in the organization?

The Witness: In my office?

Mr. Wright: Yes.

The Witness: By my secretary.

Mr. Wright: You keep personal files; you don't turn them over to some central filing branch?

The Witness: No, sir. We have our own files, each office.

Mr. Wright: How often do you destroy your files?

The Witness: Well, that depends on the type of information it is. Some things are kept for a good
2840 many years; other things are destroyed when we
consider they will be of no value to us.

Mr. Wright: How extensive was your search for it?

The Witness: We looked all through my files and had my secretary to look through them.

Mr. Wright: Had you ever made similar inquiries of this sort before?

The Witness: No, sir.

Mr. Wright: In 1942?

The Witness: This is the first study I made on that basis.

Mr. Wright: Have you ever made any inquiry since that time?

The Witness: No, sir; we got into the—you see, this was '42, and we got into abnormal conditions in the war and didn't see the necessity of making those studies.

Mr. Wright: Was 1942 a normal year?

The Witness: It turned out to be, fairly normal.

Mr. Wright: Do you know whether the copies of that correspondence and of your correspondence with the branch offices would be preserved in the branch offices?

The Witness: I wouldn't know that.

Mr. Wright: Your Honor, I object to the offer of this material in evidence. It is clearly hearsay and by the wit-
ness' own testimony it is not a record kept in the
2841 regular course of business or a regular entry made.
It was a special study and the basic data from which it was derived may be in the possession of the National Lead Company as far as this witness knows. Certainly the search for the basic data that he has described is not sufficient to determine that there is any possibility of procuring it.

Mr. Ewing: He has testified that he made this study in the regular course of business as part of his job with the National Lead Company and under the circumstances I submit that, regardless of what weight there may be eventually given it, it is admissible.

Mr. Wright: Your Honor, in answer—

Trial Examiner Norwood: I think counsel should show the reliability of this; sufficient reliability to have it come in.

Mr. Ewing: I will withdraw for the moment my offer of 151-A and B.

Trial Examiner Norwood: If it is subject to counsel's undertaking—

Mr. Ewing: I withdraw for the time being the offer of 151-A and B, and I will ask that the witness look at 150-A and B.

By Mr. Ewing:

Q. Tell us what information is shown thereon.

A. White lead-in-oil and white lead in liquid form
2842 or paint, by States and branches.

Q. Was that compiled by you?

A. Yes, sir.

Q. For what year?

A. It covered 19—sales of 1942.

Q. And when you say "sales," what company's sales?

A. National Lead Company's sales.

Q. Did it include sales in the Pacific Coast branch territory?

A. No, sir.

Q. Based upon what did you prepare that?

A. By reports from the branches.

Q. And those reports that you testified about in response to Mr. Wright's questions?

A. Yes, sir.

Q. And that is your own original record?

A. Yes, sir.

Mr. Ewing: I offer it in evidence.

Mr. Wright: Your Honor, 150—that is 150 apparently; I have not seen it—apparently, from the testimony of the witness, is the same information expressed in a different way. One is tonnage and one is percentagewise but still the basic data about which he was testifying I believe were the basic data from which he prepared 150. 151 is a further refinement of 150; but it was not something, an
2843 entry made in the due course of business.

Mr. Ewing: It was made in the regular course of business. The fact that it wasn't ever done before doesn't mean that it wasn't done in the usual course of business.

Mr. Wright: I appreciate that counsel asked the witness if it was made in the regular course of business, and that the witness answered "yes," but on voir dire it appeared that it was something which they made up in 1942, had never made before and never made since.

Mr. Ewing: He made it up as part of his job.

Mr. Wright: There has been no showing that the basic data can't be brought in for some sort of examination.

Trial Examiner Norwood: Do you have these tabulations made up on invoices, or something which the other side can verify? You usually have?

If Commission's counsel has something or other to verify any portion of the data here—

Mr. Ewing: The document in your hands, Judge, was prepared by the witness.

Trial Examiner Norwood: But he prepared it on reports by somebody else.

Mr. Ewing: I say that was prepared by the witness for the purpose of offering it here. The document which Mr. Wright has just given you was prepared by the witness, himself, from data available to him at that time which
2844 he no longer has, but he prepared it, himself, in the regular course of his job.

Trial Examiner Norwood: The condition we have always put on documents of this kind is that the supporting data be available to the other side. It doesn't have to be offered in evidence but there has to be some record, or something, from which the Commission can verify the figures.

Mr. Wright: According to the witness' testimony, it is perfectly possible that copies of these letters which were the basis of that are still in the files of the branch offices.

Trial Examiner Norwood: If the counsel will undertake to support that, I can receive them and then go on to make the examination, but it is subject to that condition.

Mr. Ewing: Well, we will make an attempt to.

Trial Examiner Norwood: You have to undertake to make the supporting data available to the other side.

Mr. Ewing: If I don't, I take it Your Honor will exclude the document or strike it at a later date?

Trial Examiner Norwood: We are going to take evidence based on that which you are not fairly certain you can furnish supporting data here for. I don't see how we can take it in.

Mr. Ewing: May I go off the record for a moment?

Trial Examiner Norwood: Yes.

(Discussion off the record.)

Trial Examiner Norwood: We will recess until 2 o'clock.

(Whereupon, at 12:12 p. m., a recess was taken until 2 p. m. of the same day.)

2845 Afternoon Session.

2:00 p. m.

Trial Examiner Norwood: The hearing will be in order. Proceed.

ALBERT B. TIBBETS resumed the stand and testified further as follows:

Direct Examination (Continued).

Mr. Ewing: In connection with my offer of Respondents' Exhibit 150-A and -B for identification, I would like to state that I believe that we will be able to produce the source material which forms the basis for it, or the equivalent, and with that statement I renew the offer.

Mr. Wright: Well, Your Honor, purely as a matter of procedure, I don't believe the material should be received until we have further background.

Trial Examiner Norwood: On condition that that be furnished, I believe it might be received; and if there is some legitimate examination you want to make on it, throwing light on its authenticity and so on—

Mr. Wright: (Interposing.) I have no objection to its receipt on that condition, provided the witness is to be examined further regarding the material; but if he isn't—

Trial Examiner Norwood: (Interposing.) You offer Respondents' Exhibit 150-A and 150-B?

2846 Mr. Ewing: Yes, and Respondents' Exhibit 151-A and -B.

Mr. Wright: That is provided, of course, I am given an opportunity, when the basic material is furnished, of having this witness here for further examination?

Trial Examiner Norwood: Yes, that is right. They are received, subject to the condition that the basic material is to be made available to counsel in support of the allegations of the complaint, and that thereafter he is to have the opportunity to cross-examine the witness further.

Mr. Wright: That is agreeable.

(The papers referred to, heretobefore marked for identification RESPONDENTS' EXHIBITS 150-A and 150-B, and 151-A and 151-B, were received in evidence.)

Mr. Ewing: I ask that this map be marked Respondents' Exhibit 152 for identification.

Trial Examiner Norwood: It may be so marked.

(The map referred to was marked Respondents' Exhibit 152 for identification.)

By Mr. Ewing:

Q. Mr. Tibbets, I show you this map, which has just been marked Respondents' Exhibit 152 for identification, and ask you to state if you know what the various figures, other than the legends such as ¼ cent, ½ cent, and so forth, that appear on the exhibit, are?

2847 A. These are the percentage of the sales of white lead-in-oil by States, excluding the Pacific Coast branch.

Q. Have you compared percentages, by States, of National Lead Company's white lead-in-oil business as set forth in your compilation Respondents' Exhibit 151-A and -B, which I show you, with the percentage figures, by States, shown on Respondents' Exhibit 152 for identification?

A. Yes, sir.

Q. Will you state whether they are the same?

A. Yes, sir.

Q. Meaning they are?

A. They are.

Q. Now directing your attention again to Respondents' Exhibit 151-A and -B, will you state whether, under National's method of selling white lead-in-oil, one or more branches may serve the same State?

A. That is true.

Q. Still directing your attention to Respondents' Exhibit 151-A and -B, will you tell us whether Alabama is served by National's Cincinnati branch?

A. Yes, sir.

Q. Is it served by any other branch?

A. St. Louis.

Q. Now I ask you to look at the map, Respondents' Exhibit 152 for identification, and in particular at

2848 Alabama, and ask you whether you have compared the percentage of business done in Alabama with the total of the St. Louis and Cincinnati branch business in Alabama, as shown by Respondents' Exhibit 151-A and -B?

A. Yes, sir.

Q. How does the total compare?

A. It is the same.

Q. That is, the percentage of business shown by the map as Alabama business, corresponds with the compilation in Exhibit 151-A and -B for the Cincinnati branch and the St. Louis branch business in Alabama?

A. Yes, sir.

Q. Where one or more branches serve a particular State, what does the percentage of business figure, shown by the map, Respondents' Exhibit 152 for identification, reflect?

A. The total white lead-in-oil,—the percentage of the total white lead-in-oil business of that State, of all States except the Pacific Coast branch.

Mr. Ewing: I offer Respondents' Exhibit 152 for identification.

Mr. Wright: Objection. It hasn't been identified as to who prepared it or the source of it.

Mr. Ewing: I will withdraw the offer. I forgot that, Mr. Wright.

Trial Examiner Norwood: All right.

2849 By Mr. Ewing:

Q. I ask you to compare Respondents' Exhibit 152 for identification with copy of Commission's Exhibit 5-A.

A. It is the same.

Q. As far as the territorial divisions indicated by the coloring matter are concerned?

A. Yes, sir, the different zones.

Q. I ask you to look at Respondents' Exhibit 151-A and -B, and Respondents' Exhibit 152 for identification, and compare the State totals of white lead-in-oil percentage business with the State totals indicated by your Exhibit 151-A and -B.

A. They are the same.

Mr. Ewing: I now offer the map, Respondents' Exhibit 152 for identification, and I might say that it is simply a pictorial representation of the data set forth in the other exhibit, Respondents' Exhibit 151-A and -B.

Mr. Wright: I still object. There has been no statement as to who prepared it and the method by which he prepared it.

Mr. DuBose: What difference does it make?

Mr. Ewing: It is a picture map of the States, with figures written in which compare with the other exhibit.

Mr. Wright: His testimony that he sees, by comparing this document and this document, that they have certain common features, doesn't make the document admissible.

2850 Trial Examiner Norwood: Off the record.

(Discussion off the record.)

Trial Examiner Norwood: On the record.

Mr. Wright: I have a few questions on voir dire.

By Mr. Wright:

Q. Would you explain again how you derived the figure of .38 for the State of Alabama?

A. That is the sum of the percentage sold in that State by Cincinnati and St. Louis.

Q. How did you derive that sum, simply by adding the figure appearing under St. Louis for Alabama to the figure appearing under Cincinnati for Alabama?

A. That is right.

Q. And in any case where there was a duplication, it was derived in the same manner?

A. Yes, sir.

Mr. Wright: I make the same objection, Your Honor, to Respondents' Exhibit 152 as was made to Respondents' Exhibit 150-A and -B, and 151-A and -B, namely, that the basic data are not available for cross-examination.

Trial Examiner Norwood: I shall overrule the objection and receive Respondents' Exhibit 152 for identification, subject to the same conditions, that is, that the basic data for 150-A and -B and 151-A and -B, on which this map was based, be made available to counsel in support 2851 of the complaint, and if it is not made available I will entertain a motion to strike all this evidence.

(This map referred to, heretofore marked for identification RESPONDENTS' EXHIBIT 152, was received in evidence.)

Mr. Ewing: I ask that this document be marked Respondents' Exhibit 153 for identification.

Trial Examiner Norwood: It may be so marked.

(The paper referred to was marked Respondents' Exhibit 153 for identification.)

By Mr. Ewing:

Q. I show you this paper, Mr. Tibbets, that has just been marked Respondents' Exhibit 153 for identification, and ask you whether that was prepared by you or under your direction, at my request?

A. It was prepared under my direction.

Q. From what source, if you know, were the figures derived?

A. From the books of the Accounting Department.

Q. Have you those figures with you?

A. No, sir.

Q. Will we be able to produce them in New York?

A. Yes, sir, I think so.

Q. Will you look at the branches listed on Respondents' Exhibit 153 for identification, and state which of National's ten branches there listed now produce white lead-in-oil?

A. Atlantic, Chicago, John T. Lewis, and St. Louis
2852 and San Francisco.

Trial Examiner Norwood: Those points manufacture it?

The Witness: Yes, sir.

By Mr. Ewing:

Q. Did National ever produce white lead-in-oil at any of the other branches shown on that exhibit at which there now is no production?

A. Yes, sir.

Q. Will you tell us at which branches it produced white lead-in-oil, if you know?

A. Boston, Buffalo, Cincinnati, Cleveland, Pittsburgh.

Q. I don't recall your answer to a preceding question, but will you tell us whether you included Chicago as a branch at which white lead-in-oil is now produced?

A. I thought I included it. It should have been.

Q. I couldn't recall.

Mr. Ewing: Subject to supplying the information in a fashion similar to the prior ruling, I offer Respondents' Exhibit 153 for identification in evidence.

Mr. Wright: Well, I have the same objection, of course.

Trial Examiner Norwood: Yes. Now that is subject to your producing the—

Mr. Ewing: The basic data from which it was compiled.

2853 Trial Examiner Norwood: When we get to New York?

Mr. Ewing: Yes, sir.

Trial Examiner Norwood: Received, under that condition.

(The paper referred to, heretofore marked for identification RESPONDENTS' EXHIBIT 153, was received in evidence.)

Mr. Ewing: I now ask that these 9 sheets be marked Respondents' Exhibit 154-A to -I, inclusive, for identification.

Trial Examiner Norwood: They may be so marked.

(The papers referred to were marked Respondents' Exhibit 154-A through 154-I for identification.)

By Mr. Ewing:

Q. I show you these nine sheets marked Respondents' Exhibit 154-A to -I, inclusive, for identification, and ask you to state whether the information set forth therein was compiled and tabulated by you or under your direction?

A. I did it.

Q. Does this exhibit set forth pig lead prices from the earliest date stated thereon, namely, December 20, 1920, down through January 14, 1942?

A. Yes, sir.

Q. What pig lead prices does it purport to show?

A. New York prices.

Q. New York prices?

A. Yes, sir.

2854 Q. From what source did you obtain the prices set forth in this exhibit?

A. From the Sales Department.

Q. Now will you tell us what other prices this exhibit purports to show for what other pigments?

A. Paste White Lead, Paste Red Lead, Dry White Lead, Lead Sulphate, Dry Red Lead, and Litharge.

Q. When you say "Paste White Lead"—

A. (Interposing.) White lead-in-oil.

Q. And when you say "Paste Red Lead"—

A. (Interposing.) Red lead-in-oil.

Q. When you stated that you obtained the pig lead price figures from the Sales Department and referred to them before that as the New York prices, what company's prices were they, if you know?

A. I don't believe I am prepared to tell that.

Q. I will ask you this question. Were they National's prices?

A. No.

Q. Now with respect to the other pigments which you have mentioned, namely, Paste White Lead, Paste Red Lead, Dry White Lead, Lead Sulphate, Dry Red Lead, and Litharge, what company's prices are shown in this exhibit?

A. National Lead Company's.

2855 Q. Now what prices of National's with respect to those 6 pigments that I have just mentioned, were shown on the exhibit?

A. Paste White Lead, Paste Red Lead, Dry White Lead, Dry Red Lead, and Litharge—

Q. (Interposing.) I mean what was the price that you show here?

A. Per hundred. You mean from the standpoint of retail price?

Q. Yes.

A. That is list price.

Q. That is sometimes referred to in this case as "card price", is that right?

A. Right, card price.

Q. What price changes are shown with respect to those pigments?

A. I don't quite understand your question.

Q. I will withdraw the question.

Does this exhibit, to the best of your knowledge and information, set forth all card prices for these 6 pigments, other than pig lead prices, and changes in National's prices, for the period covered by the list?

A. Yes, sir.

2856 Q. Calling your attention to page 5 of the exhibit which has been marked Respondents' Exhibit 154-E for identification, I ask you to note in the two columns to the right, under the respective headings Dry Red Lead and Litharge, the pencil entries which appear, and I ask you who made those entries?

A. I did.

Q. What do they represent?

A. They represent the Dry Red Lead price at that date, April 4, 1930, and the Litharge price for the same date—pardon me, it is April 7, 1930.

Q. Under what circumstances were those entries made?

A. I made the correction in checking back on this, and my secretary didn't see it and I didn't see it.

Q. Now I call your attention to page 9 of the exhibit, marked Respondents' Exhibit 154-I for identification, and direct your attention to the last figures in the column headed Dry Red Lead and Litharge. Whose entries are those two pencil entries?

A. Those are mine.

Q. What do they represent?

A. They represent the price change on January 14, 1942, for dry red lead and litharge.

Trial Examiner Norwood: Are those figures $10 for Dry Red Lead and $9 for Litharge, respectively?

The Witness: Yes, sir.

By Mr. Ewing:

Q. Under what circumstances were those entries made by you?

A. I made them, and my secretary didn't catch them, and neither did I.

2857 Q. Do you mean by that answer that when the document was typed, they were not on there, and that upon checking you discovered their absence and supplied them?

A. That is right, sir.

Mr. Ewing: I offer Respondents' Exhibit 154-A to -i, for identification, in evidence.

2858 Mr. Wright: I would like a short cross-examination on the identification.

Trial Examiner Norwood: Very well.

By Mr. Wright:

Q. Did I understand you to say that you compiled this document?

A. Yes, sir.

Q. When did you compile it?

A. About a month ago, I guess.

Q. Will you tell us now just how you went about compiling it; what did you do to get the information?

A. Well, I had the records of the pig lead changes—

Q. Where did you obtain those?

A. From the Sales Department.

Q. Do you know where they obtained them from?

A. Yes, they compiled them. As every change is made they make a record of every pig lead change.

Q. When did they make that record?

A. In 1920—or even back of 1920, I have forgotten just what year it was, but it is from 1920 right straight through.

Q. Do you know what prices of pig lead that represents?

A. Yes, the New York prices.

Q. Is that common pig lead?

A. Yes.

Q. Or corroding lead?

2859 A. Yes.

Q. Which?

A. Corroding lead.

Q. It is corroding lead?

A. That is my understanding of it.

Q. And where did you get that understanding?

A. Well, that is what these pig lead changes are, for corroding lead.

Q. You are willing to stand on it, then, that these are figures for corroding lead rather than common pig lead that appear here? You know that there is a differential, do you not, between common and corroding?

A. Yes. I will have to change my answer; I don't know which these are.

Q. Do you know from what sources the Sales Department compiled that?

A. From the prices established in New York.

Q. Established by whom?

A. By the selling companies, the supplying companies.

Q. You don't know who those companies might have been?

A. No.

Q. Or how they received that information?

A. No; it is the New York market.

Q. On the paste white lead, that is the list price, you said the price a consumer would pay to one of your dealers?

2860 A. That is the list price.

Q. That is not the painters' price?

A. No.

Q. For what quantity is that price?

A. 100 pounds.

Q. That is ~~in~~ 100 pound kegs?

A. Yes, sir.

Q. That would be for a single keg or more than a single keg?

A. Well, it is a single keg price.

Q. There is no quantity discount on that?

A. No, sir.

Q. That is gross?

A. Yes, sir.

Q. Now as to the paste red lead, is that in the same category?

A. Yes, sir.

Q. As to the dry white lead, what sort of a container is that in?

A. That would be a keg price.

Q. Of 100 pounds?

A. Yes, sir.

Q. That would be the type of product which would be sold in accordance with those zones in Commission's Exhibit 580, on dry white lead?

A. Yes.

Q. How about lead sulphate; are the prices that
2861 are entered there in the same category?

A. That is a hundred pounds.

Q. One Hundred pound kegs?

A. Yes.

Q. And dry red lead and litharge, would those be 100 pound keg prices on those products?

A. Yes.

Q. Sold in accordance with the zones similar to those in Commission's Exhibit 580?

A. That is right.

Q. This wouldn't be the dry lead, dry red lead and litharge sold to paint manufacturers or battery manufacturers?

A. No, sir.

Q. This is the type sold to dealers for resale generally?

A. Not lead sulphate, we don't sell that through dealers.

Q. In what territory are these prices applicable?

A. New York.

Q. Would that be the par territory?

A. Yes.

Q. This would not reflect any changes that were made in discounts to dealers or other purchasers, would it?

A. No, sir.

Q. Only the list price changes?

A. Right.

Q. How did you get these price changes, Mr. 2862 Tibbets; just what procedure did you go through to obtain them?

A. The paste white lead was from actual cards, price cards.

Q. Did you have a complete set of those cards in your possession?

A. Yes, sir.

Q. How about the other products?

A. They changed so often that those were records kept by the Sales Department; they don't keep the cards for all of those things.

Q. How did they keep their records on that?

A. By just a tabulation of the changes as they made them.

Q. In what form were these tabulations?

A. In typewritten form on small sheets.

Q. They had a running tabulation of all the price changes?

A. That is right.

Q. Can you produce the cards and the tabulations and the basic data from the Sales Department, from which this was prepared?

A. Yes, sir.

Q. Would they be in a position to tell us exactly what those pig lead prices were, for what grade of lead, and how they were made, and from what source they got them?

A. No.

Q. They wouldn't know from what source those figures were compiled?

2863 Mr. DuBose: Who wouldn't know?

Mr. Ewing: I don't think he understood the question.

Mr. DuBose: I object to the question.

Mr. Wright: I will repeat it.

By Mr. Wright:

Q. Would the Sales Department know the source of these pig lead prices which they furnished to you, which appear in the first column of this exhibit?

A. I wouldn't know that.

Mr. Wright: Your Honor, I object to the receipt of this document in evidence without proffer, for examination at least, of the basic data upon which it was made. In the first place, as to the pig lead prices it is obvious that this witness doesn't even know what grade of lead is involved, let alone from what source the Sales Department obtained the information.

Mr. Ewing: We will supply the pig lead data, and with respect to the other price changes we have, I believe, all of the basic data here.

Mr. Wright: May we go off the record.

Trial Examiner Norwood: Off the record.

(Discussion off the record.)

Trial Examiner Norwood: On the record.

Mr. Ewing: While I had not intended to offer the price cards showing changes in the case of pig lead, and
2864 the tabulations showing changes in the other pigment prices in view of the large number of them, I am prepared now to make the proffer of them to Mr. Wright for his examination in connection with any cross-examination he has of this witness. I can, of course, through this witness offer each and every one of the documents which support the compilation in case of the six pigments other than pig lead, but I didn't think it was necessary to burden the record with that unless you would like to have it in.

Trial Examiner Norwood: Suppose counsel confer about that and see if they can make some agreement on it.

Mr. Wright: I would like to go off the record for this discussion.

Trial Examiner Norwood: Off the record.

(Discussion off the record.)

Trial Examiner Norwood: On the record. We will take a ten minute recess.

(A short recess was taken.)

Trial Examiner Norwood: All right, proceed.

Mr. Ewing: I withdraw the offer of Respondents' Exhibit 154-A to i for Identification at this time.

I ask that this sheet be marked Respondents' Exhibit 155 for identification.

Trial Examiner Norwood: It may be so marked.

(The paper referred to was marked Respondents'
2865 Exhibit No. 155 for identification.)

By Mr. Ewing:

Q. I show you this sheet of paper which has been marked Respondents' Exhibit 155 for Identification, and ask whether it was prepared by you?

A. Yes, sir.

Q. What does it purport to show?

A. The average percentages of white lead-in-oil sales sold by branches through agents.

Q. For what years?

A. The years 1933 to 1941, inclusive.

Q. From what source did you obtain those figures?

A. From the branches.

Mr. Ewing: I would like to go off the record.

Trial Examiner Norwood: Off the record.

(Discussion off the record.)

Trial Examiner Norwood: On the record.

Does this refer to consignment sales?

Mr. Ewing: Yes, sir.

Mr. DuBose: Under the agency contracts which are already in evidence.

Trial Examiner Norwood: What does that mean—the average percentage as compared to the total sales of National?

Mr. Ewing: Of each branch, of white lead-in-oil.

2866 Mr. DuBose: Other than the Pacific Coast.

Trial Examiner Norwood: That is, white lead-in-oil was 86 per cent of the sales of the Atlantic Branch?

Mr. Ewing: Eighty-six per cent of the Atlantic Branch sales of white lead-in-oil during this time were sales made through the consignment method.

Mr. Wright: May I ask a few questions on voir dire?

Trial Examiner Norwood: Yes.

By Mr. Wright:

Q. Mr. Tibbets, where did you get the information that appears in the note appearing at the bottom of the page?

A. From the branches.

Q. Is this the correspondence from the branches which I have here?

A. Yes, sir.

Q. Will you point out where in that correspondence you got that information?

A. That is my own compilation based on these. I wouldn't say that was—

Mr. Ewing: (Interposing.) I might say this. When I come to offering this exhibit I will omit from the offer, and we can physically strike it should it seem preferable, the two sentences appended, as well as the note below them.

Trial Examiner Norwood: Very well. Off the record.

(Discussion off the record.)

2867 Trial Examiner Norwood: On the record.

By Mr. Wright:

Q. Is this document which I hand you here, dated March 26, 1947, the letter which you sent to the branches?

A. Yes sir.

Q. And on the basis of which you received this information?

A. Yes, sir.

Mr. Wright: I have no further voir dire.

Mr. Ewing: I offer Respondents' Exhibit 155 for identification in evidence, except for the matter which appears below the word "St. Louis" and the figure "90".

Mr. Wright: Your Honor, I object to the offer and I direct your attention to the document which the witness has just stated was the one that he sent to the branch managers asking for this information, in which he requested them for an estimate. Now you will notice that the original exhibit doesn't state that it is an estimate. That is the vice of receiving a tabulation such as this sort separate and apart from the basic material. This would appear to be, from the exhibit itself, a tabulation which was made from the physical records of the company. In fact, all that the witness asked the branch managers for was a guess. The substance of this is a tabulation of guesses, it can't be anything else. It is stated in the replies, many of them, that this is frankly an estimate because they don't know.

2868 Trial Examiner Norwood: I think we will have to wait to receive this until we get a firmer foundation for it.

Mr. Wright: The people who made those estimates and guesses haven't been proffered. How do I know on what basis they made their guess? And the note which is appended "An average of 1 to 2 per cent was sold through dealers other than agents and the balance was sold to customers such as government and industrials" was an afterthought which this witness put on there, which he didn't get from any of the basic data.

Trial Examiner Norwood: I think that I will sustain the objection for the time being. Possibly you can put a little foundation under it later on and then maybe we will receive it.

Mr. Ewing: I have no further questions.

Trial Examiner Norwood: Cross examination.

Cross-Examination by Mr. Wright.

Q. Mr. Tibbets, you stated that the National Lead Company at one time manufactured white lead at Boston, Buffalo, Cincinnati, Pittsburgh and Cleveland, is that correct?

A. Yes sir.

Q. When was that?

A. I couldn't tell you the dates.

2869 Q. Have they produced any white lead at any of those places since 1930?

A. No.

Q. Since 1920?

A. I couldn't tell you; I haven't got the figures here at all.

Q. Have they produced it that you recall since you began your service with the company?

A. My memory wouldn't serve me as to that.

Q. But at any rate it is a long time ago, is it not?

A. Yes sir.

Q. What are these branches that appear in the exhibits here; what do you mean by the term "branch"?

A. That is a branch office, in branch territory.

Q. Is that a sales organization?

A. A sales organization and in some cases combined with manufacturing.

Q. In some cases?

A. Yes, I mentioned those.

Q. Now one manufacturing branch would manufacture for and ship into perhaps several branch territories?

A. That is right.

Q. So that actually the branch territories are simply a sales and bookkeeping proposition as distinguished from manufacturing, although some branches may also manufacture?

2870 A. That is right.

Q. What is the Oxide Committee of the National Lead Company?

A. Well—I don't understand your question.

Q. You stated, as I recall it, that you had been Secretary to the Oxide Committee since somewhere aronnd 1924; that is that committee?

A. It is the Sales Committee on Oxides.

Q. It is a Sales Committee, is it?

A. Yes sir.

Q. Does that committee consider marketing problems and methods of price quotation?

A. Yes sir.

Q. Do they originate recommendations to the Company as to changes in those marketing policies?

A. No, not necessarily—that is in a general way.

Q. What do you mean "in a general way"?

A. Well, any major change in policy they might discuss it at a committee meeting, but they don't determine the policy on prices.

Q. Are you familiar with the manner in which the company quoted on these oxides over any considerable period of time?

A. No.

Q. Your duties on the Oxide Committee and on the Sales Committee didn't include any experience, then, with the pricing methods that the company employed?

2871 A. Well, only for attending the meetings and recording what was done.

Q. You didn't take any part in the policy determinations or discussions?

A. No sir.

Q. You were in the advertising end of the business, you stated?

A. Sales promotion.

Q. Have you had anything to do with the advertising?

A. I did at one time.

Q. When was that?

A. From 1919 to about 1927, I think it was.

Q. Do the fields of advertising and sales promotion more or less run together on a number of things?

A. No.

Q. They do not?

A. No.

Q. What were the principal media of advertising of the company back in the period when you were in that department?

A. Magazines.

Q. What magazines, for instance?

A. Well, the Saturday Evening Post. I don't recall them all now, that was several years ago and I don't remember just what the media were at that time. That was back in 1927 when I left there. I had the direct mail 2872 anyway, I didn't have the medium selection.

Mr. Wright: May we have a five minute recess, Your Honor? I think we can probably get through with this witness in a hurry if we do.

Trial Examiner Norwood: A five minute recess.

(A short recess was taken.)

Trial Examiner Norwood: Proceed.

By Mr. Wright:

Q. Mr. Tibbets, calling your attention again to Respondents' Exhibit 148, under the column "Differential Per Ctw. 'Old System'," do you know what that system was?

A. Yes, it was their differential points; we charged freight differentials.

Q. The figures are as you found them in Commission's Exhibit 659?

A. Yes sir.

Q. Do you know how long the company operated on that Old System?

A. No, I don't.

Q. Do you know when they changed to the Zone System as shown in Column 2?

A. Not definitely I don't.

Q. What is your recollection?

A. I prefer not to say rather than be inaccurate.

Q. Did you mean, in preparing this exhibit, to 2873 have it show that the differentials as shown in Commission's Exhibit 659 were changed to the differentials which are shown in Commission's Exhibit 580?

A. Yes sir.

Q. And that there were no intervening differentials between those that were different from those that appear here?

A. I followed the record.

Q. What do you mean by "I followed the record"?

A. Well, the exhibits that you have mentioned, the information you mentioned—I followed those.

Q. In other words, you don't know anything independent of what is in those exhibits?

A. No sir.

Q. You didn't mean this exhibit to show anything that was independent from what was in those two exhibits?

A. I followed those two exhibits.

Q. And there is nothing added from any other records or from your own knowledge at all?

A. No sir.

Q. Going back to Respondents' Exhibit 148, as I understood your testimony these figures in the Old System were added to the base price in making the price to the customer?

A. That is the freight differential, yes sir.

Q. How was that handled, do you know?

A. No, I wouldn't know that.

2874 Q. Did the customer pay the freight in those instances, do you know?

A. They paid the differential.

Q. They paid the differential over the par price?

A. Yes sir.

Q. Would the testimony which you have just given regarding those differentials as to Respondents' Exhibit 148 be the same in answer to the same questions regarding Respondents' Exhibit 149, as to the significance—

A. (Interposing): Yes, the difference in differentials.

Q. They are on the same basis, then?

A. Yes, they are.

Mr. Wright: I have no further cross examination, Your Honor.

Trial Examiner Norwood: Is there any redirect?

Mr. Ewing: No redirect.

Trial Examiner Norwood: Thank you, Mr. Tibbets.

(Witness excused.)

Mr. Ewing: I would suggest Your Honor that we adjourn now until tomorrow morning at 10 o'clock.

Trial Examiner Norwood: All right, we will recess until tomorrow morning at 10 o'clock, Eastern Daylight Saving Time.

(Whereupon, at 3:30 p.m., June 10, 1947, the hearing in the above-entitled matter was adjourned.)

2875 Room 332, Federal Trade
Commission Building,
Washington, D. C.,
Wednesday, June 11, 1947.

Met, pursuant to adjournment, at 10:00 a. m., E. D. S. T.

Before:

John W. Norwood, Trial Examiner.

Appearances:

Joseph S. Wright, Esq., and
Paul R. Dixon, Esq., appearing for the Federal Trade Commission.

J. T. Welch, Esq. (Davies, Richberg, Beebe, Busick & Richardson, 815-15th St., N. W., Washington, D. C.), appearing for Sherwin-Williams Company.

Edmund P. Wood, Esq. (2801 Carew Tower, Cincinnati, Ohio), appearing for Eagle-Picher Lead Company and Eagle-Picher Sales Company.

Henry E. Gardiner, Esq. (Chadbourne, Wallace, Parke & Whiteside, 25 Broadway, New York, N. Y.), appearing for Anaconda Copper Mining Company and International Smelting & Refining Company.

James D. Ewing, Esq., and
E. Z. DuBose, Esq. (Alexander & Green, 120 Broadway, New York, N. Y.), appearing for the National Lead Company.

2876 PROCEEDINGS.

Trial Examiner Norwood: The hearing will come to order.

Pursuant to adjournment on yesterday, the hearing in Docket 5253 is now reconvened at 10 o'clock a. m., on the 11th day of June, 1947, in Room 332, Office of the Federal Trade Commission, Washington, D. C.

The reporter will note the appearances.

Call your witness.

Mr. Ewing: I understood, Your Honor, you were going to rule this morning on Mr. Wright's motion to strike Mr. Sprague's testimony.

Mr. Wright: Off the record.

Trial Examiner Norwood: Off the record.

(Discussion off the record.)

Trial Examiner Norwood: On the record.

I have looked at the passages there, and will need some discussion before I can make any decision about them, so we will defer that until later today, or as soon as we can get to it.

Call your witness.

Mr. Ewing: Mr. McNair.

JOHN GORDON CRAWFORD McNAIR was thereupon called as a witness for the respondent National Lead 2877 Company, and having been first duly sworn, testified as follows:

Trial Examiner Norwood: State your full name.

The Witness: John Gordon Crawford McNair.

Direct Examination by Mr. Ewing.

Q. Mr. McNair, by whom are you presently employed?

A. National Lead Company.

Q. When were you first employed by National Lead Company?

A. October 5, 1910.

Q. By what branch were you first employed?

A. The Atlantic Branch, New York.

Q. By what branch are you presently employed?

A. Atlantic Branch, New York.

Q. What was the nature of your first employment in the Atlantic Branch?

A. I was a clerk in the office.

Q. And how long did you occupy that position?

A. Six months.

Q. Thereafter, what positions did you occupy?

A. Salesman.

Q. Still with the Atlantic Branch?

A. Yes, sir.

Q. How long were you a salesman with the Atlantic Branch?

A. Approximately 8 years.

Q. What was the nature of your employment following your employment as a salesman? 2878

A. Assistant Sales Manager.

Q. Still with the Atlantic Branch?

A. Still with the Atlantic Branch.

Q. And how long were you Assistant Sales Manager?

A. Six years.

Q. What was your connection with the Atlantic Branch thereafter?

A. I became Sales Manager, which job I occupied for about five and a half years; Assistant Manager of the Atlantic Branch for a period of about nine years; and Manager of the Branch for about eight years.

Q. Now will you tell us generally about the set-up of the Atlantic Branch, what products it distributes or manufactures, if any?

A. We manufacture a variety of lead products. In the Pigment Division, white lead-in-oil, red lead, litharge, basic lead sulphate, red lead-in-oil, linseed oil, and a lot of other miscellaneous items.

Q. Where are your plants located?

A. Of the Atlantic Branch?

Q. Of the Atlantic Branch.

A. We have two plants in Brooklyn, and one in Perth Amboy.

Q. What is manufactured at the Perth Amboy Branch?

A. Metal products and white lead.

2879 Q. Will you tell us approximately the white lead capacity of the Perth Amboy plant?

A. At the present time?

Q. At the present time:

A. Approximately about 14,000 tons a year of white lead-in-oil and dry white lead.

Q. Now will you tell us what you manufacture at the two Brooklyn plants?

A. Well, at the Perth Amboy plant we finish the dry lead, and we transport pulp white lead from the Perth Amboy plant to Brooklyn, which plant processes it by the addition of linseed oil.

Q. When you say you finish the white lead at Perth Amboy, will you explain that?

A. The dry white lead.

Q. The dry white lead.

A. Well, it simply comes over in water pulp, and that is put in driers and dried, the water taken out of it and it is dried.

Q. Will you tell us what the pulp lead is that is shipped from Perth Amboy to Brooklyn?

A. Pulp lead is the carbonated lead in water form. The process which we use in that plant is a cylinder process, better known as the Carter process; and that is
washed with water, and when it is finished, the wash-
2880 ing, it is shipped in tanks, that is, by tank-boat, to
Brooklyn, at which point it is dewatered by the addition of linseed oil, and it runs through a series of roller mills and is put into the kegs as lead-in-oil.

Q. Now during the time that you have been connected with the Atlantic Branch, has that branch operated any white lead plants other than those you have mentioned?

A. Yes, sir.

Q. Will you tell us where they were located?

A. We operated the Matheson Lead Company in Long Island City; we had another plant in Port Richmond.

Q. Do you still operate the plant at Port Richmond?

A. No, sir.

Q. What happened to it?

A. We shut the plant up, and it was finally demolished, to save taxes. The reason why we did that was because the volume was insufficient to operate that plant and the Perth Amboy plant economically. As a matter of fact, to manufacture white lead economically it is desirable to have your plant operating at its fullest capacity, which couldn't have been the case if our production had been divided between Port Richmond and Perth Amboy.

Q. What was the capacity of the Port Richmond plant at the time you shut it down?

A. About 12,000 tons, in round figures.

Q. Now what has become of the Matheson plant?

2881 A. The Matheson plant was likewise shut down,
and that has been sold; that is, the machinery was taken out of there and transferred, some to the Brooklyn plant and some down to Perth Amboy, and eventually the plant was closed up and sold.

Q. About when did you shut the Port Richmond plant, do you know?

A. I think it was in the late 30's, if I remember correctly.

Q. And about when did you shut the Matheson plant?

A. About '32 or '33, or somewhere in the early 30's.

Q. Will you tell us why you closed the Matheson plant?

A. We closed the Matheson plant for the same reason that we closed the Port Richmond plant, because it was not economical to operate that plant with the capacity we had going through it.

Q. And what was the capacity at the time you closed it?

A. Approximately 7,000 tons.

Q. You mean per year?

A. Per year.

Q. Am I correct in understanding that during the time that you have been Manager of the Atlantic Branch of the National Lead Company, you have had charge of all the activities of that branch, including manufacture, sales and distribution of its products?

A. That is correct.

Q. What connection, other than as Manager and
2882 Assistant Manager of the plant or of the branch,
have you yourself had with the white lead-in-oil business of National Lead Company?

A. Well, I was a salesman and sold it for 8 years.

Q. And what was your territory, Mr. McNair?

A. South Carolina, Georgia and Florida; and I was moved up then to the New England States, and eventually into the New York area, around Brooklyn and Jersey, prior to the time I was transferred into the office.

Q. Now in the regular course of your employment as a salesman, what contact, if any, did you have with painters or other users of white lead-in-oil?

A. I had a great deal of contact, because in the nature of my sales job it was necessary for me to contact painters, builders, architects, stores, wholesale distributors, railroads, and every type of industry that would prove a likely prospect for the consumption of white lead.

Q. What raw materials are used in the production of white lead?

A. Pig lead and linseed oil.

Q. How is white lead produced?

A. White lead is produced by several methods, such as the old Dutch process, the Carter process, the electrolytic process, the Lenox process—that covers the general range of the normal processes.

Q. What process was used by the Atlantic Branch
2883 in its production of white lead?

A. We have manufactured by the Lenox process, by the Dutch process, and the Carter process.

Q. Where did you manufacture with the Dutch process?

A. Perth Amboy and Brooklyn.

Q. By what process do you now manufacture?

A. We manufacture by the Carter process.

Q. And that is at Perth Amboy?

A. Yes, sir.

Q. Do you know at what branch or plants National now produces white lead, in addition to the plants of the Atlantic Branch?

A. Yes, sir.

Q. Will you state them?

A. New York, Philadelphia, Chicago, St. Louis, and San Francisco.

Q. Did National ever produce white lead at any of its other branches?

A. Yes, sir.

Q. Will you tell us at which branches it formerly produced white lead, if you know?

A. Originally, all branches at one time had a white lead plant, and that is how the branches came into being. They had a Boston branch, they had a plant in Salem,
Pittsburgh, they had a plant in Cincinnati, one at
2884 Cleveland—all of those plants have been discontinued.

Q. Did the Buffalo Branch have a plant?

A. Yes, Buffalo.

Q. Has National Lead Company prepared any material which portrays graphically the manufacturing story of Dutch Boy White Lead and Dutch Boy Red Lead?

A. Yes, sir.

Mr. Ewing: I ask that this be marked Respondents' Exhibit 156 for identification.

Trial Examiner Norwood: It may be so marked.

(The document referred to was marked Respondents' Exhibit 156 for identification.)

By Mr. Ewing:

Q. I show you this document, which has been marked Respondents' Exhibit 156 for identification, and ask you whether that is the material to which you have just referred?

A. Yes, sir.

Mr. Ewing: I offer Respondents' Exhibit 156 for identification, in evidence.

Trial Examiner Norwood: Any objection?

Mr. Wright: I would like to ask a question or two on identification.

Trial Examiner Norwood: Very well.

By Mr. Wright:

Q. Mr. McNair, who prepared this exhibit?

2885 A. Our Advertising Department.

Q. Did you have anything to do with preparing it?

A. No, sir.

Q. Do you know whether all the material in it is factually correct or not?

A. Yes, sir.

Q. How do you know that?

A. My experience in the lead business.

Q. You have examined it yourself, then, and know it to be correct?

A. That is right.

Mr. Wright: I have no objection.

Trial Examiner Norwood: Received.

(The document referred to, heretofore marked for identification RESPONDENTS' EXHIBIT 156, was received in evidence.)

By Mr. Ewing:

Q. Now I take it from what you have already testified that you are familiar with the operation of plants manufacturing white lead?

A. Yes, sir.

Q. Are you familiar with the construction of plants of that nature?

A. Yes, sir.

Q. Based upon your experience with National Lead
2886 Company, are you in a position to tell us the approximate cost, in normal times, say the late 1930's, of constructing a white lead plant of sufficient size to operate economically and of sufficient capacity to serve such a number of customers?

Mr. Wright: Objection, Your Honor.

Mr. Ewing: I just asked if he was in a position to tell us.

Trial Examiner Norwood: Objection overruled. Answer it.

A. I think I am qualified.

By Mr. Ewing:

Q. Will you tell us?

Mr. Wright: Objection, Your Honor. It hasn't been shown on the record that this gentleman is qualified to make any such statement. It hasn't been shown that he has constructed any plants or has any knowledge of the cost of their construction. He is the Manager of a branch. There has been no showing that they ever constructed any plant during that period of time or that this man is familiar with construction costs during that period.

Mr. Ewing: He is Manager of the branch, he is the operating manager of the plant at these various plants, and he has run them. He has taken them down, at least. I haven't asked if he has put them up. And I think he is qualified to make such an estimate.

2887 Mr. Wright: The question was unqualified as to what was the cost of a plant. There is no telling what sort of plant the question calls for or whether it is strictly a white lead plant—

Trial Examiner Norwood: (Interposing) You can bring out those particulars on cross-examination.

Do you feel, Mr. Witness, that you can give us a reliable estimate?

The Witness: I think I can, sir.

Trial Examiner Norwood: Or approximate those costs?

The Witness: Yes, sir.

Trial Examiner Norwood: Objection overruled.

By Mr. Ewing:

Q. Now will you give us the answer, Mr. McNair?

A. Back in 1930 or thereabouts, to construct a white lead plant with a capacity of around 10,000 to 12,000 tons per year, it would run over a million and a half dollars. The same plant today would cost considerably more money, due to the increased costs of construction.

Q. Now will you tell us how white lead-in-oil is used by the painter?

A. White lead-in-oil is purchased by the painter, and he mixes linseed oil with it, approximating, for the finishing coat, 3½ gallons to the hundred, adds a little drier to it, and the tinting colors if he desires to have it tinted.

2888 To the priming coat, he would add 2 gallons of oil and 2 gallons of turpentine to the hundred, and the necessary tinting materials if he desired to tint it.

2889 Trial Examiner Norwood: That is per hundred pounds?

The Witness: A 100 pound keg, yes sir. A hundred pound keg is equivalent to about $3\frac{1}{8}$ gallons in itself, and if you add 3 gallons of oil to it you would have $6\frac{1}{8}$ gallons of paint material.

Trial Examiner Norwood: What is the total gallonage?

The Witness: A hundred pound keg is equivalent, to a soft paste package, to about $3\frac{1}{8}$ gallons.

Trial Examiner Norwood: Go ahead.

By Mr. Ewing:

Q. So when you add three gallons of the other material, the thinner, to it, you have a hundred pound keg producing approximately $6\frac{1}{8}$ gallons of finished paint?

A. That is correct.

Trial Examiner Norwood: How much lead is in that?

The Witness: A hundred pound keg of white lead averages about 89 per cent carbonate and 11 per cent oil. With the heavy paste lead it will run about 8 per cent of oil and 92 per cent of carbonate.

By Mr. Ewing:

Q. What, if you know, is the relation of the cost of white lead-in-oil to the painter as compared to the painter's total cost in doing a paint job?

A. In normal times it would run 20 to 25 per cent of the total cost of the paint job.

2890 Q. What branches of National Lead distribute white lead-in-oil?

A. All branches.

Q. I ask you to look at these sheets that have been marked Commission's Exhibits 807-A to L, inclusive, and tell us whether they set forth the branches of National Lead and the branch territories?

A. Yes; these sheets represent the branches of the National Lead Company, with their boundaries, territorial boundaries.

Q. Do you know the historical reasons for the branches and the branch territories as shown by that exhibit, and as they now exist?

A. Yes, sir.

Q. Will you give us the reasons underlying the branch and territorial set-up of the National Lead Company?

Mr. Wright: Objection, Your Honor. This witness by his own testimony has never served in any capacity except with the Atlantic Branch of the National Lead Company. He has not been shown to have had anything to do with the policies or the operations of any of the other branches, and I strenuously object to his testimony about the larger policies of the National Lead Company in other of its branches, because it can be nothing but hearsay.

Mr. Ewing: I didn't ask him anything about policies
at all. I asked him if he knew the historical reasons
2891 underlying the branch set-up and he testified that he
did. Now he says that he knows it.

Mr. Wright: It can't be within his experience—

Mr. Ewing: (Interposing.) It can be within his knowledge—

Trial Examiner Norwood: (Interposing) You may cross-examine him on that, but I don't see how I can stop him from what he knows.

Mr. Wright: I have no objection to somebody from the National Lead Company who knows testifying, but I submit that this witness has never been out of the Atlantic Branch.

Trial Examiner Norwood: This isn't his opinion, this is his knowledge. You may ask him as to that, and if it develops later that it has to be struck, that may be done, but we should see what his knowledge is. Objection overruled.

The Witness: I am quite familiar with the branches of the National Lead Company because I have visited all of the branches, I have gone through all of their plants, I have conferred with them on sales records, and I am quite well versed as to the operations and the boundaries of all of our branches.

In the early days, before the National Lead Company was formed, there were a great number of white lead pro-
ducers, a total approximating eighteen or twenty.
2892 These companies sold white lead in their vicinity
where they could operate economically. When the
National Lead Company was formed they retained these branches and practically the territorial boundaries that the old company, the original company, operated in. They retained a great many of the brands for years, there were twenty-odd—Ulster, Atlantic, Brooklyn, Jewett, Anchor, Red Seal, Collyer, Fahnestock, Beeman & Bauman—maybe I have covered twenty. If I haven't, maybe I can figure out the rest of them.

By Mr. Ewing:

Q. So that the present branch system through which National now operates is the outgrowth of the development of the company?

A. Yes, sir.

Mr. Wright: Objection Your Honor. That was a statement by counsel.

Trial Examiner Norwood: I think so; objection sustained.

By Mr. Ewing:

Q. Were National's various branches all authorized to sell Dutch Boy White Lead In Oil?

A. Yes, sir.

Q. Were the various branches permitted to sell other brands in addition to the Dutch Boy Brand?

2893 A. The Dutch Boy Brand as a trademark was adopted, I believe, in 1907. At that time they put the Dutch Boy name and the Dutch Boy trademark on the body of the package, and on the heads of the package they retained the old names of the constituent companies. In our particular branch we had four of them, and as years went by they gradually dropped these names and substituted the name Dutch Boy on the cover in place of these old names of the original companies.

Q. Does National Lead Company, in distributing and selling white lead-in-oil now use a method based upon zone or territorial differentials?

A. Yes, sir.

Q. For how long, to your own knowledge, has National Lead Company used a method of selling and distributing white lead-in-oil based upon zone or territorial differentials?

A. More than 37 years to my knowledge, because they operated on that basis when I first came with the company, prior to 1910.

Q. Based upon the knowledge acquired by you in the regular course of your duties in your long employment with National, can you state for how long prior to 1910, when you came with the company, such a method of selling or distributing white lead-in-oil has been used?

A. When it was put into effect I do not know but it was in effect when I came with the company in 1910.

2894 Q. In connection with the sale of white lead-in-oil does National now portray graphically its acceptance of territorial differentials as a basis for sale?

A. Yes, sir.

Q. I show you a map, Commission's Exhibit 580, and ask you whether that portrays in substance National's territorial differentials as now used?

A. Yes sir.

Q. Do you know the approximate date when National first employed the present zone map in connection with its sale of white lead-in-oil?

A. I believe it was between the late Fall of 1933 and the early Spring of 1934, somewhere along in that period.

Q. Prior to the use of the present zone map how did National set up its zone or territorial differentials?

A. In practically the same way.

Q. Will you tell us what you mean by that?

A. Well, they had certain differential zones, they had equalization points and delivery points.

Q. When you say that they had differential zones, what do you mean?

A. Differential zones whereby in that particular area they would add a premium over their par prices to compensate for some part of the freight.

Q. I show you a copy of Commission's Exhibit 659-C to P, inclusive and ask you to examine it.

2895 A. Yes sir.

Q. Will you tell us whether that exhibit that you have just examined sets forth National's territorial set-up during the years to which it relates?

A. Yes sir.

Q. There has been some testimony in this proceeding concerning what has been described as consumer acceptance of the Dutch Boy label. Will you tell us what the phrase "consumer acceptance" means to you?

A. The National Lead Company over the years has spent a great deal of money advertising the Dutch Boy brand. Through our sales promotional activities with the painters, the property owners and other consumers, and the salesmen's activities, plus the quality of the product which we have always striven to improve it has built up in the mind of the painter as well as the property owner a great belief in the quality and the performance that can be expected from Dutch Boy White Lead.

Mr. Wright: I move that the answer be stricken. It was not responsive. The question asked him what he understood to be the meaning of the term "consumer acceptance".

Mr. Ewing: I think the first part of the answer was responsive, but I suggest that it be read back.

Mr. Wright: No sir, I don't believe he explained at all what that term meant.

Trial Examiner Norwood: Read the question and answer.

2896 (The reporter read the record as requested.)

Trial Examiner Norwood: That is what you mean by "consumer acceptance"?

The Witness: Your Honor that is how you get consumer acceptance.

Trial Examiner Norwood: Motion denied.

By Mr. Ewing:

Q. What was the consumer acceptance that you yourself found in regard to the Dutch Boy White Lead label in the course of your experience with the National Lead Company since 1910?

A. Will you repeat that again, please.

Trial Examiner Norwood: Read the question.

(The reporter read the preceding question.)

The Witness: To such a high degree that very often it has proved very embarrassing to me.

By Mr. Ewing:

Q. Have there been, during the years in which you have worked for the National Lead Company, actual expressions to you by painters and other users of white lead-in-oil of their reaction to the Dutch Boy product?

A. Many and many a time.

Q. Tell us, for example, what expressions have been made to you?

Mr. Wright: Objection, Your Honor; it is purely hearsay.

2897 Mr. Ewing: This witness has had contact with the public, Your Honor.

Trial Examiner Norwood: He is showing the public attitude as to this brand, and I think that is the only way he can do it. Objection overruled. Do you want the question read?

The Witness: No; may I answer it?

Trial Examiner Norwood: Yes.

The Witness: Painters have expressed to me often that the public is so conscious of the quality of Dutch Boy White Lead and its performance that when they take it on a job no question is raised as to the quality of the product, and it usually stamps them as a high quality painter by virtue of the fact that the material he is using is Dutch Boy White Lead.

Mr. Wright: I move that the answer be stricken. It is purely irrelevant, self-serving and hearsay.

Trial Examiner Norwood: I don't think so; I think he should be allowed—

Mr. Wright (Interposing): The quality of Dutch Boy or any other white lead isn't involved in this proceeding.

Trial Examiner Norwood: I think he should be allowed to tell his story here with respect to the marketing of this product and the surrounding circumstances of it as bearing on the fundamental issues. In view of the breadth of
2898 our inquiry heretofore it seems to me that we should let him tell these things. The motion is denied.

By Mr. Ewing:

Q. Mr. McNair, are there Federal specifications for White Lead?

A. Yes sir.

Q. I show you a printed copy of a document described as TT-W-251b, which contains a number of subheadings among them one being "Federal Specification for White-Lead", and ask you if that sets forth the Federal specification for white-lead, directing your attention in particular to the tables which appear on page 2?

A. Yes sir.

Q. Is the document, which I now ask be marked Respondents' Exhibit 157 for identification, a copy of those schedules, except for the headings?

A. This is a copy of the specifications.

(The document referred to was marked as Respondents' Exhibit No. 157 for identification).

Mr. Welch: Your Honor, may we have a few minutes' recess while they are looking at these documents?

Trial Examiner Norwood: We will take a five minute recess.

(A short recess was taken.)

2899 Mr. Wright: Mr. McNair, is this specific TT-W-251b presently in force?

The Witness: I think so. There is a supplement to that.

Mr. Wright: Does that supplement alter the basic specification?

The Witness: I don't think so.

Trial Examiner Norwood: Is this offered?

Mr. Ewing: It is identified but not offered.

Mr. Wright: I thought you had offered it.

Mr. Ewing: Go ahead and then I will make the offer.

Mr. Wright: Do you know for how long a time prior to the date of this specification which appears to be May 30, 1945 that it was in effect?

The Witness: The Government has had specifications for a number of years. They change from time to time.

Mr. Wright: I direct your attention to the statement appearing on the original document that this supersedes one of November 6, 1934, and to the note at the end of the first page that "Certain provisions in this specification are intended to conserve critical or strategic materials. When the present emergency is over this specification will be considered for revision."

Do you know what the specifications were that were applicable in 1934?

2900 The Witness: Not offhand.

Mr. Wright: You don't know what changes might have been made prior to that time?

The Witness: No, sir.

Mr. Ewing: I offer the document, Respondents' Exhibit 157 for identification.

Mr. Wright: Your Honor, the difficulty with this exhibit is, of course, that it does not contain, being an excerpt, the qualifications which appear on the original which show on its face it is an emergency measure to conserve basic material, so presumably from November 6, 1934 to May 30, 1945, the Federal specifications on these products were other than these. This would have no significance prior to May 30, 1945.

Mr. Ewing: I am willing for the record to show whatever limitations there are in the original. It is not, of course, offered as a statement of Federal specifications for any other period than represented by the original.

Trial Examiner Norwood: You are offering such portions of the original as this paper which I hold here, which has been handed me, is a copy?

Mr. Ewing: That is correct.

Trial Examiner Norwood: And counsel in support of the complaint indicates that it should contain some other portions of the original than what you are offering?

2901 Mr. Ewing: Only the limitations, as I understand.

Mr. Wright: The limitations appear on the face of the document.

Mr. Ewing: I am perfectly willing to have the record note them just as though physically noted on this.

Trial Examiner Norwood: The limitations are as stated by counsel.

Mr. Ewing: He read them from the paper.

Mr. Wright: That is correct. Subject to those limitations I have no objection to the receipt of the paper in evidence.

Trial Examiner Norwood: The exhibit is received subject to the limitations mentioned. Do you offer the supplement?

Mr. Ewing: I just offered the copy.

Trial Examiner Norwood: The copy is received as an exhibit.

(The document referred to, heretofore marked as RESPONDENTS' EXHIBIT 157 for identification, was received in evidence.)

Trial Examiner Norwood: Off the record.

(Discussion off the record.)

Mr. Ewing: I withdraw the offer of Respondents' Exhibit 157 for identification and ask that this printed document consisting of three sheets printed on both sides,
2902 be marked Respondents' Exhibit 157-A to F, inclusive, for identification.

Trial Examiner Norwood: Very well.

(Respondents" Exhibit 157 previously received in evidence was thereupon withdrawn.)

(The document referred to was marked Respondents' Exhibit No. 157-A through 157-F, for identification.)

Mr. Ewing: Now I offer Respondents' Exhibits 157-A to F, inclusive.

Mr. Wright: No objection.

Trial Examiner Norwood: The document is received as marked.

(The document referred to, heretofore marked as Respondents' Exhibit No. 157-A through 157-F for identification, was received in evidence.)

Trial Examiner Norwood: The copy heretofore presented is withdrawn.

Do you desire the substitution of a photostat?

Mr. Ewing: Yes, sir.

Trial Examiner Norwood: That may be done. Will that be furnished the reporter?

Mr. Ewing: We will ask the reporter to get the photostats for us.

Trial Examiner Norwood: And turn it in as the original.

2903 By Mr. Ewing:

Q. If my recollection is correct, Mr. McNair, I think I asked you before what you produced at the Brooklyn plants of the Atlantic branch, and I think you referred to the pulp lead shipped from Perth Amboy to Brooklyn, but went no further in your answer.

Will you tell us now what products are manufactured at the Brooklyn plants?

A. We have a linseed oil plant in Brooklyn which is adjacent to the white lead plant where we crush linseed oil. Naturally as a by-product we get cake, linseed cake.

We refine linseed oil, we produce white lead, some miscellaneous paint products, and at the Bradley plant we manufacture red lead and litharge.

Q. Where is the Bradley plant?

A. 85th and J, New York.

Q. Brooklyn?

A. Brooklyn.

Q. What is the name of the plant located at Port Richmond?

A. Jewett.

Q. And Port Richmond is where?

A. Staten Island.

Q. Referring to Federal specifications in Respondents' Exhibit 157-A to F, inclusive, I ask you whether as between brands of white lead meeting Federal specifi-
2904 cations, there is in your opinion any difference from the standpoint of performance?

A. Yes.

Q. Will you explain the differences which exist from the standpoint of performance or use, in your opinion?

A. There may be a difference in the whiteness, the ease of application under the brush, the spreading capacity—

Q. Is the difference in whiteness which you have mentioned a difference in hiding power?

A. Well, yes. There is a difference in hiding power of the lead, too.

Q. That is not the same thing as difference in whiteness?

A. No.

Q. When you say difference in whiteness you speak simply of the white color?

A. The brilliancy of it.

Q. Whereas hiding power—

A. Is the ability to cover, to obliterate.

Q. Has National Lead Company over a period of years made any effort to improve or perfect the quality of its Dutch Boy white lead products?

A. Yes, sir.

Q. Will you tell us about what efforts have been made?

A. We have constantly over the years striven to produce as high quality white lead as human ingenuity 2905 and modern machinery can make.

Periodically we buy our own brands in the open market as turned out by the various plants. The laboratory rates those and those reports are sent to the various managers of the plants.

In addition to that we also obtain in the open market our competitors' brands of lead and analyze that likewise as a basis of comparison of our quality.

Q. When you say the laboratory rates those, to what laboratory do you refer?

A. The National Lead Company's laboratory in Brooklyn.

Q. What improvements in quality are sought after in this testing work?

A. Well, ease of application, durability, whiteness and hiding qualities.

Q. When did any branch of National Lead first use the so-called agency plan for selling white lead in oil?

A. It was in the latter part of 1952.

Q. What branch of National first used that plan?

A. The Atlantic branch.

Q. Who in that branch introduced the plan?

A. I did.

Q. Who in that branch had charge of its administration?

A. I did.

Q. Was the agency plan ever used by any other 2906 of National's branches?

A. Yes, sir.

Q. When did any of National's other branches adopt the use of the agency plan?

A. The Atlantic branch put it into effect first, and then later on the Philadelphia branch adopted it and subsequent to that all the other branches adopted it.

Q. Did the Pacific Coast branch?

A. No, sir.

Q. When you answered the previous question with "All the others", you meant all others—

A. Excluding the Pacific Coast.

Q. So far as you know, has National's Pacific Coast branch ever used the agency plan?

A. No, sir.

Q. When the Atlantic branch first adopted the agency plan was there, so far as you know, any agreement by National or the branch with any other company producing and selling white lead in oil, to use such a plan?

A. No, sir.

Q. Will you tell us why you introduced the agency plan in the Atlantic branch?

A. Our brand of white lead was being offered by dealers as a loss leader. The popularity of the brand would attract painters into the stores and to encourage them in
2907 that respect they would sell white lead without profit.
On many occasions they have even gone below the actual cost to themselves.

Mr. Wright: Objection, Your Honor. I move that be stricken. That is hearsay testimony which is very vague and general and without any supporting data of any sort.

Trial Examiner Norwood: I think the manager will know when they are using the stuff as a loss leader.

Mr. Wright: It has not been established.

Trial Examiner Norwood: I will ask if he is answering that of his own knowledge, and he may tell us how he knows it. You may cross-examine him on that.

Is that a motion?

Mr. Wright: Yes, sir, a motion to strike.

Trial Examiner Norwood: Motion denied. You may renew it later if you want to.

The Witness: There is more to that question if you desire to have me finish.

By Mr. Ewing:

Q. Go ahead.

A. This attitude on the part of these dealers proved

very injurious to our product because it made those that desired to make a profit unwilling to sell it due to the fact of this cut-throat competition which impelled us to do something to preserve our business, and that is how the
2908 agency plan became adopted.

Q. It was for the purpose of meeting that situation, then, that you introduced the agency plan?

A. That is correct.

Q. From your standpoint or National's standpoint as producer and seller, was there any evil involved in selling through agents on consignment?

A. Economic—

Trial Examiner Norwood: Wait a minute.

Mr. Wright: Objection, Your Honor. That calls for a conclusion on the part of the witness.

Mr. Ewing: It calls for his opinion.

Mr. Wright: It calls for an outright conclusion.

Trial Examiner Norwood: He may give us the facts about that, directed as to whether or not there is some advantage, but "evil" is a pretty broad question, even a religious question.

Mr. Ewing: I didn't use the word in a religious sense, Your Honor.

Trial Examiner Norwood: Objection sustained.

By Mr. Ewing:

Q. Mr. McNair, in your opinion, what advantages accrue to the producer, or a producer such as National, through the use of a plan involving the sale of white lead in oil through agents on consignment?

2909 A. There is an economic evil because it required us to carry an abnormal stock of white lead being in the hands of these various agents throughout the country, which gave us a much greater inventory than we would normally have if we did not have the consignment plan. Furthermore it tied up a lot of capital.

Q. What was the objection to having the abnormal inventory?

A. There would be an injury. Well, in case the pig lead market declined we would have these abnormal stocks in the hands of our distributors which would not be the case if we had the stock actually in our plant.

Q. There has been testimony in this proceeding that a proposed master code was submitted by the lead industry through Lead Industries Association in August, 1933, in connection with the National Recovery Administration, containing a provision permitting the filing of supplementary codes.

Will you tell us whether you, with Mr. Harold Rowe, attended some meetings of the Lead Pigment Division of the Lead Industries Association or its sub groups concerned with the drafting of the supplementary code for the membership companies comprising the Lead Pigment Division?

A. Yes, sir.

Q. I show you the minutes of a meeting of the Dry Products Committee of the Lead Pigment Division, August 9, 1933, Respondents' Exhibit 135-A and B, and ask
2910 you to read those to yourself.

Trial Examiner Norwood: Are those meetings he attended?

Mr. Ewing: Yes, sir, that is the next question.

The Witness: Do you wish me to read all of this?

By Mr. Ewing:

Q. Just the first one.

A. Yes.

Q. Tell us whether you attended the meeting of the Dry Products Committee of the Lead Pigment Division on August 9, 1933?

A. Yes..

Q. In what connection were the subjects set forth at that meeting discussed?

Mr. Wright: I would like to request a short voir dire of the witness' recollection of that meeting which was 14 years ago before we get into a discussion of that.

Trial Examiner Norwood: He is using the minutes to refresh his recollection and I think counsel may ask if it does, in fact, refresh his recollection.

Mr. Wright: What is the state of your recollection of that particular meeting, Mr. McNair?

The Witness: Only by virtue of the fact that I have read these minutes and have seen that I was present.

Mr. Wright: You can't visualize the meeting and
2911 who was there and what was discussed?

The Witness: Only in a general way.

Mr. Wright: What general way?

The Witness: With reference to supplementary codes.

Mr. Wright: You don't have any independent recollection, after reading that, of a particular discussion that occurred at that meeting?

Trial Examiner Norwood: Read the question.

Mr. Ewing: I will rephrase it.

By Mr. Ewing:

Q. Will you tell us generally in what connection the subjects set forth in the minutes of that meeting of August 9, 1933 were discussed?

Mr. Wright: Objection, Your Honor. The witness has already testified he does not remember any particular discussion that occurred at that meeting.

Mr. Ewing: He said he had a general recollection.

Trial Examiner Norwood: Ask him to testify from his own recollection about this matter, and if he does not remember it he may say so. That is all we can ask him to do.

Do you want the question read?

The Witness: No, sir.

Trial Examiner Norwood: Can you answer from your own recollection?

2912 The Witness: The general discussion was in connection with supplementary codes, in connection with the N. R. A.

By Mr. Ewing:

Q. Now, I ask you to look at the minutes of the White Lead in Oil Committee of the Lead Pigment Division, of August 9, 1933, Commission's Exhibit 501-A to D, inclusive, and read them to yourself.

Trial Examiner Norwood: Off the record.

(Discussion off the record.)

By Mr. Ewing:

Q. Do you recall whether you attended a meeting of the White Lead in Oil Committee of the Lead Pigment Division of August 9, 1933?

A. Yes, sir.

Q. Have you any independent recollection with respect to your attendance at that meeting, other than as refreshed by your look at the minutes?

A. No, sir.

Q. Did you attend that meeting on August 9, 1933 of the White Lead in Oil Committee of the Lead Pigment Division?

Mr. Wright: Objection. He says he has no recollection of that meeting or of attending it.

Trial Examiner Norwood: He may recollect the fact that he did attend. Answer from your own recollection. I overrule the objection.

2913 The Witness: Your Honor, I attended quite a few of these meetings and by referring to these minutes of that meeting I see my name is listed there, and to that extent I was unquestionably there.

Trial Examiner Norwood: That document is already in evidence.

Mr. Wright: Your Honor, by the witness' own statement this document does not refresh his recollection. He reads the document and says he was there because his name is listed there.

Mr. Ewing: He said he remembered attending a number of these meetings and when he takes a look at this one he remembers he was there.

Mr. Wright: Will the reporter read the witness' answer?

Trial Examiner Norwood: I recall what his answer was.

Mr. Wright: I don't think he should be permitted to testify when his only information is that he sees his name in the minutes.

Trial Examiner Norwood: I am going to ask him to put down the document that he was told to refresh his memory from.

Now, is there a question pending?

2914 Mr. Wright: No, sir. There was an objection to the question counsel asked on the basis of the witness' statement he had no independent recollection and he presumed since his name appeared in the minutes that he attended the meeting. That is not proper refreshment.

Mr. Ewing: Of course it is. How else can you refresh it?

Mr. Wright: Proper refreshment is when you see a document which will stimulate an independent recollection in his mind.

My objection was to counsel's question relating to this meeting, in view of the witness' statement that he had no independent recollection as to this meeting.

Trial Examiner Norwood: I think he can ask any question regarding that meeting, regardless of what he said before. He may explain that and change what he said before. The objection is overruled.

Will counsel reframe the question?

By Mr. Ewing:

Q. Will you tell us whether you attended the meeting of the White Lead Committee of the Oil Pigment Division of August 9, 1933?

Mr. Wright: May I request you to instruct the witness to answer that question from his own independent recollection as it may have been stipulated by his examination of the document, but not from what he sees in the document?

2915 Trial Examiner Norwood: I think the witness understands.

If you don't recollect, tell us so.

The Witness: I have attended quite a few of these meetings and my memory is refreshed by reading those minutes, that I did attend some at the Lawyers Club, but as to the specific date I have no recollection except that the document states I was there on August 9th.

By Mr. Ewing:

Q. In what connection were the subjects discussed at the various meetings of the Lead Pigment Division or its subsidiary committees in the summer of 1933, which you attended—discussed by the persons present at those meetings?

Mr. Wright: Objection, Your Honor. He has not testified as to the dates when he attended those meetings.

Trial Examiner Norwood: I think he may tell us what happened at the meeting even though he does not remember the dates.

Mr. Wright: He doesn't recollect any specific meeting at any specific time.

Trial Examiner Norwood: I will let him tell us what he can, and you may cross-examine him, and if he has told something he doesn't know I will strike it.

The Witness: It was in connection with supplementary codes.

2916 By Mr. Ewing:

Q. When the National Lead Company determined to use in connection with the sale of white lead in oil, a map similar to Commission's Exhibit 580 which you have seen before, this morning, and which I believe you said was put in use sometime between the fall of 1933 and the spring of 1934, so far as you know was there any agreement by it with any other producer of that product, namely, white lead in oil, relating to the use of any such map?

A. No, sir.

Q. Again referring to Commission's Exhibit 580, the map which you have said, if I recall correctly, was put in use by National Lead sometime between the fall of 1933 and the spring of 1934, at what time was it put in use in relation to the adoption by National Lead of the so-called agency plan of selling white lead in oil on a nationwide basis?

A. Shortly thereafter.

Q. Who in National Lead established the prices at which it sold dry white lead, white lead in oil and lead oxides?

A. The general office.

Q. Will you tell us what you mean by the general office?

A. Well, the executives in the general office.

Q. As distinguished from the branches?

A. That is right.

Mr. Ewing: I ask that this document be marked 2917 Respondents' Exhibit 158 for identification.

Trial Examiner Norwood: Very well.

(The document referred to was marked as Respondents' Exhibit No. 158 for identification.)

By Mr. Ewing:

Q. I show you a document which has just been marked Respondents' Exhibit 158 for identification, and ask you by whom or under whose direction it was prepared.

A. I prepared this.

Q. What does that document which has been marked Respondents' Exhibit 158 for identification purport to set forth?

A. It sets forth the various selling schedules of the National Lead Company and the companies prior to the formation of the company, as far as those constituent companies that were taken into the Atlantic branch to market white lead.

Q. Upon what data did you prepare Respondents' Exhibit 158 for identification?

A. Historical records that I found in the office.

Q. I call your attention to the bottom of the second column where there appears the statement "Soft paste offered to trade September 1, 1927"; and I ask you to tell us what is soft paste?

A. Soft paste white lead is of thinner consistency than heavy paste white lead. It contains linseed oil and turpentine and mineral spirits.

2918 Mr. Ewing: I offer Respondents' Exhibit 158 for identification in evidence.

Mr. Wright: I would like to make a preliminary cross-examination here.

Trial Examiner Norwood: Very well.

Mr. Wright: Directing your attention to the first column, the description "white lead", what product do you mean by white lead there?

The Witness: White lead in oil.

Mr. Wright: So this entire document relates to white lead in oil?

The Witness: White lead in oil only.

Mr. Wright: Does this purport to be a complete description of all the terms and conditions which were offered on this product over this entire period of time?

The Witness: As far as I could ascertain from the records that I found.

Mr. Wright: What sort of records did you have?

The Witness: Historical records.

Mr. Wright: In what form were they?

The Witness: Various forms.

Mr. Wright: Will you describe them?

The Witness: Some were in longhand written on the stationery of those earlier days, others in printed form and others in card form.

2919 Mr. Wright: Do you have those documents in your possession still?

The Witness: I think so.

Mr. Wright: Your Honor, I object to the receipt of this document in evidence since it is based on documents which have not been made available, and there has been no opportunity for me to examine the basic material from which it was made. It is exactly in the same category as an exhibit of yesterday which was withdrawn after the basic materials had been examined.

Mr. Ewing: We will make the basic material available to him.

Mr. Wright: I don't think I should be put to the onus of later examining the basic material and then making a motion to strike on this sort of an offer, Your Honor. That is a burden that I don't believe should be placed on me.

Trial Examiner Norwood: That may be correct on something vital and directed to an issue—

Mr. Wright: The prices and terms and conditions of sale of the National Lead Company from 1863 to 1947 certainly go to the vital issues in this matter.

Mr. Ewing: I would say the prices of the Atlantic branch and its predecessors based upon records in the possession of Mr. McNair.

Mr. Wright: The document does not say that. It
2920 says "National Lead Company, changes in selling schedules, 1863 to 1947."

Trial Examiner Norwood: I merely started out to discuss the degree of availability which should be required, but the discussion took another turn.

Until this appears to be vital it seems to me like counsel's statement that he will make the material available to counsel in support of the complaint, is sufficient, isn't it?

Mr. Wright: No, sir, it is not. This is secondary evidence which should not be admitted unless the primary evidence is not available. Yesterday we had tabulations which were in error here, which had not been properly prepared.

Trial Examiner Norwood: Should the Commission be required to send its Examiner to the office of the Respondent and examine the basic material there and check it?

Mr. Ewing: We will bring it to him next week.

Mr. Wright: We will be in New York next week.

Mr. Ewing: And I will have to break in on Mr. McNair again and bring him out of town at a waste of time. You and I have to be there anyway.

Trial Examiner Norwood: I will hold this in abeyance like the other two until counsel on the other side is satisfied he will have an opportunity to object. I will reserve the ruling on 158 until we can make further arrangements about checking.

Proceed.

2921 By Mr. Ewing:

Q. To what types of use does soft paste lend itself?

A. For the painting trade.

Q. To what type of use does heavy paste lend itself?

A. The painting trade and other uses.

Q. What other uses?

A. The car builder uses it for putting on car wheels; it is used in making up putty by the painter; there are many uses.

The difference between heavy paste and soft paste is that the soft paste is of a more fluid consistency and the painter can turn it into paint more readily than he can heavy paste.

Q. So far as you know during your connection with National Lead Company, has it at any time ever entered into any agreement with any other company producing white lead or lead oxides, relating to prices?

A. No.

Q. So far as you know, has it ever entered into any such an agreement relating to the setting of zone differentials or territorial differentials?

A. No.

Q. So far as you know has it ever entered into any agreement relating to quantity discounts?

A. No, sir.

2922 Q. So far as you know has it ever entered into any agreement relating to districts of production?

A. No.

Q. So far as you know has it ever entered into any agreement relating to customer allocations?

A. No.

Q. So far as you know has it ever entered into any agreement relating to uniform terms of sale except to the extent that such uniform terms of sale may have been adopted in the code for the lead industry?

A. No.

Mr. Ewing: I ask that these photostats, ten sheets in all, be marked Respondents' Exhibit 159-A to J, inclusive, for identification.

Trial Examiner Norwood: Very well.

(The documents referred to were marked as Respondents' Exhibits 159-A through 159-J, for identification.)

Mr. Ewing: Off the record.

(Discussion off the record.)

By Mr. Ewing:

Q. I show you, Mr. McNair, the originals of ten documents, photostatic copies of which have just been marked Respondents' Exhibit 159-A to J, inclusive, for identification, and ask you to tell us generally what they are.

A. They pertain to marketing policy.

2923 Q. Are they part of the files of the Atlantic branch?

A. This letter?

Q. Yes.

A. It was gotten out of the Atlantic branch.

Q. When did you first see these documents?

A. About ten days ago.

Q. When I say "first" I mean at the present time; I mean now and not back in 1934.

A. I saw the document back in 1934, but I only saw these letters about ten days ago when they were found in our office.

Q. Will you tell us the circumstances under which you found them?

A. I was endeavoring to refresh my recollection on certain sales policies, and I went to a young lady in the office who has been there for a number of years, even though she is young, and asked her if she had anything pertaining to prices or as to our selling policies on our various products, and she went through her desk and pulled out these letters and gave them to me.

Q. Now, I direct your attention to Respondents' Exhibit 159-A which appears to be a memorandum dated June 9, 1934, addressed to all branch managers from Harold Rowe, and ask you whether the Atlantic branch received that?

A. This top letter?

Q. Yes.

2924 A. Yes, we received it.

Q. Prior to that had you received the document which has been marked Respondents' Exhibit 159-B for identification, appearing to be a memorandum dated May 11, 1934, addressed to Branch Managers, from Harold Rowe?

A. Yes.

Q. I call your attention to the next to the last paragraph of the May 11, 1934 memorandum, Respondents' Exhibit 159-B for identification.

A. These are not marked with any identification number at all.

Q. That is why I am giving you the date. It is the second one, next to the last paragraph.

A. What is your question, Counsel?

Q. I ask you whether you received with that memorandum of May 11, 1934, the eight accompanying sheets which appear to be instructions, interpretations, referred to in the May 11, 1934 letter?

A. Yes.

Q. Were those documents all received by Atlantic branch from the general office of National Lead?

A. Yes, sir.

Q. In the regular course of business?

A. Yes, sir.

Mr. Ewing: I offer Respondents' Exhibit 159-A
2925 to J in evidence.

Mr. Wright: No objection.

Trial Examiner Norwood: Received as marked.

(The documents referred to, heretofore marked as RESPONDENTS' EXHIBITS 159-A through 159-J, were received in evidence.)

Mr. Ewing: That closes the direct examination, Your Honor.

Trial Examiner Norwood: Cross-examine.

Mr. Wright: I suggest, Your Honor, we recess for lunch now and reconvene at 2 o'clock.

Trial Examiner Norwood: Is that agreeable?

Mr. Ewing: Right.

Trial Examiner Norwood: We will recess until 2 o'clock.

(Whereupon, at 12:10 o'clock p. m., a recess was taken until 2:00 o'clock p. m. of the same day.)

2926 Afternoon Session.

2:00 p. m.

Trial Examiner Norwood: The hearing will be in order.

Mr. Ewing: Before Mr. Wright starts his cross-examination, there are two or three more questions I would like to put to Mr. McNair.

Trial Examiner Norwood: Go ahead.

JOHN GORDON CRAWFORD McNAIR resumed the stand and testified further as follows:

Direct Examination (continued) by Mr. Ewing.

Q. I show you again Respondents' Exhibit 158 for identification, which you have testified you had prepared, and ask you to tell us how you came to prepare the information set forth on that document?

A. I was interested in finding out the various sales policies, as far as pricing is concerned, that the National Lead Company had.

Q. At what time was that?

A. When I made this original chart up, it was about 10 years ago, since which time I have brought it up to date.

Q. And on what [illegible] did you make the original chart up?

A. I don't understand the question.

2927 Q. I mean did you make it up about 10 years ago, bringing it back as far as it goes, and up to 10 years ago; or was it in the form of a record which you kept from time to time as the years went by with the company?

A. After I originally made it up, from that time on I recorded changes which occurred from the time the original chart was made up.

Q. When you say "original chart", you are not referring to this particular one?

A. Not this particular one, no.

Q. And that original chart was made up at least 10 years ago, approximately?

A. At least 10 years ago.

Mr. Ewing: That is all.

Trial Examiner Norwood: Proceed with the cross-examination.

Cross-Examination by Mr. Wright.

Q. What was your capacity with the National Lead Company during the period from about 1930 to 1939, Mr. McNair?

A. Assistant Manager.

Q. You were Assistant Manager, then, at the time of these meetings which were referred to on direct?

A. I think so.

2928 Q. When you attended those meetings, in what capacity did you attend them? Were you representing the National Lead Company at those meetings?

A. No, I attended with Mr. Harold Rowe.

Q. You went along with him?

A. Yes.

Q. Did you participate in those meetings?

A. In the discussions?

Q. Yes.

A. Undoubtedly I did.

Q. Mr. Rowe was representing the company, though?

A. Officially, yes, sir.

Q. Now will you explain to us the original breakdown of the National Lead Company as between the general offices and the branch offices?

A. The branches have a manager, who has jurisdiction over the branches. The general office contains the top executives, which dictate policies to the branches.

Q. What matters of policy are generally passed on from the general office to the branches?

A. Price changes and other pertinent facts in connection with the operation of the business.

Q. Are general policies as to terms and conditions of sale passed on?

A. Yes.

Q. Types of contracts?

2929 A. That is correct.

Q. Those are all determined in the general offices?

A. Yes, sir.

Q. So that the branch manager would not be in position to initiate any change in policy of any importance regarding the marketing of these products?

A. That is correct.

Q. You stated this morning that in 1939 it was your estimate that it would cost a million dollars or over a million dollars to construct a white lead plant of 10,000 tons annual capacity, is that correct?

A. No, sir, I think I said in the period around 1930 to 1932 or 1933—I don't think I mentioned 1939.

Q. Now for what process would that plant that you are speaking of now, be designed? Would that be an Old Dutch plant or a Carter plant?

A. The Old Dutch plant is practically a thing of the past.

Q. What process were you thinking of when you made that estimate?

A. The Carter process.

Q. How many of the white lead plants are—I am confining this only to those of the National Lead Company—how many of the white lead plants in existence now are of 10,000 tons capacity or more?

A. I am not so sure about the Pacific Coast, but
2930 the other branches would have at least 10,000 tons.

Q. Would that apply to your competitors' plants, too, or wouldn't you know?

A. Oh, I wouldn't know that.

Q. How would you break that million dollar cost down; what factors were you taking into consideration?

A. The cost of machinery, the building, the property, the equipment.

Q. Will you break that down into the component parts?

A. As to the cost of each?

Q. Yes, sir.

A. I couldn't do that.

Q. Well, how did you arrive at that figure, if you can't do that?

A. Because I have had a great deal of experience in the building of our plants, the additions that we have built, getting new equipment to improve our process, improve our product.

Q. Well, if you don't know the parts that go into the whole, how can you know the whole? How did you arrive at that figure of over a million dollars?

A. I gave an estimate of over a million and a half. Now it is quite possible that it may run many thousand dollars over that.

Q. What did you allocate, in your mind, to actual processing machinery, out of that total?

2931 A. Well, I couldn't answer that question, sir. It is a general figure that I gave.

Q. Well, it is just an opinion, then, isn't it?

A. Based upon my knowledge of a white lead plant.

Q. What I am trying to get at is what is that knowledge of costs, now?

A. Well, right now, or do you mean back in 1930?

Q. I am talking about back in the period about which you testified.

A. Well, I had occasion to buy a lot of equipment. We were making alterations to the plant, and I have a general idea what construction costs were, and what machinery cost.

Q. How much machinery or what machinery is necessary to the operation of such a white lead plant?

A. Cylinders, tubs, washing equipment, roller mills, pug mills, blow drums, motors—those are the vital items of equipment.

Q. That is the main factory machinery that is necessary?

A. That is right.

Q. How much floor space is required for such a plant?

A. Well, you would have on your floor with your cylinders, probably the building would be at least 200 feet long by 50 or 60 feet wide.

Q. That is the total plant area?

A. No, that is for the cylinders alone.

2932 Q. Those are the cylinders where you corrode the lead, is that right?

A. That is right.

The blow drum would probably occupy an area 60 x 80. Your washing equipment and tubs, and so forth, would probably occupy an entire floor under the cylinder floor. You would have a power plant.

Q. How much of that "over a million dollars", then, would be in machinery and equipment as distinguished from—

A. (Interposing.) From the building itself?

Q. As distinguished from the building and premises.

A. I would say the machinery in a white lead plant of that description would probably run $650,000.

Q. Now the Jewett Plant at Port Richmond, you stated that that was a plant that had 12,000 tons capacity of white lead?

A. That is right.

Q. And that produced only white lead?

A. That is right.

Q. It didn't produce red lead and litharge?

A. No, sir.

Q. How much was that plant carried on the books of the National Lead Company at while it was in operation?

A. That particular plant was carried close onto a million dollars.

Q. Now these plants that you referred to earlier 2933 at Cincinnati, Boston, Cleveland, Pittsburgh, and Buffalo, when were they last in operation?

A. I really don't know. The Boston plant has been down for a great number of years. The Cincinnati plant I believe was down in 1930. Did you mention Pittsburgh?

Q. Yes, sir.

A. Pittsburgh probably along the same time, but I am not so sure about those dates.

Q. Was that the National Lead Company of Pennsylvania that operated that Pittsburgh plant?

A. Yes, sir.

Q. At how much was that carried on the books of the company?

A. I don't know, I wouldn't know.

Q. What was the capacity of that plant?

A. I wouldn't know.

Q. Do you recall the capacity of the Cincinnati plant?

A. No, sir.

Q. How about the Buffalo plant?

A. No, sir.

Q. How about the Boston plant?

A. No, sir.

Q. You spoke this morning of the National Lead Company historically being composed of a number of plants at all these various different branches who served particular territories in which they were located, was that your testimony?

2934 A. That is right.

Q. Were they large plants, generally, or were they small ones, or do you know what size and capacity they were?

A. I would say offhand, outside of those particular plants that we had in the New York area and Philadelphia, they were relatively small plants in comparison.

Q. About how many tons do you mean, roughly?

A. I mean the size of the plant.

Q. Well, that would determine their capacity, wouldn't it?

A. That is right.

Q. Well, can you give us an estimate of what their capacity was?

A. No, I could not.

Q. Was it as much as 10,000 tons?

A. I couldn't answer that question.

Q. What is the capacity of your largest plant, white lead plant?

A. At Chicago.

Q. What is that capacity?

A. Probably about 18,000 to 20,000 tons.

Q. Is that one of the largest plants in the business?

A. Yes, sir.

Q. How does the Perth Amboy plant compare with that?

A. About three-quarters of that.

Q. Is that also considered a large plant?

2935 A. Yes, sir.

Q. So a 10,000 ton plant, then, would be a large plant, would it not?

A. It is a fairly large plant, yes.

Q. Do you know whether there have been, in your experience in the industry, plants operating with less than that capacity?

A. I testified this morning that we had the Matheson plant that had a capacity of around 7,000 tons.

Q. I suppose the cost of construction of the smaller plant would be correspondingly lower?

A. That is correct.

Q. So the effect, then, of the disbanding of these various branch plants, with their local territories which they served, was to give wider distribution to the remaining plants of the National Lead Company?

A. A greater production.

Q. A greater production and wider distribution?

A. To enable us to operate the existing plant at its maximum capacity, which is the most economical basis to operate a white lead plant on.

Q. What linseed oil plants does the National Lead Company operate?

A. Two.

Q. Where are they located?

A. Philadelphia and Brooklyn.

2936 Q. The production and marketing of that product is under your jurisdiction, too?

A. The New York plant, yes.

Q. How do you quote and sell linseed oil?

A. By the pound.

Q. What territorial differentials do you have on linseed oil?

A. We have a territorial differential on linseed oil.

Q. Is that in the form of zones?

A. A zone differential, yes.

Q. Roughly what is the par zone on linseed oil?

A. Minneapolis and Chicago.

Q. I don't understand you. You say Minneapolis and Chicago are the par zones?

A. The par territory is Minneapolis and Chicago. The reason for that is that that is the flax seed belt.

Q. What territory is Eastern Seaboard, New York and Pennsylvania?

A. Three-tenths of a cent over par.

Q. How many zones are there for linseed oil?

A. I couldn't answer that.

Q. How many zones are there in the territory with which you are familiar?

A. There are three.

Q. What are those zones?

A. New York—as far as our branch is concerned, 2937 we consider that par in our branch. Florida and Georgia on the Seaboard have a differential; and Macon, west of Macon has a higher differential than Seaboard.

Q. Those are the three areas in which you—

A. (Interposing.) In our branch, yes, sir.

Q. What is the Lenox process?

A. It is a precipitated process.

Q. Is that presently being used by the National Lead Company?

A. No, sir.

Q. How does that work,—do you put lead into solution?

A. Well, eventually you get it into solution. The lead is feathered and put in a tub and sprayed with acetic acid, and it is carbonated that way by precipitation.

Q. Does the National Lead Company use the electrolytic process?

A. No, sir.

Q. Do they use the Old Dutch process at any of their plants?

A. No, not now.

Q. What physical differences are there in white lead produced by the various different processes, Mr. McNair?

A. Well, there is a difference in the fineness of the particles.

Q. Is there a difference in color?

A. Yes, there is. The Dutch process has more yellow color to it than the Carter process. The Carter pro- 2938 cess is a very white process.

Q. How does the Carter process compare with the electrolytic process?

A. In whiteness?

Q. Yes, sir.

A. About the same, I should say.

Q. Are there any differences in Carter and electrolytic processed white lead?

A. Well, there may be a slight difference in the fineness of the particles.

Q. Is there any difference in hiding power?

A. Well, it depends upon the plant. It is possible when manufacturing under the Carter system that the product in some plants would have greater hiding than that in some other plants using the same system.

Q. Who was the Carter process developed by?

A. I couldnt answer that.

Q. Does that have any relation to the old Carter White Lead Company, Mr. F. M. Carter?

A. Whether the Carter process was used prior to the formation of the Carter Lead Company, I wouldn't know.

Q. You don't know the origin of the process?

A. No, I do not. The oldest process is the Dutch process.

Q. The Matheson Lead plant, when was that acquired by the National Lead Company?

2939 A. I couldn't give you the date accurately; I don't know.

Q. Was that prior to your service with the company?

A. Yes.

Q. Was that a previously independent operation?

A. Yes.

Q. How about the Jewett plant at Port Richmond?

A. The Jewett plant was taken into the company at the time of its organization, I believe.

Q. It goes back, then, to 1890, or so?

A. Yes.

Q. How about the plant at Cincinnati, when was that acquired?

A. I wouldn't know.

Q. How about the Boston plant?

A. I wouldn't know.

Q. How about the Cleveland plant?

A. I wouldn't know.

Q. The Pittsburgh plant?

A. I wouldn't know.

Q. The Buffalo plant?

A. I wouldn't know.

Q. Does the National Lead Company still manufacture white lead-in-oil for the duPont Company?

A. Yes.

Q. Under contract arrangements?

A. I don't know what their arrangement is.

2940 Q. That is handled in the general offices?

A. That is right.

Q. You supply that from the Atlantic Branch, however?

A. We do.

Q. Do you supply that in package form?

A. Yes, sir.

Q. With the duPont label on it?

A. Yes, sir.

Q. What would be the cost of construction of a litharge plant of 10,000 tons annual capacity, say, back in 1939?

A. Of 10,000 tons capacity?

Q. Yes.

A. To manufacture litharge only?

Q. Well, I will amend the question. We will make it a red lead and litharge operation to produce 10,000 tons, combined, of the two.

A. Then you would get into a much greater expense. If you manufactured litharge alone, a plant back in 1930 or thereabouts would not be a very expensive plant, probably $200,000 would have covered that.

Q. That is just a roasting operation of the pig lead, is that right?

A. Well, it all depends upon how it is made.

Q. How much would the added red lead cost be?

A. Then you would have to have additional equipment.

2941 Q. Do you know what the capacity, approximately, of the Eagle-Picher Company in Jersey is?

A. No, sir.

Q. Is that a large plant?

A. I wouldn't say it is the largest in the country. It is a fair sized plant.

Q. What would be the capital investment, in the 30's, for a plant of about that size?

A. In the 1930's?

Q. Yes.

A. I have never been in that plant, I have only seen it passing by on the train, so it is a rather hard question to answer. I don't know what equipment they have in there, or how much they produce.

Q. You are familiar with the Evans plant down in Charleston, West Virginia, are you not?

A. No, sir, I am not.

Q. What is the capacity of your red lead and litharge plant in Brooklyn?

A. We have gotten as high as 29,000 tons out of that plant.

Q. Is that the only plant in the Atlantic Branch that produces those products?

A. Litharge and red lead?

Q. Yes.

A. No, sir.

2942 Q. What other plants produce that?

A. Perth Amboy.

Q. What is the capacity of that Perth Amboy plant?

A. At that particular plant they could turn out about 20,000 tons.

Q. At what is that plant carried on the books, the red lead and litharge plant?

A. We don't make red lead there, just litharge.

Q. At what is that plant carried on the books of the National Lead Company?

A. We have just constructed that particular unit.

Q. What is the capital investment in that?

A. In that particular plant, I would say about $450,000 or $500,000.

Q. That is just the litharge end of the plant?

A. That is right.

Q. That is a 20,000 ton plant?

A. Yes, sir.

Q. Now it has been testified here that a battery manufacturer, for instance, can produce litharge and red lead profitably on his own account if his consumption is 4,000 tons a year or more. About what would be the capital investment, in the 30's, in a 4,000 ton litharge and red lead plant?

A. Probably $650,000 to $800,000.

Q. For a 4,000 ton plant?

A. Yes.

2943 Q. What would make the difference between that expense and the expense of the plant that you have just now constructed for 20,000 tons of litharge?

A. Well, that particular plant—you have to have a certain amount of equipment to produce 4,000 tons, but that plant may be capable of turning out seven or eight thousand tons with the same equipment.

Q. So, then, your testimony was with regard to one that had a capacity of about eight thousand tons?

A. No. There is a minimum amount of equipment that you must have necessarily in order to have an oxide plant, and if you want to have a production of 4,000 tons you have to have that minimum equipment.

Q. What is that minimum equipment?

A. It consists of furnaces, mills—

Q. (Interposing.) How many furnaces?

A. For 4,000 tons?

Q. Yes, sir.

A. To turn out red lead or oxide?

Q. Red lead and litharge, half and half; or, say 3,000 tons of litharge and a thousand tons of red lead.

A. You see red lead and litharge are made in different ways. To produce red lead you have to have more equipment.

Q. Isn't it correct that red lead is a further refinement or processing of litharge?

2944 A. That is right.

Q. Take a plant now that a battery manufacturer would be interested in, which is designed to produce 3,000 tons of litharge and 1,000 tons of red lead each year, for an estimated average consumption of 4,000 tons a year, just about what equipment would be necessary to make that average production?

A. You would probably require eight or ten furnaces, with the necessary equipment for charging and discharging, grinding, packing and so forth.

Q. Would those furnaces be capable of handling both the litharge and the further refining into red lead?

A. In certain processes, yes, sir.

Q. About what would that cost at pre-war construction prices?

A. A furnace?

Q. Yes.

A. You could probably build an oxide furnace for fourteen or fifteen thousand dollars.

Q. What does your charging and other handling equipment for a furnace run to?

A. Well, I couldn't answer that offhand.

Q. About how much would your grinding and other refining and screening equipment for handling the production of eight furnaces run to?

A. At the present time?

Q. No, prior to the war.

2945 A. I couldn't answer that question authentically.

Q. Are you familiar with the Atlanta plant of National?

A. No, sir.

Q. I thought you were familiar with all the operations of the various branches?

A. Those are oxide plants; I have very little to do with oxides in our business. White lead plants were what I was talking about.

Q. Doesn't the Atlantic Branch handle oxides and litharge and red lead?

A. That is right.

Q. You stated this morning that the cost of white lead would run to around 20 per cent of the cost of paint jobs, is that correct?

A. I thought I testified to the fact that the materials cost of a painting job averaged between 20 and 25 per cent of the total cost of the painting job.

Q. You meant all material costs?

A. That is right.

Q. On what do you base that estimate?

A. From actual knowledge of what I know to be true myself.

Q. What is that knowledge, how do you break it down?

A. Say a paint job costs $125, if you pay $25 for your materials, that gives you a percentage. It is a figure which is more or less recognized in the industry.

2946 Q. Did you make any study to determine that?

A. It wasn't necessary.

Q. How did you find it out?

A. From my actual experience.

Q. As a painter?

A. No, as a salesman in my contacts with painters.

Q. You stated this morning that you had used zones prior to 1910, in quoting on white lead-in-oil?

A. I did.

Q. What zones did you use prior to 1933 or 1934?

A. I couldn't answer the question as to what zones there were at that time, because when I started out as a salesman for the first time with the company I travelled in Georgia and Florida and there was a zone differential down there at the time.

Q. When you were speaking of zone differentials did you mean the differentials which appeared on Commission's Exhibit 659, the list of differential points?

A. I don't recognize the exhibit number.

Q. Well, look at this exhibit.

A. That (indicating) is a zone differential there in Florida.

Q. What do you mean by "that is a zone differential"? How did you make prices on that?

A. Half a cent over par.

Q. Was that a price to Jacksonville only?

2947 A. That is right.

Q. Then how would you make a price to Miami?

A. The price to Miami would be equalized with Jacksonville.

Q. What do you mean by that?

A. If a customer in Miami desired to purchase white lead, and if the rate from New York to Miami was, we will say, 85 cents a hundred, and from Jacksonville to Miami, 50 cents a hundred, the customer would only pay the fifty cents.

Q. In other words he would pay the half cent extra to Jacksonville plus the 50 cents difference in freight rates?

A. That is right. In other words, it would not cost a customer any more buying white lead if we shipped it direct out of New York than if he got it out of Jacksonville.

Q. That then really amounted to the price at Jacksonville plus the freight from Jacksonville to Miami?

A. If that freight was less than from New York, yes.

Trial Examiner Norwood: Jacksonville, then, is the shipping point there?

The Witness: No, sir, that is the equalization point.

By Mr. Wright:

Q. Are all these other points on here, then, equalization points?

A. No, sir; these (indicating) are delivery points.

Q. What is the difference between an equalization point and a delivery point?

2948 A. We deliver free of charge to a delivery point and we do not equalize any other shipments in that area with those points; whereas, in the case of an equalization point, we equalize the freight with that equalization point for shipments made in that area.

Q. For instance, then, take a point in the State of Vermont. You have Bellows Falls, Brattleboro, Montpelier, Rutland, St. Albans and St. Johnsbury as delivery points, and Burlington as an equalization point. Assuming, now, that you wanted to quote to a customer in some other place in Vermont than those that are listed there, how would you make your price to him?

A. If the rate from New York to the point in question was greater than that from Burlington to that particular point, than we would equalize with Burlington.

Q. Equalize with Burlington?

A. Yes.

Q. But, for instance, if a man were 20 miles out of one of these delivery points?

A. We wouldn't ship it.

Q. You would equalize it—

A. (Interposing.) We would not pay the freight on that; we would only pay the freight to delivery points.

Q. Well, then, would you charge him the price at the
delivery point, plus what his freight was from that
2949 delivery point to his destination?

A. Say that again, please.

2949 Q. Would you charge him the price at the delivery
point, twenty miles away, plus the freight from the
delivery point to destination?

A. We will deliver free of charge to a delivery point. For a point outside of a delivery point, which is not an equalization point or a delivery point, the customer pays the freight.

Q. In other words, for a man twenty miles out of St. Johnsbury, for instance, you would ship it to St. Johnsbury?

A. Oh no.

Q. You would ship it directly to him?

A. Directly to him, and he would pay the freight.

Q. He would pay the freight from New York?

A. That is right, on this schedule here.

Q. And that would be equalized with Burlington if that made any advantage to the customer?

A. That is right.

Q. Now in this method which is outlined in this exhibit, and about which you have been testifying, were there any territories in which a flat price prevailed?

A. You mean par territory?

Q. Yes.

A. Yes, the New York area is par territory.

Q. The New York area?

2950 A. Yes, sir.

Q. But there were no areas, say of a half a state, or a state, where everyone in the state received the same price regardless of his location, under that old method?

A. I don't quite get the question.

Q. Under the present method, using your zone map, everyone in the State of Tennessee, wherever located, pays the same flat delivered price, does he not?

A. I am not so familiar with Tennessee, it is not in my jurisdiction.

Q. Take Maine, then.

A. That is right.

Q. Were there any similar territories under this old method where everyone within the borders of a state or a large area paid the same flat price?

A. Take the State of New Jersey, they all received a flat price in the State of New Jersey.

Q. Under this old method?

A. Yes—

Q. (Interposing.) In other words every town was a delivery point?

A. It later on developed that way.

Q. What was it at the time of this exhibit, which is 1921?

A. I would have to examine that a little more closely.

Q. Here is the New Jersey listing here.

2951 A. This is 1924, is that the one you want?

Q. Yes.

Trial Examiner Norwood: What exhibit number is that?

Mr. Wright: Commission's Exhibit 659-C.

A. Back in that particular time the customers located in Connecticut other than those designated here, would pay their own freight.

By Mr. Wright:

Q. How about New Jersey?

A. It has practically every town listed in New Jersey that we ship to as a delivery point there, but should there be a town not listed here, they would pay the freight on it. In other words this record indicates whether or not we would allow freight to the customer, or equalize the freight to the customer.

Q. Now this is dated in 1924. Can you tell us what changes were made in that from 1924 to 1933, up to the time—

A. (Interposing.) I wouldn't remember the changes that took place.

Q. Were there any radical changes in method?

A. I couldn't answer that; that is too long ago for me to remember.

Q. You were speaking this morning about the fact that Dutch Boy has certain quality differences in the ease of
breaking, ease of application, spreading, whiteness
2952 and hiding power. What factors make the differences
in quality of Dutch Boy in those respects?

A. Well, the efficiency of manufacture, I would say.

Q. You mean now the processes that you use?

A. No, the efficiency of operation in the manufacturing processes. You might compare that with a cook getting flour, and two cooks will produce different grades of pie out of the same raw materials.

Q. Which ones of your competitors use the Carter Process in producing white lead-in-oil?

A. I don't think any of them do, to tell you the truth.

Q. What process does Eagle-Picher use, do you know?

A. They used to use the Old Dutch Process. Sherwin-Williams used the Old Dutch Process at one time; whether they do now or not I don't know. Anaconda uses the electrolytic process.

Q. Do the differences in the processes of manufacture have any effect on the ease of breaking and of application, and hiding power and whiteness, and spreading?

A. They could.

Q. How about Eagle white lead, is that an inferior product to your product?

A. I think that the National Lead Company makes the highest quality of white lead on the market today, and that is brought about by the fact that we have several plants
that are in competition with each other all the time to
2953 improve the quality of their lead; and, modestly
speaking, I would say that the Atlantic branch has
the best quality of the entire company.

(Laughter.)

Q. Is any white lead that you make and market sold under any other brand than Dutch Boy?

A. Yes, the Dutch Boy White Lead and the trademark appear on all of our packages, but as I testified this morning these older brands have been gradually dropped. Now in the Atlantic Branch we used to have four or five different brands. Today we only have two and those are the Dutch Boy Brand and the Atlantic Brand. The Brooklyn and the Ulster and the Union and Jewett brands have been dropped, discontinued.

Q. But the Atlantic Brand still has the Dutch Boy label on the side of the keg?

A. Oh yes.

Q. And it is known as Dutch Boy lead?

A. All the brands of the National Lead Company carry Dutch Boy Lead and the trademark on the package.

Q. They are all sold at the same price?

A. Yes, sir.

Q. How does lead produced by the electrolytic process compare in these qualities that we have been speaking of, particularly as to whiteness?

A. It is very white.

Q. Do you recall any instances in the industry
2954 when comparative tests were made showing the relative whiteness of the leads?

A. Oh yes.

Q. Will you tell us again, Mr. McNair, about this cutthroat competition and "loss-leader" selling that you referred to this morning on direct examination, as to white lead-in-oil?

A. Tell it over again?

Q. Yes.

A. Due to the popularity of the Dutch Boy trademark and its ability to attract customers to a point store, many distributors for selfish motives would market our brand of white lead at cost or at times below cost, to influence customers to come into their store.

Q. Who were these dealers that did that, who engaged in that practice?

A. There were a great many of them in the New York area. I could name you a dozen or twenty of them if you would like to have them.

Q. Was that confined principally to the New York area?

A. No, sir.

Q. At what other points in the country did the company encounter that situation?

A. In my conversation with other branch managers it was more or less prevalent in all large trading areas.

2955 Q. Do you know the reasons these people sold Dutch Boy at low prices?

A. I specified that reason.

Q. And the agency plan then was one that was designed to correct that situation?

A. That is correct.

Q. Did it prove effective in correcting the situation?

A. It did.

Trial Examiner Norwood: Would they ever cut the price without cutting it down to cost?

The Witness: Oh yes, yes sir. I only recall one area where they actually sold it below cost, and that was in Paterson, because there was a particular dealer out there who was trying to put his competitors out of business.

By Mr. Wright:

Q. That is the only instance that you can recall of a sale actually below cost?

A. In the Paterson area, yes.

Q. The other sales were made only below your suggested resale prices?

A. They were made at cost in many instances, ranging right up to our list price.

Q. This was effective in preventing them from selling below your list price, this agency plan, was it?

A. That is correct.

2956 Q. And that was the purpose of it, to control the resale price of your product?

A. That is correct, yes.

Mr. DuBose: I object to that. Will you read the question again. I think there were a few words in there that weren't quite clear.

(The reporter read the preceding question.)

Mr. Ewing: I object and move to strike the answer on the ground that under the agency plan there was no resale price; that is a misnomer. The goods were consigned to the agent and they were our goods, and he resold them at retail.

Trial Examiner Norwood: This witness is telling the story; the objection is overruled.

By Mr. Wright:

Q. Do you recall ever taking any dealer's agency away for failing to adhere to the prices in the agency contracts?

A. There may have been some instances, but very few.

Q. Do you recall receiving, in that period from 1933, on, complaints from other dealers of violations of those agency agreements?

A. We have had those complaints, yes sir.

Q. Did you check up on those complaints when you received them?

A. Yes.

Q. You made an effort to determine that those contracts were being lived up to by dealers?

2957 A. That is correct.

Q. How did you classify your accounts as between dealers and agents, when you first set up your plan?

A. The lead was sent to the agents on consignment, and it was in our control the entire time.

Q. After you embarked on the consignment plan, when you did decide to sell a dealer how did you determine whether he was to be an agent or a dealer?

A. In the Atlantic Branch we didn't sell to dealers.

Q. You had no accounts with dealers?

A. No, it was all through our agents.

Q. Were there retailers who handled Dutch Boy products who could not buy direct from you but who purchased from agents for resale?

A. Yes.

Q. How did you determine whether a man could be an agent or whether he had to purchase through an agent?

A. Well, we selected our agents, those distributors that we thought would be desirable. They were hand picked.

Q. And were some of the customers who had theretofore bought direct from you prevented from buying direct after that?

A. That is correct.

Q. And they paid a higher price then, did they not, for their lead, than if they had been able to buy direct on the agency basis?

2958 Mr. Ewing: I object to that—"buy direct on the agency basis".

Trial Examiner Norwood: Read the question.

(The reporter read the question as follows:

"Q. And they paid a higher price then, did they not, for their lead, than if they had been able to buy direct on the agency basis?")

Trial Examiner Norwood: I don't understand that.

Mr. Wright: It is a perfectly clear question. The witness is ready to answer and he understood it.

Mr. Ewing: The contracts are in evidence and they are proper contracts carrying out the agency plan. They don't buy direct.

Trial Examiner Norwood: There is a confusion there.

Mr. Wright: These contracts are already in the record and the relationship is plain and this witness is thoroughly familiar with it and I think should be permitted to answer a perfectly legitimate question of that sort without having an objection which may be just a modification of his answer.

Mr. Ewing: I am objecting to certain phraseology in the question which is at least the subject of legal construction.

Trial Examiner Norwood: Will you read the last question again, please?

2959 (The question was reread by the reporter as follows:

"Q. And they paid a higher price then, did they not, for their lead, than if they had been able to buy direct on the agency basis?")

Mr. Ewing: That implies a legal conclusion.

Trial Examiner Norwood: As I understand there wasn't any buying on the agency basis.

Mr. Ewing: But if there is a question about it it should not be put in the question propounded to a layman.

Trial Examiner Norwood: Can't you straighten that out, Mr. Wright?

By Mr. Wright:

Q. If these people, after establishment of your policy of agency, had been agents and had the margin between the agency price and the resale price, they would have realized a larger gross on their sales of white lead. Is that not correct?

Mr. Ewing: I object to that, the agency price. Let's not ask the questions with the words in them that may be misleading.

Mr. Wright: The National Lead Company consigned the material to the agents and when the agents sold it they sent in a report and were billed for the difference between the National Lead Company's agents price and the sales price, and they received that margin between the so-
2960 called agents price and the sales price.

Mr. Ewing: I have no quarrel with the fact that there is an agents price, but let's not characterize it.

Trial Examiner Norwood: You may answer it with the explanation of the term "price" as used in the question.

The Witness: Direct from the National Lead Company —was that the question?

By Mr. Wright:

Q. Yes.

A. The agents were reselling the National Lead Company in the sales of our white lead.

Q. What compensation did the agents receive from the National Lead Company for selling your white lead at retail as compared to the difference between the price to the dealer and the suggested resale price?

A. The agent received a commission for his sales. It changed from time to time.

Q. In 1940 what was the difference?

A. At one time—the exact date I don't recall—but the agents commission was 10 and 10.

Q. I believe it is shown in the record that sometime in 1937—I think it was 1937 and I am willing to stand corrected on that—you discontinued the 10-10-2 and went on flat schedules so that you had no percentages involved, so that you had a list price, a painter price, a dealer
2961 price and an agent price.

A. That is right.

Q. What was the difference per hundredweight between the dealer price and the agents price, bearing in mind what I stated about that relationship—per hundredweight?

A. The dealers price was higher.

Q. By how much?

A. I don't recall the exact amount.

Q. About $1 per hundredweight?

A. In certain quantities, yes.

Q. Were those accounts which you classified as dealers and in the Atlantic branch refused to permit to buy direct, in competition with the agents in the resale of these products to painters and consumers?

A. They probably were, yes, in certain cases.

Q. You were intimately associated with the sales problems at those times, were you not?

A. Yes.

Trial Examiner Norwood: We will have a five-minute recess.

(Whereupon, a short recess was taken.)

Trial Examiner Norwood: Proceed.

By Mr. Wright:

Q. The margins for agents on your agency contracts—have they been the subject of complaints from your 2962 agents as being too low to permit them to make what they consider a reasonable profit?

A. Distributors of white lead have always complained about the margin of profit that they have had.

Q. Is it considered in the trade as generally being a low margin?

A. That is right.

Q. So that one cent per pound on that to a dealer would be an important matter to him as regards his margin of profit in handling it?

A. Well, it all depends on what he sold it for.

Q. Assuming now that he paid your regular prices and sold it for your suggested prices.

A. It would be a close margin of profit.

Q. What would the margin now of a dealer who bought from an agent and resold to a painter at the present time? What would his cent-per-pound margin be?

A. Our list price today is $27 a hundred and I am not so clear as to what our agents' price is. If you have the cards there I could tell. It is $22.50 or something like that.

Q. Approximately 4½ cents per pound margin between—

A. If that is the spread. I am not sure of the agents' prices.

Q. Painters' prices are lower than list prices?

2963 A. Yes, they usually give a discount off that to the painter.

Q. So a dealer buying from an agent and reselling to a painter would have a low margin as compared with the agent buying direct from you and selling to a consumer?

Mr. Ewing: I object to an agent buying direct from us.

Mr. Wright: I will amend that to "acquiring".

Trial Examiner Norwood: Answer the question as amended.

The Witness: Yes, that is correct.

By Mr. Wright:

Q. Do you know whether all branches of the National Lead Company have the same policy with regard to refusing to sell direct to dealers, as the Atlantic branch?

A. I don't know.

Q. How long has it been the policy of the Atlantic branch to refuse to sell direct to dealers?

A. It was our policy during the time of the agency.

Q. The whole time?

A. Of the agency. Since that time, since the agency plan was done away with, we sell direct now to—

Q. Anybody that asks for it?

A. Generally speaking.

Q. Any recognized dealer?

A. Any dealer of fair size.

2964 Q. You said this morning that "We installed the agency system", I believe in 1932. You meant the Atlantic branch?

A. The Atlantic branch; they were the first ones to put it into effect.

Q. That was your own idea, was it?

A. That is correct.

Q. Was that on order of the general offices, or was that a matter of your own discretion?

A. No, I worked up the plan and sold the proposition to the general office.

Q. It was the general office that put—

A. They sanctioned it.

Q. They authorized you to do that?

A. That is correct.

Q. And when the November 15th order putting it into effect came down, that was a general office order to all branches, was it?

Mr. Du Bose: November 15 of what year?

Mr. Wright: 1933.

The Witness: If I remember correctly, I said the latter part of the year. I don't know if it was December or November.

By Mr. Wright:

Q. I think it is established in the record it was the 15th of November, 1933.

2965 Mr. Ewing: Nationwide except for the Pacific Coast branch.

By Mr. Wright:

Q. So that was a general office order. That was not your branch?

A. Oh, no.

Q. So that in your testimony this morning regarding these various matters, you were speaking as the manager of the Atlantic branch rather than the general offices, and the overall policy of the National Lead Company. Is that correct?

A. I don't quite get the question.

Q. When you were speaking this morning of "we" did this and "we" did that, you were speaking of the Atlantic branch rather than the policy of the general offices of the National Lead Company?

A. That is correct.

Q. That was your policy as manager of the Atlantic branch?

A. That is right.

Q. And you could not speak for the general offices of the company?

A. No, I could not.

Q. What quantity discounts do you now allow on dry white lead in barrels or drums?

A. I am not so familiar with those prices.

Q. I believe it is in the record that at least in 1942
2966 when OPA went on there was one-quarter cent a
pound differential for carload purchases of dry white lead. Is that correct?

A. I am not so familiar with those prices. My position has been more with the administrative policy of white lead and so forth during my entire career with the company.

Q. You have had charge of all sales of white lead to paint companies by the Atlantic branch?

A. That is correct, but those details are handled by my assistants.

Q. Do you recall when the one-quarter cent per pound differential on white lead for carload purchases was established?

A. No, sir.

Q. Is the white lead business a dying business, Mr. McNair?

A. I wouldn't say it is a dying business. I think white lead will be in demand for a great many years to come.

Q. Is it recognized as one of the principal pigments for white paint?

A. Dry white lead?

Q. Yes.

A. It is one of the principal ingredients, yes, for good mixed paint.

Q. Is it still recognized as a mark of quality in mixed paint?

A. Yes.

Q. And it still marks the best mixed paint?

2967 A. It still what?

Q. And the best white paint on the market still has a substantial quantity of white lead?

A. In my opinion the more white lead the paint has in it the better quality the paint is.

Q. And do you think that situation will continue in the future?

A. In superior mixed paint, yes, I think so.

Q. I call your attention to a document offered this morning which you identified, Respondents' Exhibit 159, this correspondence back in May and June of 1934.

There are a number of names appearing on the top of 159-A. Can you tell me whose names appear there?

A. Mr. Rowe, R. M. Rowe—he was Assistant Manager of the Atlantic branch.

My name appears on there, and Mr. Hurley—

Q. What was his position?

A. At that particular time he was Sales Manager. And Mr. Zang—he was in the sales department—

Q. Do you know who put that on there? Do you know whose handwriting it is?

A. It looks very much like Mr. Sidford's handwriting. He was the Manager of the Atlantic branch at that particular time.

Q. Who put the interlinings that appear there in 2968 either pen or pencil on those various sheets?

A. I wouldn't know.

Q. I call your attention on 159-B to the name written there, and underscored, in the right-hand margin. Do you know who put that on there?

A. No, I do not.

Q. That was on there when it was found in your files. Is that correct?

A. That is correct, and this is exactly as I found it in my files about ten days ago.

Q. I call your attention on 159-C to the word "new" written in the margin. Do you recognize that?

A. No, sir.

Q. You don't recognize the handwriting?

A. No, sir.

Q. I show you on 159-E the interlining there, "amount? for requirements".

Do you recognize that?

A. No, sir.

Q. I show you now on 159-G "Arrange with Mr. Cavarly for this marking."

Do you know whose handwriting that is?

A. That looks very much like Mr. Sidford's writing.

Q. He was the manager?

A. He was the manager, yes, sir.

2969 Q. Now, I call your attention to the statement appearing in the last paragraph of the letter of June 9, 1934, 159-A, and ask you to read that. Do you recall a confusion over the zone set-up at that time?

A. Well, it was rather a difficult matter to know which points were delivery points and which points were not delivery points. It caused a lot of confusion in that respect.

Q. Apparently under this there were no delivery points. There were flat prices in those states and areas?

A. No, there is a differential there (indicating).

Q. That is for delivery to any point in those states. Is that not the import of that document?

A. I think so.

Q. So there were no delivery points in those states, but customers within them all took the same price. Is that right?

A. I think so.

Q. Do you want to revise your answer then as to the confusion regarding what was the differential and delivery points?

A. This pertains to oxides and dry white lead, as I stated before. I am not too familiar with those particular marketing problems.

Q. What portion of the dollar sales of the Atlantic branch is accounted for by the so-called oxides and dry white, as compared to white lead in oil?

A. Gross margin, you mean?

2970 Q. No, gross sales.

A. Gross sales?

Q. Yes, sir.

A. Dry white lead will be the least important as to the actual dollars and cents. I can't state that. Then litharge would be next to white lead and red lead would be between litharge and dry white lead as to dollars and cents.

Q. And white lead in oil is the most important of your products?

A. In dollar volume.

Q. You see the statement here:

"In the hope it will help simplify this complicated matter we are planning to make up colored maps for each product which will be sent to you as soon as they can be completed."

Q. Do you recall ever receiving those colored maps?

A. I do not.

Q. Were you able to find any such maps in the records?

A. No, sir.

Q. Do you recall what the terms of sale for oxides and litharge and red lead were, as far as differential points or zones, prior to this announcement?

A. I don't recall, no, sir.

Q. Prior to 1934 while you were Sales Manager and
Assistant Manager of the Atlantic branch, was it
2971 customary to accept 90-day contracts on card prices
from customers for litharge and red lead?

A. I don't recall.

Q. You don't know?

A. No.

Q. Has it been customary in the past for years to accept such contracts?

A. I don't know.

Q. Now, in making your differential quotations on carload purchases of red lead and litharge, has it been customary in the period from 1934 to date to make contracts for carload purchases, based on a differential over the average quotation on pig lead as reported in the American Metal Market and the Engineering and Mining Journal?

A. I don't know whether that has been true or not.

Q. Now, I show you 159-B, the statement in the first paragraph: "The necessary changes in conditions for sale of dry lead were made on January 1st."

Do you recall those changes that were made on that date?

A. I do not, no, sir.

Q. Does that refer to dry white lead? Is that what is customarily referred to as dry white lead?

A. Dry lead, that is dry lead.

Q. I call your attention now to 159-D, the second paragraph, where it states:
2972 "All sellers have agreed to discontinue the old
90-day card price contracts."

Do you recall anything about those?

A. No, sir, I do not.

Mr. Wright: No further cross-examination.

Trial Examiner Norwood: Redirect?

Mr. Ewing: Inasmuch as I am going to have to recall Mr. McNair on this other document, I would like to reserve what little, if any, redirect I might have until next week, and with that understanding release him at the present time.

Trial Examiner Norwood: That is all right if it is agreeable to Mr. Wright.

Mr. Wright: That is satisfactory.

Trial Examiner Norwood: Very well.

(Witness excused.)

Mr. Ewing: Now, may we have about a two-minute recess?

Trial Examiner Norwood: We will have a five-minute recess.

(Whereupon, a short recess was taken.)

Mr. Ewing: If it suits Your Honor's convenience, I have discussed this with Mr. Wright—I think we would save time tomorrow if we would adjourn now until 10 o'clock and I think we can finish this week's work tomorrow.

Trial Examiner Norwood: Very well. We will re-
2973 cess until 10 o'clock tomorrow morning.

(Whereupon, at 3:45 o'clock p.m., a recess was taken until 10:00 o'clock a.m., Thursday, June 12, 1947.)

• • • • •

2974

Room 332, Federal Trade
Commission Building,
Washington, D. C.,
Thursday, June 12, 1947.

Met, pursuant to adjournment, at 10:00 a.m., E.D.S.T.

Before:

John W. Norwood, Trial Examiner.

Appearances:

Joseph S. Wright, Esq., and Paul R. Dixon, Esq., appearing for the Federal Trade Commission.

J. T. Welch, Esq. (Davies, Richberg, Beebe, Busick, & Richardson, 815-15th St., N. W., Washington, D. C.), appearing for Sherwin-Williams Company.

Edmund P. Wood, Esq., (2801 Carew Tower, Cincinnati, Ohio), appearing for Eagle-Picher Lead Company and Eagle-Picher Sales Company.

James D. Ewing, Esq., and E. Z. DuBose, Esq. (Alexander & Green, 120 Broadway, New York, N. Y.), appearing for the National Lead Company.

2975

PROCEEDINGS.

Trial Examiner Norwood: Pursuant to adjournment on yesterday, the hearing in Docket 5253 is now reconvened at 10 o'clock a.m., June 12, 1947, in Room 332, Office of the Federal Trade Commission, Washington, D. C.

The reporter will note the appearances.

Call your witness, Mr. Ewing.

Mr. Ewing: Mr. McCarthy.

FRED K. McCARTHY was thereupon called as a witness for the respondent National Lead Company, and having been previously duly sworn, testified as follows:

Trial Examiner Norwood: State your full name.

The Witness: Fred K. McCarthy.

Trial Examiner Norwood: You have testified before?

Mr. Ewing: He has testified twice before, when called by the Commission.

Trial Examiner Norwood: It is not necessary to swear him again, I don't believe.

Mr. Wright: I assume the same oath would govern his testimony. If there is any question about it, I would suggest that he be re-sworn.

Trial Examiner Norwood: Proceed.

Direct Examination by Mr. Ewing.

2976 Q. When were you first employed by National Lead?

A. In November, 1935.

Q. And in what capacity were you then employed?

A. As a salesman in the Cincinnati Branch.

Q. I think you testified heretofore that from 1939 to 1943, you were Manager of the Cincinnati Branch of National Lead?

A. That is true.

Q. Since 1943, in what capacity have you worked for National Lead?

A. I have been Manager of Trade Sales in the general office, and Chairman of the White Lead Sales Committee.

Q. And those are both positions in the general office?

A. That is true.

Q. What, in general, were your duties in the Cincinnati Branch from 1935 to 1943?

A. In chronological order, I began as a salesman; became Sales Manager; and then Assistant Manager of the branch; and in 1939, Manager of the Branch.

Q. Now what did your duties as a salesman consist of?

A. Calling on the trade that used the white lead and paint products distributed by the company under the Dutch Boy brand.

Q. Was that limited to the territory of the Cincinnati Branch?

A. Throughout the ten States served by the Cincinnati Branch, yes.

Q. Were those duties limited to the time that you
2977 were a salesman?

A. No, that was when those duties began, but throughout my experience at Cincinnati, I was in contact with our trade and customers in our territory.

Q. Did your duties, both as salesman and later as Manager, require you to travel throughout the territory covered by the branch?

A. Very much of the time I spent traveling.

Q. What contact did you have with customers purchasing white lead-in-oil from your branch?

A. Naturally, in order to be on top of my responsibilities, I endeavored to know most of our key accounts personally, and to know as many of our other customers as I could.

Q. I hand you copies of Commission's Exhibit 582-D and Commission's Exhibit 807-C, and ask you to state whether the map and the chart, those exhibits respectively, correctly portray the territory served by the Cincinnati branch while you were associated with that branch?

A. Yes, sir, they are identical.

Q. Will you tell us how white lead-in-oil was distributed from the Cincinnati branch during the period from 1935 to 1943 when the agency plan was in effect and while you were connected with that branch?

A. Cincinnati was no longer a manufacturing branch
of white lead products in that period, and we shipped
2978 to our own account at the various agency points,
from the factory at Chicago, throughout our territory, lead on consignment in kegs, and direct to customers in barrels where dry lead was involved, shipping only out of our Cincinnati warehouse and out of our Atlanta warehouse to local drayage deliveries.

Q. Was white lead, dry white lead, sold on consignment during that period?

A. Never.

Trial Examiner Norwood: Off the record just a minute.

(Discussion off the record.)

Trial Examiner Norwood: On the record. Proceed.

By Mr. Ewing:

Q. At what points throughout the territory of the Cincinnati Branch were agents located, to the extent that you can recall?

A. In most cities of over 5,000 population in each of the ten States.

Q. During the period from 1935 to 1943, while you were connected with the Cincinnati Branch, did you become personally familiar with the competitive problems facing the agents of the National Lead Company located at various points throughout its branch territory?

A. Yes.

Q. From your own personal knowledge, can you state whether any agent located in a town near or at the 2979 border of any zone served by the Cincinnati Branch was affected, from a competitive standpoint, by the zone differential applicable to the zone in the territory across the line?

Mr. Wright: Would you read that question, please?

(The reporter read the question as follows:

"Q. From your own personal knowledge, can you state whether any agent located in a town near or at the border of any zone served by the Cincinnati Branch was affected, from a competitive standpoint, by the zone differential applicable to the zone in the territory across the line?")

Mr. Wright: I object to that question, Your Honor. It calls for conclusions on the part of this witness as to matters which can be established. There hasn't been a proper groundwork laid here for that question, showing the location of these agents and the competitive situation in any particular respect. Now this can be proved by direct testimony of the parties involved, rather than these broad conclusions.

Mr. Ewing: That isn't what the question called for, Judge. It asked him whether he could state from his own personal knowledge, and it calls for a "yes" or "no" answer—can he state. I am not asking him the ultimate question.

Mr. Wright: Can he state a broad, general conclusion as to competitive effects as between agents within his territory and agents and other competitors without 2980 his territory.

Trial Examiner Norwood: I think that is probably irrelevant, because he wouldn't be permitted to state that knowledge in the way that you elicit it there, inquire about it. He will have to show what factual conditions brought about. You give the facts which indicate what the effects will be. As I understand it, you are going to the effects which this thing would have on different sides of the zone lines. Now we want to get at that in a factual way.

Mr. Ewing: Off the record, if I might.

Trial Examiner Norwood: Off the record.

(Discussion off the record.)

Trial Examiner Norwood: On the record.

I will sustain the objection to the question as it stands now, but this witness may give us the facts of competitive reaction which came to him in the due course of business, he may do that. He may tell us how the system laid down a given article at a certain price in one town, and at a different price in another, and whether he lost any customers over there or not, and what they did about it—

Mr. Wright: (Interposing.) I take it that Your Honor means to exclude outright hearsay from that statement of what will be permitted.

Trial Examiner Norwood: He may give—

Mr. Ewing: (Interposing.) He can only do it by 2981 customer reaction.

Trial Examiner Norwood: Yes. He may give facts which came to him in the due course of business. He was manager there, managing these salesmen in that territory.

Mr. Wright: He is talking now about a relationship between customers and other people, not about problems encountered by his own salesmen. The question calls for something which can be proved by direct and reliable testimony.

Trial Examiner Norwood: If they quit buying from him and stated the reason why, and that came to him in the due course of business, he may tell us.

Mr. Ewing: And if they didn't quit buying from him, that, of course, is the negative, but it is still a significant factor.

Trial Examiner Norwood: Well, go ahead.

Mr. Ewing: Let's find out what he knows.

By Mr. Ewing:

Q. Does the territory which the Cincinnati Branch sold while you were there, contain so-called par territory?

A. Yes.

Q. Does it also contain so-called 1/8 Zone territory?

A. No.

Q. Is any part of the par territory sold by the Cincinnati Branch contiguous to any 1/8 Zone territory?

A. No.

2982 Q. Is any part of the par territory sold by the Cincinnati Branch contiguous to any ¼ Zone territory?

A. Yes.

Q. Now will you tell us what portion of the par territory sold by the Cincinnati Branch is contiguous to ¼ territory, and at the same time give us the ¼ territory?

A. The zone border of Kentucky and West Virginia was the south edge of our par area adjacent to the northern borders of Tennessee and our section of the State of Virginia, which were, in our territory, ¼-plus territories.

Q. Now along the line dividing those territories, looking at Respondent's Exhibit 157, will you state what cities or towns you see set forth on that map which, on the face of things, would appear to be competitive?

Mr. Wright: Objection, Your Honor. I don't think that that question is proper, a statement "which, on the face of things, seem to be competitive", is a very suggestive statement which calls for a conclusion.

Mr. Ewing: It doesn't call for a conclusion—

Mr. Wright: (Interposing.) Your Honor, I assume that counsel's purpose is to prove that none of these points are competitive, and I object to the characterization, "which appear on their face to be competitive".

Trial Examiner Norwood: You want to know whether these towns were within a competitive distance?

2983 Mr. Ewing: Yes, to look at the map and see if there are towns close together, and then we will find out what he knows about the competitive situation.

Trial Examiner Norwood: Well, he can designate what towns he is referring to. I will overrule the objection, with that explanation.

A. There are no towns along these borders in which we had agencies.

By Mr. Ewing:

Q. You are referring now to the border separating South Kentucky and South West Virginia, and the north border of the State of Tennessee and Western Virginia?

A. That is true.

Q. Now where, to the best of your recollection, did you have agents in Kentucky?

A. In Louisville, Lexington, Ashland, Covington, Newport, Henderson, Owensboro, Madisonville, Bowling Green, Danville, and for a time, I believe, in Hopkinsville.

Q. Where, to the extent that you can recall, did you have agents in Tennessee and Western Virginia which carried the ¼ differential?

A. Nashville, Chattanooga, Knoxville, Johnson City, Kingsport, and Bristol, in Tennessee; and in Virginia at Abingdon and Pulaski.

Q. Now did your branch include a territory carrying a ⅜ differential? 2984

A. Yes.

Q. What territory was that?

A. The States of Alabama and Georgia, and our parts of North and South Carolina.

Q. Now the boundary dividing that portion of the Cincinnati Branch territory which carried a ¼ differential, and that portion carrying the ⅜ differential, was, then, the southern line of Tennessee and the northern line of Alabama and Georgia, and the eastern line of Tennessee and the western line of North Carolina, is that correct?

A. That is right.

Q. Now will you tell us where, in that portion of North Carolina falling within the Cincinnati branch's territory, you had agents?

A. At Asheville, Shelby, Gastonia,—those are all I recall.

Q. Now I believe you said that your branch territory covered a certain portion of South Carolina, is that correct?

A. That is true.

Q. Will you tell us, to the extent that you can now recall, where, in that portion of South Carolina falling within your branch's territory, you had agents?

A. At Spartanburg, Greenville, and Anderson.

Q. Where, in the State of Georgia, did you have agents?

A. In Rome, Athens, Gainesville, Atlanta, Columbus, Newman, and Decatur. 2985

Q. Where, in the State of Alabama, did you have agents?

A. Birmingham, Montgomery, Dothan, Selma, Anniston, Gadsden, and Florence.

Trial Examiner Norwood: Would Chattanooga and Gadsden take the same rate, get the same price?

The Witness: No, sir, Gadsden would be ⅛ over Chattanooga.

By Mr. Ewing:

Q. Now while you were with the Cincinnati Branch, to what classes of customers did your agents sell white lead-in-oil?

A. Mostly to painters, to some dealers, maintenance accounts, local governmental purchasing agencies, and very occasionally to farmers.

Q. You referred to maintenance accounts. Will you tell us what they are?

A. Some small plant might want to paint fire escapes, for example, and would buy a keg of red lead-in-oil.

Q. Of those various classes of customers listed by you, will you tell us which class or classes, if any, bought at list or card price, so-called?

A. A farmer or property owner would pay that price if they ever bought lead-in-oil.

Q. Now while you were with the Cincinnati Branch, both as salesman and as Manager, did you ever receive
2986 complaints from your agents or others purchasing your products, with respect to the differential existing either between par territory and ¼ territory, or between ¼ territory and ⅜ territory?

A. Never.

Mr. Wright: Objection, Your Honor. It is irrelevant.

Trial Examiner Norwood: Objection overruled.

By Mr. Ewing:

Q. Your answer was what?

A. "Never".

Q. Did you ever hear, while you were a salesman or Manager of the Cincinnati Branch, of any restriction upon competition in the branch territory arising out of the existence of the territorial differential?

Mr. Wright: Objection, Your Honor. What this witness ever didn't hear of while he was Manager of the branch is highly irrelevant and immaterial and incompetent.

Trial Examiner Norwood: I think that that is calling for a rather broad conclusion. He may state any facts reported to him that would throw light on these matters, or what his salesmen reported to him.

Mr. Ewing: As you can see from his answer to the preceding question, I am in the difficult position of proving a negative; I can only prove that he never had any complaints, as he has testified, or what he has heard.

2987 Trial Examiner Norwood: I think he can show what he hasn't heard, but I just thought that your question was too broad there, and went to a conclusion.

Mr. Ewing: I ~~will~~ reframe the question so that there will be no question about it.

Trial Examiner Norwood: All right.

By Mr. Ewing:

Q. In the course of your connection with the Cincinnati Branch as Manager, what reports, if any, did you receive from your salesmen or from others, indicating the existence of complaints based upon adverse effect on competition from agents or customers?

Mr. Wright: Objection, Your Honor. That is irrelevant and immaterial, and it is also a very leading question and calls for information which has no place in this record.

Trial Examiner Norwood: I think that you should amend your question by asking if he had heard any complaints of conditions arising out of differences in price.

Mr. Ewing: I will be glad to amend the question to that effect.

Mr. Wright: He has already asked the question if he had any complaints on the territorial differentials, and the witness has said no. That is in the record.

Mr. Ewing: This is from a different source.

Trial Examiner Norwood: I think he may ask this. 2988 I will overrule the objection, with the understanding that the question is amended.

A. There were never any such complaints.

Mr. Wright: Your Honor, I move that that answer be stricken unless there is a proper question to which it is responsive. I don't think counsel has reframed his question in response to Your Honor's suggestion.

Trial Examiner Norwood: He adopted that.

Mr. Wright: To what question was that answer in response?

Trial Examiner Norwood: If the record is not clear on the matter, I will strike it.

Mr. Ewing: I would say that the witness responded to the question as amended; is that correct?

The Witness: Yes.

Mr. Wright: There were two questions, one suggested by Your Honor and one asked by Mr. Ewing.

Trial Examiner Norwood: Off the record.

(Discussion off the record.)

Trial Examiner Norwood: On the record. Proceed.

By Mr. Ewing:

Q. Mr. McCarthy, in answering the question which has been the subject of discussion, will you state whether you were answering the question as rephrased and amended by Judge Norwood?

A. It was the Judge's phraseology to which my answer applied.

2989 Q. Now you mentioned various classes of customers, and I believe that those that you referred to other than list, were dealers, painters, industrials and certain Government agencies, is that correct?

A. Yes.

Q. And you also mentioned maintenance accounts?

A. That is true.

Q. Now based upon your experience with the branch, both as salesman and as manager, can you state whether industrial accounts and government accounts, for example, were in competition with each other?

A. No.

Q. The question is—can you state?

A. Yes.

Q. Will you state?

Mr. Wright: May I have the first question?

Trial Examiner Norwood: Read the question.

(The reporter read the question as follows:

"Q. Now based upon your experience with the branch, both as salesman and as manager, can you state whether industrial accounts and government accounts, for example, were in competition with each other?")

Mr. Wright: I object to that, Your Honor, as calling
for a broad general conclusion on the part of this witness,
for which no basis has been laid. He is talking about
2990 wide categories of customers here, and it is a con-
clusion of the witness as to something which could be
established by direct evidence; it is self-serving in the ex-
treme.

Mr. Ewing: The question put to the witness called for a statement with respect to his personal knowledge based upon his experience in the business, as to whether, in the course of that experience he had found competition between these two particular classes of customers that I mentioned, namely, industrials and the Government. I think it is competent for him to answer that question if he has that knowledge, and he says he has. If he has, he has.

Trial Examiner Norwood: If, in his experience, he has observed that there is competition between Government and industry in the purchase of white lead—

Mr. Wright (Interposing): The question goes much beyond that. The question goes to the relationship of these customers with each other, which he could only have gotten second hand—such information. It can only be a conclusion based on hearsay.

Trial Examiner Norwood: He may tell us what his experience has been; he is telling the facts which his experience has developed, which would throw light on whether or not there is such competition. I shall overrule the objection and let him answer the question.

Mr. Wright: Exception.

2991 Trial Examiner Norwood: Give a factual answer; he is not asking you for an opinion, but give a factual answer if you know about this competition.

The Witness: There could hardly have been competition.

Mr. Wright: That, I submit, was not a factual answer; that was a conclusion.

Trial Examiner Norwood: If that is a motion to strike, I will allow your motion.

Mr. Wright: Yes, I move to strike that answer.

The Witness: There was no competition.

Mr. Wright: I move to strike that answer.

Mr. Ewing: That, I submit, is a proper answer because the question is conditioned on his knowledge and experience. In other words the answer to the question in effect is, "Based on my knowledge and experience there was no competition between those classes." That is as far as he can go. He can't go any farther than what his knowledge and experiences shows.

Trial Examiner Norwood: Please read me that original question.

(The reporter read the question as follows:

"Q. Now based upon your experience with the branch, both as salesman and as manager, can you state whether industrial accounts and government accounts, for example, were in competition with each other?")

2992 Trial Examiner Norwood: Whether government accounts and industrial accounts are in competition with each other?

Mr. Ewing: Yes, as far as his experience goes.

Trial Examiner Norwood: I don't know what that question means.

Mr. Wright: When you ruled on my objection, as I understood your ruling it was that he would be permitted to give any evidentiary facts out of his experience which would deal with that thing, and it wasn't to permit any broad, general conclusion.

Trial Examiner Norwood: I am going to reverse my ruling and sustain the objection to the question originally put, and strike the answers that were subsequently made. I think we should begin now and bring out the facts of this competition, whether any agents sold to one or the other, or whether there was bidding, or just what those facts of competition were.

Mr. Ewing: I am trying to develop the relationship from the competitive standpoint, between the classes of customers that I mentioned. Now—

Trial Examiner Norwood (Interposing): Do the same dealers sell to both classes?

Mr. Ewing: The same dealers may sell to both classes.

Trial Examiner Norwood: That is a factor in this competition, a factual matter.

2993 Mr. Ewing: But that isn't the point here; the point here is that with the industrial customer class getting one price, as I recall it, and the government customer class getting another price, there is no competition between those two classes, so there is no question of discrimination as far as they are concerned.

Trial Examiner Norwood: Why don't you, then, bring out the fact that when the government buys it, it is for consumption, or whatever they use it for, and when the dealer buys it, he is buying it for resale, and show us the competitive situation exactly as it is, instead of getting this man's opinion about a point of law.

Mr. Wright: You Honor, if we are to continue to discuss what counsel is trying to bring out from this witness I suggest that he be excused from the stand.

Trial Examiner Norwood: Well, I want him to understand what we are saying—

Mr. Ewing (Interposing): He isn't a stranger to this case.

Trial Examiner Norwood (Continuing):—about the facts.

Mr. Wright: I will subscribe to that statement.

Trial Examiner Norwood: We will have a five minute recess.

(A short recess was taken.)

2994 Trial Examiner Norwood: Proceed.

By Mr. Ewing:

Q. Mr. McCarthy, have you yourself sold, or do you know of sales by agents of the Cincinnati Branch to Government accounts?

A. Yes.

Q. Do you know for what use or uses the purchases were made?

A. The Government account was classified as a wholly tax-supported institution, and such merchandise of our manufacture was consumed for its own maintenance requirements.

Mr. Wright: I object to the answer as not responsive, and move that it be stricken.

Trial Examiner Norwood: He has answered the next question, but I think it may stand if counsel wants it to stand; I think it might as well, to save time. The objection is overruled and the motion denied.

By Mr. Ewing:

Q. Have you, yourself, sold or do you know of sales by agents of the Cincinnati Branch to the so-called industrial accounts—just yes or no?

A. Yes.

Q. What use or uses were made of the products by industrial purchasers?

A. The merchandise was consumed in their own maintenance program.

Q. Now have you yourself sold or do you know of
2995 sales by agents to the so-called painter class of customer?

A. Yes.

Q. Will you tell us what use or uses are made of the product by that class of customer?

A. Our material would be used by the painter in discharging his contract with the property owner.

Q. Have you yourself made, while you were a salesman, or do you know of sales by agents of the Cincinnati Branch, to the so-called dealer class?

A. Yes.

Q. What use or uses of the product would be made by that class?

A. The agents would sell to a dealer for resale purposes.

Q. How far, to the best of your recollection, is it from Chattanooga, Tennessee, to Gadsden, Alabama?

A. Upwards of sixty miles.

Q. During the time you were at the Cincinnati Branch, and since 1943 when you have been Manager of Trade Sales and Chairman of the White Lead Committee—if I recall your testimony correctly—what percentage of the sales of white lead-in-oil of National Lead were made at list price, if you know?

A. An infinitesimal fraction of one per cent.

Q. In the case of sales at list price what would be the type of customer involved?

2996 A. An infrequent buyer such as a property owner or a farmer.

Q. To what use would that class of customer put the product?

A. He might make paint out of the lead or make putty out of the lead, or use it for some purpose having to do with painting or plumbing.

Q. While you have been employed by the National Lead Company have you, yourself, known of any agreement between it and any other company or companies manufacturing white lead-in-oil or dry white lead, relating to the fixing of prices?

A. Never.

Q. I ask you the same question in relation to the fixing of zone or territorial differentials?

A. Never.

Q. I ask you the same question with respect to the restriction of production?

A. Never.

Q. I ask you the same question with respect to the allocation of customers?

A. Never.

Q. I ask you the same question with respect to fixing terms of sale, except as there were provisions in the Lead Industry Supplemental Code relating thereto?

A. Never.

Q. Basing this upon your knowledge as acquired by your experience, where would the so-called dealer

2997 class of customers be generally located?

A. Geographically?

Q. Yes.

A. In smaller towns, suburban areas of big cities, and in sparsely settled communities.

Q. Where, generally, on the same basis, would the painter class be located?

A. Mostly concentrated in metropolitan areas.

Q. I believe last October you testified generally as to how National Lead Company established its prices for white lead. Will you give us the factors taken into consideration by National Lead Company in establishing prices of dry white lead and white lead-in-oil?

Mr. Wright: I object, Your Honor. It hasn't been shown that this witness has had anything to do with the making of the prices at the general offices of the National Lead Company. The question is so broad and general, and it doesn't restrict it as to time.

Trial Examiner Norwood: Read the question.

(The reporter read the question as follows:

"Q. I believe last October you testified generally as to how National Lead Company established its prices for white lead. Will you give us the factors taken into consideration by National Lead Company in establishing prices of dry white lead and white lead-in-oil?")

2998 Mr. Ewing: I will add to that—since you have been Manager of Trade Sales and Chairman of the White Lead Sales Committee—if you know.

Mr. Wright: Now Your Honor, it hasn't been established just how prices are made within the organization of the National Lead Company. This witness hasn't been qualified as being able to testify on that matter.

Mr. Ewing: I asked him if he knew what the factors are.

Trial Examiner Norwood: I think he may state what factors he took into consideration respecting anything that he did about it.

Mr. Ewing: I think if he knows the factors the company takes into consideration, he being an official of the general office—if he knows, he surely can so state, and if he doesn't know he can say so.

Trial Examiner Norwood: I will overrule the objection; answer the question.

The Witness: The prices for dry lead would be established by the general office as a result of quite a few different factors—the cost of pig lead, the cost of containers, direct labor in the plants, freight, administrative overhead expense, our own so-called general office expense which encompasses a research laboratory, national advertising, the general office family, and so forth, and also the 2999 competitive situation arising from the current prices of other pigments such as leaded zinc, zinc oxide, titanium and other pigments with which we are in competition in our efforts to sell dry white lead to paint grinders, potteries, and other industrial consumers.

By Mr. Ewing:

Q. Would the price of ready-mixed paint be any factor?

A. Not to much of an effect on our pricing of dry white lead because in that—

Q. (Interposing): No, no—give us the factors in connection with white lead-in-oil?

A. The cost of pig lead, the cost of linseed oil, mineral spirits, containers, production costs from the factory side, labor rates and so forth; our own overhead, as previously mentioned, and primarily the existing price structure of competitive prepared paints and other factors of competition.

Q. To whom, or to what class or classes of customers is dry white lead sold generally?

A. Paint grinders and potteries, primarily.

Q. To what class or classes of customers is dry red lead sold generally?

A. The manufacturers of paint, varnish, storage batteries, ceramics—they account for the bulk of dry red lead consumption.

3000 Q. To what class or classes of customers does National Lead Company sell red lead in oil?

A. Railroads, steamships, industrial accounts, governmental agencies, and a minor percent to the painting trade.

Q. To what class or classes of customers does National Lead sell litharge?

A. Mostly to the manufacturers of storage batteries, producers of dry colors, varnish makers, and a small amount to paint grinders; also insecticide manufacturers use litharge.

Q. Now a little while ago you mentioned certain competitive pigments. Does National Lead produce any zinc oxide?

A. No sir.

Q. Does it produce any leaded zinc oxides?

A. No sir.

Q. Does it produce any lithopone?

A. No sir.

Q. Does it, either directly or through any subsidiary, produce any titanium oxide?

A. Yes, that we do.

Q. When a sale of white lead-in-oil is made direct to a customer, or was made direct to a customer by the National Lead Company, or one of its branches, as compared with a sale to a customer by one of its agents during the period the agency plan was in effect, was the same price paid in either event by that customer?

A. To the same class of customer, yes.

3001 Trial Examiner Norwood: Read that question and answer for me, please sir?

(The reporter read the record as requested.)

By Mr. Ewing:

Q. Mr. McCarthy, did you know a Mr. Lester Wilson?

A. Yes.

Q. What position with National Lead Company did he hold in 1937, if you know?

A. He was Chairman of the Metal Sales Committee, and Manager of Metal Sales.

Q. Do you know Mr. Joseph Martino?

A. Yes.

Q. Was he connected with the company in 1937?

A. Yes, as Assistant Comptroller and Secretary of the Metal Sales Committee.

Mr. Ewing: No further examination.

Trial Examiner Norwood: Cross-examination.

Cross-Examination by Mr. Wright.

Q. Mr. McCarthy, I take it that you are thoroughly familiar with all the customers that were sold by the Cincinnati Branch in that branch territory over the period with which you were connected there?

A. All of the key accounts and most of the others, yes sir.

Q. And were familiar with the competitive relationships that existed between those various customers? 3002

A. Yes.

Q. Do you recall having any conferences several years ago with Mr. Carl Depue of the Federal Trade Commission?

A. Mr. Depue, yes, sir.

Q. Isn't it correct that you cooperated with him in furnishing the records for a tabulation of invoices which was made up?

A. That is true.

Q. Do you recall obtaining from the various branch offices of the National Lead Company certain information regarding their accounts, which you turned over to Mr. Depue?

A. Yes.

Q. Do you recall obtaining for Mr. Depue from the branch offices lists of all accounts within those branches?

A. We got so much material for Mr. Depue that I don't recall the individual pieces.

Mr. Wright: I would like to have the reporter mark this document as Commission's Exhibit 858-A to -F, inclusive, for identification.

Trial Examiner Norwood: It may be so marked.

(The document referred to was marked Commission's Exhibit 858-A through -F, inclusive, for identification.)

By Mr. Wright:

Q. Now Mr. McCarthy, when you were listing those accounts which were close to the borders of the
3003 differential zones of the Cincinnati territory, did you
mean to list all of the accounts who were agents?

A. Those that I recall.

Q. Just those that you recall?

A. Yes.

Q. So there may very well have been a number of others along that line which you omitted?

A. There could have been.

Q. I show you a document, Commission's Exhibit 858-A through -F, and ask you if you recognize that document?

A. Frankly I don't recall having seen this before.

Q. Do you recognize that as a list of all the accounts of the Cincinnati Branch during the period designated?

A. Yes, these are all customers of the Cincinnati Branch.

Q. You don't recall that that document was supplied by you to Mr. Depue as a list of all those accounts?

A. It must have been.

Mr. Wright: Your Honor, I would like to interrupt the cross-examination of this witness now to obtain further identification of this document by another witness. I hesitate to do this but in view of the witness' failure to recognize this document I have no alternative.

Mr. DuBose: May we go off the record.

Trial Examiner Norwood: Off the record.

(Discussion off the record.)

3004 Trial Examiner Norwood: On the record.

Mr. Ewing: I will stipulate that we supplied that.

Mr. Wright: In other words I understand that the stipulation is that Commission's Exhibit 858-A through -F is a document which was supplied by the National Lead Company?

Mr. Ewing: That is right.

Mr. Wright: I offer Commission's Exhibit 858-A through -F in evidence, as a document supplied by the National Lead Company setting forth as to the Cincinnati Branch, all customers to whom they sold white lead, dry or in oil, during the period from January 1 to March 31, 1943, with symbols as explained thereon.

Mr. Ewing: No objection.

Trial Examiner Norwood: Received.

(The document heretofore marked COMMISSION'S EXHIBIT 858-A through -F, for identification, was received in evidence.)

By Mr. Wright:

Q. Mr. McCarthy, during the period of the agency plan what was the differential between the dealer and the agent on white lead-in-oil?

Mr. DuBose: I object to that question. I don't think the word "differential" is the correct way to term the net which the agent received. It implies that there is a price, in other words.

3005 Mr. Wright: Your Honor, this witness was manager of that Branch and is the Manager of Trade Sales and knows exactly what I am talking about, and is thoroughly competent to answer that question, and any question he doesn't understand he can say so.

Mr. DuBose: I am sure we all know what this question relates to, but the record ought to be clear.

Trial Examiner Norwood: I don't think the word as used has such an implication.

Mr. Wright: I still urge that I have the right to use any terms in describing this on cross-examination, as I wish, as long as I don't try to trap the witness.

Trial Examiner Norwood: I don't know that that is the general rule, but at any rate I will overrule the objection and ask the witness to answer the question. Do you want it read?

The Witness: No sir. During the last few years of the existence of the agency plan there normally obtained about a dollar between the agent's cost and the dealer's price.

By Mr. Wright:

Q. That is a dollar per hundredweight?

A. Yes.

Q. Do you know whether the accounts which were classified as dealer accounts were in competition with your agents in reselling these products?

3006 A. There could have been instances of that nature.

Q. Do you know that there were instances of that nature?

A. Not definitely, no sir.

Q. Well, now, what were a man's qualifications in order to obtain lead at the dealer's price; what business did he have to be engaged in?

A. We had no contact with that type of trade; I wouldn't know.

Q. Well, now, you sold to dealer accounts when you were in the Cincinnati Branch, did you not?

A. No sir, we didn't sell to dealers.

Q. I call your attention to the fact that on this document here, Commission's Exhibit 858-A through -F that the symbol "D" refers to Dealers, and to the fact that there are accounts listed here designated as "D" for dealer and "A" for Agent. Now on Commission's Exhibit 858-B, for instance, in Peru, Indiana, there is the Jones Hardware Company with the symbol "D" alongside—presumably a dealer account—and Wellers Paint & W. P. Co., with the symbol "A" alongside, or an agent's account.

A. You are right.

Q. That would indicate, would it not, that there were sales direct to that class of accounts, at least during the period which this document covers?

A. You are correct; I am in error.

3007 Q. I call your attention to Exhibit 858-C, and to the Loeb Hdwe. Co., Montgomery, Alabama, with the designation "D" for Dealer alongside; and the G. W. Barnett Hdwe. Co., the Pittsburgh Plate Glass Co., and Teague Hdwe., all in Montgomery, Alabama, and all with the designation "A" for Agent, alongside. Is it not a fair assumption that the Loeb Hardware Company was engaged in a similar enterprise as those other accounts in that territory?

A. Yes sir.

Q. In other words, then, is it not fair to state that the dealers were primarily engaged in the resale of those products?

A. Yes sir.

Q. Were the agents also engaged in the sale of those products to similar classes of customers?

A. Yes.

Q. Would it not be fair, then, to state, that they were in competition with each other?

A. That could have been.

Q. Now as manager of the Cincinnati Branch you sold all products of the National Lead Company in that area, is that correct?

A. Yes.

Q. You sold litharge and red lead to the battery manufacturers?

A. Yes.

3008 Q. Did you also sell litharge and red lead in hundred pound and smaller kegs?

A. Yes.

Q. Were those products in those kegs sold to the dealer trade for resale generally?

A. Yes, they were.

Q. And they took the white lead-in-oil selling schedule, did they not?

A. No, they were priced on another schedule.

Q. On what schedule were they priced?

A. Just what do you mean by "schedule", Mr. Wright?

Q. I mean zone and territorial differentials, and the differentials as between the various sizes of kegs.

A. The package differentials were the same as for lead-in-oil, and the geographical zone differentials were identical.

Q. That is what I meant. Now from what factories or plants did the red lead and litharge sold by the Cincinnati Branch originate?

A. We would ship the western part from St. Louis, and the eastern part from Philadelphia.

Q. How about the Atlanta territory, the Atlanta plant?

A. That would come from St. Louis.

Q. Doesn't the company have a plant producing red lead and litharge in Atlanta, Georgia?

A. No, the Atlanta oxide plant makes only one
3009 grade of battery litharge, with no red lead facilities
and no facilities for other than this battery litharge.

Q. Do they make just one grade of battery litharge?

A. At the time I left there they had two types of a similar product for battery manufacturers only.

Q. What types have they made since you left there? You left there in 1939, was it not?

A. No, in 1943. I understand that they now make one or two other grades of the same battery litharge, but they still do not make red lead.

Q. How about the keg red lead and litharge, where did that originate?

A. From either St. Louis or Philadelphia.

Q. Where did you have warehouses in the Cincinnati Branch territory?

A. At Cincinnati and at Atlanta.

Q. Those were the only two warehouses?

A. That is right.

Q. And your dry white lead came from Chicago?

A. And St. Louis.

Q. And St. Louis?

A. Right.

Q. And your white lead-in-oil came from Chicago?

A. Chicago.

Q. You stated a while back that an infinitesimal
3010 fraction of sales were at list price while you were
manager at Cincinnati?

A. That is correct.

Q. You meant by the company itself?

A. And to my knowledge by our agents.

Q. But you don't know for sure the price at which they sold?

A. No.

Q. The only information you received from them was the amount that they sold and a remittance of all but what they kept as their compensation?

A. That is true.

Q. Did you ever receive complaints from any of the trade in your district regarding the narrow margin for the dealers and agents on white lead-in-oil?

A. It was a subject of discussion; because of the character of the product it was a narrow margin item.

Q. Did you receive complaints that the margin was too low?

A. Occasionally they would remark on the narrow margin at which they had to operate.

Q. What were these discussions that you referred to?

A. Well, we countered by showing them that it was a compact inventory and a fast turnover, so that at the end of the year their net compared very favorably with other slower moving, longer margin items.

Q. Did you receive such complaints principally from your agents?

3011 A. Yes.

Q. Mr. McCarthy, what have you had to do with the general policy of the National Lead Company in fixing and setting its prices and its price policies?

A. Every time a price has been changed since I have been in New York I have been in on the decision.

Q. That is, since 1943?

A. Yes sir.

Q. Then your answer as to the factors that entered into the price making didn't go back of 1943?

A. No sir.

Q. When a major change in pricing is made by the National Lead Company what are the mechanics for discussing that and finally deciding it within the organization?

A. Those immediately concerned with the decision would get all of the available material for basing such a decision, together, go over it in detail, consult with some of the people from the branches on occasion, and then announce by bulletin to the various branches what the new basis would be.

Q. Who has the authority to make the final decision and determine that you are going to do it?

A. Mr. Harold Rowe.

Q. He is the Vice President in charge of that aspect of the matter?

A. That is right.

3012 Q. In other words it is a higher level decision in the company organization, is it not?

A. The final decision, yes, sir.

Q. Is that ever acted on by the Board of Directors?

A. Not to my knowledge.

Q. Who below Mr. Rowe are immediately concerned with such decisions; does the White Lead-in-Oil Committee function as a committee to assess the factors involved?

A. No, not as a committee. Mr. Rowe and myself, our comptroller and one or two other general office officials would be in on such a decision.

Q. The comptroller would also be in on that decision?

A. Yes.

Mr. Wright: No further cross-examination.

Mr. Ewing: That is all, Mr. McCarthy.

Trial Examiner Norwood: Thank you, Mr. McCarthy.

(Witness excused)

Mr. Ewing: Might we have a short recess? I have some papers that the next witness is going to use and I think we could save some time if I talked to Mr. Wright about them to see if we might reach an accord on how we shall handle them.

Trial Examiner Norwood: All right, a five minute recess.

(A short recess was taken.)

3013 Trial Examiner Norwood: The hearing will come to order. At the request of counsel we will recess until two o'clock.

(Whereupon, at 12 noon, a recess was taken until 2:00 p. m., this day.)

3014 After Session.

2:00 p. m.

Trial Examiner Norwood: Come to order, gentlemen.

Mr. Ewing: Mr. Examiner, may I have these exhibits marked for identification as Respondents' Exhibit 160-A to -R, inclusive; 161; 162-A to -D, inclusive; 163-A to -G, inclusive; 164; 165-A to -O, inclusive; 166-A and -B?

Trial Examiner Norwood: They may be so marked.

(The papers referred to were marked Respondents' Exhibits 160-A thru 160-R; 161; 162-A thru 162-D; 163-A thru 163-G; 164; 165-A thru 165-O; 166-A and 166-B, for identification.)

J. R. HIGGINS was thereupon called as a witness for the Respondents and, having been first duly sworn, testified as follows:

Direct Examination by Mr. DuBose.

Q. Mr. Higgins, will you state for the record your full name and address?

A. J. R. Higgins, 345 Fairlawn, Webster Groves, Missouri—that is St. Louis County.

Q. By whom are you employed, Mr. Higgins?

A. National Lead Company.

Q. In what capacity?

3015 A. At the present time, Assistant Manager.

Q. When were you first employed by National Lead?

A. 1911 through a subsidiary company.

Q. That is the St. Louis branch of the National Lead?

A. St. Louis branch.

Q. In the course of your employment have you had anything to do with the sales of any of the products of the St. Louis branch of the National Lead Company?

A. Yes. In 1939— In 1929 I was made Assistant Comptroller and Sales Manager of the White Lead and Oxide Sales.

Q. And from that time on—

A. Later, in 1939, I was made Assistant Manager.

Q. From 1929 on you have had experience with sales of white lead-in-oil and oxide?

A. I have.

Q. How about dry white lead.

A. That is also included.

Q. Since 1929?

A. Yes.

Q. Mr. Higgins, I show you documents marked Respondents' Exhibit 160-A to -R, inclusive, for identification, and I ask you what those documents are.

A. These records are 1941 sales of heavy and soft paste white lead-in-oil.

Q. Who prepared those documents?

3016 A. The documents were prepared under my direction.

Q. As a result of what request were these documents prepared?

A. We had a request from our national office for the sales record of 1941, as I recall it.

Q. And as a result of that request these documents were prepared under your supervision?

A. That is correct.

Q. When were these documents prepared?

A. I would say in April of 1947.

Q. Is this date of any significance (indicating to witness)?

A. That is April 5, 1947.

Q. Now, take Respondents' Exhibit 160-A for identification. Will you tell us what those figures are under each heading beginning with the left-hand column?

A. This is a summary of the work sheets. The first column shows the zone, the second column shows the total of pounds sold, the third column the total freight and cartage, and the final column average freight per hundredweight.

Q. Per hundred pounds?

A. Per hundred pounds.

Q. And that covers, does it not, white lead-in-oil for 1941?

A. The first bracket covers white lead-in-oil for 1941.

Q. And those represent figures showing sales of the St. Louis branch of the National Lead Company?

3017 A. That is correct.

Q. Of that product for 1941?

A. That is correct.

Q. Now, coming to the item number 2 or second bracket, will you tell us what is represented there?

A. That is 1941 sales of dry white lead.

Q. Going back to the first bracket, these purport to be the total pounds sold of white lead-in-oil for the respective zones there indicated?

A. That is correct.

Q. And the same is true as to the freight and cartage by zones?

A. That is correct.

Q. And the average freight per hundredweight?

A. That is correct.

Q. The second line under item 2—will you tell us what that represents?

A. Under dry white lead we have a par classification which covers certain territory. It gives the total pounds, total freight and cartage, and the average cost per hundred pounds.

Q. Will you take the words "plus one quarter cent" and tell us what that purports to represent?

A. "Plus one quarter cent" is the differential that is added in certain territory, and it covers the total of 3018 white lead pounds sold into those territories, the total amount of the freight and cartage and the cost per hundred pounds.

Q. All of these figures represent, do they not, sales by the St. Louis branch of the National Lead Company?

A. That is correct.

Q. Under item number 3, will you tell us what is listed there?

A. That is the 1941 sales of oxides in carload lots.

Q. Will you take the words and figures appearing on the two lines below the heading?

A. We have a car territory. That covers the total pounds, total freight, cost per hundred pounds.

Q. Does that total freight also include cartage?

A. It includes cartage, and I should have said total freight and cartage.

Trial Examiner Norwood: Cost per hundred pounds—do you mean cost to the customer?

The Witness: Cost per hundred pounds, the freight charges.

The next line is the differential 25 cents, one-quarter, covering the total pounds, total freight and cartage, and the cost per hundred pounds.

By Mr. DuBose:

Q. Now, let's take item 2. The par and plus one-3019 quarter cent apply to the zones for dry white lead. Is that true?

A. That is correct.

Q. Item number 3 represents the zones for oxides in carload lots?

A. That is correct.

Q. And the figures applicable thereto?

A. That is correct.

Q. Will you tell us what item number 4 is?

A. 1941 sales of oxides in carload lots.

Q. Should that be carload or less than carload?

A. I would have to see these sheets a moment. Item number 4 includes the differential of one-quarter territory.

Q. What I am asking you about, Mr. Higgins, is the heading here. There apparently are two headings; one, item number 3 purports to be 1941 sales of oxides in carload lots and item number 4 also states 1941 sales of oxides in carload lots.

3020 Should that not be less-than-carload lots?

A. No, the first is carload. The word "car" should be added here (indicating), and the words "one-quarter differential" added here (indicating), and then you have the classifications.

Q. In other words, this represents car sales. What is the "plus one-quarter cent" on item 3?

A. That is under the differential territory of one-quarter of a cent.

Q. Will you go to Respondents' Exhibit No. 163-G, for identification, and tell us what that is?

A. That is the differential for the one-half cent territory.

Q. For what size lots?

A. L. c. l. lots. There was no carload classification.

Q. I show you Respondents' Exhibit 164, for identification, and I call your attention to the heading under the last item—

Mr. Wright: Off the record.

(Discussion off the record.)

By Mr. DuBose:

Q. Do you notice the heading under the last heading on Respondents' Exhibit 164, for identification?

A. Yes.

Q. Do you notice the heading under item 4 on Respondents' Exhibit 160-A, for identification?

A. Yes.

Q. Is that a correct heading?

3021 A. The headings should be "Carload Lots" and "Less-than-carload Lots" separated.

Q. In other words, item No. 4 should be "1941 Sales of Oxides in Less-than-carload Lots"?

A. That is correct.

Q. Instead of "Carload Lots" as is there stated?

A. That is correct.

Q. I show you Respondents' Exhibit 160-B, for identification, and ask you what that purports to show?

A. These are actual figures on cartage which we were able to determine from our records.

Q. When you say "actual figures on cartage," do you mean the cartage expense to National Lead Company?

A. Yes, to the National Lead Company at what we call warehouse points.

Q. What does that represent, National Lead's own trucking expense, or what they had to pay to outside trucking companies, if you know?

A. That is both, St. Louis truckage and outside trucking companies. Warehouses do not have delivery trucks.

Q. And these figures are taken from the books of the St. Louis branch of the National Lead Company?

A. That is correct, they are exact figures.

Q. Showing the cartage expense to National Lead Company, St. Louis branch, for the year 1941?

3022 A. That is correct.

Q. In connection with the warehouses at the points indicated on this exhibit?

A. That is correct.

Q. For the products white lead-in-oil, dry white lead, and oxide. Is that correct?

A. That is correct.

Q. Is Respondents' Exhibit 160-B, for identification, a summary of the material in Respondents' Exhibit 160-C, for identification?

A. That is correct.

Q. Now, take Respondents' Exhibit 160-D, for identification. What does that purport to show?

A. This is the differential par territory. It covers a list of towns in Illinois and Missouri, which are classified under par territory.

The first column represents where shipped from—in all cases St. Louis.

The second column is the freight rate from St. Louis according to the 1941 tariff which we had in our possession.

Q. That is under the numeral "4" on this page, Respondents' Exhibit 160-D, for identification?

A. That is correct.

Q. Do you know what that freight rate is, listed under item No. 4?

3023 A. That is the freight in the case of the first item, to Aledo, Ill., from St. Louis, 42 cents per hundred pounds.

Q. That is the freight rate which you obtained from someone in the National Lead Company's St. Louis branch?

A. We obtained that from our traffic department.

Q. You have a traffic department in that branch?

A. We have a traffic department at St. Louis.

Q. And they obtained their figures from the 1941 tariff books?

A. That is correct.

Q. Now, take the figures appearing under the heading "6," and beneath that the word "tonnage." Will you tell us what those figures are and where you obtained them?

A. The tonnage shown in column No. 6 is the actual tonnage which was sold in these various towns during the year of 1941.

Q. What product is involved?

A. Covering white lead-in-oil.

Q. Upon what records in the St. Louis branch of the National Lead Company are those figures based? What records are they taken from?

A. We have a card system which I believe I stated back some years ago, back in 1929 and 1930, in order to get a better analysis of the sales of our product.

We formerly kept it in just a few cities. My object at that time was to get a classification and find out 3024 where our tonnage material was going.

They apparently carried it along on a card system and some years later the plan was changed from the towns to the counties. We changed our sales plan because we divided some States for the salesmen, and the salesmen worked according to counties.

Q. Take the year 1941. Were those cards based upon tonnage sold to cities rather than by counties?

A. That is correct.

Q. How were those cards made up, that is, the cards from which these tonnage figures were taken?

A. That was made up by our statistical or auditing department. Fortunately they had these records.

Q. What were the mechanics of that; how did that work; where did they get the material to put on the cards, themselves?

A. At the time the invoices came through from the billing department they went to the Cardex department, and the girl took an actual record of the tonnage and so indicated on the card which she used, by punching the card at a certain notch on a machine devised for that purpose.

Q. Take Respondents' Exhibit 160-D, for identification, the towns listed under the heading "Illinois." Are those all the towns to which deliveries of white lead-in-oil were made by the St. Louis branch of National Lead Company for the year 1941?

A. That is correct.

3025 Q. Going back to the first line opposite the town Aledo—that shows that the shipment came from St. Louis?

A. That is correct.

Q. That the freight under column 4 from the warehouse was 42 cents—that is from St. Louis to Aledo?

A. That is correct.

Q. And column No. 5 the applicable rate was listed as 42 cents?

A. That is correct.

Q. Then the figures 6,050 represents pounds. Is that it?

A. Pounds is correct.

Q. Which represents the total poundage sold to customers in Aledo during the year 1941 by the St. Louis branch of the National Lead Company?

A. That is correct.

Q. And under column No. 7 "Applicable Freight," that is how the figure was arrived at?

A. That is the sum total of 6,000 pounds times the rate of 42, or $25.50.

Q. 6,050 pounds?

A. That is correct.

Q. For the rest of that page, the information opposite each of the cities is similar?

A. That is correct.

Q. The freight rates were obtained from the traffic department?

3026 A. That is correct.

Q. And the total pounds sold to customers located in these towns was obtained from your card system as to which you have just testified?

A. That is correct.

Q. Under the heading "Illinois" opposite the town "Decatur," will you tell us what the letters and figures "TL 22, LCL 32" represent?

A. L. c. l. represents the less-carload rate.

Q. Which is 32 cents?

A. Thirty-two cents.

Q. Per hundred pounds?

A. Per hundred pounds.

Q. What is the "TL"?

A. That is the truckload.

Q. That is 22 cents per hundred pounds?

A. Twenty-two cents per hundred pounds.

Q. In other words, that "TL 22" means that the truckload rate from St. Louis to Decatur, Ill., is 22 cents per hundred pounds. Is that correct?

A. That is correct.

Q. And that the less-than-carload rail tariff from St. Louis to Decatur, Ill., is 32 cents per hundred pounds?

A. That is correct.

Q. Respondents' Exhibit 160-D represents the entire tonnage or pounds of white lead-in-oil sold by 3027 the St. Louis branch from 1941 for the par territory?

A. That is correct.

Q. And at the bottom there is a summary, is there not?

A. That is correct.

Q. What does the figure 2,560,244, near the bottom of this page, Respondents' Exhibit 160-D, for identification, represent?

A. That represents the total figure of white lead-in-oil in pounds in the par territory.

Q. Sold by the St. Louis branch?

A. Sold by the St. Louis branch.

Q. In 1941?

A. In 1941.

Q. Right opposite that figure is the figure 584801. What is that figure?

A. That is the total of the freight charges according to the classification set down there.

Q. What is that? What does that figure mean? Is it $5,848.01?

A. That is correct.

Q. Beneath that are the words "plus cartage in St. Louis." What is the sum opposite those words?

A. $1,334.24.

Q. The total of $7,182.25 is a simple addition of those two figures immediately preceding?

3028 A. That is correct.

Q. What is this figure here "less $1,782.18"?

A. We had to separate that because this was in Missouri and that was in Illinois, and in order to get it straight we had to deduct the $1,782.18 from that.

Q. That represents the deduction for cartage in Missouri?

A. That is correct.

Q. And the total figure of cartage in St. Louis, $1,334.24, is the figure which appears under the heading "St. Louis" on Respondents' Exhibit 160-B, for identification?

A. That is correct.

Q. Now, will you tell us what Respondents' Exhibit 160-E, for identification, purports to represent?

A. That represents the differential territorial of one-eighth of a cent.

Q. Does that show sales, in other words, by the St. Louis branch of the National Lead Company for 1941 in the one-eighth differential territory?

A. That is correct.

Q. That and the continuing pages?

A. That is correct.

Q. Now, is the information on this page, Respondents' Exhibit 160-E, for identification, prepared in similar fashion and from similar records as were the figures on Respondents' Exhibit 160-D, for identification?

3029 A. That is correct.

Q. Respondents' Exhibit 160-F is a continuation of the one-eighth differential territory sales?

A. That is correct.

Q. As is Respondents' Exhibit 160-G, for identification?

A. That is correct.

Q. Now, will you tell us what Respondents' Exhibit 160-H through K, inclusive, represents?

A. That is one-quarter differential for white lead-in-oil, St. Louis branch, 1941.

Q. In other words, that shows the white lead-in-oil sales by the St. Louis branch of National Lead Company for the year 1941 in that particular territory?

A. That is correct.

Q. Was the information on these sheets prepared in similar fashion and from similar records as were the others that you testified about?

A. That is correct.

Q. I don't know whether you have told us this. On these pages throughout Respondents' Exhibit 160-A to R, for identification, under the numeral or column numbered 1, are the words "shipped from" and then entries thereunder. What do those entries represent?

A. In that case it represents the Kansas City warehouse.

Q. In other words, you there set forth the ware-
3030 house from which goods sold to these particular
towns were shipped?

A. That is correct.

Q. Will you tell us what the material on Respondents' Exhibit 160-L and M represents?

A. That represents the territory under the three-eighths differential, white lead-in-oil, St. Louis branch, 1941.

Q. Also sales by the National Lead Company, St. Louis branch?

A. Yes.

Q. That year?

A. Yes.

Q. In that territory?

A. That is correct.

Q. And the material appearing on those pages was prepared in similar fashion as the other page as to which you have testified?

A. That is correct.

Q. Now, Respondents' Exhibit 160-N and O represents what?

A. That is the territory covered under the one-half cent differential, National Lead Company, St. Louis branch, white lead-in-oil, year 1941.

Q. And those figures were prepared in similar fashion from similar records?

A. That is correct.

Q. What does Respondents' Exhibit 160-P and Q represent?

3031 A. That represents the territory covered by the three-quarters cent differential, National Lead Company, St. Louis branch, white lead-in-oil, for the year 1941.

Q. Sales to customers in that territory?

A. That is correct.

Q. Now, take the item "Athens, Texas," on Respondents' Exhibit 160-P, for identification, under column No. 1, and "Dallas."

A. That shows the shipment originated from Dallas. Material was shipped out of the Dallas warehouse.

Q. The material was shipped initially from St. Louis to the Dallas warehouse?

A. That is correct.

Q. And under column No. 2 is the figure "48." What does that represent?

A. That represents the commodity rate, carload, from St. Louis to Dallas.

Q. Forty-eight cents a hundred pounds?

A. That is correct.

Q. And under column 4 the figure "36" represents what?

A. That represents the l. c. l. rate, all-rail, from Dallas to Athens, Texas.

Q. And under column No. 5 the figure "84" represents what?

A. That is the sum total of the carload rate of 48 plus 36 cents l. c. l. rate to point of destination.

Q. Per hundred pounds?

A. Per hundred pounds.

3032 Q. In other words, Mr. Higgins, this Respondents' Exhibit 160-A to R, inclusive, for identification, shows in the case of a shipment from a warehouse located at a point other than St. Louis, the freight from St. Louis to the warehouse and the applicable freight rate from the warehouse to the particular city or town?

A. That is correct.

Q. I show you Respondents' Exhibit 160-R, for identification, and ask you what that represents?

A. That represents the differential territory one cent.

Q. Does that represent sales by National Lead?

A. Sales by National Lead Company, St. Louis branch, white lead-in-oil, towns under that list for the year 1941.

Q. I show you document marked Respondents' Exhibit 161, for identification, and ask you what that represents?

A. This represents the 1941 sales of white lead-in-oil for the St. Louis branch of the Nationl Lead Company, classified according to the States and then broken down into the various differentials, par, one-eighth, one-fourth, three-eighths, and so on.

Trial Examiner Norwood: Off the record.

(Discussion off the record.)

By Mr. D. Bose:

Q. And this shows pounds?

A. Total pounds in each differential.

3033 Q. I show you documents marked Respondents' Exhibit 162-A to D, inclusive and ask you to state what they represent?

A. These pages represent dry white lead sales in all States in the St. Louis branch under par territory with the exception of from Colorado, New Mexico, and Wyoming.

Q. And those three States are not in the par territory, are they?

A. That is correct.

Q. Those are sales for what year

A. Dry white lead for the year 1941.

Q. Are they listed by cities in each particular State?

A. These are listed by States.

Q. Those are by States?

A. Yes, and we have also the cities.

Q. Does that purport to show all of the sales of dry white lead by the St. Louis branch, by cities, for the year 1941?

A. That is correct.

Q. In the par territory?

A. That is correct.

Q. And the information contained on these documents marked Respondents' Exhibit 162-A to D, for identification, was prepared in similar fashion and from similar records as the information contained in Respondents' Exhibit 160-A to R, inclusive, for identification?

A. That is correct.

3034 Q. Now, in case of shipments from warehouses other than St. Louis, these documents, Respondents' Exhibit 16-A to D, inclusive, for identification, show the carload rates from St. Louis to the particular warehouse from which the shipments were actually made?

A. That is correct.

Q. And in that latter situation they show also the freight from the warehouse to the town in which the coustomer is located?

A. That is correct.

Q. And the applicable freight rate is either the freight rate directly from St. Louis to the towns mentioned or the total of the freight rate from St. Louis to the warehouse plus the freight from the warehouse to this particular city. Is that correct?

A. That is correct.

Q. I show you Respondents' Exhibit 163-A to D, inclusive, and ask you what these documents represent?

A. These represent the sales of oxides in carload lots in par territory, according to States and the towns shown as the point of destination.

Q. And those are, in other words, sales by the St. Louis branch of National Lead Company of oxides in carload lots for the year 1941?

A. That is correct.

3035 Q. To the customers in par territory?

A. That is correct.

Q. Were the figures which appear on these sheets, Respondents' Exhibit 163-A to D, inclusive, for identification, prepared in similar fashion?

A: That is correct.

Q. Respondents' Exhibit 163-C and D represents sales of oxides by the St. Louis branch of National Lead Company in less-than-carload lots for the year 1941?

A. That is correct.

Trial Examiner Norwood: Off the record.

(Discussion off the record.)

By Mr. DuBose:

Q. I show you Respondents' Exhibit 163-E, for identification, and I ask you what that represents?

A. That represents sales of oxides, National Lead Company, St. Louis branch, to differential territory one-quarter of a cent, according to the States and towns listed.

Q. In what lots or sizes?

A. In carload lots.

Q. Is it correct to say that Respondents' Exhibit 163-F, for identification, represents similar information as to sales of the St. Louis branch, National Lead Company, of oxides in less-than-carload lots?

A. That is correct.

3036 Q. I show you Respondents' Exhibit 163-G, for identification, and I ask you what that represents?

A. That represents the sales of oxides, National Lead Company, St. Louis branch, under differential territory one-half cent, according to the States listed for the year 1941.

Q. Did you say in what lots these sales were?

A. Less-than-carload lots.

Q. Now, Mr. Higgins, all of the information which appears on this series of documents marked Respondents' Exhibit 163-A to G, inclusive, for identification, was prepared in similar fashion and from similar records, as were these statistics and figures set forth in Respondents' Exhibit 160-A to R, inclusive for identification?

A. That is correct.

Q. I show you Respondents' Exhibit 164, for identification, and ask you what that represents?

A. This is the 1941 sales data which is the result of the work sheet and covers 1941 sales of heavy and soft paste white lead-in-oil, 1941 sales of dry white lead, 1941 sales of oxides in carload lots, 1941 sales of oxides in less-than-carload lots.

Q. Is it correct to say that that document, Respondents' Exhibit 164, for identification, contains the information appearing on Respondents' Exhibit 160-A, for identification?

A. That is correct.

3037 Q. I believe you stated that Respondents' Exhibit 160-A, for identification, is a general summary of the material set forth in Respondents' Exhibit 160-B through Respondents' Exhibit 163-G, these other documents as to which you just testified?

A. That is correct.

Q. Now, Mr. Higgins, I believe you stated that the tonnage or pound figures showing the sales of white lead-in-oil, dry white lead, and oxides which appear on these exhibits you have just identified, were taken from certain cards kept in the St. Louis branch of the National Lead Company?

A. That is correct.

Q. Did you tell us where the information on those cards was obtained from?

A. The records were obtained from cards which were made up some years ago to carry the tonnage in the various towns of the States that we covered.

Q. Were those cards based on actual invoice figures?

A. That is correct.

Q. Was the information set forth on the cards put thereon at the time the invoices came through your records?

A. That is correct.

Q. What happened to the actual invoices, themselves, on white lead-in-oil, dry white lead, and oxides for the year 1941?

A. The invoices were destroyed.

Q. Do you know when they were destroyed?

3038 A. They were destroyed some years back, five or seven or eight years back. That I cannot recall.

Q. 1941 is six years ago, so do you want to amend your answer? You mean there was a regular practice of destroying records after a certain period of time?

A. That is correct, that is what I had in mind.

Q. And these records you find are destroyed?

A. That is correct.

Mr. DuBose: Off the record.

(Discussion off he record.)

3039 Trial Examiner Norwood: On the record.

Mr. DuBose: At this time I wish to offer in evidence Respondents' Exhibits which have heretofore been identified as 160-A to -R, inclusive; 161; 162-A to -D, inclusive; 163-A to -G, inclusive; and 164, all now marked for identification.

Mr. Wright: Pursuant to agreement of counsel, I would like to defer my cross-examination on the identification of these documents to the hearing in New York next week. I understand this witness will be produced there, and that in the meantime we can have these photostated and I can be supplied with copies thereof.

Mr. DuBose: That is satisfactory.

Trial Examiner Norwood: Counsel may conduct a voir dire examination in New York.

Mr. Wright: May we take a short recess?

Trial Examiner Norwood: Very well, we will have a five-minute recess.

(A short recess was taken.)

Trial Examiner Norwood: Proceed.

Mr. Higgins, as I understand it, may stand aside, subject to reappearing in our New York hearing.

Mr. Ewing: Yes, sir.

Trial Examiner Norwood: Very well.

(Witness temporarily excused.)

Mr. Dubose: Mr. Matthiessen, will you take the stand?

3040 Trial Examiner Norwood: Have you been sworn in this case, Mr. Matthiessen?

Mr. Matthiessen: Not yet.

C. S. MATTHIESSEN was thereupon called as a witness for the respondent National Lead Company and, having been first duly sworn, testified as follows:

Trial Examiner Norwood: Give me your name, please, sir.

The Witness: C. S. Matthiessen.

Direct Examination by Mr. DuBose.

Q. Mr. Matthiessen, whom are you employed by?

A. John T. Lewis & Bros. Company, in Philadelphia.

Q. In what capacity?

A. At present I am a salesman on the road.

Q. Selling what product?

A. All their products.

Q. Does that include white lead-in-oil?

A. Yes, sir.

Q. And how long have you been associated with the white lead-in-oil business of John T. Lewis & Bros. Company?

A. Since April 28, 1906.

Q. Mr. Matthiessen, I show you documents which have been marked Respondents' Exhibit 165-A to -O, inclusive, for identification, and ask you what they
3041 represent?

A. These figures represent the actual freights taken from our paid railroad freight bills and various carriers' freight bills.

Q. Were these documents which have just been marked Respondents' Exhibit 165-A to -O, inclusive, for identification, prepared by you or under your supervision?

A. These were prepared by me and obtained from a distribution of expense book, from which I obtained these voucher numbers, headed White Lead-In-Oil. These are the actual amounts paid for freight.

Q. In other words, Mr. Matthiessen, taking the first column on the left, the heading above that is what?

A. January 1941.

Q. And under the heading "Voucher", the first item is 8335.

A. Yes.

Q. What does that represent?

A. That represents the voucher number on which those bills were paid.

Q. And the item under the heading "Par" is what?

A. That represents the freight paid in Par Territory.

Q. In other words, is it correct to say that the sum of $1.89 represents a figure which was obtained from an actual voucher of John T. Lewis & Bros. Company, representing a sale by that company of white lead-in-oil in the Par Territory?

3042 A. That is correct.

Q. And the items which appear under the heading "⅛" represent what?

A. They represent the freight paid in the territory which covers the ⅛ territory.

Q. Now that first figure under the ⅛ column, of $8.85—does that represent an actual freight bill which was paid in connection with a sale of white lead-in-oil by John T. Lewis & Bros. Company in January, 1941, in the ⅛ white lead-in-oil territory?

A. Correct.

Q. And that figure was obtained from Voucher No. 8337 of that company?

A. That is right.

Q. And were the items under the column headed "⅜" similar—16 obtained from actual vouchers?

A. Exactly.

Q. And is it correct to say that those represent actual freight paid by John T. Lewis & Bros. Company for sales of white lead-in-oil in January, 1941, to customers who were located in the ⅜ cent per pound white lead-in-oil territory?

A. That is correct.

Q. There are three columns on this exhibit, Respondents' Exhibit 165-A for identification, three main columns or divisions. What do they represent?

3043 A. They represent the total freight paid in the month of January, 1941, for the Par Territory, the ⅛ Territory, and the ⅜ Territory.

Q. And is the middle column a continuation of column 1?

A. That is correct.

Q. And the total, following column 3, is the total of all the items theretofore listed?

A. That is correct.

3044 Q. And the figure opposite the word "Total", under the heading "Par", of 40647, represents $406.47?

A. That is correct.

Q. Now at the bottom of the page, opposite the word "Cartage" is the figure $207.41—what does that represent?

A. That represents the actual cartage paid in par territory, and is figured out by the method of obtaining our cartage rates, which are all expenses paid for automobiles, plus their depreciation.

Q. From what record or records was that item opposite the word "Cartage" obtained?

A. I do not know that, sir, since I didn't obtain that. This was supplied me by Mr. A. M. Wilson.

Q. And who is Mr. A. M. Wilson?

A. He is the vice president of our company.

Q. Taking the other documents which have been marked respectively Respondents' Exhibit 165-B to O, inclusive, for identification, were those figures there set forth similarly obtained and from similar actual vouchers of John T. Lewis Bros. Company?

A. Exactly, sir. I examined every freight bill for the whole year of 1941.

Q. And these other pages represent the figures by month from February through December, inclusive, 1941?

A. Correct.

3045 Q. And they represent, do they not, actual freight paid by John T. Lewis Bros. Company on white lead-in-oil sales in par, ⅛ cent and ⅜ cent territories?

A. Correct.

Q. Plus the figure, in each month, for cartage, which you say was supplied by Mr. A. M. Wilson?

A. Correct.

Q. I show you Respondents' Exhibit 166-A for identification and ask you what that represents?

A. That represents the tonnage obtained from our IBM records; they are actual net sales.

Q. In other words, that shows the total pounds sold by John T. Lewis Bros. Company with respect to white lead-in-oil for the year 1941, in par, Plus ⅛ cent, and Plus ⅜ cent white lead-in-oil territories?

A. That is correct.

Q. And do the figures under "Total Frt. Cartage" represent the total of the figures set forth in these work sheets which have been marked Respondents Exhibit 165-A to -O, inclusive for identification?

A. Correct.

Q. What are the figures under "Average Frt. Per CWT"?

A. That is the average freight per cwt.

Q. How was that arrived at?

A. By taking the dollars and dividing the number 3046 of pounds into them to get our average freight rate.

Q. Per hundred pounds?

A. Yes.

Q. And that shows the average freight actually paid by John T. Lewis Bros. Company per hundred pounds for white lead-in-oil sold by that company in Par, ⅛ cent and ⅜ cent territories?

A. That is correct.

Q. I show you Respondents' Exhibit 166-B for identification and ask you what that represents?

A. That represents a summary of the work sheets, with their totals added, for the Par territory including the cartage, the ⅛ territory and the ⅜ territory, with proof of the sheet worked out on the right-hand column.

Q. And the totals which there appear are the same as the figures under the heading "Total Ft. & Cartage" appearing on Respondents' Exhibit 166-A for identification?

A. Correct.

Q. And this is a recapitulation, by month, of your work sheets which are Respondents' Exhibit 165-A to -O, inclusive, for identification?

A. Correct.

Mr. DuBose: At this time I offer in evidence Respondents' Exhibit 165-A to O, inclusive for identification, and Respondents' Exhibit 166-A and -B for identification.

3047 Mr. Wright: As in the case of the prior exhibits identified by Mr. Higgins, I would like to reserve my right to cross-examine on the identification of these exhibits until we resume again in New York.

Trial Examiner Norwood: Is that satisfactory to counsel?

Mr. DuBose: May we go off the record a moment?

Trial Examiner Norwood: Off the record.

(Discussion off the record.)

Trial Examiner Norwood: On the record.

Mr. Ewing: With respect to this witness' recall to the stand, in view of his own personal situation I am not prepared to state with any assurance that he will be recalled next week, but I do state that if we are to proceed with the proffer we will recall him and submit him to such examination not only in connection with the identification but subsequent examination if desired by counsel, or else we will have to withdraw the proffer of the exhibits.

Mr. Wright: That is entirely satisfactory so long as we have that understanding.

Mr. Ewing: You will either have the opportunity to examine him or you will not have to struggle with this batch of documents.

Trial Examiner Norwood: Are there any further questions of this witness?

3048 Mr. DuBose: Not at the present time. I understand that Your Honor is reserving his ruling on the offer, subject to the right of cross-examination by counsel for the Commission at some subsequent date.

Trial Examiner Norwood: That is correct. The witness will now be excused with the understanding that he is to appear later for further examination on the identification of these documents.

(Witness temporarily excused.)

Trial Examiner Norwood: What is your further pleasure, gentlemen?

Mr. Ewing: I suggest that we adjourn until Tuesday morning next, at ten o'clock in the Bar Association Building, Room 605, in New York City.

Trial Examiner Norwood: Is that satisfactory to you?

Mr. Wright: That is satisfactory.

Trial Examiner Norwood: This hearing will now adjourn to reconvene in New York City, in the Hearing Room of the Bar Association, 36 W. 44th Street, on Tuesday next, June 17, 1947, at 10 o'clock Eastern Daylight Saving Time.

(Whereupon, at 3:40 p. m., June 12, 1947, the hearing in the above-entitled matter was adjourned.)

3049

Trial Room,
Bar Association Building,
36 West 44th Street,
New York, N. Y.,
June 17, 1947.

Met, pursuant to adjournment, at 10:00 a. m., USST.

Before:

John W. Norwood, Trial Examiner.

Appearances:

Joseph S. Wright, Esq., appearing for the Federal Trade Commission.

Edmund F. Wood, Esq., 2801 Carew Tower, Cincinnati, Ohio, appearing for Eagle-Picher Lead Company and Eagle-Picher Sales Company.

Robert H. Ecker, Esq., and
Henry E. Gardiner, Esq., (Chadbourne, Wallace, Parke & Whiteside, 25 Broadway, New York, N. Y.), appearing for Anaconda Copper Mining Company and International Smelting and Refining Company.

James D. Ewing, Esq., and
E. Z. DuBose, Esq., (Alexander & Green, 120 Broadway, New York, N. Y.), appearing for the National Lead Company.

3050 PROCEEDINGS.

Trial Examiner Norwood: Come to order. Pursuant to adjournment on June 12, 1947, the hearing in Docket No. 5253 is now reconvened in the Trial Room of the Bar Association Building, 36 West 44th Street, New York, N. Y. at 10:00 o'clock a. m., daylight savings time on June 17, 1947.

Let the record show the following appearances:

Joseph S. Wright, Esq., appearing for the Federal Trade Commission.

Edmund F. Wood, Esq., appearing for Eagle-Picher Lead Company and Eagle-Picher Sales Company.

Robert H. Ecker, Esq., and Henry E. Gardiner, Esq., appearing for Anaconda Copper Mining Company and International Smelting & Refining Company.

James D. Ewing, Esq., and E. Z. DuBose, Esq., appearing for National Lead Company.

Proceed.

Mr. Ewing: I call Walter P. Carroll.

Trial Examiner Norwood: Mr. Reporter, this is Mr. Walter P. Carroll, 900 West 18th Street, Chicago, Illinois.

WALTER P. CARROLL was thereupon called as a witness for the Respondents and, having been first duly 3051 sworn, testified as follows:

Direct Examination by Mr. Ewing.

Q. What is your full name?
A. Walter P. Carroll.
Q. What is your address?
A. 900 West 18th Street, Chicago, Illinois.
Q. Mr. Carroll, are you connected with the National Lead Company?
A. Yes, sir.
Q. In what capacity?
A. As manager of the Chicago branch.
Q. Are you also a director of the company?
A. Yes, sir.
Q. Will you tell us when you were first employed by the National Lead Company?
A. In August 1910.
Q. In what capacity were you then employed?
A. A clerk in the sales department.
Q. How long did you work in that capacity?
A. Until 1926 when I was appointed sales manager.
Q. What products did you sell while you were a salesman?
A. Oxides of lead, dry oxides of lead and metals.
Q. And in charge of what department of sales were you sales manager? I mean what products?
3052 A. Oxides and metals.
Q. How long were you sales manager?
A. Until 1938 when I was appointed assistant manager of the branch.
Q. How long did you serve as assistant manager of the branch?

A. Until 1941 when I was made manager.

Q. And you have been manager ever since?

A. Yes, sir.

Q. When were you first elected a member of the Board of Directors?

A. In September 1943.

Q. And you have been a member of the Board ever since; is that right?

A. Yes, sir.

Q. Does the Chicago branch include a manufacturing plant?

A. It includes three manufacturing branches at the present time.

Q. Plants?

A. Yes, sir.

Q. Will you tell us what they are?

A. The southern plant at 900 West 18th Street now manufactures metals. The Carter plant at West Pullman manufactures white lead, dry and in oil, paint and oxides, and the Raymond plant on the near west side manu-3053 factures or fabricates, extrudes and rolls tin, lead and allies thereof.

Q. Were you a member of any committee or committees which considered proposed revisions for a supplementary code in connection with the NRA?

A. Yes, sir.

Q. Do you recall what committee or committees you belonged to in that connection?

A. The Oxide Division or committee.

Q. Do you recall attending meetings of such a committee during the days preceding the adoption of the supplementary code for the lead industries?

A. Yes, sir.

Q. Do you recall whether you attended any meetings of the Dry Products Committee of the Lead Pigments Division during the days preceding the formulation of the code?

A. Yes, sir.

Q. Do you recall any particular date or dates of such meetings?

A. No, sir.

Q. I show you Commission's Exhibit 504-A and B and ask you to look at the two pages and read them to yourself (handing to witness).

A. Yes, sir.

Q. Now will you tell us, Mr. Carroll, whether your recollection is refreshed as to attendance at a Dry
3054 Products Committee meeting of October 27, 1933?

A. Yes, sir.

Q. Did you attend such a meeting?

A. Yes, sir.

Q. Will you tell us in what connection the various subjects reported in the minutes were discussed at that meeting?

Mr. Wright: Your Honor, I object. I would like to avail myself at this time of a short voir dire examination on the refreshment of this witness' memory from that document.

Trial Examiner Norwood: Is there any objection?

Mr. Ewing: I have no objection.

Trial Examiner Norwood: Proceed.

Mr. Wright: Mr. Carroll, do you have any independent recollection of that meeting?

The Witness: Yes, sir. That is, I couldn't remember the dates.

Mr. Wright: Can you visualize now in your own mind that particular meeting?

The Witness: Yes, sir.

Mr. Wright: Can you recollect where it was held?

The Witness: It was at the Chicago Athletic Club.

Mr. Wright: What was the date of that meeting?

The Witness: I don't know the date except as
3055 you have it there.

Mr. Wright: Do you recall who was at the meeting?

The Witness: Well—

Trial Examiner Norwood: (Interposing.) Off the record.

(Discussion off the record.)

Trial Examiner Norwood: On the record. Proceed.

Mr. Wright: Did you say that you recall who was in attendance at that meeting, Mr. Carroll?

The Witness: Well, I know Mr. Rowe was at the meeting. The others I would be merely guessing.

Mr. Wright: You don't recall anyone else at the meeting specifically?

The Witness: I know all of them that would be attending the meeting.

Mr. Wright: I want you to recall who was at the particular meeting.

The Witness: I couldn't recall who was at that particular meeting.

Trial Examiner Norwood: After looking at that if he knows he was at that meeting even though he doesn't remember many details, it would be sufficient to let him tell what he does remember about it.

Proceed.

By Mr. Ewing:

3056 Q. Now will you tell us, Mr. Carroll, in what connection the various subjects discussed at the meeting of the Dry Products Committee of the Lead Pigments Division of October 27, 1933, were discussed?

A. For the purpose of a supplementary code.

Q. Was the meeting considering various suggestions with respect to the supplementary code then in process of formulation?

A. Yes, sir.

Q. Do you recall attending a meeting of the Lead Oxide Committee of the Lead Pigments Division of the Lead Industries Association or meetings in December 1933?

A. I couldn't say what month it was.

Q. I show you Respondents' Exhibit 137-A and B and ask you to read it to yourself (handing to witness).

A. Yes, sir.

Trial Examiner Norwood: Does that refresh your recollection about that meeting?

The Witness: Yes, sir.

By Mr. Ewing:

Q. Will you tell us whether you attended a meeting of the Lead Oxide Committee of the Lead Pigments Division of the Lead Industries Association on December 14 and 15, 1933?

A. Yes, sir.

Q. Will you tell us whether you have any recollection of attending another meeting of that committee later 3057 in that same month?

A. No, sir.

Q. I show you Respondents' Exhibit 138-A and ask you to read it and then state whether your recollection is refreshed?

Trial Examiner Norwood: Off the record.

(Discussion off the record.)

Trial Examiner Norwood: On the record.

By Mr. Ewing:

Q. Does it refresh your recollection?

A. Yes, sir.

Q. Did you attend a meeting of the Lead Oxide Committee subsequent to the meeting of December 14 and 15, 1933, which was held later in December?

A. Yes, sir.

Q. Now in what connection were the subjects recorded in the minutes of those two meetings which are in evidence as Respondents' Exhibits 137-A and B and 138-A discussed?

A. For the purpose of the supplementary code.

Q. I direct your attention to the first full paragraph following the attendance listing of the minutes of the meeting of December 27 and 28, 1933, Respondents' Exhibit 138-A and to the reference therein to the question of establishing zones.

Mr. Wright: Your Honor, this witness has already refreshed his recollection from that document. I think
3058 from now on we can have his independent testimony
regarding it and I object to any further displaying of the document to the witness and having him read from it.

He has already testified that his recollection has been refreshed as to that meeting.

Mr. Ewing: I haven't asked a question. I have directed his attention to this and then I want to ask the question.

Trial Examiner Norwood: I would ask the question and let him say that he doesn't recall it sufficiently and then he can refresh his recollection.

Mr. Ewing: The question that I am going to ask does not relate to what happened at that meeting. It just relates to this subject and I want to show what the subject is.

Mr. Wright: Your Honor, the witness testified a moment ago that he knew every subject in those minutes was discussed for the purpose of a supplementary code. Now if he testified as to that, then he must have known what the subject of those minutes were.

Mr. Ewing: I am not asking him that. There isn't any question before us.

Trial Examiner Norwood: Off the record.

(Discussion off the record.)

Trial Examiner Norwood: On the record.

3059 By Mr. Ewing:

Q. So far as you know, Mr. Carroll, did the manufacturers of lead oxide make any agreement in regard to the establishment of zones in connection with the sale of lead oxides in the south and west portions of this country?

A. No, sir.

Q. I ask the same question with the addition, did they reach any agreement among themselves or make any agreement among themselves in regard to the establishment of zones in connection with the sale of lead oxides as far as the supplementary code was concerned?

A. Not that I recall.

Q. What?

A. Not that I recall.

Q. I show you a copy of the printed code of fair competition for the lead industries in evidence as Commission's Exhibit 809, and direct your attention to Article 2 which is headed "Conditions for sale of lead oxides in lots of at least 20 tons." That is Article 2 of schedule "A."

Do you recall whether at the meeting of the Lead Oxide Committee of the Lead Pigments Division of the Lead Industries Association held on December 27 and 28, 1933, a basis for sale of oxides at differentials over lead was discussed?

Just do you recall yes or no.

3060 A. Yes, sir.

Q. Does Article 2 of schedule "A" of the code, Commission's Exhibit 809, reflect the basis discussed at the meeting of the Lead Oxide Committee on December 27 and 28, 1933?

A. It does reflect it.

Q. So far as you know was there any agreement between the producers of lead oxide as to the amount of the differential to be added to the common lead price at New York?

A. No, sir.

Q. Were you in charge of the sale of lead oxide for the Chicago branch prior to 1933?

A. Yes, sir.

Q. Did you sell lead oxides yourself prior to 1933?

A. Yes, sir.

Q. Will you tell us whether, prior to 1933, freight was ever added to the sales price of lead oxides in sales to the various territories served by the Chicago branch?

A. Yes, sir.

Q. By whom was that freight paid?

A. The freight was paid by the customer, the buyer.

Q. Will you tell us in what territories sales of that nature occurred, if you can recall?

A. In Montana and Wyoming.

Q. Did the Chicago branch normally serve those territories?

A. We do from a sales end but from manufactur-
3061 ing we need to ship from Chicago or St. Louis.

Q. When the customer paid for the freight in those instances, was the freight from the point of actual shipment to the destination?

A. No. We added part of the freight. If the freight was more than a quarter, we added probably the difference.

Mr. Wright: Your Honor, I move to strike that last answer. It was obviously a guess and a hypothesis so far as the witness is concerned.

Trial Examiner Norwood: Read the question and answer.

(The reporter read the question and answer as follows:

"Q. When the customer paid for the freight in those instances, was the freight from the point of actual shipment to the destination?

"A. No. We added a part of the freight. If the freight was more than a quarter, we added probably the difference.")

Trial Examiner Norwood: Motion denied. You can cross-examine him on that.

By Mr. Ewing:

Q. Mr. Carroll, in stating your answer to the preceding question, what do you mean when you said "we added part of the freight over 25¢?"

3062 A. The car load freights to some of those western points where we sent special oxides amounted to, I would say, from 60¢ to $1.25 car load and LCL. And we have added, to my recollection, as much as 80¢ to the regular price delivered in the normal territory.

Q. If the freight was 25¢ or less, did you add freight?

A. No, sir.

Q. If the freight was 25¢ or more, did you absorb it to the extent of 25¢?

A. Approximately.

Q. Now prior to 1933, will you tell us approximately the number of special oxides that the Chicago plant manufactured?

A. We manufactured over 25 oxides with various variations for the various trades; different weights, acid absorption and so forth, dependent upon the requirements of that particular business.

Mr. Ewing: I ask that these be marked Respondents' Exhibit 167-A to O inclusive for identification and that we have permission to have them photostated and the photostats substituted.

Trial Examiner Norwood: Is there any objection?

Mr. Wright: No objection, your Honor.

Trial Examiner Norwood: They will be marked for identification as Respondents' Exhibit 167-A to O inclusive.

3063 (The document referred to was marked Respondents' Exhibit 167-A, 167-B, 167-C, 167-D, 167-E, 167-F, 167-G, 167-H, 167-I, 167-J, 167-K, 167-L, 167-M, 167-N and 167-O for identification.)

Trial Examiner Norwood: Proceed.

By Mr. Ewing:

Q. Mr. Carroll, I show you these cards that have been marked Respondents' Exhibit 167-A to O for identification and ask you whether you brought those cards here from Chicago (handing to witness)?

A. Yes, sir.

Q. Will you tell us what they are?

A. They are the changes in price mailed to the general trade using oxides in the Chicago district.

Q. Do they relate to price changes prior to the adoption of the code?

A. Yes, sir. That is, for as long as we had them that far back.

Q. Have you any price cards earlier than Respondents' Exhibit 167-A for identification which bears the date effective February 6, 1929?

A. Those were all we had available prior to that date.

Mr. Ewing: I offer Respondents' Exhibit 167-A to O inclusive in evidence.

Trial Examiner Norwood: Is there any objection?

3064 Mr. Wright: No objection.

Trial Examiner Norwood: They will be received in evidence as Respondents' Exhibit 167-A to O inclusive.

(The document referred to, heretofore marked for identification RESPONDENTS' EXHIBIT 167-A, 167-B, 167-C, 167-D, 167-E, 167-F, 167-G, 167-H, 167-I, 167-J, 167-K, 167-L, 167-M, 167-N and 167-O, was received in evidence.)

By Mr. Ewing:

Q. Were these price cards which are now in evidence as Respondents' Exhibit 167-A to O inclusive, the cards showing the price changes of the National Lead Company, Chicago branch?

A. Yes, sir.

Q. Who was president of the National Lead Company during 1933-1934?

A. Mr. Edward J. Cornish.

Q. Did you know Mr. Cornish?

A. Yes, sir; very intimately.

Q. Is he now alive?

A. No, sir.

Q. During the NRA period, meaning that time in 1933 following the passage of the National Recovery Act and up until the Supreme Court's declaration of its unconstitutionality in May 1935, did you ever have occasion to discuss with Mr. Cornish the National Lead Company's 3065 policy generally relative to the purpose and intent of the National Recovery Act in the regular course of your business?

A. Yes, sir.

Q. Will you tell us what company policy Mr. Cornish expressed to you at that time?

Mr. Wright: Objection, Your Honor, it is hearsay.

Mr. Ewing: It is the regular course of business and it is in the nature of instruction from the president to the assistant manager of the Chicago branch.

Mr. Wright: There have been nothing about instructions here and the only way that the regular course of business crept in was in counsel's question.

All that has been established was that he talked with Mr. Cornish and that Mr. Cornish told him certain things about the policy of the company.

Trial Examiner Norwood: Isn't that the only way that you can show his policy is what he said to his subordinates. In other words, you are proving a state of mind here.

Mr. Wright: I think that question goes way beyond a state of mind. This is a question: what were the policies of the National Lead Company at that time?

Mr. Ewing: He is the chief executive.

Trial Examiner Norwood: We have been delving into
the mental attitude of all of these people on this one
3066 subject and a state of mind is involved and company
policy, and he can tell us that.

Mr. Wright: This is certainly hearsay of the first water and there has been no showing that competent evidence, primary evidence, as to what the policy of the National Lead Company at that time prior to the NRA, can be produced.

There hasn't been any showing as to how he came into possession of this information, whether it was in the regular course of business in connection with his official duties or whether it was a personal conversation in the observation car of a train somewhere, or on a golf course.

Mr. Ewing: I asked him if he had any conversations in the regular course of his duties.

Trial Examiner Norwood: I will ask him this on voir dire.

Was this statement that he had with you an official statement that he made to you, something that was intended to guide your conduct in these matters?

The Witness: Yes, sir.

Trial Examiner Norwood: I will overrule the objection.

Mr. Ewing: Will you read the question, please?

(The reporter read the question as follows:

"Q. Will you tell us what company policy Mr.
3067 Cornish expressed to you at that time?")

The Witness: While Mr. Cornish was in sympathy—

Trial Examiner Norwood (Interposing.): Wait a minute now. Tell us what he said as indicating what it was. You can't read his mind. You can only tell what he said to you at those times in regard to official matters and in connection with your official duties.

Please confine your answer to that.

The Witness: He warned me that we should have nothing to do with price fixing because he considered the NRA a temporary and non-workable act. And as long as the

Sherman-Clayton Acts were on the books, that the company would live in their memory and that we could stand on our fifty years of business where we had established a reputation for quality, service and integrity; and that price fixing only shielded weaker competitors.

Mr. Wright: Your Honor, I move that that entire answer be stricken as stating the personal opinions expressed in hearsay. Certainly that has nothing to do with the official duties and instructions of this witness.

He was telling us what was in Mr. Cornish's mind.

Trial Examiner Norwood: Motion denied. We will take a five-minute recess at this time.

(A five-minute recess was taken.)

Trial Examiner Norwood: Come to order. Proceed.

3068 By Mr. Ewing:

Q. Mr. Carroll, I show you Respondents' Exhibit 167-A and ask you to explain the terms 60-2 per cent-15 set forth thereon?

A. The 60 days are net. In other words, when a bill is paid before 60 days, they pay it net. If they pay it on or before 15 days, they are allowed 2 per cent cash discount.

Q. Now I show you Respondents' Exhibit 167-0, and ask you to explain the terms 30-1 per cent-10 there?

A. The 30 days are the net time in which the bill is due net, and the 1 per cent is allowable if paid within 10 days from date of invoice in all instances.

Mr. Ewing: I ask that this be marked Respondents' Exhibit 168 for identification and in that connection I ask permission to have it photostated and a photostat substituted.

Trial Examiner Norwood: Leave will be granted to substitute a photographic copy and it will be marked Respondents' 168 for identification.

(The document referred to was marked Respondents' Exhibit 168 for identification.)

Trial Examiner Norwood: Proceed.

By Mr. Ewing:

Q. I show you Respondents' Exhibit 168 for identifica-
tion and ask you whether you produced that and
3069 gave it to me (handing to witness)?

A. Yes, sir.

Q. I direct your attention to the date July 28th which appears without the year. I withdraw that question.

Will you tell us what that paper is, Respondents' Exhibit 168 for identification?

A. This is a clipping that I took from the Chicago Tribune of July 28, 1934, a statement by Mr.—

Q. (Interposing) No. Did you yourself cut this out of the Chicago Tribune?

A. Yes, sir.

Q. At or about when?

A. On or about July 28, 1934, the day I read it in the paper.

Q. Do you make it a practice to collect clippings?

A. I have collected a few.

Q. How many besides this clipping?

A. This was in a book with two others which I was rather proud of.

Q. What were the other two?

A. The first was the result of a scholarship examination in the archdiocese of Chicago in which I had the highest score ever made and the other was a clipping from a San Antonio paper when I was commissioned a lieutenant in
the Signal Corps in 1917, and the other is this one, this
3070 article, Respondents' Exhibit 168, confirming Mr.
Cornish's stand on the NRA.

Q. And you say you kept it to see whether his words would come true?

A. Yes, sir.

Q. Do the statements attributed to Mr. Cornish in this clipping, Respondents' Exhibit 168 for identification, correctly set forth his directions of a similar nature to you?

A. Yes, sir; and I would like to read them.

Mr. Ewing: I offer it in evidence.

Trial Examiner Norwood: Is there any objection?

Mr. Wright: Your Honor, I have no objection to the admission of this document into the record as such. I do object and move to strike the statement which the witness just made in answer to Mr. Ewing's last question which was a highly improper question and answer regarding whether this accurately reflected what Mr. Cornish had told the witness, because this obviously is a statement by Mr. Cornish to other people which had nothing to do with his statements to the witness.

Mr. Ewing: Well, I didn't intend to imply in my question that it had. I intended to ask as to whether it was an expres-

sion of a nature similar to the ones that were made to
3071 him.

Mr. Wright: That is exactly the point that I object to. He has already testified over my objection to what Mr. Cornish told him in his official business.

Trial Examiner Norwood: Inasmuch as there is no objection to this Respondents' Exhibit 168 for identification—

Mr. Ewing: (Interposing.) I am perfectly willing to consent to have the last question and the answer that has been the subject of discussion struck.

Trial Examiner Norwood: The last question and the answer will be struck, and the exhibit is received as Respondents' Exhibit 168 as marked.

(The document referred to, heretofore marked for identification RESPONDENTS' EXHIBIT 168, was received in evidence.)

Trial Examiner Norwood: It is understood that only the face of the exhibit is received in evidence.

What is the title there?

Mr. Ewing: "National Lead Shuns NRA Price Fixing, Sees Anti-Trust Law."

Trial Examiner Norwood: Proceed.

By Mr. Ewing:

Q. Was Mr. Cornish a lawyer, if you know?

A. Yes, sir.

Q. Was he?

3072 A. Yes, sir; the best.

Q. Will you tell us generally whether the Board of Directors of the National Lead Company acts to establish prices for its lead pigments products?

A. The Board as such does not. It is usually left to the department heads to establish the price.

Q. That answer has reference to your own experience on the Board since September 1943?

A. Yes, Sir.

Mr. Ewing: That is all. You may cross examine him.

Trial Examiner Norwood: Cross Examination.

Cross-Examination by Mr. Wright.

Q. Mr. Carroll, how did your company sell oxides in car load lots prior to 1943? How did they quote them?

A. Oh—

Q. (Interposing.) I will withdraw the question. Prior to 1943 in quoting on oxides, were there any differentials over your base or Chicago price on account of the location of the customer?

A. No, sir.

Q. Was it a flat price then?

A. A flat price.

Q. The same as the Chicago price?

3073 A. Yes, sir. Pardon me. That's right.

Q. Anywhere in the territory served by the Chicago branch?

A. Yes, sir.

Q. That is your car load business now?

A. Yes, sir.

Q. Does that include the Montana and Wyoming territory?

A. No. Those were specials.

Q. How did you set that up?

A. They were special oxides that we would ship out to points for all oil companies for oil refining to those points.

Q. Was that car load business?

A. In some instances car load and in some instances less than car load.

Q. The car load price then anywhere in North Dakota at that time would be the same as the car load price in Chicago; is that correct?

A. No. We added the freight, part of the freight, from Chicago or St. Louis, depending on where we shipped it from.

Q. That is exactly what I was trying to get at. Then you didn't mean in your answer that you sold at the same price including freight transportation charges anywhere in the territory of the Chicago branch office prior to 1934?

A. Well, Montana, or Wyoming and Montana were not in Chicago territory.

3074 Q. But you did ship to them?

A. We shipped to them because the purchasing department or head office was in the Chicago district.

Q. How about North Dakota? Did you ship into North Dakota?

A. Not that I recall; no, sir.

Q. How far south did you ship from the Chicago office?

A. Nothing that I can recall.

Q. What was the territory prior to 1934 in car load business of the Chicago branch?

A. Michigan, Wisconsin, the northern half of Illinois and the corner of Indiana and Ohio.

Q. That was the branch territory?

A. Yes, sir.

Q. But you did ship outside that territory from your manufacturing plants there?

A. We made a few shipments of special oxides out of that territory; yes, sir.

Q. Just the special oxides?

A. Yes, sir.

Q. Didn't the Chicago branch ship into the territory on into the area of the Cincinnati branch?

A. That is true, we shipped for Cincinnati.

Q. In other words, the Chicago branch and the Cincinnati branch are sales and billing and head-office divisions
which include the manufacturing plants but the man-
3075 ufacturing plants will often serve more than one
branch territory on oxides; is that correct?

A. Correct. We ship that for the account of Cincinnati and it would be billed from Cincinnati and not from Chicago.

Q. You don't know the price that it would be billed at?

A. No, sir. We would bill the National Lead Company in Cincinnati and they in turn would bill the customer.

Q. So since 1934 in the car load oxide business, the Chicago branch served par territory, as you call it now, with no differential for freight added except in special instances in Montana and Wyoming?

A. Yes, sir.

Q. Now with reference to your card business, I show you Respondents' Exhibit 167-O, terms f.o.b. Chicago, Detroit and Milwaukee. What is the significance of that statement?

A. We shipped from Chicago, Detroit or Milwaukee warehouses.

Q. How did you handle freight or transportation on those?

A. In car loads we would deliver at this price and at less than car loads it would be f.o.b. the warehouse.

Q. With freight or cartage added?

A. Yes, with that paid for by the customer.

Q. Do you know the territory that those warehouses were? What physical territory does the Detroit warehouse serve on the car load business?

3076 A. Detroit would take fifty miles around Detroit and Milwaukee would take 20 or 25 miles around Mil-

A. (Interposing.) And in some instances we shipped

Q. Well now,—

A. (Interposing.) And in some instances we sphipped depending on whether we would save money.

Q. In some instances on less than car load you shipped direct from the plant to the different warehouses; is that correct?

A. Yes; and vice versa.

Q. How would you handle a charge of that sort? Would you add freight?

We are talking about prior to 1934. Would you add freight from the nearest warehouse point?

A. No. They would pay the freight. We would ship it collect.

Q. They would pay the freight from Chicago in the case that you shipped it?

A. Yes, sir.

Q. These card prices, I assume that is what is represented by the cards, Exhibit 167-A through O?

A. These are the prices we would print at Chicago when a charge was made in the pig lead market. An advance or a decline.

Q. These weren't car load prices, were they?

A. To some trade they would be car load prices.

3077 Q. To what trade would they be car load prices?

A. Well, to a special trade where the oxides were made specially.

Q. Would you give us an illustration of that?

A. Pottery, varnish, assayers and some color work.

Q. In the battery business, for instance would these prices represented by Exhibit 167 and the sub-numbers be car load or less than car load prices?

We are talking now about the dates of these cards.

A. As of the dates of these cards?

Q. Yes.

A. They would be less than car load.

Q. As of the date of that card which you have there, Exhibit 167-O, would that represent a quotation on red lead and the litharge in drums or barrels in any quantity less than a car load?

A. Yes.

Q. In other words, they had no 5-ton price at that time?

A. I won't say as to that. That I couldn't remember as far back.

Q. It says nothing in the cards about any other price?

A. That's right, it says nothing on the card.

Q. You can't recall the price classification?

A. No, sir; not definitely.

3078 Q. Now getting back to these people to whom these were the car load prices, what were the less than car load prices to these special classes of trade at that time?

A. Well, most of those were car load and if they were less than car load, they might have been the same because there would be very few of them to the best of my knowledge at this moment.

Q. Very few of them who bought less than car loads in the varnish trade?

A. Yes, sir.

Q. In the color trade?

A. Yes, sir.

Q. Ceramics?

A. At that time; yes, sir.

Q. Pottery?

A. Yes, sir.

Q. Back in the period covered by these cards now, did your branch have so-called card contracts?

A. Yes, sir.

Q. With purchasers who purchased in card quantities?

A. Yes, sir.

Q. That is, less than car load quantities?

A. Well, we would cover them for, say, three months.

Q. At the card prices?

A. At the card prices, yes, for a given quantity in the hopes that they would take it in the largest deliveries possible. 3079

Q. What was the duration of those contracts?

A. 90 days normally.

Q. A 90 day contract?

A. Yes, sir.

Q. You had similar contracts with car load purchasers, too, did you not?

A. Yes, sir.

Q. Do you now have 90-day contracts or any other type of requirement contract with purchasers at the so-called card prices on oxides?

A. No, sir.

Q. When did you abandon or cease using such contracts?

A. Well, due to our inability to obtain the pig lead and to know the price at which we paid for the lead, all orders were taken subject to the market at the time of the shipment or the average, for instance.

Mr. Wright: Your Honor, I move that that answer be stricken as not responsive.

Trial Examiner Norwood: Read the question and answer.

(The reporter read the question and answer as follows:

"Q. When did you abandon or cease using such contracts?"

3080 "A. Well, due to our inability to obtain the pig lead and to know the price at which we paid for the lead, all orders were taken subject to the market at the time of the shipment or the average, for instance.")

Mr. Ewing: I will consent to it being stricken.

Trial Examiner Norwood: Motion allowed.

By Mr. Wright:

Q. Can you tell me precisely or approximately the time at which the National Lead Company, the Chicago branch, ceased making these 90-day card contracts?

A. We have not ceased that I know of.

Q. When did you last enter into such a 90-day card contract?

A. That I don't remember.

Q. Were you entering into such contracts in 1938 and 1939?

A. I think we were.

Q. I am speaking now of card prices. I am not speaking of car load contracts or differential contracts.

A. Not that I recall.

Q. You were not using such contracts in 1938 or 1939?

A. Not that I recall.

Q. Were you using them in 1936?

A. I couldn't say then either without trying to look back at the records.

Q. Can you ascertain from your records when you last made a regular practice of entering into such con-
3081 tracts?

A. I don't know.

Q. You don't recall any such contracts since 1936, do you?

A. Yes. We have made commitments for specified quantities of oxides.

Q. Were they in the form of these 90-day card contracts?

A. No. They would be in the form of orders, an order given for 20, 30, or 40 or 50 tons for a future shipment.

Q. Now these contracts that I have been referring to which you said you employed at this time, they were printed form contracts, weren't they?

A. No, sir. We didn't have any printed form contracts at Chicago.

Q. Have you ever used printed form contracts at Chicago?

A. Not that I recall, no.

Q. On any of the oxides?

A. No, sir.

Q. Do you recall what changes in the methods of quoting and pricing the oxides were made in June of 1934?

A. In general there was no change made that I know of.

Q. What was your position in 1934 at the Chicago branch?

A. We sold oxides—

Q. (Interposing.) What was your position?

A. My position?

Q. Yes.

3082 A. I beg your pardon. I thought you meant—I was sales manager.

Q. You would be thoroughly familiar at that time, wouldn't you, with all the various sales policies with regard to these oxides?

A. Yes, sir.

Q. How they were to be priced and how they were to be sold?

A. Yes, sir.

Q. I show you a document, Respondents' Exhibit 159-A to J, which was identified by Mr. McNair as a letter that he received as manager of the Atlantic branch on June 9, 1934, about the pricing of oxides and other pigments.

I also show you Exhibit 159-B, a letter of May 11, 1934.

Trial Examiner Norwood: Is that a Commission's exhibit?

~~Mr. Wright:~~ That is Respondents' exhibit, your Honor.

Trial Examiner Norwood: Off the record.

(Discussion off the record.)

Trial Examiner Norwood: On the record. Proceed, Mr. Wright.

By Mr. Wright:

Q. Do you recall ever having seen those letters or similar letters before?

3083 A. I never saw either of those letters or similar letters.

Q. Do those refresh your recollection as to the changes that were made in the terms and conditions of sale of oxides in that period of time?

A. I did not see that document.

Q. Do the statements in the document refresh your recollection any?

A. You see part of this was of no interest to me in Chicago because it was only the conditions that would pertain to Chicago—we did have the document that I recognized before, this printed document—

Q. (Interposing.) The code of fair competition?

A. That is what I had.

Q. Well—

A. (Interposing.) I did not see those letters from Mr. Rowe at any time.

Q. What was your answer then to my question as to whether reading those documents refreshed your recollection as to what changes you made in Chicago at that time?

A. I would have to read those more thoroughly.

Q. From your examination that you made, they don't refresh your recollection?

A. No, sir.

Q. Mr. Carroll, will you tell us again about how you quoted this freight differential in Montana and Wyo-

3084 ming when the freight was more than a quarter of a cent per pound?

A. In those instances we added the difference between the car load or less than car load rate as obtained from the railroad for our traffic department.

Q. What did the quarter of a cent per pound have to do with it?

A. Because we had allowed usually—the freight in our district would amount to approximately a quarter of a cent.

Q. Was that average freight?

A. Well, not average freight but that would be the freight to the greatest distance at that time in the Chicago district.

Q. Then do I understand it that the freight was over 25¢ a hundredweight that the customer paid that difference?

A. No. Only where the freight was up on the 60¢ or 70¢ or 80¢ that we would recognize it.

Q. If the freight was just 50¢ then you allowed that?

A. I would say less than 50¢.

Q. Well now, just what is this figure now?

A. Well we have added from 25¢ to 80¢ that I recall vividly.

Q. What do you mean by "added?"

A. To the normal price for delivery in our district.

3085 Q. You have added 25 to 50¢?

A. 25 to 80¢.

Q. To 80¢?

A. Yes.

Q. Well now, can you tell us again just where you would add 25¢?

A. Well—

Q. (Interposing.) Where—

A. (Interposing.) This is, of course, as you remember as I said to you some time back that we were adding those prices.

Q. Yes, sir.

A. I do recall, as I say, adding as much as 80¢ a hundredweight on a shipment to one or the other of those points in Montana or Wyoming. I think it was Montana.

Q. But you don't recall any other details of the transaction?

A. Oh, yes. We shipped the material.

Q. What I mean is do you recall what the freight was?

A. It was 80¢.

Q. That was the actual freight incurred in shipping?

A. No. That was the difference what we would charge them. In other words, if we would ship that out there we would be losing money. We couldn't stand the whole freight so we had to arrive at some freight so I added the difference of approximately 25¢.

3086 Q. What I am trying to get at are the mechanics by which you did it.

A. No special mechanics but it was my own.

Q. By transaction?

A. That's right.

Q. You might do one one day, and another the next; is that correct?

A. That's correct; yes, sir.

Q. Now I understood your testimony, Mr. Carroll, that all the subjects discussed in the minutes of these meetings which you attended were discussed for the purpose of drawing a code or fair competition; is that correct?

A. Yes, sir.

Q. You stated that you attended the October 27, 1933 meeting of the Lead Pigments Division. Do you recall that that was the case, particularly as to that meeting?

A. Yes, sir.

Q. What were the subjects discussed at that meeting?

A. I would not be able to tell you.

Q. You don't recall what the subjects were that were discussed?

A. Not the particular subjects at that particular meeting. In general I know what was discussed at all the meetings.

Q. But you can't tell what every particular discussion was?

3087 A. No, sir.

Q. Or what the subject of it was?

A. On the particular dates, no, sir.

Q. Can you recall all of the subjects which were discussed at the three meetings about which you testified, the one in October and the two in December?

A. Yes, sir.

Q. You can recall all the subjects which were discussed at those three meetings?

A. As I was refreshed on reading them.

Q. What were those subjects?

A. Well, if I had this code over here I could probably tell you everything that was in there.

Q. But your refreshment then a few minutes ago wasn't sufficient?

A. Oh, yes. But it isn't refreshed now. I can't retain that. I depend on the actual records.

Q. Were you testifying from the records or from your own recollection?

A. Both.

Q. Well, can you testify from your own recollection without the records in front of you?

A. Not as to what went on at any particular meeting.

Q. I am talking about the three meetings together. You attended only three as I take it?

3088 A. Yes sir.

Q. What was discussed at the three meetings without reference to whether it was a particular one?

A. The question of quantities and whether the custom of entering orders for tonnages over a certain period weren't nuisances, what constituted a delivery. For instance, delivery had to be made in 3 days, they would like to make it in three days to constitute a car load.

Who paid the cartage if the buyer's vehicle was used. Those I recall vividly.

Q. Do you recall any others?

A. No, sir; unless I could refresh my memory.

Q. Do you recall whether there was any discussion as to the advisability of putting into practice in advance of the code any of the practices which the members felt were desirable practices in the industry?

A. That was discussed.

Q. Do you recall what the discussion was on that?

A. No, sir; not the particular ones that were deferred, but I know we had—there were tentative decisions made and sometimes deferred.

Q. As to that particular subject now about putting those things in operation?

A. Yes, sir.

3089 Q. There were decisions made at those meetings to that effect?

A. Yes, sir. Well now just a minute. I said they were not made at that meeting. They were deferred.

Q. All such decisions were deferred

A. I wouldn't say all of them because there may be some of them that were not. Of course we had a number of these practices ourselves at Chicago.

Q. Some of the practices which were listed in those schedules attached to the code?

A. Yes, sir. Now because it might mean profit or loss to us. In other words, the custom of entering an order for a quantity of material which might not be taken at a particular time might result in a loss.

Q. Do you recall any discussion of the limitation of productive facilities?

A. No, sir.

Q. That wasn't discussed at any of the meetings?

A. No, sir.

Q. Was the question of differentials in price between the various grades of red lead discussed at those meetings?

A. Yes, sir.

Q. Was the question of selling oxides in less than car load quantities at a differential over pig lead discussed at those meetings?

3090 A. No, sir.

Q. Were the questions of the differentials over the price of pig lead for any sales discussed at those meetings?

A. No, sir.

Q. When you say "no, sir," do you mean in your statement that they positively were not discussed at the meeting?

A. None of the meetings that I attended, they were not discussed.

Q. Don't you mean rather that you didn't hear them discussed, or don't recall any discussion of the same?

A. Not in my presence.

Q. Then you can state categorically that they weren't discussed at the meetings officially, at any rate?

A. To me officially or unofficially.

Q. Yet you attended all of the discussions of the committees as such? You weren't absent from the room at any time there?

A. I might have gone out to the washroom or the telephone.

Q. You stated that there was no discussion at all regarding the limitation of productive facilities?

A. Yes, sir.

Q. I call your attention to the first paragraph of the October 27th minutes, Commission's Exhibit 504-A, the statement that the chairman suggested that the members proceed to discuss the third draft of the supplement-

3091 ary code, etc., whereupon a general discussion arose as to the desirability of including paragraphs which had been omitted from the third draft relating to the limitation of productive facilities, divergent views being expressed.

Wouldn't that indicate that there was a discussion of that question at the meeting?

A. Well, I don't recall it as such.

Q. In view of the fact that that appears in the official minutes which were represented to be records kept by the secretary of the Lead Industries Association of the discussions, wouldn't it indicate perhaps that your recollection might be a little faulty in some particulars as to exactly what was discussed?

Mr. Dubose: Have you read the entire paragraph?

Mr. Wright: No, sir.

Mr. Dubose: I object on the ground that the entire paragraph has not been read.

Trial Examiner Norwood: Overruled.

Mr. Wright: Did you understand my question?

Trial Examiner Norwood: Read the question.

(The reporter read the question as follows:

"Q. In view of the fact that that appears in the official minutes which were represented to be records kept by the secretary of the Lead Industries Association of the discussions, wouldn't it indicate perhaps that your recol-
3092 lection might be a little faulty in some particulars as
to exactly what was discussed?")

The Witness: Well, I don't know whether or not remembering that particular one would be a basis for forgetting or not being specifically clear on the other. That I wouldn't say, but I would leave that to the human element.

By Mr. Wright:

Q. You admit that it wouldn't be beyond human failings but there would be a number of things that might have been discussed fourteen years ago at those meetings which you wouldn't recall now; isn't that correct?

A. Some I might not recall; if they were important I think I would.

Q. But then when you answered as to exactly what was discussed, you were really answering so far as your memory serves you, were you not?

A. If they were important or an issue worthwhile, I am pretty sure I would recall it.

Q. Wouldn't you think that a question of including a paragraph, that a general discussion of the question of including a paragraph in the code relating to the limitation of productive facilities which resulted in the expression of divergent views, would be fairly important as an industry matter?

A. Well, I never heard of such a thing in this industry, in the thirty-seven years that I am active in it, and 3093 thirty-eight years connected with. I never heard of any expression from anyone asking to restrict production.

Q. Do you recall any discussion of dumping?

A. I would like to have you define dumping.

Q. I don't know, I am only using a term that appears in the minutes of one of these meetings.

Mr. DuBose: You are not referring to the meetings which Mr. Carroll attended.

Mr. Wright: Yes, sir; I am.

The Witness: Well, the only way you might apply dumping would be or could be, if that is what you are asking, could be that you might have an exceptionally high pig lead market and somebody who was afraid of the market might have sold some of the material at a special price, but that, I don't know about.

By Mr. Wright:

Q. You don't recall any question of dumping being discussed then at these meetings that you attended?

A. It could be, but again I say it wasn't important unless you can show me that it was important.

Q. Do you recall any discussions as to dry white lead that took place at any of these meetings?

A. Not particularly. I wouldn't pay so much attention to dry white lead because it wasn't my department.

Q. I take it then, from your statement of what Mr. 3094 Cornish told you, the clipping which you brought in, that if Mr. Cornish and the National Lead Company had engaged in any price fixing activities during the NRA, it would have been with full awareness of the existence of the anti-trust laws and of the fact that they were still in existence at the time, would it not?

A. I think with Mr. Cornish and I that it would be.

Mr. Wright: No further cross-examination.

Trial Examiner Norwood: Is there any redirect examination?

Mr. Ewing: No redirect.
Trial Examiner Norwood: You are excused, Mr. Carroll.

(Witness excused.)

Mr. Ewing: Might we adjourn until 2:00 o'clock, Mr. Examiner?
Trial Examiner Norwood: Is that agreeable to you, Mr. Wright?
Mr. Wright: Yes, Mr. Examiner.
Trial Examiner Norwood: We will recess at this time to reconvene at 2:00 o'clock.

(Whereupon, at 12:15 p. m., a recess was taken until 2:00 p. m., this day.)

3095

Afternoon Session

Trial Examiner Norwood: Come to order. Proceed, Mr. Ewing.

Mr. Ewing: I call J. R. Higgins.

J. R. HIGGINS, a witness called by the Respondent, having been previously sworn, resumed the stand and testified further as follows:

Cross Examination by Mr. Wright:

Q. Mr. Higgins, this series of documents which have been marked for identification as Respondent's Exhibit 160 through 164, about which you testified on direct examination, do you recall from whom in the National Lead Company's general office you received a request for this information?
A. The letter came into the office and I am not sure whether it was addressed directly to me. It was either addressed directly to me or one or two of the other officers of the company. I would say it came from Mr. Fred McCarthy.
Q. Do you recall what was in that letter of request? Do you recall what it specifically requested you to do?
A. Well, I saw a copy of the letter and it asked for certain information as to our records for 1941. Among the

other things was tonnage, freight and cartage and, as I
recall, the end was the cost per hundred pounds, three
3096 classifications, as I recall it.

Q. Of the transportation charges?

A. Yes.

Q. Do you know what the purpose of the request was? Did the letter state the purpose?

A. I believe it did.

Q. Directing your attention now to the document marked Respondent's Exhibit 164, there is a statement there: "The following is the information you requested in your letter of March 26, 1947." Is that the letter referred to there, the letter of March 26th, the original request for this information?

A. That's correct.

Q. But you do not recall as I understand your testimony, what was in that letter as far as the purpose for which the material was requested or specifically the details of the request?

A. I do not recall that, except the details of the request according to the three columns as shown.

Q. This recapitulation, then, in Exhibit 164, that is a summary of all the work sheets of the other exhibits; is that correct?

A. That's correct.

Q. And that is the final boiling down of the information?

A. That's correct.

3097 Trial Examiner Norwood: Off the record.

(Discussion off the record.)

Trial Examiner Norwood: On the record. Proceed, Mr. Wright.

By Mr. Wright:

Q. Will you tell us exactly the procedure that you followed in requesting this information from your staff and the technique which you followed in obtaining it?

A. When I received a copy of the letter, I contacted Mr. Sargent who signed that letter and told him that as far as I knew, our 1941 records had been destroyed. I was somewhat concerned to know how or in what way we could answer that letter, and give him the information that had been requested. After taking—attempting to find out the tonnage records, somebody came up with the answer that we put a card system into effect a number of years ago. I think I started it back, possibly some years before, at least, and trying to find the tonnage of the states, the large cities, and then the smaller towns.

I was interested in knowing just where the tonnage was going or being distributed. From that, one of the young ladies, I should say, who has charge of the filing card system, said she had the tonnage of the towns where the white lead had been distributed during the year of 1941. So we used that as a basis. It came up with the tonnage of
3098 each of the towns indicated for white lead and the
different classifications, dry white lead, oxides and anything else that was requested.

Q. Now, that is as to the figures which appear in the work sheets under tonnage, and also in the other exhibits under total pounds sold.

A. That's right.

Q. That is the derivation of those figures?

A. That's right.

Q. Now, what instructions did you give regarding the information on freight and cartage?

A. We made an effort, first, to determine from our warehouses, speaking of warehouses, branches of the St. Louis branch, and as I recall, we had certain haulage or truckage as the case might be, and in going into that record, we found that we could get actual figures on the cartage from the warehouses and from St. Louis, so that that portion of our records is what I would call factual information. That is absolutely correct and it is added into the total figure.

Q. Just what do those cartage figures consist of? How were they secured? From what records were they taken? How were they fitted into this thing?

A. They were taken into the record from our auditing department. I can't tell you where the details would be kept.

Q. Do you know how they kept those figures in the
3099 auditing department?

A. We have five different branches.

Q. In the St. Louis branch?

A. Yes. We call them warehouses which designates the warehouses separately so that we could check back on our records and find out just what operation each warehouse might be doing. One or two of them are manufacturing points and for that reason we had to have certain records separately with each warehouse.

Q. What are those warehouses again, in the St. Louis branch territory?

A. First, it is St. Paul, Omaha, Kansas City, Dallas, New Orleans and, of course, the major distribution from St. Louis.

Q. Now, taking the warehouse at Kansas City, what products did the Kansas City warehouse?

A. White lead in oil, dry white lead and small amounts of oxide.

Q. Of oxide?

A. Yes.

Q. Were mixed paints warehoused there?

A. Now, at that time we were not in the mixed paint business.

Q. How about solder?

A. Solder was carried at Kansas City. That is the metal items. I am speaking only of white lead and
3100 oxide, in my testimony.

Q. What other items other than white lead and oxides were warehoused in Kansas City?

A. White lead in oil, and I believe in 1941 we did have paint. We had pure white lead paint which has been discontinued. I wanted to correct that statement. Then there are certain specialties or painters' supplies that go along with the white lead in oil and linseed oil, lead mixing oil, colors in oil and what we call general painters' supplies, red lead, litharge, red lead, both in kegs and drums. Beyond that met department, I would simply have to give you my knowledge, not too much contact, but the metal end of the business also carried supplies there, some of which were made at Kansas City.

Q. In other words, the Kansas City warehouse, wouldn't it be fair to state, warehoused most all the products sold by the National Lead Company; is that correct?

A. That is correct, I should say.

Q. Well, now, coming back to these entries of cartage expense on white lead in oil, how did the warehouses segregate the cartage expense on white lead in oil from the cartage expense on all the other items?

A. They would have to show the totals at the end of the day of the different departments, and it would show on that classification. White lead in oil has—the records

3101 have always been kept separately from the other items.

Q. Would the cartage expenses on white lead in oil be kept separately from cartage expenses on flatting oil and linseed oil and other related items which, no doubt, would be sold to the same customer in the same shipment?

A. They were, because in our receipts, which you have some place, it showed the different warehouses and it showed the different products.

Q. Well, now, you know, and can testify for a fact, that these, then, are the actual figures on the cartage of white lead in oil as distinguished from any other product in that warehouse?

A. That's correct.

Q. And is not an average or an estimate?

A. They are factual, actual records.

Q. Which have been kept in the regular course of business all the way down the line?

A. That's correct.

Q. Now, how did you derive these figures on the work sheets such as those that appear under: "carloading rate to warehouse," "lcl rate warehouse to customer," "carload rate warehouse to customer," "truckload rate from warehouse to customer," as appear on Respondent's Exhibit 162-A (showing to witness)?

A. The matter of the records was discussed and I recall drawing up on my desk from a sheet of paper the
3102 headings that appear on the top of this page. And
that was the form that we used in arriving at these figures.

Q. Just how did you go about getting them? What request did you make of the traffic department? You testified they were made up by the traffic department.

A. The freight rates in all cases were supplied by the traffic department.

Q. I understand that. But now what request did you make of them? In response to what request from you did they give you these figures?

A. The request that we made to them having in mind the tonnage that went into these various towns that we had to designate to the best of our knowledge how that shipment was handled. That is, when the shipment went from our St. Louis warehouse, for example, to the St. Paul warehouse. We used carload shipments as much as we possibly could to the warehouse. In fact, in all cases, so then we had to analyze in our minds how the shipment was handled.

Q. Who are you talking about "we" now?

A. Those of us in the white lead department. I think there was eight in all that worked on this, including all departments.

Q. Including the traffic department?

A. Including the traffic department. There were three directly from the white lead department. Then we
3103 had to determine just how the shipments originating in St. Louis, going in carloads to the warehouses, and then from there to the customer. And we had to designate, which we did in this column, the carload rate. In this case, St. Louis to Omaha.

Mr. Ewing: What town are you referring to on that exhibit?

The Witness: This happens to be the first town of Council Bluffs, Iowa. Council Bluffs is across the river from Omaha. There are no trucking charges on this classification. It was extended at the rate because we actually got the cartage for a fact in order to determine any additional costs that went in in handling those shipments from the warehouse.

By Mr. Wright:

Q. Now, getting back to my original question, would you summarize for me just what you asked the traffic department to put on this sheet of paper?

A. Yes. While we have a general knowledge of freight rates, there is nothing accurate about it. So I asked the traffic department if they had the records from the year of 1941 and they told me that fortunately they had the tariffs and that changes had been made later than the 1941 tariffs. So that I felt absolutely sure that the freight rates that were put down were the actual freight and the actual records that appeared at that time.

3104 Q. Who was responsible for the so-called routing of the shipments? In other words, to say whether it should appear as being one shipped directly from the factory to the customer or from the warehouse to the customer.

A. The order would originate a good deal in the warehouse territory. An order would come in from any of the towns. It would go to the warehouse and the warehouse would make the shipment. So, following through on that, the warehouse necessarily had to get the material from St. Louis in order to make the shipments.

Q. Wouldn't it be fair to say, then, that on this routing and on the question of whether the rates that actually appear in these columns would actually have been used in the shipping, that these are estimates based upon your experience as to how those customers would probably have been shipped?

A. I don't—

Q. Would you like that read again?

A. Yes, sir.

Trial Examiner Norwood: Read the question.

(The reporter read the question as follows:

"Q. Wouldn't it be fair to say, then, that on this routing and on the question of whether the rates that actually
appear in these columns would actually have been
3105 used in the shipping, that these are estimates based
upon your experience as to how those csutomers
would probably have been shipped?")

The Witness: That is correct.

By Mr. Wright:

Q. In other words, this is your best guess in 1947 as to how you routed those shipments in 1941?

A. That is correct. That is the best knowledge that the St. Louis branch could contribute on that job.

Q. But you can't say now that any particular shipment took any particular rate at that time as a specific transaction? You believe now that that is how it would have been shipped, probably?

A. Very few shipments would be made to small towns unless there was an exceptional rate in effect where the lcl rate from St. Louis to that point was lower than the combination of the carload to that warehouse and the lcl from there to the destination. Those we know from past experience over many years, how they are handled. Those are exceptions.

Q. But there are some of those instances?

A. I think so.

Q. Where the lcl rate from the factory to the customer is lower than the combination carload rate to the warehouse plus lcl from warehouse to customer?

A. That's correct.

Q. There may be such instances in here, might there not?

3106 A. I think there are, and I think they are classified the way they were actually shipped.

Q. Do you know for sure whether those were checked that way?

A. They were checked by three different people.

Q. Who checked them?

A. Three in the white lead department. The man in charge of the order department and two young ladies, one that has been with us for 28 years and another one for 20 years.

Q. Is that by people in the traffic department?

A. In the white lead department.

Q. Now, as to these combinations of rates as to which one would be lower. Do you know whether that was checked by the traffic department?

A. All figures were checked by the traffic department.

Q. We are talking now about something that goes beyond the figures, perhaps. There appear to be a good many combination rates here of a carload to warehouse and lcl from warehouse to customer. Do you know whether the traffic department checked all those to determine whether the lcl rate from the factory to the warehouse might not be lower?

A. I don't think so.

Q. You don't think so?

A. No, because we know from past experience in handling the warehouses, the major portion of it.

3107 Q. When you say this was all checked, you are speaking of this whole series of exhibits from 160-A to 164; is that correct?

A. Yes, sir.

Q. You yourself have checked this compilation?

A. I did.

Q. Calling your attention now to Exhibit 160-D, white lead in oil, St. Louis branch, sheet number 1, you come down to this figure in column number 7 of $5,848.01 which is apparently an extension of the freight rate against the pounds shipped to show the estimated freight expense.

A. Yes.

Q. On those transactions?

A. Yes.

Q. The figure below that of $1,334.24 which is plus cartage St. Louis, is added. Will you tell me why the $1,782.18 is deducted?

A. May I look at the next sheet there?

Q. Surely.

A. You have par territory on this sheet. This portion covers Illinois. This portion covers more, and in order to get the correct amount for the par territory, we had to deduct that $1,782. That was a statistical record which Mr. Sargent arrived at in breaking it up to get the par territory.

3108 Q. Wasn't more in par territory?

A. No, sir, it was not.

Q. When you made that deduction there, from what records did you ascertain the extent to which the cartage was in par or in the plus territory?

A. Well, the auditing department had the records, as I said, on the cartage, the drayage.

Q. As to each transaction?

A. They had the sum total of all the records. Those are statistics in the auditing department. We were arriving and working towards sheet number 1 and in order to get this amount correct, we had to separate the one-eighth from the par to take out the drayage that was in there in order to get an accurate record of both par and one-eighth so that they weren't dovetailed together.

Q. Then that $1,700, was that added to your figure on the one-eighth zone?

A. It should have been. It is deducted—pardon me. It was less, so, therefore, it was deducted and put in the one-eighth.

Q. You said you had no invoices. The only record of these transactions which you had were these cards which had been punched from the invoices years ago?

A. On tonnage?

Q. On tonnage.

3109 A. Tonnage only.

Q. So that there were no individual transactions reported?

A. That's correct.

Q. Well, now, how was the auditing department able to separate on a transaction basis the drayage and cartage expenses?

A. That is a simple matter for St. Louis, which includes

Kirkwood, St. Louis, and what we call the metropolitan area. That would have been an easy matter to deduct our freight, or rather, cartage would have been from the St. Louis plant to these points designated here. I am sure that they have that record, without any question.

Q. As to individual transactions?

A. The sum total.

Q. Classified by territories where they delivered it?

A. Yes, that's correct.

Q. In other words, they would set up their cartage accounts to Kirkwood, or such other places as were in the ⅛th zone as distinguished from those that were in the par zone?

A. That's correct. The reason I feel certain of that is that we have our own system of truckage in the St. Louis plants. That does not exist at the other warehouses. That is public service. So that is an actual record from our books.

3110 Q. Where does this $1,782 figure come from? Would you look at those exhibits and tell me where it comes from (showing to witness)?

A. It is the sum total of the white lead and the dry white lead. It does not include the oxides.

Q. Do you mean to say by that that it is the sum total of the figures on Exhibit 160-B, appearing in the first column under St. Louis?

A. That's correct.

Q. I call your attention to the fact that those first two figures only amount to $1660.78.

A. I can't analyze that further. I asked the same question and they said it was a separation between the ⅛th and the par and without further checking, I accepted that.

Q. And you do not know how that distinction was made, do you?

A. No.

Q. Was that figure of $1,782 cartage expenses out of the St. Louis warehouse?

A. That's correct.

Q. Direct warehouse expenses of your own trucks, was it?

A. Of our own trucks.

Q. Of your own trucks?

A. Yes.

Q. Anything in the metropolitan area of St. Louis
3111 was par, wasn't it?

A. That's correct.

Q. So that the ⅛th would have had to have been outside of St. Louis?

A. Beyond, I think, the area is 20 miles, approximately.

Q. Beyond 20 miles?

A. Yes.

Q. So that the 1334 would be cartage in the metropolitan area within 20 miles?

A. Yes.

Q. And the 1782 would be beyond 20 miles?

A. That is correct.

3112 Q. Calling your attention now to Exhibit 160-E,
Mr. Higgins, get down here to shipments into Iowa from St. Louis. Is that the plant or the warehouse that they are being shipped from now?

A. The plant and the warehouse are both the same thing.

Q. They are in the same establishment?

A. We call it the St. Louis works.

Q. So that when you listed freight rates there from warehouse to customer, that really was from plant or warehouse to the customer?

A. Correct.

Q. Now on your Davenport rate, you will notice it here in the middle of the page of Exhibit 160-E, there are three different figures given, an LCL rate at 43, a car load rate at 26 and a truck load rate of 30¢, but the applicable rate is given as 50¢.

Will you explain that (showing to witness)?

A. There is a fairly good tonnage at Davenport; in my opinion shipments to Davenport would go in truck loads. You might combine four, five or six customers.

Now under the tariff rules, you can ship to one customer. If you have more than one customer they make an additional charge for it. My analysis of Davenport would be that truck loads were shipped to Davenport and very likely a public warehouse handled the distribution.

3113 That will vary from years ago. We got it at 5¢
but it will vary 8, 10 or 12¢. So the analysis of that loads and that whatever the charge may have been for

a truck load rate would represent to the best of our knowledge the cost of getting that material there.

That does not show, by the way, a truck load rate. It shows a car load rate.

Q. Isn't that figure "TL 30," doesn't that represent truck load?

A. That would be the difference, the sum total of the drayage and the public warehousing in handling it.

Q. What drayage are you speaking about, the drayage at the Davenport end?

A. Yes.

Q. I call your attention to the fact that the highest classification which would involve no drayage is LCL; isn't that correct, that would go to the customer with no further drayage to be paid, wouldn't it? That is 43¢.

Yet the applicable rate which was used in deriving the freight cost there was 50¢. The same, I might add, is the case with the one directly below it which is Des Moines where the car load rate is 32½¢, truck load 45¢ and LCL 65¢ and the figure given under total applicable rate upon which you based your calculation is 71¢.

3114 Let me ask you this now, Mr. Higgins: Of that material going to Davenport, nearly a quarter of a million pounds, you can't state on the basis of the cards from which you got that tonnage how much of that might have been in truck load quantities to a single customer or in car load quantities, can you?

A. That was determined by an analysis of going over the accounts as to how the shipments would be made. It is about 62 tons and tonnage of that kind would be handled very likely in truck rates and through the public warehouse.

Mr. Ewing: Is he referring to Davenport or Des Moines?

Mr. Wright: I am referring particularly to Des Moines there where you have got a figure of nearly a quarter of a million or over a hundred tons.

The Witness: Shipments to Des Moines are in various quantities.

By Mr. Wright:

Q. Isn't it possible now as to either Davenport or Des Moines that there might have been one or more car load shipments to a single customer in that period?

A. I don't think so, sir.

Q. Well, you don't know that there weren't, do you?

A. In 1941 I would say there was no car load shipments.

Q. Can you state that as a fact, now, one which
3115 would be within your knowledge and which you are
willing to state here on the stand under oath that
there were no car load shipments?

A. To the best of my knowledge that is correct.

Q. What I am trying to do is to establish a fact. Now is your answer that you don't know of any or is it your answer that there were none to either Davenport or Des Moines during 1941?

A. I do not recall any car load shipments going to either point during that time.

Q. Well now, could there have been a car load shipment to either of those points that you wouldn't know of?

A. I do not believe so.

Q. Now could there have been a truck load to a single customer?

A. That is correct.

Q. There could have been?

A. Oh, yes, many.

Q. In both places?

A. Yes.

Q. Do you think there probably were truck loads to a single customer?

A. Possibly in the case of one customer, but to my
knowledge I have okayed the payment of bills for the
public warehouse at Des Moines very, very frequently.

3116 Mr. Wright: I move that that last answer be
stricken, your Honor. It wasn't responsive.

Trial Examiner Norwood: Motion allowed.

By Mr. Wright:

Q. Do I understand your testimony to the effect that there could have been and probably were one or more truck loads during 1941 to a single customer in Davenport and Des Moines?

A. That is possible.

Q. So that in that instance the freight applicable would have been the truck load freight rate?

A. That's right.

Q. Of 30¢ in Davenport or 45¢ in Des Moines?

A. That's correct.

Q. Now I call your attention to the sheet marked Exhibit 160-P. There is a transaction there at Corpus Christi, Texas, and in the column headed "No. 1," there is written in there what appears to be Dallas, 120,000 pounds in car load from St. Louis and then following that, car load St. Louis to Corpus Christi, 76¢. And a derivation here, total applicable rate 87¢ a hundredweight.

Will you tell us which of those several figures is the correct one to apply there and why?

A. The total amount given is 131,840 pounds. According to this record there is 120,000 pounds in car load
3117 from St. Louis shipped to Corpus Christi at a rate of 76¢. Those two car loads were shipped to the naval airport at Corpus Christi and the amount is so unusual, it stands out.

The smaller amount, the difference of 11,840 pounds would make up for the balance of the LCL which normally would have been shipped from the Dallas warehouse.

Q. On that 87¢ that was used there, it doesn't represent any actual freight rate, does it?

A. Well, they have a rate from Dallas of 97¢.

Q. Yes.

A. Now add to that, it does not appear but we have a commodity rate to get white lead in oil from St. Louis to Dallas which, at that time, was 48¢ a hundred.

Q. Well now, what I am trying to get at is here that according to this note, 120,000 pounds or well over 90 per cent of that 131,000, were shipped not at the rate which appears in column 5 here of 87¢, but at 76¢.

A. That's correct.

Q. Now where do you get that 11¢ that was added to the rate on that 120 000 pounds? Is that somebody's arithmethical average to determine what you would have to multiply the total poundage by to get this figure in column 7 showing what you think those shipments cost freightwise?

Mr. Ewing: Would you read that question, please?

(The reporter read the question as follows:

3118 "Q. Now where do you get that 11¢ that was added to the rate on that 120,000? Is that somebody's arithmetical average to determine what you would have to multiply the total poundage by to get this figure in column 7 showing what you think those shipments cost freight-wise?")

The Witness: That is correct, sir.

By Mr. Wright:

Q. Then that 87¢ doesn't represent any actual freight rate or tariff rate at all?

A. To the best of our knowledge it represents the cost of getting that material down to Corpus Christi.

Q. The average cost per hundredweight?

A. I would say it was the actual cost, sir.

Q. Well now, if the car load freight rate was 76¢, where do you get that freight rate of 87¢? That is what I am trying to get at.

A. We have determined the cost of lead in oil first for the remaining portion, to get it from St. Louis down to Dallas which is 48¢ in the car load. Then there was a rate from Dallas to Corpus Christi which, according to this record, is 97¢.

Q. So that then that gave you a total rate combination car load to warehouse and warehouse LCL to Corpus Christi of $1.45 a hundredweight?

3119 A. Yes.

Q. So how did you get the 87¢? You have got $1.45 on one hand and 76¢ on the other and those are the only two official tariff rates that you have?

A. Yes.

Q. So will you tell me the process by which they got that figure of 87¢, if you know?

A. Beyond the rates given I can make no further explanation.

Q. You don't know how that was derived?

A. No.

Q. Now going over here to sheet 160-Q, under San Antonio, there is a statement there under car load rate, under columns 2 and 3 running across there, car load from St. Louis, and then under column 4, there is LCL, $1.53. What is that $1.53? Is that the LCL rate from St. Louis to San Antonio?

A. That is correct, sir.

Trial Examiner Norwood: We will take a five-minute recess at this time.

(A five-minute recess was taken.)

Trial Examiner Norwood: Come to order. Proceed, Mr. Wright.

By Mr. Wright:

Q. Now, Mr. Higgins, going back to Exhibit 160-Q here, the less than car load rate from St. Louis to San Antonio,

$1.53, it is indicated on this that there was a car load
3120 from St. Louis. Yet the applicable freight rate used
in figuring was the less than car load rate.

Can you account for that?

A. San Antonio is one of the exceptions that I spoke of in my earlier testimony that a through rate from St. Louis would apply of $1.53. That shipment originated from St. Louis and went through to San Antonio.

Q. It is indicated on here, is it not, that that was in the form of a car load?

A. There is no price in here for the car load. There is no indication at all of a car load shipment.

Q. How do you account for that statement, car load from St. Louis, that appears opposite of San Antonio?

A. This is the LCL rate and that was the rate that they used in making the divisor for the tonnage.

Q. The amount that is included there is approximately a 20-ton car load, isn't it, 80,000 and some odd pounds?

A. A 40-ton car load.

Q. So that that could have been one shipment in a car load then, could it not?

A. I don't believe so.

Q. Well, what does that statement "CL from St. Louis" mean then?

A. There should be no notation of car loads there. The LCL rate applied and it went through at $1.53.

3121 Q. What is that "CL from St. Louis" doing there then? Did you put it in?

A. No, sir.

Q. Who put it in?

A. I don't know.

Q. You don't know what they might have meant when they put it in then, do you?

A. No.

Q. Was your answer no to that question?

A. The answer would be no.

Trial Examiner Norwood: Off the record.

(Discussion off the record.)

Trial Examiner Norwood: On the record. Proceed, Mr. Wright.

By Mr. Wright:

Q. How long have you been in the St. Louis branch, Mr. Higgins?

A. From January 1, 1915.

Q. Do you recall ever making any similar study of average costs in the various territories at any other time than the one here that is represented by these documents?

A. I have never made a survey of that kind before.

Q. Do you know of one ever having been made?

A. Not to my knowledge.

3122 Q. Now you stated on direct examination that those figures on cartage were all expenses paid for automobiles plus their depreciation; is that not correct, when you were figuring cartage?

A. I do not recall making any testimony about automobile charges.

Mr. DuBose: May I be off the record?

Trial Examiner Norwood: Off the record.

(Discussion off the record.)

Trial Examiner Norwood: On the record. Proceed, Mr. Wright.

Mr. Wright: I withdraw that statement.

By Mr. Wright:

Q. Now your cartage that is represented here, does that include the cost of the National Lead Company's own vehicles?

A. I am not familiar with the charge off on the automobiles in connection with the actual drayage charges.

Q. Well now, the St Louis branch, the St. Louis plant and warehouse do have their own trucks in some instances, don't they?

A. At our St. Louis lead in oil works where I have control, we have two trucks.

Q. Do those trucks make deliveries to customers?

A. In the metropolitan area.

Q. Just in the metropolitan area?

A. That is correct.

3123 Q. Not to those points in the ⅛ zone just outside the metropolitan area?

A. That is true.

Q. Those are made by hired carriers?

A. That is right.

Q. So then that figure that you have in here of 1,334.24 cartage in St. Louis which was added to that par thing on Exhibit 160-D would then include the cost of those trucks that you operate yourself?

A. I do not believe that depreciation is included in those figures.

Q. Does it include the cost of cartage in those trucks?

A. No, sir.

Q. It does not?

A. Cartage only, actually.

Q. How did they figure of the cartage in their own trucks, how did they put that in that $1,334?

A. That would cover the cost of the operation of the trucks and the men employed as chauffeurs to drive the trucks.

Q. You know that for a fact, that that is how that is included in that figure or is that your opinion as to how they probably put it together?

A. The figures would have to be assembled in our office, that is correct, sir.

Q. Well now, what did you mean by that answer?

3124 A. That the figures—the auditing department would have to arrive at those figures.

Q. Do you know how they arrived at them, what factors they took into account in arriving at those cartage figures?

A. I don't know the details.

Q. You don't know the details?

A. No.

Q. You don't know from what records they took them?

A. No, sir.

Q. Either as to the outside trucking or as to the cartage expense on your own trucks?

A. If there was any outside trucking handled under emergency shipments, that would be included.

Mr. Wright: Would you read the question and answer, please?

(The reporter read the question and answer as follows:

"Q. Either as to the outside trucking or as to the cartage expense on your own trucks?"

"A. If there was any outside trucking handled under emergency shipments, that would be included.")

Mr. Wright: I don't believe you understood my question.

By Mr. Wright:

Q. What I meant was, do you know exactly what 3125 figures and from what source they took into account in putting together this figure of $1,334 as total cartage? Do you know where they got the figures as to outside cartage that they paid the public carriers? I withdraw that.

Presumably that $1,334 of cartage, St. Louis, contains cartage both expense from the operation of National's own trucks and cartage which was paid outside carriers in delivering; is that correct?

A. That's correct.

Q. Do you know exactly what figures the auditing department put together to arrive at that $1,335?

A. I cannot give you the details.

Q. I take it that all these figures have been checked and rechecked a number of times so that the only error you know of in them is the one which was pointed out on Exhibit 160-A, under the heading "4" which should have been car load instead of less than car load; is that correct?

A. I believe that is correct. I believe there was one correction on another page but the figure was correct as it was used.

Q. What was that other correction you were speaking of?

A. An error in the extension only.

Q. That has been corrected, has it, on this sheet?

A. Yes, sir.

Mr. Ewing: What sheet is that?

3126 Mr. DuBose: Exhibit 160-A.

By Mr. Wright:

Q. Now getting into the work sheets on dry white lead, Exhibit 162-A to D—that is, Respondents' Exhibit 162-A to D—on 162-C, there is a deduction of $961.30. Will you explain to me what that deduction is?

A. $961.30 is the sum total of drayage from the various warehouses indicated.

Q. Why was that deducted? Was that not a legitimate transportation expense in the par territory?

A. My explanation of that would be that they were trying to break down the actual figure in order to arrive at the sum total on our final sheet of the total amount for each territory.

Q. Well now, you have included cartage in your total as to these other territories when it applied to that territory, have you not? Why did you deduct it as to this particular one?

A. My answer to that would be the breakup, that they were in differential territories.

Q. Now you recall what the par territory is on dry white lead, don't you? I show you this list of points here and ask you to tell me which one of those is outside of the par territory (showing to witness)?

A. They are all outside the par territory.

3127 Q. All of these warehouses, St. Louis, New Orleans, Kansas City, Omaha and St. Paul?

A. That is correct.

Q. Outside the par territory of dry white lead?

A. Dry white lead, that is correct.

Q. What is the par territory for dry white lead?

A. All territories with the exception of Colorado, Wyoming—there is one other state that I do not recall—New Mexico.

Q. Are any of those warehouse points in Colorado, New Mexico or Wyoming?

A. They are not.

Q. They are not?

A. No.

Q. Then they must be in par territory then?

A. The warehouses are all in par territory then for dry white lead.

Q. This particular exhibit here, 162-A to C, is a compilation as to the sales in the par territory, is it not?

I call your attention to the heading "Differential territory par" on Exhibit 162-A. So that I would still like your explanation as to why you deduct cartage expense in the par territory.

A. May I have the work sheet for a moment, please?

Q. This is the work sheet, is it not?

A. There it is (indicating). I cannot identify it
3128 except to state that it has the actual figures for plus cartage in the first paragraph and the second classification is removing at the uniform rate of 10¢ to arrive at a certain figure.

Q. Then they just use the arbitrary figure of 10¢ on cartage on that; is that right?

A. That is correct.

Q. Coming over now to the figures on Exhibit 163-C and D, under the heading on Exhibit 163-C, "Par territory, oxides, LCL lots." On exhibit 163-D, there are several figures on cartage amounting to some $376.22 estimated cartage, Kansas City, Omaha and St. Paul which is deducted from the figure of $4,062.96.

Can you explain how that was deducted and why?

A. I think the same thing applies that we discussed with each of our warehouses, the cost of the drayage, and we had in mind to take 10¢ all over. We found later that we could, by a process in the auditing department, that we were able to get the actual records.

And I think in this case what they attempted to do was to deduct the 10¢ where they found there was a difference between the two rates.

Q. You say you think that was what they did?

A. I know that is what it is because I was told that the drayage was absolutely correct.

Q. Who told you that?

3129 A. The comptroller of the company.

Q. There is apparently there a figure of a little less than $1,200 which was added to the LCL differential on Exhibit 163-D of $2,878 making a total of $4,062.96. Will you explain to me what these figures below that which total $376.22 represented? If the top figures were actual cartage, why did you, as appears from the note there, deduct "less estimated cartage?"

A. I think they were included by the auditing department in arriving at the total and where they had included the 10¢ and found later that they had the actual drayage charges—

Q. So the, the estimated cartage appearing there should never have been there in the first place?

A. That is correct.

Q. And this other figure under cartage actual was the figure that they represented to you as the actual cartage?

A. That is correct, sir.

Q. But again on this cartage, outside of the fact that the comptroller telling you that those are the actual cartage figures, you don't know what processes he went through to obtain them and to break them down from the other products that might have been involved?

A. I am unable to give you the details on that part of the business.

3130 Q. Now coming to this series of exhibits on par territory, oxides in car loads and car load lots, does this slip attached to this exhibit here describe the par territory?

Mr. DuBose: What is the number?

Mr. Wright: Exhibit 163-A and B.

The Witness: That is correct, par territory.

By Mr. Wright:

Q. That would be Illinois, Iowa, Kansas, Kentucky, Missouri, Minnesota, Nebraska, North and South Dakota, Tennessee and Wisconsin?

A. That is correct.

Q. In what territory is Texas?

Trial Examiner Norwood: Off the record.

(Discussion off the record.)

Trial Examiner Norwood: On the record.

The Witness: Texas is in the ¼ differential territory.

By Mr. Wright:

Q. Now I call your attention to Exhibit 163-B to the transactions there under the heading "Differential territory par," Dallas, Port Arthur and San Antonio.

A. That is incorrect. That should read "¼ differential car load lots.

Q. Those figures went into the total as under par territory then?

3131 A. Texas is in the ¼¢ differential territory and the only explanation I could offer is that when these sheets, before we left, on account of the detail, that the young lady took the receipts and attached these memorandum in order to make them more convenient to handle. Texas is in the ¼¢ differential territory definitely.

Q. In the addition and computation in 163-B, the Texas transactions follow Exhibit 163-A. Doesn't that total figure here carry over and make the total for par territory of 11,839,904 pounds?

A. That is correct.

Mr. Wright: I have no further voir dire on this.

Trial Examiner Norwood: Is there any objection to the proffer of the exhibits?

Mr. Wright: I wanted Mr. Ewing to have an opportunity for any further questions he wanted to ask the witness.

Mr. Ewing: Subject to the correction and perhaps further testimony with respect to them, we reoffer these exhibits.

Mr. Wright: I object to the proffer of the exhibits. I think it is plain that exactly what they are. It is a combination of an estimate and secondary record and guess work. When you examine the details that went into it,

3132 you find the thing is inaccurate. It is in error in a number of very important respects, and it can't be explained by this witness in a number of other very important respects.

I object strenuously to its receipt in evidence being of that character.

Mr. Ewing: I think a substantial portion of the basis of the objection goes to weight and the reason I mentioned the correction is that if and to the extent there is error, we will correct it. But if we are going to talk about them and have further testimony in connection with them, I think they should be in evidence.

Trial Examiner Norwood: I understand that we had a condition there that the basic data was to be available to the Commission's counsel.

Mr. Wright: That is correct.

Mr. Ewing: I can't make the basic data in the sense of the invoice available because they are not existent. I don't know what other basic data Mr. Wright would have in mind having.

Anything we have got within reason we will be only too glad to make available.

Mr. Wright: I am in this difficulty, that while Mr. Higgins, the witness, thinks he knows what went on in the minds of the people who got some of this material together, he doesn't actually know and these people are not available to me for cross examination. 3133

Of course, the fact that all humans are frail, we have seen that in these particular exhibits and we have seen that in other exhibits of this sort, and I dislike an important exhibit of this sort to come into the record without my having as much of the available source material as is possible.

I don't believe that these things should be offered until there is further testimony available by the people who prepared them as to just exactly what went into them and what records they got them from. I am going to strenuously object unless that testimony is available.

Mr. Ewing: My suggestion would be that they be received subject to a motion to strike if the errors aren't corrected and if the further testimony with respect to them isn't supplied.

Trial Examiner Norwood: I am at a disadvantage now. This witness, in identifying these papers, made certain statements and told us how he made them and told us the source from which they came. I just didn't memorize it at the time and I can't rule on this motion until I get that record and run through his testimony about the matter, or if you want to give me a resume of the testimony here if you recall it and you can tell me about it, it would probably refresh my memory.

3134 But he made those tabulations, did he?

Mr. Ewing: May we go off the record?

Trial Examiner Norwood: Off the record.

(Discussion off the record.)

Trial Examiner Norwood: On the record. You are excused.

(Witness excused.)

Trial Examiner Norwood: We will recess then at this time until 10:00 o'clock tomorrow morning.

(Whereupon, at 4:00 o'clock p.m., the hearing in the above entitled matter was adjourned until 10:00 o'clock a.m., the following day, June 18, 1947.)

3135

Trial Room,
Bar Association Building,
36 West 44th Street,
New York, N. Y.,
June 18, 1947.

Met, pursuant to adjournment, at 10:00 a.m., EDST.

Before:

John W. Norwood, Trial Examiner.

Appearances:

Joseph S. Wright, Esq., appearing for the Federal Trade Commission.

Edmund F. Wood, Esq., 2801 Carew Tower, Cincinnati, Ohio, appearing for Eagle-Picher Lead Company and Eagle-Picher Sales Company.

Robert H. Ecker, Esq., and Henry E. Gardiner, Esq., (Chadbourne, Wallace, Parke & Whiteside, 25 Broadway, New York, N. Y.), appearing for Anaconda Copper Mining Company and International Smelting and Refining Company.

James D. Ewing, Esq., and E. Z. DuBose, Esq., (Alexander & Green, 120 Broadway, New York, N. Y.), appearing for the National Lead Company.

J. T. Welch, Esq., (Davies, Richberg, Beebe, Busick & Richardson, 15th Street, N. W., Washington, D. C.), appearing for Sherwin Williams Company.

3136 PROCEEDINGS.

Trial Examiner Norwood: Come to order. Pursuant to adjournment taken on June 17, 1947, the hearing in Docket No. 5253 is now reconvened in the Trial Room of the Bar Association Building, 36 West 44th Street, New York, N. Y., at 10:00 o'clock a.m., daylight saving time, June 18, 1947.

Let the record show the following appearances:

Joseph S. Wright, Esq., appearing for the Federal Trade Commission.

Edmund F. Wood, Esq., appearing for Eagle-Picher Lead Company and Eagle-Picher Sales Company.

Robert H. Ecker, Esq., and Henry E. Gardiner, Esq., appearing for Anaconda Copper Mining Company and International Smelting & Refining Company.

James D. Ewing, Esq., and E. Z. DuBose, Esq., appearing for the National Lead Company.

J. T. Welch, Esq., appearing for Sherwin-Williams Company.

Proceed.

Mr. DuBose: I call Mr. Hesselbrock.

Trial Examiner Norwood: Mr. Reporter, this is Mr. J. H. Hesselbrock, 118 Rosemont Avenue, Fort Thomas, Kentucky.

3137 J. H. HESSELBROCK was thereupon called as a witness for the Respondent and, having been first duly sworn, testified as follows:

Direct Examination by Mr. DuBose.

Q. Will you state your full name?

A. J. H. Hesselbrock.

Q. What is your address?

A. 118 Rosemont Avenue, Fort Thomas, Kentucky.

Mr. DuBose: I ask that these sheets be marked Respondents' Exhibit 169-A and the following sub-letters for identification.

Trial Examiner Norwood: It will be marked as Respondents' exhibit 169-A to N inclusive for identification.

(The document referred to was marked Respondents'

Exhibit 169-A, 169-B, 169-C, 169-D, 169-E, 169-F, 169-G, 169-H, 169-I, 169-J, 169-K, 169-L, 169-M, and 169-N for identification.)

Trial Examiner Norwood: Proceed.

By Mr. DuBose:

Q. Mr. Hesselbrock, by whom are you employed?

A. The National Lead Company, Cincinnati branch.

Q. In what capacity?

A. As assistant comptroller.

Q. How long have you been so employed?

3138 A. Nineteen years with the company and two years as assistant comptroller.

Q. And prior to being assistant comptroller, what was your employment?

A. Accounting department, in charge of accounting for our Georgia Lead Works Division.

Q. Mr. Hesselbrock, are you familiar with the books of account and records of the Cincinnati branch of the National Lead Company?

A. I am.

Q. Did you in or about the month of March this year receive a request from the home office of the National Lead Company to obtain certain information?

A. We did.

Q. And what did that request ask for, if you recall?

A. The tonnage of white lead in oil shipped into the various differential zones, the freight applying against those shipments, and the average freight charged, and the same information was asked for car load shipments of oxides.

Q. Do you remember for what year?

A. For the year 1941.

Q. And have you prepared that information?

A. That information has been prepared.

Q. And are these sheets, Respondents' Exhibit 169-A to N inclusive for identification, the work sheets and the 3139 summaries setting forth the summary of the information on the work sheets in response to that request from the home office (showing to witness)?

A. They are.

Q. And these records relate to sales of white lead in oil and car load oxides by the Cincinnati branch of the National Lead Company for the year 1941; is that correct, Mr. Hesselbrock?

A. That's correct, sir.

Q. Mr. Hesselbrock, I show you Respondents' Exhibit 169-A for identification and I ask you to state what that represents (showing to witness)?

A. The pounds of sales shown on this exhibit were the total pounds taken from our net sales statement for the year 1941. The oxide covers the same period.

Q. Your first statement related to white lead in oil?

A. White lead in oil, yes.

Q. Now under the heading "Sales heavy and soft paste," that title refers to white lead in oil?

A. That refers to the white lead in oil department as established in our accounting set-up.

Q. That is, of the Cincinnati branch of the National Lead Company?

A. That is of all branches.

Q. These figures relate to the pounds sold by the 3140 Cincinnati branch?

A. Correct.

Q. Opposite the word "par" and under the heading "Total pounds sold" at the top of this exhibit, will you state what that figure 3,000,794 represents?

A. That represents the total pounds of heavy and soft paste sold in par territories.

Q. Par territory for white lead in oil?

A. Yes, sir.

Q. Again, opposite the same statement "par" under the heading "Heavy and soft paste" and under the sub-heading "Total freight and cartage," are the figures $15,424.13. What do those figures mean?

A. That is the exact amount of freight charged against the white lead in oil department in the par zone.

Q. Now is that $15,424.13?

A. Yes, sir.

Q. Opposite the same word "par" under the same general heading and under the sub-heading "Average freight per CWT" is the figure .514. What does that represent?

A. That is the average freight per 100 pounds of white lead in oil sold in par territory and was obtained by dividing the total freight and cartage by the total pounds sold.

Q. In other words, that is 51 4/10c per 100 pounds?

A. Yes.

3141 Q. That was arrived at by dividing 3,000,794 pounds into the figure $15,424.13; is that correct?

A. That's correct.

Q. Again, under the general heading "Heavy and soft paste," opposite the line upon which are the words and figures "par plus ¼" are certain figures. Will you tell us what that entire line represents beginning with the word "par?"

A. That figure represents—the pounds in that column represents the total shipments as determined by an analysis of the individual invoices to customers in the par plus ¼ zone. The freight and cartage was obtained by analyzing the expense account vouchers chargeable to freight and cartage, soft and heavy paste, applying against the par ¼ zone.

The average of .769 was obtained by dividing the total freight and cartage by the total pounds sold in that zone.

Q. Now the figure of .769 is 76 9/10¢ per hundredweight?

A. Right.

Q. And was arrived at by dividing the $2,353.56, the total freight and cartage by 306,037½ pounds; is that correct, sir?

A. That is correct.

Q. And opposite the words and figures "par plus ⅜" are certain figures. Will you tell us what those represent sir?

3142 A. Those figures represent the total pounds sold into the par plus ⅜ zone, the freight and cartage applying against those shipments and the average freight per hundredweight which was obtained, .937 per hundredweight which was obtained by dividing the total freight and cartage by the total pounds sold in that territory.

Q. Now under the general heading "1941 sales of oxides in car load lots," will you tell us what those words and figures represent (showing to witness)? On both lines following that general heading.

In all instances the invoices were analyzed to find exactly what shipments went into the par zone and the par plus ¼ zone. The freight was obtained from vouchers and freight rates.

The total freight was divided by the total number of pounds to obtain the average freight per hundredweight.

Q. And on the first line are the total pounds sold of oxides in car load lots in par territory with the total freight and cartage applicable there plus the average freight per hundredweight in par territory; is that correct?

A. That is correct.

Q. And the second line represents similar figures for the par plus ¼ oxide zone?

A. Correct.

Q. For car load lots?

3143 A. Yes, sir.

Trial Examiner Norwood: Off the record.

(Discussion off the record.)

Trial Examiner Norwood: On the record. Proceed, Mr. DuBose.

By Mr. DuBose:

Q. I show you Respondents' Exhibit 169-B for identification and I direct your attention to the statement in the left-hand column about one-third of the way down that column, the heading "Total sales," and underneath that the figure of 3,767,336 and ask you what that figure represents, Mr. Hesselbrock?

A. That figure represents the total sales of soft and heavy paste during the year 1941 as shown on our net sales statement.

Q. That is by the Cincinnati branch?

A. By the Cincinnati branch, yes.

Q. Is that a record kept in the ordinary course of business?

A. It is our standard procedure.

Q. And is it divided showing sales by years?

A. Each year is kept separately and this was a sales statement for the year 1941.

Q. So from that you are able to determine that the Cincinnati branch in 1941 sold 3,767,336 pounds of white lead in oil for that year; is that correct?

3144 A. That is correct.

Q. Just below that and in the same column is the word "freight," and underneath that is the figure of 22,093.89. Will you tell us what that word and those figures represent, sir?

A. The word "freight" represents the total freight and cartage expense chargeable against the white lead in oil department for the same year 1941 for the Cincinnati branch.

Q. And that is $22,093.89?

A. Correct.

Q. Where did you obtain that figure?

A. From our expense statements as regularly calculated. That is a standard report.

Q. Was that in the same statement that you obtained this poundage from?

A. Well, it is a separate statement but it pertains to the same business.

Q. It is a separate book or record, however?

A. It is a separate record entirely.

Q. Coming to the second, third and fourth columns on this same exhibit, will you tell us what they represent and from what records you obtained that information (showing to witness)?

A. In the second column that represents a recap of our sales into the Tennessee and Virginia territories

3145 which are listed as zone par plus ¼.

Q. Is that by pounds?

A. In pounds; yes, sir. These were obtained by analyzing each invoice for shipment into that territory for the year 1941.

Q. Now how did you obtain those invoices?

A. Well, we took all of the invoices for the year 1941 and broke them down into zone par plus ¼ and zone par plus ⅜ and analyzed the individual shipments that went into those zones and took the par territory by difference.

Q. In other words, you obtained the pounds sold in par plus ¼ and par plus ⅜ zone respectively, and the total of that is listed here for the par plus ¼ zone of 3,306,370½ pounds; is that correct?

A. That is correct.

Q. To that you added the pounds sold in the par plus ⅜ zone which is 460,505 pounds?

A. Right.

Q. And the total of those figures you subtracted from this figure in the left-hand column under the heading "Total sales," 3,767,336?

Trial Examiner Norwood: Off the record.

(Discussion off the record.)

Trial Examiner Norwood: On the record. Proceed, Mr. DuBose.

3146 Mr. DuBose: I will rephrase that question.

By Mr. DuBose:

Q. The total pounds under the heading "Tennessee and Virginia, par plus ¼" were added to the total pounds under Alabama, Georgia, North Carolina and South Carolina, par plus ⅜ and those two figures were subtracted from the pounds shown under the heading in the left-hand column, "Total sales" to arrive at the pounds sold in the par territory; is that correct?

A. That is correct.

Q. Now opposite the word "freight" are certain figures under the heading "par plus ¼, par plus ⅜ and par." Will you tell us what those figures represent and from what source you obtained them?

A. These figures were obtained from an analysis of our expense account.

Q. What do they represent?

A. Par plus ¼ was added to the par plus ⅜ territories and subtracted from the total freight charged against the white lead in oil department to obtain the freight and cartage charged in par territory.

Q. Now these figures represent dollars and cents of freight and cartage; is that correct?

A. Correct.

Q. And the total of the freight figures under the
3147 par plus ¼ were added to the total of the figures under
par plus ⅜ and the sum of those was subtracted from the figure in the left-hand column under the heading "freight" to arrive at the applicable freight and cartage charge for par territory which is in the last or fourth column under the heading "par"; is that correct?

A. That is correct.

Q. Underneath that line and opposite the words "ACGE rate," are certain figures. What do those represent?

A. Those represent the averages in each territory, in each zone.

Q. The average what?

A. The average freight rate in each zone.

Q. Per what?

A. Per hundredweight.

Q. So that the three figures there under the second, third and fourth columns represent respectively the average freight per hundredweight for white lead in oil shipments from the Cincinnati branch for 1941 in par plus ¼, par plus ⅜ and par zones; is that correct?

A. That is correct.

Q. Where were those freight figures under the heading "par plus ¼" and "par plus ⅜" obtained?

A. They were obtained by analyzing individual vouchers which had been charged to the white lead in oil ex-
3148 pense, freight cartage expense account, for par plus ¼ zone and par plus ½ zone. The sum of the freight charged against these two zones was subtracted from the total freight to obtain the freight and cartage in the par zone.

Q. Now I show you Respondents' Exhibit 169-D and E for identification and ask you what those sheets represent (showing to witness)?

A. Exhibits 169-D and 169-E represent the voucher numbers on which freight was charged to the white lead in oil department.

Q. Are those all the vouchers for sales in 1941?

A. They are all the vouchers for sales in 1941.

Q. And from those vouchers, you sorted out the vouchers dealing with shipments to the differential territories; is that correct?

A. That is correct.

Q. And from those differential territory vouchers, you obtained the actual freight figures shown on this Exhibit, Respondents' Exhibit 169-B for identification?

A. That is correct.

Q. Now getting back to Respondents' Exhibit 169-B for identification, under the heading "Sales WLO 1941" there are certain words and certain figures. Without reading the figures through will you tell us what they represent and what those words represent?

3149 Trial Examiner Norwood: Off the record.

(Discussion off the record.)

Trial Examiner Norwood: On the record.

The Witness: We attempted to give here an estimate of the sales which were made through agents and the other sales to industrialists and other customers.

By Mr. DuBose:

Q. Now you say an estimate. Where did you obtain those figures?

A. Our 1940 and 1941 sales statements contain a breakdown of the total sales sold through agents.

Q. Well then, the figure opposite the words "Through agents" which begins with the numeral 3, was obtained from books of the Cincinnati branch kept in the regular course of business, were they not?

A. That's right.

Q. Was that the same record from which you obtained the pounds under the heading "Total sales"?

A. The same record, the net sales statement.

Q. And that record does actually show the number of pounds which were sold through agents; is that correct?

A. That's correct.

Q. And you were able to obtain that for the two years, 1940 and 1941?

A. That is correct.

3150 Q. As this exhibit shows?

A. Correct.

Q. So it is not just an estimate, is it, Mr. Hesselbrock?

A. No, sir. It is based on actual figures for those two years.

Q. Now there are certain percentage figures opposite the figures which show the pounds sold through agents or to others. Will you tell us what those percentage figures represent?

A. Assuming the total sales as 100 per cent, the sales through agents represent 89.49 per cent. This was obtained by dividing the sales through agents by the total sales in pounds.

Q. That is shown for both 1941 and 1940 there; is that correct?

A. That is correct.

Q. I show you Respondents' Exhibit 169-C for identification and ask you to state what this sheet represents (showing to witness)?

A. This sheet is an accumulation of the breakdown of freight to par plus ⅓ zone and par plus ⅔ zone as detailed on other work papers.

Q. And are the totals under the respective headings "par plus ⅓" and "par plus ⅔ and par" on Respondents' Exhibit 169-C for identification the same as the corresponding figures under the same headings opposite the word "freight" on Respondents' Exhibit 169-B for identification? 3151

A. They are.

Q. In the left-hand column under the heading which is on Respondents' Exhibit 169-C for identification, the heading "No. 22 cartage and freight 1941" are certain figures. Will you tell us what the figures under that heading represent and from what source you obtained them?

A. The number 22 represents the number of the expense account in our cost system. Freight and cartage is the name of the account. The total dollars represent the total freight and cartage chargeable against the white lead in oil department for the year 1941.

Q. I show you these work sheets which have been marked Respondents' Exhibit 169-F to J inclusive for identification and I ask you to tell us what they represent? You might look at all of them first.

A. The exhibits No. 169-F through 169-J represent the analysis of individual invoices.

Q. What do they show?

A. They show those shipments which went into par plus ¼ territory and par plus ⅜ territory.

Q. Do they relate to pounds or to freight?

A. Pounds only.

Q. So these sheets are the work sheets showing
3152 the pound or pounds of white lead in oil sold in the
differential territory served by the Cincinnati branch for the year 1941 which were obtained from actual invoices; is that correct, sir?

A. That's correct.

Q. And the totals of these pages, Respondents' Exhibit 169-F through J inclusive for identification are set forth on both Respondents' Exhibit 169-A and 169-B for identification, are they not?

A. They are set forth on Exhibit 169-B for accumulation and the totals transferred to Exhibit 169-A.

Q. In other words, the figures on Respondents' Exhibit 169-B for identification at the top of the page represent the page-by-page totals set forth on these documents, Respondents' Exhibit 169-F, to 169-J inclusive; is that correct?

A. That is correct.

Q. I show you Respondents' Exhibit 169-K to M inclusive for identification and I ask you what these three sheets represent (showing to witness)?

A. The schedules, Exhibit 169-K to 169-M represent an accumulation of individual items of freight charged against par plus ¼ zone and the par plus ⅜ zone.

Q. And where were those figures obtained?

A. They were obtained from the vouchers on which the freight was originally paid.

3153 Q. And are the totals appearing on Respondents' Exhibit 169-K, L and M for identification the figures which appear on Respondents' Exhibit 169-C for identification?

A. Yes, sir.

Q. And then the grand total of these figures which appear on Respondents' Exhibit 169-C for identification appear opposite the word "freight" and under the particular heading on Respondents' Exhibit 169-B for identification?

A. That is true.

Q. I show you Respondents' Exhibit 169-N for identification and I ask you to state what that represents (showing to witness)?

A. It represents the total sales of oxides in car load lots, pounds and freight.

Q. What territories?

A. Par plus ¼ and par territories.

Q. And that includes, you say, both pounds and freight in dollars and cents?

A. That is correct.

Q. And from what source were those figures, both as to pounds and freight rates, obtained?

A. The pounds were obtained from actual invoices covering sales in those particular territories. In the case of par plus ¼ and the state of Tennessee, the freight rate was applied against the total pounds.

3154 Q. Now taking the heading "par plus ¼, Alabama" on this Respondents' Exhibit 169-N for identification and the first column on the left-hand side, will you state what the words "St. L. to Birmingham, Alabama" mean?

A. It means these shipments went forward from our St. Louis branch to customers in Birmingham, Alabama.

Q. There is no oxide plant in Cincinnati, is there, Mr. Hesselbrock?

A. No.

Q. When Cincinnati obtained an order for a car load from a customer in Birmingham, Alabama, from what plant was that material shipped?

A. St. Louis.

Q. To whom was the freight on that shipment from St. Louis charged?

A. It was charged to the Cincinnati branch.

Q. By inter-branch vouchers?

A. Yes, sir.

Q. And from those vouchers you are able to ascertain that there were only these five car load shipments to par plus ¼ oxide territory so far as car load lots are concerned; is that correct?

A. Not from the vouchers but from the invoices.

Q. From the invoices?

A. Yes, sir.

3155 Q. Is there any difference?

A. No, because one would apply against the other. However, in the case of Alabama the freight rate was applied against the total weight of the shipment.

Q. In other words, under the heading "Freight rate," the figure 52 encircled is the car load freight rate for oxides from St. Louis to Birmingham; is that correct?

A. That is correct.

Q. And the total pounds sold by the Cincinnati branch in the par plus ¼ territory and shipped from St. Louis was simply multiplied by this rate of 52¢ per 100 pounds to arrive at ~~the total~~ freight applicable against these shipments; is that correct?

A. That is correct.

Q. Now under the heading "par, Tennessee," will you tell us what the column on the left represents?

A. It represents the weight in pounds as determined by an analysis of our invoices for shipments during the year 1941 into the Tennessee area or the Tennessee territory.

Q. That is for oxides in car load lots?

A. Oxides in car load lots only.

Q. Now under the same heading, what does the column on the right represent?

A. It represents actual freight paid.

Q. From what source was that obtained?

3156 A. That was obtained from the invoices of the branch.

Q. Now under the third general sub-heading on this exhibit, Respondents' Exhibit 169-N for identification, is the word "par." Will you tell us what that word means?

A. The word "par" means that that was shipments into the par zone.

Q. Other than Tennessee; is that correct?

A Other than Tennessee; yes, sir.

Q. Now under that heading "par" are two columns. Will you tell us what the left-hand column represents?

A. The left-hand column represents the weight of the shipments as determined by an analysis of the invoices.

Q. And will you tell us what the right-hand column represents?

A. It represents the freight actually charged against those invoices.

Q. Was that shown on the invoices themselves?

A. Yes, it would be.

Q. Now in case the Cincinnati branch obtained an order for a car load lot of oxides, from what shipping point would those oxides be shipped?

Mr. Wright: Objection, your Honor. That is going into the contents of the document rather than any characterization or identification. It is not yet in evidence.

3157 Mr. DuBose: I am simply trying to show how these figures are arrived at.

Trial Examiner Norwood: Read the question, please.

(The reporter read the question as follows:

"Q. Now in case the Cincinnati branch obtained an order for a car load lot of oxides, from what shipping point would those oxides be shipped?")

Trial Examiner Norwood: I think he can answer that irrespective of the exhibit. He can bring that out.

Objection overruled.

The Witness: Well, that is a question which I cannot answer because I do not handle the routing of any orders.

By Mr. Du Bose:

Q. Do you know whether that would be shipped from Cincinnati?

A. In no case.

Q. Do you know from what possible points it might be shipped other than Cincinnati?

A. It would or could be shipped from our St. Louis branch, from our Chicago branch, from our Philadelphia branch. That is all.

Q. When they were shipped—and I take it then that all of these car load shipments in par Tennessee and in par territory which you have listed there—they were

3158 not shipped from Cincinnati; is that correct?

A. No shipments listed were made from Cincinnati.

Q. They were all made from other branches of the National Lead Company; is that correct?

A. That is correct.

Q. Now did these other branches in each instance bill the Cincinnati branch for the freight charges?

A. Yes, sir.

Q. Was it from those inter-bills or invoices that you obtained these freight figures?

A. Yes, sir.

Q. And are the totals on this exhibit, Respondents' Exhibit 169-N for identification, as to both pounds and freight, the totals which appear under the heading "1941 sales of oxides in CL lots, on Respondents' Exhibit 169-A for identification?

A. They are.

Q. Mr. Hesselbrock, were these records, Respondents' Exhibit 169-A to N inclusive for identification prepared by you or under your direction?

A. They were.

Q. And did you check the totals and the work sheets and the figures thereon?

A. Not personally in all cases.

Q. Some others worked with you on the individ-
3159 ual invoices; is that correct?

A. Right.

Q. Who prepared the totals which are listed on Respondents' Exhibit 169-A and B and C for identification (showing to witness)?

A. I prepared the totals on Exhibit 169-A. The totals on Exhibit 169-B and 169-C were prepared by an assistant in the accounting department.

Q. Who was working under your direction?

A. Under my direction; yes, sir.

Mr. DuBose: I offer in evidence Respondents' Exhibit 169-A to N inclusive for identification.

Mr. Wright: I object to the receipt of these documents in evidence, your Honor. There is no basic data available here from which it can be ascertained what these figures represent.

An examination of this witness, since I have not yet seen these papers, is completely unintelligible to me and there are no records of any sort from which we can check here the method by which these things were prepared and what they represent.

Mr. DuBose: Your Honor, there has been just about as complete an identification as possible. This man obtained these figures from actual invoices, actual company records. We haven't these records with us, of course.

3160 Trial Examiner Norwood. Those records are in existence, are they?

The Witness: They are in existence.

Trial Examiner Norwood: Where are they?

The Witness: In Cincinnati.

Mr. Du Bose: And they will be made available.

Trial Examiner Norwood: They will be made available to the Commission's accountants?

Mr. Du Bose: At any time.

Trial Examiner Norwood: And at such time will you go over it with the Commission's accountant so as to show him the source in each case and so on, so that they may check these documents completely?

The Witness: If I am directed to do so by my superior.

Trial Examiner Norwood: I should have asked that with regard to counsel.

Mr. Du Bose: Yes, your Honor.

Mr. Wright: I object to putting that in in this fashion. When the Commission prepared similar tabulations the work sheets were made from the records in the possession of these companies and they were left with the company's accountants and they were checked over and worked out, so when it came time to consider the question of putting them in evidence, both sides knew what they were.
3161 Here are documents which I have never seen before and which are thrown at me in this fashion and by a ruling permitting them to go in subject to a ruling of basic documents, I am put to the burden and the Commission is put to the burden of going through the books and records of all these branch offices here to determine whether or not these things were properly made, and I don't think that is proper.

Trial Examiner Norwood: The Commission has a very expert and capable force maintained for just that purpose, and I should think that they would prefer examining this data in the office there and with this expert here to show them what it is.

It would be more satisfactory than bringing some of the stuff here to New York, and you would be inquiring about other material and it would be in Cincinnati. We receive this kind of information that is being offered here all the time in these cases.

Mr. Wright: My objection is to the receipt of it in evidence before we have had an opportunity. I mean to receive such secondary evidence as this, it is necessary to have some agreement of counsel ordinarily if we follow the rules on the matter.

Certainly I haven't been approached on that problem and I have had no opportunity of examining this material.

Trial Examiner Norwood: Counsel has said that 3162 he has agreed to make all this material available to the Commission. Now if I receive it, I am going to receive it under that condition.

Mr. Wright: Your Honor, I would suggest rather than admitting it subject to a motion to strike on the basis of our doing that, that you defer a ruling on the admission of the documents until we have had an opportunity of examining the basic data, in which case I may be able to withdraw my objection.

Trial Examiner Norwood: I think inasmuch as the data is as shown here that I will overrule the objection and receive these exhibits in evidence subject to the conditions here that the counsel make these completely available to the Commission and the Commission's experts.

Mr. Wright: Your Honor, I would like to suggest also as a part of that, that I be given an opportunity of deferred cross-examination of this witness with regard to these exhibits.

Trial Examiner Norwood: You may call him for further cross-examination.

Mr. Wright: Is it understood that he will be available to me for further cross-examination on this as part of the admissibility of these documents?

Mr. Du Bose: Certainly.

Trial Examiner Norwood: Yes.

3163 Mr. Du Bose: We will also have photostats of these made and substitute photostatic copies thereof.

Trial Examiner Norwood: It will be received in evidence as Respondents' Exhibit 169-A to N inclusive.

(The document referred to, heretofore marked for identification RESPONDENTS' EXHIBIT 169-A, 169 B, 169-C, 169-D, 169-E, 169-F, 169-G, 169-H, 169-I, 169-J, 169-K, 169-L, 169-M and 169-N, was received in evidence.)

Trial Examiner Norwood: Off the record.

(Discussion off the record.)

Trial Examiner Norwood: On the record. We will take a five-minute recess at this time.

(A five-minute recess was taken.)

3164 Trial Examiner Norwood: Come to order. Proceed.

Mr. Wright: I would like to request a further cross-examination of this witness.

Mr. Du Bose: That is perfectly satisfactory.

Trial Examiner Norwood: Have you had all the direct you want on these documents?

Mr. Du Bose: Yes, sir.

Trial Examiner Norwood: Are there any further explanations that you would like to bring out?

Mr. Du Bose: Not at this time, although there might be more on the cross-examination.

Trial Examiner Norwood: The witness is excused, to be recalled at some future time, and the counsel for the National Lead Company undertakes to produce him for said examination.

Mr. Du Bose: Yes, sir.

(Witness excused.)

Trial Examiner Norwood: Proceed, Mr. Du Bose.

Mr. Du Bose: I call Edward L. Baum.

Trial Examiner Norwood: Mr. Reporter, this is Mr. Edward L. Baum, 711 9 Shore Road, Brooklyn, New York.

EDWARD L. BAUM was thereupon sworn as a witness on behalf of the company and, having been first duly sworn, testified as follows:

3165 *Direct Examination by Mr. DuBose.*

Q. What is your full name?

A. Edward L. Baum.

Q. What is your address?

A. No. 711 9 Shore Road, Brooklyn, New York.

Q. Mr. Baum, by whom are you employed?

A. I am employed by the National Lead Company, Atlantic Branch, New York City.

Q. No. 111 Broadway, New York City?

A. Yes.

Q. In what capacity?

A. I am assistant to the controller.

Q. And how long have you been so employed?

A. About 12 years in that capacity, 30 years with the company.

Q. And prior to being assistant controller, what were your duties?

A. Well, I was cashier for 2 years and travelling auditor for 2 years before that, and office manager in the National Lead Company crooke works in Brooklyn.

Q. In 1941, you were assistant controller?

A. Assistant to the controller.

Q. Assistant to the controller?

A. Yes, sir.

3166 Q. And you are familiar with the books, records, and books of account of the Atlantic Branch of the National Lead Company for the year 1941?

A. Yes, sir.

Mr. Du Bose: I ask that these two sheets be marked Respondent's Exhibit 170-A and B for identification.

Trial Examiner Norwood: They will be marked Respondent's Exhibits 170-A and B for identification.

(Whereupon, the documents referred to were marked Respondent's Exhibits 170-A and 170-B for identification.)

Trial Examiner Norwood: Proceed, Mr. Du Bose.

By Mr. Du Bose:

Q. Mr. Baum, I show you Respondent's Exhibit 170-A for identification and ask you to tell us what that record represents (showing to witness)?

A. This represents a record of the total sales of our heavy and soft paste white lead in oil in the year 1931.

Q. What year?

A. Pardon me, in the year 1941. That is broken down into the apportion of that total which was shipped to par zone and also the portion which went to the plus ⅜ths zone. It further records the total freight and cartage applicable to the shipments in those two zones. An arithmetical calculation was then made which gives the average cost per hundredweight freight and cartage for those two zones.

3167 Q. Is that with reference to sales by the Atlantic Branch only?

A. Yes, sir. It also shows a summary or a total of our oxides department sales for the branch only, and the freight and cartage paid by the branch applicable there which was again averaged out through an arithmetical calculation to show the average freight and cartage cost per hundredweight of oxides shipped.

Q. That shows only par shipments?

A. It does. It shows only par shipments because an analysis of the records disclosed that there were no shipments other than par from the Atlantic Branch.

Q. Now, I show you Respondent's Exhibit 170-B for identification and I ask you whether this is the work sheet from which the totals under the heading "heavy and soft paste white lead" were taken as shown on Respondent's Exhibit 170-A for identification?

A. I would answer that by stating that this exhibit, Respondent's Exhibit 170-B, is the work sheet from which the totals shown for shipments to the plus 3/8ths zone were derived.

Q. And that does not show—

A. That does not show the grand total for the total shipments of the Atlantic Branch.

Q. Now, I notice on Respondent's Exhibit 170-A
3168 for identification under the heading "heavy and soft paste white lead" and under the sub heading "total pounds sold" at the bottom of that column a figure, and I ask you to state what that figure is beginning with the numerals 19.

A. That figure is the total sales of heavy and soft paste white lead by the Atlantic Branch in the year 1941 to our customers, stated in pounds.

Q. From what source was that figure which appears at the bottom of that column on Respondent's Exhibit 170-A for identification taken?

A. That figure was taken from the sales accounting record of the heavy and soft paste white lead sales for the year 1941.

Q. Is that a record kept in the ordinary course of business by the Atlantic Branch?

A. That is. That is our regular standard procedure. I took that figure from that record.

Q. Now, going to Respondent's Exhibit 170-B for identification, opposite the heading "Florida" the second column, the heading "in pounds," or "in lbs." underneath that heading are certain figures. Will you tell us what those figures in that second column represent?

A. Well, these figures represent the portion of the total sales referred to a moment ago. that the point of destina-
tion of our shipments being in the State of Florida
3169 and identified by the several cities therein.

Q. Now, do these figures under that second column under the heading "in pounds" represent the pounds of white lead in oil sold by the Atlantic Branch to customers in these particular named towns in Florida and Georgia?

A. Yes, sir, they do.

Q. And do those represent all of the sales of white lead in oil in the 3/8ths zone by the Atlantic Branch for the year 1941?

A. Yes, sir, they do.

Q. Now, from what records were these figures showing the pounds, sold to customer in particular cities obtained? What records of the Atlantic Branch?

A. Well, these figures were taken from our sales analitical records which are checked periodically, I might say daily, with the sales accounting records. The only difference being that the sales accounting record is in total and the sales analytical records represent tabulations taken from the same source by point of destination.

Q. Now, you say sales analytical records. In what form are those records kept?

A. These records are kept on a visible card system analysis.

Q. And are those cards kept town by town?

A. They are.

Q. For the 3/8ths territory; is that correct?

3170 A. Well, by inference, yes. It is kept town by
town by Florida and Georgia, which happens to be a 3/8ths territory.

Q. So that they show all the sales by towns of the Atlantic Branch for the year 1941 in Florida and Georgia?

A. Yes, sir, they do.

Q. And Florida and Georgia are the only two states served by the Atlantic Branch for white lead in oil; is that correct, in 1941?

A. No. The only two states served in the 3/8ths zone, yes, sir, that's correct.

Q. Now, taking as an example the first town listed under the heading "Florida," the town of Daytona, the figure in the second column you have testified, I believe, represents the pounds of white lead in oil sold by the Atlantic Branch in 1941 to customers in that town of Daytona, Florida; is that correct?

A. That's correct, net weight.

Q. Net weight?

A. Yes.

Q. The third column "revised rates, lcl" has a figure opposite the town Daytona. Will you tell us what that figure represents?

A. Well, that figure represents the lcl rate, the minimum lcl rate from point of shipment to point of destination.

Q. Point of shipment from the Atlantic Branch?

3171 A. From the Atlantic Branch point of shipment to the point of destination being Daytona in this case.

Q. Now, under the fifth column under the heading "gross wt." is a figure opposite the town Daytona. Will you tell us what that figure represents?

A. Well, inasmuch as we do not record the gross weight of every shipment in summary form for sales record purposes, we felt that for this presentation we should add six per cent to the net weight to approximate what was considered to be the gross weight of these shipments to Georgia and Florida.

Q. In other words, the shipping weight of material is in excess of the actual pounds of the material sold; is that correct?

A. That's correct.

Q. And to arrive at that shipping weight you added six per cent to the pounds of material sold; is that correct?

A. Yes, sir.

Q. Now, under the next column under the heading "CL" is the figure .68 opposite the town Daytona. Will you tell us what that is?

A. Well, that represents the carload rate for white lead in oil shipments originating in Brooklyn and having a destination of Daytona, Florida.

Q. Under the next heading "carload weight," there is a figure opposite Daytona. Will you tell us what that

3172 represents?

A. That represents the minimum carload weight that pertains to that rate for shipments to Daytona, Florida.

Q. In other words, in order to obtain a carload rate for a shipment to Daytona, you would have to ship at least that much or that many pounds; is that correct?

A. Yes, sir.

Q. Now, under the next column is a heading which I wish you would read for us (showing to witness).

A. That says revised calculation. These totals—well, that is what it says.

Q. Revised calculation?

A. Yes.

Q. Now, underneath that, opposite the town Daytona, is a figure. Will you tell us what that represents?

A. This column referred to represents the cost of shipping the quantity specified calculated at the lcl rate to the point of destination indicated on each line at the respective rates and includes a local cartage to the carrier. That is to say, from our point of shipment in Brooklyn to the carrier.

Q. Arithmetically, what is that figure opposite Daytona, Florida, under the heading "revised calculation"?

A. Well, using Daytona to illustrate, the gross weight shipped to Daytona multiplied by the lcl rate to Daytona—

Q. That being in the third column?

3173 A. In the second column.

Q. In the second column?

A. I stand corrected. That is the third column.

Q. Under what heading?

A. Under the heading "lcl." That rate plus the average local cartage cost would equal the amount I have just referred to, which shows in this column marked—shall I read it?

Q. Revised calculation?

A. Revised calculation based on actual weights.

Q. Now, I call your attention to the next column headed "freight gross weight calculated on carload rates" and to a figure opposite the word Daytona and ask you what that figure represents?

A. Using the same gross weight shipped to Daytona, but applying the carload rate previously referred to, pertaining to Daytona, the multiplication was made and that figure indicates the extension or the cost thereof.

Q. In other words, that figure under the heading "freight gross weight calculated on carload rates" is the gross weight multiplied by the carload rate to Daytona; is that right?

A. That's correct.

Q. I call your attention to the last column on the right under the heading "calculation based on one carload shipment to each point of destination," and ask you to
3174 what that refers?

A. That calculation, again using Daytona to illustrate, represents the cost of one carload shipment of white-lead in oil to Daytona, Florida, calculated at the carload rate.

Q. Is that calculated on the minimum carload weight applicable to shipments to Daytona?

A. Yes, sir.

Q. Now, the figures under the same columns opposite the other towns in Florida and in Georgia were all arrived at by similar calculation; is that right?

A. Yes, sir.

Q. Going back to the heading in the third column "revised rates lcl," will you tell us where those figures were obtained?

A. Well, all of these rates were checked through our traffic department.

Q. Is that the general office traffic department?

A. Yes, sir, the general office traffic department of the company.

Q. And you asked them for the applicable lcl rates to these towns from either Brooklyn or New York, as the case might be, and they gave you those figures; is that correct?

A. That's correct. And in the case of the notation, "revised rates"—to explain the notation "revised rates," when checking the original calculation, errors were
3175 noted and accordingly the revised or correct rates
were recorded and these calculations are all made on these so-called revised rates.

Q. Just to the right of the revised rate lcl is a statement "original state," with figures underneath that for particular towns. Do I then take it you mean that where the original rate was not corrected, you found that that was correct?

A. That is a correct statement.

Q. But in either case, it is the lcl rate?

A. Yes, sir, in either case.

Q. Now, under the fifth column, the fifth general column under the heading "CL" are certain figures opposite each town. Will you tell us what those figures are and from what source you obtained them?

A. Those figures represent the carload rates to the respective points of destination and were checked through the company traffic department.

Q. You obtained those rates from the same source as the lcl rates?

A. Yes, sir.

Q. Now, going back to Respondent's Exhibit 170-A for identification, under the heading "heavy and soft paste white lead," the second column entitled "total freight and
cartage" has at the bottom thereof a figure. What
3176 does that figure represent?

A. That figure is taken from our expense accounting records which tell us how much freight and cartage expense was chargeable to the heavy and soft paste white lead department of the branch for the year 1941, the shipments to customers.

Q. Now, you say "our records." Whose records are those?

A. The branch records.

Q. And in what form are those records kept?

A. Well, they are bound. They are pencilled records bound in book form.

Q. And they show total freight and cartage paid by the Atlantic Branch in connection with sales of white lead in oil for the year 1941; is that correct?

A. Yes, sir.

Q. Now, going back to Respondent's Exhibit 170-B for identification again, at the bottom of the second column entitled "in pounds," is a figure. Is that figure the total pounds of white lead in oil sold by the Atlantic Branch in 1941 for Florida and Georgia?

A. Yes, sir.

Q. Then under the heading in the forth column "gross weight," is a figure. What does that represent?

A. That represents the net—the total net weight just
referred to increased by six per cent. In other words,
3177 106 per cent of the figure in the second column which
we estimate to be the weight of the material shipped
to Georgia and Florida in 1941.

Q. In other words, the figure, the total of the gross weight, represents 106 per cent of the weight of the material actually sold which in your opinion was a correct estimation of the shipping weight of that material; is that correct?

A. I would say it is the best estimation of the actual material billed in Georgia and Florida.

Q. Upon what factors did you base that estimate or what factors did you consider in arriving at your estimate of the shipping weight as being 106 per cent of the net weight of material sold?

A. Well, the company sells this material in various sized packages which, of course, represent the tare weight.

Q. What do you mean by that?

A. That is the weight of the package in which the material is sold.

Trial Examiner Norwood: That is exclusive of the container?

The Witness: In the case of white lead in oil, they usually ship the container in the package. They don't in other words, box it in the sizes that we ship to Georgia and Florida.

Trial Examiner Norwood: Doesn't that six per
3178 cent take care of the weight of the container?

The Witness: Yes, sir. I said package, but it is really a container.

By Mr. DuBose:

Q. Under the sixth column, the heading "revised calculation, amount" and at the bottom of that column there is a figure. Will you tell us what that total figure represents?

A. The figure referred to represents the total amount of freight and cartage expense calculated on the actual weights shipped on the basis of the lcl rates. I would like to correct that. Based upon the rate applying to the particular points of destination.

Q. What rate?

A. The lcl rate.

Q. So that this total under the column headed "revised calculation, amount" represents the total of the freight and cartage for shipments of white lead in oil in 1941 calculated by multiplying the actual weight shipped town by town as increased by six per cent to approximate shipping weight, and as multiplied by the particular lcl rate applicable to that particular town, and represents, rather, the total of all the shipments to these particular towns calculated in that fashion; is that correct?

A. It is correct, with the exception that we also include the local cartage cost to the carrier from the point of 3179 shipment.

Q. Where is that shown?

A. That is shown up here at the top of the column.

Q. What is that average cartage?

A. That average cartage cost is .0885 cents per hundred-weight.

Q. Was that in each case added to the lcl rate?

A. It was.

Q. Does this figure include cartage under the lcl?

A. It does not.

Q. It does not?

A. No.

Q. So that taking Daytona as an example, the pounds sold to Daytona as increased by six per cent and multiplied by the lcl rate and then there was added a figure showing cartage per hundredweight; is that correct?

A. That's right.

Q. Now, opposite this total figure that appears at the end of the column "revised calculation, amount" and to the left are the letters "A.V.G." and a figure, both of which are encircled in pencil. Will you tell us what those letters and that figure mean?

A. Well, after performing the calculation illustrated for Daytona for all points of destination and adding up the total freight and cartage expense, that amount divided 3180 by the net weight of the total shipments to Florida and Georgia gave us an average cost which is indicated in the circle.

Q. And the letters "A.V.G." mean average?

A. An arithmetical average.

Q. And average for how many pounds?

A. Per hundredweight.

Q. Now, which figure was divided into the total appearing at the bottom of the column "revised calculation, amount"? The figure showing the net weight of the material shipped or the figure showing the gross weight? That is, the net figure as increased by six per cent?

A. The figure showing the net weight of the shipment was used as the divisor, sir.

Q. Now, the figure which shows the total of the freight and cartage as calculated on the lcl rate and which appears at the bottom of the column entitled "revised calculation, amount" also appears, does it not, on Respondent's Exhibit 170-A for identification, opposite the words "plus ⅜ths" and under the second column entitled "total freight and cartage"; is that correct?

A. Yes, sir.

Q. And the figure on Respondent's Exhibit 170-A for identification opposite the words "plus ⅜ths," under the heading "average freight per hundredweight," are the
same as the figures encircled preceded by the letters
3181 "AVG" which appear on the left of the total under
the column "revised calculation, amount" on Respondent's Exhibit 170-B for identification; is that correct?

A. Yes, sir.

Q. Now, will you tell us how the figures on Respondent's Exhibit 170-A for identification, under the general heading "heavy and soft paste white lead" opposite the word "par" were arrived at?

A. They were arrived at by subtracting from the total sales shown on our sales accounting records the net weight of the shipments to the plus ⅜ths zone, the difference representing par shipments.

Q. Did you subtract the net weight or the gross weight of the shipments to the differential territory?

A. We subtracted the gross weight of the shipments to the plus ⅜ths zone from the total net weight—from the net weight of the total shipments.

Q. And the result of that was the figure appearing opposite the word "par" under the heading "total pounds sold"?

A. That's correct.

Q. Now, will you tell us how the figures appearing on Respondent's Exhibit 170-A for identification, opposite the word "par" and under the heading "total freight and cartage" were determined?

A. From the total freight and cartage expense of
3182 our white lead in oil department for the year 1941
expense records, we deducted the calculated amount of freight and cartage for the shipments to Georgia and Florida listed on Respondents' Exhibit 170-B. The difference applying to our par zone.

Q. Now, will you tell us how the figure on Respondent's Exhibit 170-A for identification, opposite the word "par" under the heading "average freight per hundredweight" was determined?

A. Well, having determined the amount of freight and cartage applicable to the par zone; that figure was divided by the total pounds sold in the par zone, giving us an arithmetical average cost of freight and cartage in the par zone.

Q. And that is an average freight and cartage cost per hundredweight?

A. Per hundredweight, yes.

Q. Mr. Baum, I call your attention to Respondent's Exhibit 170-B for identification, the next to the last column headed "freight gross weight calculated on carload rates," and to the figure at the bottom of that column, and ask you what that figure represents (showing to witness)?

A. That figure—you refer to the amount?

Q. Yes, to the amount.

A. The amount at the bottom of that column represents the cost of delivering white lead in oil to Georgia and Florida in the year 1941 to the respective points of
3183 destination, each of which was calculated on a carload rate basis.

Q. And that is the total figure for freight and cartage for all of these shipments based upon carload rates; is that correct?

A. That's correct.

Q. To the left of that total figure and in a pencil circle are the letters "AVG" and a figure. Will you tell us what those letters and that figure represent?

A. That represents the average cost per hundredweight of material delivered to Florida and Georgia, calculated by dividing that figure, by dividing the amount by the net weight of materials shipped.

Q. In other words, that figure just to the left of the total amount figured on the carload rate, is equivalent to the average cost to the Atlantic Branch per hundredweight of these particular shipments to these particular towns in Florida and Georgia and in the particular amounts as figured on the carload basis, the carload rate basis?

A. Yes, sir. That is a calculation only figured on a carload basis. It is not taken from any record.

Q. And those carload rates were obtained, as you stated, from the traffic department of the general office?

A. We are still using the same rates referred to previously, carload rates.

3184 Q. Now, I show you the last column on this exhibit, Respondent's Exhibit 170-B for identification, and I call your attention to certain figures which appear on the last two lines underneath that heading, and ask you what they represent?

A. Well, the next to the last line represents an amount arrived at by calculating the cost of shipments to Georgia only, based on one carload shipment to each point of destination listed for Georgia.

Q. At the minimum carload weight?

A. At the minimum carload weight and carload rates applying thereto.

Q. What is the last figure on that line, under that column? What does that represent?

A. The last figure on that line represents a cost calculated using the same method but covering both the states of Georgia and Florida. In other words, the figure referred to—the amount referred to a moment ago was simply a sub-total for the State of Georgia. In working up these figures we show separate totals for Georgia and Florida, and then a grand total.

Q. And this last figure is the total of the two sub-totals for Georgia and Florida?

A. That's correct.

Q. Now, to the left of that figure, which is the
3185 grand total, under the last column on Respondent's
Exhibit 170-B for identification, are the letters
"AVG" and a figure in a pencilled circle. Will you tell us
what those letters and that figure mean?

A. That is an arithmetical average arrived at by dividing the total amount calculated on the basis just mentioned by the net—by the total net weight of shipments to Georgia and Florida.

Mr. DuBose: I ask that this document be marked Respondent's Exhibit 171.

Trial Examiner Norwood: It will be marked for identification as Respondent's Exhibit 171.

(Whereupon, the document referred to was marked Respondent's Exhibit 171 for identification.)

Trial Examiner Norwood: Off the record.

(Discussion off the record.)

Trial Examiner Norwood: On the record. Proceed, Mr. DuBose.

By Mr. DuBose:

Q. Mr. Baum, I show you Respondent's Exhibit 171 for identification, and ask you what that represents (showing to witness)?

A. Well, that represents a summary of the figures calculated on Exhibits 170-A and 170-B. It is put in the form of a letter.

3186 Q. That was pursuant to request?

A. That is pursuant to a request that we received for information.

Q. Now, is it correct to say that on Respondent's Exhibit 171 for identification, under the heading "1941 sales of heavy and soft paste white lead," the figures appearing are the totals of the figures appearing on Respondent's Exhibit 170-B—I will withdraw that.

Mr. Baum, you prepared this document which has been marked Respondent's Exhibit 171 for identification?

A. Yes, sir, I did.

Q. And the figures which there appear under the heading "1941 sales of heavy and soft paste white lead" are the figures which appear on Respondent's Exhibit 170-B for identification, as figured on the less than carload rate; is that correct?

A. If you add as presented on Exhibit 170-B and Respondent's Exhibit 170-A, that is correct. In other words, these two schedules together form the basis of that summary.

Q. Now, the total freight and cartage figures and the average freight per hundred pound figures which appear under this heading "1941 sales of heavy and soft paste white lead" are the result of the calculations made on Respondent's Exhibit 170-B for identification, on the less than carload basis; is that correct?

3187 A. Yes, except that you have got to bring this other sheet into consideration.

Q. To arrive at the par—

A. To arrive at the difference which was par. In other words, the Exhibit 170-A shows the total. Now, Exhibit 170-B shows Florida and Georgia. Now, in order to get the par we deducted the figures on Exhibit 170-B, Florida and Georgia, from the totals shown on Exhibit 170-A which gave me the calculation for par.

Q. This first calculation is based on the less than carload rate?

A. Yes. That appears definitely on Exhibit 170-B only. Yes, that is correct.

Q. Now, with regard to the last calculation on Respondent's Exhibit 171 for identification, under the heading "a calculation was also made using the same quantities and destinations but based on carload shipments and rates and the result follows" were similarly based upon the figures which appear on Respondent's Exhibit 170-A and B for identification as figured on the carload rate?

A. That's correct.

Q. Now, the last sentence which is a separate paragraph on Respondent's Exhibit 171 for identification contains the average per hundredweight as figured on Respondent's Exhibit 170-B for identification, in connection with the last column on that page in the fashion that you have explained; is that correct? 3188

A. That's correct.

Q. In other words, that particular calculation which appears in the last sentence and the last paragraph of Respondent's Exhibit 171 for identification is the result of figuring the freight which would have applied had all of these shipments to the particular towns involved in Florida and Georgia been made in carload lots in the minimum carload quantity; is that correct?

A. Not quite. I would say it would represent the average freight that would have applied had we made one carload shipment to each point of destination in Georgia and Florida, figured at the carload rates.

Q. That is what I meant to imply.

Mr. DuBose: May I be off the record?

Trial Examiner Norwood: Off the record.

(Discussion off the record.)

Trial Examiner Norwood: On the record. Proceed, Mr. DuBose.

Mr. DuBose: May we withdraw this witness temporarily, Mr. Examiner?

Trial Examiner Norwood: He may be withdrawn.

(Witness temporarily excused.)

Trial Examiner Norwood: Proceed.

3189 Mr. DuBose: I call Mr. Leonard Werne.

Trial Examiner Norwood: Mr. Reporter, this is Mr. Leonard Werne, 76 Halsted Street, East Orange, New Jersey.

LEONARD WERNE was thereupon called as a witness on behalf of the company and, having been first duly sworn, was examined and testified as follows:

Direct Examination by Mr. DuBose.

Q. Will you state your full name?
A. Leonard Werne.
Q. What is your address?
A. No. 76 Halsted Street, East Orange, New Jersey.
Q. Mr. Werne, by whom are you employed?
A. By the National Lead Company, general office.
Q. At 111 Broadway?
A. At 111 Broadway, New York.
Q. In what capacity?
A. At the present as assistant traffic manager.
Q. How long have you occupied that position?
A. Since February 1941.
Q. And prior to that time, what was your position with the National Lead Company?
A. I was employed on January 2, 1923 as rate clerk, which position I held and continued to hold in addition
3190 to duties as chief clerk, until April of 1926, at which
time I was named assistant to the traffic manager at St. Louis, Missouri. On January 5, 1931, I was transferred to San Francisco, California, as assistant traffic manager, which position I held until coming to New York in 1941 as assistant traffic manager.
Q. Now, Mr. Werne, during the course of your entire employment, then, you have been concerned with rates and traffic rates as they apply to products shipped by the National Lead Company?
A. That's correct.
Q. And you have had occasion to check official tariffs, commodity rates, carload and less than carload rates from various points as they might apply to a particular product or products of the National Lead Company?
A. That is correct.
Q. You do not remember offhand all of the traffic rates which might be applicable to white lead in oil for the year 1941, do you?
A. You mean throughout the country?
Q. Throughout the country.

A. No, sir.

Q. Would you know without refreshing your recollection what the lcl or carload rate for white lead in oil might be from Brooklyn, or New York, to any particular
3191 town or city in Florida and Georgia?

A. No, sir.

Q. Have you any records with you which would refresh your recollection as to the rates applicable for shipments of white lead in oil in 1941 from Brooklyn or New York to various towns in Florida and Georgia?

A. The question is, do I have that available?

Q. Yes.

A. I do.

Q. Will you produce such records?

A. Yes, sir (handing papers to counsel).

Q. Will you tell us, Mr. Werne, and in each case give the official tariff or whatever the official rate classification might be, what the rate for a white lead in oil shipment from either Brooklyn or New York in 1941 would be to Daytona, Florida at the less than carload rate?

A. Can I ask to have that question re-read.

Trial Examiner Norwood: Read the question.

(The reporter read the question as follows:

"Q. Will you tell us, Mr. Werne, and in each case give the official tariff or whatever the official rate classification might be, what the rate for a white lead in oil shipment from either Brooklyn or New York in 1941 would be to Daytona, Florida, at the less than carload rate?")

3192 Trial Examiner Norwood: What is that document you are refreshing your memory from?

The Witness: These are in effect the freight rates with the complete tariff authority for each rate which I could not retain in my mind due to the fact that there are thousands of them.

Trial Examiner Norwood: Did you make that from the official rate books and so on?

The Witness: I did, sir. I made part of it and all of it was done under my supervision.

Trial Examiner Norwood: Does it specify which rate books it is taken from so that it can be verified?

The Witness: Yes, sir, it certainly does.

Trial Examiner Norwood: Proceed.

The Witness: The rate from New York to Daytona, Florida, on shipments of white lead in oil of 100 pound lots was 89 cents for 100 pounds from the New York dock of the steamship line to store door delivery at destination.

By Mr. DuBose:

Q. Is that for the year 1941?

A. That is for the year 1941. Now, in qualifying the
authority for that rate, I might say that it is known as a
combination rate which was made over Jacksonville, Flor-
ida. It is a combination of two rate factors made over
Jacksonville, Florida, and the tariff authority for the
3193 combined rate was Atlantic Seaboard Freight Tariff
45 Series and the St. John's River Line Tariff 11-A
Series.

Trial Examiner Norwood: We will recess at this time until 2 o'clock.

(Whereupon, at 12:30 o'clock p. m., a luncheon recess was taken.)

3194 Afternoon Session.

2:00 p. m.

Trial Examiner Norwood: Come to order. Will you resume the stand, Mr. Werne.

LEONARD WERNE resumed the stand and testified further as follows:

Direct Examination (Continued).

Trial Examiner Norwood: Proceed.

Mr. DuBose: Your Honor, shall we excuse the witness until the matter of the motion made last week in Washington is taken up?

Trial Examiner Norwood: I don't think it makes any difference. There is nothing that he should not hear.

Mr. Wright: Your Honor, since Mr. Hinds is here at this time I would like to renew the motion I made earlier on page 2686 of the transcript and strike certain portions of the testimony of the witness Sprague for the same grounds as were covered fully in the memorandum brief that I filed in support of the motion for striking the testimony of the witness Burrus, on the ground that it was improperly admitted and is incompetent, hearsay and opinion testimony based on facts and records which were not available for the purposes of cross-examination and which were not within the personal knowledge of the witness.

Trial Examiner Norwood: I have noted here that
3195 your previous motion was directed to page 2551 line 16, 18 and 19.

Mr. Wright: That's correct, sir, and also beginning with the words "but facing" on line 5 of page 2710.

Trial Examiner Norwood: I have got that beginning with the words "but facing" through line 19 and 2721 line 31 through page 2725 through line 4. Page 2729 line 2 through 2730 through line 9.

Mr. Wright: That is correct, sir.

Trial Examiner Norwood: May I look at the transcript on that?

Mr. Wright: Yes, sir.

Mr. Hinds: Off the record.

Trial Examiner Norwood: Off the record.

(Discussion off the record.)

Trial Examiner Norwood: On the record. Proceed, Mr. Hinds.

Mr. Hinds: Generally as to the charge that these statements by a chief executive of a business division are hearsay, it seems to me that the objection stretches the hearsay rule far beyond any tolerable limits even if this were a court of law where the rules of evidence are very strictly observed and are fortiori in this administrative tribunal where there are more practical standards for admit-
3196 ting testimony.

To illustrate, the Commission without objection was permitted to ask and get the answers from a large number of businessmen as to who their competitors were. Had I objected that that is hearsay, I think I should have been left out of the hearing room and I should have deserved to be let out of the hearing room.

Yet there is even a sounder basis for saying that such testimony is hearsay, than to make that objection to these things that are the subject of this motion. The head of a business necessarily gives hearsay testimony by that strict definition when he states who his competitors are.

The only legal evidence by the strictest theory would be the evidence of some person who was present at the customer's office and saw a man come in whom he could identify as a salesman for the customer. Usually, the chief executive would not have had that experience because salesmen's customers don't come in while their competitors are there. I mean competitors' salesmen don't come in while their competitors are there, so that at the least, it would be secondhand testimony, hearsay, through the salesman, but actually would be thirdhand because even the salesman wouldn't be able to give legal evidence by this strict theory of my adversary.

3197 Actually what this executive says when he answers a question, "Who are your competitors?" he is saying what his salesman said his customers told him. That is the only knowledge he could possibly have. He comes in there and he gives that testimony based partly upon what he has heard second or thirdhand at the least or what he has gotten from some record which itself would be incompetent as legal evidence.

Now I say that that stretches the hearsay rule, stretches it too far. I say that a chief executive can say—we certainly wouldn't object and didn't object—who his competitors are. He can also say which of his articles is most popular.

The head of a shipping line can say, "We lost two ships last year through submarines." Would my opponent jump up and say, that is hearsay. Were you there? Did you see those ships sunk? How do you know that they weren't captured, or how do you know they are not still sailing the high seas?"

Now I think you will find that what I have said applies to every one of these objections insofar as it is hearsay. This man came in here and was paid to know the facts of this business the same as a railroad man knows that he has a spur line out of Altoona although he has never been to Altoona. So much for hearsay.

3198 I don't think that the standard that my friend seeks to use against us would leave very much of his testimony in the record. Now as to the objection that you can't compare two magnitudes or two quantities unless you can give at least an approximation of each by itself, that I think is demonstrably unsound.

The issue here is not how much the added elements of cost—there are seven of them, by the way, in these oxides as I recall them offhand. There is the added railroad freight or trucking in smaller lots. There is the warehousing where it is in smaller lots, the added cost of soliciting, that is sales, the fact that technical services are required by the small people which the big people don't require because they have their own technical experts.

Then there is the added clerical work, invoicing and so on, the existence of which I think courts take judicial notice of. There is the added expense of investigating doubtful fellows as to their credit even if they pay their bills, and the expense of getting after them and collecting from them.

Then there are credit losses. Now the question is not how much each of those is or how much they are in the aggregate related to a pound of a product but the question is, is that aggregate as much as or greater than ½¢ per pound?

3199 Now I say you do not have to be able to give even an approximation, much less an arithmetically demonstrated precision figure of each of two quantities in order to say that one is greater than the other. After a tornado, a pole is down-sticking out of a well. The witness sees it and he is asked "Was the pole longer than the depth of the well?" and he unhesitatingly says, "yes."

Yet he didn't get near the place and he couldn't for the life of him tell you how long the pole was or how deep the well was, but he knows that the pole was longer than the depth of the well.

An experienced fisherman who has fished a certain lake for many years and he has gotten paid to take people around testifies that there are more fish at one end of the lake than there are at the other. He couldn't possibly tell you how many fish there are at either end.

A seaman in an admiralty case says that ship "A" was further from him at the time he observed the situation than ship "B" but he can't give you an estimate as to how far either one was from him. But he knows that "A" was further away from him than "B."

Mankind for centuries knew that the sun was larger and further away than the moon. They seem to be about the same size but yet it wasn't until the time of Galileo that they knew even the approximate size of either one of
3200 those heavenly orbs or how far away they were from the earth.

Now an experienced man comes in and says, "I can't possibly give you the figure which represents the aggregate of all these added expenses. I can give you a rough guess on freight but the freight is about 25¢ per 100 more in the less than car load lots."

By the way, the evidence on that is here. The lawyers could dig it out if the clients could possibly afford to pay the lawyers for that work. The lawyers could dig it out but it would be a very elaborate piece of arithmetical analysis because we have all the freight rates and we could probably figure out for you what on the average the Glidden Company from its plant in Hammond which is the same freight rate I understand as from Chicago had to pay for less than car load lots as against car load lots.

Mr. Sprague and Mr. Burrus said that it was somewhere around 25 per cent which itself would be half of the entire aggregate. Now the evidence is there to be dug out. Our books do not distribute freight rates although that is an arithmetically ascertainable figure.

Our books do not distribute freight rates according to whether they are between car load lots and greater than car load lots. As a matter of fact, they don't even distribute them as between zones or as between different kinds of oxides. We can't get that from the books.

3201 It seems to be assumed here that we are ducking and coming in here with secondary evidence when we might get it from our books. It isn't in our books. The only way we could get that out, and I admit that it would be physically possible, would be to make an exceedingly expensive analysis, a survey.

You would have to take each separate invoice and relate it to whether it was less than car load or more than car load for a particular product. That is impracticable.

The Witness Sprague said that it was imprudent. Meaning that the advantage of it in this law suit wouldn't justify the expense. Now that happens to be one of the arithmetically ascertainable things.

I say it is impracticable even though I admit it is arithmetically ascertainable. Now warehousing: That is probably less arithmetically ascertainable than freight although that is conceivably the possible thing to do, but we don't keep our books that way.

Now when you get into these other things I say we are prepared to devote the entire assets of the Glidden Company to this study then we couldn't give it to you as an arithmetical attitude. You still have to have a businessman's judgment.

The expense of following up credit investigation—how
can we possibly relate that to dollars and cents except
3202 to say in our judgment that the expense is very
much larger in the case of the little fellow than in the
case of the big fellow? In fact, one of these witnesses, I forget which, said there was no expense of credit investigation or collection with respect to the big man. Now possibly credit losses, one of the seven, possibly that could be dug out by an elaborate analysis, but it can't be taken from the books.

The books don't show that. You would have to dig it out from the original records and make an elaborate study. Now when you come to such things as selling expense, a salesman—it takes just as much time for a salesman to call on a little fellow to get a 500 pound lot as it does to call on a big fellow and maybe the big man may give his order over the telephone for a car load.

We can't reduce that to dollars and cents and we couldn't possibly do it. Now it seems to me, and I think I am on sound ground that has been walked over before, when I say that the standards of evidence in this tribunal are practical standards.

I say that the standard that my friend invokes, the standard of evidence for justifying these quantity differentials—incidentally, this would apply to zone differentials—the standard that he invokes would make it impossible for any concern within the jurisdiction of the Federal Trade Com-
mission, and I suppose the same would apply to the
3203 courts if it is a rule, that same standard would allow
differentials only to two groups of business people in
this country. One, people whose volume of business in a certain commodity is big enough so they could afford as a practical business matter to go to the expense of either keeping their books on that basis or making elaborte surveys and hiring lawyers to come in and present it through witnesses or people whom the Federal Trade Commission didn't happen to get after, because everybody else, and that would include us, will be excluded from having any quantity differentials by this standard of evidence because our business people knowing all about this and having the advice of counsel as to what is involved in our friend's hoped for

standard of evidence on justifying differentials have decided that it simply is impracticable.

They cannot do it. It would cost more to meet my friend's standard than all the net profits of engaging in this particular business that would be lost by giving up differentials.

Now you heard one of our witnesses say that only about 10 per cent of our business is to the car load lot people. We would like to have them more but we can't get much more, and it wouldn't be safe for us to take much more, both of them said, if we could get it.

So the result of applying this standard against us,
3204 and it will be all the more so with regard to still
smaller concerns, will be that we will have to give up either the car load business or the less than car load business. It happens that it would be the car load business, I suppose, although that is the cream of our business.

That is where the profit lies despite the differential as both witnesses said. We would have to give that up or go out of business because we can't give up the less profitable small business because that represents, I think Mr. Burrus said, 90 per cent or a very large per cent.

Now that is the practical situation here. Now another objection has been made or implied that the testimony doesn't go far enough to say that there are added—that it costs more to investigate credits of the little men, it costs more to ship freight in less than car loads and so on. That is objected to on the ground that it doesn't go far enough.

My friend says it has no probative force. I don't think this court has the right—assuming that it were the only objection in the case—I don't think this court is justified in assuming that there will be no further evidence. If that is the only objection, it doesn't go far enough.

How do we know that one of the other respondents perhaps won't come in and give some evidence that will
have some evidentiary application to the Glidden
3205 situation? The commodities are approximately the
same. In fact, if they weren't approximately the same we couldn't be brought in here under the same complaint.

So that seems to me it can be disposed of by saying that we have no right to anticipate what further evidence will be in the record to supply that which may be lacking. I don't admit there is anything lacking. I think this goes entirely to the weight and not to the admissibility of the evidence.

I say that when an experienced businessman, even though his experience may been have derived as everybody's experience is from what other people have told him, his subordinates, and even though it may be in part derived from records over the years that he has consulted, when he gives you a business fact such as, who my competitors are, I say that he is giving evidence. He is giving legally admissible evidence and the only question there is for the finder of the facts, the trier of the facts, to say what weight shall be given to it.

Now in detail the first one is at page 2551 line 7 to 19. Mr. Sprague was asked what his experience was in selling the smaller battery manufacturers as compared to the larger ones. He says, "The smaller battery manufacturer was saleable at higher prices but the cost of selling him was sufficiently high to end up in an offset."

3206 We can't give you any better evidence than that. It is impracticable. We can't have stop watches on everyone of our salesmen. We have no records. We have to depend on the business judgment for what it is worth of the man who can size up on the witness stand and say whether or not he was a competent man and knew what he was talking about.

Now on page 2710 lines 5 to 19: He was asked whether he had made studies. I assumed his answers would be no. "Have you made analysis of the varying operating costs so that you can allocate them as to sales, as to the various classes of customers in the battery business?"

I assumed he was going to say no and to my surprise he said: "But facing the problem in its broad aspects I recall one time that we made quite an analysis of the losses we had sustained in our sales to the storage battery industry. This was some years ago but I recall it because I used it as an argument on one of my visits to our headquarters office to see if I could persuade the company to adopt a more liberal credit attitude," and so forth. I won't read all of it.

I maintain that that is relevant as showing in part the basis of his business experience which enables him to answer a broad general question with respect to his business which I still maintain is analogous to the question

3207 who are your competitors; who is your principal competitor?

Trial Examiner Norwood: You are referring now to page 2710 beginning with line 5?

Mr. Hinds: Yes, sir. Now page 2721 line 21 to page 2725 line 4, there are about four pages there that he wants to have stricken out. Some of it is colloquy but it starts with this question: "With respect to the expensive collections and investigations, from your experience was there any difference between such expense in connection with sales to small battery manufacturers as contrasted with the large ones?"

"A. Oh, yes, there was no expense of that sort in connection with the large ones."

So you have zero on one side.

Then I said: "What about the small ones?"

There were a lot of objections and your Honor finally allowed him to say, and he wants it stricken out: "Those expenses with regard to the small manufacturers were high."

That is only part of the story. He is later going to say that taking all of these seven things together they amounted to more than one-half per cent per pound in his judgment, in his experience. I say you have a better analogy—a perfect analogy to my case that the man said that the 3208 pole that he saw sticking out of the well was longer although for the life of him he couldn't tell you how long either one was.

Then he goes on: "Now as to the expense of any of the warehousing, was there any difference between expense there and sales to the large manufacturers and sales to the small manufacturers?"

And he said: "Yes, there was a difference." He said there was a difference. He couldn't tell how much the difference is, but when you ship less that a car load in order to be able to give service in a distant city you have to put the stuff in a warehouse. You have the warehousing charge and the in and out charge.

We can't tell you that in detail. It is impossible. Even if it were possible, the expense would be prohibitive. We would have to suffer a cease and desist order preventing us from having any of that business or having a differential if we had to meet such a standard of proof, and it would be even more so if the principle were established applying to still smaller units of business.

The Glidden Company is a sizeable company but this particular lead oxide business is not a sizeable business at all. It is a very small business. The whole net profits would be wiped out in legal and accountancy and other expenses and travelling if we had to meet this standard of proof.

3209 Then he goes on. The same thing is true with a cash discount. He tells you how much the cash discount is, 1 per cent, which isn't available to the larger car load buyers. That requires a pencil and paper and counsel can figure that out in his brief.

We are not threatening you with that and I don't think we intend to do it, but we are going to rely on principles that I am invoking here. It is the question of the weight of the testimony of a businessman.

As your Honor pointed out, this man's testimony is peculiarly evidentiary because he has to risk his business life on it. A trapeze performer whose life depends on whether that rope is strong enough, and he tells you that it is strong enough, that is better than a college professor telling you how strong the rope is. His very life depends on his judgment and the business life of these witnesses depends on the judgment that they have to reach in these matters.

Then we go to clerical items.

Trial Examiner Norwood: What page is that?

Mr. Hinds: The bottom of page 2724, invoices, clerical items.

Trial Examiner Norwood: That is not in the motion, page 2724.

Mr. Hinds: Yes, it is sir. It goes all the way from
3210 2721 to 2725.

Trial Examiner Norwood: Yes, I beg your pardon.

Mr. Hinds: I suppose that if we should give up manufacturing lead oxides and go into the cost accountancy business, we might be able to give you a figure on postage and typewriters, salaries, and so on, and typing ten invoices instead of one invoice, ten letters instead of one. But it would take all the net profits of the business to attempt any such thing.

Page 2729: That is the $64 question which sums up everything before, asking him in his judgment whether he made any study into what is the effect.

He says, "We gave considerable attention to the cost of doing business as among customers of various sizes and customers of various kinds and customers at various locations out of which we realized as I stated in my earlier testimony that we had to do certain things with respect to the type of trade we sold in order to make a profit.

"But there was no accounting study prepared to reduce it to a specific figure."

Then I said, I asked: "In your judgment would it or would it not have been practicable to classify your accounts so as to allocate the time spent by various executives, salesmen and others to these different classes of customers?"

"A. It would not have been practicable nor would
3211 it have been prudent. We were obliged to operate
with a minimum of affixed expense of that sort."

So in conclusion, I want to point out that the standard which my friend seeks to invoke of attempting to justify these quantity differentials and other differentials is an impractical standard which cannot in business life be met except possibly by concerns who have such a very large volume of business that the expense would only be a fraction of their net profits.

But even as to them, many of these expenses couldn't, if they had unlimited funds and were willing to go into bankruptcy, be reduced to any arithmetical standard.

Trial Examiner Norwood: Off the record.

(Discussion off the record.)

Trial Examiner Norwood: On the record.

Mr. Hinds: I would like to have your Honor give such weight as my argument may have in its application to the portions of the Burrus testimony which has already been stricken out.

Trial Examiner Norwood: I will consent to that.

Mr. Wright: I would like to say in answer to that, that of course the arguments that counsel made were equally applicable to the testimony of the witness Burrus be-
cause the testimony of both of those gentlemen was in
3212 exactly the same category and was apparently based
on exactly the same sort of information. We are dealing now with a statutory provision under Section 2-B of the Clayton Act which is a special statutory provision.

Your Honor can take judicial notice of the fact that in the numerous other cases which have been decided by the Commission where the question of cost justification of differences has come up that the rulings have without exception been the requiring of a detailed justification on the basis of some records rather than opinion or expert testimony by one of the executives which precluded any cross examination by Commission's counsel of the factors which went into his testimony.

Now with regard to the special burden that is raised under Section 2-C there, Congress apparently drew that portion of the statute with exactly in mind the situation that we have here with regard to the burden of proof and the burden of going forward with a cost justification after discriminations have been shown in the record.

As I stated in memorandum brief, Congressman Gilchrist in the Congressional Record, Page 8241, May 28, 1926, stated regarding this section: "Along this same line something has been said in argument about the burden of proof and it has been asserted that the bill is not constitutional because those who have specific and certain
3213 knowledge of their own good faith are permitted to prove it.

"We should distinguish between the duty of going forward with the evidence and the burden of proof. It is often wise to place the burden of producing evidence on the party best able to sustain it. It is very often held that where the party who does not have the original burden of proof but who possesses positive and complete knowledge concerning the existence of facts which his opponent has called a negative or where for any reason the evidence to prove a fact chiefly, if not entirely within the control of the party who does not have the general or original burden of proof, then the burden of going forward with and producing this evidence rests upon him who does have the facts primarily and chiefly within his possession."

And he went on to state that that section of the bill provides that after it has been shown that discrimination in price has really occurred, then the duty of going forward with the evidence to show justification and good faith rests upon the party who has almost exclusive possession of such evidence of good faith and who has such easy means of proving it.

Now Mr. Hinds has indicated that a number of these factors about which we are talking about can be ascertained. As to some of them he expressed doubt. But certainly the record doesn't show sufficient evidence to
3214 prove that doubt as to whether those things can be ascertained and they have been ascertained many

times in similar cases before the Commission involving exactly this proposition.

My adversary also states and admits that this is proof in his opinion that the differences in cost more than justify the differentials in price. In other words, he considers it to be competent evidence for that purpose.

Now a number of statements were made there which I don't believe were supported by the record, statements of fact. It was stated that it takes as much time by counsel in his argument for a salesman to get a 500 pound order as a car load order. Well now, that is something that can be ascertained by competent testimony.

It has not been shown in this record to be the fact. He contends that we cannot go back of and that we rely upon the opinion testimony of a competent executive.

Mr. Hinds: Oh, no. You can rebut it but you can't exclude it.

Mr. Wright: Who obviously knew what he was talking about. Well, I submit to your Honor that when on cross-examination it appeared that the witness had no figures or studies upon which to base his testimony, we couldn't tell whether he knew what he was talking about or not. I don't believe that Mr. Hinds is seriously going to urge the various analogies that he raised there of the testi-
3215 mony by the various witnesses as to who their com-
petitors were as having any bearing on this testimony.

Certainly it was not established as to that testimony that these gentlemen weren't basing that upon evidentiary facts that were within their own knowledge and certainly the analogy of the pole sticking out of the well has little to do with this question.

Now as to the specific parts of the record to which this motion relates, it is perfectly plain that the testimony goes beyond the mere opinion testimony by an executive that their costs were higher in dealing with certain classes of customers. It goes right to the heart of the matter, and as to the effect that they actually suffered a loss in dealing with these certain classes of customers, that the differentials and discriminations, the higher prices to the smaller purchasers did not recompense them for the higher expenses and we are asked to accept that in spite of the statement that 90 per cent of the business is with less than car load purchasers.

Now the original question and answer which appears on page 2551 and which was the grandfather, as it were, of all this other testimony which was brought out on cross appearing on lines 17, 18 and 19 of page 2551, the smaller battery manufacturer was saleable at higher prices but the cost of selling him was sufficient to end up in an offset.

3216 Mr. Hinds: That means an offset of the difference in price. It doesn't mean any loss. I don't think we claim that we sell at a loss as a whole.

Mr. Wright: There is intended by that opinion testimony to justify the discrimination which has been shown. It is the adding of the sum of all these factors and stating that the difference in price didn't justify the higher costs or did justify the higher costs.

I will withdraw that.

Trial Examiner Norwood: Is there anything in the cross examination? In making those other rulings, the cross examination was controlling. Is there anything in the cross examination with respect to these statements?

Mr. Wright: Yes, sir.

Trial Examiner Norwood: Begin there with page 2551, lines 17, 18 and 19. He is stating there that they were an exact offset.

Mr. Wright: He didn't say an exact offset, but he said it was an offset. Now from the ordinary meaning of that word you must conclude that that meant that they received less net profit in selling to the smaller purchasers than they did from the large purchasers.

Mr. Hinds: That was so testified to expressly, I believe.

Trial Examiner Norwood: What have you in the 3217 cross examination that would throw light on that?

Mr. Wright: The only basis for that answer could have been some examination of the cost factors and some study of those various factors there from which he could reach such a conclusion. That would be a conclusion of fact rather than an opinion that was drawn out of the air.

On page 2709 of the record, on cross examination, the witness was asked. "Have you made any analysis of the various operating costs so that you can allocate them as to the sales to the various classes of customers in the battery business?"

Trial Examiner Norwood: 2709?

Mr. Wright: Yes. The answer that appears on page 2710 beginning at line 3 and running down to line 19 indicates vaguely that they had gone into that in some fashion or another, but it wasn't brought out whether that was a written report or what kind of a study that was.

But when going on to line 22 of page 2710, "You do not have any study then from which you could state with any authority on the basis—"

Mr. Hinds: (Interposing.) By the way, that word should be "accuracy." The stenographer got it as "authority." You will concede that was "accuracy," won't you, Mr. Wright? I think you said accuracy and not authority.

Trial Examiner Norwood: The record may be cor-
3218 rected later.

Mr. Hinds: I think that should be accuracy and ~~not authority~~.

Mr. Wright: The question then related to whether he had any statistics or studies of costs from which he could state with either accuracy or authority that he suffered a loss of sales to small battery manufacturers.

"A. I can state with authority of the observation and belief of a manager of the business who is watching the expenses and the costs which he sustains in doing business, but I couldn't show it from any accounting study in cents per pound."

In other words, it is plain in the record. Coming back now to pages 2729 and 2730, the witness stated at the beginning of line 23 of page 2729 the fact that they gave considerable attention to the cost of doing business among various customers but he wound his answer up by stating that this was something that they had observed in our business by a common observation.

It was there for all to see. But there was no accounting study prepared to reduce it to a specific figure. So, as appears there, he had nothing but an opinion and judgment upon which to base his answers, and the net effect of his testimony when you get down to the last questions that were asked him there is that it is an opinion and hear-
3219 say statement upon which he couldn't be cross ex-
amined that these costs were so high that they more than offset the price differences.

Trial Examiner Norwood: In the cross examination on the other questions it was definitely shown that the statements of Witness Burrus, the cross examination showed there that his statements were based on hearsay reports and counsel on the other side was deprived of any inquiry into these bases and what they were and their reliability and so forth.

So far as I have gone here, I think that these statements here are on a different basis because he has not stated that they were based on reports made to him. He stated that they are based on his own opinion, on his own experience in his business. And the fact that they are not accurate goes to its weight.

Now the Commission is not justified in taking the position that this burden is to be sustained in any particular way. They have the burden of showing that the differences in the costs are no more than the differences in the price.

Mr. Wright: The Commission has that, sir.

Trial Examiner Norwood: No, not the Commission but the Respondents. I said "they" meaning the Respondents. But the Commission cannot say that you must put this in by tabulations made by an accountant or some other
witness.
3220 The Commission cannot say that that has to be of
a certain weight. It has to be of a sufficient weight to rebut the prima facie case. But it doesn't preclude the Respondent in putting in evidence that is vague even provided that it has any reasonable degree of substance in it. We can't say that you have to do this through tabulations and through expert accountants. The difference between exact figures and figures which the man is willing to swear to as based on his experience may be a difference of weight. But I haven't had the record to use and I will reserve this ruling on this until tomorrow morning to read the record.

Mr. Wright: I would like to make one further observation, your Honor, in view of what you have stated here. On the question of whether this evidence is competent as proof of what is offered now, it is admittedly opinion testimony and it is admittedly broad and general statements.

Mr. Hinds: We don't admit that. In fact, I was going to interrupt and say that we do not regard it as opinion testimony but as judgment and experience and facts and not opinion.

Trial Examiner Norwood: Let him finish.

Mr. Wright: It is obviously opinion testimony by this
witness. It is a broad and general statement by which
3221 we can't go into on cross examination. We can't get
the details because it is just something he knows from

his experience. He can't detail the things in his experience that lead him to that conclusion.

As your Honor stated in your paper in the George Washington Law Review that type of statement is not proper evidence to prove matters which can be the subject of exact proof, not necessarily by an accounting survey but by the ordinary means of proving such matters relating to costs or profits or prices or sales and the like.

Mr. Hinds: Let me say just one more thing.

Trial Examiner Norwood: Very well.

Mr. Hinds: If it be opinion, the witness has shown the expertness which entitles him to give opinion evidence. We do not regard it, however, as opinion evidence even though the witness was qualified to give an opinion. We regard it as fact testimony, facts testified to by a man who has had experience and who states his judgment.

I would like to give one further analogy. A surgeon is testifying and he is qualified to give an opinion if such be needed but he doesn't give an opinion. He said that the tumor on the man's left lung was larger than the tumor on his right lung. There was no means, practical means, of finding out how large either of them was.

He couldn't give you even an approximation in
3222 ounces of either one of the tumors but not as a matter
of opinion but as a matter of fact in the judgment of a skilled observer he says that one was larger than the other.

I maintain that that cannot be questioned on the ground that it is hearsay or opinion or doesn't go far enough, it goes to the weight.

Trial Examiner Norwood: I know, but even opinion evidence must be based upon facts that are on some evidence contained in the record, you see. And these statements of this witness were not given as being based on any of that.

Mr. Hinds: You mean the witness Sprague or the witness Burrus?

Trial Examiner Norwood: It is the witness Burrus, isn't it?

Mr. Hinds: I have been arguing about Sprague. You have already stricken out some of the Burrus testimony.

Trial Examiner Norwood: The witness Sprague.

Mr. Wood: If your Honor please, I would like to make a very short statement just to preserve my position on the record and I shall not be long.

Trial Examiner Norwood: Proceed.

Mr. Wood: I disagree entirely with Mr. Wright in respect to saying that this question arises in regard to Section 2-B of the Clayton Act. I think it arises in regard to Section 2-A. The Seventh Circuit Court of Appeals
3223 in the Morton Salt case brought out the difference
between a differential and a discrimination which Attorney General Tom Clark had previously suggested in a publication and which was covered in our brief on our motion to dismiss.

The Seventh Circuit Court of Appeals held that a differential was not necessarily a discrimination, that there was a qualitative difference between the two.

Trial Examiner Norwood: That decision just simply placed the burden back on the complainant. Under that decision there would not be any burden. That is, according to that decision the burden would not be on the respondent any more.

Mr. Welch: The burden would rise in a different stage of the proceeding.

Mr. Wood: At any rate, here is my only point and I will cut it rather short. That is, that evidence should not now be excluded on the presumption that that decision will be reversed.

Mr. Hinds: Whatever the burden may be, we have undertaken the burden and whether we had to undertake it or not, we did undertake it. My argument is that we sustained it to such an extent as the triers of the fact will eventually give weight to it that it cannot be excluded as inadmissible on any known ground.

Mr. Wood: I didn't make myself fully clear. I
3224 have one more point and that is that I conceive testi-
mony of the type given by Mr. Sprague and which I intend to attempt to introduce to be directed to the state of mind of the corporate executives as to whether or not these differentials publicly announced, available to all, are in fact and intended as discriminations in the sense of the statute.

Mr. Hinds: Off the record.

Trial Examiner Norwood: Off the record.

(Discussion off the record.)

Trial Examiner Norwood: On the record.

Mr. Wright: With reference to the Morton Salt case I agree that that was under Section 2-A and that related to when the Commission has sustained the burden under 2-A of proving discrimination. I am assuming now that this testimony if offered to rebut the presumption as provided under Section 2-B of a discrimination under 2-A, so that it is not controlled by the Morton case.

Now it may very well be that counsel may contend that we haven't proved any discriminations under the rule in the Morton Salt case. Well if that is the case, of course this has nothing to do with it.

Mr. Hinds: I think I am not at odds with my opponent on that feature. As I say, whether we had the burden or not, we undertook to sustain it. I think we have done it to such a degree as the testimony has weight.

3225 Trial Examiner Norwood: I want to thank counsel for their assistance in this matter and after I read the record, I will give my decision tomorrow.

We will now take a short recess.

(A short recess was taken.)

3226 Trial Examiner Norwood: Proceed.

By Mr. DuBose:

Q. Mr. Werne, you were in the hearing room this morning during the testimony given by Mr. Baum, the previous witness, were you not?

A. Yes, sir.

Q. And you have seen his worksheet, marked Respondent's Exhibit 170-B for identification, have you not?

A. I have.

Q. And you heard him testify that to the net weight of the material, that is, the white lead in oil sold, there was added six per cent to approximate shipping weight, did you not?

A. That's correct.

Q. Are you, in your position with the National Lead Company familiar with shipping weights as compared with net weights of white lead in oil shipments?

A. I am.

Q. And were you familiar with such weights for shipments during the year 1941?

A. I was.

Q. Will you state what factors must be taken into consideration at arriving at an estimate of shipping weight as compared with net weight of white lead in oil?

A. Of course, the main factor is your tare weight 3227 for the package.

Q. When you say "tare weight," what do you mean?

A. I mean the actual weight of the empty container.

Q. Now what is the average weight of the container as compared with the net weight of the white lead in oil itself?

A. Well, referring to Mr. Baum's testimony this morning, with reference to using a six per cent increase in the net weight in order to sustain a gross weight of 106 pounds, that, of course, referred only to a one 100 pound white lead in oil package. Now, that weight of six pounds tare for the container is arrived at through an agreement which is reached between the various weighing and inspection bureaus of the United States, which includes the Western Weighing and Inspection Bureau, the Industrial Weighing and Inspection Bureau and the Southern Weighing and Inspection Bureau.

Q. Are you testifying now as of your own knowledge there?

A. As of my absolute knowledge, yes. The packages in 1941 were manufactured at Granite City, Illinois. Approximately every six months test weights were taken of these packages by the three bureaus simultaneously and they arrived at the average weight for each empty container or group of empty containers. Now, as I recall, for 100 pound container, the tare weight arrived at was 6 pounds for the package and the cover. However, that varies a little as
3228 you go into a group of containers. The actual weight of one 100 pound empty white lead container may be 5.76. It may be 5.74. So that when you took a group, we would say, of 4 empty 100 pound white lead containers at an average of 5.75, your gross weight of those 4 containers would only reflect—I hope I am correct on this—23 pounds, instead of 24 pounds, when you take the per container average of 6 pounds which they arrived at for one container.

Q. Now, you spoke of certain tests being made. For what purpose were those tests made?

A. The tests were made for the purpose of obtaining the average weight to be applied for the empty steel containers or packages.

Q. Was that for the purposes of figuring freight?

A. That is correct.

Q. Now, when a shipment of white lead in oil is made, does the shipper actually weigh the material?

A. I would hesitate to answer that question, but I might, if I may, say this: When the tests of these containers are made by the respective bureaus and the weights per container or containers are agreed upon, a chart is set up from one which shows the gross weight which includes the hundred pounds of white lead in oil plus the gross weight, plus the tare weight ascertained for that package for one
container, for two containers, for three containers
3229 and all the way down to a hundred containers. So
that all that is necessary for a shipping clerk in any of our branches to do, is to look at the chart to determine what the gross weight for a set number of packages is.

Q. Now, you say, then, that 6 per cent represents the agreed percentage increase of net weight to obtain shipping weight for one, 100 pound package?

A. That's right.

Q. For groups of more than one 100 pound package does the percentage go up or down?

A. Generally speaking, they go down, because your average weight per package is not exactly 6 pounds.

Q. So that do you know what a hundred 100 pound bags or packages of white lead in oil would carry as shipping weight? What percentage increase of shipping weight?

A. I don't know without reviewing the file.

Q. It would be less than 6 per cent?

A. It would be less than 6 per cent, yes, may be only 10 pound, but it would be less.

Q. Now, going back to the line of testimony which we started prior to the noon recess, will you tell us what the less than carload rate for white lead in oil was in 1941 from either Brooklyn or New York, and specify the point of origin to Gainesville, Florida?

A. One dollar for 100 pounds, which applied from
3230 the dock of the steamship line in New York to store
door delivery at destination.

Mr. Wright: Your Honor, I object to the witness reading into the record statements off a paper which is not in evidence. I move that that answer be stricken.

Mr. DuBose: Well, that, your Honor, will recall that prior to the noon recess, questions were asked this witness as to whether or not he could give independently these rates and he said no, he would have to refresh himself from this record which not only contains the actual rate, but gives the official source of each rate.

Mr. Wright: That is the point of my objection, that he is reading off a paper the rates and the sources and the routes. The paper is not in evidence.

Mr. DuBose: I will be perfectly willing to offer the sheet in evidence, except that without his explanation I think it means nothing and I think it is simpler to have it read into the record.

Trial Examiner Norwood: If the witness can use the paper to look at and then testify from his own recollection which has been refreshed, he can put the paper away and give us those figures.

Mr. DuBose: Perhaps that would take longer than if he just identified them.

Trial Examiner Norwood: If he made those and
3231 knows they are true and will give their sources, and
it does not sufficiently refresh his recollection, it makes the paper itself admissible, isn't that right?

Mr. Wright: May I have that read, please?

Trial Examiner Norwood: Read my statement.

(The reporter read the statement as follows:

Trial Examiner Norwood: If he made those and knows they are true and will give their sources, and it does not sufficiently refresh his recollection, it makes the paper itself admissible, isn't that right?")

Mr. Wright: That is correct.

Trial Examiner Norwood: Provided that it is relevant and properly substantiated.

Mr. DuBose: I believe there is an objection pending.

Mr. Wright: Yes, sir. The objection to that answer was a motion to strike really that answer, on the ground that he was reading from a long tabulation.

Trial Examiner Norwood: Can you answer that, then, from your own recollection, after being refreshed?

The Witness: You mean, your Honor, after looking at that form?

Trial Examiner Norwood: Could you repeat that figure without looking at the paper?

The Witness: That particular figure, yes, sir.

3232 Trial Examiner Norwood: What is it?

The Witness: One dollar.

Mr. DuBose: Can we go off the record?

Trial Examiner Norwood: He has a right to testify to that if he can do it of his own recollection, so I will deny the motion. Go ahead.

Mr. DuBose: Can we go off the record here?

Trial Examiner Norwood: Off the record.

(Discussion off the record.)

Trial Examiner Norwood: On the record.

Mr. DuBose: Your Honor, I should like to ask that these four sheets be marked Respondent's Exhibit 172-A to D inclusive for identification.

Trial Examiner Norwood: They will be so marked Respondent's Exhibit 172-A to D inclusive for identification.

(Whereupon, the documents referred to were marked Respondent's Exhibits 172-A, 172-B, 172-C, and 172-D, for identification.)

Trial Examiner Norwood: Proceed.

By Mr. DuBose:

Q. Mr Werne, I show you Respondent's Exhibit 172-A to D inclusive, for identification, and I ask you whether these were prepared by you or under your supervision?

A. They were prepared partially by me, but all under my supervision.

3233 Q. What do they purport to reflect?

A. The less than carload rates, also quantity rates and carload rates and the minimum weights together with other information necessary in order to give full explanation of the rate.

Q. Do they also show in each case the tariff authority for the particular rate cited?

A. They do.

Q. And have you checked the towns and the rates listed on Respondent's Exhibit 172-A to D inclusive for identification with the towns and the applicable lcl and carload rates listed on Respondent's Exhibit 170-B for identification?

A. I have.

Q. And are they the same?

A. They are not entirely the same.

Q. Will you point out to us what the differences are particularly?

A. Particularly there are shown on Respondent's Exhibit 172-A to D inclusive, certain quantity rates for lcl quantities which do not appear on Respondent's Exhibit 170-B.

Q. Now, the rates listed on Respondent's Exhibit 170-B for identification are what, lcl rates?

A. They are the lcl rates for a 100 pound shipment.

Q. For a 100 pound shipment?

A. That's right.

3234 Q. And in some cases, if I understand you correctly, they are for lcl shipments within the lcl shipment rates? There are also some quantity rates as distinguished from carload rates?

A. That's correct.

Q. Are all of those quantity rates, indicated on this Exhibit, Respondent's Exhibit 172-A to D inclusive for identification?

A. They are.

Q. Do you know whether or not the lcl rates listed as applicable to the various towns on Respondent's Exhibit 170-B for identification are the correct lcl rates for 100 pound shipments to those particular towns for 1941? Will you check them again and when you come to any difference, will you note it for the record?

A. Is it your desire that I point out as I come across any discrepancy in the two at this time?

Q. Yes.

A. Then I refer you to the lcl rate quoted on Respondent's Exhibit 170-B to Miami, Florida. The rate shown on such exhibit being 68 cents. That rate should be 69½ cents, the difference being that there is a wharfage rate of 1½ cents at Miami, which has not been included in the rate shown on Respondent's Exhibit 170-B.

Q. That extra cent and a half, then, is the wharfage?

3235 A. That's correct.

Mr. Wright: May I be off the record?

Trial Examiner Norwood: Off the record.

(Discussion off the record.)

Trial Examiner Norwood: On the record.

By Mr. DuBose:

Q. Is that rate for lcl to Miami the only discrepancy you find between Respondent's Exhibit 170-B for identification and Respondent's Exhibit 172-A to D inclusive for identification, as far as the less than carload rates are concerned?

A. That is correct.

Q. Now, will you check the carload rates to the particular towns as listed on Respondent's Exhibit 170-B for identification with those listed on Respondent's Exhibit 172-A to D inclusive for identification and note on the record any discrepancies between the two exhibits?

A. The carload freight rates shown on Respondent's Exhibit 170-B, are identical with those shown on Respondent's Exhibit 172-A to D inclusive.

Q. That is the carload rates?

A. Yes, sir.

Q. Now I believe you stated, Mr. Werne, that Respondent's Exhibit 172-A to D inclusive for identification was prepared partly by you, but all under your supervision.

3236 A. That's correct.

Q. Can you state whether or not the rates there reflected are based upon actual tariff authorities in effect in 1941 as applied to white lead in oil?

A. They are.

Mr. DuBose: I offer in evidence at this time Respondent's Exhibit 172-A to D inclusive for identification.

Trial Examiner Norwood: Is there any objection?

Mr. Wright: I have no objection to the receipt of these papers in evidence. Of course, I don't mean by that to concede any right I might have that the rates might have been different with regard to any other testimony.

Mr. DuBose: Certainly.

Trial Examiner Norwood: It will be received in evidence as Respondent's Exhibit 172-A to D inclusive.

(Whereupon, RESPONDENT'S EXHIBIT 172-A, 172-B, 172-C, 172-D, heretofore marked for identification, was received in evidence.)

Mr. DuBose: I have no further questions of this witness.

Trial Examiner Norwood: Do you have any questions, Mr. Wright?

Mr. Wright: Your Honor, I am in no position to cross examine this witness. He has testified exclusively about papers which I have not yet seen and have had no 3237 copies furnished me. His testimony was unintelligible to me since I couldn't follow the exhibits about which he was testifying.

Mr. DuBose: We will be glad to make Mr. Werne available for cross examination at a future date to be determined by agreement between counsel.

Trial Examiner Norwood: With the exception of a few questions there which you asked which were based on his own knowledge, all this has gone to the identification of these papers, and the papers are here. If you are not going to examine him any further on the papers, there is no reason for further cross examination except on the identification. On the basic data, and so on, that is. But if counsel agree that he may be recalled, I will agree that he may have a deferred cross examination with this witness if you want to.

Mr. Wright: I don't see how I am in a position to proceed right at this moment with cross examining him, because all of his testimony has been with regard to these tabulations which, as I say, I have not seen yet.

Trial Examiner Norwood: We can proceed and have this witness come back tomorrow and counsel have these papers to study from now until then.

Mr. Wright: I wouldn't have a copy of the transcript. It was meaningless to me when he testified about the thing. I will be glad to do my best to cross examine him tomorrow.

Trial Examiner Norwood: He can go over by 3238 agreement of counsel.

Mr. DuBose: Will the witness be excused until 10 o'clock tomorrow morning?

Trial Examiner Norwood: Do you want to examine him tomorrow or do you want to put it off?

Mr. Wright: It may be possible for me to examine him tomorrow after I have had some opportunity of looking at this transcript today, because without comparing the exhibit and the transcript, I can't make much of his testimony.

Trial Examiner Norwood: Will you get a copy of the transcript tonight?

Mr. Wright: I will request a copy of the reporter.

Trial Examiner Norwood: You are temporarily excused until tomorrow morning at 10 o'clock, Mr. Werne.

(Witness temporarily excused.)

Trial Examiner Norwood: Can we finish with Mr. Baum now?

Mr. Du Bose: Yes, your Honor.

Trial Examiner Norwood: Mr. Baum, will you resume the stand please?

EDWARD L. BAUM, having been previously sworn, resumed the stand and testified further as follows:

Mr. DuBose: Your Honor, at this time we would like
to offer in evidence these documents which have been
3239 identified by Mr. Baum, namely, Respondent's Exhibit
170-A and B for identification, and Respondent's Ex-
hibit 171. May we state for the record that we would be per-
fectly willing to agree that counsel for the Commission have
custody of these documents overnight to study them for
the purpose of possible cross examination of this witness
tomorrow, if he wishes to do so.

Trial Examiner Norwood: I will reserve the ruling until tomorrow morning so that counsel may have time to study those and to make his objections, if any.

Mr. DuBose: That will be perfectly suitable to us.

Mr. Wright: I will make every effort to prepare myself on these tomorrow morning and I will do my best in that regard. I am not prepared to make any voir dire examination on the identification nor to make any objections to the documents at this time.

Mr. DuBose: I take it, then, that the witness is excused until 10 o'clock tomorrow morning?

Trial Examiner Norwood: Yes. You are excused, Mr. Baum.

(Witness temporarily excused.)

Mr. DuBose: That is all we have today, your Honor.
We have in addition to these witnesses being
3240 recalled, some further testimony to offer tomorrow
and at this time I would like to suggest a recess until
10 o'clock a.m. tomorrow morning.

Trial Examiner Norwood: We will recess until 10 o'clock tomorrow morning, June 19, 1947.

(Whereupon, at 4 o'clock, p.m., the hearing was adjourned until 10 o'clock, a.m. June 19, 1947.)

3241

Trial Room,
Bar Association Building,
36 West 44th Street,
New York, N. Y.,
June 19, 1947.

Met, pursuant to adjournment, at 10:00 a. m., EDST.

Before:

John W. Norwood, Trial Examiner.

Appearances:

Joseph S. Wright, Esq., appearing for the Federal Trade Commission.

Edmund P. Wood, Esq., 2801 Carew Tower, Cincinnati, Ohio, appearing for Eagle-Picher Lead Company and Eagle-Picher Sales Company.

Robert H. Ecker, Esq., and

Henry E. Gardiner, Esq., (Chadbourne, Wallace, Parke & Whiteside, 25 Broadway, New York, appearing for Anaconda Copper Mining Company and International Smelting & Refining Company.

James D. Ewing, Esq., and

E. Z. DuBose, Esq., (Alexander & Green, 120 Broadway, New York, N. Y.), appearing for the National Lead Company.

J. T. Welch, Esq., (Davies, Richberg, Beebe, Busick & Richardson, 15th Street, N. W., Washington, D. C.), appearing for Sherwin Williams Company.

3242 Roger Hinds, Esq., (165 Broadway, New York, N. Y.), appearing for The Glidden Company.

3243

PROCEEDINGS.

Trial Examiner Norwood: Come to order. Pursuant to adjournment taken on June 18, 1947, the hearing in Docket No. 5253 is now reconvened in the Trial Room of the Bar Association Building, 36 West 44th Street, New York, N. Y., at 10:00 o'clock a. m., daylight saving time, June 19, 1947.

Let the record show the following appearances:

Joseph S. Wright, Esq., appearing for the Federal Trade Commission.

Edmund P. Wood, Esq., appearing for Eagle-Picher Lead Company and Eagle-Picher Sales Company.

Robert H. Ecker, Esq., and Henry E. Gardiner, Esq., appearing for Anaconda Copper Mining Company and International Smelting & Refining Company.

James D. Ewing, Esq., and E. Z. Du Bose, Esq., appearing for the National Lead Company.

J. T. Welch, Esq., appearing for Sherwin Williams Company.

Roger Hinds, Esq., appearing for The Glidden Company.

Proceed.

Mr. DuBose: Mr. Werne, will you resume the stand, please.

LEONARD WERNE resumed the stand and, having
3244 previously been sworn, testified further as follows:

Further Direct Examination.

Mr. DuBose: Your Honor, I have a few more questions on direct examination.

Trial Examiner Norwood: Proceed.

By Mr. DuBose:

Q. Mr. Werne, I show you documents which were identified yesterday as Respondents' Exhibit 172-A to D inclusive, and I ask you whether you wish to make any corrections and, if so, what corrections ~~on~~ these documents (showing to witness)?

A. On Exhibit 172-C opposite the designation West Palm Beach, Florida, under tariff authority, the number 11 is shown which indicates and refers to the tariff reference shown on page 1 of Exhibit 172-A. This tariff reference No. 11 should be changed to No. 12.

Q. That is, the tariff reference on Respondents' Exhibit 172-C opposite the town West Palm Beach, Florida, under the heading "tariff authority" should read No. 12 instead of No. 11; is that correct?

A. That is correct.

Q. Continue, please.

A. Then referring to Exhibit 172-A at the lower left-hand corner is shown No. 11 with reference Clyde Mallory

A-289 series. The prefix to this tariff authority should read 12 instead of 11.

3245 Mr. DuBose: Off the record.

Trial Examiner Norwood: Off the record.

(Discussion off the record.)

Trial Examiner Norwood: On the record.

Mr. DuBose: I have no further questions.

Trial Examiner Norwood: Cross-examination.

Cross-Examination by Mr. Wright.

Q. Mr. Werne, wouldn't you say that these freight rates that you figured in that exhibit and which were carried over into Respondents' Exhibit 170-A and B for identification to those Florida and Georgia points were complicated rates to figure?

A. They were.

Q. And—

Mr. DuBose: (Interposing.) Excuse me, isn't that in evidence too, Respondents' Exhibit 170-A and B?

Mr. Wright: It was my understanding that it is not.

By Mr. Wright:

Q. It is true generally that freight rates are complicated things, particularly when there is a joint route or a joint rate so that capable traffic experts can come out differently on them?

A. All freight rates are complicated.

3246 Q. So that in the last analysis very often the only way you can determine what a rate is, is by litigation over the shipping charges with the carrier?

A. Well, all freight rates must be published. Of course there is the question of trying to determine the lowest freight rate in effect. We believe in our own traffic department, because we have fewer commodities and general commodities in the classification tariffs, that we do know our freight rates pretty well.

Q. Now going to Respondents' Exhibit 170-B for identification, there appear to be three methods of calculating the averages on the rates which appear on this exhibit; is that not correct (showing exhibit to witness)? That employed in column 6, that employed in column 7 and that employed in column 8.

A. You are talking now of freight rates?

Q. The method of calculating the average freight rates on those shipments.

A. Well, I can't say that I am qualified to answer how they arrived at those averages.

Q. You didn't figure those averages?

A. No, sir.

Q. Now can you state whether the rates appearing under CL, in column 5 include cartage from the plant to the dock?

A. Do you want me to go down the line and ex-
3247 plain each one?

Q. No, I just wondered if you could make an answer which would state categorically about the whole column.

A. Under the car load rates shown in the column referred to, there are seven designations under these car load rates which do not include lighterage free pick-up at our plant. On these seven points it is necessary that we deliver to the New York piers.

Q. Are those seven points indicated in any fashion on the exhibit?

A. I see on this exhibit that only five have been indicated. There are two additional points.

Q. How are they indicated on that exhibit?

A. With the "x" opposite the minimum weight.

Q. What about the other two points?

A. The other two points are on this exhibit but are not so indicated.

Q. Which are those other two points?

A. The other two points are West Palm Beach, Florida and Key West, Florida.

Q. But those have cartage added into those figures; is that right, on those seven points on this exhibit?

A. I can't answer that.

Mr. Wright: I have no further examination of this witness.

3248 Trial Examiner Norwood: Is there anything further?

Mr. DuBose: No, Mr. Examiner.

Trial Examiner Norwood: You are excused.

(Witness excused.)

Trial Examiner Norwood: Proceed.

Mr. Wright: May I be off the record?

Trial Examiner Norwood: Off the record.

(Discussion off the record.)

Trial Examiner Norwood: On the record.

Mr. DuBose: Mr. Baum, will you resume the stand, please?

EDWARD L. BAUM was recalled and, having previously been sworn, testified further as follows:

Cross-Examination by Mr. Wright.

Q. Mr. Baum, as I understand it now, Respondents' Exhibit 170-B, the work sheet, on the plus 3/8 zone on white lead in oil, Exhibit 170-A combines totals from Exhibit 170-B plus other figures from the par zone?

A. That's correct.

Q. And they are all tied together in this summary in Exhibit 171?

A. That represented a transmittal I made up from those two work sheets.

3249 Q. Now will you tell us just from what records you got the information appearing on Exhibit 171 under par pounds sold total cartage and freight for white lead in oil?

A. Yes, sir. That is the last figure I arrived at. I started in by referring to the 1941 record of sales.

Q. What is that record of sales?

A. That is a standard summary of the sales of heavy and soft paste white lead in this particular instance.

Q. For the whole branch?

A. For the Atlantic branch for the year 1941.

Q. It is a total figure for the year then?

A. Yes, and it is arrived at by accumulating the daily pounds of those commodities shipped by the Atlantic branch and checked through the means of a tabulation of the invoices for those commodities against the plant shipping record or warehouse shipping record, if you will.

And the monthly totals by accumulation are checked against stock reports. So that in that way by an accumulation of twelve monthly figures we arrived through what I call my sales accounting record to a total of—well, the total stated on this report.

Q. Does that include all shipments by the Atlantic branch to whatever customer?

A. That includes all shipments billed.

Q. Would that include shipments to the Du Pont Company?

3250 A. No.

Q. Under a contract?

A. It would not include the shipments to the Du Pont Company because that is an inter-branch billing proposition.

Q. Would that include all other shipments then?

A. No. It would only include those shipments to customers, to the classification we call customers' accounts receivable.

Q. Who are in that classification of customers' accounts receivable?

A. Well, there are several thousand customers, but it does exclude all what we call company branches and subsidiaries with the possible exception of one or two foreign or partly owned companies. I don't know those by name.

Q. Would that figure then, the total figure, include shipments to foreign branches and foreign customers?

A. As I say, I don't know them by heart. That is, through memory. But it does possibly include one or two foreign shipments.

Q. What do you mean one or two foreign shipments? Shipments to one or two foreign accounts?

A. I beg your pardon; yes, sir. Shipments to one or two foreign accounts which are associated with the company. I couldn't testify as to what extent because I have no knowledge of it.

Q. Would that also include sales of white lead in 3251 oil to any paint companies?

A. If they are in the category I mentioned before, yes. In fact, many of them no doubt are paint companies. I don't know how many.

That could be obtained from the records, but I don't know that.

Q. That wouldn't necessarily then include just the material packed in cases of 100 pounds or less, would it?

A. Oh, yes, because we sell all of the tonnage on this report—that covers material packed only in kegs of 100 pounds or less.

Q. It wouldn't include then anything in larger containers?

A. No, sir; definitely not.

Q. Sent to larger consumers?

A. We don't put that in this category.

Q. Now where did you get your figure that appears here on your total freight and cartage under that category?

A. Another standard record in the expense accounting system is the expense account which is broken down into several classes of expense and one of which is what we call freight and cartage.

Q. Is that allocated only to white lead in oil?

A. This particular figure on schedule Exhibit 170-A, the total has been taken directly from the expense accounting record of the Atlantic branch for the year
3252 1941 for the amount charged to white lead, heavy and
soft expense and for the freight and cartage white lead.

Q. Do you know how that is allocated in the case of mixed billings?

A. I know that we allocate all freight directly. By that I mean on the basis of the weight involved times the rate giving an extension and we accumulate those figures from carriers' invoices.

However, inasmuch as local cartage does enter into these calculations on schedule Exhibit 170-B, we assess or allocate local cartage on the basis of average cost per hundredweight shipped.

Q. In other words, it is an average figure then?

A. That is an average figure which is applied to all our products including white lead in oil.

Q. Then as far as local cartage is concerned, you don't have the actual figure?

A. No, sir; that is an average figure.

Q. And this total freight and cartage includes an average figure?

A. That is an average figure as schedule Exhibit 170-B indicates.

Q. I am talking now but not about the material in Exhibit 170-B but the cartage that is figured into the par zone shipments.

A. But as I explained in the first instance in an-
3253 swer to your first question, the average freight shown
for the par zone was arrived at by difference. That is, I took the total of the white lead in oil shipments to customers and the total expense freight and cartage and

from that are deducted the tonnage to Georgia and Florida as well as the calculated amount of freight and cartage applying thereto and by difference I arrived at the quantities sold in the par zone and the freight and cartage applying thereto.

And by an arithmetical calculation arrived at that average freight per hundredweight.

Q. So that the total figure that you started with then was not broken down as between cartage and freight? I am talking now about this—

A. (Interposing.) I didn't quite get that question.

Q. The total that you started with on total cartage and freight—this figure here on Exhibit 170-A—that wasn't broken down in any way?

A. No, sir. That is a total figure as I explained before. It is a total figure applying only to the white lead in oil department though.

Q. Does that include in that total figure any average cartage?

A. It does as I explained before. It is a direct freight charge or outside carriers' charges, but our own company equipment does the local cartage and that is applied 3254 on an average weight per hundredweight based on cartage cost sheets that we maintain in the office.

Q. And you just allocated that cartage based on your cost experience with your own trucking?

A. That's right; yes, sir.

Q. Do you know, Mr. Baum, where the bulk of the shipments represented in this approximate 20,000,000 pounds of white lead in oil sold in the par zone went in the par zone?

A. No, I do not.

Q. You don't know whether it was 95 per cent sold in metropolitan New York or 95 per cent sold some place else?

A. I certainly do not. That information could be obtained, but I don't know it.

Q. You don't know the allocation of it?

A. The records there are just like we got it from Georgia and Florida and we could get it from any state or any city for that matter.

Q. I assume the total freight and cartage figure there also included the foreign freight on those foreign shipments that were in there?

A. Now that brings up a point that I am not sure of for this reason: We formerly carried—rather we formerly maintained the records of the white lead in oil foreign sales as a separate department and, frankly, I am not sure what the date was that we consolidated that
3255 into one total with the domestic, so I cannot answer your question with any degree of accuracy.

I would have to look at the record.

Q. Now the only place then that the Atlantic branch sells outside of par territory is Florida and the eastern half of Georgia, isn't it?

A. To my knowledge, those are the only points to which we sell customers outside of par territory.

Q. Then the Philadelphia branch would no doubt handle all the intervening area there between the southern border of the Atlantic branch and the northern border of eastern Georgia?

A. I wouldn't say that because I don't know.

Q. But you jump over some other branch's territory to get down in there?

A. Yes, we do.

Q. Now on these oxides, what branch handles the car load sales in Florida and eastern Georgia?

A. I don't think I am qualified to say whether it is exclusively—I know that the Atlantic branch ships material down there but I don't know what the territories are.

Mr. Du Bose: May we state, Mr. Wright, that so far as these Respondents' Exhibits 170-A and B for identification and Respondents' Exhibit 171, refer to oxides and we are not offering them for that purpose at all. And
3256 those portions of the exhibit that have reference to oxides may be considered stricken from the sheets since we asked no questions on that.

We are offering it only to show the white lead in oil situation.

By Mr. Wright:

Q. Mr. Baum, isn't this what you did now; didn't you start with two total figures which you knew to be records?

A. Yes, sir.

Q. Total pounds of the branch and total freight?

A. That's correct.

Q. And cartage?

A. Yes.

Q. And then you made hypothetical calculations in this zone on three different freight bases; one, on a straight LCL basis; two, on a car load basis in the quantity shipped at car load rates and three, on a car load basis assuming a single car load to each point in the destination?

Neither one of which conditions necessarily had to apply throughout all those shipments. And then you deducted that from your two factual figures on the book and made these calculations from them?

A. My answer would be yes in the case of the second and third calculations but I just wondered which should qualify—I mean the answer yes as applied to the 3257 LCL, because in looking down the list of destinations here and having checked those rates through the traffic department that are applied, I would say that they—in most instances—yes, in most instances they represent an LCL rate which is not hypothetical.

But in several instances I will admit that they seem to be a total pounds involved which would take a car load rate whereas the calculation is all on an LCL basis.

Q. Many of them could have taken either a car load or a less than car load rate?

A. Yes. Because these, after all, are total figures for the year, and I can't say whether or not, to illustrate, Jacksonville, Florida, 46,897 pounds, might have been one car load and then several LCL shipments.

Q. Statistically speaking now, do you really think that your total figure for par is exactly comparable to your figures for these various points in view of the fact that in your par total figure you have no allocation to show where in the par zone the deliveries were made?

Mr. Du Bose: I object to that question as argumentive.

Trial Examiner Norwood: I think that he may answer. This is cross-examination.

Mr. Du Bose: That is true.

Trial Examiner Norwood: Objection overruled.

3258 The Witness: Well, I can't say between them—I can't say it wouldn't make an infinitesimal difference but as to how much difference when we calculate to four decimal places on an average rate per hundredweight, when you consider the fact that there were 104 tons, a total of 9,826 tons roughly 1 per cent shipped down to the Florida and Georgia zones, that calculation, using the method I did to arrive at the par average would be hardly noticeable.

I think with four decimal points it might make a one or two point, decimal point, difference.

By Mr. Wright:

Q. You don't have any other territory than the par, the ⅜ and the Atlantic branch?

A. No, sir.

Q. No ⅛ and no ¼?

A. For the white lead in oil?

Q. Yes.

A. Not to my knowledge, no. Can I qualify that?

Q. Yes.

A. Of course, I don't presume to know all the—not all, but to know any of the bases of calculation. That is, the differentials that may be used in the department. These figures that I have prepared cover what I understand to be the only zone differentials that apply to the Atlantic branch for the sales of white lead in oil.

Q. Do you have any warehouses for white lead in 3259 oil in the Atlantic branch?

A. I believe we have—in 1941 you are speaking of?

Q. Yes, sir.

A. It seems to me we had six or eight hundred consignment accounts which were equivalent to warehouses. In other words, the goods were lying there on consignment ready to be withdrawn.

Q. I am talking about a warehouse now to which you ship goods for transshipment to customers.

A. Yes, we did have one in Savannah and there might have been one—I am not sure because of the date which is six years ago—there may have been one in Jacksonville.

Q. Wouldn't the existence of those Savannah and Jacksonville warehouses throw out all your hypothetical calculations showing shipments direct from Brooklyn to those points?

A. Well, as I said, before, I admitted that in the second and third cases they were hypothetical but in the first instance where we marked, I believe, LCL, those are totals and they may or may not have been made up of less than car load shipments in some instances.

Of course, obviously most of them are LCL and they must have taken an LCL rate.

Q. Well now, are you sure, for instance, that all of these shipments went directly from Brooklyn to the customer direct without going through either the
3260 Savannah or Jacksonville warehouses?

A. No, I am not sure of that.

Q. In other words, they could have been warehoused in either of those places and been transshipped by truck or something?

A. These are final invoices of sales—final destinations covered by invoices billed to customers.

Q. Now the National Lead Company has a warehouse in Atlanta, doesn't it?

A. I don't know. I am only speaking for the Atlantic branch and they do not have a warehouse in Atlanta.

Q. You don't know of any deliveries from an Atlanta warehouse then into Atlantic branch territory?

A. I don't know of any, no.

Q. You checked all these calculations on here, did you not, Mr. Baum?

A. Yes, sir; I did.

Q. Will you check over the calculation that appears in the top part of the column, column 6, under the heading "freight-gross weights calculated on car load rates?"

A. Now as I understand it, Mr. Wright, you would like me to make—to indicate the weight and the rate—

Q. (Interposing.) No, sir; just check the addition of those figures.

A. Yes, sure.

3261 Trial Examiner Norwood: Off the record.

(Discussion off the recerd.)

Trial Examiner Norwood: On the record.

By Mr. Wright:

Q. Have you checked that, Mr. Baum?

A. It seems to be out one penny in the total. That figure there is out $200.

Q. That figure is out $200?

A. Yes.

Q. That is the figure of $989.79?

A. That should be $789.79. But the total used in calculating the average is out one penny and the average is not changed at all.

Q. But the total figures are out somewhere?

A. It is out one penny in the total, yes.

Mr. Wright: I have no further questions.

Redirect Examination by Mr. DuBose.

Q. Let me get this straight, Mr. Baum. Going back to Respondents' Exhibit 170-B for identification, the line opposite the words "total Florida" under the heading "freight-gross weight calculated on car load rates," should read $789.79 instead of $989.79; is that correct?

A. That's correct.

Q. Now the total at the bottom of that same col-
3262 umn opposite the words "grand total," however, are
correct to one penny; is that right?

A. That's correct.

Q. In other words, in adding total Florida and total Georgia, the figures should be $789.79 plus $657.07; is that correct?

A. Correct to two pennies.

Q. Are you anticipating my question, Mr. Baum.

A. I am sorry.

Q. The total Florida under that heading should be $789.79; is that correct?

A. That's correct.

Q. And the total Georgia under the same heading should be $657.07; is that correct?

A. That's correct.

Q. And the grand total under that same heading should be $1,446.86 instead of $1,446.88 as written; is that correct?

A. That's correct.

Q. So that the grand total which appears on Respondents' Exhibit 170-B for identification under the heading "freight-gross weights calculated on car load rates" is correct to two pennies; is that correct?

A. Yes, sir.

Recross Examination by Mr. Wright.

3263 Q. You heard about Mr. Werne's testimony re-
garding the seven points in Florida at which cartage
was not included in the car load rate used?

A. Yes, sir; I did.

Q. You heard his designation of those seven points?

A. Yes.

Q. Can you tell us whether cartage is figured in those car load rates on the seven points mentioned?

A. Could I tell you whether it is included in there, is that your question?

Q. Yes.

A. It is only included in five of those points, the ones indicated by the "x."

Mr. Wright: I have no further questions.

3264 Mr. DuBose: I reoffer, subject to your ruling of yesterday, Respondent's Exhibit 170-A and B for identification and Respondent's Exhibit 171 for identification, excluding so much of these exhibits as refer to oxides.

Trial Examiner Norwood: What was my ruling of yesterday which counsel referred to?

Mr. Wright: I haven't made any objection to it and I am prepared now to make an objection to the offer.

Trial Examiner Norwood: Proceed.

Mr. Wright: Your Honor, I first want to object on the ground of relevancy. The document is irrelevant because it doesn't relate to individual transactions within a class. It is speaking here now of all shipments in the par zone without regard to where they were shipped and without any breakdown of any sort. It is a total figure with an average which is meaningless.

My second objection is that the document combines actual records with estimates and guesses which make the total conclusion which comes out in Exhibit 170-A and Exhibit 171, a very misleading and erroneous conclusion. In the first place, as it was brought out, they started here with two total figures, the total pounds sold in the whole branch and the total freight in the whole branch. Then they went into the ⅜ths territory and found out how much was shipped into each town. They figured freight
3265 rates to those towns on three different bases and then deducted on the basis of those three different bases from the total figure as if individual shipments were made from Brooklyn to those towns. Then deducting that and deducting the pounds sold there, they were left with the residual sum, being as stated, the pounds sold in par and the total freight and cartage in par.

In the first place, the witness said there were foreign shipments left in that figure which isn't par at all in this foreign freight for all he knows, included in that total on the freight to par. We have no idea of the amount of either one of them but it makes the final calculation a very misleading and an erroneous one based on estimates.

In the second place, he stated that there were at that time two warehouses down here, one in Savannah and one in Jacksonville, and for all he knows a good many of those shipments went to these warehouses in these places and then were reshipped to the customer, so that these calculations, none of them would apply to such shipments.

Mr. DuBose: Are you through, Mr. Wright?

Mr. Wright: I am through.

Trial Examiner Norwood: I want to ask counsel how to settle these issues to show average costs.

Mr. DuBose: I beg your pardon?

Trial Examiner Norwood: How does it go to the settlement of these issues for you to show average costs?
3266 I think we ought to thrash that out right now and
not have any further motions in case the average cost is not going to be determined.

Mr. Du Bose: Your Honor has already admitted various records of this nature.

Trial Examiner Norwood: Yes, I know that.

Mr. Du Bose: Our theory is that the zone method for white lead in oil, as this exhibit relates to, was based upon average freight costs within the particular zones. Whether that be a valid argument is a matter of law. We are trying to show the facts to show that the average cost of shipping in, say, ⅛th, ¼ or ⅜ths territories does not exceed the difference between the average par freight cost and the average freight and shipping costs or cartage in the differential territories, but that there is some relation between the two.

Now, whether or not that be valid, as I say, is a question of law, but we believe we are entitled to show that to justify the zone method, so-called.

Trial Examiner Norwood: You think that would go to both issues?

Mr. Du Bose: It would certainly have relevance to both issues based upon all the evidence. There may be part of count number one of the amended complaint which, if
interpreted one way would say that these particular
3267 methods were unfair methods of competition regard-
less of collusion and, of course, count two alleges that they are discriminatory. So I think that this evidence is relevant as to both counts.

Trial Examiner Norwood: What about the objections made to these particular exhibits?

Mr. DuBose: On the relevancy the argument that I made, I think, holds true. All the rest of Mr. Wright's argument goes to the weight entirely to be given to a document which has been prepared along factual lines. Now, you will notice that there are three different calculations. Mr. Wright says, how do we know that some of these shipments might not have passed through warehouses? Well, assuming that, we made a calculation based upon carload shipments to each one of these points which is the cheapest way you could get them down there, regardless of whether it went through the warehouse or any other place. And, of course, they had to get from the plant to the warehouse first and the National Lead Company had to pay the shipping cost to get them down there before they could be restricted.

Trial Examiner Norwood: In other words, shipping them from the warehouse wouldn't have reduced it in any case, would it?

Mr. Du Bose: It wouldn't have reduced our calculation based on carload rates anyway, and that is why we used the alternative methods:

3268 Trial Examiner Norwood: I am inclined to agree with counsel that the objections go to weight and these can be analyzed and the incorrect features of the exhibits shown, if there are any. I shall give you the benefit of the doubt, that is, with regard to any doubts as to the relevancy on that issue. I think the general proposition would probably be considered in connection with count number one and as to average costs, it might enter some way into our consideration in determining the discrimination issue.

I will overrule the objection and receive the exhibits.

Mr. Du Bose: You are not limiting the reception of this to any particular count?

Trial Examiner Norwood: No. Respondent's Exhibits 170-A and B for identification and Respondent's Exhibit 171 for identification will be received in evidence.

(Whereupon, RESPONDENT'S EXHIBITS 170-A, 170-B, and 171, heretofore marked for identification, were received in evidence.)

Trial Examiner Norwood: Is there anything further of this witness?

Mr. Wright: That is all, your Honor.

Trial Examiner Norwood: You are excused, Mr. Baum.

(Witness excused.)

Mr. Du Bose: May we have a short recess at this
3269 time, your Honor?

Trial Examiner Norwood: We will take a five-minute recess at this time.

(Whereupon, a short recess was taken.)

Trial Examiner Norwood: Come to order. Proceed.

Mr. Wright: Your Honor, I assume that these last two exhibits that were received, 170-A and B, and 171, were received subject to the same restrictions that were placed on other similar material, namely, that unless the basic data were made available to me, that you would entertain a motion to strike.

Trial Examiner Norwood: That is true, we have had that understanding heretofore.

Mr. Ewing: The basic data is at 111 Broadway, and Mr. Baum, I am sure, will be glad to supply it to any Commission representative, except Saturdays.

Trial Examiner Norwood: Call your next witness.

Mr. Ewing: I call Ernest R. Dondorf.

Trial Examiner Norwood: Mr. Reporter, this is Mr. Ernest R. Dondorf, 191-30 114th Road, St. Albans, New York.

ERNEST R. DONDORF, was thereupon called as a witness on behalf of the company and, having been first
3270 duly sworn, testified as follows:

Direct Examination by Mr. Ewing.

Q. What is your full name, please?

A. Ernest R. Dondorf.

Q. What is your address?

A. No. 191-30 114th Road, St. Albans, New York.

Q. Mr. Dondorf, are you employed by the National Lead Company?

A. I am.

Q. In what capacity are you presently employed?

A. As manager of metal purchases.

Q. Will you tell us what your duties are in that regard?

A. Purchases of all virgin material, pig lead, antimony, silver, all virgin materials.

Q. How long have you occupied that position?

A. September 1, 1949.

Q. When were you first employed by the National Lead Company?

A. October 1, 1906.

Q. In what capacity were you then employed?

A. Office boy.

Q. How long did you continue to work as office boy, approximately?

A. Oh, until 1908 or 1909, I would say.

Q. Have you been continuously employed by the 3271 National Lead Company since 1906?

A. No, I wish to correct that. I was originally employed by the United Lead Company in 1906. That was a subsidiary of the National Lead Company.

Q. And have you been continuously employed by the National Lead Company, or one of its subsidiaries?

A. That's right.

Q. What was your next position after you ceased being office boy?

A. Bookkeeper.

Q. How long did you occupy that position, approximately?

A. Oh, until 1913, I would say.

Q. What was your next employment after that?

A. As manager of the export department.

Q. And how long were you manager of that department?

A. Until 1924.

Q. What was your next employment?

A. As assistant secretary of the United Lead Company.

Q. And how long did you occupy that position?

A. Until November, 1928.

Q. And did you go from that position to your present position?

A. No. In 1928 I went into the metal department.

Q. In what capacity?

A. As assistant to Mr. Hall, who was then the manager of the metal department.

3272 Q. And how long did you continue as his assistant?

A. Until 1939.

Q. Are you familiar with the purchases of pig lead by the National Lead Company, say, during the years 1936 to 1941, inclusive?

A. No. I was in the department but I had nothing to do with the purchase of pig lead.

Q. Well, I am asking you now if you are familiar with the purchases during that period?

A. More or less, yes.

Mr. Ewing: I ask that this sheet be marked Respondent's Exhibit 173 for identification.

Trial Examiner Norwood: It will be marked Respondent's Exhibit 173 for identification.

(Whereupon, the document referred to was marked Respondent's Exhibit No. 173 for identification.)

Trial Examiner Norwood: Proceed.

By Mr. Ewing:

Q. Mr. Dondorf, I show you this paper that has been marked Respondent's Exhibit 173 for identification, and ask you whether that was prepared by you or under your direction?

A. Yes, it was.

Q. This document is headed "pig lead purchases (tons)" and purports to relate to the years 1936 to 1941 inclusive. I ask you to state from what source or
3273 sources the information contained in the document was obtained by you.

A. This information was obtained by a yearly statement that we make up in this department every year from permanent records.

Q. Does that statement purport to show the purchases made by the National Lead Company of pig lead during those years?

A. Yes, sir.

Q. Now, will you tell us a little more about what you mean when you said that it was made up from annual statements?

A. Statements like you have in your hand there. We make those up every year.

Mr. Ewing: I ask that these six documents be marked Respondent's Exhibit 174-A to F inclusive for identification.

Trial Examiner Norwood: They will be so marked for identification as Respondent's Exhibit 174-A to F inclusive.

(Whereupon, the documents referred to were marked Respondent's Exhibit 174-A, 174-B, 174-C, 174-D, 174-E, and 174-F for identification.)

Trial Examiner Norwood: Proceed.

By Mr. Ewing:

Q. Will you tell us whether these documents marked Respondent's Exhibits 174-A to F inclusive for identification are records prepared in your department (showing to witness)?

A. Yes, they were.

Q. Are they prepared in the regular course of
3274 business in your department?

A. Yes.

Q. To what use are they put?

A. We prepare these records for the executives primarily to show what went on in the department during that year.

Q. With respect to the purchase of pig lead?

A. That's right.

Q. Now, do the figures shown on the document which has been marked Respondent's Exhibit 173 for identification correctly reflect the figures contained in the records which have been marked Respondent's Exhibit 174 A to F inclusive for identification, as well as the six principal companies from which National purchased pig lead in the years 1936 to 1941?

A. They do.

Mr. Ewing: I offer Respondent's Exhibit 173 for identification in evidence.

Trial Examiner Norwood: Is there any objection?

Mr. Wright: I have a basic objection to this, on the ground of relevancy and furthermore that the basic data have not been supplied.

Mr. Ewing: As far as the ground of relevancy is concerned, I would say that in view of the allegations of the amended complaint with respect to our alleged control
of pig lead prices, it is quite relevant to show from
3275 whom and in what quantities we have been buying
pig lead. As far as the basic data is concerned, this is prepared from these other exhibits which I didn't offer and do not intend to unless Mr. Wright would wish me to, simply for the purpose of cluttering the records. They are the records of the department and if there are any other records of the department that Mr. Wright would like to see or have the Commission see, they are welcome to make any examination they would like at any time.

Trial Examiner Norwood: He may have those reports on which this tabulation is based?

Mr. Ewing: Certainly.

Trial Examiner Norwood: That is 174-A to F for identification?

Mr. Ewing: That's right.

Trial Examiner Norwood: What is this recapitulation on the bottom here, Anaconda five thousand and Smelting two thousand?

Mr. Ewing: That is the reference to others in the last year.

Trial Examiner Norwood: Objection overruled. The exhibit will be received as marked. The laboring data will be delivered to Commission's counsel.

(Whereupon, RESPONDENT'S EXHIBIT NO. 173, heretofore marked for identification, was received in evidence.)

3276 Trial Examiner Norwood: Proceed.

By Mr. Ewing:

Q. Now, Mr. Dondorf, you have testified that since 1939 you have been manager of the metal purchasing?

A. Yes.

Q. When in 1939 approximately did you become manager?

A. September 1st,

Q. Since that date what, if anything, have you yourself had to do with the purchase by the National Lead Company of pig lead?

A. I purchased all the pig lead for the entire company since that time.

Q. Is it within your province to select the source from which you purchase pig lead for the National Lead?

A. Yes.

Q. Will you tell us briefly what considerations enter into the selection by you of any particular company from which you purchase pig lead?

A. Well, it all depends on the grade of pig lead that I wish to purchase, whether chemical corroding or common.

Q. Well, will you explain that answer a little more?

A. Well, if I want to buy a lot of corroding lead, I would first go to the American Smelting and Refining Company and if I couldn't get my supplies from them, then I would go to the other producers.

3277 Q. Will you give us some of the other producers of corroding pig lead?

A. St. Jo Lead Company, United States Smelting Refining and Mining Company, Bunker Hill and Sullivan Mining Company. Those are the principal producers of corroding lead.

Q. From whom do you purchase common pig lead?

A. From the American Smelting and Refining Company, Anaconda Sales Company, Bunker Hill and Sullivan, American Metal Company.

Q. Are the purchases of pig lead as shown on Respondent's Exhibit 173 inclusive of both common and corroding pig lead?

A. That's right.

Q. Is it correct to say that they include all pig lead purchased by National during those years?

A. Correct.

Q. Does anyone else in your department buy pig lead under your supervision?

A. Yes. I have an assistant there.

Q. He works under your supervision?

A. That's right.

Q. Now, as far as you know, have you ever, since your employment in your present capacity, or has your assistant or anyone else in the National Lead Company ever suggested at any time to the American Smelting and Refining
3278 Company or any representative of it that it fix or establish a price for pig lead suggested by you or anyone else?

A. No, sir, not at any time.

Q. Would your answer be the same if I put the same question with respect to the other companies from which you purchase pig lead?

A. That's correct.

Mr. Ewing: I have no further questions.

Cross-Examination by Mr. Wright.

Q. Mr. Dondorf, on the basic data from which you compiled this exhibit, there are two categories of lead set out separately, are there not? Refined and common.

A. That's right.

Q. What is the refined lead that is in that basic data?

A. We classify refined lead as corroding lead.

Q. They are synonymous?

A. That's right.

Q. Is there a difference in the proportion of corroding lead over that period purchased from A. S. & R. as against the others compared to the proportion of common lead purchased from A. S. & R. as compared with the others?

A. It all depends, I have got to break that down. I can't tell you from that statement how much is corroding and how much is common.

3279 Q. Will you refresh your recollection as to the portion of corroding lead purchased from A. S. & R. during those years from those documents marked Respondent's Exhibit 174-A to F for identification?

A. Yes. In 1936 from A. S. & R. we purchased 30,465 tons of corroding lead.

Q. Out of a total purchase of how much?

A. Out of a total purchase—

Q. Of corroding lead now.

A. Out of a total purchase of 53,568.

Q. Now, how does that proportion that obtained in that year obtain in the other years there, without giving us the exact figures.

A. I would say about the same percentage each year.

Q. In the period of those years, 1936 to 1941, did the National Lead Company have any contractual relationship with the American Smelting and Refining Company covering its purchases of pig lead, either refined or common?

A. Yes.

Q. Roughly what was that contract?

A. It was always made on a monthly basis either by a flat price or an average for the month.

Q. How were your purchases distributed? Were they principally on the average basis?

A. No. I would say they were more on the flat
3280 price rather than on the average.

Q. Would that be a spot price?

A. That is what I mean by flat price, spot price.

Q. Do those contracts call for you to take any special percentage of your requirements of such lead? I am speaking now of the period from 1936 to 1941.

A. The contracts are made up either in corroding or common grades, you see. They are specified that way.

Q. Do they specify the amount that you shall purchase over a period of time?

A. That's right.

Mr. Wright: I have no further cross-examination.

Redirect Examination by Mr. Ewing.

Q. Over what period of time, Mr. Dondorf?

A. By months.

Q. Month to month?

A. Just month to month, that is all, yes.

Q. And you are free to terminate that arrangement at any time?

A. That's right.

Q. Did the contract or contracts in effect since you have been manager of your department call for the purchase by National Lead of any particular percentage of the requirements?

3281 A. No.

Mr. Ewing: That is all.

Recross Examination by Mr. Wright.

Q. Is it not true, Mr. Dondorf, now, that you are willing to get lead from any source that you can get it?

A. That is true.

Q. For over how long a period has that situation obtained?

A. That was all during the war period, I would say.

Q. How about in 1941?

A. It started in about 1941.

Q. Was there a plentiful supply in 1940?

A. I wouldn't say plentiful but we could get what we needed in 1940.

Q. It still didn't resemble the period in the early thirties though, did it, as far as the availability of supply?

A. That's right.

Q. You say in your experience in the company that you don't recall any requirements contract or any percentage of requirements contract with the American Smelting and Refining Company?

A. I don't remember, no, sir.

Q. But you haven't been in the metals department—how long a period of time is your service in the metals department?

3282 A. 1928.

Mr. Wright: No further examination.

Mr. Ewing: No further questions.

Trial Examiner Norwood: You are excused.

(Witness excused.)

3283 Trial Examiner Norwood: Proceed.

Mr. Ewing: I call Henry O. Bates.

Trial Examiner Norwood: Mr. Reporter, this is Mr. Henry O. Bates, 67 Briarcliffe Road, Mountain Lakes, New Jersey.

HENRY O. BATES was thereupon called as a witness for the Respondents and, having first been duly sworn, testified as follows:

Direct Examination by Mr. Ewing.

Q. Will you please state your full name?

A. Henry O. Bates.

Q. What is your address?

A. 67 Briarcliffe Road, Mountain Lakes, New Jersey.

Q. Mr. Bates, are you connected with the National Lead Company?

A. I am.

Q. In what capacity are you connected with it?

A. Secretary of the corporation.

Q. How long have you been secretary approximately?

A. Since 1938.

Q. When were you first employed by the National Lead Company?

A. 1902.

3284 Q. Have you been continuously employed by that company, National Lead, since then?

A. I was out for a few months in 1905 and 1906.

Q. Now as secretary you are the custodian of the minutes of the National Lead Company's stockholders' meetings, directors' meetings and Executive Committee meetings, are you not?

A. I am.

Q. Have you brought with you minute books covering those meetings this morning?

A. I have brought five of the minute books.

Q. Have you with you the original minutes of the directors' meeting of February 18, 1892 and also of the meeting of March 17, 1892?

A. I have.

Mr. Ewing: I ask that these two sheets be marked Respondents' Exhibit 175-A and B for identification.

Trial Examiner Norwood: They will be marked as Respondents' Exhibit 175-A and B for identification.

(The documents referred to were marked for identification Respondents' Exhibit 175-A and 175-B.)

Trial Examiner Norwood: Proceed.

By Mr. Ewing:

Q. I ask you to turn to the minutes of the Board of Directors' meeting of February 18, 1892.

3285 A. Yes.

Q. What was the next regular meeting of the Board of Directors after the meeting of February 18, 1892?

A. The next meeting recorded, the regular meeting of March 17, 1892.

Q. Now I hand you here with these photostats which have been marked Respondents' Exhibit 175-A and B for identification and ask you whether the photostats set forth in full the minutes of February 18, 1892 and a portion of the minutes of March 17, 1892 (showing to witness)?

A. That is correct.

Mr. Ewing: I offer Respondents' Exhibit 175-A and B for identification in evidence.

Trial Examiner Norwood: Is there any objection?

Mr. Wright: I haven't finished reading them, your Honor.

Trial Examiner Norwood: Can you give us a little statement of purpose on this?

Mr. Ewing: Yes, sir. With respect to the meeting of February 18, 1892, I am offering it with specific reference to the last paragraph at the bottom of Respondents' Exhibit 175-A for identification where the resolution appears authorizing the Executive Committee to report on the advisability of discontinuing the manufacture of white lead at one plant and the grinding of lead in oil at another, and I propose to connect that with action that
3286 was later taken.

With respect to Respondents' Exhibit 175-B for identification, I am offering it with specific reference to the action indicated by the next to the last paragraph on the page relating to division of territory.

Mr. Wright: With reference to the offer with regard to the next to the last paragraph there, this document stops in the middle of a sentence which is a description of what they meant by the paragraph that counsel has pointed out.

Mr. Ewing: That is not the paragraph. The paragraph where it stops in the middle of the sentence relates to sales managers and that is not what I am interested in.

It is the paragraph before that and if you want the rest of the minutes in, why we will provide them.

Mr. Wright: May I inquire of counsel about the statement then following are the boundary lines for the several districts at the end of the paragraph?

Mr. Ewing: That is part of the report. As I say, I have no objection to offering all of the minutes. I simply didn't have them photostated because it didn't seem necessary. The originals are right here.

Mr. Wright: I don't see how we could consider receiving the first paragraph of something which continues

3287 on and is broken off right in the middle.

Mr. Du Bose: Why not?

Trial Examiner Norwood: Counsel can examine the minutes here and see if he has any objection.

Mr. Wright: Very well, your Honor. Your Honor, I don't see the relevancy of these exhibits. I would like to make an objection on that ground and I would like to make a further objection about Respondents' Exhibit 175-B that it is incomplete and the statement to which counsel called attention is misleading without having the entire minutes of that meeting included in the exhibit.

I don't think it means anything standing by itself.

Trial Examiner Norwood: Well, counsel can make a careful note of that so that he can introduce the rest of it inasmuch it is available to him.

Mr. Wright: Is it proper to introduce an excerpt out of the minutes in this fashion?

Trial Examiner Norwood: I think so.

Mr. Ewing: I don't know why not.

Trial Examiner Norwood: Off the record.

(Discussion off the record.)

Trial Examiner Norwood: On the record. I shall receive it subject to connection as Respondents' Exhibit 175-A and B in evidence.

(The document referred to, heretofore marked for

3288 identification RESPONDENTS' EXHIBIT 175-A and 175-B, was received in evidence.)

Trial Examiner Norwood: Proceed.

By Mr. Ewing:

Q. Now I ask you whether you have with you, Mr. Bates, the minutes of the meetings of the Board of Directors of the National Lead Company held on December 21, 1911 and May 19, 1927?

A. What was that first date?

Q. December 21, 1911.

A. I have.

Mr. Ewing: I ask that these two photostats be marked Respondents' Exhibit 176-A and B for identification.

Trial Examiner Norwood: They will be marked Respondents' Exhibits 176-A and B for identification.

(The documents referred to were marked for identification Respondents' Exhibit 176-A and 176-B.)

By Mr. Ewing:

Q. Now I show you Respondents' Exhibit 176-A for identification and ask you whether that is a correct copy of that portion of the minutes of the Board of Directors' meeting of December 21, 1911, appearing at page 190 of the minute book?

A. That is correct.

3289 Q. And I show you Exhibit 176-B for identification and ask you whether it is a copy of that portion of the minutes of that same meeting appearing at page 192 of the minute book?

A. That is correct.

Mr. Ewing: I offer those photostats which have been marked Respondents' Exhibit 176-A and B for identification, being a portion of the minutes of the meeting of the Board of Directors of the National Lead Company held December 21, 1911 with the statement that the rest of the minutes are available and here and if counsel wishes to have a copy we will provide him with it.

But it doesn't seem to be necessary for us to burden the record with other than these two portions. I should say that I offer them specifically for showing the resignation from the Board of Messrs. Daniel and Murry Guggenheim and also the resignation from the Board of Mr. Edward Brush.

Trial Examiner Norwood: Is there any objection?

Mr. Wright: In view of counsel's statements with regard to the availability of these records and further of the limited purpose of the offer to show the resignation of these men, I have no objection.

Trial Examiner Norwood: They will be received in evidence as Respondents' Exhibit 176-A and B.

(The document referred to, heretofore marked for 3290 identification RESPONDENTS' EXHIBIT 176-A and 176-B, was received in evidence.)

Trial Examiner Norwood: Proceed.

By Mr. Ewing:

Q. Now, Mr. Bates, have you with you the minutes of the meeting of the National Lead Company's Board of Directors held on May 19, 1927?

A. I have.

Mr. Ewing: I will ask that these two photostats be marked Respondents' Exhibit 177-A and B for identification.

Trial Examiner Norwood: They will be marked for identification as Respondents' Exhibit 177-A and B.

(The document referred to was marked for identification Respondents' Exhibit 177-A and 177-B.)

By Mr. Ewing:

Q. Now I show you, Mr. Bates, Respondents' Exhibit 177-A and B for identification and ask you whether they correctly reproduce the minutes of the meeting of May 19, 1927 (showing to witness)?

A. They do.

Q. Respondents' Exhibit 177-A for identification is a reproduction of that portion of the minutes which appears in the minute book which you have produced as page 73?

A. Yes, sir.

3291 Q. And Respondents' Exhibit 177-B for identification is a reproduction, is it not, of that portion of the minutes which appears on page 76 of the minute book?

A. Yes, sir.

Q. So that when you answered my question a moment back, you did not intend to imply that these two sheets covered the entire minutes of that meeting?

A. That's correct.

Mr. Ewing: I offer Respondents' Exhibit 177-A and B for identification and, in particular, the last formal resolution which appears on Exhibit 177-B for identification relating to the minimum differential price on oxides.

Trial Examiner Norwood: Is there any objection?

Mr. Wright: I object to the offer, your Honor, on the ground that this is incomplete. It is only a portion of the minutes.

Mr. Ewing: I make the same proffer with respect to the rest of the minutes.

Trial Examiner Norwood: Is there anything further?

Mr. Wright: No, sir.

Trial Examiner Norwood: The exhibit will be received as marked. Objection overruled.

(The document referred to, heretofore marked for identification RESPONDENTS' EXHIBIT 177A and
3292 177-B, was received in evidence.)

By Mr. Ewing:

Q. Mr. Bates, have you with you the original minutes of the annual stockholders meeting of February 16, 1893?

A. I have.

Trial Examiner Norwood: Were you secretary at that time?

The Witness: No, sir.

Mr. Ewing: I ask that this sheet be marked Respondents' Exhibit 178 for identification.

Trial Examiner Norwood: It will be marked for identification as Respondents' Exhibit 178.

(The document referred to was marked Respondents' Exhibit 178 for identification.)

By Mr. Ewing:

Q. I show you Respondents' Exhibit 178 for identification and ask you whether that correctly reproduces the fourth page of the minutes of that meeting, page 20 of the minute book in your hands?

A. That is correct.

Q. That is the meeting of the stockholders' meeting, annual meeting, of February 16, 1893; is that right?

A. That is right.

Mr. Ewing: In this case, I would like to offer all of the minutes of that meeting which appear in this
3293 minute book of annual meetings of stockholders at
pages 17 to 24 and would like the opportunity to substitute photostats which will be made and supplied.

Mr. Wright: I have no objection to that procedure.

Mr. Ewing: This is the first annual meeting.

Trial Examiner Norwood: You will deliver the photostats to the reporter before he sends in the transcript?

Mr. Ewing: Yes, your Honor. I ask that these be marked Respondents' Exhibit 179-A to G inclusive for identification.

Trial Examiner Norwood: They will be so marked for identification as Respondents' Exhibit 179-A to G inclusive.

(The document referred to was marked for identification Respondents' Exhibit 179-A, 179-B, 179-C, 179-D, 179-E, 179-F and 179-G.)

Trial Examiner Norwood: What is the purpose of that offering?

Mr. Ewing: I would be glad to state the purpose.

Mr. Wright: Has it been offered yet?

Mr. Ewing: Yes. The offer relates particularly to that portion of the minutes appearing on page 20 of the minute book "A" of the stockholders' meetings of the National Lead Company relating to the discontinuance of certain white lead factories and the enlargement of others.

3294 And also with respect to the following portions of the president's report of which the reference on page 20 is a part appearing on page 21 of the minute book "A."

Trial Examiner Norwood: When that is photostated will it include the page numbers there?

Mr. Ewing: Yes, sir.

Mr. Wright: As I understand it, it runs from page 17 to page 21.

Trial Examiner Norwood: Through page 24.

Mr. Ewing: It starts on page 17 and ends here.

Trial Examiner Norwood: Off the record.

(Discussion off the record.)

Trial Examiner Norwood: On the record. Proceed.

Mr. Wright: Your Honor, I object to the reception of this exhibit in evidence as competent evidence for the proffer which counsel has made. It consists of self-serving declarations to the stockholders that the company does not want to maintain a monopoly and that there will always be goods manufactured by the company, and they have brought a new efficiency to the business by closing up badly operated and uneconomic plants and so forth.

It has no evidentiary value of any sort. It is pure self-serving declarations by the company to its stockholders and the fact that it was made in 1892 doesn't lend it any more weight than if it was made last week.

3295 Mr. Ewing: We are charged with having started in business practically as a monopoly and it bears directly on that issue.

Trial Examiner Norwood: You charge that they acquired these properties and they have admitted acquiring these properties.

Mr. Wright: Yes, sir.

Trial Examiner Norwood: I don't think we can stop them from giving their explanation of it.

Mr. Ewing: Made at the time.

Mr. Wright: A pious declaration to the stockholders at the time that they had no aim to create a monopoly certainly is not evidence.

Mr. Ewing: Characterize it as you will, the fact remains that that is the record.

Trial Examiner Norwood: I think they have the right to put that in. Objection overruled. It will be received as marked, Exhibit 179-A to G inclusive with photostats to be supplied. The photostats will be the originals and given to the reporter.

(The document referred to, heretofore marked for identification RESPONDENTS' EXHIBIT 179-A, 179-B, 179-C, 179-D, 179-E, 179-F and 179-G, was received in evidence.)

By Mr. Ewing:

3296 Q. Mr. Bates, have you with you the minutes of the annual meeting of stockholders of the National Lead Company held on April 19, 1906?

A. I have.

Mr. Ewing: I ask that these two photostats be marked Respondents' Exhibit 180-A and B for identification.

Trial Examiner Norwood: They will be marked Respondents' Exhibit 180-A and B for identification.

(The document referred to was marked for identification Respondents' Exhibit 180-A and 180-B.)

By Mr. Ewing: I show you photostats which have been marked Respondents' Exhibit 180-A and B for identification and ask you whether they correctly reproduce pages 120 and 124 of the minutes of the annual stockholders' meeting of April 19, 1906 (showing to witness)?

A. They do.

Mr. Ewing: I offer Respondents' Exhibit 180-A and B for identification for the purpose of showing the election to the Board of Directors of the National Lead Company of Messrs. Daniel Guggenheim, Murry Guggenheim and Edward Brush.

Mr. Wright: I have the same objection with regard to the incompleteness of the exhibit. But if it is received under the same stipulation and limited purpose as stated by counsel, then I have no objection.

3297 Trial Examiner Norwood: It will be received in evidence as Respondents' Exhibit 180-A and B.

(The document referred to, heretofore marked for identification RESPONDENTS' EXHIBIT 180-A and 180-B, was received in evidence.)

By Mr. Ewing:

Q. I ask you, Mr. Bates, whether you have here the minutes of the meeting of the Executive Committee of the Board of Directors of the National Lead Company held on January 14, 1932?

A. I have.

Mr. Ewing: I ask that these two sheets be marked Respondents' Exhibit 181-A and B for identification.

Trial Examiner Norwood: They will be marked as Respondents' Exhibit 181-A and B for identification.

(The document referred to was marked for identification Respondents' Exhibit 181-A and 181-B.)

By Mr. Ewing:

Q. I show you Respondents' Exhibit 181-A and B for identification and ask you whether they correctly reproduce page 602 of the minutes of the Executive Committee meeting of January 14, 1932 (showing to witness)?

A. They do.

Mr. Ewing: I offer Respondents' Exhibit 181-A and B
for identification with the statement that the orig-
3298 inal minutes in their entirety are available to the
Commission at any time and for the specific purpose
of having received in evidence the first full paragraph on
Resepondents' Exhibit 181-B for identification being a reso-
lution in regard to certain prices on certain products.

Trial Examiner Norwood: Is there any objection?

Mr. Wright: In view of counsel's statement about the availability of the minutes and of the limited purposes of the offer, I have no objection.

Trial Examiner Norwood: It will be received in evidence as Respondents' Exhibit 181-A and B

(The document referred to, heretofore marked for identification RESPONDENTS' EXHIBIT 181-A and 181-B, was received in evidence.)

By Mr. Ewing:

Q. Now I ask you, Mr. Bates, whether you have with you the original minutes of the Executive Committee of January 6, 1935?

A. June 6th.

Q. June 6 is correct.

A. I have.

Mr. Ewing: I ask that this sheet be marked Respondents' Exhibit 182 for identification.

Trial Examiner Norwood: It will be so marked as Respondents' Exhibit 182 for identification.

3299 (The document referred to was marked Respondents' Exhibit 182 for identification.)

By Mr. Ewing:

Q. I show you Respondents' Exhibit 182 for identification and ask you whether that correctly reproduces the minutes of the meeting of June 6, 1935 of the Executive Committee?

A. It does.

Mr. Ewing: I offer Respondents' Exhibit 182 for identification, it being the entire minutes of that meeting and with particular reference to the last full paragraph prior to the notation of adjournment.

Trial Examiner Norwood: Is that just one page?

Mr. Ewing: Yes, sir.

Trial Examiner Norwood: Is there any objection?

Mr. Wright: No objection, your Honor.

Trial Examiner Norwood: It will be received in evidence as Respondents' Exhibit 182.

(The document referred to, heretofore marked for identification RESPONDENTS' EXHIBIT 182, was received in evidence.)

By Mr. Ewing:

Q. Referring back to Respondents' Exhibit 180-A and B being a portion of the minutes of the annual meeting of the stockholders of the National Lead Company held on April 19, 1906, I call your attention to the recording 3300 in those minutes of the election to the Board of Directors of Messrs. Daniel Guggenheim, Murry Guggenheim and Edward Brush. Do you know who Mr. Edward Brush was?

A. I never knew him.

Q. Do you know who he was?

A. He was connected with the American Smelting & Refining Company.

Q. Do you know what interest or interests he represented on the Board during the period he was on the Board?

A. Only by hearsay.

Q. Well, will you tell us?

A. Those three gentlemen, Mr. Brush and the other two, were in the American Smelting & Refining Company which at the time held something of a stock interest in the National Lead Company.

Mr. Ewing: I have no further questions.

Cross-Examination by Mr. Wright.

Q. Is it customary, Mr. Bates—I withdraw that.

Mr. Wright: I have no cross-examination.

Trial Examiner Norwood: You are excused.

(Witness excused.)

Trial Examiner Norwood: Proceed.

Mr. Ewing: I now suggest that we adjourn for lunch, your Honor.

3301 Trial Examiner Norwood: We will recess at this time until 2:00 o'clock.

(Whereupon, at 12:50 p. m., a recess was taken until 2:00 p. m., this day.)

3302 Afternoon Session. 2:00 p. m.

Trial Examiner Norwood: Come to order. I want to dispose of this motion and that is the motion of Mr. Wright that the following testimony be stricken, to wit, page 2551 lines 17, 18 and 19, page 2710 line 5 beginning with the words "but facing" and through 19.

Now on page 2721 line 21 through page 2725 line 4, all of the statements of the witness, the answers of the witness contained in that part of the transcript.

Now on page 2729 line 2 through 2730 line 9.

I have given all this material and the arguments of counsel very careful consideration and I feel that this material consists of general statements and conclusions which, as shown at page 2729 to 2730 line 9 and elsewhere, were based on general impressions and not on any definite factors or information which prudent businessmen would rely on in determining whether their costs of sale and delivery were equal to or more than their price differentials.

In fact, it appears affirmatively that the witness had not attempted to reduce cost differences to a specific figure and it was further stated that it would "not have been practicable nor would it have been prudent" to allocate various costs to different classes of customers who received different prices.

3303 I think the law places the duty on this respondent to make such factual determinations in order to justify its price differentials. On the issues raised in count No. 2, the burden of proof cannot be sustained by general observations not supported by some substantial data.

Conclusions from this witness are not admissible in any case, but if accompanied by a factual basis, would probably be received in an administrative investigation such as this. But in the absence of these bases, I feel that this testimony is neither reliable, probative nor substantial and it would be of no advantage to the respondent for me to leave it in the record. It should be stricken in the interest of consistent procedure and to avoid any injurious precedent in this case.

The motion is therefore allowed.

Mr. Hinds: Exception.

Trial Examiner Norwood: Call your next witness.

Mr. Ewing: I call Charles Simon.

Trial Examiner Norwood: Mr. Reporter, this is Mr. Charles Simon, 8466 Radnor Road, Jamaica, New York.

CHARLES SIMON was thereupon called as a witness for the Respondent and, having first been duly sworn, testified as follows:

3304 *Direct Examination by Mr. Ewing.*

Q. Will you please state your full name?

A. Charles Simon.

Q. What is your address?

A. 8466 Radnor Road, Jamaica, New York.

Q. Mr. Simon, are you connected with the National Lead Company?

A. Yes.

Q. In what capacity?

A. Treasurer.

Q. How long have you been treasurer?

A. Since 1925.

Q. When were you first employed by the National Lead Company?

A. November 1904.

Q. Will you give us chronologically the course of your employment by way of the positions occupied by you?

A. I came as office boy and I worked in the stock transfer department and became stock transfer clerk, assistant treasurer.

Q. When did you become assistant treasurer?

A. 1915 and director in 1935.

Q. Then you were treasurer of the National Lead Company in 1930?

3305 A. Yes.

Q. Will you tell us briefly what was the investment policy of National Lead at that time?

A. Just short term investments in Governments and municipals.

Q. At or about that time did the company sometimes have occasion to invest in stocks or bonds of other industrial companies?

A. Occasionally.

Q. When such investments were made was there any limitation, generally speaking, from the standpoint of the business in which the companies were engaged?

A. Well, those investments we made, with the exceptions, they were very small investments. It wasn't anything that amounted to anything.

Q. When you did make such an investment, in what sort of a company would you purchase the securities?

A. I think we would look into the investment and see how much we knew about a particular company and the business of the company.

Mr. Ewing: I ask that this be marked Respondents' Exhibit 183 for identification.

Trial Examiner Norwood: It will be marked Respondents' Exhibit 183 for identification.

(The document referred to was marked for identification Respondents' Exhibit 183.) 3306

By Mr. Ewing:

Q. Will you tell us whether the National Lead Company at any time made any investment in the stock of the Eagle-Picher Lead Company?

A. Yes.

Q. Have you examined the records of the National Lead Company to ascertain by date the number of shares purchased in Eagle-Picher from time to time by or on behalf of National together with the purchase price per share, the cost of shares and the number of shares, if any, sold and the dates of sale, the sales price per share and the proceeds?

A. Yes.

Q. I have handed you Respondents' Exhibit 183 for identification and ask you to state whether that was prepared by you or under your direction?

A. Yes, that is correct.

Q. Does that exhibit correctly reflect the information therein set forth as obtained by you or under your direction from the books of the National Lead Company?

A. Yes.

Mr. Ewing: I offer it in evidence as Respondents' Exhibit 183.

Mr. Wright: From what records was this obtained, Mr. Simon?

3307 The Witness: From the books of the company.

Mr. Wright: What particular books contain this?

The Witness: The principal books of the company.

Mr. Wright: I have no further voir dire.

Trial Examiner Norwood: Is there any objection?

Mr. Wright: Your Honor, I have no objection to the receipt of this document in evidence provided that it is under the same category as the earlier exhibits so that I may have an opportunity to examine the basic data.

Mr. Ewing: That is understood.

Trial Examiner Norwood: Does that exhibit make a reference to the basic data in any way?

The Witness: No, it doesn't say that.

Mr. Ewing: It was taken off the books to show these various things.

Trial Examiner Norwood: It will be received under those conditions as Respondent's Exhibit 183.

(The document referred to, heretofore marked for identification RESPONDENTS' EXHIBIT 183, was received in evidence.)

By Mr. Ewing:

Q. Now will you tell us generally, Mr. Simons, the circumstances under which National purchased these shares in the Eagle-Picher Lead Company?

A. That is a long time ago, but as I recall it, I
3308 think we had some telephone calls from some brokers
in Cincinnati. They called our attention to these shares, and that there was a block of stock that was apparently available.

And we had some investment funds there. At times we had an insurance fund, a fire insurance fund and so forth, and occasionally we would go into some other investments. In this particular case this stock was called to our attention and the broker kept offering it and we bought at times when we thought the price was right.

Q. When you say when you thought the price was right, do you mean by that, when you thought the price was low?

A. That's right.

Trial Examiner Norwood: This is the number of shares that National held of Eagle-Picher at these various times?

Mr. Ewing: Yes, and the sales dates.

Trial Examiner Norwood: I am referring to Respondents' Exhibit 183.

Mr. DuBose: It shows both.

By Mr. Ewing:

Q. Now in whose name was this stock purchased?

A. In the name of E. J. Cornish, Edward J. Cornish.

Q. During the time that National Lead held stock in Eagle-Picher in the name of E. J. Cornish or Edward J. Cornish was, so far as you know, National Lead ever represented on the Board of the Eagle-Picher Company? 3309

A. No.

Q. During the same period of time, so far as you know, did National or anyone in its behalf attempt to exercise any control or influence the Eagle-Picher Company in the management or conduct of its business?

A. I say no.

Q. During the period in which the stock was held by National was that stock voted?

A. I believe it was.

Q. Under what circumstances, if you know?

A. Well, I think it is our general policy of our company—we know something about proxies and stockholders, the action of stockholders in voting their shares, the lethargy—that it was our duty as a stockholder to really vote the stock if we felt everything was all right.

Q. And how did you vote the stock, if you know?

A. I think by regular proxy.

Q. Now what was your connection with the National Lead Company in 1906?

A. I was in the stock transfer department.

Q. There has been testimony here in this case as to the ownership of stock of the National Lead Company by one or more of the Guggenheims and Thomas Fortune Ryan. And there has also been testimony that Messrs. Daniel Guggenheim and Murry Guggenheim and Mr. Brush were elected to the Board of Directors of the National Lead Company, I believe, in April 1906. 3310

Do you know approximately when the Guggenheims acquired and offered for transfer stock of the National Lead Company?

A. I think it was the early part of 1906.

Q. Upon what is your recollection based?

A. I recall they had—one of their runners that always came—one of their representatives always come in to collect the checks for seals to us. He came in with a black bag—I recall it distinctly—and opened it up and pulled out a load of stock certificates.

Q. How many shares were in it?

A. I would say it was thirty-five thousand shares or more.

Q. What did he do with them?

A. It was all endorsed for transfer and he left it with us for examination and transferred it in the name of some individuals, some nominees.

Q. And at that time you were transfer clerk?

A. Yes.

Mr. Ewing: No further direct.

Cross-Examination by Mr. Wright.

Q. When did you receive this call from the brokers 3311 about the availability of this Eagle-Picher stock, Mr. Simon?

A. Oh, during the general business hours we got them.

Q. When in point of time, the dates?

A. The dates?

Q. Yes.

A. I think over the period from 1930 to 1932.

Q. Were you referring to a particular call from brokers in Cincinnati?

A. No, occasional calls.

Q. Who were the brokers in Cincinnati that called?

A. A. & J. Frank.

Q. A. & J. Frank?

A. Yes. I think there was a Mr. Kaplan.

Q. Is he the gentleman that called?

A. I believe he did most times.

Q. Did he call you?

A. He called me and sometimes he called Mr. Cornish.

Q. Do you know what he said to Mr. Cornish?

A. He simply said or told him that they had these shares of stock for offer and it looked to him like a good opportunity to buy some stock at a reasonable price.

Q. Now did you listen in on this phone conversation?

A. Well, Mr. Cornish repeated it to me and that is about the same thing that Mr. Kaplan told me, too, that these shares were up for sale and that he had them 3312 available and he could probably contact—

Q. (Interposing.) Did he know you had an interest in acquiring Eagle-Picher stock?

A. He didn't know it but he thought we might be a possible customer. I imagine he probably asked other people too.

Q. In this period now from 1930 to 1932, how many other industrial stocks did National have in its investment folio?

A. We might have had a few shares of American Smelting & Refining.

Q. Can you think of any other stocks now that you might have had?

A. We may have had some bonds of the St. Joe Lead.

Q. They would be bonds?

A. Bonds, yes.

Q. You can only think of one other common stock then in which you invested?

A. That's right.

Q. Did this broker customarily call you about other stocks and tell you they were available?

A. He might have.

Q. You don't recall his doing it?

A. I don't recall right now.

Q. Was it customary to receive calls from him about stocks being available? I mean outside of this incident.

A. That was his business to look for customers.

3313 Q. Was this stock held on the transfer records of the Eagle-Picher Company in the name of the National Lead Company?

A. No, Edward J. Cornish.

Q. Under E. J. Cornish?

A. Yes.

Q. Why was that arrangement resorted to?

A. That made it easier to transfer, a simple transfer.

Q. Will you explain that?

A. Well, stock in the name of the corporation calls for certain requirements whereas in the name of an individual you can just simply transfer that stock on the basis of his endorsement.

Q. When you speak of requirements there you are thinking of the requirements of retransferring it?

A. Stock transfer requirements, yes.

Q. Was it customary—I withdraw that. Did you have any other stocks or bonds in your investment folios which were on the transfer books in the name of an individual?

A. Yes, I believe in most cases if we held anything for a transfer nature we put it in the name of an individual so that it was available for resale.

Q. Was that the case with the bonds that you held?

A. They were bearer bonds.

Q. They were bearer bonds?

3314 A. Yes.

Q. Then the only other stock that you held in that period was A. S. R. stock?

A. That's right.

Q. Was that held in Mr. Cornish's name?

A. That was held in the National Lead Company.

Q. What other stock was held in the name of an individual during that period?

A. We had a number of stocks, I think probably some one or two small stocks, whenever we had a transfer which we felt we would liquidate sooner or later, we left it in the name of the individual. But in the case of the A. S. & R. stock, that was simply one of those conditions there that we figured the name of the National Lead Company would be all right, because there was a different condition that existed there.

The offer was made in a big block by a bank.

Q. How big a block was it?

A. Well, I guess it was about twenty thousand shares.

Q. Of A. S. & R.?

A. Yes.

Q. That you held at that time?

A. Yes.

Q. Do you still hold a substantial interest?

A. No.

Q. Why was it all right to hold the A. S. & R. 3315 stock in the name of the National Lead Company and not all right to hold the Eagle-Picher stock?

A. I don't think there was a question of it being all right. I don't think so, that isn't the point. It was just a question of convenience there, that is about all.

Q. Well now, this broker that called about the block of stock that was available, I notice your first purchase was just about 100 shares?

A. Yes.

Q. Was that the block you mentioned?

A. That is what he had available I think. That is what he spoke about and brought on the condition which eventually led to the purchase of this amount of shares that we had.

Q. Then the next day, July 30th, there was another block of 400 shares and then two and a half months later another block of 300 shares?

A. Yes.

Q. And then thirteen days later another block of shares?

A. Yes.

Q. And the next day another block of shares?

A. Yes.

Q. Are you sure that there wasn't a standing order with this broker to purchase that Eagle-Picher stock as he acquired it?

A. No, there was not.

3316 Q. Each one of those was a separate order and a separate transaction to that broker?

A. Absolutely.

Q. And they were all handled through that broker?

A. I think they were, yes.

Q. Do you know what the total number of shares of capital stock of the Eagle-Picher Company were at that time?

A. I think it was about close to a million shares.

Q. Close to a million shares?

A. A million shares, yes.

Q. Of common stock?

A. Common stock, yes, about nine hundred thousand or a million, I believe.

Q. Did any of the other officers of the National Lead Company or anyone associated with them hold any stock at that time in Eagle-Picher that you know of?

A. Not that I know of, no.

Q. Can you recall the circumstances under which the stock was voted? You said it was voted by proxy.

A. Yes. Well, the proxy that they sent out to vote. Each stockholder receives a proxy at every annual meeting. That is a requirement.

Q. What did you do, just fill in that proxy and just send it?

A. Yes. In the first place, it was signed by Mr. 3317 Cornish because the stock was in his name, you see.

Q. Mr. Cornish was the one that sent the proxy in, did he?

A. Yes.

Q. Do you know how he filled out those proxies?

A. He just signed the proxy. I think later on the stock was put in the name of the National Lead Company and that was after Mr. Cornish died in 1938.

Q. In other words, Mr. Cornish never retained personal possession of that stock?

A. No.

Q. It was always in the possession of the National Lead Company?

A. Yes.

Q. Now going back to 1906, will you tell us again about this runner coming in, Mr. Simon?

A. Well, just as I said, he came in. I was a stock transfer clerk and, of course, naturally a thing of that kind really would come to your attention to see a man come in with his bag and open it up and pull out a great big bunch of stock certificates and throw them out there for transfer.

Q. Were you advised at that time that that was Guggenheim or associated interest stock?

A. The only thing I saw there was 71 Broadway, the name of five or six nominees.

Q. You did actually examine the certificates?

3318 A. We had to in order to see that the transfers were valid.

Q. These were transfers in 1906 to the Guggenheims?

A. That's correct.

Mr. Wright: Your Honor, I have no more cross-examination. I would like at this time to move to strike that part of the witness's testimony though which related to conversations repeated to him by Mr. Cornish regarding telephone calls that he received from brokers. I will say that I didn't object to that on direct examination because it didn't appear at that time that he was repeating what Mr. Cornish had told him someone told him on the telephone.

Mr. Ewing: The answer to his move to strike was an answer to his question and, furthermore, the witness testified that the broker told him the same thing.

Trial Examiner Norwood: I think that is part of the picture he is giving here. I don't think that his testimony is of such a nature to require us to be too meticulous about that. Motion denied.

I notice these sales here in 1937, the prices are different from $3 in 1937—$25 a share. There was a different stock setup?

The Witness: I beg your pardon?

Mr. Ewing: That was the profit they made on the investment.

Trial Examiner Norwood: This is sales on this side?

3319 Mr. DuBose: That's right.

Trial Examiner Norwood: Is there any further examination?

Redirect Examination by Mr. Ewing.

Q. Mr. Simon, at the purchases of Eagle-Picher's stock as shown on Respondents' Exhibit 183, was the Eagle-Picher stock listed on the New York Stock Exchange, if you recall?

A. No, I don't think so. I don't believe it was.

Q. Now if you will look at Respondents' Exhibit 183, I call your attention to the column headed "cost" and the total insofar as it relates to common stock of $226,630. Was that the total cost of the common stock purchased by or on behalf of National Lead?

A. Yes.

Q. Then in the last column on the right headed "proceeds" again relating to the common stock, I call your attention to the total $1,086,014.03. Does that represent the gross proceeds received by National in selling the Eagle-Picher stock?

A. Yes.

Q. So that the difference between the total of the cost column and the total of the proceeds column, less whatever transfer or brokerage charges there may have been, represents profit to National Lead?

3320 A. Yes. There are no brokerage charges.

Q. The difference is the net profit?

A. It is all included, yes.

Mr. Ewing: No further questions.

Trial Examiner Norwood: Do they still hold in Eagle-Picher?

The Witness: No, sir.

By Mr. Ewing:

Q. Do you now hold any AS & R stock?

A. No.

Q. What disposition was made of the St. Joseph Lead Company bonds?

A. They were all sold. It was just held for a period of, I guess, four or five years or so.

Q. Did National's investment in either Eagle-Picher stock or AS & R stock or in the St. Joe Bonds represent an investment of a permanent nature?

A. No.

Mr. Ewing: That is all.

Recross Examination by Mr. Wright.

Q. Mr. Simon, when you were answering about any control or suggestions by the National Lead Company to the Eagle-Picher Company, when you stated that you knew of no one, you meant that you personally knew of no
3321 exercise of control of that stock to the Eagle-Picher Company?

A. Yes.

Mr. Wright: That is all.

Trial Examiner Norwood: You are excused.

(Witness excused.)

Mr. Wright: May we go off the record?

Trial Examiner Norwood: Off the record.

(Discussion off the record.)

Trial Examiner Norwood: On the record. By agreement of counsel the hearing is adjourned to reconvene July 22, 1947, Washington, D. C., office of the Federal Trade Commission, Room 332 at 10:00 a.m., city time. That is, Eastern Daylight Saving Time.

(Whereupon, at 2:50 p.m., the hearing was adjourned to reconvene in Washington, D. C., July 22, 1947, at 10:00 a.m., EDST.)

Hearing Room,
Federal Trade Commission,
Washington, D. C.,
July 22, 1947.

Before:

J. W. Norwood, Trial Examiner.

Appearances:

Edmund T. Wood and Richard Sewiss, American Building, Cincinnati, Ohio, representing Eagle-Picher Company and Eagle-Picher Sales Company.

E. Z. DuBose, 120 Broadway, New York, New York, representing National Lead Company.

3323 Henry E. Gardiner, 25 Broadway, New York, New York, representing Anaconda Copper Mining Company and International Smelting & Refining Company.

James T. Welch, 815 15th Street, N. W., Washington, D. C., representing The Sherwin-Williams Company.

Joseph S. Wright and Paul R. Dixon, appearing for the Federal Trade Commission.

3324

PROCEEDINGS.

Trial Examiner Norwood: The hearing will come to order.

Pursuant to adjournment on June 19, 1947, the hearing in Docket 5253 is now convened in Room 332, Office of the Federal Trade Commission, Washington, D. C., at 10 o'clock a. m., City Time, July 22, 1947.

Appearances are as follows:

Joseph S. Wright and Paul R. Dixon appearing for the Federal Trade Commission.

Edmund T. Wood and Richard Sewiss appearing for Eagle-Picher Company and Eagle-Picher Sales Company.

E. Z. DuBose appearing for National Lead Company.

Henry E. Gardiner appearing for Anaconda Copper Mining Company and International Smelting & Refining Company.

James T. Welch appearing for the Sherman-Williams Company.

I have laid out to furnish counsel a tentative statement of the issues here, both on Count 1 and Count 2, and have also made a short synopsis or outline of the complaint, stating the various charges and what I consider to be the logical order.

In respect to these charges, unless we make some changes pursuant to suggestions and criticisms from counsel, I shall treat this matter in this order in my report. I
3325 shall be glad to have suggestions along that line.

There is just one page here of tentative issues, and I think that we should settle those issues very soon. I should like to have any suggestions or any objections from counsel as to what the issues ought to be, or I would like to have them tender the issues to me; that is, such issues as they think should be considered.

Mr. Wood: If Your Honor please, could we have about five or ten minutes to look that over, because I would like to see how my own proposed testimony is going to fit within the framework of the issues as you have framed them.

Trial Examiner Norwood: Yes, you may have a recess.

(A short recess was taken.)

Trial Examiner Norwood: Are you ready to go ahead?

Mr. Wood: Yes.

Trial Examiner Norwood: All right, proceed.

Mr. Wood: I am going to make a very brief statement of the defensive position of the Eagle-Picher Company.

It is the charge of the bill of complaint that there has been a matching of prices among the producers of lead pigments throughout the country, and that as a result of that there has been no competition in the sale of lead pigments.

The record so far shows that these pigments are sold in general at recognized and fixed levels above the price
3326 of pig lead, and that the prices of the various companies in general have tended to be about the same at about the same time. That situation permits two possible inferences: One, that there is a price fixing conspiracy; two, that it is a type of industry in which price leadership exists. The Commission asserts the former, that it is a price fixing conspiracy; we assert that it is an industry in which price leadership exists.

Now, since there is no direct testimony, and everything is a matter of inference, we propose to show that there is very keen competition in the sale of lead pigments generally, and particularly between Eagle and National; that Eagle is competing very actively and very successfully with National in the sale of lead pigment, and that therefore that is evidence that there is no price fixing conspiracy. If there were a price fixing conspiracy, you would not have this keen competition which exists in the industry.

The nature of that competition was competition in value of the product delivered as distinguished from sheer price war. Eagle-Picher is in this position: Being the smaller of the companies, the less powerful, as alleged in the complaint, Eagle-Picher is not in a position to start a price war with National but does compete by the effort to give greater value in the product sold.

The products are not the same, they are different. 3327 Eagle-Picher custom cuts its product for the particular needs of the customer and has a very extensive research and technical sales service. It endeavors to give the customer the better job.

It is as if you were buying a suit and two tailors had the same quality wool suit at the same price but in one case they just sold you a suit of wool, "Take it," and in the other case there was a man that would pick out the model that was best suited for you, make alterations, and if necessary give you a custom cut coat. We say there is no matching of values there. The values are different even though the price is the same.

Now, to use another analogy, we admit that all products such as red lead or white lead in oil, Eagle-Picher has not been engaged in a price war with National but we say that General Stonewall Jackson's flank maneuver at Chancellorsville was just as much a military operation as Pickett's frontal charge at Gettysburg. We have not directly assaulted the entrenched position of National, but we have been carrying on what you might call a flanking attack, and succesfully, over a long period of years by the means suggested.

That is going to be the substance of the testimony

Trial Examiner Norwood: Call your witness.

Mr. Wood: Mr. Goetz.

Trial Examiner Norwood: Give us your full name, 3328 please.

Mr. Goetz: Alvin C. Goetz.

ALVIN C. GOETZ was thereupon called as a witness on behalf of respondent Eagle-Picher Company and, having been first duly sworn, was examined and testified as follows:

Direct Examination by Mr. Wood.

Q. Will you please state your residence and occupation, Mr. Goetz?

A. I live in Cincinnati, Ohio. I am the manager of the Technical Service Department of the Pigment Division of the Eagle-Picher Company.

Q. Will you please state your education?

A. I have a B.S. Degree in Chemistry from the Pennsylvania State College.

Q. What year?

A. 1915.

Q. Do you have any other degrees?

A. I have no other degrees.

Q. Are you a member of any technical societies or learned societies?

A. I am a member of several societies.

Q. What are they, please?

A. The American Chemical Society; I am a Fellow in the American Institute of Chemists; I am a member
3329 of the American Society for Testing Materials; the American Institute of Technical Engineers; the Federation of Paint and Varnish Production Clubs; the Chemical Market Research Group and also the Technical Group.

Q. Apart from the Eagle-Picher Company have you had in the past any positions on the boards or committees or anything like that in the lead industry?

A. I have served in a number of instances; I served in a technical advisory capacity on the Lead Industry Association Affairs regarding pigments. I also served, in the period from 1941 to 1945, as a dollar-a-year consultant to the Protective Coatings branch of the War Production Board, and also served as a per diem expense consultant for a six months period beginning ~~late in 1946, and as a~~ consultant on paint for the Public Roads Administration. In addition to that I have been continually consulted by various Government persons interested in paint, both in the use and in the writing of specifications.

Q. After leaving college what did you do?

A. After leaving college I became the chemist of Kellogg & Miller, linseed oil manufacturers in New York.

Q. How long were you there?

A. I was there from approximately June, 1915, until August, 1917.

Q. What did you do then?

3330 A. In approximately August, 1917, I entered the Armed Forces, Officers' Candidate School at Fort Niagara, New York.

Q. What did you do after leaving the service?

A. After leaving the service I was engaged temporarily by the Bureau of Fisheries to investigate the economic position of fish meal and fish oil on both the East and West Coasts with a view to improving the quality, et cetera.

Q. What was your next position?

A. I then became manufacturing chemist in the by-products department of the Southern Cotton Oil Company at Savannah, Georgia.

Q. How long did you stay there?

A. About two or two and a half years.

Q. What was your next position?

A. My next position was superintendent of the fatty acid plant engaged in the production of steric acid, red oil and pitch for Darling Company in Chicago.

Q. How long did you hold that position?

A. Approximately two years.

Q. What position did you have after that?

A. That brings us up to 1923 when I became associated with the Eagle-Picher Company in Chicago, Illinois.

Q. Have you been connected with the Eagle-Picher Company continuously since 1923?

A. Continuously since 1923 to date.

3331 Q. What was your first position with the Eagle-Picher Company?

A. My first position was as a technical salesman.

Q. Selling what products?

A. Selling all of our lead and zinc pigments.

Q. How long did you remain a technical salesman?

A. I remained a technical salesman from 1923 through to 1939.

Q. What was the change of position in 1939?

A. In 1939 I was transferred to the home office in Cincinnati to take charge of a newly formed technical service department.

Q. What was the newly formed technical service department?

A. The object of that department, or my duties?

Q. The object of the department first.

A. To keep the pigment division fully informed on all technical development concerning its welfare and also to attend technical meetings and investigate technical subjects and work in a technical service way with the industry in the development of the use of our products.

Q. While you were technical salesman did you have any contact with the Eagle-Picher Research Laboratory?

A. Did I have contacts?

Q. Yes.

A. Yes, continual contacts.

3332 Q. What was the purpose of the contacts?

A. To keep the Research Laboratory informed in detail as to technical developments and to work out research projects more particularly concerning protective coatings, and still more specifically what we know as paint.

Q. What in general was the scope of the activity of the Research Laboratory in so far as the selling of pigments was concerned? Just generally, Mr. Goetz.

A. That may be divided into two parts, what we call our sales service where problems come in from the users of our pigments, and the second part where we are engaged in the investigation work as to improvement in the use of our products, in the manufacture of paint, for example.

Q. What sort of salesmen do you employ in the pigment division of Eagle-Picher Company?

A. At the present time, and as long as I can recall, all of the pigment division salesmen have been either chemists, chemical engineers or electro-chemists.

Q. What is the purpose of employing men of that degree of technical qualification?

A. To give our customers the best service possible in the use of our products and to improve the quality of their own products.

Q. In giving customers service can you give us in a little bit more detail what sort of service you give the customers?

3333 A. For example, a paint customer might say, "Look over my paint for me, will you? See how you think it stacks up with competition today." We would look over his paint formula. We might suggest, for example, "You are a little low in hiding power, you ought to put in a little more of the high hiding pigments." We might say, "You have too much oil present." The customer might say, "Very well, but how do you know that?" So we refer to our several thousand exposures, both in effect at the time and the record from previous work and determine what he might expect in the way of performance in his paint from the changes which we suggest.

There are a great many errands to run. Oftentimes a person doesn't understand a Federal specification, for example, and our salesmen sit down with him and study out the specification and explain to him how to meet it.

Q. You referred to exposures. I would like to hand you a document which is marked for identification as Respondents' Exhibit 184-A through 184-D, and ask you if you can tell us what this document represents?

A. You asked me if I recognize these pictures?

Q. I ask you if you can tell what that exhibit represents?

A. This is a rather brief resume or outline of our test fence exposure where we study the performance of paint and the effect of changes for the benefit of ourselves 3334 and for the benefit of the trade, both on wood surfaces and on metal surfaces, and with several exposures, atmospheric and submerged.

Q. What do you mean by test fence? Explain in a little bit more detail, please.

A. In a study of paint it is rather costly and laborious to paint a house, for example, or a structure with a new paint. Usually in an important study there are many variables but so arranged that there is no conflict. There is only one variable made in a series at a time. Rather than engage 500 or 1000 houses which would be quite impractical, we use what are called panels which may be flat boards on the order of six to twelve inches wide and ten to eighteen or twenty-four inches long, or simulated siding of houses made up from clapboards. It is a much handier way and much cheaper.

Following our study of the performance of paint on these panels the next step is to separate the good from the bad and proceed by testing on a full scale structure like a residence.

Q. What is a test fence? You used the term "test fence".

A. We use the term "test fence" because of the manner in which the panels are exposed, which looks like a fence. For example, in this picture (indicating).

Q. Well, you are referring to the top picture on the page marked A there?

3335 A. The top picture on B.

Q. How large would that fence be, for instance? Can you give us some idea?

A. The fence would vary from 50 to 100 feet long. The space on which the panels are placed would be from 4 to 5 feet high, and a site would contain any number most of such fences.

Q. Well, for instance, can you give us an approximate idea of the size of your test fence at Joplin, Missouri?

A. We have a number of such structures to accommodate in the order of 5000 panels.

Q. Now, to whom does the information which you obtain from your test fences go?

A. Ultimately to the paint manufacturer.

Q. What is the purpose of giving that information to the paint manufacturer?

A. To help him make better paint.

Q. And what does your company get out of that?

A. Our company hopes that if we help the paint manufacturer to make a better paint, either maintain the same quality at a lower price or to make some special paint we hope that he is going to be good enough to remember us when he buys his pigments.

Q. To whom is this technical service available?

A. Our technical service is available to all of the
3336 industry and the Government, both Federal and State
services.

Q. Is it limited strictly to your customers?

A. We have no restriction to customers. We may do more work for some one person than another, but that is because he may have more requirements or ask that more be done. Some requests are very simple. Some take a lot of time and labor.

Q. You spoke of the Research Laboratory developing special pigments. What is the purpose of developing special pigments?

A. One example might be that a paint manufacturer wishes to change his formula, for some reason or other, whereby he uses a pigment which we don't manufacture, and that upsets his formulation. It may reduce the body and viscosity of his paint. We have to investigate and give him one of our pigments of such a nature that he will maintain the desired body in that paint.

He might also wish to reduce the cost of his paint by using some other type of pigment, or a different proportion of pigments.

Q. For how long a period of time have you been familiar with the so-called paint industry?

A. Since 1915.

Q. Now, in 1915, what was the position as to importance of basic carbonate white lead in the paint industry?

3337 A. I will have to ask you to repeat that question.

Trial Examiner Norwood: Read the question.

(The question was read.)

The Witness: In 1915, basic white lead carbonate occupied a very important place in the paint industry. White lead was the keystone of all exterior paint.

By Mr. Wood:

Q. Well, was white lead used just for white paint, or also for colored paints?

A. White lead is used in the manufacture of white and most tint paints, but not dark shades such as deep browns, maroons, and so forth.

Q. What was the attitude of the industry in 1915 in respect to other substances that were put into paint with white lead?

Mr. Wright: Objection, Your Honor. It hasn't been shown that this witness had any connection with this industry in 1915. As a matter of fact, he had just graduated from college at that time, and was employed in a linseed oil plant, as I recall his testimony.

Mr. Wood: I asked him directly when he became familiar with the paint industry, and he said in 1915. I don't care whether it is exactly 1915, or when it is, but linseed oil is one of the important items in the paint industry.

Trial Examiner Norwood: Read that question.

3338 (The pending question was read.)

Trial Examiner Norwood: Do you know that attitude?

The Witness: I do.

Trial Examiner Norwood: You may tell us. The objection is overruled.

By Mr. Wood:

Q. Will you please state what it was?

Mr. Wright: Your Honor—

Trial Examiner Norwood: Do you want to make a further statement?

Mr. Wright: I would like to make a further statement about it. I did not realize until now that he was being called as an expert witness on the attitude of the industry back at that time, and I submit that the qualifications that have been spread on the record don't show him to be such an expert witness as to testify as to what the attitude of the industry was at that time, because he had no connection with the industry at that time by his own testimony.

He graduated from college in 1915, and went with the Linseed Oil Plant, where he stayed for two years. From there he went to the Bureau of Fisheries, working on fish meal. His connection with the paint industry didn't begin until 1923, by his own testimony.

Mr. Wood: But the linseed oil industry is a part of the paint industry, Mr. Wright.

3339 Trial Examiner Norwood: I think you will have to lay the ground for that. I misunderstood the question there.

Mr. DuBose: He stated he knew of his own knowledge what the situation was, and I think Mr. Wright's objection goes to cross-examination and to the weight.

Mr. Wright: The question called for an expert statement as to what the opinion of the industry was at that time. It cannot be anything but a conclusion.

Trial Examiner Norwood: I will reverse my ruling and sustain the objection until further grounds are laid.

By Mr. Wood:

Q. Now I will relate my question to the period commencing in 1923, when you went to the Eagle-Picher Company, or whenever thereafter you became thoroughly familiar with the paint industry, and I will ask you whether or not you knew or learned in the period following 1923 the attitude of pigment purchasers who were paint manufacturers in respect to materials other than basic carbonate white lead which were mixed with basic carbonate white lead?

A. Well, the general attitude of the paint industry at that time was—

Mr. Wright: Excuse me, Your Honor. That question asked if he knew that.

Trial Examiner Norwood: That is right.

3340 By Mr. Wood:

Q. Answer yes or no first, whether you knew the attitude?

A. You are asking if I did or do know the attitude of the industry at that time?

Q. Yes.

A. I do know the attitude of the industry at that time.

Q. Will you please state what it was?

Trial Examiner Norwood: He asked about the attitude of purchasers, also. Do you know that?

The Witness: I do.

By Mr. Wood:

Q. In fact, you were engaged in selling pigments to purchasers at that time, weren't you?

A. That is correct.

Q. What was the attitude?

A. The attitude of the paint industry at that time was to use materials which had been used for a number of years; namely, white lead, zinc oxide and inerts in white and light tint paints. New pigments at the time were received with some reserve.

Q. That goes far enough in answering the question, Mr. Goetz.

Now, in 1923, when you commenced selling lead pigments for Eagle-Picher, what position did basic carbonate white lead occupy in the paint industry?

3341 A. At that time basic white lead carbonate occupied a dominant place in the industry.

Q. Do you know for how long it had occupied the dominant position?

Mr. Wright: Objection, Your Honor. It obviously calls for a conclusion, or hearsay on the part of the witness.

Trial Examiner Norwood: He asked if he knows. Answer that yes or no.

By Mr. Wood:

Q. Do you know the position?

A. The position of white lead in the industry at that time?

Q. Yes.

A. At that time, white lead occupied a very strong position, and furnished the bulk of white lead for paints.

Q. Now, in the answer to the previous question you used the term "dominant position." Could you explain just what you mean by dominant position?

A. By dominant position I mean that in 1923, when paint was formulated, the first thought was given to how much white lead could be used in the paint. That being determined, the other pigments in the formulation were adjusted to meet that white lead content.

Q. Do you know what formulation was considered the best outdoor paint in 1923?

3342 A. In 1923, 65 percent white lead, 25 to 30 percent zinc oxide, and approximately 10 percent inerts was considered a good paint in whites and light tints.

Q. Was a pure basic carbonate white lead paint considered better?

A. No, not considered better with basic white lead carbonate so long as some white lead was present.

Q. What is meant by the term "mixed paint"?

A. Mixed paint is the type of paint which one buys in the ordinary paint store all ready for use after stirring in the can.

Trial Examiner Norwood: That contains the oil and pigments?

The Witness: Everything is mixed ready for use.

By Mr. Wood:

Q. Do you know how a painter makes paint from white lead and oil?

A. I do.

Q. How?

A. He breaks up the white lead and oil, and usually allows it to stand or ripen. To any given quantities of that so-called shop lead, he adds additional linseed oil, thinner and dryer. Sometimes it is broken up directly on the job without first having gone into the form of shop lead.

Q. Does he add inert pigments or anything like that?

3343 A. Very rarely.

Q. Why is that?

A. Because the product has been used many, many years in that particular form, and there is no necessity for adding any other material, with one exception. Sometimes a little zinc oxide is added.

Mr. DuBose: May we have a recess, Your Honor?

Trial Examiner Norwood: Are you nearly through with this witness?

Mr. Wood: No.

Trial Examiner Norwood: We will take a five-minute recess.

(A short recess was taken.)

Trial Examiner Norwood: Proceed.

By Mr. Wood:

Q. In 1923 what was the relative demand for a pure basic carbonate white lead in oil paint in relation to a mixed paint?

A. In 1923 the demand for the straight white lead paint, as we call it, was still relatively high. Subsequently, however, along about 1924 the demand became drastically less.

Q. What has been the trend between then and the present time?

A. The trend has been distinctly toward the so-
3344 called ready mixed paint, the white lead in oil having
just about held its own, whereas the ready-mixed
paint production has increased manyfold.

Q. Now, is ready-mixed paint in competition with the pure basic carbonate white lead in oil paint?

A. In direct competition.

Q. How many types of white lead does the Eagle-Picher Company manufacture and sell?

A. Two types of white lead, basic white lead sulphate and basic white lead carbonate.

Trial Examiner Norwood: What is the difference between them?

The Witness: The difference is in chemical composition. The sulphate is a basic sulphate having the formula of $PbO{-}PbSO4$ and the carbonate $Pb(OH)_2.2PbCO_3$.

By Mr. Wood:

Q. I hand you a copy of the National Paint Dictionary, Second Edition, and direct your attention to the definition of white lead appearing on page 131, and ask you to read that definition into the record, please.

A. Read it aloud?

Q. Read it aloud into the record.

A. "White lead—"

Mr. Wright: Just a moment, please. I am going to object to that unless I can have an opportunity to see 3345 what is being read.

Mr. Wood: Let Mr. Wright read it first. It is just a formula.

The Witness: "White lead: 2 $PBCO_3.Pb(OH)_2$ or $PbO.PbSO_4$. The most widely used pigment in the paint industry, and sometimes incorrectly referred to as basic carbonate of white lead. It has excellent wettability with linseed oil and other drying vegetable oils, and produces a paint which exhibits excellent brushability in actual application. It is characterized by a high specific gravity and a very low absorption (7.0 to 11.0). White lead is now understood to mean either basic carbonate of white lead or basic sulphate of white lead. However, the term originally was used to indicate only the basic carbonate of white lead."

By Mr. Wood:

Q. What is the date of the dictionary from which you are reading?

A. July, 1942.

Mr. Wood: I call Your Honor's attention to the fact that paragraph 4-a, Count 1 of the amended complaint in the case reads:

"A. Lead pigments: This term includes the lead pigments commonly known in the industry as white lead 3346 (both basic carbonate and basic sulphate of lead)."

I was simply putting in the dictionary definition, Your Honor, to clarify the difference between the products.

By Mr. Wood:

Q. Now, is the basic sulphate white lead in competition with the basic carbonate white lead?

A. It is in direct competition with the basic carbonate of white lead.

Q. Is the basic sulphate white lead sold ground in oil the way basic carbonate white lead is sold?

A. To a very small extent.

Q. How is the basic sulphate white lead sold?

A. Almost exclusively in the dry powder form.

Q. To whom is the basic sulphate type of white lead sold primarily?

A. Almost the entire production in the order of 95 or a higher percent is sold to mixed paint manufacturers.

Q. And are their products in which they use that basic sulphate white lead in competition with the pure basic carbonate white lead paints made from white lead in oil?

A. They are in direct competition.

Q. What are the relative merits of the paints made from basic sulphate white lead and basic carbonate white lead?

A. There is no practical observable difference.

Trial Examiner Norwood: Read the question, please.

3347 (The question was read.)

The Witness: I assume you mean multiple pigment paints.

By Mr. Wood:

Q. Explain what you mean, Mr. Goetz, amplify your answer by stating just what you mean.

A. I mean used in a mixture with other pigments in the form of ready-mixed paint, ready for application as it comes in the package.

Trial Examiner Norwood: What is the basis then of the competition between the two?

The Witness: The Eagle-Picher Company feels that basic white lead sulphate produces a better paint and has exported the pigment to an infinitely greater extent than any other manufacturer of that particular pigment, because we think it gives the paint manufacturer a product with which he can make a good paint.

By Mr. Wood:

Q. Which is the more expensive of the two types of white lead?

A. The basic white lead carbonate sells at a somewhat higher price than the basic white lead sulphate.

Q. You stated in your answer to a previous question that the Eagle-Picher Company exploited the basic sulphate type of white lead. Why is that?

3348 A. Because for economic reasons the Eagle-Picher Company is in a better position to manufacture basic white lead sulphate than competitors are.

Q. What is the basis of that statement?

A. Because our plant is located in the mining area, the

Tri-State area, very convenient to our source of ores, whereas in the case of carbonate it is necessary to bring in pig lead from which the basic white lead carbonate is made.

Q. Where do you get the pig lead from which the basic white lead carbonate is made by Eagle-Picher?

A. From smelters and refiners who generally sell that type of material.

Q. From what material do you manufacture your basic sulphate white lead?

A. That is manufactured by two methods. Our production is almost entirely made from lead or concentrates. It can be made, however, by so-called wet or precipitation processes, but that is not the general practice.

Q. What is the wet or precipitation process?

A. That is a method whereby one starts with litharge which was previously made directly from pig lead and then precipitated by means of the use of a sulphate and under the proper conditions of temperature and PH value, and so on, obtaining a basic white lead sulphate precipitate.

3349 Q. Which process is the cheaper manufacturing process, to make it directly from the ore concentrate or to make it by the precipitation method?

A. Made directly from the ore is the cheaper process.

Q. Does National Lead Company make basic lead sulphate?

A. To the best of my knowledge their production is very small.

Q. But they do make some?

A. I can't say positively. I believe that they do but I can't say positively beyond that. It would be very insignificant.

Mr. Wright: I object to that last answer, Your Honor. If he says he doesn't know I don't believe he should be permitted to answer as to the extent. I move it be stricken.

Trial Examiner Norwood: Read the last answer.

(The answer was read.)

Trial Examiner Norwood: The motion is allowed to strike the last part of the answer beginning with "It would be very—"

By Mr. Wood:

Q. Do you regard the National Lead Company as an important competitor in the manufacture and sale of basic white lead sulphate?

A. Very much so.

Q. In sulphate?

3350 A. Oh, not in sulphate. I was referring to white lead.

Q. Do you know of any competitor of Eagle-Picher in the manufacture and sale of basic white lead sulphate who manufactures directly from the ore concentrates?

A. I do not.

Q. What position in the industry does your company consider itself to have in regard to the cost of manufacturing white lead basic sulphate?

Mr. Wright: Your Honor, I object to that. It obviously must call for a conclusion on the part of the witness, who obviously cannot speak as to the costs of other manufacturers.

Mr. Wood: I asked his state of mind, the attitude of the company as to where they thought they stood on basic white lead sulphate.

Trial Examiner Norwood: Read the question.

(The question was read.)

Mr. Wright: If it is counsel's intention to bring out what this witness thinks the company's position is, I must object on the ground that what he thinks the company's position is is irrelevant and immaterial.

Mr. Wood: I only asked what he thought their position was, and I think that is quite important from the point of view of explaining the competition.

Mr. Wright: He has no facts to go on, that I can 3351 see.

Trial Examiner Norwood: He might explain his actions to meet what he understands the conditions are in the trade. I think he may show that.

I overrule the objection.

Mr. Wood: Will you read the question to the witness again, please?

Trial Examiner Norwood: You may want it understood as something which you have determined from your business experience; and as something which you have acted on.

(The question was read.)

The Witness: A favorable position.

Trial Examiner Norwood: That is in regard to costs? Does that question go to costs?

Mr. Wright: Costs of manufacture as between his company and other companies, Mr. Examiner.

Trial Examiner Norwood: Do you know of the costs of your competitors?

The Witness: No, I do not.

Mr. Wood: Can I ask him if he thinks they are higher or lower?

Mr. Wright: I submit that what he thinks his competitors' costs are is wholly incompetent.

Mr. DuBose: It goes to purpose, Your Honor, this whole Count 1 is permeated with purpose.

3352 Trial Examiner Norwood: Now, he establishes something here that bears on the question of competition, and I think that he must give us something more substantial than just his guess at that.

Mr. Wright: He has already testified that he doesn't know anything about what his competitors' costs might be, so how can he reach the conclusion that he did?

Trial Examiner Norwood: You can show us that in some reliable data. I will allow the motion to strike the last answer.

By Mr. Wood:

Q. Of the two white leads, does Eagle-Picher endeavor to sell one in preference to the other?

A. We have always pushed the sale of basic white lead sulphate.

Q. Why?

A. Because it fits into our picture better than the sale of basic white lead carbonate.

Q. In respect to which white lead do you consider your company to occupy the more favorable competitive position?

A. Basic white lead sulphate.

Q. Why?

A. Because we are in a very strong position, having our plant right in the midst of our ore bodies, and our central mill where the ore for the manufacture of basic white lead sulphate is closely available.

3353 Q. Now, if you attempted to make that basic white lead sulphate by the precipitation process, what would it be necessary to do, taking the product from the ore concentrate? What additional steps would be required?

A. It would be necessary to reduce the ore to metal lead, whereby litharge would be made, which would be the starting point for the manufacture by the wet process.

Q. Then what would be the next step in the wet process?

A. The lithage is placed in tank under agitation with the sulphate, and under proper conditions of precipitation, such as temperature, PH value, a basic precipitate is formed which must then be filtered, dried and pulverized.

Q. Now, how many steps are there in manufacturing from the ore concentrate?

A. Essentially one step.

Q. What is that?

A. Namely the mixing of fuel, ore and air in a concentric nozzle, from which the mixture enters into a combustion chamber with the immediate oxidization of the lead sulphate of the ore to basic white lead sulphate. The only other step is carrying the fumes, the product of the oxidation, from there through a settling chamber, then into classifiers and filling machines.

Q. Has there been any controversy in the industry in respect to the relative merits of the basic carbonate
3354 white lead and the basic sulphate white lead?

A. Yes, there has been considerable controversy over the value of the two white leads in ready-mixed paint a decade or so ago.

Q. For how long has that controversy continued?

A. Since the beginning of the use of the pigment.

Q. What is the position of the Eagle-Picher Company?

A. The Eagle-Picher Company's position is the use of basic white lead sulphate on an equal basis with basic white lead carbonate in basic white paints.

Q. Give us a typical formulation you would recommend which contains basic sulphate white lead.

A. The present-day formulation would contain approximately 30 percent of white lead.

Q. You mean sulphate white lead?

A. Either sulphate or carbonate. About 30 to 32 percent zinc oxide, 12 to 15 percent of titanium oxide, and the balance an inert or extender, usually in the form of magnesium silicate.

Q. Does your company manufacture zinc oxide?

A. Our company does manufacture zinc oxide.

Q. Does your company manufacture titanium dioxide?

A. It does not manufacture titanium dioxide.

Q. Does National Lead Company manufacture titanium dioxide?

A. The Titanium Pigment Company manufactures

3355 titanium oxide, which is reported to be a subsidiary of National Lead Company.

Q. And does National Lead Company manufacture zinc oxide?

A. It does not manufacture zinc oxide.

Q. Now, in what form does your company usually sell its basic sulphate white lead to the paint manufacturer?

A. In the form of leaded zinc oxide, which is a mixture of basic white lead sulphate and zinc oxide.

Q. How many different leaded zincs has your company sold to the paint industry?

A. Five or six.

Q. What have been the differences between them, in general?

A. The amount of basic white lead sulphate present.

Q. Is there ever any difference in the particle size or the pigment size?

A. There is always a difference in paint making properties, paint properties being influenced by the physical and chemical nature of the pigments.

Q. Now, if you had a customer that wished to buy your leaded zinc, what type would you sell that customer?

A. That would depend upon his needs. We would ordinarily sell him 35 percent.

Q. How would you determine your customer's needs?

A. By the nature of the formulation which he is making. That would include pigmentation and physical prop-
3356 erties of the paint which he desires.

Q. And on the basis of what information would you make your determination?

A. Your question is not clear.

Q. In picking out a particular leaded zinc to sell a particular customer, what information would you use as the basis for your selection?

A. We would have to know his pigmentation formulation. We would also have to know what particular properties he desires in his paint. Mixed paint is a compromise. We have to know on what properties he wishes to place the most emphasis. For example, brushability—a paint which will flow easily under the brush—is one example. Also the white lead content.

Q. Has your company had any experience with the properties of mixed paints?

A. We have had several years' experience in the properties of mixed paints.

Q. Well, have you tested out various mixed paint formulas on your test fence?

A. We are continually testing out and have for a number of years developments of our own and also commercially produced paints, and generally recommended formulations that we hear about in the trade.

Q. Well, is the information resulting from those
3357 various tests and experiments available to a customer or prospective customer?

A. That information in some cases, if it is a special matter where the customer wishes his problem kept confidential between himself and Eagle-Picher, the information is not disclosed; but in general the information which is built up on the basis of these tests is freely available to all of the industry.

Q. Can you state the relative production of the Eagle-Picher Company of the basic sulphate type of white lead and the basic carbonate type of white lead say in the 1941-42 period?

A. In the period 1941-42, the production of basic white lead sulphate per se—that is the single pigment not mixed with any other material—and the basic white lead carbonate were approximately equal; but the production of basic white lead sulphate in the form of leaded zinc oxide was considerably greater than that.

Q. Well, how much greater than the production of basic carbonate white lead?

A. Our production of leaded zinc oxide would be approximately three and one-half times the production of basic white lead sulphate.

Q. Now, is your leaded zinc oxide in competition with basic carbonate white lead?

A. In ready-mixed paint, it is in direct competi-
3358 tion as a source of white lead.

Q. I hand you a booklet marked Respondents' Exhibit 185 and ask you if you can state what that is?

A. This is a publication of the pigment division of Eagle-Picher Company which presents the properties and uses of super sublimed white lead, which is our trade name for supplying white lead for basic white lead sulphate.

Mr. Wood: I would like to offer in evidence Exhibits 184 and 185.

Mr. Wright: I haven't examined either of those exhibits and should like to have an opportunity to do so.

I should like a short voir dire on the identification of these documents.

Trial Examiner Norwood: All right, go ahead.

By Mr. Wright;

Q. When was Respondents' Exhibit 185 published, do you know, Mr. Goetz?

A. There may be a date on there. That was published in June, 1940.

Q. Who prepared it, do you know?

A. That was a matter of collaboration between the research laboratory, the staff, myself and our advertising department.

Q. There were several departments in Eagle-Picher who collaborated on them?

A. Three, I believe.

3359 Q. Was this prepared as an advertising bulletin?

A. You might call it that. It was prepared as an information circular to give the paint trade primarily the properties and uses of basic white lead sulphate as a paint.

Q. With the objective in mind of increasing the sales of your pigments?

A. Naturally, that is right.

Q. In the paint trade?

A. That is right.

Mr. Wright: Your Honor, I have no objection to the receipt in evidence of Respondent's Exhibits 184-A through D, but I do object to the offer of Exhibit 185. It is a long, technical advertising circular prepared by the Eagle-Picher Company. There has been no verification of the information which appears in it. I must object to its receipt in evidence as a statement of the facts which it contains because those facts are susceptible of being proved by direct evidence and competent testimony.

Trial Examiner Norwood: The witness said he prepared them.

Mr. Wright: No, I believe he said that was prepared through the research laboratory, through the advertising department and the technical services. I certainly want to preserve my objection to all that material that is contained in there.

3360 Trial Examiner Norwood: What do you think about that?

Mr. Wood: The witness has testified that they were competing with National Lead. That was a document they got out in furtherance of competition.

Trial Examiner Norwood: This went to the customers?

The Witness: That is right.

Mr. Wright: It is an advertising circular to the customers. Now it is being offered presumably as a statement of facts about the relative technical differences in the manufacture of these pigments.

Trial Examiner Norwood: Well, I don't think it should be received for that purpose.

Mr. Wright: I would have no objection to its receipt in evidence as being what the Eagle-Picher Company believed in 1940 the case to be, but I certainly don't want it received as evidence of those facts.

Trial Examiner Norwood: It can be received as an actual act of competition; this is an instrument of that competition.

Mr. Wood: That is right.

Trial Examiner Norwood: The same as a representation made by a salesman as to whether or not there was any competition.

3361 Mr. Wright: There are statements here, for instance, purportedly taken from reports of State regulatory bodies, and so on.

Trial Examiner Norwood: The fact that he issued that to the trade can be shown. It will not be received to show the chemical content and the truth of those scientific statements. You will have to show that by other evidence.

Mr. Wood: By other witnesses, yes, I appreciate that.

Trial Examiner Norwood: It is limited to a showing that it is a sales instrument and it is received to be considered with respect to its bearing on competition, only. Received as marked, 184-A through 184-D, and 185.

(The documents referred to were marked RESPONDENT'S EXHIBITS NOS. 184-A, 184-B, 184-C, and 184-D and 185 and received in evidence.)

Mr. Wright: I would like to ask counsel if he has copies of those available?

Mr. Wood: I will try to get extra copies for you. Off the record.

(Discussion off the record.)

By Mr. Wood:

Q. Referring again to Exhibit 185, are you familiar with the contents of this exhibit?

3362 A. I am.

Q. Do you believe the contents of this exhibit to be true?

A. Absolutely true.

Q. In so far as comparisons of a pure basic carbonate white lead paint and a mixed paint containing basic sulphate white lead, have you ever on your own made any comparison between those two products?

A. Many times.

Q. Will you give us an example, some specific example that occurs to you where you yourself have made the comparison of the properties of those two types of paint?

A. The basic white lead carbonate type of paint is what we call a single pigment paint. There is very little can be done to regulate the properties of that paint. It is a paint which has been accepted by the trade for many years. On the other hand, mixed paints are what we call multiple pigment paints in which we have two or more pigments, using today at least four. With this assortment of pigments much can be done to regulate the properties of that paint.

As, for example, a multiple pigment paint in white contains a certain type of titantium oxide, which is what we call a chalking type of pigment. The organic matter in the linseed oil, which is the vehicle, disintegrates and permits the pigments which do not react with the linseed
3363 oil to wash away or chalk away. That is an example
of what can be done in the multiple pigment paints. In general the multiple pigment paints present a more attractive appearance than do paints made from basic white lead carbonate.

Q. I asked you to give an example of a physical comparison that you yourself have made between the two types of paint.

A. You mean the actual details of inspection?

Q. Yes, some job that you yourself either made or inspected.

A. Very well. In Cincinnati, Ohio, about four years ago, in the same neighborhood, one house was painted with straight white lead in oil, as we call it, which would be a single pigment basic white lead carbonate paint; two houses down the street was a house painted within thitry days of the time the other house was painted, which had a well known brand of ready-mixed paint. At the end of about nine months the house painted with white lead in oil or the single pigment basic white lead carbonate paint, showed a good film integrater but the painting was very unattractive in that it had an irregular dirt retention, whereas in the case of the multiple pigment paint the paint job was much more attractive because it was cleaner for the reasons which I mentioned just previously.

During the war I inspected hundreds of Army cantonments at three of which there were jobs on which 3364 straight white lead in oil had been used and also jobs on which two types of ready-mixed multiple pigment paint had been used. In all cases the multiple pigment paint showed greatly improved performance in the way of decoration over the straight white lead carbonate paint.

Q. I hand you a document marked for identification as Respondents' Exhibits 186-A through 186-E, inclusive, and ask you if you can state what that is?

A. These are photographs which were part of a brief which was presented to the members of the Federal Specification Committee on Paint at the request of the Chairman of the Committee. The manufacturers of basic white lead carbonate and manufacturers of basic white lead sulphate were required to present data concerning the usefulness and the properties of these two pigments in multiple pigment ready-mixed paint.

This exhibit which you gave me contains the photographs which were used in the exhibit presented by Eagle-Picher.

Q. What was the purpose of Eagle-Picher's exhibit?

A. The purpose of this Eagle-Picher Exhibit was to place into the hands of the committee information as to the performance of the two white leads, at the request of the chairman of the committee.

Q. Who was the chairman of the committee?

A. Mr. E. F. Hickson of the Paint and Varnish, 3365 Lacquer and Related Materials Section.

Q. Section of what?

A. Of the Bureau of Chemistry at the National Bureau of Standards in this city.

Q. Was he a Government employee?

A. He is a Government employee.

Q. What was he trying to do at the time?

A. A controversy arose in the committee which began on the basis of representations made by manufacturers of these two white leads. The committee wished information as to how paints performed when made in one case with basic white lead sulphate and in the other case with basic white lead carbonate, all other conditions remaining the same.

Q. What was the purpose of the committee in desiring that information?

A. The purpose of the committee, which is a standing committee and part of the Bureau of Federal Supply, as it is now called—at that time it was part of Treasury Procurement—this committee is charged with writing specifications for paints and related materials for use by Government agencies.

Q. In this particular case what was the paint specification to be used for?

A. The paint specification was to be used for what we would call in the trade ready-mixed outside house paint.

In this particular case if you wish me to identiy the
3366 specification it was TT-P-40, paint, oil, exterior ready-mixed, light tints and white; and also Federal Specification TT-P-25a, paint, exterior primer, ready-mixed white (undercoat for wood).

Q. Now, why was the Government at that time particularly determining the specification?

A. Well, this committee—as all specification committees are charged with doing and really do do—is trying to keep their specifications up to date.

Now, in the old days the Federal specification TT-P-36 was used, which contained for whites 70 percent white lead, 20 percent zinc oxide, and 10 percent inerts. In the case of tints, 60 percent white lead, 30 percent zinc oxide, and 10 percent inerts.

Now, since that specification was written, which dates back to 1930, considerable progress has been made in the technology of paint. Our whole philosophy in the formulating of what we call house paint or exterior paint has changed, due largely to the introduction and finally wide acceptance of the pigment known as titanium, meaning either titanium oxide or a composite pigment containing 25 to 30 percent of titanium oxide.

Now, the committee, wishing to keep their paint specifications up to date—and that is one of the most pro-

gressive committees—looked into the matter of chang-
3367 ing their paint formulation. In looking into the matter, the chairman of the committee always casts about in industry for ideas and copies of the specifications in the proposed stage are quite widely distributed amongst interested people—the ASCM, for example; the Federation of Varnish and Production Clubs; paint manufacturers who so desire them, and raw material manufacturers who desire them may have copies of all proposed specifications. The knowledge that the specification was about to be changed became quite general, whereupon certain individuals proposed the mandatory use of basic white lead carbonate either entirely, or to an amount to be stated in the specification.

The situation became sort of confused with representations made by this person and that person both from raw material houses, mixed paint people, and members of the Government, that the chairman decided, with the advice and consent of this committee, to ask certain individuals to present data on the details of performance of paint made with either one of these two white leads, and this is a portion of the data which was prepared and presented to the committee, each and every member given the information as Eagle-Picher had developed it. The same information was presented by other manufacturers who specialized principally in basic white lead carbonate.

Q. By the same information, you mean similar information?

3368 A. Similar information, the same type.

Q. They were on the other side of the question, though, weren't they?

A. That is right.

Q. Now, who was on the other side of the question; that is, in favor of the carbonate as against the sulphate?

A. This goes back to 1941. The National Lead Company was one, and the Glidden Company was another. Those two companies were the principal factors in presenting the data concerning basic white lead carbonate, whereas Eagle-Picher was the only one presenting data stressing basic white lead sulphate. Keep in mind that this data states the properties of each pigment, not one but each pigment, as was the case with the two companies just mentioned.

Q. In other words, they were contending for the superiority of the basic carbonate white lead without showing the properties of the basic sulphate white lead?

A. No, they contended that basic white lead carbonate had performed better in multiple pigment paints than basic white lead sulphate, by means of data which they had established and presented to the committee. Eagle-Picher, on the other hand, merely endeavored to and did show the equality of the two white leads as the source of white lead in multiple pigment ready-mixed paints.

Q. Before introducing this into evidence, I would like you just to summarize what these photographs show.

3369 Mr. Wright: Your Honor, I object to any summarization of what the photographs show. That is not a proper identification of the document.

Trial Examiner Norwood: Do not summarize any of the information in that paper, but you may summarize your description, telling us what it is. I do think you have completed that already.

Mr. Wood: Well, I will withdraw the question.

Trial Examiner Norwood: In other words, these are documents that were submitted to that committee on those questions.

Mr. Wood: I will withdraw the question, and offer into evidence Respondents' Exhibit 186-A through D.

Mr. Wright: Your Honor, I have several objections to this data. In the first place, it is obviously incomplete, and it is meaningless in and of itself. It is copies, apparently, of Sheets 1, 2, 4 and 7 of an appendix to a brief. There is no showing on this document of how these tests were conducted, if they are the result of tests, or what procedure was followed, or what the significance of them is. They are not competent evidence, in addition to the fact that they are entirely irrelevant.

Mr. Wood: I don't see how they can be considered irrelevant. The witness has testified that is part of the data submitted to the Government.

3370 Trial Examiner Norwood: I think it is time for the lunch hour. I will take this and look it over, and give my ruling after lunch.

What is counsel's pleasure?

Mr. DuBose: 2 o'clock.

Trial Examiner Norwood: We will recess until 2 o'clock.

(Thereupon, at 12:20 o'clock p.m., a recess was taken until 2 o'clock p.m.)

3371 Afternoon Session

(The hearing was resumed at 2 o'clock p.m., at the expiration of the recess.)

Trial Examiner Norwood: The hearing will be in order. With regard to the offer of Respondents' Exhibit 186-A through D for identification, I see no reason why you cannot put in these photographs here showing the difference under similar circumstances of the results obtained from the sulphate and the carbonate; but in its present condition, its only basis is that it is an exhibit to a brief which was submitted to the Committee of the Bureau of Standards. I presume that brief was to maintain one side or the other of some contention; I don't know. But that wouldn't give it a proper basis in evidence, as was the case of this other document that we took in. That was sent out by these people, but this doesn't have a competitive angle at all. This is purely a matter of fact as to the effects of these two different commodities or two different ingredients.

Mr. Wood: I might ask the witness the purpose of the brief.

Trial Examiner Norwood: If you will indicate this, or if he will testify that this is a fact, or will testify to the circumstances, and those differences are found to be relevant, you may do that.

3372 Mr. Wright: I don't see the relevancy of this at all. I don't see what counsel has in mind proving here. There is no contention that the products that Eagle-Picher manufactures and sells are not of equal quality with any other.

Trial Examiner Norwood: He is showing some things he is doing here to meet competition. These are competitive methods here, some activity here in investigating these differences and in developing this particular paint to meet competition. He is offering it for that purpose.

Mr. Wright: I concede that the Eagle-Picher Company has done technical research in paints and in various pigments, but of what possible relevance are comparative tests which are not described? This is just the end result apparently of some comparative tests which are not described in the exhibit, as to the value of a paint made with one type of pigment that Eagle-Picher sells as against a paint with another type of pigment that Eagle-Picher sells.

This isn't comparative as between Eagle-Picher and other companies.

Mr. Wood: On the contrary, the witness has testified that Eagle-Picher was pushing sulphate white lead, and National was pushing carbonate white lead. It is competition between these respective companies.

Mr. Wright: I disagree there is any evidence of competition between National and Eagle-Picher Company,
3373 your Honor.

Trial Examiner Norwood: Isn't that as far as you need to go to show that there is competition?

Mr. Wright: If counsel means by competition that his company sells one type of product and that National Lead solicits customers in the same type of business for that and similar types of products, there is no issue there between us.

Trial Examiner Norwood: He corroborates his statement that there is a difference between these by putting in these photographs here to show there is a difference in the results they obtain between the two.

Mr. Wright: I submit that hasn't been proven. It isn't proved by those exhibits.

Trial Examiner Norwood: He may do that, if he can authenticate it.

Mr. Wright: But National sells both of these materials, and Eagle-Picher sells both of these materials, as far as the record shows now.

Mr. Welch: But the percentage of each different product sold by the two companies varies considerably.

Mr. DuBose: Not only that.

Mr. Wright: I think that is a subject of proof.

Mr. Welch: There is no testimony to that effect.

Mr. DuBose: We maintain that price competition
3374 does not mean price war.

Trial Examiner Norwood: Go ahead, Mr. Wood.

ALVIN C. GOETZ resumed the witness stand and was examined and testified further as follows:

Direct Examination (Resumed) by Mr. Wood.

Q. Now, Mr. Goetz, in the period 1941 to 1942 was there any difference in the cost of paint manufactured from the two different varieties of white lead, carbonate and sulphate?

A. Yes, there was a difference in favor of the use of basic white lead sulphate, either as such or in the form of leaded zinc oxide.

Q. How much cheaper would a gallon of paint using the sulphate type of white lead be than a gallon of paint using the carbonate of substantially equal quality?

A. Between six and seven cents a gallon in favor of the basic white lead sulphate type of formulation.

Trial Examiner Norwood: Is that a substantial difference?

The Witness: That is considered in the paint trade a substantial difference. I might say that that depends on your formulation. We used in 1942 the 60-30-10 or the 70-20-10 type of formulation, which was then quite commonly used. In some areas, Your Honor, that is the 3375 difference between a profit and a loss.

Mr. Wood: Will you mark this Exhibit 187-A and B, please?

(The document referred to was marked Respondents' Exhibits 187-A and 187-B for Identification.)

By Mr. Wood:

Q. I show you a document marked 187-A and B, and ask you whether or not you know what this is?

A. Yes, this is a letter sent to the members of the Federal Specification Paint Committee with reference to the use of the two white leads in Federal Specification TT-P-36a, 101a and TT-P-81.

Q. Now, at that time what was the status of the two white leads as far as Government specifications were concerned?

A. The specifications permitted the use of either white lead to satisfy the white lead content required by the specification.

Q. Now, I call your attention to the statement appearing in the last paragraph on the first page of this letter, which reads:

"Because basic sulphate white lead as such (or in the form of leaded zinc oxide) is cheaper per pound than basic carbonate of lead, I am informed that no basic carbonate white lead was used in the million gallons of paint. As a result, I have received a request from a large basic 3376 carbonate white lead producer that this committee specify that one-half of the white lead in pigments of the TT-P-36a, TT-P-101a and TT-P-81 be basic carbonate of lead."

Mr. Wright: I object, Your Honor, and ask that counsel's question be stricken.

Mr. Wood: I haven't asked it yet.

Mr. Wright: I ask that counsel's statement be stricken, because that document is not in evidence.

Mr. Wood: I will offer the document in evidence.

Trial Examiner Norwood: Have you finished your question?

Mr. Wood: No, I haven't finished the question.

By Mr. Wood:

Q. Do you know who the basic carbonate white lead producer was that wanted the specifications changed?

Mr. Wood: I will introduce this into evidence.

Trial Examiner Norwood: I am confused over this situation here. This has been read into the record, but you didn't ask him if that were true. You read that to refresh his memory with respect to a certain firm there?

Mr. Wood: I identified the exhibit. I could put it in at that time after identification, but I was going to show its pertinence first by reading a section to him and asking
him what he knew about that section. It is optional
3377 with me as to when I offer it in evidence.

Trial Examiner Norwood: Is there a motion?

Mr. Wright: I made a motion to strike counsel's question with his statement of what was in that document, out of the record.

Trial Examiner Norwood: I will allow that motion.

Mr. Wood: In that case I will offer the document into evidence first as Exhibit 187-A and 187-B.

Mr. Welch: Off the record, Mr. Examiner.

Trial Examiner Norwood: Off the record.

(Discussion off the record.)

Mr. Wright: I am going to object to this, Your Honor, because it is absolutely irrelevant. It has no evidentiary value in this proceeding. It is obviously a letter seeking information on the subject of the comparative qualities of these pigments by the Chairman of the Technical Committee on Paint. It is evidence of nothing except that the committee did seek information on the pigments and it has no relevancy at all to this proceeding.

Trial Examiner Norwood: Do you concede that they did so seek?

Mr. Wright: The letter purports to show that. The witness has testified under oath that he received that from that man. I have no way of going back of that.

Trial Examiner Norwood: Off the record just a
3378 minute.

(Discussion off the record.)

Mr. Wood: I think it is extremely relevant on this count: That the charge here in this case is that the National Lead Company has monopolized the white lead business, controls it; that there is no competition in it and that Eagle-Picher has collaborated and cooperated with National to maintain that situation. That document and the other companion documents that go with it will show that the carbonate manufacturers tried to get a Government specification changed so that there had to be a high percentage of carbonate, the more expensive carbonate present in the formulations to come under the Government specifications, and that Eagle-Picher fought that tooth and nail in an effort to sell the greatest amount of sulphate possible, which was the cheaper of the two products. If that doesn't show competition I don't know what does.

Mr. Wright: Your Honor, right on that point maybe I can help Mr. Wood out. I appreciate there have been probably many instances in the recent history of this industry where there have been controversies about one thing or another in the lead business between Eagle-Picher and National and between Eagle-Picher and other members of the industry. The charge in this complaint relates to price competition. Now, I believe Mr. Wood has prac-
tically conceded that there is no such thing as price
3379 competition. I am willing to concede that there is
what Mr. Wood considers to be competition in the furnishing of technical services and sales services and the like.

Mr. Wood: I think this is an excellent example of price competition because the witness has just testified that the use of the Eagle-Picher material provided a more economical paint. If that isn't price competition what is price competition?

Mr. DuBose: In addition to that we do not concede Mr. Wright's remark that we admit there is no price competition in this industry. We distinctly claim that there is.

Mr. Welch: Your Honor, if I may make an observation, price competition even according to the Commission's theory ultimately turns not on the price to the customer—and using the Commission's definition of price—turns not on the price to the customer but the ultimate return to the manufacturer. The witness on the stand has already testified that the costs of two different products are entirely different so there is no price competition under the Commission's definition.

Trial Examiner Norwood: You mean there is competition in mill net?

Mr. Welch: Yes, sir.

3380 Mr. DuBose: Under the Commission's theory.

Trial Examiner Norwood: I will ask counsel to explain to me tersely the purpose of respondents' Exhibit 187-A to 187-B. Is it to show the truth of the contents there or to show the fact that this circular was sent out to the trade or to the paint industry?

Mr. Wood: That was sent to us.

Trial Examiner Norwood: It can't be admitted to show the truth of any of the facts therein stated.

Mr. Wood: I don't care about the truth of the facts therein stated, particularly.

Mr. Wright: For what other purpose could it be offered except to show it was an inquiry for information?

Trial Examiner Norwood: To show there was a contest between these people and that that contest was taken up before the Bureau of Standards and before this committee.

Mr. Wright: I don't believe that letter shows there was a contest between any particular people.

Mr. Wood: It is the opening document in showing the contest.

Mr. Wright: I assume from counsel's question, to which you sustained an objection, he is going to attempt by this witness, on the basis of that document, to identify unnamed parties who are mentioned in that letter.

Trial Examiner Norwood: Can't this witness tell
3381 us of his own knowledge everything he knows about this subject here?

Mr. Wood: You mean without the documents?

Trial Examiner Norwood: Yes. He can use them to refresh his memory then if Commission's counsel wants to let them in evidence, he can do it. I will sustain the objection to it for the time being, to that exhibit, that is 186-A to 186-E and counsel can proceed to bring out that information in a little more satisfactory way.

By Mr. Wood:

Q. Do you remember any sort of an controversy in the spring and summer of 1941 in respect to the basic carbonate and basic sulphate white lead in ready-mixed paints, TT-P-36a, TT-P-101a and TT-P-81?

A. I do remember a controversy.

Q. Will you state what you remember of that controversy?

A. The controversy arose at the time the specifications were reopened to bring them up to date in current paint technology, at which time a certain group of manufacturers of white lead whose product was either entirely the carbonate type or predominately the carbonate type, sought to have written into the specifications that a certain amount —they first desired 100 percent and later reduced their demand to 50 percent—of the white lead used to satisfy the white lead requirements in the specification should be
3382 the basic white lead carbonate type of white lead.

To support that position certain pamphlets were issued as requested in Mr. Hickson's letter which has just been under discussion.

Q. What position did the Eagle-Picher Company take in respect to that proposed change?

A. Eagle-Picher pointed out that for a number of years, 20 or more years, the two white leads had been accepted on an either-or basis and that it was not fair to the public or to the Government to require basic white lead carbonate at a higher price. We were agreeable that the matter should be entirely optional. We did not insist it should be one way or the other, we wished it to be optional on the part of the paint manufacturer.

Q. Who were the companies that were trying to put over the carbonate?

A. The National Lead Company, the Glidden Company and the Euston Company, which is part of the Glidden Company and also the Anaconda White Lead Company, or more properly, perhaps, known as the International Smelting & Refining Company.

Q. What were the relative prices of the basic lead carbonate white lead and the basic lead sulphate white lead?

A. There was a half a cent a pound difference. The exact price I cannot give from memory except to say they were on the order of six or eight cents a gallon.

3383 Q. Was there any additional saving by the use of leaded zinc?

A. A slight saving by the higher bulking value of basic white lead sulphate; largely theoretical, but some saving in that respect.

Q. That is over the sulphate alone?

A. No, over the carbonate. When used in the form of leaded zinc oxide there was an additional saving at that time and with the paint being made at the time it would amount to a difference in the order of six to seven cents a gallon.

Q. Why did Eagle-Picher when it was making both the carbonate and the sulphate types of white lead put up a struggle to prevent the change in making the certain percent of carbonate mandatory?

Mr. Wright: Objection, Your Honor, there has been no testimony that there was a struggle put up.

Mr. Wood: I think he testified that they resisted.

Trial Examiner Norwood: I think so. Did you, or not?

The Witness: I think that I did. I started to say that the Eagle-Picher Company resisted this change and I think there was an objection. I don't know whether I finished that statement, or not.

By Mr. Wood:

Q. Go ahead, anyhow.

3384 Trial Examiner Norwood: Answer the question. Objection overruled.

The Witness: What is the question?

Mr. Wood: Read it, please.

(The question was read.)

The Witness: Because Eagle-Picher's greatest interests lay in the use of basic white lead sulphate, because we were predominately a basic white lead sulphate house, whereas all of our competitors were either 100 percent or predominately basic white lead carbonate houses. Furthermore, since the specification had been entirely satisfactory to the Government and also in industry where the two white leads were used interchangeably, we could see no reason for making the change.

By Mr. Wood:

Q. How general was the competition between the basic white lead sulphate or the leaded zinc containing the basic white lead sulphate, and the basic carbonate white lead?

A. In the past decade the competition was extremely keen both as between basic white lead sulphate and carbonate as such, and also between basic white lead carbonate and basic white lead sulphate in the form of leaded zinc oxide.

Q. And has that competition been price competition?

A. That has been price competition due to the difference in the cost of arriving at a mixture of leaded zinc
3385 on the basis of leaded zinc oxide, or a mixture of basic white lead sulphate and zinc oxide.

Q. Now, did the controversy regarding those Government specifications continue into the year 1942?

A. Sometime in late '42, or early 1943.

Q. Do you know what the outcome was?

A. Yes, the outcome in the case of the Federal specification which finally issued under the No. TT-P-25—that is the primer specification—was that the white lead was mandated to be 50 percent white lead carbonate and 50 percent white lead sulphate.

Q. Was that with Eagle-Picher's agreement?

A. That was with Eagle-Picher's agreement, but there was also another specification involved, TT-P-40, in which the white lead content was allowed to be optional, and there were special reasons why there was a difference in the action of the committee in those two specifications.

Q. You used the word "agreement." You said with Eagle-Picher's agreement. Eagle-Picher's agreement with whom?

A. Perhaps I misused that word agreement. By agreement I meant during the prolonged discussions of this specification, in order to bring about some satisfactory specifications, with reference now to TT-P-25, the primer, Eagle-Picher decided, "Well, we are just not going to ball up the works any more. Let the boys go ahead and
3386 get out the specification. The Army is in need of primer paint. Let us go along and settle it."

So it finally came out on the so-called compromise basis, 50 percent of each, to satisfy the white lead content in TT-P-25.

Q. Do you remember whether or not your company protested to Mr. Hickson over the adoption of that 50 percent mandation of basic carbonate white lead?

A. I do recall such a protest.

Q. Do you remember the contents of that protest?

A. Well, substantially the protest was made on the basis that the optional use of the white leads had been satisfactory over a long period of years, in the case of one type of paint, namely TT-P-40, and we could see no reason to make a change at this time. In the case of the other type of paint, the primer TT-P-25, there was a divided opinion as to whether 100 percent of white lead of one type or the other type, or a 50-50 mixture of the two should be used in that type of formulation.

Q. Does the Eagle-Picher Company manufacture a product called blue basic lead sulphate?

A. It does.

Q. For how long has it manufactured it, to your knowledge?

A. To my personal knowledge, it has been made for 25 years or longer.

3387 Q. Does your company manufacture a product called red lead?

A. It does.

Q. What is the relationship between blue lead and red lead as far as their use is concerned?

A. Both are used substantially for protection of iron and steel against rusting.

Q. How is red lead manufactured by the Eagle-Picher Company?

A. Red lead is manufactured from litharge, which is first manufactured from pig lead.

Q. And how is blue lead manufactured by the Eagle-Picher Company?

A. Blue lead is manufactured from ores direct without first reducing the ores to pig lead.

Q. Which is the cheaper as manufactured by the Eagle-Picher Company? Which is the cheaper of the two products as maunfactured by the Eagle-Picher Company?

A. The blue lead is the cheaper.

Mr. Wood: Will you mark that 188, please, and this 189.

(The documents referred to were marked Respondents' Exhibits 188 and 189 for Identification.)

By Mr. Wood:

Q. I hand you two exhibits, marked 188 and 189 respectively, the first bound in blue and the second in red, and ask you what those two documents are?

3388 A. This (indicating) Exhibit 188, is a brochure put out by the Eagle-Picher Company describing the properties of blue lead, basic white lead sulphate, and giving formulations for their use in primers for the protection of ferrous surfaces under several types of exposure.

189 is a similar publication put out by the National Lead Company dealing with formulations for paint based on red lead.

Mr. Wood: I offer these two documents into evidence, Your Honor.

Mr. Welch: May we have a five-minute recess while the gentlemen are examining the documents?

Trial Examiner Norwood: It is a little early for the recess.

Mr. Wright: I might say, Your Honor, that there appear to be about 40 pages of printed material in these documents which I have never seen before.

Trial Examiner Norwood: We will take a five-minute recess.

(Thereupon a short recess was taken.)

Mr. Wright: I would like to ask a few questions on voir dire.

By Mr. Wright:

Q. Mr. Goetz, this document, respondent's Exhibit 188 for identification, what use it made of that? Has that 3389 been published to the trade generally?

A. This particular document has had limited circulation. It is circulated to paint manufacturers. It is designed particularly for formulators who have more than an average interest in the formulation of paints for protecting iron and steel under specific conditions.

Q. In other words, it is technical information by way of advertising your products to your customers?

A. Of course. We do this in the hope we are going to get some return in the way of tonnage, that is right.

Q. I notice there are some pencilled notations through here. What is the source of those notations?

A. Probably something I put down there for future changes.

Mr. Wood: May we go off the record?

Trial Examiner Norwood: Off the record.

(Discussion off the record.)

The Witness: It is very difficult, no matter how hard you try, to keep everyone in the company interested and after it goes to press and is actually being printed, in the last stages, you will always find something that needs changing so as soon as it comes out I always make it a point to go over it and make changes for future revisions.

By Mr. Wright:

Q. How did you come into possession of this document, Exhibit 189?

3390 A. That is generally available in the industry.

Trial Examiner Norwood: Is that a document from Eagle-Picher?

Mr. Wright: No, sir, this is a document that has printed on it "Published by the National Lead Company." I object to the receipt of these documents in evidence. They contain a mass of technical data on the composition of various types of paint. I think a glance at random will disclose the nature of the documents. I fail to see that they have any relevancy to the proceeding at all.

Mr. Wood: It is our position, of course, Your Honor, that they are excellent evidence of competition between the two companies.

Trial Examiner Norwood: Well, you don't object to the identification of this as being something that National issued, do you?

Mr. DuBose: Your Honor, I haven't made any objection yet. I should like to reserve my objections on the ground that perhaps it may be incorrect or it may not be a proper document published by the National Lead Company. I have no doubt that it is but I should like to reserve my objections on the ground of correction.

Mr. Wright: There are many, many statements of fact and expositions of fact reported in these two documents.

Certainly I don't think it is competent to prove those 3391 statements of fact by this method or by these documents.

Mr. Wood: I will make the statement that the documents are not offered to prove the accuracy of the facts represented in either document, but merely to show the technical warfare that is going on between the two companies.

Mr. Wright: I object to them as being incompetent to show any technical warfare between the two companies. They don't show any technical warfare on their face. They show that one company in one document is advocating a certain specification of paints for certain purposes, and another company is advocating another specification for paint for certain purposes. It is not shown that those purposes are the same.

Mr. DuBose: I take it that is the purpose of the offer.

Trial Examiner Norwood: So I understood.

Mr. DuBose: Solely.

Mr. Wood: Yes.

Trial Examiner Norwood: I think they may be admitted for that purpose. I will overrule the objection and receive Respondents' Exhibits 188 and 189, they being permanently bound pamphlets.

(The documents previously marked RESPONDENTS' EXHIBITS 188 and 189 for Identification were received in evidence.)

3392

By Mr. Wood:

Q. Does the National Lead Company put out blue basic lead sulphate?

A. They do.

Q. National Lead?

A. They sell blue lead also, but not in any quantities.

Q. How long have they sold it, if you know?

A. A matter of 20 years to my knowledge; it has been listed on their price cards although I don't think they sell much of it.

Trial Examiner Norwood: It is understood that Respondents' Exhibits 188 and 189 are received for the purposes for which they were offered, as stated by counsel.

Mr. Wood: That is right.

Mr. Wright: As I understand it Mr. DuBose was reserving objection, was he not, to the receipt of Exhibit 189?

Mr. DuBose: Reserving objection, Your Honor, not making objection, subject to the accuracy thereof.

Trial Examiner Norwood: He can move to strike them later if he wants to.

Mr. Wood: As far as I am concerned if Mr. DuBose can show that that document is a forgery I will be glad to withdraw it.

3393 By Mr. Wood:

Q. Now I hand you a document, four pages of which have been marked 190-A to D, inclusive, and will ask you if you can state what this booklet is?

A. This is a booklet put out by the National Lead Company on the subject of structural metal painting.

Q. I call your attention to the heading and the matter thereunder beginning at the bottom of page 52, which is marked here Exhibit 190-A, and ask you what the substance of that material is?

Mr. DuBose: I object, Your Honor, on the ground that this is referring to a document not in evidence.

Trial Examiner Norwood: Yes, objection sustained.

Mr. Wood: Your Honor, I am in a very difficult position here on this account: It is one case where I am offering a document for the untruth of what is stated, instead of the truth of what is stated. In other words—

Mr. DuBose: I object to that remark, Your Honor. As I understand counsel it is a document prepared by the National Lead Company and I move to strike the remarks of counsel.

Trial Examiner Norwood: Motion denied, it having appeared that it was a National Lead document. Counsel volunteered that.

Mr. Wood: It has been identified as such.

3394 Trial Examiner Norwood: But it hasn't come in yet. You can move to strike it after it comes in.

Mr. Wood: May we go off the record, Your Honor?

Trial Examiner Norwood: Off the record.

(Discussion off the record.)

By Mr. Wood:

Q. I call your attention to the cover page of this document, Respondents' Exhibit 190-D, and ask you to state your understanding of the origin of the document.

Mr. DuBose: Your Honor, I think we can perhaps simplify this matter by saying that I reserve my objection. For the moment I concede that to all apparent purposes it was issued by National Lead Company. I reserve, however, on the record my objection to the document, should it appear at any time later that it is not a document issued by the National Lead Company.

Mr. Wright: I should like to have the document properly identified on the record, in any event.

Trial Examiner Norwood: Now, is there a question pending?

Mr. Wood: Yes, ~~sir.~~ Will the reporter read it, please?

(The question was read.)

The Witness: The origin is the National Lead Company.

3395 By Mr. Wood:

Q. How did this document come into your possession, if you remember?

A. I picked it up in the trade some place. It was widely distributed.

Mr. DuBose: May I have the right of preliminary cross-examination here?

Trial Examiner Norwood: Just wait until he gets through identifying it.

Mr. DuBose: I beg your pardon.

Trial Examiner Norwood: Off the record.

(Discussion off the record.)

By Mr. DuBose:

Q. Mr. Goetz, do you recall under what circumstances the Eagle-Picher Company got this document, a few pages of which have been marked as Respondents' Exhibit 190-A to D, inclusive, for identification?

A. Yes. We heard about the circulation of it in the trade and we were able to pick one up.

Q. When you say in the trade, what do you mean?

A. Amongst paint manufacturers and paint specification writers.

Q. When you say "We picked it up in the trade," what do you mean, a salesman of yours?

A. Someone at Eagle-Picher picked that up.

3396 Q. And brought it back to your office?

A. That is correct.

Q. Outside of that you have no independent knowledge of who published this document, is that correct?

A. That is correct.

Mr. Wood: I offer the document into evidence.

Mr. DuBose: Just the pages that are marked?

Mr. Wood: Just the pages that are marked.

Mr. DuBose: Your Honor, may I state for the record that we, subject to correction, concede that this is a publication issued by National Lead Company.

Mr. Wright: Your Honor, I am not going to object to this on the ground of the identification subject always, of course, to a motion to strike later when I have had an opportunity to examine it, but I am going to object to its offer in evidence as being absolutely immaterial and irrelevant.

It is shown on the record that both of these companies produced both red lead and blue lead and what one of them might think about certain tests it has made as against what another might think about certain tests it has made, has absolutely no relevance to this question about price fixing.

We simply contend that the price of red lead has been
fixed by these two companies and others acting in
3397 concert and we contend that the prices of these other
pigments, lead sulphate and lead carbonate and blue lead have been fixed by a meeting of the minds of the companies. Whether one of them advocated the use of one over another is an entirely irrelevant proposition.

Trial Examiner Norwood: It is like some of the other evidence we have received here—and some of it on behalf of the Commission's contention—standing alone it would probably not mean much but taken in connection with other circumstances it might. I can't prejudge this thing. I can't say now but for the purpose of showing that one of these respondents was making statements in disparagement of the other's product, that is something they can properly show here as one of the circumstances bearing on what he has stated he proposes to show. I think since the document has been satisfactorily identified that it might be received to show that one thing.

Mr. DuBose: If I might say so, it seems to me it would fly in the face of common sense to say that there was a conspiracy and then to have one conspirator disparage a product of his co-conspirator.

Trial Examiner Norwood: That is a matter for counsel to discuss later on in his arguments and the fact that he might base an argument on that is one reason why I am
receiving it.

3398 I will overrule the objection and receive these four
pages in evidence for that purpose, and that purpose only, to show that National was disparaging the product of Eagle-Picher, or intending to show that.

Mr. Wright: Your Honor, I submit that is not a proper characterization of that exhibit, that National was disparaging the products of Eagle-Picher.

Trial Examiner Norwood: I didn't say that, I said I admit it for the purpose of showing that; 'I don't say whether it shows it or doesn't show it, but counsel has offered it for that purpose and all I have to determine is that there is some small degree of relevancy or some degree of relevancy, however small, which would justify me in admitting it which would not justify me in excluding it.'

This document is received Respondents' Exhibit 190A through 190-D. 190A is page 52; 190-B is page 53; 190-C is page 54 and the title page is marked Respondents' Exhibit 190-D. They are received in evidence for the special purpose stated.

(The documents referred to were marked RESPONDENTS' EXHIBITS 190-A, 190-B, 190-C and 190-D and received in evidence.)

Mr. Wood: I wish it clearly understood on the record that I am not offering the document as proof of the contents therein, but only for the purpose as stated by
3399 the Examiner.

Trial Examiner Norwood: Are you going to put photostats of that in, or not?

Mr. Wood: Yes, I will ask the reporter to obtain photostats of those pages.

Trial Examiner Norwood: And substitute them before you send them to the docket section?

Mr. Wood: Yes, sir, and substitute them.

Trial Examiner Norwood: Proceed.

By Mr. Wood:

Q. Now, what are the relative selling prices of red lead and blue lead?

A. Red lead sells at an appreciably higher price than blue lead.

Q. Can you state approximately how much higher?

A. I will have to speak from memory now, but in the order of two or more cents per pound.

Q. How, between the two products, which one does your company push?

A. We push the blue lead.

Q. Why?

A. For the reason that we are in a favorable position for the manufacture of that product, and in addition it has certain properties in paints not possessed by other pigments.

Q. Now, over a period of years, has your research 3400 laboratory expended any time or effort in improving the quality of blue lead in relation to the properties of red lead?

A. Well, our laboratory has investigated and approved the properties of both pigments, and emphasized the properties of blue lead to a very considerable extent and at considerable cost.

Mr. Wood: You may cross-examine.

Mr. DuBose: May I request the privilege of cross-examination before counsel for the Commission, if it is all right counsel for the Commission?

Mr. Wright: I have no objection to that.

Trial Examiner Norwood: Counsel may examine the witness: I am not sure you could properly call that cross-examination.

Mr. DuBose: As the answers may appear, I don't think it is either cross-examination or any other. It is examination by a correspondent in the case.

Trial Examiner Norwood: Go ahead.

By Mr. DuBose:

Q. Mr. Goetz, I believe you testified that in the Eagle-Picher Company you pushed, so-called, blue lead and also sulphate of lead, whether individually or as a component part of leaded zinc oxide. Is that correct?

A. I did.

Q. Now, in the industry, so far as sulphate of lead 3401 and carbonate of lead are concerned, was there a difference of opinion as to the efficacy of one over the other?

A. There was at one time.

Q. Particularly during the period, we will say, between 1923 up through 1934, was there a difference of opinion?

A. I would say there was a difference of opinion in that period.

Q. When did that opinion change, in your opinion?

A. The last words, please?

Q. When did that opinion as to the difference between sulphate and carbonate of lead change, in your opinion?

A. Within the last ten to fifteen years.

Mr. DuBose: I have no further questions.

Trial Examiner Norwood: Cross-examine.

Cross-Examination by Mr. Wright.

Q. Mr. Goetz, all your testimony has been with reference to the different pigments sold to paint manufacturers, has it not? That is all your department covers, is it not?

A. That is right.

Q. You have nothing to do with the white lead and oil?

A. To some extent I do.

Q. You haven't anything to do with the red lead, the litharge and battery end of the business?

A. No, I do not.

3402 Q. What was your tonnage of blue lead in 1941 sold to paint manufacturers for use as a pigment?

A. That figure I do not have in mind.

Q. Can't you give us an approximation of it?

A. In the order—I am guessing now, because I cannot carry figures that far back—of ten to twelve hundred tons.

Q. What was your tonnage of red lead in that same period?

A. There again I am guessing, but in the order of 10,000 tons, maybe a little less or it might be a little bit more, for paint purposes.

Q. In other words, it would be about equally divided?

A. No, just a minute. That is an industry figure. I really don't know.

Q. You don't know then whether you sell more red lead than blue lead, or vice versa?

A. I would say we sell much more red lead than we do blue lead.

Q. For paint purposes?

A. For paint purposes, but I am sorry I cannot give you the figure. I can give you the industry figure, which I would estimate is in the order I stated, namely, eight or ten thousand tons of red lead used for the manufacture of paint. Eagle-Picher's share I do not know.

Q. How is blue lead sold by Eagle-Picher Company? Can you tell me that?

3403 A. Yes, blue lead is sold in dry form in barrels and bags of 50 pounds net weight each. It is also sold mixed or ground into paste with linseed oil.

Q. What sort of containers is it sold in when ground in a paste?

A. In the customarily used metal kegs, steel metal kegs.

Q. One hundred pounds, 50 pounds and 25 pounds?

A. One hundred, 50, 25 and 12.5.

Q. What zone differentials are quoted on blue lead?

A. Sir, I cannot answer your question on that. I don't know.

Q. You don't know what the pricing setup is?

A. I don't know. I can only make the assumption that it is sold on the same basis as red lead and white lead.

Q. It is sold on the same basis?

A. I would assume that, but I cannot say positively, because I do not know.

Q. You stated it was sold at approximately two cents a pound cheaper than red lead?

A. I was speaking of the dry pigment.

Q. The dry pigment?

A. And that was an estimate, if you will recall, too. I would have to look in the records for that.

Q. How many people work in your technical service department for the pigments division, Mr. Goetz?

3404 A. Principally myself.

Q. Do you have any assistants?

A. I have the assistance of several of our salesmen part-time when I need it, and I have the wide assistance of our research laboratory.

Q. What is your relation with the research laboratory?

A. My relation is to keep the research laboratory informed of new developments, and to plan and work with them on programs of investigation, principally on paint matters.

Q. Now, does the research department cover all the scientific investigations for all the various divisions of the company?

A. Our research department carries on investigations for all of the divisions of the company, but it does not necessarily do all the investigational work, because some of it may be done outside from time to time.

Q. Well, they would handle all the paint matters and all the storage battery matters?

A. Substantially so, yes.

Q. And all the metallic lead research?

A. Substantially so. The company may see fit to have a problem worked out outside of the company, which is customary these days.

Q. Can you tell me what the approximate budget was for technical research on the pigments division matters in 1941?

3405 A. I am sorry, I do not have that figure.

Mr. Wood: I may say that all of this information Mr. Wright is asking and not getting the answer from this witness will be supplied, if he so requests, through other witnesses.

Trial Examiner Norwood: All right.

By Mr. Wright:

Q. Your work in the technical research department of the pigments division covers work on zinc oxide as such, doesn't it?

A. Yes, it does.

Q. And on leaded zinc oxide, a combination of the two?

A. That is right.

Q. Does Eagle-Picher Company produce any other pigments than those which have been mentioned here this morning?

A. We produce basic white lead silicate, which I don't think was mentioned this morning. It was mentioned this afternoon, but only in reference to the bulletin which was offered as an exhibit.

Q. And blue lead, red lead, litharge, basic carbonate and basic sulphate. You don't produce any lithopone?

A. Yes, we produce lithopone.

Q. Are you a large producer of lithopone?

A. I would say we are a relatively small producer of lithopone.

3406 Q. At what plant do you produce lithopone?

A. At our plant in Argo, near Chicago, Illinois.

Q. Lithopone pigment is interchangeable with the leaded zinc oxide?

A. No, it is not, not in the opinion of a big majority of paint technologists. It is used for a different purpose.

Q. Has it been used in place of the other white lead and zinc pigments?

A. It has in an emergency, but only because some other pigment is not available. I wish to point out it was only in an emergency, and such use is not countenanced by good formulators. One is an interior pigment and the other is an exterior pigment.

Q. How does the company sell leaded zinc oxide? Is that sold in drums or packages?

A. Fifty-pound paper bags.

Q. Do you know what territorial differentials are quoted on that product?

A. No, I am not familiar with prices. They are available to me anytime that I need them, but my work is of such a nature that I can always call and get prices when I need them. I know in a general way; but I don't know specifically today.

Q. You spoke of the houses that had been painted in Cincinnati with mixed paint and with pure white lead paint which showed a difference in color retention after a
3407 period of time. Do you know who painted those houses?

A. I don't at the moment. I know they were painted by master painters.

Q. But you don't know whether the methods or techniques of applying the paint on those two structures were identical, do you?

A. I would say for all practical purposes they were identical.

Q. Do you know that of your own knowledge?

A. Not of my own knowledge, because I was not present at the time; but I can tell from the looks of a job whether it is good workmanship, mediocre or bad.

Q. Did I understand you to state that the customary price differential between dry basic sulphate and basic carbonate is a half cent a pound?

A. Yes, I made that statement.

Q. And you stated that the difference in costs in 1941 and '42 in the use of basic sulphate or basic carbonate was six or seven cents a gallon. Is that correct?

A. Depending on the particular type of formulation, but the formulation which was most popular at that time, considering the basic white lead sulphate and leaded zinc oxide, its saving was, as I stated, between six and seven cents a gallon in favor of the basic white lead sulphate.

Q. Approximately how many pounds of lead pig-
3408 ments were in those paints per gallon?

A. Let us see. About 12 pounds—yes, about 12 pounds of pigment in a gallon of paint, of which in the case of white we will say 65 percent was the average lead content of the particular paint I have in mind. You must remember at that particular time we had gone into that period of transition when our ideas on the formulation of paint were changing, eventually resulting in the type of paint which we are using so extensively today, which is a lower lead content paint.

Q. Now, up to that time isn't it true that there were on the market a number of high quality paints which contained anywhere from 10 to 14 pounds of lead pigments per gallon?

A. No, I wouldn't say, not unless you are thinking of straight basic white lead carbonate paint where the pigment is entirely based on white lead carbonate. The average mixture weighed about 16 pounds to a gallon in those days, and with 4 pounds of oil present and maybe a half a pound of thinner and dryer, it was 4.5 from 16, which leaves 11.5. Keep in mind now that we were going through the transition stage, and 65 to 70 percent white lead was commonly used in the pigmentation, so 70 percent of 11 would be in the order of 7.5 to 8 pounds per gallon.

Q. Aren't there still paints on the market which contain a very high percentage of basic carbonate or
3409 basic sulphate white lead?

A. You must distinguish the type of paint. If you are referring to so-called ready-mixed pure white paint, which is essentially paste white lead reduced with oil and put into ready-mixed paint form, then there is an appreciable quantity of 100 percent pigment paint. But it all depends on what we mean by large.

In 1923 we figured we couldn't make a good paint without at least 65 to 70 percent white lead present. Today we have evidence to show, both on test fences and in the matter of several years' experience on houses, that we can make good paints with 30 percent white lead content, providing we have a judicious, proper combination of pigments.

Q. Now, this so-called controversy that you had between carbonate and sulphate, which ended with the TT-P-25 in 1943 on primer specifications, who did you notify of your agreement or acquiescence in that specification at that time?

A. That was such a long drawn out affair. I talked to Mr. Hickson about that, chairman of the committee.

Q. And told him the Eagle-Picher Company was willing to go along with that specification?

A. As he finally reached it, but you must remember that that specification dragged out for months and months and months, and we had I guess reams of statements and millions of words for and against one or the other,
3410 or any combination of the two. And also keep in mind that the Army at that time was needing paint

We didn't have this great shortage of paint until subsequent to 1942.

Q. Did the Lead Industry Association take any part in that controversy?

A. Not to my knowledge. I believe Mr. Wormser was called in by Mr. Hickson as an authority, and Mr. Vogelsang of the Tin-Lead-Zinc Branch, but they were called in only on account of the War Production Board having been in existence, or what was then called the Office of Production Management, and any changes in raw materials of a chemical nature, including paint, were not made without first consulting the proper office in the War Production Board, or its predecessor agencies.

Consequently, Mr. Vogelsang, who headed the Tin-Lead-Zinc Branch was called in to at least one meeting to state his views, and I think we brought Mr. Wormser along as a witness, and Mr. Wormser may have been invited by the committee. Mr. Hickson endeavored to be very thorough, very fair and very impartial in handling this matter, because in mind that we were at that transition period between a high lead paint and a low lead paint, and he wanted the Government to have the benefit of all modern technology, and yet he wanted to be fair in his dealings with everyone.

Due to the war situation, and the connection of
3411 these people with the War Production Board, several of the people were called in on the committee who would not in ordinary times have been invited, or whose opinion wouldn't have been considered.

Q. Was there not a very serious shortage of lead during the war?

A. At times a very serious shortage. At times there was plenty of lead.

Q. Did the shortage of lead in any way affect the Government's consideration of the specifications on these mixed paints?

A. Yes, it did.

Q. Tending to reduce the content, the minimum lead contents in mixed paints?

A. No, it did not work to reduce—as I recall it, it did not work to reduce the minimum lead content of the paint. What reduced the lead content in the paint was a natural development of the technology of paint, which extended a decade before the war, but which was brought to a head by mere coincidence at just about the time of the war, and at times during the war there was plenty of lead.

Q. Going back to blue lead now and its composition, what is the metallic lead content of blue lead?

A. Approximately 70 to 72 percent.

Q. That compares with what metallic content of
3412 the high grade red lead?

A. Red lead is 90 percent.

Q. Does that account in large part of the price difference which exists between those two commodities?

A. It may be one factor.

Mr. Wright: I have nothing further.

Trial Examiner Norwood: Redirect?

Mr. Wood: No redirect examination.

Trial Examiner Norwood: Call your next witness.

Mr. Wood: I would like to suggest an adjournment until tomorrow morning.

Mr. DuBose: May I join in that request?

Trial Examiner Norwood: Is this witness discharged, or do you want to bring him back?

Mr. Wood: Discharged.

Trial Examiner Norwood: The witness is discharged.

(Witness excused.)

Trial Examiner Norwood: We will recess until 10 o'clock tomorrow morning.

(Thereupon, at 3:45 o'clock p. m., an adjournment was taken until the following day, Wednesday, July 23, 1947, at 10 o'clock a. m.)

3413 Hearing Room,
Federal Trade Commission,
Washington, D. C.,
July 23, 1947.

Met, pursuant to adjournment, at 10:00 a. m.

Before:

J. W. Norwood, Trial Examiner.

Appearances:

Edmund T. Wood and Richard Serviss, American Building, Cincinnati, Ohio, representing Eagle-Picher Company and Eagle-Picher Sales Company.

3414 E. Z. DuBose, 120 Broadway, New York, New York, representing National Lead Company.

Henry E. Gardiner, 25 Broadway, New York, New York, representing Anaconda Copper Mining Company and International Smelting & Refining Company.

James T. Welch, 815 15th Street, N. W., Washington, D. C., representing The Sherman-Williams Company.

Joseph S. Wright and Paul R. Dixon representing the Federal Trade Commission.

3415 PROCEEDINGS.

Trial Examiner Norwood: The hearing will come to order.

Pursuant to adjournment of yesterday the hearing is now reconvened at 10 o'clock a. m., Daylight Saving Time, on July 23, in Room 332, Office of the Federal Trade Commission, Washington, D. C. The appearances are as follows:

Joseph S. Wright and Paul R. Dixon appearing for the Federal Trade Commission.

Edmund T. Wood and Richard Serviss appearing for Eagle-Picher Company and Eagle-Picher Sales Company.

E. Z. DuBose appearing for National Lead Company.

Henry E. Gardiner appearing for Anaconda Copper Mining Company and International Smelting & Refining Company.

James T. Welch appearing for The Sherman-Williams Company.

You may call your witness.

Mr. Wood: Mr. Harner, please.

Trial Examiner Norwood: Will you give me your full name, please?

Mr. Harner: Harold R. Harner.

HAROLD R. HARNER, was thereupon called as a witness for the respondents Eagle-Picher Company and Eagle-Picher Sales Company and, having been first duly sworn, testified as follows:

3416 *Direct Examination by Mr. Wood.*

Q. Mr. Harner, will you please state your residence and occupation?

A. I am chief chemist of the Eagle-Picher Company and also assistant research director with my residence at Joplin, Missouri.

Q. Will you please state your education?

A. I am a graduate in chemistry cum laude from Westminister College at Fulton, Missouri.

Q. After leaving Westminister what did you do?

A. I went into the employment of the Eagle-Picher Lead Company at Joplin, Missouri, directly from school.

Q. In what capacity?

A. As a worker in the research department.

Q. How long did you occupy that position?

A. That was from 1924 until 1927.

Q. And what did you do next?

A. I was in the employment of Mr. J. H. Calbeck in the Calbeck Laboratories at Joplin, Missouri, doing contract work for the Eagle-Picher Company.

Q. What was the nature of your research work at Eagle-Picher and also in your next association?

A. My work at Eagle-Picher was primarily on
3417 storage batteries at that time, although I did a good
deal of other work, not storage batteries. During the interim when I was with Mr. Calbeck our work was on the reclaiming of values from storage battery plates.

Q. How long were you with Calbeck?

A. Three years.

Q. And what position did you take next?

A. I returned to the Eagle-Picher Lead Company as chief of the storage battery division in the research department.

Q. Have you been in the employ of the Eagle-Picher Company ever since?

A. I have.

Q. What have been your duties and responsibilities over that period of employment?

A. From the time I returned in 1930 until 1935 I was in charge of the storage battery division of the research laboratory. Beginning in 1936, the first of the year, I became chief chemist of the research laboratory and assistant to Mr. McMullen, the research director. About 1941 I became chief chemist of the entire company.

Q. What is the condition of Mr. McMullen's health at the present time?

A. Mr. McMullen is confined to his home with hypertension at the present time.

Q. And is unable to testify in this case?

3418 A. That is right.

Q. Can you give us an over-all picture of the business of the Eagle Picher Company, that is, just broadly, the fields in which the company is engaged and the general nature of its manufacturing efforts, as you understand them?

Mr. Wright: I am going to be required to object to that question unless it is amended so that the answer will clearly be from this witness' own experience as chief chemist of the company.

Trial Examiner Norwood: Well, haven't you pretty well covered that anyway?

Mr. Wood: I don't think so, I don't think there is anything in the record.

Trial Examiner Norwood: I will ask the witness to testify from his own experience.

Mr. Wood: That is perfectly all right as a qualification.

Trial Examiner Norwood: Go ahead.

The Witness: You want the scope of the company's activities?

By Mr. Wood:

Q. Just generally.

A. The Eagle-Picher Lead Company is engaged in the production of, primarily, raw materials or heavy chemicals
from lead and zinc, or lead and zinc ores. Their sub-
3419 sidiary, the Eagle-Picher Mining & Smelting Com-
pany produces lead and zinc ore from the mines, has mining properties, concentrating plants and smelters.

The Eagle-Picher Company's activities include not only pigments but insulation and metal goods as well.

Q. Where are the mining properties of the Eagle-Picher Company?

A. The major mining properties are in the so-called Tri-State field of Missouri, Kansas and Oklahoma, centered between Joplin, Missouri, and Picher, Oklahoma. They have another new field in the so-called Tri-State field of Illinois, centering about Galena, Illinois, and extending into Wisconsin and Iowa. They also have properties in Mexico and Arizona.

Q. What is the nature of the ore which is mined in the Tri-State district about Joplin?

A. The ore in the Tri-State field is quite unusual in that the lead ore, for example, is substantially free from silver and bismuth and is quite different from any other ore except that of the Tri-State Illinois field which resembles it very much. It is also another ore that is substantially free from silver and bismuth.

Q. What, if any, significance is there to that freedom from silver and bismuth?

A. This freedom from these two impurities makes it
possible to use these ores directly in the production of
3420 pigments, whereas if silver and bismuth were present
the ores could not be used directly in their manufacture.

Q. Will you please give us a brief over-all summary of the duties and responsibilities of the research laboratory?

A. Of course the primary duty of the research laboratory is to maintain the competitive position of the company both in regards to the technical services furnished in regard to the quality and types of products produced, and in regard to the development of new products as needed to meet competition and keep the company in their position in industry.

Now, we have other responsibilities. The research laboratory coordinates the plant development laboratories, and the plant control laboratories. Each plant has a control laboratory and a number of them have developed laboratories working on their specific products.

Q. Will you explain what you mean by the plant laboratories and the control laboratories, other than your laboratory?

A. All of our products are sold on very rigid specifications which require analyses of the product continuously. We must know that every barrel or lot of production meets the specifications. For example, at the Joplin litharge or lead oxide plant every barrel of lead oxide must be analyzed before it is accepted and checked for shipment.

We make so many different grades that it requires very complicated testing to be sure that each barrel or
3421 each lot, where lots are made, meet the specifications.

That is true in every plant, we have laboratories controlling them each chemically now. In addition we have developed laboratories in a number of plants to handle the specific problems of that plant.

For example, at East Chicago the laboratory is working on white lead and the recovery and refining of lead from secondary sources. We must keep those processes improved and this requires a staff at that point, in addition to the regular laboratory research staff at the central laboratories at Joplin.

Q. Could you give us a list, Mr. Harner, of the control or research laboratories that you know about, other than the central laboratory at Joplin, with which you are connected?

A. Yes.

Q. Would you do so, please?

A. There is a control laboratory at our zinc smelter at Henrietta, Oklahoma; a control laboratory and a development laboratory at our plant at Galena, Kansas, where basic sulphate is produced; there are two control laboratories and a development laboratory in the Joplin plant. There is a control laboratory and a development laboratory in the diatomaceous earth plant at Clark, Nevada.

There is a control laboratory at East St. Louis. There is a control laboratory at the zinc oxide plant at
3422 Hillsboro, Illinois—two control laboratories. There is a control laboratory at our lithochrome plant at Argo, Illinois. There is a control laboratory and a devel-

opment laboratory at our East Chicago plant. There is a control laboratory at our white lead plant at Cincinnati. There is a control laboratory and a development laboratory at our metal goods plant at Cincinnati.

There is a control laboratory at our metal goods plant at Dallas, Texas. There is a control laboratory at our Wabash, Indiana, insulation plant. There is a control laboratory at our Newark lead oxide plant.

I may have missed some, but I am certain of all those named.

Q. Now, what is the relationship of the Joplin laboratory, at which you are assistant research director, to the other laboratories of the company?

A. It is my duty as chief chemist of the company to supervise all of the control laboratories, both in regard to the tests conducted and the methods of test.

It is our duty as a research department to correlate the work of all the development laboratories so that it all goes forward on one unified plan.

Q. Now, in answer to one of the earlier questions, you mentioned technical service. Will you explain what you mean by technical service?

3423 A. Our technical service takes many forms which are brought on by the fact that we have such a diversity of small customers, many of whom do not have development or engineering laboratories. In order to provide them with the means to be competitive in the trade, we provide them with technical information both as to our products and as to how these products should be used, and we also assist them in designing or developing the products which they wish to manufacture.

I can give an example. During the war, on the batteries for tanks and Diesel batteries, only a few of the larger companies knew how to make these batteries. We designed the battery completely, including the size of the grids, the number of plates, the amount of material that must go in each plate, and submitted that information to all of our battery customers, enabling them to produce successfully for the Government these needed batteries.

Q. Did those batteries require special oxides or special blends of oxides, or particularly selected blends?

A. They did.

Q. And who made the selection?

A. We did.

Q. Now, what if any is the relationship between the research laboratory and the sales department of the pigments division?

A. The research between the laboratory and the sales department of the pigments division is very close. 3424 Every man in the sales staff of the pigments division is a technical man who services, as far as he can, his customers. If he cannot take care of their needs, then the research laboratory is called in, either by members of that department, or by transmittal of this information from the salesman or the technical representative to the laboratory where the problem may be worked on in the laboratory, and the solution reached which will enable the problem to be whipped.

Q. Who trains the salesmen, the technical salesmen in the pigments division?

A. The research laboratory.

Q. How do they train them?

A. Every new salesman or sales candidate is sent to research for a period of at least six weeks, ordinarily three months, and sometimes a year, where they go through a regular course of study in our products and the use of those products, and the technology which we have developed in regard to them, and also in regard to the field in which these products are used, so that when they go out they can understand the customer's problems and work with him in servicing the customer and keeping him competitive.

Q. What is the purpose of this working relationship between the research laboratory and the technical salesmen of the pigments division?

A. The purpose is fundamental in our principle of 3425 operation, because unless we can supply this technical information to the customer, we would have no position. Our position is built, and our competitive situation is based on technical service.

Q. Can you explain why your competitive position is based on technical service?

A. I don't know as I can very well. That is an involved subject, because it has been our principle of selling and our principle of working ever since I have been with the company. It is the only way we have been able to remain competitive in the industry.

Q. There was testimony yesterday with regard to test fences erected by the company. Do you have any familiarity with those test fences?

A. I do.

Q. What is their purpose?

A. Their purpose has several phases. It began as a study of all the different types of pigments to find out exactly the properties of each one in paint. We stepped up from that to combinations of these pigments to find the joint properties, or shall we say synargy, because sometimes when you add two things together you don't get the expected result.

Then we combined three pigments, and went on until we knew pretty well what would happen with any
3426 combination of pigments in paint.

That developed a mass of basic information from which we can then postulate formulations and check directly the exact paint formulations to be used in the trade.

Now, in addition to trying out the final definite formulas we developed, of course we studied current paint formulations in use in industry, securing samples of paint on the open market with which to compare the formulas which we are developing and studying.

Q. How long do you expose your panels on test fences?

A. That depends on the type of protection that is expected. On wood paints, it will vary, in the case of normal paints, from three to six years. In the case of metal protective paints, it may take ten years to complete a test.

Q. In other words, you leave one panel on a fence for that length of time?

A. That is right.

Q. During the history of your test fences, how many panels, approximately, have you exposed altogether, just approximately?

A. I believe our panel numbers are in the 20,000 somewhere at the present time, because they have been listed serially.

Q. Now, the collated information obtained from the test fences is available to whom?

A. To any of our customers. The reports are submitted. As soon as a piece of work or a section is
3427 completed, the report is written and submitted to the sales department, the technical division at Cincinnati, where it is made available through these salesmen to any customer to whom it will be of use.

Q. How about prospective customers?

A. I should say customers, or prospective customers.

Q. Has any information obtained from the test fences ever been presented to any governmental bodies?

A. It has.

Q. Which ones?

A. Quite a number. The Paint Group in Washington here Mr. Goetz spoke about yesterday; the Maritime Commission. I know it has been presented to the Navy, to many public roads or state road commissions; the Panama Canal Commission; the United States Engineers. I believe the Navy Department of Aeronautics during the war, when we did some work on aviation paints.

There are probably more, but I am not too familiar with all the places to whom this information has been submitted.

Q. What is your understanding of the term "mixed paint"?

A. My understanding of the term "mixed paint" is a paint in which two or more, and usually three, four or five different pigments are blanded so that the best combination of properties is secured for the purpose for
3428 which that paint is being produced. It is ready-mixed with oil, thinner, dryer and any other ingredient needed to make it ready to use on opening the can.

Q. Will you give us an example of the formulation of what you would consider a very high quality outdoor white house paint?

A. At the present time our formulations would probably be in the order of 35 percent lead sulphate, in the order of 25 to 35 percent zinc oxide, 12 to 15 percent TiO_2, titanium oxide, and the balance of the pigment as an inert, such as asbestine or magnesium silicate, the whole ground in a mixture of raw linseed oil and bodied linseed oil.

Q. Now, how would such a paint compare with a pure lead carbonate white paint, say when manufactured by the Atlantic Division of National Lead Company?

A. I should say it would be superior to the white lead. White lead has certain deficiencies as a single pigment which are quite well known.

Q. Well known by whom?

A. The industry, the paint industry.

Mr. Wright: Your Honor, I move that that answer be stricken from the record. There has been no basis laid to show that this witness has compared any such formulations he has testified about with the specific product produced by the Atlantic Branch of the National Lead Company.

3429 Mr. Wood: We will ask him whether he has or not.

By Mr. Wood:

Q. Have you ever tested out a pure white lead carbonate paint of the Atlantic Branch of the National Lead Company?

A. I cannot say of any branch. We have tested many white leads from the National Lead Company.

Q. You are not sure of the branch?

A. I wouldn't say about the branch.

Trial Examiner Norwood: Have you tested out the Dutch Boy brand?

The Witness: Yes.

By Mr. Wood:

Q. It was Dutch Boy brand that you were testing?

A. Yes, sir.

Mr. Wood: Off the record.

Trial Examiner Norwood: Off the record.

(Discussion off the record.)

Mr. Wright: I still submit there hasn't been any proper basis laid that the witness has compared any specific paint to which he has testified with that paint.

Trial Examiner Norwood: I think you can cross-examine him on that.

Off the record.

(Discussion off the record.)

Trial Examiner Norwood: On the record.

3430 By Mr. Wood:

Q. Now, on this test fence, Mr. Harner, do you test the products of competitors?

A. We do.

Q. Have you ever tested pure basic carbonate white lead paint made from Dutch Boy brand of the National Lead Company?

A. We have.

Q. And of pure white lead carbonate paints made from Eagle white lead?

A. We have, many times.

Q. Have you compared the properties of such paints with the properties of mixed paints of the formulation which you gave us just a moment ago?

A. We have.

Q. And how do those properties compare?

A. The findings indicate the mixed paint to be more satisfactory. White lead tends to check and discolor in service, and then chalk rather badly, although as far as protecting the surface on which it is laid, it gives good protection. But in appearance it is not as good.

The mixed paint will give protection and good appearance over a longer period of time.

Q. By white lead in your last answer, you meant basic carbonate white lead?

A. That is right in this case.

3431 Q. Which is the cheaper of the two paints?

A. The mixed paint will be cheaper to produce than the basic carbonate white lead.

Q. Can you tell us how many different lead pigments the Eagle-Picher Company manufactures?

A. Yes.

Q. Will you please name them, all of them?

A. We produce at least three kinds of basic sulphate white lead, basic sulphate blue lead, lead silicate, anhydrous lead silicate, white lead or the silicate white lead, the carbonate white lead, several types of red lead, five or six distinct processes or types of litharge with very many modifications in each type. We produce lead formate. We produce special silicates, such as our trade-marked Alsilox, which is a lead alumino-silicate. We produce the leaded zinc oxides, if you wish to include them, of which there are about six main types, and some thirty modifications. We also produce lead peroxide.

Q. Now, does your laboratory obtain samples of competitors' products and analyze their properties?

A. Yes.

Q. How extensively?

A. Whenever any product is brought out by a competitor, a number of samples are secured both to get information as to the product itself and as to its variability 3432 and range of properties. Then from time to time additional samples are secured on all competitive products so that we may keep posted if there is any change from the original material as brought out.

Q. Is that done systematically or haphazard?

A. Rather systematically. It isn't always possible to get samples just when we want them, but as nearly as possible, it is a systematic procedure.

Q. Now, have you ever analyzed any of the lead pigments of the National Lead Company?

A. We have.

Q. How many of them?

A. I couldn't give you a number. It is a great number, but I couldn't give you an actual number.

Q. Well, on the basis of analyzing the products of National Lead Company, what is your estimate as to the relative number of lead pigments manufactured by National Lead Company and the Eagle-Picher Company respectively?

A. From what I have seen, the National Lead Company produces a lesser number of products than Eagle-Picher in lead pigments.

Trial Examiner Norwood: I believe he is trying to find out how many are common to both, how many qualities both the concerns produce.

The Witness: Do you wish a further answer?

3433 Trial Examiner Norwood: Go ahead and ask a question.

Mr. Wood: Was Your Honor asking for the number of products that were exactly alike or the two companies?

Trial Examiner Norwood: Yes, of the two companies.

Mr. Wood: I think I can ask it in a way that will bring it out.

Trial Examiner Norwood: I will withdraw my question.

By Mr. Wood:

Q. His Honor was inquiring, Mr. Harner, in respect to the number of products which are common to the two companies, that is, the National Lead Company and the Eagle-Picher Company, so I am going to ask you, for instance, in respect to basic lead carbonate what are the similarities or differences in the products of National Lead Company and the Eagle-Picher Company, as far as carbonates are concerned?

A. As far as carbonates are concerned we both produce a range of carbonates to give different properties in paint but they are comparable ranges of pigments. I would say there is no substantial difference in the carbonates in the ranges of materials produced.

Q. How about the red leads intended for this paint grinders' industry?

A. The red lead, again we produce similar lines of
material although we started the use of an extremely
3434 fine red lead which was made from sublimed litharge
and the National took steps afterwards in order to
match the product but at the present time our lines of paint
grinders' red lead are comparable.

Q. Do you manufacture any lines of paint grinders' red lead that National doesn't manufacture now?

A. Not at the present time.

Q. But you have in times past?

A. Yes.

Q. And National has followed your lead in products?

A. That is right.

Q. In regard to blue lead does National have a comparable product?

A. As far as I know National Lead Company does not manufacture a product comparable to our blue lead.

Mr. Wood: Off the record a moment.

Trial Examiner Norwood: Off the record.

(Discussion off the record.)

By Mr. Wood:

Q. Now, do you know whether National puts out leaded zinc oxide?

A. I do not think they do, in fact I am rather certain National does not put out leaded zince oxide.

Q. What are the comparative qualities of the
3435 Eagle-Picher basic lead sulphate and the National
basic lead sulphate?

A. I have only seen one type of National basic lead sulphate which was a precipitated lead sulphate. We make three types, of which the precipitated is a minor item.

Q. What do you mean by precipitated?

A. A precipitated basic sulphate white lead is made by reacting a mixture of litharge, the lead oxide and water, with sulphuric acid in the correct proportions and under the right conditions to precipitate or throw down a lead sulphate of the right properties, which is then filtered, dried and milled for use.

Q. In other words, the product has to go through the pig lead stage?

A. The product has to go through the pig lead stage, the litharge stage.

Q. How about your lead sulphates?

A. The bulk of our lead sulphate is produced directly from lead ore, especially purified lead ore which is burned directly in a furnace like powdered coal to form the sublimed white lead fume.

Q. What is the relative cost of manufacture of the sulphate from the ore concentrate and from the pig lead?

A. I cannot give you exact figures. I have seen them but I know it is definitely lower in cost to produce the basic sulphate directly from ore rather than from pig lead.

3436 Q. What grade of ore is required to produce that type of sulphate?

A. It takes the type of lead ore produced in one of the Tri-State fields free from silver and bismuth and it must be further purified and chemically treated before it is burned to the sulphate.

Q. Do you know of any other lead ores in this country that could be so utilized?

A. None that I have seen.

Q. How about the basic silicate white lead, does National make that, do you know?

A. They make a basic silicate but it is not a white lead, it is rather a basic silicate chemical compound for other uses. From our examination of the pigment it does not appear to be a paint type of pigment material, that is, the National product.

Q. Do you know of any National product that is the functional equivalent of your basic white lead silicate?

A. I do not.

Q. Now can you name any other lead pigments going to the paint grinders manufactured by Eagle-Picher other than those you have named, which National does not make?

A. Offhand, no.

Q. Has your research laboratory devoted any work to the development of blue lead or basic lead sulphates

3437 or basic lead silicate white lead?

A. Oh, yes.

Q. How much in general over a period of years?

A. That work has been continuous for, well, over the entire period there has been work conducted and it has been intensified. I should say on the average that on those three pigments which you named for the past ten years there have been at least from six to ten men continuously employed on that group of three pigments.

Q. Has there been any particular emphasis on the research work on those particular products?

A. Definitely.

Q. Why?

A. Because they are particularly adapted to the Eagle-Picher setup. The basic sulphate white lead and the basic sulphate blue lead, especially so, since we control ore bodies from which we can make these pigments and we can make them economically so that we can make some money on them and sell them to our customers economically.

In addition to that their properties, as demonstrated by our tests, are superior.

Q. Superior to what?

A. To the competitive products such as carbonate white lead in the case of the red lead, and basic sulphate in the case of the blue lead.

3438 Q. Now turning to the battery oxides, how many different oxides of lead are there?

A. I would have to name them. I think there are about five.

Q. Please name them.

A. We have the PbO, lead monoxide, which is known ordinarily as litharge; we have Pb_3O_4, lead tetraoxide, known ordinarily as red lead. We have Pb_2O_3, the lead sequi-oxide which is not widely used but may be in the future.

Then there is a new one, the Pb_5O_8, which is not named and which has only been determined by X-ray to exist. Lastly there is the PbO_2, lead peroxide, which is the material which is in the positive plate of the storage battery. It is also used in industry for an oxidizing agent.

Q. Of those five oxides you have named how many does your company manufacture?

A. Three at the present time, the monoxide litharge, red lead and the peroxide. We do not manufacture the Pb_2O_3 or the Pb_5O_8, that is, not to our knowledge, there may be some mixed in the other materials.

Trial Examiner Norwood: Does National manufacture the three that you do?

The Witness: I am not sure about the lead peroxide. They manufacture the other two and they may manufacture the peroxide, but I don't know.

3439 By Mr. Wood:

Q. Now, are these various types of commercial oxides which you have named equivalent to each other? I mean, is every litharge just like everyother litarge or are there different types?

A. They are not. There are two physical modifications of litharge or PbO that are identifiable by X-ray, the tetragonal and orthorhomic crystal forms. In addition to that each manufacturing process produces an oxide of different properties, such as chemical reactivity or stability or rate of formation in a battery plate so that we have six different manufacturing properties at the present time for making litharge.

Q. By "we" do you mean Eagle-Picher Company?

A. I mean the Eagle-Picher Company.

Q. Why does the Eagle-Picher Company employ so many different methods of making one chemical?

A. The needs of our many customers are so diverse that in order to supply them with precisely the material which will give them the best results we produce litharge by all of these different processes.

Q. Do you know whether the National Lead Company sells that many litharges?

A. I don't believe they have quite as many; I think they have four or five different types of litharge. I think we have one or two more types than they have. 3440

Q. Now, are your litharges and the National Lead Company's litharges exactly the same?

A. No.

Q. They are not?

A. Our processes are not identical with theirs. They are comparable but not identical.

Q. Do the litharges of the two companies exhibit different properties when utilized in battery manufacture?

A. Yes.

Q. Such as what?

A. It is necessary to adjust the formulations in the battery plates, sometimes only slightly but in every case necessary when you go from one oxide to another. It is just as necessary between National and ours as it would be between any of the six modifications of ours. In other words, the adjustment would be, perhaps, only in the amount of fluids which had to be added to the mixture in making the paste; it might be in the type of fluids which had to be added; it might be the formation of the plates which would be different.

Q. By formation of the plates do you mean the electrical charging?

A. The initial electrical charging which converts the material in the plates from the original lead oxides into the final material.

3441 Q. By formation you do not mean the physical construction?

A. No, I do not.

Q. You mean the electrical development?

A. The electrolytic conversion.

Q. In making the switch from one company's oxide to the other do those variations have to be scientifically determined for the best results?

A. That is right, they do.

Q. In other words, you couldn't guess and get a good result?

A. No. In fact, there have been instances, and many, where such a change was made inadvisably and without proper examination where trouble, and serious trouble, was experienced; not that adequate results could not have been secured had this examination and changes been made.

Q. Well, for instance, if the Eagle-Picher Company is selling a battery oxide to an account which formerly used a National battery oxide, what type of service do you give the customer in connection with taking over the account?

A. We will study their process and get the details, then in our laboratory we will duplicate as near as we can that process and by selection we can tell which modifications of our oxides should be adaptable to that process.

We will then try that selected group and see which one does the best in that process, then we will select that
one, or possibly two, and make a plant test in the
3442 plant, just a single barrel or single test, and if that is
satisfactory we will run a larger batch until we are
assured it is giving the result we want.

Q. Are you able to catch up with National?

A. I think we are ahead.

Q. What is your effort in giving that type of service?

A. What is our effort?

Q. Yes, what are you trying to do?

A. To maintain our position in the field; that is how we get business.

Q. Are you trying to improve on National?

A. No, we are trying to improve on ourselves. We are already ahead of them, I think.

Q. In 1930 when you went back with the Eagle-Picher Lead Company did National Lead Company give any service at that time in connection with its sale of battery oxide?

A. To my knowledge, very little.

Q. Did the Eagle-Picher Company?

A. Yes, we did. We had ten men in the battery laboratory at that time in 1930.

Q. Has the giving of service to customers continued since that time?

A. Yes.

Q. On the part of Eagle-Picher?

A. Yes, it has.

3443 Q. Do you know whether or not at some point National Lead Company commenced to give service?

A. Yes, they did. I can't give the exact year but about 1940, possibly 1939, they hired a number of people and enlarged what had been a small battery laboratory to one that is comparable to ours at the present time, in size. I was told quite proudly by the National Lead representatives of the wonderful new laboratory they had and we began to see their men in the field there.

Q. Is there competition now between the two companies in the giving of technical service to customers in connection with the sale of battery oxides?

A. Very intense at the present time.

Q. How many grades of red lead do you manufacture for the battery trade?

A. We manufacture about, I believe, eight or nine different grades of red lead for the battery industry—shall we say types, rather than grades?

Q. Types?

A. That is right.

Q. Are those battery red leads the same as the red leads that are sold to the paint grinders?

A. No, they are not the same.

Q. Are they manufactured in the same batches, or anything like that?

3444 A. They are made in the same furnace but from different base materials and handled differently throughout the manufacture.

Q. So that the products are not interchangeable?

A. No.

Q. Do you know how many battery red leads the National Lead Company puts out?

A. No, I don't. They have several but I don't know the exact number.

Q. Can you estimate whether it is more or less than the number you put out?

A. Less, I think.

Mr. Wright: Objection, Your Honor, the witness already stated he doesn't know. He knows they have several, now he is asked frankly for a guess.

Trial Examiner Norwood: Read the question and answer.

(The record was read.)

Trial Examiner Norwood: I think he can give his impression about that.

Mr. Wright: Your Honor, that is something that can be determined by testimony. I don't want the record to show National Lead Company produces less on the basis of the witness' guess, when he has already stated he doesn't know.

Trial Examiner Norwood: He is just giving his opinion there.

3445 Mr. Wright: It isn't an opinion, it is a guess, an estimate after stating that he didn't know.

Trial Examiner Norwood: Did he state he didn't know?

Mr. Wright: Yes, sir.

Mr. Wood: Well, it seems to me that the witness has a right to state his impression or opinion there. After all, the point of this testimony is that the Eagle-Picher Company at least thinks it is competing successfully with National and if the laboratory thinks they put out a greater variety of red lead for competitive purposes than National, it shows the spirit and intensity of the competition.

Mr. Wright: He knows how many Eagle-Picher puts out, which I think he stated as nine; he doesn't know how many the National Lead Company puts out. I think it is improper for him to guess that National puts out less.

Trial Examiner Norwood: I will overrule the objection and let him answer that. Off the record.

(Discussion off the record.)

Trial Examiner Norwood: We will take a five-minute recess.

(A short recess was taken.)

Trial Examiner Norwood: Are you ready to proceed?

Mr. Wood: I have a few more question of the witness.

3446 By Mr. Wood:

Q. Mr. Harner, what is the Eagle-Picher plan of merchandising battery oxides?

Mr. Wright: I object to that, Your Honor. It hasn't been shown that this gentleman has had anything to do with the merchandising of these products. He has been a chemist and research man in the laboratory, by his own testimony.

Mr. Wood: I will ask a preliminary question there, Your Honor.

Trial Examiner Norwood: All right, go ahead.

By Mr. Wood:

Q. Do you have any duties apart from technical research itself in furtherance of the Eagle-Picher plan of merchandising battery oxides?

A. I do.

Q. What are they?

A. In training the salesmen who are to sell these oxides in the field.

Q. What is the Eagle-Picher plan of merchandising battery oxides?

A. The Eagle-Picher plan, as we teach it to the salesmen, is to sell these oxides as specialties, to fit them to the customer's individual needs.

Q. What is the purpose of that plan?

3447 A. The purpose of the plan has only one objective, and that is to maintain our competitive position in the field as compared with our larger competitors.

Q. Mr. Harner, have you ever prepared and delivered any technical papers before any technical societies?

A. I have.

Q. Approximately how many?

A. I have delivered about ten papers before the National Association of American Battery Manufacturers. I don't recall the exact number, but two or three before the Electrochemical Society, of which I am a member.

Q. What was the purpose of delivering these papers?

A. The papers before the National Battery Manufacturers Association was to distribute and make available generally to the battery industry the major findings of our laboratory in regard to storage battery technology.

Mr. Wood: You may cross-examine.

Trial Examiner Norwood: Cross-examine.

Cross-Examination by Mr. Wright.

Q. These processes for production of pigments directly from the concentrates, Mr. Harner, how many of the pigments of the Eagle-Picher Company are produced in that fashion?

A. The basic sulphate white lead, the bulk proportionate of our sulphate. We do have two other processes,
3448 but the bulk of our sulphate white lead is produced
by that method. The blue lead is also produced by that method. Some of our co-fumed leaded zinc is produced directly from ore, and all of our zinc oxide at the Hillsboro plant is produced directly from zinc ores, which wasn't mentioned before.

Q. How about litharge?

A. No.

Q. In other words, you must process that from pig lead?

A. That is right.

Q. Red lead is in the same category?

A. That is right.

Q. And basic carbonate?

A. That is right.

Q. Now, does the Eagle-Picher Company produce, or have they ever produced orange mineral?

A. Yes.

Q. How is that produced?

A. Our orange mineral is produced by our sublimed litharge, using a special grade of sublimed litharge, and not from lead carbonate or white lead carbonate as is the customary method.

Q. Then this advantage you were speaking about on the processing directly from concentrates is confined to the products we are principally concerned with, lead sulphate and blue lead?

3449 A. And leaded zinc oxide.

Q. Now, do you produce a product, leaded zinc oxide, from one operation, or is it a combination?

A. We have two different processes for producing leaded zinc oxide. In one it is produced in a single operation in which the product is known as co-fumed leaded zinc oxide produced simultaneously from a mixed lead-zinc ore. In the other, the basic sulphate white lead is produced separately from the pure zinc oxide, and then by selection of the two to get exactly the properties desired, they are blended together into what is called our blended leaded zinc oxide.

Q. Now, you sell those leaded zinc oxides, don't you, in percentage grades of 50 percent leaded zinc and 35 percent leaded zinc, and so forth?

A. 5 percent leaded zinc, 35 percent leaded zinc, 50 percent leaded zinc, 60 percent leaded zinc, and 70 percent leaded zinc. The latter two are specialties.

Q. Those are your specialties?

A. Yes.

Q. Now, can you reach those percentages by that co-fumed method?

A. About 50 percent is the maximum that can be reached by co-fuming, and that is rather difficult, I believe, from what I have seen.

3450 Q. Now, most of those percentages grades then are produced by the double process of mixing zinc oxide and basic sulphate, then?

A. We make the higher grades out of 35 percent leaded zinc by adding more lead to it. You see, we can add more lead to sublimed basic sulphate white lead, to the 35 percent leaded, and bring up the lead content.

Q. Now, these technical services that you make available to paint manufacturers, battery manufacturers, and others, they are made available to everyone in the trade?

A. That is right.

Q. Customers and prospective customers alike?

A. That is right.

Q. Irrespective of size?

A. That is right, whatever is necessary to take care of the needs of the customer, or the customer or potential customer. Remember that I do not necessarily mean customer when I use that term.

Q. Now, are you aware of the battery oxides, or have you tested them, that are produced by the Metals Refining Company?

A. Yes.

Q. Do you know whether they maintain technical research for battery manufacturers?

A. At the present time, I don't know. I assume so, but the man who was there is no longer with them, Dr. Johnson. They did maintain such service.

3451 Q. In other words, they would give service, so far as you know, to a battery manufacturer to make their oxides meet his processes?

A. Some. They had a small laboratory.

Q. And the National Lead Company does the same thing?

A. At the present time they are very active in servicing.

Q. Now, you were discussing ~~a~~ comparable formula of mixed paint containing 35 percent lead sulphate, 25 percent zinc oxide, 15 percent titanium dioxide, and the remainder inert?

A. As an approximate formula of the type.

Q. That is only one of probably thousands of formulas for paint?

A. That represents a typical good present formula today.

Q. There are many other formulas which will vary either way on content of any of those materials?

A. It is obvious to you that the possible combinations and permutations are infinite, although you might get over in a bad range if you go too far over in any one constituent.

Q. Now, as to merits or qualities of these different formulae, are there differences of opinion in the paint trade among manufacturers of pigments as to what the best formula might be?

A. Oh, yes. Each man has his pet formula.

Q. That is just your—.

A. That is based on our information.

3452 Q. —opinion?

A. Opinion if you wish. It is not just an opinion, but on our findings on our test fence and our laboratories; not just opinion only. It is based on those findings.

Q. Now, some of the other opinions in the trade have been based on findings on technical research, too, have they not?

A. That is right.

Q. Are you familiar with the ready-mixed white paint the Eagle-Picher Company at one time marketed?

A. I know they have such a product, and we have tested it.

Q. Do they presently market that product?

A. I think so, though I don't know. I assume they do, for I haven't heard otherwise.

Q. Do you know what the formula of that paint is?

A. As far as I know, it is straight white lead with linseed oil and thinner.

Q. What form of white lead is used in that?

A. The basic carbonate white lead.

Q. Are you familiar with the processes of manufacture that were employed in the Evans Lead Company plant at Charleston, West Virginia?

A. By hearsay from people who work at that plant.

Q. Have you tested any of the materials from that process of manufacture?

A. We have.

3453 Q. What materials do they produce there, do you know?

A. I don't know what they produce now, but at the time we tested them, they produced sublimed litharge, and what they called mechanical litharge, and of course the red leads made from the two litharges.

Q. Do you know of any unique processes they might have developed there in the Evans Lead plant?

A. I do not.

Q. In the mid-'30's?

A. I do not.

Q. You have stated that in order to switch the purchasers of battery pigments from one producer to another, the battery manufacturer would have to make changes in his technical processes?

A. Yes.

Q. He would also have to make changes if he switched from one type to another that you manufacture?

A. That is right.

Q. I take it that your organization is always willing to advise a customer of National or Metals Refining on just what technical changes would be necessary in order to switch from their product to yours, is that not true?

A. That is right.

Q. That is one of the purposes of your organization?

A. Yes.

3454 Q. The same would be the case with National or Metals Refining, I assume, in connection with a customer of yours that they desired to secure?

A. Yes.

Q. So that all the principal producers stand ready to give that service?

A. At the present time they do.

Q. You are aware of the problems in the battery manufacturing field, I take it, from your experience?

A. Yes.

Q. Are there any battery manufacturers located in Joplin, Missouri?

A. There is one battery manufacturer in Joplin, a small one—no, there are two manufacturers now.

Q. What are the names of those companies, do you recall?

A. The Ebart Battery Company, and I don't recall what the other is. I suggest you ask Mr. Chubb when he is on the stand.

Q. Are they customers of yours, do you know?

A. Yes.

Q. Both of them?

A. Yes.

Q. What batteries are sold principally in and around the area of Joplin?

A. As far as I know, all nationally advertised
3455 brands are sold in that area.

Q. Were there any batteries of the Vitalic Company sold in that area?

A. I expect so.

Q. And all the nationally known products?

A. Yes.

Q. —are also sold there?

A. Yes.

Q. Some of those nationally known battery manufacturers are also your customers. Is that correct?

A. They are.

Q. Which ones do you recall, just offhand?

A. That are our customers?

Q. Yes, of the nationally known ones.

A. Oh, National Battery Company, Globe-Union Company.

Q. Globe-Union is in Milwaukee, is that correct?

A. Yes.

Q. And you ship to them from Joplin?

A. I think so; I think that is where it is shipped from.

Q. I assume they would be carload purchasers?

A. Yes.

Q. Is that the manufacturer of the batteries that Sears-Roebuck sells?

A. Globe-Union, yes.

Q. What type of purchasers are these two small
3456 battery companies in Joplin? Are they carload purchasers?

A. I don't know whether they have ever reached carload scale or not; I don't know. They are small scale, that is all I can say.

Q. Can you estimate about how many batteries a day they put out in those plants—50 or 100?

A. No, I suggest you ask Mr. Chubb that question.

Q. Mr. whom?

A. Chubb.

Mr. Wood: He will be the next witness.

By Mr. Wright:

Q. What instructions to salesmen do you give regarding the pricing of your product?

A. Nothing. We know nothing about that.

Mr. Wright: No further examination.

Trial Examiner Norwood: Redirect.

Redirect Examination by Mr. Wood.

Q. You were asked about nationally known battery manufacturers who were customers of Eagle-Picher. You named several. Do you know whether or not any of the nationally known battery manufacturers manufacture their own battery oxides?

A. Yes, I do.

Q. To what extent do they manufacture their own
3457 battery oxides, as far as you know?

A. As near as I could tell, about 50 percent of the oxide used in batteries is manufactured by the battery companies, these larger battery companies.

Q. Which battery companies, for instance, manufacture their own oxides?

A. The Electric Storage Battery Company, which includes Exide and Willard; the Electric Auto-Lite Company, which includes Prestolite and U. S. Lite; the Dual Storage Battery Company.

Q. Is that a National Battery Company subsidiary?

A. It is a subsidiary of the National Battery Company. The Delco Company, which is a subsidiary of General Motors. The Bowers Battery Company of Reading, Pennsylvania. I believe that is all the larger companies that manufacture their own oxides.

Q. Do any of those companies buy red leads for batteries?

A. Yes, they do.

Q. Do they buy litharges?

A. Only, I believe, for special purpose batteries, or to supply capacity at peak production periods when they cannot make enough..

Q. Now, Mr. Wright asked you whether or not you were familiar with the problems of battery manufacturers, and
you said that you were. What particular type, if any,
3458 of battery manufacturers did you have in mind?

A. We are familiar with the problems, the technical problems—I should qualify it to that extent—of the battery industry with the exception of a few of the companies who make all their own oxides.

Q. You mean the larger companies?

A. Yes.

Q. Then you are familiar primarily with the problems of the smaller companies?

A. That is right.

Q. And what is your objective in giving these smaller companies all of this technical service and research?

A. Because it doesn't pay to have all your eggs in one basket. We have spread our business among the smaller customers, and given them the service to spread and diversify our sales of oxide, and thereby better maintain our competitive position in the industry.

Q. And what effect, if any, does that have on their competitive position in respect to the larger companies that manufacture their own oxides?

A. It maintains their competitive position. Without our help at times they wouldn't have stayed in business.

Mr. Wood: That is all.

Recross Examination by Mr. Wright.

3459 Q. Did I understand you to say the Bowers Company has its own oxide plant?

A. So I understand. I have not seen that particular installation.

Q. Where did you obtain your information?

A. Through a group who make equipment for battery manufacturers.

Q. You don't know whether that is true or not?

A. I have not verified it myself. I was told through an equipment group. It is hearsay in that sense.

Q. Do you know where this plant was reported to be located?

A. At Reading, Pennsylvania.

Q. Where is the plant of the Autolite Company, the oxide plant?

A. They have two that I know of, one at Niagara Falls at the U. S. Light plant and one at Speedway, Indianapolis.

Q. What is the capacity of those plants, do you know?

A. Not exactly. I have seen the oxide plant at Speedway, I know that that oxide plant exists and is operating.

Q. How about the Gould plant?

A. It is located at Depew, New York.

Q. Does Gould make the SLI type of battery?

A. They make some SLI type batteries, but they are primarily manufacturers of heavy duty batteries.

Q. Industrial batteries?

3460 A. Industrial batteries.

Q. With the exception of Gould all of the others that you mentioned as having plants, Electric Storage Battery Company, Autolite, Delco and Bowers are primarily in the field of SLI batteries, is that correct?

A. I wouldn't say that the Exide branch of Electric Storage Battery Company was primarily a SLI manufacturer.

Q. I didn't understand you to say it was the Exide branch.

A. That is one of the two branches, there are the Grant and Willard branches.

Q. What is their interest in Grant Company in Minneapolis?

A. I understand that Grant is a wholly-owned subsidiary of Willard Storage Battery Company.

Q. What is Willard's relation?

A. It is a wholly-owned subsidiary of Electric Storage Battery Company, as I understand it.

Q. Do the Willard branch and the Grant branch—or subsidiaries, if you will—manufacture their own oxides?

A. I don't know whether the Grant division of Willard makes its own oxide, or not, or whether they are supplied by Willard from one of their other oxide factories.

Q. Can you tell me what you would judge the minimum consumption of oxides would be which would make it economical for a battery manufacturer to produce his own oxides and erect his own plant?

3461 A. I wouldn't know.

Q. Would it be a substantial tonnage?

A. It would be my impression it would have to be a substantial tonnage.

Q. So that only a very large company could do that?

A. At least a large company.

Q. Either a large or a very large company?

A. That is right.

Q. No small or medium sized battery company could produce its own oxides in a modern oxide plant?

A. I don't believe so.

Q. You spoke of promoting the competitive position of the small battery manufacturers? Back in the mid and late '30's what was the position of the small battery manufacturer in competition, can you tell me that?

A. Well, they were at their worst position at the time the NRA went into effect.

Q. Did that condition continue for several years thereafter?

A. No, they improved because we were able at that time to show them how to make batteries meeting the requirements of the NRA Code.

Q. Was it a highly competitive field, the battery industry?

A. Extremely competitive.

Q. Was it competitive in a price way?

A. There was a price war until the NRA days.

3462 Q. Were batteries sold at extremely low prices in the period subsequent to the NRA by some of the companies?

A. I don't recall such severe price competition after that period.

Mr. Wright: No further examination.

Mr. Wood: No further questions.

Trial Examiner Norwood: Thank you, Mr. Harner. You are excused.

(Witness excused.)

Trial Examiner Norwood: Call your next witness.

Mr. Wood: Mr. Chubb.

Trial Examiner Norwood: Give me your full name, sir.

Mr. Chubb: M. F. Chubb.

M. F. CHUBB was thereupon called as a witness for the respondents Eagle-Picher Company and Eagle-Picher Sales Company and, having been first duly sworn, testified as follows:

Direct Examination by Mr. Wood.

Q. Will you please state your residence and occupation, Mr. Chubb?

A. I live in Joplin, Missouri, and am employed at the Research Laboratories of Eagle-Picher Lead Company.

3463 Q. Will you please tell us what your education was?

A. I got my B. S. degree at Baker University in Baldwin, Kansas, and my Master's degree at Massachusetts Institute of Technology.

Q. In what year?

A. 1933.

Q. What did you do after you graduated with your Master's degree from the Massachusetts Institute of Technology?

A. Started working at the Eagle-Picher laboratories immediately after graduation.

Q. Incidently, who offered you your position with the Eagle-Picher Company?

A. Dr. Schaeffer at that time was in charge of the research and it was through him and Mr. Harner I got my position.

Q. Did you know Mr. Zoller at that time?

A. No, I didn't know him at that time.

Q. He is an M. I. T. graduate too, isn't he?

A. That is right.

Q. What were your duties at the time you went to work for the Eagle-Picher Company in their research laboratory?

A. Well, in the usual fashion I started out as a helper and a laboratory boy. I was put in the battery research division and did whatever was to be done in that department.

Q. Are you still in that department?

A. That is right.

3464 Q. Have you ~~been in that~~ department continuously over that period of years?

A. I have.

Q. Will you tell us the different duties and responsibilities you had during your employment by the Eagle-Picher Company?

A. Well, I started out as a laboratory helper and within the next year or two I was called on to do sales service work, and I think in 1940 or 1941 I was placed in charge of all the storage battery research in the department.

Q. Will you explain what you mean by the term "sales service work"?

A. That is helping the salesmen to apply the information and technology which we gather in the laboratory, applying it to use with and for our customers so as to improve our position in using our product in our customers' plants.

Q. What do you mean by improving your position?

A. Well, just trying to do a better job than the other guy with respect to oxides, mostly, to improve our competitive position.

Q. Why do your customers require this sales service?

A. Well, many of them, in fact in number most of our customers are relatively small accounts and they do not have the facilities and manpower or technology back of them to do the best job which we think is possible 3465 with our products. In order to keep them using our products to the best advantage we have to show them not only how to use our products but give them basic information on how to make storage batteries by any process which they happen to be using or which we would like to put in in their plant.

Q. Do your customers compete with the major battery manufacturers who make their own oxides?

A. Very much so, yes.

Q. Do you ever examine any of the batteries put out by any of the major companies which make their own oxides?

A. Quite frequently we do, yes.

Q. What is the relative quality of the batteries put out by your customers under your direction and the batteries put out by the major companies, to which I have referred?

A. To the best of our ability it is to our interest to make our customers' batteries just as good as those batteries, and I think we do.

Q. Why?

A. Because it would mean that it would be only a matter of time until our customers went out of business if they couldn't equal those manufacturers' products.

Q. Can you give us some examples of the type of technical sales service you give to your customers, just typical examples of various types of service?

A. I think one early one which would probably 3466 stand out would be our early work with the NRA when a test was placed on the trade whereby guarantees of batteries were based on 20-hour rates. At that time no one knew anything about 20-hour rates except some of the larger manufacturers. It was evidently through their influence that tests were put in.

We had to develop information to meet that test so that it would be available to the many smaller manufacturers who were our customers.

Another example would be negative expanders. We keep a continual program in force trying to improve so-called negative expanders, which are addition agents for improving the cold capacities. During my stay with the company we probably increased the capacity of the negatives in that respect almost 100 percent.

Another example would be in drying plates—

Q. I was speaking of the sales service rather than your company's actual developments, that is, the type of sales service which you would give these smaller companies.

A. Well, a recent one would be actually helping, assisting in the setting up of a small battery plant which they didn't know how to set up, or, really, the processes that went into it. We were asked to show them what materials and equipment were necessary and we did so in the hope that by so doing we would get the business. That happens quite frequently.

Q. How many different battery oxides does your 3467 company make at the present time?

A. You mean—

Q. Different types of battery oxide.

A. Different products available to the battery industry?

Q. That is right.

A. There are probably in the neighborhood of 100.

Q. Do you know whether or not the National Lead Company puts out an equal number of products in the way of battery oxides?

A. Well, I could only answer that by saying I have certainly never seen nearly that number in the trade and I would assume that they do not.

Q. What is the purpose of putting out such a large number of battery oxides?

A. That is done in order to be of greatest assistance to any one customer. Every customer, every plant seems to have its own peculiar problems which require a special oxide or a special process and if it can be solved by making a special product we would like to do it.

There are also variations in climatic conditions over the country which require different types of negatives or positives. Incidently, a single all-purpose battery just isn't available. It takes a lot of variations, where you want to emphasize one quality over another and it is through all these variations both in performance and in manu-
3468 facturing facilities that we feel so many of our products are a good thing to go to our customers.

Q. How do you determine which product goes to which customer?

A. We first probably make a survey of the particular problem at hand. If a plant was running we would go in and study their process. He might or might not be having difficulty, or he might have something peculiar in the process which required emphasizing certain characteristics. After a study of all those factors we select the product or actually make a new one which we think will do the best job in that particular situation.

Q. Since you have been with Eagle-Picher Company what major developments has the Eagle-Picher research laboratory made in the battery field? You can refer to your notes there, if you wish, Mr. Chubb, if you have made any.

A. I think you can take them by steps. Of course, we consider the availability of so many different oxides is an important contribution to the battery industry because it allows people to make lots of different kinds of batteries, which was especially true during the past war when special purpose batteries were very much in need.

As I mentioned before in the early days we did develop the information that contributed to the battery industry's methods for meeting the 20-hour capacity
3469 and actually improved those capacities through the years in the past. Those capacities have been stepped up 15 or 20 percent in the last ten years.

In the mixing of the paste which is one of the initial steps in making a battery, we have developed methods for mixing which improve the quality, uniformity, and actually cut costs in that they reduce the scrap in the plant. That information has been published so that it is available to the industry.

In pasting, while we have not had any part in developing pasting machines themselves we certainly played a part in adapting materials to be used with those pasting machines and have made a continual study of the pasting machines being developed at all times and have developed products and methods of processing to fit those pasting machines.

In drying the plates, another early step in processing, we very early made a study and contributed to drying plates and replaced the earlier so-called pickle process where all plates were dipped in acid. Under the new process they are dried in either batch ovens or continuous ovens and we worked out schedules where these plates could be dried.

More recently we have developed a so-called damp process and the equipment for promoting that process whereby the plates are only partially dried. It has many advantages and is being accepted quite extensively
3470 throughout the trade. In conjunction with this equipment we have also changed other processes so as to get the full benefit in that it reduced the forming time.

Q. What do you mean by forming time?

A. That is the first charging of a battery. It reduces the time that is necessary for a battery to stay in a plant being charged before it can be either put in stock or shipped out. That works in with the processor equipment which I mentioned before.

Q. Did you mention Chubb processor?

Mr. Wright: Your Honor, I am going to object to any further questions along this line. It has absolutely no relevancy in this proceeding at all. It is cumulative. It has no bearing that I can see on the essential charges of price fixing and price discrimination in this case. I appreciate the Eagle-Picher Company is a fine company and they have done a lot of research work, but I think we have had that described fully enough for the purpose of this proceeding.

Mr. Wood: This is the last question along that line,

Your Honor, and we say it has a relevance to the case in this respect: If there were definite evidence of conspiracy here in this case instead of just a few circumstances from which the Commission requests that the inference of conspiracy be drawn, I agree that this would not rebut
3471 direct evidence, but when there is only inferential
evidence then by showing the money being poured into continuous, keen competition in research we say it is one factor from which the inference of price leadership could be drawn.

Mr. Wright: I object to counsel's statement that there is no direct evidence of conspiracy in this case.

Trial Examiner Norwood: Counsel's statement is not taken as evidence. I will overrule the objection and let him answer the question.

Mr. Wood: Let me finish this question, then I have just one more question which is slightly different.

Trial Examiner Norwood: Go ahead.

By Mr. Wood:

Q. Did you mention the Chubb processor?

A. That was mentioned indirectly; the plate processor, that is the Chubb processor.

Q. Is that a drying machine?

A. That is a machine for processing plates between the pasting machine and the forming process.

Q. Do any other major developments come to mind?

A. Of course at the present time a process has been developed and will be used for high acid formation where the batteries are only formed in a single acid rather than in the conventional formation where you charge and then dump, then recharge after you fill it with strong acid again.

3472 Q. What, in your opinion, has been the effect of
the Eagle-Picher research on competition in the battery industry?

A. Well, it has certainly tended to keep our customers in a competitive position.

Q. What in your opinion has been the technical resultant of the Eagle-Picher research, as far as the improvement in the quality of storage batteries is concerned?

A. I think we have been one of the leaders in any improvement that has gone on in batteries, certainly since I have been with the company, and probably for a short time before that.

Q. Does your company now have a contract with the Signal Corps to perform research work in storage battery development?

A. Yes, it does, and has had for the past three years.

Q. And apart from that work for the Signal Corps, which I imagine is restricted, is all of your research and service available to all customers and prospective customers?

A. Yes.

Mr. Wood: Cross-examine.

Cross-Examination by Mr. Wright.

Q. Your research services are available, as you said, to all in the field, that is, large, small medium sized and giant battery companies, is that correct?

A. That is right.

3473 Q. Has the availability of your research laboratory and your technical assistance been used as a sales argument to the large battery manufacturers to purchase oxides from you, rather than make their own?

A. Will you state that question again, please?

Mr. Wright: Would you read it to him, please?

(The question was read.)

The Witness: I don't believe I am in a position to answer that.

By Mr. Wright:

Q. Do you cooperate with the sales department on these matters?

A. To a certain extent, but there are some large manufacturers, as you class them, whose plants I never get into.

Q. Are there some whose plants you do get into?

A. That is right.

Q. You give them technical assistance?

A. That is right.

Q. Who are they?

A. Well, among them would be National Battery Company—I believe you classified your size as large.

Q. I am speaking of companies in the size range that have sufficient consumption of oxides so that they could conceivably make their own oxides rather than purchase from you. National Battery would be one of them?

3474 A. That is right; Price battery.

Q. That is in Reading, it is not?

A. That is in Hamburg, Pennsylvania. Then there is Solar.

Q. Where is that located?

A. Milwaukee. They have one plant at Milwaukee.

Q. You do considerable technical work with them, do you?

A. Yes.

Q. Improving their process?

A. Yes.

Q. Do most of the large battery companies have research staffs of their own?

A. Yes, they do.

Q. Are they in any way comparable to the research staff which you maintain?

A. Certainly.

Mr. Wood: Objected to, unless the question is qualified as to whether the questioner means quantitatively or qualitatively.

Mr. Wright: I asked in any way are they comparable. If the witness knows in what way they are comparable he can answer.

Trial Examiner Norwood: I think we can clarify that later. Objection overruled. Do you want the question read?

The Witness: Yes.

3475 (The question was read.)

The Witness: I think I will have to ask you what you mean by comparable. I was perhaps in error in answering yes.

By Mr. Wright:

Q. Can you compare the research staff engaged in research on battery manufacturing problems at the Solar Company, with yours, from the point of size?

A. Taking that one in particular they have a smaller staff.

Q. Do you think it is in any way comparable in quality or extent of research with your own research department?

A. I would say the quality of the work that they do would be comparable to ours. However, the quantity wouldn't be.

Q. The extent?

A. Well, I classify quantity and extent as the same thing, unless you have something else in mind.

Q. Do you furnish technical services for Globe Union?

A. We have worked with them.

Q. Do you sell oxides to Grant in Minneapolis?

A. At the present time we do not.

Q. Have you in the period, say, from 1936 to 1942?

A. It would be a very small amount.

Q. Do you have any customers in the State of Texas to which you supply oxides for battery manufacture?

A. I don't believe that I am qualified to answer
3476 that right now. That could be a changing condition.

I don't know whether we are selling anyone down there, or not.

Q. You don't recall furnishing services down there?

A. Yes, I do recall furnishing services there.

Q. Do you recall the two battery companies that Mr. Harner mentioned, located in Joplin?

A. There are two located in Joplin, Lead Products Company and Ebert-Allen Company.

Q. Are you familiar with those two operations?

A. Yes, I have been in the plant a number of times.

Q. Have you furnished services to them?

A. We do.

Q. What is the capacity of the Ebert-Allen plant?

A. Well, they have recently made a change. Right now I would say they have a capacity of 100 batteries a day.

Q. What is the change that you mentioned?

A. They have moved into larger quarters.

Q. When was that move?

A. In the past two months.

Q. What was their capacity prior to that move?

A. During last winter I think they made about 50 to 60 batteries a day.

Q. About what is the capacity of the Lead Products Company?

A. I would put it in the same category.

Q. Are they carload purchasers of oxide, do you know?

3477 A. Ebert-Allen is not. I think that the Lead Products Company have purchased carload quantities.

Q. You don't know that they always purchase in that quantity?

A. They haven't at all times, I know that; but I don't know just what you would classify as a carload purchaser.

Q. Are you familiar with the pricing schedule for these oxides?

A. No.

Q. You don't know anything about the territorial differentials applied?

A. No, I don't know a thing about it.

Q. The differentials between five ton and carload, and less than five-ton prices?

A. I know there is a difference, but the extent to which it differs I don't know.

Q. Are you familiar with competitive conditions in the battery business as far as the problems that your customers in that industry have faced during the last ten years or more?

A. Yes.

Q. What has been the situation generally of the smaller battery manufacturers in competition with Willard, Delco or Autolite? Is he generally—and I am speaking now in the period from 1936 to 1942—able to sell his battery for as high a price as the larger battery manufacturer?

3478 A. I don't know. I think that some have. I think a lot of that is a local condition. You have to take each individual instance.

Q. You don't think any general statement of general application could be made, then, that the small battery manufacturer is usually at a price disadvantage over the large nationally advertised product?

A. No, I don't think so.

Q. I am talking now of the period from 1936 to 1942.

A. Yes. I am not qualified to make a statement.

Q. Well, you testified you were familiar with these problems and had been in and done research and helped these manufacturers out with their problems. Certainly you must know something about what those problems have been.

Mr. Wood: Is there a question?

Mr. Wright: Yes.

Mr. Wood: Is that a question?

Mr. Welch: There is no question.

The Witness: What is the question? Where do we stand now?

Mr. Wood: The witness doesn't understand that as a question.

Mr. Wright: I would like to be permitted to make my own cross-examination.

Trial Examiner Norwood: Read the question.

3479 Mr. Wright: I made a statement to the witness for the purpose of refreshing his recollection in a further attempt to get an answer to the question about which he said he couldn't recall.

Mr. Wood: The witness was hesitating because there was no question.

Trial Examiner Norwood: Go ahead.

By Mr. Wright:

Q. Do you know—and I will repeat the question again—that it was generally the case in the period from '36 to '42 that the small local battery manufacturer was able to command as high a price for his product as the nationally advertised brands such as Willard, Exide, Autolite and Delco?

A. I still don't know what the question is.

Mr. Wright: Will your read the question, please?

Trial Examiner Norwood: Read it.

(The question was read.)

The Witness: I don't believe that the smaller manufacturers which you speak of did charge as much as these larger manufacturers.

By Mr. Wright:

Q. Do you recall in the period from '36 to '42 that some of the larger manufacturers quoted storage batteries at very low prices, comparatively speaking?

A. Did you say some of the manufacturers?

3480 Q. Some of the large manufacturers.

A. I don't recall that with batteries sold under their own name, no.

Q. Do you recall it with private brand batteries that weren't sold under their own name?

A. Yes.

Q. What do you recall about that?

A. Well, I think at one time you could buy cheaper batteries, probably around $3.

Q. What effect did that have in your experience on the competitive problems of the small battery manufacturer, speaking now of operations comparable to Ebert-Allen and the Lead Products ventures?

A. Well, I believe most of those fellows tried to meet that competition not by coming down in price, but by giving a different kind of service in the locality.

Q. Did it create a serious competitive problem for them?

A. Oh, yes, I think so.

Mr. Wright: No further questions.

Mr. Wood: Nothing further.

Trial Examiner Norwood: Thank you, Mr. Chubb.

(Witness excused.)

Mr. Wood: That is all I have in the way of witnesses, Your Honor.

Mr. Wright: You mean at this hearing?

3481 Mr. Wood: At this hearing.

Trial Examiner Norwood: Are there any further witnesses by any of the other respondents?

Mr. Gardiner: I have none, Your Honor.

Trial Examiner Norwood: Well, I suppose that since all counsel are not here, we had better meet at 2 o'clock, and I will discuss those issues with you for awhile.

Mr. Wright: May we go off the record for a moment?

Trial Examiner Norwood: And also to let counsel put their requests on the record for future hearings, and so forth.

(Off the record.)

(Discussion off the record.)

Trial Examiner Norwood: After discussion with counsel off the record, I have decided to adjourn the hearing to reconvene in Washington, D. C., Office of the Federal Trade Commission, at 10 o'clock a. m., City Time, on September 16, 1947.

Mr. Wright: It is my understanding that we will run fairly continuously at that time until we have completed respondents' testimony?

Trial Examiner Norwood: We will run as continuously as possible.

Mr. Welch: I would like to state for the record at this time that I have commitments in the case of F. T. C.
3482 vs. R. J. Reynolds Tobacco Company for the week beginning September 22 in Indianapolis, Indiana; the week beginning September 29 in New York, New York; the week beginning October 6 in Washington, each of those settings being, as far as I know, for one week; and also a hearing in Winston-Salem, North Carolina, for the week of October 27. With those exceptions, I will be available at any date in September or October.

Trial Examiner Norwood: Well, I will state that we have made our calendar with deference to the requirements of Mr. Welch and his firm heretofore, and we have refrained from doing some work in July because he was engaged, and so on, and I feel that after September it will be incumbent upon him to make arrangements in these other cases so that we can go on with this case. I am requesting him to do the best he can in that respect.

Mr. Welch: Your Honor, with all due deference, I do not recall that I resisted in any setting of hearings in July on my account, or that I resisted the setting of any in June. I don't know that any hearing has heretofore been postponed on my specific request.

Trial Examiner Norwood: I will add that we had a conference with counsel about adjusting these hearings, and I had one with Mr. McIntyre with relation to these hearings, and we have a great deal of trouble adjusting 3483 these hearings so that Mr. Welch can try more than one case before the Commission at a time. I am willing to make all reasonable concessions to him, but I don't think that I can adjourn this hearing another month on that account when there are other counsel in his firm who can be here when he is not introducing evidence for his particular client.

Now, I think you can make some arrangement where we can live and let live, and make it possible for us to go ahead with reasonable diligence to try the rest of this case, and I will ask counsel to give a good deal of thought to it. In the meantime, we will adjourn until September 16, as stated.

(Thereupon, at 12:40 o'clock p. m., an adjournment was taken until September 16, 1947, at 10 o'clock a.m., in Room 332 Federal Trade Commission Building, Washington, D. C.)

3484

Hearing Room,
Federal Trade Commission,
Washington, D. C.,
September 16, 1947.

Met, pursuant to adournment, at 10:00 a.m.

Before:

J. W. Norwood, Trial Examiner.

Appearances:

E. Z. DuBose, Attorney for the Respondent National Lead Company. (120 Broadway, New York, New York.)

Edmund T. Wood and Richard Serviss, Attorneys for Respondents Eagle-Picher Sales Company and Eagle-Picher Lead Company. (American Building, Cincinnati, Ohio.)

3485 Henry E. Gardiner, Attorney for Respondents Anaconda Copper Mining Company and International Smelting & Refining Company. (120 Broadway, New York, New York.)

James T. Welch, Attorney for Respondent The Sherwin-Williams Company. (815 15th Street, N. W., Washington, D. C.)

Joseph S. Wright and Paul R. Dixon, attorneys for the Federal Trade Commission.

3486

PROCEEDINGS.

Trial Examiner Norwood: The hearing will come to order.

Pursuant to adjournment on the 23rd of July, 1947, hearing in Docket 5253 is now reconvened at 10 o'clock a. m., on the 16th day of September, 1947, in Room 332, Office of the Federal Trade Commission, Washington, D. C.

The following counsel have appeared:

James D. Ewing and E. Z. DuBose appearing for the National Lead Company.

Edmund T. Wood and Richard Serviss appearing for Eagle-Picher Company and Eagle-Picher Sales Company.

Henry E. Gardiner appearing for Anaconda Copper Mining Company and International Smelting & Refining Company.

James T. Welch appearing for The Sherwin-Williams Company.

Joseph S. Wright and Paul R. Dixon appearing for the Federal Trade Commission.

You may call your witness.

Mr. Gardiner: If Your Honor please, I would like to call Mr. Frank Hurless.

FRANK H. HURLESS was thereupon called as a witness for the respondent International Smelting & Refining Company and, having been first duly sworn, testified as follows:

3487 *Direct Examination by Mr. Gardiner.*

Q. Will you please state your name and address?

A. Frank H. Hurless, Lowell, Indiana.

Q. At the present time, what is your occupation?

A. At the present time I am employed by the International Smelting & Refining Company in the Midwest area as a special representative. My duties consist right now mainly in the purchase of copper scrap for refining at Anaconda, Montana, and Perth Amboy, New Jersey.

Q. When were you first employed by that company?

A. In 1922.

Q. Will you kindly outline your activity with the International Smelting & Refining Company from that date down to the present, giving your various assignments with the company?

A. At first I was employed as a checker in the construction of a zinc oxide plant at Akron, Ohio.

Q. What time was that, when, what year?

A. 1922. My duties consisted in checking on the use of supplies and materials and the labor used in constructing the plant, as the construction was on a cost-plus basis. Subsequently I was in charge of the small plant office at Akron, Ohio.

In 1927 I began part-time sales work, and about 1929, as I recall it, I began full-time sales work.

3488 In 1929 I was transferred to the main office at East Chicago, Indiana.

In 1930, I was made district salesmanager and had charge of the dry white lead and zinc oxide sales in the Midwest area.

In 1936 I was made assistant salesmanager, and had charge of the sale of dry white lead, white lead and oil, and zinc oxide.

While assistant salesmanager, I virtually had charge of the sales of all territories, inasmuch as our official salesmanager, who was located in Akron, Ohio, had other duties which prevented him from giving full time to sales work.

Then in 1938 I was made salesmanager, and had full charge of the sale of dry white lead, white lead and oil, and zinc oxide in all territories.

Q. When did you first have anything to do with the sale of white lead and oil?

A. In 1931.

Q. The amended complaint in this proceeding defines lead pigments as the lead pigment commonly known in the industry as white lead, both basic carbonate and basic sulphate of lead, blue lead, red lead, or red oxide of lead, litharge or monoxide of lead, orange mineral and grinders' lead paste, such pigments as marketed either as dry products in the form of dry powder or in oil, in the form 3489 of a paste, after mixture with linseed or other oils.

What products covered by this definition have been produced by respondent, International Smelting & Refining Company?

A. Dry white lead and white lead and oil.

Q. Are those the only ones?

A. Yes.

Q. When did International first start to manufacture dry white lead?

A. In the latter part of 1936.

Q. Where was this operation conducted?

A. At East Chicago, Indiana.

Q. Prior to 1936, was dry white lead produced at the East Chicago plant of International?

A. Yes, it was.

Q. By what company was dry white lead produced prior to that time?

A. By the Anaconda Lead Products Company.

Q. Do you know what relation that company had to respondent, International, and respondent, Anaconda Copper Mining Company?

A. The Anaconda Lead Products Company was a subsidiary of the Anaconda Copper Mining Company, as was the International Smelting & Refining Company.

Q. Do you know whether there was any subsequent change in this relationship?

3490 A. Yes, there was.

Q. Is the Anaconda Lead Products Company still in existence?

A. No, it is not.

Q. What became of it?

A. The assets and properties of the Anaconda Lead Products Company were taken over by the International Smelting & Refining Company.

Q. Is the Anaconda Lead Products Company as a company still in existence, do you know?

A. No, it was dissolved.

Q. Do you know when?

A. In the latter part of 1936.

Q. When did the Anaconda Lead Products Company first start to produce dry white lead?

A. In the latter part of 1919.

Q. And do you know when they first made sales of that product?

A. In the first part of 1920.

Q. Do you know how much of a factor this production was in the total output of dry white lead in the earlier years of production of that commodity by this company?

Mr. Wright: Objection, Your Honor. This witness is not shown to have been employed or to have had any contact with these products prior to about 1930.

Trial Examiner Norwood: In the question, how 3491 much of a factor, it seems to me the term "factor" is not very definite. You must show any percentages within the knowledge of this witness.

Mr. Gardiner: I will withdraw that question.

Trial Examiner Norwood: Yes.

By Mr. Gardiner:

Q. Are you familiar with the figure showing the production of the International Smelting & Refining Company of white lead during the period that it produced dry white lead?

A. I am.

Q. I hand you an exhibit and ask that it be marked Respondent's Exhibit No.—

Trial Examiner Norwood: I think it will be 190. I will ask the counsel to check.

Is the next respondent's exhibit 190?

Mr. Wright: I can ascertain that in just a moment.

Trial Examiner Norwood: Off the record.

(Discussion off the record.)

Trial Examiner Norwood: On the record.

Mr. Wright: According to my records, it is 190.

Trial Examiner Norwood: Very well. We will mark it 191, to be safe.

(The document referred to was marked Respondent's Exhibit 191 for identification.)

By Mr. Gardiner:

3492 Q. I show you Respondent's Exhibit marked for identification No. 191, and ask if you have seen this document before?

A. Yes, I have seen these figures before.

Q. Do you know anything about their preparation?

A. They were prepared under my supervision.

Q. At whose request?

A. At the request of our counsel.

Q. What does this record purport to show?

A. This record purports to show the percentage of International's production of dry white lead of the total production of dry white lead in the United States for the years shown.

Q. What was the basis on which these figures were calculated?

A. The figures for the total production of dry white lead in the United States were taken from figures submitted by the United States Bureau of Mines. The figures for the production of International were taken from our records in our accounting department at East Chicago, Indiana.

Mr. Wright: I would like a few preliminary questions on that.

Trial Examiner Norwood: Very well.

By Mr. Wright:

Q. Mr. Hurless, in what form were the figures secured from the Bureau of Mines?

A. Those figures are in the regularly published 3493 form of the Bureau of Mines. I think sometimes they are in book form or they can be secured by writing the United States Bureau of Mines direct.

Q. Were these secured from the publication of the Bureau of Mines known as the "Minerals Year Book"?

A. I do not know.

Q. Then you cannot tell me where we could have access to those figures?

A. Well, you could get the figures from the United States Bureau of Mines. But whether or not you would get them in the exact physical form we got them, I do not know.

Trial Examiner Norwood: Is that information confidential? Is that part of the confidential Bureau of Mines information?

The Witness: No, I do not think that this information is considered confidential, because my understanding is that anyone writing for it can secure it from the Bureau of Mines.

Mr. Wright: Your Honor, I realize that the Bureau of Mines does publish in its mineral year books figures on the total production of these various products and others, but I have no way of knowing whether these are the figures that appeared in the "Minerals Year Book", which is public information, or not.

By Mr. Gardiner:

3494 Q. Mr. Hurless, when were these figures compiled, do you recall?

A. I do not know the date, but I would say that it was probably a few months after this complaint was issued.

Q. And do you recall at that time what the request was so far as the compilation of these records with relation to securing the information on the world production? Was there any directive to you as to how you were to secure the figures on the United States production in this material?

A. Well, we were not told where we should go to get the figures; that is, whether from the "Minerals Year Book" or to write the United States Bureau of Mines. But I do know that at East Chicago we always maintained copies of the "Minerals Year Book" in our library. But whether or not these figures were actually taken from that or not, I cannot say.

Mr. Wright: Your Honor, may we go off the record just a minute?

Trial Examiner Norwood: Off the record.

(Discussion off the record.)

Mr. Gardiner: I should like to offer at this time Respondent's Exhibit 191 in evidence.

Mr. Wright: Your Honor, I have no objection provided it is admitted subject to motion to strike later provided that the basic data from which this exhibit was com-
3495 piled is not made available on my request.

Trial Examiner Norwood: It will be admitted subject to that condition.

(The document referred to, heretofore marked for identification RESPONDENT'S EXHIBIT 191, was received in evidence.)

Mr. Gardiner: I ask that this document be marked Respondent's Exhibit No. 192 for identification.

(The document referred to was marked Respondent's Exhibit 192 for Identification.)

By Mr. Gardiner:

Q. I show you this document marked Respondent's Exhibit 192 for Identification, and ask you if you have seen it before?

A. Yes, I have seen these figures before.

Q. Did you have anything to do with their preparation?

A. They were prepared under my supervision.

Q. Where?

A. At East Chicago, Indiana.

Q. What do these figures purport to show?

A. These figures purport to show the percentage of sales by International of the total percentage of sales in the United States for the years specified.

Q. What is the basis on which these figures were calculated?

A. The figures for total sales in the United States were taken from figures supplied by the Lead Industries
3496 Association.

The figures for sales by International were taken from our records, in our sales department at East Chicago, Indiana.

Mr. Gardiner: I should like to offer in evidence Respondent's Exhibit 192 subject to the same qualifications as Exhibit 191.

Mr. Wright: I have no objection subject to the same qualifications.

Trial Examiner Norwood: It is so received.

(The document referred to, heretofore marked for identification RESPONDENT'S EXHIBIT 192, was received in evidence.)

By Mr. Gardiner:

Q. Did the Anaconda Lead Products Company and International sell dry white lead to the trade directly, or did they use a sales agent for some or all of their production?

A. They sold the dry white lead on a direct basis and through a sales agency.

Q. What was the name of this sales agency?

A. The Anaconda Sales Company.

Q. What connection did this sales agency have with respondent International or with respondent Anaconda Copper Mining Company?

3497 A. The Anaconda Sales Company is a subsidiary of the Anaconda Copper Mining Company, as was International or is International.

Q. Why was the Anaconda Sales Company used as a sales agency?

A. Because in certain States it is licensed to do business where the International Smelting & Refining Company is not licensed to do business.

Q. To what class of trade did Anaconda Lead Products Company and International sell dry white lead?

A. They sold principally to manufacturers of paint and ceramic products.

Q. What was the price basis or system on which Anaconda Lead Products and International first sold dry white lead?

A. On the basis of f. o. b. East Chicago, Indiana, freight allowed.

Q. To any point in the United States?

A. As I recall it, that was the case.

Q. Was any change subsequent made in this pricing system?

A. Yes.

Q. What was it?

A. We established a par zone and a Pacifiic Coast zone.

Q. What do you mean by par zone?

A. The territory in the United States east of the Rocky Mountains was considered the par zone, and the territory west of and including the Rocky Mountains was considered the Pacific Coast zone.

3498 Q. What was the par zone? I understand it is part of the United States that was included within that group, but what distinguishes that from the Pacific Coast zone? What was the difference between them?

A. There was a difference in price of one-quarter cent per pound.

Trial Examiner Norwood: In favor of the par zone?

The Witness: That is right.

By Mr. Gardiner:

Q. Now, do I understand that the material was sold in the par zone f. o. b. where?

A. East Chicago, Indiana.

Q. Freight allowed?

A. Freight allowed.

Q. Within any part of the par territory?

A. That is right.

Q. And what was the situation so far as the Pacific Coast zone was concerned?

A. It was sold f. o. b. East Chicago, Indiana, freight allowed, the price being one-quarter of a cent per pound more.

Q. Why did these companies adopt this two-zone system for selling dry white lead?

A. Well, we adopted it because it was adopted by our competitors, and we went along on the same basis.

Q. How did you know that your competitors had such a system?

3499 A. Well, it was very easy for us to pick up information regarding our competitors' practices in the pricing of their products from our customers and prospective customers.

Mr. Gardiner: Will you read my last question, please, and the answer?

Trial Examiner Norwood: Read the question.

(The question and answer were read.)

By Mr. Gardiner:

Q. Now, so far as your competitors were concerned, how did you learn what their prices were?

Mr. Wright: Objection, Your Honor. That is repetitious.

Trial Examiner Norwood: No, let him answer. Objection overruled.

The Witness: Will you repeat the question, please?

(The pending question was read.)

The Witness: We could very easily learn what our competitors' prices were by asking our customers and prospective customers.

By Mr. Gardiner:

Q. How did you determine what your competitors' general selling tactics were? How did you determine that?

A. By making inquiries from our customers and prospective customers.

Mr. Wright: Your Honor, I object to this line of 3500 questioning because it is not restricted to any period of time. So far as we know, we have been talking about the period from 1922 to the present. It is not limited to any specific instance.

Trial Examiner Norwood: It applies to the time when they made a change in the par zone and Pacific Coast zone, and the operations thereafter. I think that is sufficiently definite. You may cross-examine him further on it.

By Mr. Gardiner:

Q. Did Anaconda Lead Products or International allow any quantity discount on the sale of dry white lead?

A. Yes, they did.

Q. What discount was allowed?

A. A discount of one-quarter cent per pound under the less carload price was allowed for carlots of 20 tons or more.

Q. Was this discount allowed in both the par and the Pacific Coast zones?

A. Yes.

Q. Why was such a discount made?

A. Well, we allowed such a discount because it was the general practice of competition.

Q. How did you know that that was the general practice of competition?

A. By contacting our customers and prospective customers we would learn what our competitors were doing pricewise.

3501 Q. Did your companies quote different prices to railroads and industrials?

A. Yes.

Q. Why were different prices quoted to railroads and industrials?

Mr. Wright: Your Honor, I object to this line of questioning. It is not restricted as to time. We are talking about another matter than the zone matter now.

Trial Examiner Norwood: You may clarify that.

By Mr. Gardiner:

Q. Subsequent to the adoption of the par and Pacific Coast zones, did your companies quote any different prices to railroads and the industrials?

A. Yes.

Q. Why were different prices quoted to railroads and industrials?

A. Well, we quoted different prices to railroads and industrials because competitors were likewise quoting such prices.

Q. How did you learn that your competitors were quoting different prices to these groups?

A. By contacting industrial and railroad accounts we would find out what our competitors were doing pricewise.

Q. Through what medium did you make this contact?

A. Usually through our salesmen.

Q. During the period subsequent to the adoption
3502 of the two-zone system, do you know generally what
the profit and loss situation was so far as the production and sale of dry white lead was concerned?

A. Well, in a general way—

Trial Examiner Norwood: Answer yes, if you know.

The Witness: Yes, in a general way I know.

By Mr. Gardiner:

Q. What was the situation?

Mr. Wright: I object, Your Honor. What profit and loss situation might have been at a particular time is absolutely irrelevant to the issues of this matter.

Mr. Gardiner: If Your Honor please, I think it is very pertinent, because we are discussing the matter of pricing practices and the matter of competition, and it is important to determine what relation the pricing practices of a company had as to whether or not they were making or losing money.

Mr. Wright: Now, Your Honor, if that is counsel's purpose, to show that any one of the pricing practices had any effect on their profit and loss, it can hardly be established in this way. It is going to be necessary to get into the whole profit and loss structure of the company, and we are going to open up a field here that is going to be endless if we are going into the question of profit and loss as having anything to do with the changing or establishing
3503 of zone systems in this case.

Mr. Gardner: Well, of course the question has not been directed to the adoption of zone systems. The preceding questions dealt with prices so far as railroads and industrials were concerned, and I asked him if he generally knew what the situation was in that field, and the answer was yes. Now I have asked him what that situation in general was.

Trial Examiner Norwood: I think we are getting off the track here, I really do. I will sustain the objection.

By Mr. Gardiner:

Q. In the sales to railroads and industrials subsequent to the introduction of the par zone system, was any thought given to the sale of dry white lead at a price higher than that sold by your competitors?

Trial Examiner Norwood: Read that question, please.

(The pending question was read.)

Trial Examiner Norwood: You may answer.

A. No, I don't think we considered selling our dry white lead at a price higher than that of our competitors.

By Mr. Gardiner:

Q. Why not?

A. We could hardly be expected to get a premium for our product.

3504 Mr. Wright: Your Honor, I object to that, and I ask that the last answer be stricken. The witness said no consideration was given to the question of selling at a higher price.

Now, if no consideration was given to such a question, certainly it is improper to try to bring out that there was a particular reason for not giving consideration to the matter.

Trial Examiner Norwood: Well, he said that they gave no consideration, and now he is telling us why they gave no consideration.

Mr. Wright: If no consideration was given, obviously the matter never came up, and there was never any reason in anyone's mind.

In other words, the witness is already on the record that no consideration was ever given to that question. How can he have a reason in his mind, if the thing was never considered?

Trial Examiner Norwood: I will overrule the objection. I think he may tell us why they did not give serious consideration to selling the competitors. And I think he has already told us.

Did you say you could not get a higher price?

The Witness: I said that we could not be expected to get a premium for our products.

3505 Trial Examiner Norwood: Yes.

By Mr. Gardiner:

Q. Subsequent to the adoption of the two-zone system in the sale of dry white lead, did you ever sell that commodity at a price less than that sold by your competitors?

A. No.

Q. Why not?

A. The production and sale of dry white lead was not too profitable a business, and we felt that we had to get as much for our product as we possibly could.

Q. During the time that Anaconda Lead Products and International were producing and selling dry white lead, were they in competition with other companies?

A. Yes.

Q. What would you say as to the extent of competition that your company encountered on the sale of these products?

A. I would say that there was very stiff competition.

Q. Was Anaconda Lead Products or International able to improve their financial return through improvements in the methods of production?

A. To some extent.

Q. What improvements were made?

A. We discontinued our method of kiln drying dry white lead and substituted a mechanical Loudon dryer. Then we perfected a machine for mechanically washing
3506 also lead anodes. In the handling of our finished product in the warehouse, we installed the best mechanical equipment to be used in piling it and for taking it from stock and loading it into cars and trucks.

Q. Did these improvements in the production of this material result in an increase in your net return from the sale of that product?

A. To some extent.

Q. Was that reflected in any change in your prices?

A. No.

Q. Why not?

A. Well, our experience over a period of years was that we constantly had to strive to get lower costs. When we succeeded in cutting the costs in one place, they were usually offset in another place; for example, by increased costs of materials, supplies and labor.

Q. You testified previously that the Anaconda Lead Products Company went out of the business of producing dry white lead and was succeeded by International.

When that occurred, was there any attempt made to change the pricing system for dry white lead?

A. No.

Q. Did anything occur in the trade in the late '20's or early '30's that had a major effect on Anaconda Lead Products' outlets for its production of dry white lead?

3507 A. Yes; we encountered increased competition, due principally to the expansion of the use of titanium pigments. We were forced to go into outlying territories that we had not solicited before in order to endeavor to maintain our volume of sales and production.

Q. You stated that due to this increased competition you had to go out and sell in an area outside of the production area. Was anything done outside of attempting to secure more sales and to increase your production of dry white lead?

A. Yes; we decided to go into the production and sale of white lead in oil.

Q. Was that the primary reason for entering the white lead in oil field?

A. I would say that it was the reason.

Q. What percentage of Anaconda Lead Products' and International's dry white lead production came to be used in white lead in oil?

A. Generally about 30 to 35 percent.

Trial Examiner Norwood: Will you read that question, please?

(The question was read.)

Mr. Gardiner: May I have the answer again?

(The answer was read.)

By Mr. Gardiner:

Q. Was dry white lead ever sold under consign-
3508 ment by either of your companies?

A. No.

Q. Do you know of any agreement on the part of International with the other respondents in this proceeding, who are the National Lead Company, Eagle-Picher Lead Company, the Eagle-Picher Sales Company, the Sherwin-Williams Company, and the Glidden Company, for the adoption and maintenance of a system of delivered price quotations of dry white lead?

A. No, I do not.

Trial Examiner Norwood: Either or any of them?

The Witness: Either or any of them.

By Mr. Gardiner:

Q. Do you know of any attempt between International and any or either of the respondents just named in this proceeding for the adoption and maintenance of a plan whereby the United States is divided into zones for the purpose of selling dry white lead?

A. No, I do not.

Q. Do you know of any arrangement whereby International sought and secured advice, assistance and cooperation of the Lead Industries Association, its officers, employees and agents along with other respondents in this case previously mentioned in publishing and using non-competitive terms and conditions of sale in connection with the sales and offers to sell of dry white lead?

3509 A. No, I do not.

Q. Do you know if International ever used the office of the Lead Industries Association with the cooperation of officials of the same for the purpose of exchanging price factors and information concerning price factors to be used at times by International and other respondents in calculating, determining and announcing their offers to sell dry white lead?

A. No, I do not.

Q. In my last question, I referred to respondents, and by that I included all the respondents previously mentioned. Does that change the answer to the question?

A. No.

Q. Do you know if International ever agreed to adopt or adopted, maintained and used terms and conditions of sale employed in so-called consignment or agency agreements under the leadership of respondent National Lead Company for the purpose of preventing dealers from selling dry white lead and from making offers to sell such products at levels lower than the offers made by respective respondent producers whose names were affixed to such consignment or agency agreements?

A. No, I do not.

Q. Do you know if International ever agreed with the
other respondents previously named or with any one of them
to fix or fixed and included in offers to sell, the prices,
3510 terms and conditions at which said lead pigments were
sold or offered for sale in commerce?

A. No, I do not.

Q. When did International first commence the production of white lead in oil?

A. During the latter part of 1936.

Q. Where was this material produced?

A. At East Chicago, Indiana.

Q. Had it previously been manufactured at that plant?

A. Yes.

Q. By what company?

A. By the Anaconda Lead Products Company.

Q. When did Anaconda Lead Products Company first produce white lead in oil, if you know?

A. In the first part of 1931.

Q. You have previously testified that the Anaconda Lead Products Company went out of the business of manufacturing dry white lead upon its dissolution in 1936, and the acquisition by International of its assets and properties. Did the Anaconda Lead Products Company continue to produce white lead in oil up to the time of its dissolution?

A. Yes.

Q. Were these activities taken over and carried on by the respondent International at that time?

A. Yes.

3511 Q. Will you describe the Anaconda Lead Products
Company's first methods to sell white lead in oil and
the pricing methods that were employed?

A. Well in the beginning we knew practically nothing about the white lead in oil market. At first we thought we would confine our activities to selling white lead in oil to industrial accounts. We sent out at least one man to survey industrial accounts, and found out that the consumption of white lead in oil by such accounts was practically negligible.

Consequently, we began to promote the sale of white lead in oil in certain sections of the country through distributors who were given a defined territory. In other areas, we contacted the dealer trade direct.

In the beginning we did not have any regular pricing system, and we left it pretty much up to the salesmen to get the most that they could for our unknown product.

Q. At the time the Anaconda Lead Products Company went into the white lead in oil business, what was your position so far as sale of this product was concerned?

A. I was district salesmanager in the midwestern area.

Q. District salesmanager of what?

A. Of dry white lead, white lead in oil, and zinc oxide.

Q. Did I understand you to say that initially your sales were limited to the Midwest area, of white lead in oil?

A. Our sales were not limited to that area, no.

3512 Q. Were you in charge of these preliminary activities when the Anaconda Lead Products Company was first starting to sell white lead in oil?

A. When I was district salesmanager in the Midwest area, I really, from the beginning, devices the promotional methods for selling white lead in oil in all territories.

Q. And you were intimately familiar with the Anaconda Lead Products' sales problems so far as the sale of white lead in oil was concerned?

A. I would say that I spearheaded the thing.

Q. For that company?

A. Yes.

Q. Now, you previously testified as to the sales practices or methods when this material was first manufactured. Were these pricing methods subsequently changed?

A. Yes, they were.

Q. What price policy was subsequently adopted by the Anaconda Lead Products Company?

A. For sales to the dealers, we established a price for our white lead in oil that was one-quarter of a cent per pound under the price for the National Lead Company's agents.

Q. Were there any other changes made in your pricing methods at about that time?

A. I believe at about that time we began to sell white lead in oil on a zone basis.

3513 Q. What was the reason that prompted you to decide to sell white lead in oil at a quarter cent under the price charged by National Lead for a similar commodity?

A. Well we could not expect to get the same price for our comparatively unknown product that the National Lead Company got for their product which had been very well advertised for many years. The business from the beginning was not too profitable, and consequently we felt we could not get very far under the National Lead Company price, and so we adopted a method of selling at a quarter of a cent under the National Lead Company's price, that additional quarter of a cent per pound being considered by us as additional compensation for the dealer for promoting the sale of our unknown product.

Trial Examiner Norwood: When was that? After International took over?

The Witness: No, that was before International took over.

Trial Examiner Norwood: About when was it?

The Witness: I don't recall when it was, but I believe it probably was about 1933.

By Mr. Gardiner:

Q. You have testified you adopted a practice of underselling National's Lead price of a quarter cent per pound. How did you determine what National Lead's price was?

A. It was very easy for us to find out the National
3514 Lead Company's price by contacting our customers
and prospective customers.

Q. How did you get information from your customers? How did they know? Who were your customers?

A. Well, our customers to a limited extent were distributors in certain areas, but generally they were dealers.

Q. Were they also dealers of competing products?

A. The class of trade we termed dealers were both what National called their selling agents and the dealers that purchased from the National Lead Company's selling agencies.

Q. Did National Lead sell its white lead in oil by any particular trade name?

A. Dutch Boy.

Q. Was there any resistance in the trade to a low priced white lead in oil?

A. When we began to market white lead in oil, and in fact for a considerable period after that, there were some substitute products on the market. The substitute products would have a name that would be similar to the Dutch Boy name, and the containers were sometimes an imitation of the Dutch Boy containers. Any white lead in oil would be sold at a very low price would be viewed with suspision and probably would be considered a substitute of inferior quality.

Q. Could you have sold white lead in oil produced by Anaconda Lead Products Company, and subsequently
3515 by International, at a price equal to National Lead's?

A. No, I don't think we could.

Q. Could you have sold the material at a price lower than a quarter of a cent a pound below National Lead's price?

A. If we had, we would run into the danger of having it considered a substitute of inferior quality.

Mr. Gardiner: May we have a recess, Mr. Examiner?

Trial Examiner Norwood: We will take a five minute recess.

(A short recess was taken.)

Trial Examiner Norwood: Go ahead.

By Mr. Gardiner:

Q. Did Anaconda Lead Products sell white lead in oil on a zone basis?

A. Yes.

Q. When did International first adopt the policy of selling on a zone basis?

A. During the latter part of 1936.

Q. Was that at the time that International went into the white lead in oil business?

A. That was at the time that International took over the assets and properties of the Anaconda Lead Products Company.

Q. Why was a zone system adopted by these companies as a means of selling white lead in oil?

A. We adopted it because it seemed to be the com-
3516 petitive practice.

Q. Would you describe generally what this zone system was?

A. Well, the country was divided in certain areas called zones. There was a par zone, one-eighth, one quarter, three-eighths, one-half, three-quarters and one cent. The zones in which there were higher differentials took higher freight rates.

Q. You just described the par zones as consisting of certain fractions, and then you said one cent. Do those previous fractions refer to fractions of one cent?

A. Those fractions that I mentioned are fractions of one cent over the par zone price, with the exception of the last one I mentioned, which was a full cent over the par zone price.

Q. You made some reference to freight. Do I understand that freight was charged in addition to these prices?

A. No.

Q. What was the situation on freight?

A. What I mentioned was that the zones other than the par zone, for which differentials were charged, usually carried a higher freight rate.

Q. That is all white lead in oil was sold f. o. b. East Chicago, freight allowed?

A. That is correct.

Q. And these price differentials related to the 3517 zones in which the material was delivered?

A. That is right.

Q. How did you determine what your competitor's practice was as to the zone system for the sale of this material?

A. We contacted customers and prospective customers to find out what our competitors were doing in this respect.

Q. Was any record made of what you determined as to what their practice was?

A. Well, I believe that occasionally our salesmen would put information to that effect in their sales reports. They may have dropped us letters to tell us what was going on price-wise by our competitors.

Mr. Wright: I object, Your Honor, and move that that answer be stricken. It was based on belief rather than the witness' knowledge. He stated that the salesmen may have reported these things. It is obviously not a matter within his own knowledge from his answer.

Trial Examiner Norwood: Did they usually report that kind of information?

The Witness: It was customary for our salesmen to write out a report on every call that they made on a customer or prospective customer, and in these reports they would put any information they picked up that they thought would be of interest to me as salesmanager regarding the activities of our competitors.

3518 Trial Examiner Norwood: Do you know that that information came to you in that way?

The Witness: Yes, I do.

Trial Examiner Norwood: Objection overruled.

By Mr. Gardiner:

Q. Did you keep a map outlining these zone systems?

A. Yes.

Q. Was this map prepared at the suggestion or request or instigation of the representatives of any of the respondents heretofore named in this case?

A. No.

Q. Did you ever discuss with any representatives or official of any of the respondents heretofore named in this proceeding the use of such a map as the price pattern or the use of such a map in the sale of white lead in oil?

A. No, I did not.

Mr. Gardiner: I ask that this be marked Respondent's Exhibit for Identification No. 193.

(The document referred to was marked Respondent's Exhibit No. 193 for identification.)

By Mr. Gardiner:

Q. I show you Respondent's Exhibit for Identification 193 and ask you if you have seen this document before?

A. Yes, I have seen these figures before.

Q. Do you know anything about their preparation?

3519 A. They were prepared under my supervision.

Q. Who requested that you have these figures prepared?

A. Our legal counsel.

Q. What was the basis on which these figures were calculated?

A. The figures showing the total production of white lead in oil in the United States for the years listed were taken from figures supplied by the Lead Industries Association.

The figures showing the production of white lead in oil by International for the years listed were taken from the records in our accounting department at East Chicago, Indiana.

Mr. Gardiner: I should like to offer at this time in evidence Respondent's Exhibit No. 193, subject to the same qualifications as the previous exhibits have been submitted.

Mr. Wright: Subject to that qualification, I have no objection.

Trial Examiner Norwood: It is so received.

(The document referred to, heretofore marked for identification RESPONDENT'S EXHIBIT 193, was received in evidence.)

Mr. Gardiner: I ask that this be marked Respondent's Exhibit No. 194 for identification.

(The document referred to was marked Respondent's Exhibit 194 for identification.)

3520 By Mr. Gardiner:

Q. I show you Respondent's Exhibit No. 194 for Identification and ask if you have seen this document before?

A. Yes, I have seen these figures before.

Q. What do you know about their preparation?

A. The figures showing the sale of white lead in oil for the years listed were supplied by the Lead Industries Association.

The figures showing the sales of white lead in oil by International for the years listed were taken from the records in our sales department at East Chicago, Indiana.

Q. Were you requested to prepare these figures?

A. Yes, I was.

Q. By whom?

A. By our legal counsel.

Q. What was the basis on which these figures were calculated?

A. (No response.)

Q. Did I ask you that?

A. Yes.

Q. I say, from what sources were these figures taken?

A. The figures showing the sale of lead in oil, total sales, that is, in the United States for the years listed were taken from figures supplied by the Lead Industries Association.

Those figures showing the sale of white lead in oil
3521 by International for the years listed were taken from
the records in our sales department at East Chicago, Indiana.

Mr. Gardiner: I should like to offer into evidence at this time Respondent's Exhibit marked for identification No. 194 subject to the same qualifications as the previous exhibits have been accepted.

Mr. Wright: I have no objection to its being received subject to those qualifications.

Trial Examiner Norwood: It is so received.

(The document referred to, heretofore marked for identification RESPONDENT'S EXHIBIT No. 194, was received in evidence.)

By Mr. Gardiner:

Q. In what manner was white lead in oil sold? That is, how was it packaged?

A. In metal containers.

Q. What were the sizes of these containers?

A. 100 pounds, 50, 20, 12 and ½, 5, and 1.

Q. Did these containers carry a different price?

A. Yes.

Mr. Gardiner: I ask that this document be marked for identification Respondent's Exhibit 195.

(The document referred to was marked Respondent's Exhbit 195 for identification.)

By Mr. Gardiner:

3522 I show you Respondent's Exhibit marked No. 195 for identification and ask you if you have seen that before?

A. Yes, I have seen these figures before.

Q. Do you know anything about this document's preparation?

A. It was prepared under my supervision.

Q. What was the basis upon which these figures were calculated?

A. The price per 100 pound keg was taken from our regular price schedule which was in effect as of the date. The average freight per 100 pounds was arrived at by taking the total freight costs for the period and dividing it by the number of pounds shipped during that period. The net was the mill net. The decrease in net over East Chicago shows the decrease in mill net.

Trial Examiner Norwood: Does this relate entirely to white lead in oil?

Mr. Gardiner: Yes, Your Honor, this relates to white lead in oil.

By Mr. Gardiner:

Q. At whose request did you prepare this document?

A. At the request of our legal counsel.

Q. Why was the year 1942 selected?

A. As I recall it, that was what the sales department, or rather I as salesmanager, considered the last nearly normal year prior to the end of the last war.

3523 Mr. Gardiner: I should like to submit at this time in evidence Respondent's Exhibit marked for identification purposes No. 195, subject to the same qualifications as obtained with regard to the previously submitted exhibits.

Mr. Wright: Your Honor, this is a piece of made evidence, in that it was prepared at the request of counsel by this witness for the purpose of being offered in this matter. It purports to show that the price differences made between the par zone and the other zones, apparently, during the year 1942, were more than offset by the freight costs that were involved in these shipments. In other words, this does to the heart of the issue.

It has been improperly identified to make it admissible at this point, because we do not know what records were used in making this; nor do we know the means by which the records were processed to arrive at these averages.

There has been no basis shown here to the effect that the means of working it out and making this piece of artificial evidence which is thought to be admissible are reliable, or the nature in which it could be admitted as evidence of the facts which it purports to show.

Now, this cannot exist outside of the original records. So I must strenuously object to its admission. And I also would object to its being admitted subject to submission of documents later to me, because I think it is a highly
3524 improper method of handling this matter to put the burden on Commission's counsel of going through all records of this company for the year 1942 to ascertain how this thing was prepared and whether the records, which, after all, are the evidence, have been accurately reflected in this piece of evidence.

Mr. Gardiner: If your Honor please, so far as making evidence is concerned, it is true, as brought out on direct examination, that this was prepared at the request of counsel for the respondent. These figures were prepared from records which were or are available, or can be made available. They are not available here at this present time.

They represent averages which were arrived at, according to the witness who can elaborate as to the detail which was used in their preparation.

There is no question but what this represents a summary, and that should be the value in it showing in a simple manner the difference between the net realized in these various zones with relation to the zone price, and I submitted it subject to the same qualifications as these others were submitted, which was that complete records should be submitted to counsel for check.

Mr. Wright: I submit that this witness has not testified that these things were made up from any record which would be admissible in this case. He said we took 3525 average freight costs. Now, what did he take average freight costs from? We have no idea.

Trial Examiner Norwood: Where did you get these freight costs?

The Witness: We took the freight charges for each zone for the period specified from the records in our accounting department, and divided that by the pounds—

Trial Examiner Norwood: Was that the actual freight charges on the shipments actually made?

The Witness: Yes, sir.

Trial Examiner Norwood: There wasn't any average for a zone, was there?

The Witness: It was an average for a zone inasmuch as we divided the total freight charges actually paid for that period by the total number of pounds shipped into that zone during that period.

Mr. Wright: Your Honor, if we are going to get into the question of further identification of this, I would like the right of preliminary cross-examination.

Trial Examiner Norwood: Yes, go right ahead.

Mr. Wright: Certainly on the basis of the record as it is, this thing is inadmissible, because the records of the accounting department do not make something admissible unless it is the type of record which is sufficiently reliable that it could be admitted in evidence here.

3526 Trial Examiner Norwood: Go ahead.

Mr. Wright: Mr. Hurless, does this purport to cover the sales for the entire year of 1942?

The Witness: Yes, it does.

Mr. Wright: How did you determine the proportion of your sales which fell within the par zone and the various differential zones?

The Witness: We determined that by determination of the shipments.

Mr. Wright: Now, just what mechanical process did you go through, what records did you consult, and what means did you use?

The Witness: I had the records for the year 1942—

Mr. Wright: What records were they?

The Witness: The records of the shipments that were kept in our accounting department.

Mr. Wright: Were they invoices?

The Witness: This information was taken from invoices and freight bills.

Mr. Wright: You mean this document here was made up directly from invoices?

The Witness: And freight bills.

Mr. Wright: And original freight bills?

The Witness: Or copies of the original freight bills. I
don't know that we retained the original freight
3527 bill.

Trial Examiner Norwood: It represents the average of the freight actually paid, does it?

The Witness: That is right.

Mr. Wright: Now, I notice you have included in the top here "East Chicago" with a net of 10.50 on your first line there. You did not take into account the local cartage that might have been involved in deliveries there?

The Witness: Well, any deliveries to customers within the city limits of East Chicago would not necessarily be shipped by public carrier. Such deliveries would very likely be made by our own truck.

Mr. Wright: By your own truck, but at your expense in either event?

The Witness: Yes.

Mr. Wright: So that your net correspondingly would be reduced by the cost of that cartage?

The Witness: That is right.

Mr. Wright: Do you know what that cost might be in 1942 on an average basis?

The Witness: No, I don't.

Mr. Wright: As I understand it from Exhibit 194, your sales of white lead in oil during 1942 amounted to 1,813.9 tons?

The Witness: That is correct.

3528 Mr. Wright: You had the original invoices for that entire 1,813.9 tons?

The Witness: We had copies of the originals.

Mr. Wright: Or copies of the originals, and you segregated them all by the geographical zones?

The Witness: That is correct.

Mr. Wright: Does it appear on the invoice as to what zone the shipment was to?

The Witness: No, it did not appear on the invoices, marked, for example, one-eighth zone or one-quarter zone, but that could be determined by the price.

Mr. Wright: Now, did all of these invoices include just 100 pound containers?

The Witness: No. In exhibit 195 we gave the price per 100 pound keg to indicate the base price to the par and other zones, but the total shipment would be made up of the total amount of lead in oil shipped, which would be in 100 pound containers, and containers of other sizes.

Mr. Wright: In other words, these invoices from which you made it up might not have had 100 pound kegs? It might have had 12-½ pound cans, or 5 pound cans, or 1 pound cans?

The Witness: That is right.

Mr. Wright: So that your net in this column here was
not derived from those invoices in any way. Your net
3529 just shows what would have been the case had this
invoice been for hundred pound containers?

The Witness: Will you repeat that question, please?

Mr. Wright: The column under "net" in this exhibit that we are talking about now shows the net which would have applied had that shipment been in hundred pound kegs?

The Witness: Yes.

Mr. Wright: But it might not have been in one hundred pound kegs?

The Witness: That is correct.

Mr. Wright: Well, now, did you separate these invoices by geographical location?

The Witness: Yes.

Mr. Wright: Who did that, what employees did that?

The Witness: A clerk in our accounting department who handled the accounting matters in connection with the white lead in oil sales.

Mr. Wright: Now, how did you keep your freight records from which you got this average 100 pound freight rate?

The Witness: Well, as I remember it, we had a large ledger in which we entered the complete data from the freight bill, and then a copy of the freight bill was filed in the accounting department at East Chicago, Indiana.

3530 Mr. Wright: Now, from what did you get these figures? Was it from the ledger or from the freight bill?

The Witness: I don't know whether they came from the ledger or from the freight bill.

Mr. Wright: Would those freight bills be keyed to the invoices which showed shipments?

The Witness: We could locate the freight bill that would cover the freight charges for each invoice.

Mr. Wright: Could you tell the invoice that was involved from the freight bill or from the entry in the ledger?

The Witness: Yes, we could do that without any trouble.

Mr. Wright: Well, was that done in preparing this?

The Witness: It is my understanding that it was.

Mr. Wright: Do you know yourself that it was?

The Witness: Well, I did not do it myself, but the instructions were to carry out the work along that line.

Mr. Wright: Well, just what were your instructions? Can you recall exactly how you instructed the employees to make this up?

The Witness: I don't know that I can recall exactly, but in general the instructions were to determine the amount of lead in oil for this period that was shipped to each zone, and to determine the average freight cost
3531 by dividing the cost of the freight by the pounds of lead in oil shipped.

Mr. Wright: You did not tell them just how you wanted that done, but just told them to do it. Is that correct?

The Witness: That is correct. I assumed that they would go to the proper records and make the proper entries from them.

Mr. Wright: Do you know whether or not all of these records are still preserved in the form of invoices or copies of invoices and freight bills?

The Witness: When we closed our plant during 1946, it is my understanding that such records were shipped to Perth Amboy, New Jersey, for storage.

Mr. Wright: Are you able to state whether they are in existence at this time and can be made available?

The Witness: I cannot definitely state that, because I had nothing to do with the packing and shipping of the records.

Mr. Wright: Your Honor, I want to renew my objection now on two additional grounds: One, that this gentleman is not acquainted with the details in which these figures were compiled, but turned the job over to subordinates, and this can only be properly identified by the people who actually did the work, since he only assigned the task in a
general way; and for the additional reason that the
3532 basic data may no longer be available. According
to this witness, he cannot state whether it is or
whether it is not.

Mr. Gardiner: If your Honor please, this was submitted with the same qualifications as these previous exhibits, which was, as I understand Your Honor's ruling, that they would be stricken—

Trial Examiner Norwood: I will sustain the objection for the time being until it appears that it is possible for the basic data to be made available. Inasmuch as those are invoices, and just one year's invoices, that would not be a very large book. I should think counsel could bring those in.

Mr. Wright: It covers almost 2,000 tons of this material.

Trial Examiner Norwood: Well, tons—you could put many tons on one little invoice, you know.

Mr. Wright: Furthermore, there has been no direct evidence on the part of the respondent, who has the burden of supporting this document, showing the technique and means by which it was made up. This witness does not know what records were used to make any of this up, the freight record.

Trial Examiner Norwood: That point is well taken also, but it should appear here that there are basic data which can be produced, and also that somebody who brings them
can explain the thing to us. It is not in satisfactory
3533 condition now, anyway, but counsel may present that
again when he meets those objections. I will sustain
the objection for the time being. That is exhibit 195, is it?

Mr. Wright: Yes.

By Mr. Gardiner:

Q. Was white lead in oil ever sold by Anaconda Lead Products or International on consignment contract?

A. No.

Q. Were there any exceptions to this practice?

A. One.

Q. What was that exception?

A. The State of Wisconsin.

Q. Why was consignment contract used in the State of Wisconsin?

A. It is my understanding that the consignment contract was used in the State of Wisconsin because the laws of the State of Wisconsin provide that in case of insolvency, a consigned stock cannot be returned to the consignor unless there is a written agreement to cover it.

Mr. Wright: I move the answer be stricken. It concerns the witness' understanding. He is not competent to testify as to the reason for the company policy on the basis of knowledge that they may be required from others. It is hearsay.

Trial Examiner Norwood: He can give us his reason.

3534 Did you establish that policy or fail to establish it? Is it within your province to determine that policy?

The Witness: That policy was determined by our legal counsel.

Mr. Wright: He testified only to his understanding, Your Honor. I think a re-examination of the answer would show that he did not state of his own knowledge.

Trial Examiner Norwood: That would be all right, his understanding, if he made the policy. He can tell us the considerations.

But I think probably your objection should be sustained.

By Mr. Gardiner:

Q. Were you ever instructed to prepare consignment contracts for the use of sale of materials in Wisconsin?

A. Yes.

Q. Were you ever instructed to prepare consignment contracts for the sale of white lead in oil in any other States?

A. No.

Q. At the time you received these instructions, were you told the reason why you were required to prepare consignment contracts for Wisconsin?

A. Yes.

Q. What was the reason?

A. The reason was the laws of the State of Wis-
3535 consin provide that in case of insolvency, the consigned stock cannot be returned to the consignor unless there is a written agreement to cover it.

Q. Did either Anaconda Lead Products or International ever use any type of consignment arrangement in other States for the sale of white lead in oil?

A. They used the consignment arrangement.

Q. When was that arrangement first used, and describe its operation.

A. I cannot give the date when it was first used, but I believe that it probably was about 1932.

An order for shipment on consignment would be taken by our salesmen and forwarded to the main office at East Chicago, or would be sent indirect to that office by the customer. The shipment would be made and invoiced on memo billing.

About the 20th or 25th of every month we would send a form to the customer to be filled out. On it the customer would insert the amount of consigned stock on hand on the 25th or the preceding month, the amount of lead in oil received since that date, and the amount on hand on the present date, the difference being the amount that had been sold from the consigned stock.

Then the customer would be invoiced for that amount at current prices.

Q. Do you know who devised that procedure, or
3536 method of sale?

A. I mainly devised it, with the assistance of members of our sales department and accounting department.

Q. Was the arrangement you have just descibed put into effect at the instigation of, or through the agreement with, any of the respondents heretofore named, with any one or with an official representative of any one of these respondents?

A. No.

Q. How much business did the Anaconda Lead Products and International do by means of this consignment arrangement in the sale of white lead in oil?

A. Generally, the sales from consigned stocks accounts for 50 to 60 percent of our total sales of white lead in oil.

Q. Did Anaconda Lead Products or International ever supply dealers with price cards showing retail prices for white lead in oil?

A. Yes.

Q. Why were these cards given to dealers?

A. Those cards were informative and contained advertising value for us.

Q. Did Anaconda Lead Products or International ever require dealers to resell white lead in oil at these prices listed on such cards?

A. No.

Q. Did Anaconda Lead Products or International
3537 ever have any arrangements with dealers with respect
to the terms and conditions of resale or the prices of
materials resold?

A. Will you repeat that question, please?

Q. Did Anaconda Lead Products or International ever have any arrangements or any agreements with dealers with respect to the terms and conditions of the resale or the prices of the materials as such to be resold?

A. No.

Q. Did International, in selling and offering to sell dry white lead and lead in oil in commerce to agents or dealers for resale, require its customers to resell such products at prices and terms of sale fixed and determined and published by it?

A. No.

Q. Will you state again how many years you have been connected with the International Smelting & Refining Company?

A. 25 years.

Q. What relationship does that company have with respondent Anaconda Copper Mining Company?

A. It is a subsidiary.

Q. Are you familiar generally with the operations of the International Smelting & Refining Company throughout the United States?

A. I believe that I am.

Q. Are you familiar generally with the operations
3538 of the Anaconda Copper Mining Company through-
out the United States?

A. I believe so.

Q. Do you know whether the Anaconda Copper Mining Company has ever engaged in the production and sale of lead pigments?

A. It has not.

Q. Do you know whether the Anaconda Copper Mining Company ever gave any directions through its officers or agents to the Anaconda Lead Products Company or to the International Smelting & Refining Company as to the operations of those companies or to the prices to be charged for lead pigments and the terms or conditions under which they were to be sold?

A. No, I do not.

Q. Do you know if the Anaconda Copper Mining Company ever exercised any control over Anaconda Lead Products or International beyond that which a stockholder would ordinarily be expected to exert?

A. No, I do not.

Q. In advertising their products, did Anaconda Lead Products and International use a common name and trade-mark?

A. Yes.

Q. What was it?

A. It was the Anaconda trade-mark.

Q. Do you know if there was any arrangement with the Anaconda Copper Mining Company for such use?

A. I do not know of it.

3539 Q. Why was that particular trade-mark used?

A. Well, we used it to help us to sell our white lead in oil, which was a comparatively unknown product at that time.

Q. Do you know of any agreement on the part of International with the National Lead Company, the Eagle-Picher Lead Company, the Eagle-Picher Sales Company, the Sherwin-Williams Company, or the Glidden Company for the adoption and maintenance of a system of delivered price quotations for white lead in oil?

A. No, I do not.

Q. Do you know of any agreement between International and any of the other respondents in this proceeding heretofore named for the adoption and maintenance of a plan whereby the United States is divided into zones for the purpose of selling white lead in oil?

A. No, I do not.

Q. Do you know of any arrangement whereby International sought and secured advice, assistance and cooperation of the Lead Industries Association, its officers, employees and agents, along with the other respondents heretofore mentioned, or any one of them, in fixing, adopting, publishing and using non-competitive terms and conditions of sale in connection with the sales and offers to sell of white lead in oil?

A. No, I do not.

Q. Do you know if International ever used the 3540 office of the Lead Industries Association with the cooperation of the officials of the same for the purpose of exchanging price factors and information concerning price factors to be used at times by the International and the other respondents heretofore named or any one of them in calculating, determining and announcing their offers to sell white lead in oil?

A. No, I do not.

Q. Do you know if International ever agreed to adopt or adopted, maintained and used terms and conditions of sale embodied in the so-called consignment or agency agreements under the leadership of respondent, National Lead Company, for the purpose of preventing dealers from selling white lead in oil and from making offers to sell such products at levels lower than the offers made by the respective respondent producers heretofore named, whose names were affixed to such consignment or agency agreements?

A. No, I do not.

Mr. Wright: Your Honor I am willing to stipulate that this witness will testify that he does not know of any violation of this complaint, if it will save time.

Trial Examiner Norwood: Off the record.

(There was a discussion off the record.)

Trial Examiner Norwood: On the record. Objection overruled.

By Mr. Gardiner:-

3541 Q. Mr. Hurless, you have previously been asked a series of questions about your knowledge of the existence of agreements between International and the other respondents in this case covering the sale and distribution of dry white lead. I have also asked you some of the same questions with relation to white lead in oil.

Is your answer the same as to those questions which you have previously been asked as to dry white lead—

Mr. Wright: You mean, with regard to agreements?

By Mr. Gardiner:

Q. With regard to agreements which have not been asked you with regard to white lead in oil?

A. The answer would be the same.

Mr. Gardiner: Off the record.

Trial Examiner Norwood: Off the record.

(There was a discussion off the record.)

Trial Examiner Norwood: On the record.

By Mr. Gardiner:

Q. Is the respondent International now engaged in either the production or sale of any of the lead pigments heretofore described as included within the definition of the amended complaint?

A. No.

Q. When did International stop the production of dry white lead and lead in oil?

3542 A. Is the question, when did they stop?

Q. When did International stop the production of dry white lead and lead in oil?

A. In July of 1946.

Q. When did International make the last sale of those materials?

A. August, 1946.

Q. Does International have on hand at the present time any of such products?

A. No.

Q. What use is being made of the plant where these products were previously manufactured?

A. The plant where these products were previously manufactured was sold to the Eagle Picher Company of Cincinnati, and it is my understanding that they are using a part of it for the manufacture of dry white lead and white lead in oil.

Q. When was this property sold to the Eagle Picher Company?

A. On October 1, 1946.

3543 Q. When was the first public announcement made that International was going out of the white lead and oil business?

A. On June 20, 1946.

Q. What was the nature of this announcement?

A. Substantially the same as the one for dry white lead.

Q. Are the personnel who were engaged in the production and sale of these lead pigments still in the employ of International?

A. Only two.

Q. Who are they?

A. My secretary, Miss Helen Ohr, and myself.

Q. Are you familiar generally with the operations of the International Smelting & Refining Company and the Anaconda Copper Mining Company in the United States?

A. Yes, generally.

Q. Do you know of any facilities of the properties in this country or any other country that could be readily converted to production of dry white lead or white lead in oil?

A. I would say that there are no such properties.

Q. Would it be a correct statement to say that to go back into dry white lead or white lead in oil business, it would be necessary to purchase or construct a plant for that purpose?

A. Yes.

Q. Do you know if International has any intention
3544 of resuming the production of these lead pigments?

A. I believe that they have no intention whatsoever.

Mr. Wright: I move that that answer be stricken, Your Honor. This witness is obviously in no position to know the intention of the board of directors and governing officers of the corporation.

Trial Examiner Norwood: Motion allowed.

By Mr. Gardiner:

Q. In view of your familiarity with the Anaconda Copper Mining Company's operations, do you know of any plan that it has to enter the production of these materials through any of its susidiaries?

A. I know of no such plans.

Q. Can you elaborate on the reasons why International decided to go out of the lead pigment business?

A. Well, the reasons they decided to go out of the lead pigment business are briefly indicated in the letter of announcement that was sent to the trade on June 1, 1946.

Q. Was international influenced in its decision in any way by the action of its competitors?

A. No.

Q. With relation to the time that the decision was made to discontinue these operations, do you know when it was decided to sell the plant?

A. I believe it was about four to six weeks afterwards.

3545 Q. That is, it was four to six weeks after the decision was made to discontinue the operations that it was decided to sell the plant?

A. Well, I would put it this way: I heard about the decision to discontinue the operations about the middle of May, 1946, and about four to six weeks after that we began to make efforts to sell the plant.

Q. Were there other parties interested in its purchase besides the Eagle-Picher Company?

A. Yes.

Q. Do you know what the names of any of these prospective purchasers were?

A. The Metal and Thermit Company of East Chicago, Indiana; the American Zinc, Lead & Smelting Company of St. Louis, Missouri; and the Calumet Iron & Supply Company of East Chicago, Indiana. Those were the principal ones.

Mr. Gardiner: Your Witness.

Mr. Wright: I suggest that counsel has finished his direct examination that we recess for lunch.

Trial Examiner Norwood: Is counsel through now?

Mr. Gardiner: I am through with this witness, Your Honor.

Trial Examiner Norwood: What is your pleasure, gentlemen?

Mr. Wright: Two o'clock.

3546 Trial Examiner Norwood: We will recess until 2 o'clock.

(Whereupon, at 12:10 p. m., a recess was taken until 2 p. m., this day.)

3547 Afternoon Session

2:00 p. m.

Trial Examiner Norwood: The hearing will come to order.

Mr. Hurless will resume the stand.

FRANK H. HURLESS resumed the stand and testified further as follows:

Trial Examiner Norwood: Proceed with the cross-examination.

Cross-Examination by Mr. Wright.

Q. Mr. Hurless, will you state again your employment with the International Smelting & Refining Company, beginning back in the beginning?

A. I was employed by the International Smelting & Refining Company in 1922 as a checker on the construction of a zinc oxide plant at Akron, Ohio. I checked the materials and supplies and the amount of labor used in that construction since the construction was on a cost-plus basis.

Subsequently I had charge of the small plant office at Akron, Ohio.

Q. That is still International Smelting Company?

A. That is right.

3548 About 1927 I began part-time sales work and about 1929 I began full-time sales work and was transferred to the main office at East Chicago, Indiana.

Q. That is, sales work for International Smelting?

A. That is right.

In 1930 I was made district salesmanager. I was in the Midwest area and had charge of the sale of dry white lead and zinc oxide in the Midwestern area.

In 1936, I was made assistant salesmanager and had charge of the sale of dry white lead, white lead in oil, and zinc oxide. While assistant salesmanager, I actually had charge of the sales, since our official salesmanager in Akron, Ohio, had other duties that did not permit him to give full time to sales work.

In 1938, I was made salesmanager in full charge of the sale of dry white lead, white lead in oil and zinc oxide in all territories.

Q. What was your position when the International Smelting & Refining Company left the business of marketing these lead pigments? Were you still salesmanager at that time?

A. Yes, sir.

Q. What is your present position with the International Smelting Company?

A. I am a special representative for the International Smelting & Refining Company in the Midwestern area.

3549 Q. That is, sales representative?

A. No, not a sales representative; a sort of general representative.

Q. Who is the president of International Smelting & Refining Company?

A. It is my understanding that Mr. C. F. Kelly is president of International Smelting & Refining Company.

Q. Was he president of it back in 1936, do you recall?

A. I do not know.

Q. What office does Mr. Kelly hold in the Anaconda Copper Mining Company?

A. I understand that he is chairman of the board.

Q. Is Mr. Kelly also a director of International Smelting & Refining Company?

A. I believe that he is.

Q. Who are the other directors of International Smelting & Refining Company?

A. I believe that Mr. Frederick Laist is.

Q. That is L-a-i-s-t?

A. Yes. And Mr. E. O. Sowerwine is a director, I believe.

Q. Who are the other directors, do you recall?

A. I do not know who they are.

Q. Is Mr. Laist or Mr. Sowerwine connected with the Anaconda Copper Mining Company in any way?

3550 A. I believe Mr. Laist is the vice-president of the Anaconda Copper Mining Company.

Q. Does he have any official position with International Smelting aside from being a director?

A. I believe he is vice-president of International Smelting & Refining Company.

Q. What is Mr. Sowerwine's position with International beyond that, for the record?

A. I am not sure, but I think he is secretary-treasurer.

Q. You mean, you have difficulty in knowing who the officers of this corporation are?

A. Yes, sir, I do.

Q. What is his position with Anaconda Copper Mining Company?

A. Mr. Sowerwine is the vice-president, I believe.

Q. How many members of the Board of Directors are there of International Smelting & Refining Company?

A. I do not know.

Q. Do you know whether those members of the Board of Directors are also members of the Board of Directors or officers of the Anaconda Copper Mining Company?

A. I believe that Mr. Kelly is a director of both, but as regards the others, I do not know.

Q. And those three are the only ones that you can recall who are members of the board?

A. Those that I believe are members of the board.

3551 Q. Of International Smelting & Refining Company?

A. Yes.

Q. What other corporate officers are there besides those three men? Of International, I am speaking now.

A. Well, let us see. We have touched on the president, vice-president, and—

Q. Secretary-treasurer?

A. Secretary-treasurer.

I do not know that there are any other officers.

Q. Have you ever attended a meeting of the Board of Directors of the International Smelting & Refining Company?

A. No, sir.

Q. Do you recall ever receiving instructions from the Board of Directors of the International Smelting & Refining?

A. No, sir.

Q. Have you ever heard of a meeting of the Board of Directors of International Smelting & Refining Company, as such?

A. I cannot recall that I have.

Q. Who is the president of the Anaconda Sales Company?

A. I believe that Mr. C. F. Kelly is president.

Q. Is Mr. Laist an officer and director of the Anaconda Sales Company?

A. I don't believe that he is.

Q. Who are the other officers and directors of the Anaconda Sales Company?

3552 A. I believe that Mr. Clarence Glass is vice-president.

Q. What is Mr. Glass' connection with Anaconda?

A. Well, so far as I know his only connection is that he is vice-president of the Anaconda Sales Company.

Q. He has no independent office or no other office in the Anaconda Copper Mining Company?

A. Not that I know of.

Q. Who are the other officers of the Anaconda Sales Company?

A. Mr. Kennedy is vice-president of the Anaconda Sales Company.

Q. What is Mr. Kennedy's full name?

A. I don't know.

Q. What did you say his office was?

A. Vice-president of the Anaconda Sales Company.

Q. And Mr. Kelly, Mr. Glass and Mr. Kennedy are the three officers you know of in the Anaconda Sales Company?

A. Mr. Dohrman, I believe, is either secretary or secretary-treasurer.

Q. Do either Mr. Dohrman or Mr. Kennedy have any connection that you know of with the Anaconda Copper Mining Company?

A. I don't know of any such connection.

Q. As far as you know, they devote their full time to the operations of the Anaconda Sales Company?

A. That is my understanding.

Q. When did the International Smelting & Refin-
3553 ing Company first engage in the production of lead
pigments?

A. In the latter part of 1936.

Q. So that at the time you say you had to do with the sales of dry white lead, from the period 1930 to 1936, that company was not engaged in the production or sale of white lead. Is that correct?

A. No.

Q. What was the arrangement? I withdraw that question.

As I understand it, during that period from 1930 to '36, the production was by Anaconda Lead Products, and the sales were by Anaconda Lead Products and Anaconda Sales Company. Is that correct?

A. That is right.

Q. Well, how did you, as an employee of International

Smelting & Refining Company, have charge of those sales at that time?

A. Well, in my capacity—for example in 1930 I was district salesmanager—I simply sold the products that were produced by the Anaconda Lead Products Company.

Q. Well, were you acting for Anaconda Sales Company, Anaconda Lead Products Company, or International Smelting & Refining Company, or could you tell where one began and the other left off?

A. They were pretty much overlapping.

Q. Did they have common officers and common em-
3554 ployees during that period of time?

A. Well, the main office of the Aanaconda Sales Company at that time was in New York City. We had our main sales office at East Chicago, Indiana, from which point I operated.

Q. Were employees of Anaconda Sales Company operating that office too, or were they employed in that office?

A. No.

Q. Were employees of the Anaconda Lead Products in that office?

A. You mean in the sales office?

Q. Occupying joint offices?

A. Well, the operating, sales and accounting departments all had their offices in East Chicago in the same building.

Q. Was it the same department with different accounts, or were they physically separated?

A. Will you state that question again, please?

Q. Was it a single office with different accounts, or were the sales and accounting offices of the three companies physically separated?

A. No, the offices were not physically separated, but there were different accounts, Anaconda Sales Company and the Anaconda Lead Products Company.

Q. For bookkeeping purposes?

A. That is right.

Q. Now, when you sold dry white lead at that time, was
that transferred on the books from Anaconda Lead
3555 Products Company to Anaconda Sales Company to
International Smelting & Refining Company, or do
you know how that was handled?

A. If a sale was effected through the Anaconda Sales Company, I would say that there would be a transfer from Anaconda Lead Products Company to the Anaconda Sales Company.

Q. How, would you effect such a sale in the name of the Anaconda Lead Products Company in your capacity as salesmanager in that district?

A. I would not effect it, no. I would simply sell the material.

Q. You were the one who would make the sale?

A. That is right.

Q. Would you know in advance for which account it would be sold?

A. To some extent that would depend upon the immediate shipping point to the customer.

Q. In other words, there were certain territories in which accounts were for the Anaconda Sales Company?

A. That is right.

Q. Anybody located in that territory?

A. That is right.

Q. But that was the only basis of division?

A. That is right.

Q. Now, was part of your compensation paid by Anaconda Sales Company, part by Anaconda Lead Products, or were you an employee solely of International Smelting & Refining? 3556

A. I understand that I was an employee solely of the International Smelting & Refining Company.

Q. You don't know whether the other two companies were compensated for your services in selling for their account?

A. I don't know about the Anaconda Lead Products Company. I don't think the Anaconda Sales Company was, but I am not sure of it.

Q. Now, when the International Smelting & Refining Company acquired the plant of the Anaconda Lead Products Company in 1936, will you tell us just what changes of organization were made necessary as a result of that, what shifts of personnel, changes in methods of handling business?

A. Well, as I recall it there were practically no changes. I don't remember any that were made at the time.

Q. In other words, business was continued on. It was largely a bookkeeping transaction?

A. That is right, pretty much the same as before.

Q. Didn't you consider yourself an employee of the Anaconda organization, I mean disregarding the technicalities now?

A. Well, I think that I am a direct employee of the International Smelting & Refining Company.

Q. Did you ever attend any meeting of the Board of Directors of the Anaconda Sales Company?

A. No, sir.

3557 Q. Did you ever see any minutes of a meeting of the Board of Directors of that company?

A. I don't recall that I ever did.

Q. Do you know whether there has ever been a meeting, to your knowledge?

A. I don't know of any actual meetings, but I presume there have been.

Q. Do you know Mr. F. O. Case?

A. Yes, I do.

Q. What was Mr. Case's position in 1933?

A. In 1933, I believe—I am not too sure of the date—I believe he was general salesmanager.

Q. Of what company?

A. Of the International Smelting & Refining Company, pigment division.

Q. In other words, he was your superior officer at that time?

A. That is correct.

Q. He was not an employee of the Anaconda Sales Company or of the Anaconda Lead Products Company?

A. I don't believe so.

Q. Is he still with the Anaconda organization now?

A. Mr. Case is with the Anaconda organization.

Q. What is his position now, do you know?

A. I understand his position at the present time is assistant to the president of the Anaconda Copper Mining Company.

3558 Q. How long has he been in that position?

A. I think since about October of 1946.

Q. For how long a period of time did he remain with International?

A. I believe Mr. Case originally went with International about 1920 or 1921.

Q. How long did he remain?

Mr. Gardiner: If your Honor please, I don't know just what counsel has in mind here by this line of examination, but we are perfectly willing to stipulate that these companies—Anaconda Lead Products, Anaconda Sales Company and International Smelting & Refining Company—were all subsidiaries of the Anaconda Copper Mining Company, and the Anaconda Lead Products Company is today, and the Anaconda Sales Company, if that will facilitate matters.

Trial Examiner Norwood: Is that satisfactory?

Mr. Wright: I appreciate that there is no issue there, but counsel has raised the issue that the acts of these subsidiaries could be placed in a separate compartment, and neither had any responsibility for either of the others might have done. I think I have a right to bring out, since this question of this witness' relationship to the Anaconda Copper Mining Company was brought out on direct examination, this relationship on cross-examination.

Trial Examiner Norwood: Yes, this is cross-ex-
3559 amination.

Mr. Gardiner: I am not objecting, but I did not know what he was after.

Trial Examiner Norwood: Counsel may except that offer to stipulate in whole or in part, and be governed accordingly.

Mr. Wright: Well, there never was any issue as to whether there was a relationship of principal to subsidiary.

Trial Examiner Norwood: All right.

By Mr. Wright:

Q. When did Mr. Case leave International and go with Anaconda?

A. I believe that was about October of 1946. Correction. Mr. Case left International, I believe, about two years before the war ended to go to Las Vegas, Nevada, as general manager of Basic Magnesium, Incorporated.

Q. But up until that point he still had a connection with International?

A. That is my understanding, yes.

Q. So during the period from 1930 to '36, he was in charge of sales policies on these pigments of International?

A. I believe that is correct.

Q. From whom did he get his authority to act in determining sales policies in that period?

A. Well, I believe that Mr. Case pretty much
3560 developed his own policy as regards things.

Q. In other words, he was directly subordinate to the officers and directors of the International Smelting & Refining Company?

Mr. Gardiner: If Your Honor please, I do not want to object to each question, but I think the witness testified here as to his belief in these matters rather than what he knows.

Mr. Wright: Your Honor, this witness has testified, we did this and we did that, all morning, with regards to the period from 1930 on. Now, if counsel wants to urge that he has no authority to state what the company's policies were in that period, I am going to move to strike his direct testimony.

Trial Examiner Norwood: I think he may go ahead and state his views.

Mr. Gardiner: He was asked, where did Mr. Case get his instructions. Is that correct?

Mr. Wright: That is correct.

Mr. Gardiner: And his answer was, "He believes." In other words, he must know that.

Trial Examiner Norwood: He may make his own statement whether it be belief or whether it be direct knowledge.

By Mr. Wright:

Q. Mr. Case was your immediate superior from
3561 whom you took your instructions, I take it, during that period from 1930 to 1936?

A. That is right.

Q. And you discussed the policies of the organization with Mr. Case; is that correct?

A. Yes.

Q. And you and Mr. Case determined those policies; is that correct?

A. I would not say Mr. Case and I alone. We had Mr. L. G. Duncan, who was salesmanager with his office at Akron, Ohio.

Q. Salesmanager for International?

A. That is right, up until the time I was made salesmanager.

Q. Who in the corporate organization was Mr. Case responsible to?

A. I do not know.

Q. You know of no one between the officers and directors, then, and Mr. Case in authority in International Smelting & Refining?

A. I cannot name any individual to whom he directly reported on these matters. That is something that Mr. Case handled himself.

Q. You do not know of his getting any instructions from the board of directors or the corporate officers as to the company policy?

3562 A. I do not recall any specific instructions he got that would affect the sales policy.

Q. Now did you in the period from 1933 to 1944 participate in any of the Lead Industries Association pigment division meetings?

A. No.

Q. Who handled that?

A. Well, if there was any participation on our part, I presume that Mr. Case would do it.

Q. So you were not present at any of those discussions to know what matters were discussed at those meetings between 1933 and 1944; is that correct?

A. That is correct.

Q. I believe you mentioned in your direct testimony this morning that there is a quarter of a cent differential, or discount, for carload purchases of dry white lead.

A. Uuder the less-carload price.

Q. Under the less-carload price; is that correct?

A. That is correct.

Q. Can you tell me how long that differential has been in force?

A. No, I cannot.

Q. Did you ever discuss that differential with Mr. Case, that you recall?

A. I do not recall it.

3563 You do not recall Mr. Case's having any interest in adopting such a differential?

A. I do not recall anything about it, either way.

Q. What is the International Lead Refining Company?

A. I think the International Lead Refining Company was a subsidiary of the International Smelting & Refining Company.

Q. I show you a document in evidence as Commission's Exhibit 508-B, which has been identified as a letter written by Mr. F. O. Case, Manager of the Anaconda Zinc Oxide Department, International Lead Refining Company, under date of July 24, 1933.

Does that refresh your recollection as to that?

A. As to what?

Q. As to the relationship of International Lead Refining Company?

A. I believe that when we built our Zinc Oxide Plant at Akron, Ohio, it was under the name of International Lead Refining Company, Anaconda Zinc Oxide Department.

Q. In other words, it was known as the Anaconda Zinc Oxide Department, even though it was part of the International Smelting & Refining Company; is that right?

A. That is correct.

Q. I call your attention to that paragraph of this letter beginning with the words "I am not certain," and ask you to read that.

3564 Mr. Gardiner: I believe this is a matter of record. It is in here.

You are asking him to read it to himself, are you not?

Mr. Wright: Yes, sir.

By Mr. Wright:

Q. Do you recall discussing the matters mentioned in the last paragraph of Commission's Exhibit 508-B with Mr. Case?

A. Apparently this applies to the Pacific Coast. I believe that in my capacity as district salesmanager, I had nothing to do with the Pacific Coast at that time.

Q. I want to call your attention to the fact, "And I understand that they are going to charge a differential of one quarter of a cent for all shipments under five tons," which is in addition to the Pacific Coast situation.

Do you recall that matter?

A. I do not know that I understand the question.

Q. Do you recall any discussion with Mr. Case about the advisability of adopting that about the date of that letter, July of 1933, a less than-carload differential of a quarter of a cent on dry white lead?

A. For shipments under five tons?

Q. Yes, sir.

A. I do not recall that at all. In fact, I do not ever remember hearing or seeing anything about that five-ton differential. 3565

Q. There is a five-ton differential, is there not?

A. There is not at the present time, or there was not when he went out of the business in 1946.

Q. Would you explain again for me Mr. Hurless, what you called your consignment arrangement on direct examination?

A. Orders would be taken from our salesmen for shipment on our consignment arrangement, or the customer would mail the orders direct to our office for shipment on the consignment arrangement.

Q. Did you offer that to any dealer that wanted it?

A. No, I do not think we offered it to any dealer that wanted it. We would try to restrict it to dealers who we thought would sell a reasonable amount of lead in oil.

Q. You say, there was no contract involved?

A. Not except in the State of Wisconsin.

Q. How did you bill your shipments of that lead?

A. The shipment was billed to the Anaconda Sales Company or the International Smelting & Refining Company in care of the account that was purchasing the lead in oil or that would purchase it eventually from consigned stock.

Q. Now, then, the customers who had that arrangement would file reports monthly showing what they sold in various sized containers; is that correct, during the month?

A. Our report had the different sized containers
3566 listed with a separate column for each one, from 100
pounds down to 1 pound.

Q. What did the dealer fill in those columns with? What sort of figure did he put in those columns? Simply pounds sold, or what?

A. As I recall it, we would put on the report before it was mailed the amount of stock that our books showed was on hand with the dealer and the amount of lead in oil that had been shipped since the date of the last report. The dealer would insert his present stock on hand, which would be the number of different sized containers.

Q. Then what was the billing transaction that followed that report?

A. When the report was received from the dealer, it went to the accounting department for processing; that is, issuance of invoice to him.

Q. And you billed him then for the dealer's net price on what was sold; is that correct?

A. We billed the dealer for the amount shown as shipped during the period at the current price.

Q. The current dealer price?

A. That is right.

Q. Over how long of a period of time did that arrangement obtain?

A. You mean, what period of time did we have
3567 the consigned stock arrangement?

Q. Yes, sir.

A. I do not know when we started it, but I—correction: I believe we started that the latter part of 1932.

Q. And over how long a period did you continue to use it?

A. We continued to use it until we went out of business in 1946.

Q. Did you have any announcements to the trade covering the terms and conditions of that consignment arrangement?

A. Well, when there was a price change either up or down, we always notified our dealers both on direct sale and consigned stock arrangement of the new prices, and gave them the terms of sale.

Q. You supplied those dealers with these price cards, such as are in the record in evidence here showing dealers' selling schedule, as in Commission's Exhibit 661-Z-36?

A. That is correct.

Q. As well as the dealers' confidential price list?

A. That is right.

Q. Getting back to the first time that the zone method of selling appeared on white lead in oil, I believe you said that was around 1933 or 1944, did you not?

A. It was around 1933, as I recall it. But I do not remember.

Q. The latter part of 1933?

3568 A. I do not know.

Q. How did you sell white lead in oil prior to that zone method?

A. Well, we really did not begin to get started in the business of producing and selling white lead in oil until well along in 1932, and I think that our methods were pretty much on a hit or miss basis.

Q. How did you first hear about this zone method of selling?

A. Well, something like that being instituted would naturally cause considerable comment initially, and we would pick up information from the dealers and prospective dealers on whom we were calling.

Q. Did these dealers have any zone maps or anything from any competitors?

A. I do not believe that I ever saw or heard of a dealer having a zone map.

Q. As I recall it, your testimony this morning was that you determined those zones from the information which you picked up in the trade from dealers and so forth?

A. That is correct.

Q. If the dealers did not have a zone map, how would you get the complete information for the whole country on those zones and the territorial divisions between them, and the differentials?

3569 We would pick it up piecemeal. For example, a dealer in the so-called Tri-State area or Rock Island, Davenport, and Moline, who was any kind or dealer at all would know that in that territory where the par zone left off and the one-eight zone began. Then we could talk to a dealer or distributor in Richmond, Virginia, or vicinity, who would tell us where the par zone left off and the one-eight zone began in that territory.

Q. Are you telling us how you may have found that information or how you did find it?

A. I am telling you how we did find it, piecemeal, and put it together.

Q. Over how long a period of time did that obtain?

A. I do not know that I can answer that. We did not get it all at once. I know that.

Q. But you recall very well that process of piecing it together?

A. I remember that we had quite a time getting some of the information, and that we spent quite a little time and money doing it.

Q. Mr. Case also participated in that, I take it?

A. That is correct.

Q. Since he was salesmanager at that time?

A. Yes, sir.

Q. You don't recall Mr. Case mentioning that
3570 such maps or zones had been discussed at meetings of
the Lead Industries Association, do you?

A. No, I do not.

Q. On dry white lead, as I recall your testimony, you stated that you allow freight to the customer. Does that mean that you ship the material freight collect, and allow the amount of freight that the customer shows has been paid on the invoice when billing for the material?

A. No, we prepaid all freight charges.

Q. At all times?

A. That is right.

Q. On all products?

A. That is right.

Trial Examiner Norwood: Now, do you allow the same freight that you paid on every package?

The Witness: Well, for example, if the price of white lead in oil were 10½ cents per pound in hundred pound containers, and we were shipping from East Chicago to Akron, Ohio, we would prepay the actual freight from East Chicago to Akron, Ohio, and bill the customer at 10½ cents a pound.

Trial Examiner Norwood: But in shipping it to different places in a zone, would you charge just the actual freight in every case?

The Witness: We would prepay the actual freight, 3571 and the customer did not actually pay any freight as such.

Trial Examiner Norwood: But the freight was figured in that price, was it?

The Witness: Yes, sir.

Trial Examiner Norwood: Was that same amount of freight figured in the price that you paid, or was it an average figure?

The Witness: Well, our price structure was that in the same zone we charged the same price, paid the actual freight to the point of delivery, whatever that freight might be.

Trial Examiner Norwood: And then charged an average freight differential or an average freight amount added into the price. Is that right?

The Witness: Well, you mean from a cost accounting standpoint?

Trial Examiner Norwood: That is right.

The Witness: I believe in figuring our costs we used an average figure for freight.

Mr. Wright: May we have a five-minute recess?

Trial Examiner Norwood: We will take a five-minute recess.

(A short recess was taken.)

Trial Examiner Norwood: Are you ready to go ahead, gentlemen?

3572 Mr. Wright: Yes.

Trial Examiner Norwood: Proceed.

By Mr. Wright:

Q. Do you recall a representative of the Federal Trade Commission calling on you in March of 1944 regarding the investigation the Commission was making in this case?

A. One representative called, but I don't recall the date.

Q. Do you recall Mr. Dunn, attorney-examiner for the Commission, calling on you?

A. As I remember, he was Mr. Carmichael.

Q. Do you recall making a statement to Mr. Carmichael at that time that the consignment practice of International was initiated in the fall of '33 rather than '32?

A. No, I don't.

Q. Going back to the parties, the different corporations that were involved here, did the International Smelting & Refining Company make any annual report to the stockholders or balance sheet showing its profit, losses, expenses and earnings?

Mr. Gardiner: If Your Honor please, I object to that question. I do not see the purpose of that, as to what report the International Smelting & Refining Company may have made to its stockholders. I don't see that that has any bearing in this particular case.

Mr. Wright: Well, Your Honor, he has certainly 3573 raised an issue here of the responsibility for the acts of these various subsidiary corporations, and it seems to me that that opens up the field pretty wide for determining their act relationship.

Trial Examiner Norwood: I think you may show it for that purpose. The objection is overruled.

The Witness: Will you read the question, please?

Trial Examiner Norwood: Read the question.

(The pending question was read.)

A. Well, in my capacity in sales, I would really have nothing to do with that sort of thing, and I don't know what was done in that respect, if anything.

By Mr. Wright:

Q. Would your answer be the same if a similar question were asked relating to Anaconda Lead Products Company?

A. Yes.

Q. And Anaconda Sales Company?

A. Yes.

Q. Now, did this office in East Chicago, Indiana, in which you were located, do business for the account of the Anaconda Copper Mining Company?

A. I don't believe it did.

Q. You don't know of any business it had in that regard?

A. No, I do not.

Q. There were no employees of Anaconda, as 3574 such, located in this office?

A. No direct employees of the Anaconda Copper Mining Company, to my knowledge.

Q. But there were employees of the three subsidiary corporations?

A. I don't believe we had any employees of the Anaconda Sales Company at East Chicago.

Q. Well, weren't all the sales of Anaconda Sales Company of these pigment products made through your office?

A. Well, we made the sales, as such, through our regular sales organization. In those States where the International Smelting & Refining Company was not licensed to do business, the sales were made through the Anaconda Sales Company.

Q. Did you have anything to do with the advertising policies of the company with reference to these pigments?

A. I would not say I had anything to do with the policies, but I did have considerable to do with the development of advertising.

Q. Where was this advertising run principally, in what media?

A. Are you speaking now of white lead in oil or dry lead or zinc oxide?

Q. If you can make one answer covering white lead in oil and dry white lead, that will be all right. If you cannot, just separate the two.

3575 A. I think that we ran some advertising on dry white lead in the American Paint Journal, and I think we ran advertising on white lead in oil in the American Painter and Decorator and in the National Painters Magazine.

Q. Do you recall an advertising campaign by International to the effect that its white lead was whiter than other preparations on the market?

A. Our what you might call slogan "Whiter and brighter."

Q. Do you recall advertisements of the sort I referred to, that your white lead was brighter and whiter than competitive products?

A. Yes, we advertised that.

Q. Did you advertise showing a spot of Anaconda white lead over white lead of a competitor?

Mr. Welch: Your Honor, we object to this. This case is not a false representation case; this is a conspiracy case. I don't think that kind of question is proper.

Trial Examiner Norwood: I think it goes to the matter of competition.

Mr. Wright: If Your Honor will bear with me, I believe my purpose will be plain. If it is not sufficiently connected up, I will be happy to entertain a motion to strike.

Trial Examiner Norwood: Objection overruled. Answer the question.

The witness: May I have the question, please?

3576 (The pending question was read.)

A. We advertised that Anaconda white lead will make a white spot on ordinary lead.

By Mr. Wright:

Q. Over what period of time did you advertise that fact?

A. Over a considerable period of time.

Q. Well, can you give me some estimate of what that was?

A. Well, I would say probably a five-year period.

Q. What five years is what I meant.

A. I would estimate that perhaps from 1933 or '34 to 1938 or '39.

Q. In 1938 or '39, did you have anything to do with representing International in the Lead Industries Association, in white lead in oil or pigments?

A. I did not represent International. I believe that I was aware that they were conducting a campaign to further the use of white lead in oil.

Q. Did you attend any meetings of the association?

A. I attended one meeting at which, I believe, we discussed the media for advertising.

Q. Do you know of any discussion ever taking place before any group of the Lead Industries Association with reference to your advertising of your white lead as whiter than competitors' white lead?

A. I don't recall of any.

3577 Q. No discussion of it in your presence?

A. Well, there wasn't any discussion of it in that one meeting at which I was present.

Q. Then you don't know of any other meeting at which some discussion might have taken place?

A. No, I don't.

Mr. Wright: I have no further questions.

Redirect Examination by Mr. Gardiner

Q. Mr. Hurless, referring back to your activities as a salesman at East Chicago, did you sell any products for any of the companies that were mentioned besides white lead in oil and dry white lead?

A. Will you repeat the question, please?

Trial Examiner Norwood: Read it.

(The pending question was read.)

A. When I was a salesman selling dry white lead and white lead in oil, I also sold zinc oxide.

By Mr. Gardiner:

Q. Over what period did you sell zinc oxide?

A. Well, I sold zinc oxide for the same period of time that I sold lead pigments.

Q. You have testified, Mr. Hurless, that you have made sales on behalf of Anaconda Sales Company, Anaconda Lead Products and International. So far as you know, 3578 was there any reason why there could not have been a cost accounting arrangement so that your services were charged to any one, segregated and charged to any one or all three of those companies?

Mr. Wright: I object to that question, if Your Honor please.

Mr. Gardiner: On cross-examination the question was raised several times as to whether or not this witness worked for one of these companies, and he testified that he sold material for them. I am merely bringing out the fact or attempting to bring out the fact that he could have worked for those various companies and been compensated by one company.

Mr. Wright: The question wasn't whether or not there was such an arrangement.

Trial Examiner Norwood: I think the question is objectionable for several reasons. One is that you asked him what could have possibly been there, whether or not such a situation could have obtained, and also it was a leading question. I think I will sustain the objection. You may bring out just exactly what the circumstance is by some other question.

By Mr. Gardiner:

Q. Were you at all times at East Chicago paid by International Smelting & Refining Company?

A. As I recall, the pay checks were those of the 3579 International Smelting & Refining Company.

Q. Do you know if there was any allocation as to your salary between the various companies for which you worked?

A. There may not have been any direct allocation of salary, but my understanding is that we would charge the other—for example, the Anaconda Lead Products Company,—so much selling expense in which there would be some charge for salary.

Mr. Wright: I object to that, Your Honor, as to what his understanding is. He is not tesifying as to facts.

Mr. Gardiner: If Your Honor please, there was a lot of testimony by this witness both on direct and cross as to understandings, beliefs, and so forth.

Mr. Wright: We are talking about something which can be ascertained correctly, Your Honor. This is not a matter which needs to be proved by speculation.

Trial Examiner Norwood: Objection overruled.

By Mr. Gardiner:

Q. When you sold white lead in oil in the par zone, what consideration was given to the freight to the points within that zone in computing your price?

A. No consideration was given to it.

Q. How did you arrive at your prices for the par zone?

A. The only way we arrived at our prices for the par zone was by establishing what our competitors' prices were and setting our prices accordingly.

3580 Q. Were your sales of white lead in oil at any time computed on the basis of your freight rates?

A. No.

Q. When you say that you allowed freight to a destination, what did you mean by that?

A. I meant that we actually paid the freight from East Chicago to the point of delivery.

Q. In the par zone, when a customer purchased white lead in oil, what did he pay for it, above the list price?

A. For Example, if the price for white lead in oil in the par zone was 10-½ cents per pound for 100 pound containers, that is what he paid, less his cash discount if he took it within the cash discount period.

Q. And was that true in the other zones, with the exception that the differential was applied within those zones?

A. That is correct.

Q. A moment ago in answer to a question, you said that you figured your cost on your freight in computing your prices. What did you mean by that?

A. I misunderstood the question. What I had in mind then was, if we were figuring production costs, for example, for our own use, we would take an average rate or an average selling cost in figuring those production costs. But in establishing our prices to the customers, our prices were always based on competitive prices, and we did not 3581 figure them by including the freight charges.

Q. So that when you say you figured freight rates in computing costs, that was merely for the purpose of determining whether or not you were operating at a profit or a loss or how much of either; is that correct?

A. That is correct.

Mr. Gardiner: May we have a recess for a short period of time, Your Honor?

Trial Examiner Norwood: How long do you want?

Mr. Gardiner: Three minutes.

Trial Examiner Norwood: We will take a three minute recess.

(A short recess was taken.)

Trial Examiner Norwood: The hearing will come to order.

By Mr. Gardiner:

Q. In the sale of white lead in oil, did you compete with a similar material produced by National Lead?

A. Yes.

Q. In your opinion, how did those two compare from the standpoint of quality?

A. We considered that our quality was superior to that of the National Lead Company, and we played that up in our advertising.

Q. Was there any price differential between the 3582 material that you sold and that of National Lead?

A. We sold at a quarter of a cent under the price at which National Lead Company sold. That is for lead in oil.

Trial Examiner Norwood: When was that? All the time?

The Witness: I would say that it was after we became fairly well established in the lead in oil field.

By Mr. Gardiner:

Q. And what was the reason you sold for a quarter of a cent below National Lead?

A. We sold our lead in oil a quarter of a cent below the price of National Lead Company because we had what at that time was a comparatively unknown product—

Trial Examiner Norwood: I think we went into that this morning and explained that fully.

Mr. Gardiner: Very well.

Mr. Wright:: We have gone into that fully.

By Mr. Gardiner:

Q. Did you compete in the sale of white lead in oil with Eagle-Picher?

A. Yes.

Q. What, is your opinion, was the quality of their product with relation to yours?

A. I do not think the quality of the Eagle-Picher white lead in oil was as good as ours, particularly as regards
3583 color.

Q. Did you sell it on the same basis as Eagle-Picher?

A. No; we sold our lead at a quarter of a cent per pound under the price Eagle-Picher charged for their white lead in oil.

Q. And why was that?

A. For the same reason that we sold under the price of the National Lead Company. The Eagle-Picher product was not as well accepted and as well known as the National Lead Product, but it was a very well known product as compared to our comparatively unknown product.

Mr. Gardiner: That is all.

Recross-Examination by Mr. Wright.

Q. About this understanding that you have that your services can be had by other Anaconda subsidiaries and billed to those subsidiaries, will you go into that further?

A. I cannot say that I know what the arrangement was there. But I think that, for example, the sales department would, each month, assess the white lead department, the lead in oil department and the zinc oxide department with a certain amount of selling expense for each department.

Q. Those are departments of International now that you are speaking of?

A. Yes.

3584 And the same would be true of the Anaconda Lead Products Company.

Q. All right. Is that conjecture, or do you know that that was done as to Anaconda Lead Products Company?

A. I could not definitely say that I know it was done as regards Anaconda Lead Products Company, but I can say definitely I know it was done as far as the other departments of International were concerned.

Q. But not outside of International?

A. I cannot definitely say. I believe it was, but I cannot definitely say so.

Q. Where are the main offices of International?

A. In New York City.

Q. 25 Broadway?

A. Yes, sir.

Q. That is the office that is listed here on the price card such as Commission's Exhibit 661-Z-193, as a district office?

A. At that time, we had a district sales office at 25 Broadway, but later it was moved to the Graybar Building, and was in the Graybar Building until we discontinued the manufacture and sale of lead pigments.

Q. I call your attention to 61-Z-194, which is in October, 1939. It shows the district office at 25 Broadway.

A. That is correct.

Q. That is the main office of the Anaconda Copper
3585 Mining Company, is it not?

A. Yes, sir.

Q. Now, do I understand, Mr. Hurless, that it has been your experience that you have been handling the sale of these pigments, and that your prices as far as your company is concerned, are set by your competitors? That is, you follow what your competitors do?

A. Our prices were based on what our competitors were doing.

Q. Yes. And those have been the same prices in so far as the dry product is concerned?

A. Yes.

Q. And the difference between that and white lead in oil was in effect that you would compensate the dealer 25 cents per hundred more than your competitors; is that correct?

A. That is correct.

Q. You consider that your company has had freedom of—

Mr. Gardiner: If Your Honor please, I object to that conclusion on the part of attorney for the Commission there. He says that we in effect give the dealer a compensation of 25 cents on the dollar more.

This witness has testified that there is no limitation on what the dealer sold his material for. Whether or not he elected to sell it for the same price as our competitors or at a different price was entirely in his province.

Mr. Wright: I used the words in that question, 3586 Your Honor, that the witness used himself on his direct testimony this morning.

Trial Examiner Norwood: Objection overruled.

By Mr. Wright:

Q. Do you consider that your company has a complete freedom of action in this industry as far as prices are concerned?

A. Well, we set our own prices.

Q. Well, now, you stated with this one exception that they are the prices that are set by your competition.

A. Well, we had the same prices that they were charging, with that one exception.

Q. That is what you mean by freedom of action?

A. We were free to do as we saw fit to do.

Q. In other words, then, you could have set prices lower if you had wanted to, or on a different basis, if you had wanted to, on these various products?

A. Any limitation was really due to conditions such as costs and so forth, not on the part of our competitors.

Mr. Wright: No further questions.

Mr. Gardiner: That is all we have for Mr. Hurley as far as the International Smelting & Refining Company is concerned, and Anaconda. We have no further witnesses at this time.

We would however, like the privilege at a later 3587 date of introducing further testimony.

Mr. Wood: I will have four witnesses tomorrow and Thursday. I would not elect to proceed today.

Trial Examiner Norwood: Is there anything further to come before the Commission today?

(No Response.)

Trial Examiner Norwood: The conclusion is obvious, that we recess until 10 o'clock tomorrow morning.

The hearing is adjourned until that time.

(Thereupon, at 3:20 o'clock p. m., the hearing was recessed until 10 o'clock a. m., Wednesday, September 17, 1947.)

3588 Hearing Room
Federal Trade Commission
Washington, D. C.,
September 17, 1947.

Met, pursuant to adjourmnent, at 10:00 a. m.

Before:

J. W. Norwood, Trial Examiner.

Appearances:

James D. Ewing and E. Z. DuBose, Attorneys for the Respondent National Lead Company.
(120 Broadway, New York, New York.)

Edmund T. Wood and Richard Serviss, Attorneys for the Respondents Eagle-Picher Lead Company and Eagle-Picher Sales Company.
(American Building, Cincinnati, Ohio.)

3589 Henry E. Gardiner, Attorney for the Respondents Anaconda Copper Mining Company and International Smelting & Refining Company.
(120 Broadway, New York, New York.)

James T. Welch, Attorney for the Respondent The Sherwin-Williams Company.
(815 15th Street, N. W., Washington, D. C.)

Joseph S. Wright and Paul R. Dixon, Attorneys for the Federal Trade Commission.

3590 PROCEEDINGS.

Trial Examiner Norwood: The hearing will come to order.

Pursuant to adjournment on yesterday, the hearing in Docket 5253 is now reconvened for the reception of further evidence on behalf of respondents, in Room 332 of the Federal Trade Commission, Washington, D. C., at 10 o'clock a. m. on the 17th day of September.

The appearances are as follows:

Edmund T. Wood and Richard Serviss representing Eagle-Picher Company and Eagle-Picher Sales Company.

James D. Ewing and E. Z. DuBose, representing National Lead Company.

Henry E. Gardiner, representing Anaconda Copper Mining Company and International Smelting & Refining Company.

James T. Welch, representing the Sherwin-Williams Company.

Joseph S. Wright, representing the Federal Trade Commission.

Will you call your first witness?

Mr. Wood: Mr. W. W. Vasferling.

W. W. VASTERLING was thereupon called as a witness for the respondents Eagle-Picher Company and Eagle-Picher Sales Company, and, having been first 3591 duly sworn, testified as follows:

Direct Examination.

Trial Examiner Norwood: Will you proceed?

By Mr. Wood:

Q. Would you please state your residence and occupation?

A. Kansas City, Missouri; Technical Director, Davis Paint Company.

Q. How long have you been in the paint business?

A. Since August of 1921.

Q. How did you start in the paint business?

A. I started in the paint business with the Campbell Paint & Varnish Division of the Glidden Company, Washing laboratory equipment, and so forth.

Q. How old were you when you started?

A. 15.

Q. What positions have you held since?

A. In the course of the years, I have held the position of technical director of the Campbell Paint & Varnish Company, plant superintendent of the Campbell Paint & Varnish Company, industrial salesman for the Phelan-Faust Paint Company, and technical director of the Davis Paint Company.

Q. How long were you with Glidden?

A. 12½ years.

Q. And how long were you with the second company you mentioned?

3592 A. Nine months.

Q. Nine months?

A. That is right.

Q. And how long have you been with the Davis Paint Company?

A. Since December of 1934.

Q. Will you describe the business of the Davis Paint Company?

A. The Davis Paint Company are essentially engaged in the manufacture of what is known in the industry as trade sales, comprising such products as exterior house paints, architectural enamels, decorative enamels, and such other allied products.

Q. How do you sell your products?

A. Our products are sold through our own stores, through associate stores, through dealers and direct mail order.

Q. With what companies does the Davis Paint Company compete?

A. With all companies who operate in the same territories in which we operate.

Q. Will you name some of them?

A. DeVoe, Glidden, Sherwin-Williams, DuPont, Armstrong.

Q. How about Montgomery Ward?

A. Montgomery Ward, Sears-Roebuck, Western Auto Supply.

Q. Now, on exterior white house paint, what is the general price range of the products offered in the Kansas City market?

3593 A. You mean the retail market?

Q. Yes.

A. At the present time, the retail prices of outside white in the Kansas City area range from $4.33 per gallon to $5.34 per gallon.

Mr. Wright: Your Honor, I move to have the answer to that last question stricken, because the present market price of paint in the Kansas City area is certainly irrelevant and inadmissible to this proceeding. The question relates to a period of time considerably subsequent to the date of the amended complaint.

Trial Examiner Norwood: He may want that as a basis of comparison. Let us see what he has to say.

Mr. Wood: It seems to me, Your Honor, that that is just simply background of the general competitive conditions.

Trial Examiner Norwood: I will overrule the objection. You may ask the question.

By Mr. Wood:

Q. Over a period of years, what have been the prices of exterior white house paint in the Kansas City market, if you remember?

A. I would say prior to 1942, the retail prices were in the neighborhood of $2.95 to $3.25.

3594 Trial Examiner Norwood: Is that outside paint that you are talking about?

The Witness: That is correct.

By Mr. Wood:

Q. Has there been over a period of years a spread in the prices of exterior white house paint?

A. Yes, there has.

Mr. Wright: Your Honor, I am going to object to further questions along this line regarding the price. This witness has not been qualified as an expert in marketing problems. By his own testimony, most of his time, if not all of it, has been spent as a technical director in the production of paint.

There has been no qualification of him as an expert in marketing or sales of paint. And these questions are calling for opinion answers, not related to his own experience.

Trial Examiner Norwood: I do not want this witness to give an opinion answer. He may tell us about the prices if he knows them. I want him to answer them of his own knowledge, and if he does that, whether he is an expert or whether he is a price maker or not does not make any difference.

Were you answering those questions from your own knowledge, Mr. Vasterling?

The Witness: Yes, sir.

3595 Trial Examiner Norwood: I will let him answer. Objection overruled.

By Mr. Wood:

Q. What sort of technical department does the Davis Paint Company have?

A. We have myself and another man who perform more or less the compounding of our products and testing them, and so forth, and making up our formulations.

Q. Do you have any research department?

A. Very well.

Q. What is the nature of it?

A. Our research is limited to making tests on the paints and testing them on exterior exposure panels of our own formulations.

We rely to a great extent on our suppliers for a lot of our technical information.

Q. Will you please explain that last remark in greater detail, that you rely on your suppliers for technical information?

A. Most pigment suppliers maintain large technical staffs. Their knowledge is distributed to paint manufacturers whose own technical staffs are limited due to the fact that the cost of operating the staff is exorbitant to the smaller manufacturers.

The information is given to us in the form of cor-
3596 respondence between ourselves and our suppliers on specific problems, and on problems of general interest is usually broadcast in the form of a bulletin from the supplier.

Q. How does your own technical department compare with the technical department of the Glidden Company, as you knew it at the time you were there?

A. The Glidden Company probably have, or did, at the time I was with them, about 20 or 25 people in their technical department. We have only two.

Q. What suppliers of pigments and materials have furnished the Davis Paint Company with technical service?

A. DuPont Company, the Eagle-Picher Sales Company, and the subsidiaries of the National Lead Company.

Q. What is the general nature of the technical service which they have supplied?

A. The general nature of those services is to bring to us the improvements that they have made in their processes which they hope in turn will help them to sell their products to us, and in that way help us to make our products better.

Q. And has that assistance been of any value to your company?

A. It has been of quite a value to us.

Q. In what respect?

A. It has helped us to improve our product beyond the point that we possibly would have improved it in
3597 the length of time that it takes to do those things.

For instance, they have quite a large research program that developes certain information months or years ahead of the time that we possibly could get that information ourselves.

Q. What effect, if any, does that service have on the competitive position of your company in the industry?

A. It keeps us in a competitive position.

Q. What do you mean by that?

A. Certain of the national manufacturers sell paint. Also, they are manufacturers of the raw material.

We take technical information that they have assembled and incorporate it in our products to put us in the same competitive position that they are with their own products.

Q. Now, what technical service has the Eagle-Picher Company provided the Davis Paint Company?

A. The Eagle-Picher Company has provided the service to us of exposure of paints on their test fences which we have examined from time to time. They have also done formulating for us at our request, and their laboratories at Joplin, Missouri, are always open to anyone in the industry who cares to go there and examine what they have to offer.

Q. Has that service been of any value to your company?

A. Yes.

Q. Do other companies selling the same line of
3598 products as Eagle-Picher Company also offer your
company service?

A. Yes, they do.

Q. What other products do you sell in your retail stores?

A. Will you repeat that question, please?

Trial Examiner Norwood: Will you read it, please, Mr. Reporter.

(The pending question was read by the reporter.)

By Mr. Wood:

Q. —besides paint?

A. We sell novelty items, chinaware, unpainted furniture, brushes, and painters' tools, and step ladders, and so forth.

Q. Do you sell white lead in oil?

A. Yes.

Q. What brands do you carry, in general?

A. Dutch Boy and Eagle.

Q. Why do you carry both?

A. There is a demand for both of them. The master painter usually makes up his mind that he prefers one over the other, and we have both for sale.

Q. Now, in respect to the items that you carry in your stores that you do not manufacture yourselves, do you have any preference in respect to how you buy; that is, whether you buy on a delivered price basis or on an f. o. b. basis?

A. We would much rather buy on a delivered price basis.

Q. Why?

3599 A. Well, there is an accounting problem involved, and when you purchase on a delivered price basis, you know exactly what that price is going to be. When you buy on the basis of the shipping point, you have to assemble all of your invoices, your freight bills, and go through an accounting to get the final figure.

Q. In your own bookkeeping, how do you carry the goods that you have on your shelves?

A. We carry our goods on a delivered price basis.

Q. In other words, on what they cost you on your shelves?

A. That is correct.

Q. Whether you buy f. o. b. or whether you buy delivered price?

A. That is right.

Q. You carry them at what they actually cost there on the shelf?

A. That is right.

Q. Now, on the lead pigments that you utilize in your paint, are they standard, uniform products as offered to you?

A. They are standard products, but they are not always uniform.

Q. In what sense are they not uniform?

A. Their physical characteristics vary, depending upon the process of manufacture.

Q. Could you give us an example?

3600 A. Yes. Two pigments which are offered as basic lead sulphate from two different suppliers would have different oil absorptions. They would produce paints of different viscosities, or body, while they are the same product chemically.

Q. What determines which product you want?

A. That is up to us to determine which is best for our product, the way we want to make it.

Q. Now, what products do you buy from Eagle-Picher?

A. Leaded zinc and basic lead sulphate.

Q. Now, is Eagle-Picher's leaded zinc all alike?

A. No.

Q. What are the differences in the grades, as far as you know them?

A. Eagle have two producing plants of leaded zinc. One of them is located at Hillsboro, Illinois; the other one is located at Joplin.

The leaded zincs which we are purchasing from the Eagle-Picher vary in physical nature depending upon which plant they are produced in. One material, the material that is produced at Hillsboro, is not an identical material physically with the material produced at Joplin.

Q. Are they the same price?

A. Yes, sir.

Q. Which material does your company take?

3601 A. We prefer to have the material delivered from Hillsboro.

Q. Why?

A. Because in our product it gives us the desired properties which we want, which we do not get with material that is delivered from the Joplin smelter.

Q. Which is the closer to you?

A. Joplin.

Q. But you prefer it from Hillsboro, Illinois?

A. Yes.

Q. And that is sold to you at the same delivered price regardless of what plant it is from?

A. Yes.

Q. Now, does this difference in physical characteristics of lead pigments apply to other products or just to leaded zinc?

A. That applies to both pigments.

Q. Have you ever purchased basic lead sulphate from Eagle-Picher in the past?

A. Yes.

Q. Do you find any difference in the quality of that from plant to plant?

A. I do not know.

Q. Have you tried the lead pigments of various pigment manufacturers in your business?

A. Yes.

3602 Q. And do you find that products with the same chemical name have differences?

A. Physical differences.

Q. Are those differences of importance to you as a paint formulator?

A. They are quite important.

Q. Do these pigments have different values to you?

A. Yes.

Mr. Wood: Could we have a five minute recess, Your Honor? I think we are about through with this witness.

Trial Examiner Norwood: We will take a five-minute recess.

(A short recess was taken.)

Trial Examiner Norwood: We will proceed.

Mr. Wright: Your Honor, I want to request a requestration of the witness here.

Mr. Wood: I see no point in sequestering witnesses. Our only other witness is going to testify on a different subject.

Mr. Wright: They are both outside witnesses. Now, I have no idea of what the examination is, but neither of the witnesses is in any way connected with the Eagle-Picher Company.

Trial Examiner Norwood: Off the record.

(Discussion off the record.)

3603 Trial Examiner Norwood: Back on the record.

Mr. Mitchell will withdraw and remain within call. You may arrange with your counsel there. You can go up to the library on the eight floor.

Mr. Wood: We are going to be through with this witness in just a few minutes. I think Mr. Mitchell might as well stay in this corridor.

Trial Examiner Norwood: Proceed.

By Mr. Wood:

Q. What pigment manufacturers solicit your company's business?

A. The DuPont Company, the New Jersey Zinc Sales Company, The Glidden Company, the Sherwin-Williams Company, the National Lead Company, and the Eagle-Picher Sales Company.

Mr. Wood: You may cross-examine.

Cross-Examination by Mr. Wright.

Q. I understand from your testimony that you have been with the Davis Paint Company since 1934 as a technical director, Mr. Vasterling. Is that correct?

A. Yes.

Q. Is that a corporation?

A. Yes.

Q. Its principal office is in Kansas City?

A. Yes.

3604 Q. What was its dollar volume of paint sales, say, in 1942, roughly?

A. Around one million and three-quarters.

Q. A million and three-quarters.

A. Yes.

Q. Over what areas did it sell and solicit business in paint?

A. From the Rocky Mountains to the Atlantic Coast, from Canada to the Gulf.

Q. In other words, you have almost a national distribution except for the Pacific Coast?

A. Yes.

Q. Where are your stores located?

A. We have a company-owned store located in Kansas City, Missouri, Kansas City, Kansas, and Enid, Oklahoma.

A. You just have the three company-owned stores?

A. There are five company-owned stores in Kansas City, Missouri.

Q. I see. Where are your producing plants for paints and related products?

A. We have one producing plant at Kansas City, Missouri, and one producing plant at Cleveland, Ohio.

Q. How does the production of one plant compare with the other?

A. The production of the Kansas City plant is about 33 percent larger than the production of the Cleveland plant.

3605 Q. Is the bulk of your paint sold to dealers for retail?

A. Yes.

Q. What brands or trade names is it sold under?

A. Under the brand name of the Davis Paint Company.

Q. Do you make any different brand material?

A. Yes.

Q. For other marketers?

A. Yes.

Q. Do you make a full line of paint products?

A. We make a full line of products which are generally accepted as trade sales items.

Q. You spoke of having been supplied services by subsidiaries of the National Lead Company.

Who were those subsidiaries that you were referring to?

A. The Titanium Pigments Corporation.

Q. Is that the only one you had in mind when you made that answer?

A. Yes.

Q. What products do you purchase from them?

A. We purchase titanium oxide and titanium-calcium pigments.

Q. Are those pigments in competition with the white leads?

A. Definitely.

Q. Is the Titanium Pigments Corporation one of the principal producers of titanium pigments?

3606 A. Yes.

Trial Examiner Norwood: We will suspend for a few minutes.

(A short recess was taken.)

Trial Examiner Norwood: Proceed.

By Mr. Wright:

Q. You testified, as I recall it, that prior to 1942 your outside lead paints sold in the price range of $2.95 to $3.25 a gallon; is that correct?

A. I testified that outside white house paint sold at those prices.

Q. Yes. In 1936, was that price range about reflective of the market?

A. I do not recall that far back.

Q. Do you recall anything about the competitive situation in the mixed paint business at that time?

A. There were various prices at which the product was sold.

Q. Do you recall prices being in some instances lower than that $2.95 for outside white house paint?

A. I do not recall that they were lower.

Q. Is that generally a competitive item in times of, shall we say, a buyers' market?

A. Highly competitive.

Q. Highly competitive. Is it an item were price may be a determining factor in getting business?

3607 I am speaking now of the period prior to 1942.

A. That would depend upon the efforts of our sales people to sell their customers.

Trial Examiner Norwood: Will you speak just a little more loudly, please?

By Mr. Wright:

Q. You stated that you would rather purchase on a delivered price than on a factory price. As I recall your testimony, that is because of the inconvenience of not knowing exactly what the stuff cost you laid down in your stores; is that correct?

A. Yes.

Q. Did you have in mind there equal prices? Where the cost was equal, would you rather have a delivered price than an f. o. b. price? Is that what you had in mind?

A. What do you base that equal price on?

Q. Let us take an assumption that you could buy a lead pigment out of St. Louis at $9 per 100, and it would cost you $1 per 100 freight to get it into your plant in Kansas City, or you could buy at $10 delivered in Kansas City. In that case, the cost to you would be equal whether you bought it on a delivered price or on a quotation at St. Louis. Was it that situation that you had in mind?

A. As long as the material was delivered to our competitors at the same price.

3608 Q. I am asking you whether—

Mr. Wright: I move that that answer be stricken as not responsive.

Mr. Wood: No, the answer was responsive. The question is a difficult question.

Trial Examiner Norwood: Read the answer.

(The answer was read by the reporter.)

Mr. Wright: The question, Your Honor, went to what he had in mind when he said that, and I was trying to bring out from him whether he had in mind that the f. o. b. plant price and delivered price were equal, and that he would prefer that.

Trial Examiner Norwood: You read that a little to fast for me. Will you read it again?

(The answer was again read by the reporter.)

Trial Examiner Norwood: I think he might explain that further.

Mr. Wright: It had absolutely no relation—

Trial Examiner Norwood: You mean that you would prefer the delivered price as long as your competitors had their goods delivered at the same price; is that right?

The Witness: Yes.

Mr. Wright: Your Honor, I must object to the answer to my last question. It had absolutely no relevancy to the point that I was trying to establish from this witness.
3609 I had not brought in competitors in any way in this matter.

I asked him simply whether, when he answered that he would prefer delivered prices, if he had in mind that in that preference the f. o. b. plant price and the cost of getting it would be the same as the delivered price. It has nothing to do with his competitors in any way.

Trial Examiner Norwood: Now, you asked a further question. But he qualified his answer by saying—

Mr. Wright: It was no answer to my question.

Trial Examiner Norwood: He qualified his answer, yes, to your question by saying that he would prefer the delivered price in those cases where his competitors got the same price. And you were questioning on a further matter.

Mr. Wright: Your Honor, I must except to my cross-examination's bringing in matters that counsel must put on on direct.

Mr. DuBose: What is that?

Mr. Wright: Or must establish on direct.

Trial Examiner Norwood: I think the answer may stand. I will deny the motion.

By Mr. Wright:

Q. Mr. Vasterling, let us take a hypothetical situation now.

We will assume that you have your option of buying basic lead carbonate either at $10 per 100 laid down in your Kansas City plant or $9 per 100 f. o. b. St. Louis.
3610 And we will assume for this purpose that the freight rate in St. Louis for a car at your siding in Kansas City is 75 cents per 100, so that by purchasing it under St. Louis f. o. b. price and paying the freight, you can obtain the material at 25 cents per 100 cheaper then at a delivered price.

In that instance, which would you prefer?

Mr. DuBose: I object on the ground that that is a hypothetical question, based upon a set of facts to which there is no proof.

Trial Examiner Norwood: Objection overruled. Answer the question.

The Witness: Economically, it would seem that the 25 cent saving would be advantageous, but we are going to ship the product which we make right back into the territory from which that lead is shipped from, and it may be offered to a paint company right next door at no freight at all. And if we do not have an equal price to what they have, then we are not in competition with them.

Mr. Wright: Your Honor, I move that that answer be stricken. It is argumentative and not responsive. It was in answer to my question as to which he would prefer.

Mr. DuBose: Your Honor, that was a hypothetical question that called for an opinion answer, which the witness gave.

3611 Mr. Wright: The witness' answer related to his practices in shipping a finished product after it had been manufactured.

Trial Examiner Norwood: The witness gave his answer and explained his answer.

Mr. DuBose: Certainly.

Trial Examiner Norwood: I think we might just as well get his complete idea about this thing, about his prices, and why he prefers them.

He says in substance that he does not prefer to have it laid down in his mill at 25 cents cheaper because he has to ship it right back to the source of the raw material.

Is that the substance of your answer?

The Witness: Yes, sir.

Trial Examiner Norwood: Then he has indicated to you that he did not prefer to save that amount. Now, you can ask him anything else you want.

By Mr. Wright:

Q. Was that your answer, if you had the opportunity of purchasing your lead pigments by that means at 25 cents cheaper than you now can, that you would prefer to not take that saving? Answer that yes or no, please.

A. Yes.

Q. You would prefer to take it?

A. We would not prefer to take the saving.

Q. Irrespective of what your practice might be 3612. on your finished product?

A. Yes.

Q. How big would the savings have to be in purchasing on f. o. b. and paying freight before you would find you would prefer it over buying on the delivered price—50 cents a hundred or a dollar a hundred?

A. Well, we prefer to buy on a delivered price that we feel is being given to others as well as ourselves.

Mr. Wright: Your Honor, I move that that answer be stricken as not responsive, and the witness be requested to answer the question.

Trial Examiner Norwood: Read the question and answer first, and then counsel may speak.

(The question and the answer were read by the reporter.)

Mr. Wright: The question, Your Honor was at what point, if any, would the saving overcome his preference. He has already stated his preference.

Mr. DuBose: He has not completed his answer, if Your Honor please.

Trial Examiner Norwood: I wish you would complete your answer and tell us how big the savings would be to induce you to prefer the mill price and pay your own freight.

The Witness: Well, that is an awfully hard question to answer, because the cost of one single item in a product is reflected, of course, by the delivery price. It would 3613 take a considerably lower price to reflect any appreciable cost in a gallon of paint.

Now, economically you might say we would be foolish not to accept 25 cents or 50 cents a hundred, but it gets back to the same argument that we still have to ship our product back into a territory where that material is produced.

Trial Examiner Norwood: Well, what difference would that make?

The Witness: Well, if the lead were shipped, as inferred, on a mill plant basis, we would be in competition with other paint producers who are located nearer to that producing mill, and there the freight rate to their plant would be less than ours and would give them a lower delivered price.

Trial Examiner Norwood: Now, in case you save that 25 cents, wouldn't that give you a competitive advantage?

The Witness: Not if the company that were located half our distance from the mill were going to have 37.5 cents.

By Mr. Wright:

Q. Then I take it your answers to these questions are based not so much on your own reluctance to accept the 25 cents, but on the basis of your fear—that is, a part of that hypothetical situation I put to you—that people in St. Louis would be purchasing that lead at $9 a hundred with no freight at all?

A. That is correct, and we are in competition with
3614 those people.

Q. So that your reluctance is based on that competitive situation, and not on your desire to pass up any saving that you might effect in the cost of your materials that go into paint?

A. Well, I think I have stated our position.

Trial Examiner Norwood: Well, answer his question.

Mr. Wood: Read the question.

(The pending question was read by the reporter.)

The Witness: Yes.

By Mr. Wright:

Q. Mr. Vasterling, do the suppliers of the so-called white leads offer them to you in various different grades or standards for different purposes?

A. Yes.

Q. Do you recall the different grades of basic carbonate that are offered say by the National Lead Company?

A. Oh, I think they have a product called 111 and 333.

Q. What are the differences in those products, can you state?

A. The differences are in the oil absorption of the product and the amount of body that they will give to a paint, physical properties that they would give to a paint.

Q. Aren't there also differences as to he tinting strength or hiding?

There could be.

3615 Q. Well, those are made for particular purposes,
then, aren't they? Those physical differences are calculated in advance by the manufacturers to serve specific purposes in the paint grinding industry?

A. Yes.

Q. Do other suppliers of basic carbonate attempt to make similar differences in their products to meet those same different requirements?

A. Yes.

Q. So that is it reasonable to say if you want a high oil absorption basic carbonate, you can get it not only from National, but from Eagle-Picher or other suppliers?

A. By comparison with the standard product that they manufacture, yes.

Q. So that while there are physical differences in the products various manufacturers offer similar differences in their product to meet similar purposes or requirements by paint grinders?

A. Yes, but a product offered in direct competition with another product may also have physical differences.

Q. Well, as far as basic carbonate is concerned, can you illustrate?

A. Yes, as far as basic carbonate is concerned.

Q. Well, will you tell us what you mean?

3616 A. Well, if you had the counterpart of Eagle-Picher's basic carbonate again the National Lead Product, you would find differences in the way it reacted in your paint system or formulation. While they would be offered to you as the same product of a competitive nature, in your own system or type of formulation they may give you differences.

Q. So that you would have to make slight adjustments in your manufacturing processes and formulations to account for those differences?

A. That is correct.

Mr. Wright: I have no further examination.

Trial Examiner Norwood: Any redirect?

Redirect Examination by Mr. Wood.

Q. Can you state briefly the history of the Davis Paint Company?

A. The Davis Paint Company was started roughly about 1922 by its present president, Mr. B. J. Davis, with an investment of under $2.00.

The company has grown since that time and expanded to the point where we have our own producing units, and are producing products in the neighborhood of a million and a half gallons a year since that time.

Q. About how many paint manufacturers are there in the United States, approximately?

A. Approximately 2500.

3617 Q. Now, when you use the term "mixed paint," What do you mean?

A. The term "mixed paint" relates to a product that is sold to the ultimate consumer in applicable form. That is to say that very little or no additional ingredients need be added for the application of the material.

Q. Now, what is the history of the mixed paint business?

A. The history of the mixed paint business has been one of bettering the product since their inception a good many years ago, I think around 1915 or '16 and was in direct competition for many years with white lead in oil, which was its chief competitor.

The quality of the product has been increased as time has gone on until we believe that the ready-mixed paint is an equal to white lead in oil, if not better, when it is properly compounded.

Q. When did titanium come into the market as a pigment to be used in mixed paint?

A. About 1921.

Q. Now, prior to that, what paints were used most generally for outside house paints?

A. Lead in oil was used quite a little, and paints that were prepared from leaded zinc and lithopone.

Q. What is the historical position of basic lead carbonate in oil in the paint industry?

3618 A. You mean as to the amount that is sold at the present time?

Q. No, historically, I said, in the past.

A. Well, lead in oil was an accepted product by the master painters for a good many years as a criterion to shoot at for a good surface coating.

Q. Over what period of years would you say?

A. Oh, possibly 70, maybe more.

Q. What is its present position? That is, what is the present position of lead in oil?

A. The present position of lead in oil is that its use is curtailed greatly by the acceptance of the buying public of the ready-mixed paint products.

Q. Are the ready-mixed paint products in competition with lead in oil?

A. Yes.

Mr. Wood: That is all.

Recross Examination by Mr. Wright.

Q. These 2500 paint manufacturers that you spoke of, Mr. Vasterling, do those include a very large number of small manufacturers who have relatively local distribution?

A. Yes.

Q. Who is the largest manufacturer of mixed paint in the United States?

3619 A. I believe Montgomery Ward is.

Q. The largest manufacturer?

A. Of ready-mixed paint.

Q. How does Montgomery Ward compare with Sherwin-Williams?

A. Well, I haven't seen figures recently on their production. I don't think I am qualified to answer that question.

Q. I take it from your answer, then, that you consider Montgomery Ward a larger manufacturer of paint than Sherwin-Williams?

A. Of outside house paint.

Q. I am talking about paint generally, in the field of paint.

A. Well, I would have to see some figures to answer that.

Q. You don't know?

A. No.

Mr. Wright: No further examination.

Mr. Wood: Thank you very much. (Witness excused.)

Mr. Wood: May we have a five-minute recess?

Trial Examiner Norwood: We will recess for five minutes.

(A short recess was taken.)

Trial Examiner Norwood: You may proceed.

Mr. Wood: Mr. Mitchell, please.

• • • • •

J. O. MITCHELL was thereupon called as a witness
3620 for the respondents Eagle-Picher Lead Company
and Eagle-Picher Sales Company and, having been
first duly sworn, testified as follows:

Trial Examiner Norwood: Give your full name.

The Witness: J. O. Mitchell.

Direct Examination by Mr. Wood.

Q. Will you please state your residence and occupation?

A. Kansas City, Missouri; manufacturer of storage batteries.

Q. What company?

A. American Battery Manufacturing Company.

Q. How large is the American Battery Manufacturing Company?

A. We have two different companies. The Kansas City company will do in the year we are in now close to about a million dollars worth of business.

Q. The Kansas City company?

A. Yes.

Q. And what is the other company?

A. The other company is the American Battery Products Company, St. Paul, Minnesota.

Q. And how big a business does it do, about?

A. It will do this year about $600,000 worth of business.

Q. Will you please give us a brief history of your companies, that is when they were started and how they were started?

A. We started in Kansas City in about 1936. We
3621 bought out a company that was bankrupt, and we
continued with it in the same way, and changed our
sales policy slightly.

Q. By continuing in the same way, you don't mean you continued in bankruptcy?

A. No.

Q. Now, in 1936 was your company a carload buyer of lead oxide?

A. No, it was a truckload buyer.

Q. Is it a carload buyer now?

A. A carload buyer now, yes.

Q. Has the business of your company increased between 1936 and the present time?

A. Yes.

Q. By about how much?

A. Oh, I would say from 1936 we did maybe $30,000 worth of business, and have increased from $30,000 up to about a million dollars worth of business.

Q. Now, what companies call on you to solicit your business in the sale of lead pigments, that is, battery oxides?

A. National Lead, and I guess all the different oxide companies at one time or another were trying to get our business and called fairly regularly. National Lead and Eagle-Picher are the two that fight over it the most.

Q. And are their products exactly similar to one another?

A. No, they are very different.

3622 Q. What are some of the differences?

A. Well, with Eagle-Picher oxides, the main reason we use them is that they have what is referred to as a cold mix. We can mix our oxides with water, mix them in about two minutes, and after the oxide is used, after the plate has been made, the plates can be put in the battery within a matter of two or three hours. When we take that same oxide to the forming room, it can be formed and charged in one operation. We don't have to dump the battery and put in a different electrolyte and start over again.

Trial Examiner Norwood: Are the other products different from that?

The Witness: Very different.

Now, take the National oxide, you have to mix it with acid to start with. If you put acid and water together, you have got a heating action, and it takes about thirty minutes to mix the oxide. Then that plate cannot be used for two or there days.

In the forming room you have to charge the battery with one particular kind of acid, the battery has to be cleaned out, dumped and refilled with another acid for the final charge.

By Mr. Wood:

Q. Do the National salesmen say that their oxides are better than Eagle-Picher's?

A. Well, as time goes on, one company will be 3623 ahead for a while, the other company will take a big stride and be ahead of the other.

Q. At the present time, whose oxides do you prefer?

A. I prefer Eagle-Picher's.

Q. Have you ever had any technical assistance from members of the Eagle-Picher organization?

A. A lot.

Q. What has been the nature of it?

A. Well, they have developed first a plate dryer for us, a processor. When plates were pasted they had to be handled individually and put into ovens and cooked overnight, and then taken out of these trays and stacked. They developed a machine that is connected into the pasting machine, and that is all done automatically. The plates come right straight through and can be immediately stacked, which saves a lot of labor.

Q. Has that helped your company?

A. Yes, that particular machine saves us several hundred dollars a month.

Q. What other services, if any, has Eagle-Picher performed for you, services of a technical nature?

A. They run a constant testing for us on batteries. We send our batteries down there periodically for all different kinds of tests and ways to improve the batteries.

We also send other material down, too.

3624 Q. Does your company maintain a research department of its own?

A. No.

Q. Why not?

A. Well, we can get that from Eagle-Picher, so we don't see any reason to pay for one ourselves.

Q. Are you in competition with any of the larger battery companies?

A. We are in national competition with everybody that make batteries.

Q. Are you in competition with Willard, Exide, Electric Auto-Lite, and companies of that general type?

A. Yes.

Q. Do you know whether or not those companies have research organizations?

A. I naturally assume that they all have research laboratories. I don't know the extent of them.

Mr. Wright: I move the answer be stricken, Your Honor. It isn't based on the witness' own knowledge, but is an assumption.

Trial Examiner Norwood: Motion allowed.

By Mr. Wood:

Q. Does the technical service supplied to you by Eagle-Picher assist you in competing with the larger battery manufacturers?

3625 A. Very much so.

Trial Examiner Norwood: What is your matter of pricing?

The Witness: Retail-wise, while we have no retail price we have a suggested retail price varing from $20 to $30.

By Mr. Wood:

Q. Now back to 1936, did both National and Eagle-Picher solicit your business?

A. Yes.

Q. Did they each offer you technical service?

A. No.

Q. Which one did not?

A. Eagle-Picher offered us and National didn't.

Q. Does National now offer technical service?

A. Yes. I don't think it is of the same type, or as extensive, because it is a different part of the country.

Q. What men in the Eagle-Picher Company have given you the technical service to which you refer?

A. Mr. Chubb, mainly; Mr. Briggs and Mr. Harner, three of them.

Q. Have you ever visited the Eagle-Picher laboratory at Joplin?

A. Yes.

Mr. Wood: Mr. Welch has one question to ask the 3626 witness.

By Mr. Welch:

Q. Mr. Mitchell, does Sherwin-Williams ever try to sell you battery oxides?

A. No.

Mr. Welch: That is all.

Mr. Wood: You may cross-examine.

Trial Examiner Norwood: Cross-Examine.

Cross-Examination by Mr. Wright.

Q. Where or over what geographical area principally do you sell your batteries, Mr. Mitchell, and I am talking now of the Kansas City plant.

A. Arkansas, Oklahoma, Missouri, Kansas, Iowa and Nebraska.

Q. What is your principal distribution area from your St. Paul plant?

A. In the neighboring States, including Minnesota, North and South Dakota, and the northern part of Iowa and Nebraska.

Q. Did you acquire both of these plants at the same time, or vice versa?

A. No, we acquired the Kansas City plant in 1936, and the other plant was acquired about a year ago.

Q. Now, back in 1936 when you started the Kansas City plant, you stated that you purchased on a truckload basis from Eagle-Picher. Is that correct?

3627 A. That is right.

Q. Is that the five-ton price that you are referring to?

A. Yes.

Q. That is generally higher than the carload price, is it not?

A. Yes, I think it is a little higher.

Q. When did your purchase become such that you were eligible for a carload price, from the point of time?

A. As I remember, it was in about 1937 or '38. I cannot remember the exact date.

Q. Did you find it to be any competitive advantage to you to be able to qualify for that lower price in carload purchase?

A. Always with any saving you are naturally that much better off.

Q. Back in that period of time from '36 to '38, what was the competitive situation on batteries as to prices?

A. You mean the battery prices themselves?

Q. Yes, of your competitors, the prices that you had to sell at?

A. Well, our principal trouble then was not so much the matter of price as it was selling the customers. Since we were an unknown company, we had the problem of merchandising. That was our principal trouble back in those days rather than price.

Q. In those days, was it not true that there were
3628 some batteries in the market at extremely low retail
prices?

A. That is right.

Q. Sears-Roebuck, Montgomery Ward?

A. Yes.

Q. Did you encounter competition from Bowers Battery Company in that area?

A. Bowers sold in that area for about a year, but I have forgotten what year it was—1940 or '39.

Q. Is Grant Storage Battery Company of Minneapolis a competitor?

A. Yes, they operate through our same territory.

Q. In that period of '36 to '39, what were the price ranges of Grant? Were they low or high in comparison with the average?

A. I would say that on certain types of accounts they were high, and on certain types of accounts they were low.

Q. Can you explain that?

A. Well, batteries are normally sold with list, dealer and job prices, the three schedules. Grant had a price lower than the dealer but higher than the jobber. Where certain other companies will operate between jobber and dealer, they went about half way in between with a one-price deal.

Q. Did you find it necessary in that period of time when you first started, say from '36 to '40, to manufacture and sell a light, cheap battery at a low price?

3629 A. Yes.

Q. What kind of a battery was that?

A. Well, that is the way you describe it, a light cheap battery.

Q. What competition forced that?

A. Everybody, including ourselves. You know the old cycle where everybody forces the other person to do it.

Q. It was on a price basis that you were forced to do that?

A. Yes.

Q. What was your margin of profit on that battery in that period of time?

A. I don't remember the exact margin on it, but it was practically nothing, or maybe a loss. I don't remember the exact profit, but it was the same as no profit at all.

Q. Back in that time, was a matter of saving five to ten cents on the material cost of the battery of any importance to you?

A. No. Our principal trouble in those days was not a matter of price as much as it was a matter of selling the people on the idea that we had a good product and knew how to make a good product.

Q. Did the prices which you set on your battery have any relation to that?

A. Well, this particular battery, this light, cheap battery we mentioned—of course our idea was, and 3630 everybody else's was, to hold that sale to a very minimum. We only sold a few of those. They were referred to as price leaders.

Of course if we made all our batteries that way, we would have gone broke, but we kept down to a small percentage of them.

Mr. Wright: I have no further questions.

Mr. Wood: Nothing further.

Trial Examiner Norwood: Thank you, Mr. Mitchell. (Witness excused.)

Mr. Wood: May we go off the record?

Trial Examiner Norwood: Off the record.

(Discussion off the record.)

Trial Examiner Norwood: On the record.

We will recess until 10 o'clock tomorrow morning.

(Thereupon, at 11:40 o'clock a. m., the hearing was recessed until 10 o'clock a. m., Thursday, Septemnber 18, 1947.)

3631

Hearing Room,
Federal Trade Commission,
Washington, D. C.,
September 18, 1947.

Met, pursuant to adjournment, at 10:00 a. m.

Before:

J. W. Norwood, Trial Examiner.

Appearances:

James D. Ewing and E. Z. DuBose, Attorneys for the respondent National Lead Company. (120 Broadway, New York, New York.)

Edmund T. Wood and Richard Serviss, Attorneys for the Respondents Eagle-Picher Lead Company and Eagle-Picher Sales Company. American Building, Cincinnati, Ohio.)

3632-A Henry E. Gardiner, Attorney for the Respondents Anaconda Copper Mining Company and International Smelting & Refining Company. (120 Broadway, New York, New York.)

James T. Welch and Robert Mathis (Davies, Richberg, Busick & Richardson), Attorneys for the Respondent The Sherwin-Williams Company. (815 15th Street, N. W., Washington, D. C.)

Joseph S. Wright and Paul R. Dixon, Attorneys for the Federal Trade Commission.

3632-B

PROCEEDINGS

Trial Examiner Norwood: The hearing will come to order.

Pursuant to adjournment of yesterday, the hearing in Docket 5253 is now reconvened in Room 332, Office of the Federal Trade Commission, Washington, D. C., at 10:00 o'clock a. m. on the 18th day of September, 1947.

The appearances are as follows:

Joseph S. Wright appearing for the Federal Trade Commission..

Edmund T. Wood and Richard Serviss appearing for the Eagle-Picher Company and Eagle-Picher Sales Company.

E. Z. DuBose appearing for the National Lead Company.

James D. Ewing, appearing for the National Lead Company.

Call your witness, Mr. Wood.

Mr. Wood: Mr. Bowlby.

J. M. BOWLBY was thereupon called as a witness for the respondents Eagle-Picher Lead Company and Eagle-Picher Sales Company and, having been first duly sworn, testified as follows:

Direct Examination by Mr. Wood:

3633 Q. Will you please state your residence and occupation?

A. I reside in Cincinnati, Ohio, and am president of the Eagle-Picher Company.

Q. How long have you been president of the Eagle-Picher Company?

A. Since September, 1941.

Q. What was your business connection prior to that time?

A. For the preceding 20 years, I had been a member of the partnership of Barrow, Wade, Guthrie & Company.

Q. And what is your business?

A. Certified public accountants.

Q. Did they work for the Eagle-Picher Company under retainer?

A. They were the independent auditors of the Eagle-Picher Company from about 1926.

Q. Can you name some other typical plants of your firm?

A. Yes. Babcock & Wilcox; Island Creek Coal Company; New York, Ontario & Western Railroad Company—a large group of important companies, since the firm was the oldest accounting firm in the United States.

Q. And how many cities in the United States did you have offices, appoximately?

A. I would say 12 or 15.

Q. Will you please tell us what your education was, Mr. Bowlby?

3634 A. I graduated from college as a mechanical engineer and followed that profession for about five years, and I then entered into commercial and investment banking, and during that time attended night school and took a course in accounting and a course in law.

Q. Now, before becoming president of the Eagle-Picher Company, what, if any, was your connection with the Eagle-Picher Company?

A. From 1930 on, I was the partner in direct charge of the accounting work for the Eagle-Picher Company. During the depression I expanded the activities of the Chicago office of Barrow, Wade, Guthrie & Company, of which I was then senior partner, into the industrial management field, and commencing with 1936 I served the Eagle-Picher Company as a management consultant.

Q. Now, as management consultant to Eagle-Picher, did you at any time make a survey of the company's business?

A. Yes, I made a survey, a very extensive survey in 1936 and 1937.

Q. Did you make any recommendations to the company?

A. Yes, quite a number.

Q. Were they followed by the company?

A. To a degree at the time, not in full.

Q. What in general were the recommendations which the company followed?

3635 A. Oh, probably the principal one was the establishment of the divisional form of organization and operation which has obtained in the company from July 1, 1937, down to the present time.

Q. Will you please explain what you mean by the divisional form of organization?

A. Prior to the inauguration of that form of organization, the company had had one general sales manager who handled the selling staff which sold all of the products of the company, and they had one principal production man; whereas under the divisional form of organization, the division was integrated from top to bottom, and the divisional manager handled both the production and sale of the specific products segregated in the respective divisions.

Q. What are the present divisions of your company?

A. We have the pigment division, the white lead division, the metal division, the metal products division, and the insulation or home conditioning division.

Q. And who are the heads of those divisions at the present time?

A. Mr. Zoller is general manager of the pigment division; Mr. Hayt of the white lead division; Mr. Murdock of the metal products division, and Mr. Carter of the insulation division.

Q. What are your duties and responsibilities as 3636 president of the Eagle-Picher Company?

A. Well, just the normal duties that inure to an office of chief executive of a company of our size and breadth of activity.

Q. Do you attempt to run any of those divisions individually?

A. Oh, no.

Q. Are you familiar with the general policy in those divisions?

A. Yes.

Q. Now, at the time you made the survey for the company which led to the changes of July 1, 1937, did you familarize yourself with the competitive policy of the company to the extent necessary for that survey?

A. I did.

Q. And when you became president of the company in September, 1941, did you further familiarize yourself with competitive policies?

A. I have, since becoming president, kept myself informed on competitive policies of the various divisions.

Q. What was your purpose in familiarizing yourself with those policies?

A. Something that is obviously necessary to an understanding of the business and the establishment of other general policies which are dependent upon the competitive position of the company.

3637 Q. Now, did you at any time find any agreements or understandings between your company and National Lead Company, or any of the other companies engaged in the sale of lead pigments, affecting prices or terms or conditions of sale?

A. No, I never found any such agreements.

Q. At the time you became president of the company, were you concerned in any respect as to whether such agreements existed or not?

A. No, I don't believe it ever crossed my mind that such agreements might exist.

Q. If you had found any such agreements, what would have been your policy in respect to them?

A. Well, I certainly would have looked into their propriety, and if I had found that there were any improper agreements of that nature in existence, I would have taken the necessary steps to terminate them.

Q. Were you particularly conscious at that time of the activity of the anti-trust division of the Department of Justice?

Mr. Wright: Objection, Your Honor. I don't see that that has any relevancy in this matter.

Trial Examiner Norwood: Well, I think that is a leading question.

Mr. Wood: I think it is a proper question, because
Thurman Arnold's campaign was at its height at that
3638 time, and every executive in the country was feeling
very responsible as to his position in regard to the
anti-trust laws; everybody was.

Trial Examiner Norwood: What time was that?

Mr. Wood: September, 1941.

Mr. Wright: Counsel has supplied the answer that he hoped to get from that very leading question.

Trial Examiner Norwood: I think it is a leading question, but I think he may bring out the fact that he kept up with the law and the conditions respecting trade agreements, and so forth.

Mr. Wright: Your Honor, I am not objecting so much because of the fact that it is leading, but it is an absolutely irrelevant matter. Knowledge has no part in this proceeding. The fact that the Sherman Act is on the statute books and has been since 1890 is a well known fact to everyone connected with the business.

Mr. Wood: As president of the respondent corporation, I think the witness should have the greatest freedom in testifying to his own state of mind.

Trial Examiner Norwood: I think they have been allowed in all these cases to state their mental attitude toward this situation. I will overrule the objection. Let him answer.

Mr. Wood: Will you read the question to the wit-
3639 ness, please?

(The pending question was read by the reporter.)

A. Yes, I was.

By Mr. Wood:

Q. Now, what is the general competitive problem of the Eagle-Picher Company?

A. The Eagle-Picher Company is not a leader in any one of its respective lines. In several instances it is second in the field, and in the case of other products it ranks farther down the scale. But I make the point that not being a leader in any one of the lines, it is not in position to dictate the selling price policy in any of the fields in which it operates. It must follow rather than lead.

Q. In the insulation field, who is your principal competitor?

A. There are many. Johns-Manville is probably the principal one.

Mr. Wright: I object to further questions along the line of insulation, Your Honor, as irrelevant and immaterial to this case.

Mr. Wood: I am not pursuing the matter, Mr. Wright. I am just trying to bring out the fact that there is a general problem of the company in respect to which it has a formulated policy.

Trial Examiner Norwood: I think he wants to give 3640 us a complete picture of this company in throwing light on its various activities.

By Mr. Wood:

Q. Now, who is your principal competitor in the sale of zinc products?

A. New Jersey Zinc Company, with some substantial competition from St. Joseph Lead Company and American Zinc, Lead & Smelting Company.

Q. And who is your principal competitor in the sale of lead pigments?

A. National Lead Company.

Q. And who is your principal competitor in the sale of lead products?

A. National Lead Company and Federated Metals Division of American Smelting & Refining Company.

Q. Is it your company's policy to compete in any of these fields by means of price wars?

A. No.

Q. How would you define a price war?

A. A situation in which competing companies are constantly lowering prices to gain a larger segment of the available business.

Q. Now, if the second largest company in a given field commences a price war, what is the probable result, in your opinion?

3641 A. It will lose money and ultimately the more strongly entrenched company will win out in the war.

Q. If you lower a price below your competitor's price, how long is that competitive advantage likely to last?

A. Not any longer than it takes the competitor to lower his price below ours.

Q. Does your company compete with the National Lead Company in the sale of lead pigments?

A. It does.

Q. How does it do it?

A. By endeavoring to maintain a higher quality in its products and to give services to its customers over and beyond that given by its major competitors.

Q. If your company does have superiority of product in this respect to a competitor, is that an advantage to your company?

A. Obviously.

Q. Why, in spite of the fact that you said "obviously"?

The Witness: Will you read the previous question?

Trial Examiner Norwood: Will you read the question?

(The question was read by the reporter.)

The Witness: A superior product available at the same price will sell more readily than the inferior product available at that price.

By Mr. Wood:

Q. Can your competitor match that product, necessarily?

3642 A. Not necessarily.

Q. Has your company engaged in any research activities?

A. Yes, we have very extensive research facilities, both local plant facilities and central research activities.

Q. What if any is the relationship between your research activities and your competitive policy?

A. One of the major objectives of the reseach organization is to strive constantly to improve our products and to work with our customers in producing a product that will meet their requirements or will enable them to improve their products through the use of our products.

Q. Has your company engaged in any institutional advertising?

A. Yes. That is one of the things that I have done since I became president of the company, inaugurated a program of institutional advertising.

Q. What is the general scope of that program, or I had better say, what has been the general scope of that program?

A. It has varied from year to year as to the media employed, but its principal purpose has been to acquaint the business of financial community with the Eagle-Picher group of companies, their financial strength and stability, and incidently, with the products which Eagle-Picher manufactures and which by reason of their limited consumer use are very frequently unknown to the general public.

3643 Q. In what magazines have you advertised, in general?

A. Time, News Week, Collier's, Wall Street Journal, Chicago Journal of Commerce.

Q. Is it your opinion that that type of advertising has any effect on customer acceptance of your products?

A. I think it has a very material effect.

Q. Is that type of advertising intended to increase your business in local areas or nationally?

A. Nationally.

Q. Is it the policy of your company to compete on a national basis?

A. Yes.

Q. Did you read the testimony which Mr. Goetz and Mr. Harner and Mr. Chubb gave before the Commission in July?

A. I have read Mr. Goetz's and Mr. Harner's testimony. I do not recall that I read Mr. Chubb's.

Q. Does their testimony represent the type of service and help which it is your policy to give the customer?

Mr. Wright: Objection, Your Honor. If this witness is going to testify as to the type of activities that counsel is referring to in this question, he should testify to them directly himself rather than by adoption of another witness' testimony when he has not even been in the room when it was given.

Trial Examiner Norwood: I think it would save a
3644 great deal of time to let him adopt it. But if you
object to it, I think that that would be covering too much ground in one question and answer.

Mr. Wood: Mr. Bowlby, as president of the company, is not familiar with all of the details to which those men testified. Now, I did not ask him whether their testimony was true. I asked him whether or not those activities represented the policy of the company which was his purpose.

Mr. Wright: Now, I do not have off hand a recollection of all the activities that those three gentlemen described in that testimony. And I certainly cannot let such a question go by without objection and without having an opportunity of examining that testimony again.

Trial Examiner Norwood: If he is going to adopt the details, I think that would not be admissible at all. If he is going to adopt the general policy which this testimony reflects—

Mr. Wood: That is my point.

Trial Examiner Norwood: That is too much of an opinion. I think it will not take him long to tell us what their general policy is, and I think it is more satisfactory, in the face of an objection.

I think I shall have to exclude it.

Mr. Wood: I think he has testified previously that their policy was to give service, and that that has been 3645 adequately covered by his previous answers.

Trial Examiner Norwood: The testimony of these witnesses and what it reflects already appears in the record, you see. If he wants to add anything to it, I think he can do so especially, you see.

I will sustain the objection.

By Mr. Wood:

Q. Now, what, as you understand it, is your company's general policy in respect to the pricing policy of lead pigments?

A. In general we maintain a differential over and above the price of the basic raw material, that differential varying as between different products.

Q. On a lead pigment such as basic lead carbonate or lead oxide, what determines your company's exact price at any given time?

A. Primarily the price at which the product is obtainable from competition.

Q. What is your pricing policy on products such as leaded zinc, basic lead sulphate, and blue lead?

A. To the best of my knowledge, the same policy maintains in respect to those products.

Q. Are those products made just the same way as the oxides and the basic carbonate?

A. I could not tell you.

Q. What is the opinion of the management of your 3646 company as to the future of the business of manufacturing and selling basic lead carbonate in oil?

Mr. Wright: Objection, Your Honor. I do not think that that is a relevant matter to this proceeding. It requires hearsay, in the second place.

Trial Examiner Norwood: Will you read the question?

(The pending question was read by the reporter.)

Trial Examiner Norwood: I think that he can tell us what his opinion is, if it is relevant, and that is in part of that question.

Mr. Wright: Your Honor, what possible relevance does that have with respect to whether they are discriminating in price?

Mr. Wood: I think the purpose and the policy of the company is always a relevant matter in a case of this type.

Mr. Wright: Now, this is not the purpose or the policy of the company at the time we alleged these discriminations or conspiracies began. This is a projection into the future, which is admittedly quite some time after the initiation—

Trial Examiner Norwood: It is not required as an explanation of the present or past action, and I think I shall have to sustain that objection.

3647 Mr. Wood: Then I will ask the question differently, and put it this way:

By Mr. Wood:

Q. At the time you made your survey for Eagle-Picher in 1936 and 1937, what was your estimate of the position and future of the business of manufacturing and selling white lead carbonate in oil?

A. At that time the use of white lead carbonate in oil—that is in the paste form—seemed to be on the decline.

Q. Has your company ever considered giving up the business entirely?

Mr. Wright: Objection, Your Honor. What relevancy can that have to this proceeding?

Mr. Wood: I think it is rather important to show the company's general attitude.

Mr. Wright: Well, there again what has their general attitude on whether or not they had ever considered staying in the business or leaving it got to do with the specific acts which are charged in this complaint?

Mr. Wood: Well, I do not wish to be accused again of putting words in the witness' mouth by arguing an objection.

I think from the point of view of the testimony yesterday, and the testimony that has been in this case with respect to competition between lead in oil on the one hand and mixed paint on the other, which we conceive to be a
3648 very important matter in this case, I think that issue
in the case clearly makes this testimony relevant.

Trial Examiner Norwood: How are you going to connect this up with any of the issues as to what his view was? I can see how it might be of value in explaining some of his actions here, but I think I would ask him about the actions and ask him the reason for them.

Just bringing out the view unconnected I think is objectionable, and I shall sustain that objection.

Mr. Wood: I will go at the subject matter differently still and I will ask the witness whether or not his company manufactures and sells any paints?

The Witness The company does, through its divisions, subsidiaries and affiliates.

By Mr. Wood:

Q. Is your company at the present time competing in the mixed paint field?

A. To a relatively minor degree.

Q. Has your company made any effort to assist mixed paint manufacturers who bought lead pigments from you?

A. Yes, we have worked with those manufacturers on paint formulations to enable them to improve their products, and expand their volume of business, and thereby obtaining increased sales of our products or the introduction of new products manufactured by us.

3649 Q. Is there competition between mixed paints and white lead in oil?

A. Read the first part of that—is there competition?

Trial Examiner Norwood: Read the question.

(The pending question was read by the reporter.)

The Witness: There is.

By Mr. Wood:

Q. And from the point of view of your company policy, where have your placed your emphasis?

A. Up to the present time, emphasis has been placed on white lead and oil in a finished form, our RTU.

Q. And in what division has that been?

A. It is in the white lead division.

Q. And does that compete with the products manufactured by the pigments division and sold by Mr. Voller's division?

A. Yes, it does.

Q. What in your opinion is the relative importance of the white lead paste in comparison with the RTU?

A. You mean from a volume standpoint in the company's sales?

Q. From the point of view of your future business, as you see it.

Mr Wright: Objection, Your Honor.

By Mr. Wood:

Q. Your future prospects?

Mr. Wright: Objection, Your Honor, on the ground
3650 of relevancy again. I don't see what the future prospects as between two of these lead pigments have to do with the issues that we have at hand.

Mr. Wood: I am perfectly aware that all through this case there has been a great deal of testimony by practically every witness in the case, whether called by the Commission or called by the respondents, that is not directly linked to the most technical aspects of the issues of the case. A great deal is background testimony which we want in the record to give the Federal Trade Commissioners a picture of the industry as a whole, because they are charged with the responsibility of acting in the general public interest, and I do not think that all testimony should be excluded simply because you cannot tie it in closely with the technical aspect of an issue.

Mr. Wright: By counsellor's definition there, any executive or management problem of the Eagle-Picher Company would be relevant and admissible here in this testimony. It has no possibility of connection with the issues in the case. This does not relate to what was in the minds of the people when the system that we are talking about now was established; this is a question that relates to the mind of the man in 1947, his projection for the future.

Trial Examiner Norwood: Well, there are some rather intricate economic questions in this case, and probably
3651 we should admit some evidence here that would be considered not on the issues at all, but afterward, as to the remedy.

We have been inclined when we get the president of a company on the stand, and the company is a respondent, to resolve the doubt in his favor and let him tell us the story about his company. We have always done that through all the anti-trust cases, so unless there is any real positive harm to be done by it, I think that counsel should agree to let these matters in as to what his attitude is.

Mr. Wright: Well, Your Honor, my objection is based on the primary objection of all irrelevant matters, since all it does is serve to confuse possibly someone who may not be familiar with the issues involved as to the record in the case. Furthermore, it burdens the record with a mass of material that may be interesting from the point of view of management of the Eagle-Picher Company, but has nothing to do with this case.

Trial Examiner Norwood: Well, I think that counsel has stated the principal about that, but where these details here appear where the information may be of some probable value, even though it does not apply directly to the issues, I am inclined to resolve the doubt in the company's favor in the matter of letting him tell the whole story of his own business.

I will overrule that objection subject to striking this material if it appears injuriously irrelevant.

3652 Mr. Wood: Will you read the question to the witness, please?

(The pending question was read by the reporter.)

A. I anticipate that the RTU business will be much larger and more attractive than the paste segment of the business.

Mr. Wood: May we have a five-minute recess, Your Honor? I think I am through with the direct examination of this witness, but I want a chance to talk with Mr. Serviss.

Trial Examiner Norwood: We will take a five-minute recess.

(A short recess was taken.)

Trial Examiner Norwood: We will resume. You may proceed, Mr. Wood.

Mr. Wood: You may cross-examine, Mr. Wright.

Cross-Examination by Mr. Wright.

Q. Where are the main offices of Barrow, Wade & Guthrie?

A. The head office?

Q. Yes, sir.

A. New York.

Q. New York. Is that where you maintain your offices as the senior partner in that firm?

A. No; I was senior partner in charge of the Chicago office.

Q. In Chicago?

A. Yes.

3653 Q. How long did you maintain your residence there?

A. From 1922 until 1941, when I went to Cincinnati.

Q. What is this product RTU that you referred to?

A. It is white lead in a ready to use form.

Q. How does that differ from the paste white lead?

A. Paste white lead has only a limited amount of linseed oil added, whereas the RTU, as I understand it, has the full amount of oil and dryers, and any other elements that enter into the finished paint product, so that it is ready to be applied without any further change.

Trial Examiner Norwood: Well, that makes it ready-mixed paint, does it not?

The Witness: Yes, sir.

Trial Examiner Norwood: What is the difference?

The Witness: Except that the RTU is only the white lead itself and it is not made in colors.

Trial Examiner Norwood: I see.

By Mr. Wright:

Q. That is a straight basic carbonate white lead pigment, then, is it?

A. That is correct.

Q. Does the Eagle-Picher Company do any substantial business in the marketing and sale of aggregates and tailings from its operations?

Trial Examiner Norwood: Will you read that 3654 question?

(The pending question was read by the reporter.)

Mr. Wood: I really have no objection to the witness' answering the question, but I feel that I should object on the score of relevancy.

Mr. Wright: Your Honor, I objected originally to testimony about their business in insulating materials and so forth, and I assure you that this will be connected up.

Trial Examiner Norwood: Objection overruled.

A. Yes, we sell the residue from our milling operations, which is customarily known as chats, or tailings.

By Mr. Wright:

Q. What are those products used for, Mr. Bowlby?

A. For railroad ballast and the topping of roads air strips, exhibition grounds, or anything of that kind.

Q. Those are all produced down in your lead producing fields; is that correct?

A. In the tri-state field.

Q. Over what areas do you market those products?

A. They go over a substantial area, because they are sold largely to railroads. However, delivery is made in the immediate vicinity to the connecting road.

Q. And the customer transports it wherever he wishes to use it; is that correct?

A. That is correct.

3655 Q. You sell it, then, f. o. b. at the point of pro-

A. Yes, sir.

Q. Do you attempt to make sales of that product on the eastern seaboard?

A. Not to the best of my knowledge.

Q. On the Pacific Coast?

A. No.

Q. Why don't you seek a national distribution of that product?

A. Because there is an ample outlet among the roads serving the territory where it is produced.

Q. Is that product in competition with aggregates and gravel and other materials used for ballast, such as cinders?

A. I cannot answer that definitely. I assume that it is.

Q. Approximately what is the price per ton at which that product is sold?

Mr. Wood: May it please the examiner, I object to the indefinite continuation of this line of questioning, because it has nothing to do with the issues of the case.

Mr. Wright: Your Honor, I can only assure counsel and yourself that I will attempt to connect this matter up.

Trial Examiner Norwood: This is cross-examination. He may be testing him as to his knowledge of this business.

Mr. Wood: There is no lead pigment involved in any respect.

3656 Trial Examiner Norwood: Objection overruled. Do you want the question read?

The Witness: If you please, Your Honor.

Trial Examiner Norwood: Will you read the question?

(The pending question was read by the reporter.)

A. I do not know.

By Mr. Wright:

Q. Can you state from your experience with the company whether it would be substantially less on a tonnage basis than, for instance, litharge, or red lead?

A. Oh, yes, it is much lower than litharge or red lead, because it is a waste product. I do know that the price varies according to the work that is necessary in cleaning and screening the product.

Q. Would transportation costs on shipping that material any great distance, say, from Joplin to San Francisco, amount to as much as the customary price at which you sell the product?

Mr. Wood: I object to the question as indefinite—"would amount to as much".

Mr. Wright: "As much or more", the question stated.

Mr. Wood: I am sorry. I did not understand it that way.

Trial Examiner Norwood: Is the objection withdrawn?

Mr. Wood: If I understand the question correctly,
3657 I am perfectly willing to have the question asked.

As I understand the question, you asked whether the cost of the freight to San Francisco would be as great as the cost of the product at Joplin; is that it?

Mr. Wright: That is it.

Mr. Wood: He can ask that.

Trial Examiner Norwood: Very well.

A. I would make the assumption that it would be more.

By Mr. Wright:

Q. Is it the policy of the company to seek national distribution on that chat or tailings?

A. No.

Q. Would it be fair to state that the cost of transporting the article from Joplin in the tri-state area would prevent national distribution of the product?

A. Yes, it would probably be fair to make that statement.

Q. Br. Bowlby, you were testifying about the efforts of the Eagle-Picher Company to improve the quality and to obtain quality advantages over competition on these various lead pigments.

From your experience, is it not logical to assume that any marked quality advantage of one product over another would ultimately reflect itself in selling price?

A. No, I would say that hat does not necessarily follow.

Q. What are the alternatives to that?

3658 A. The maintenance of the differential between that product and competitive products.

Q. The quality differential at the same price?

A. Yes.

Q. Is it not fair to assume that over a period of time, that quality differential would become so widely known that the inferior product could not be sold at the same price?

A. No, not necessarily. The inferior product may have ample demand for embodiment in that end product where the highest quality is not required.

Q. Now, let us take a battery of litharge, for instance.

A. Yes.

Q. Assuming that your company could develope a battery of litharge which is superior in many respects to that of the competition on the market—and that is a real superiority now, referred to—is it not logical to assume that the trade becoming aware of those advantages will divert business from the inferior product sold ~~at~~ the same price over a period of time?

A. Yes, for the production of an end use product that required that high degree of refinement.

Q. Your answer was yes, then?

A. With those qualifications.

Mr. Wright: No further cross-examination.

Mr. Wood: I have no redirect.

3659 Trial Examiner Norwood: Are there any further questions?

Mr. Wood: No further questions.

Trial Examiner Norwood: Thank you, Mr. Bowlby. (Witness excused.)

Mr. Wood: We have one more witness, Mr. Hayt, and his testimony will be rather brief. At the end of his testimony, we will have to discuss what we are going to do next, which is primarily up to Mr. Welch. I suggest that we meet at 2 o'clock.

Trial Examiner Norwood: You would rather defer calling this witness until 2 o'clock?

Mr. Wood: I understand the witness is leaving at 3:45.

Trial Examiner Norwood: We can examine this witness, and go along here for a half hour or more, and then we can reconvene at 2 o'clock to discuss the future arrangements.

Mr. Wood: Mr. Hayt, will you take the stand, please?

W. H. HAYT was thereupon called as a witness for the respondents Eagle-Picher Company and Eagle-Picher Sales Company and, having been first duly sworn, testified as follows:

Direct Examination by Mr. Wood.

3660 Q. You are the Mr. Hayt who testified previously in this case?

A. Yes.

Q. And you are employed by Eagle-Picher?

A. Yes.

Q. As manager of the lead in oil division, is that correct?

A. The white lead division.

Q. How long have you been employed by the Eagle-Picher Company?

A. The Eagle-Picher Company and its predecessor, about 33 years.

Q. What have been your duties with the company during the period of your employment?

A. Originally I was a salesman, then a branch manager, then assisant manager in the pigments division, and later a division salesmanager, and then a division manager.

Q. How long have you been head of the white lead department?

A. Since July 1, 1937.

Q. At the time you became head of that department, were there any understandings with National Lead Company or any other competitors with respect to the prices or the terms and conditions of sale of white lead?

Mr. Wright: I object to that question, Your Honor. It calls for facts that may be without this witness' knowledge. It did not require an answer as to whether he himself
3661 knew of any such understandings.

Mr. Wood: May I have the question read, please?

(The pending question was read by the reporter.)

Trial Examiner Norwood: He can only testify as to what came to his knowledge. I don't think he can testify generally as to what everybody in the company did.

Mr. Wood: Well, I will put it this way—

Trial Examiner Norwood: The objection is sustained on that.

By Mr. Wood:

Q. At the time you became head of the white lead department of the Eagle-Picher Company on July 1, 1937, would you have known about any agreements or other understandings with National Lead Company or any of your other competitors in the sale of white lead in respect to prices or terms and conditions of sale?

Mr. Wright: I object to that, Your Honor. The question is would he have known.

Trial Examiner Norwood: I think you had better ask him what he does know, what he did know or what came to his attention.

Mr. Wood: The man became head of the department at that time, and there could not have been understandings without his knowledge.

Mr. Wright: That is counsel's conclusion.

3662 Mr. Wood: Will you read my last question?

Trial Examiner Norwood: I think you should direct the question to his knowledge, and then the circumstances which would indicate that if there were any such thing, he would know about it.

I will sustain the objection to the question in its present form.

By Mr. Wood:

Q. To your knowledge, were there any agreements between your company and the National Lead Company, or any other competitors in the sale of basic lead carbonate in oil on July 1, 1937, or thereafter with respect to prices or terms and conditions of sale?

Trial Examiner Norwood: Answer the question.

A. There were none that I knew of, and none that I heard of subsequently.

By Mr. Wood:

Q. Now, Mr. Bowlby mentioned a product manufactured by your company called RTU. Can you explain in a little more detail just what the nature and purpose of that product is?

A. Well, white lead in oil in paste form is an inconvenient product to use in that it is a semi-finished product, and requires further processing. Although it is in direct competition with mixed pigment paints, the mixed pigment paints reach the user in a form ready to use,
3663 whereas it requires both skill and time to prepare the
white lead in oil for use.

We felt that that was largely responsible for the decreasing use of the product, and therefore wanted to put it in a form that was more readily acceptable to the consumer, which would save him time and eliminate the necessity for skill.

Mr. Wood: Will you mark this for identification, please, as Respondent's Exhibit 196.

(The document referred to was thereupon marked Respondent's Exhibit 196 for Identification.)

By Mr. Wood:

Q. I hand you a document which has been marked for identification as Respondent's Exhibit 196, and ask you if you can state what this document is?

A. That document is an advertisement for Eagle RTU white lead paint and some additional reference to Eagle white lead in oil.

Q. You said the document was an advertisement. I notice at the bottom of the document, "This advertisement will appear in Better Homes and Gardens, April, 1946; American Home, April, 1946."

Is the document an advertisement from a magazine, or a sample of an advertisement that appeared in a magazine?

A. It is a reprint or preprint of the advertisement as it was about to appear.

Q. And did the advertisement so appear?

3664 A. I presume so.

Q. Did your company put out other advertising of generally like nature?

A. Yes, considerable.

Mr. Wood: I offer the document into evidence.

Mr. Wright: Your Honor, I am going to object to this on the ground of relevancy and competency. On its face it has no relevancy to the case. It is incompetent for any purpose that I can conceive of at this point, since it is a proof of an advertisement about which the witness doesn't know anything. He doesn't know whether it was actually run or not.

Trial Examiner Norwood: That is a point well taken.

Mr. Wright: It is a document which he doesn't appear to have had anything to do with the preparation of.

Trial Examiner Norwood: That point is well taken. He has not said it appeared anywhere, but I would admit it to show what the respondent actually represented to the public if there is anything in there that appears to bear on the nature of the competition.

Mr. Wright: Your Honor, assuming now that that is an advertisement that appeared, it appeared subsequent to the date of issuance of the amended complaint.

Trial Examiner Norwood: Objection sustained.

By Mr. Wood:

Q. When did you put RTU on the market?

3665 A. It was first put on the market in 1940, I believe, for a short period, and then with the restrictions on the use of linseed oil that came in late '41, I believe, after a short experimental period it was withdrawn, and then subsequently replaced on the market in 1945.

Q. When in 1945?

A. Early, probably February or March.

Q. And did your company advertise RTU during 1945?

A. I cannot say definitely when the advertising program on RTU started, but probably late in '45.

Q. Do you authorize the advertising put out by your department?

A. The advertising is provided for through a central advertising department which handles the advertising for all divisions, but the division's appropriation for advertising is prepared under my supervision, and all advertising copy is submitted to me for approval and relief.

Q. Was this particular advertising copy ever submitted to you for approval and release?

A. Yes.

Q. And I am referring to Respondent's Exhibit 196.

A. Yes.

Q. And was the publication of this advertising authorized by you?

A. Yes.

3666 Q. Have you ever seen a replica of this advertisement, Respondent's Exhibit 196, appear in any magazine of national circulation?

A. If I have not seen that particular one, I have seen numerous ones substantially the same.

Mr. Wood: Off the record.

(Discussion off the record.)

Trial Examiner Norwood: I will sustain the objection subject to some further agreement between counsel about the matter.

Mr. Wright: Your Honor, I am going to move to strike all the testimony relating to the identification of this exhibit which referred to the contents of same and to counsel's statement which read into the record the contents of same.

Trial Examiner Norwood: Well, I think the record should show all this. I will deny that motion.

By Mr. Wood:

Q. Mr. Hayt, in the sale of your white lead in oil paint, what has been your pricing policy?

A. Well, generally speaking it has been our endeavor to set prices on cost plus a reasonable margin of profit, but in actual practice, the limiting factor was prices obtained by our competitors.

Q. And what competitors do you have in mind?

A. Well, the National Lead Company, Anaconda,
3667 Glidden, Sherwin-Williams.

Q. In general, have you changed price when the National Lead Company changed price?

A. Yes.

Q. How did you know of their price changes?

A. The information comes in very rapidly from our salesmen and sales offices just as soon as the price changes are announced.

Q. Have you always followed the National Lead Company in changing price on white lead paste?

A. Do you mean following them exactly as to the amount of the change?

Q. Yes.

A. No, we have not.

Q. Have you invariably made a change when the National went up in price?

A. I think generally when National has gone up that we have gone up to some extent.

Q. But not necessarily the same amount?

A. Yes, sir.

Q. Now, in respect to your product, RTU, how do you price that product?

A. On the same basis as I described for white lead in oil; that is to say, cost plus a reasonable margin of profit. But there the limiting factor is the competition from the
3668 highest grade ready-mixed paints.

Q. Does National have a product on the market that is comparable to RTU?

A. Not at the present time.

Q. In pricing RTU, do you follow the prices of National?

A. You cannot, if they do not have a product on the market.

Q. I am sorry.

In general, how does the price of RTU compare with the price of a good quality mixed pigment paint?

A. It is considerably higher.

Q. Does your company manufacture and sell a product called basic white lead sulphate?

A. Yes.

Q. Is that in your division?

A. No.

Q. Do you know to whom, in general, that is, what class of trade, your company sells that product?

A. Almost exclusively to paint manufacturers.

Q. The products of those customers are in competition with your RTU?

A. Directly.

Q. Now, in your advertising and merchandising, what is the emphasis between RTU and white lead in oil respectively?

Mr. Wright: I am going to object to that question, unless the time is specified on that, Your Honor. I do 3669 not think it is admissible to talk about such matters subsequent to the complaint.

By Mr. Wood:

Q. You may limit your question to—what is the date of the amended complaint? May, 1946?

Mr. Wright: I am going to take objection to any testimony later than the date of the original complaint in 1943, unless it can be connected up with practices and made relevant to practices prior to that time, because the issues as to the white leads here were drawn at that time.

Mr. Ewing: But there was an amended complaint which superseded the first one, and you certainly cannot limit it to the date of the original complaint under those circumstances.

Trial Examiner Norwood: No.

The fact being, as you bring out, that certain changes were made in the entire matter after the complaint was made, it would probably be considered in connection with the original.

I will overrule the objection to any relevant evidence prior to the date of the amended complaint. I will ask counsel to rephrase his question, and that will meet the other objections.

He did do that, did he?

Mr. Wood: I think I did do that. I said "limit your answer to the date of the amended complaint, to a 3670 period prior to the date of the amended complaint, which was May, 1946.

Mr. Wright: I did not so understand counsel. But if that was the question, I have no objection.

Trial Examiner Norwood: You may answer that question.

Do you want the question repeated?

By Mr. Wood:

Q. It was the question as to the relative emphasis your company placed on the products RTU and white lead in oil paste prior to the date in question.

A. Our emphasis has been placed almost entirely on the RTU product. White lead in oil paste is very much in a secondary position.

Q. What was your reason for placing your emphasis as you did?

A. The RTU is a product that is more acceptable to the consumer, because it reaches him in a more readily usable form, and therefore the prospective potential market is much greater, and the possibilities of prolonging the life of white lead as a business were more probable.

Mr. Wright: Your Honor, I am going to move to strike that question and answer and the one immediately preceding it. It calls for an answer based on emphasis, and that is a very strange and indefinite term and could have any one of many different meanings.

3671 Mr. Wood: The witness has made a very clear statement of the company's competitive policy in regard to the materials that are primarily involved in this case, and I think it should stand.

Trial Examiner Norwood: I think that emphasis is sufficiently definite in there. It is very clear what meaning is given to it.

Your motion is denied.

Mr. Wood: Could we have a recess until 1:30?

Trial Examiner Norwood: Is that agreeable?

Mr. Wright: Off the record.

Trial Examiner Norwood: Off the record.

(Discussion off the record.)

Trial Examiner Norwood: On the record.

Is that agreeable, to recess until 1:30?

Mr. Wright: Very well.

Mr. Wood: We will recess, then?

Trial Examiner Norwood: We will recess until 1:30.

(Thereupon, at 12:05 p. m., a recess was taken until 1:30 p. m., same day.)

3672 After Recess

1:30 p. m.

Trial Examiner Norwood: Come to order.

Take the stand, Mr. Hayt.

W. H. HAYT resumed the stand and testified further as follows:

Cross-Examination

By Mr. Wright:

Q. Mr. Hayt, you spoke of the relative emphasis on RTU and paste white lead. What do you mean by emphasis?

A. The importance that the products take in our marketing plans.

Q. Well, will you explain that?

A. Originally, of course, there was no RTU in the line. Our only product at that time of that type was the keg lead, and ever since I took over the division in 1937 I felt that the white lead in oil, as such, was a dead duck and that changes should be made to make the product more readily marketable.

Finally I was able to get the company to agree to let me put a product of that type in the line, and having gotten that agreement, naturally I chose in all of our marketing plans, whether it was with the salesmen or in the advertising, to make that the leading product, and the advertising and sales emphasis was placed on that product. 3673

Q. Now, aside from the addition of more linseed oil and mineral spirits, how does the RTU differ from the paste lead?

A. Well, there is one other important element in there, the dryer which is also added so that it is a finished product in every sense of the word.

Q. That is the only other ingredient that is added aside from the additional spirits or oil?

A. That is right, you have got those three essential items, the oil, the voluble thinner and the dryer.

Q. About how much dryer is contained in each gallon of the RTU?

A. Relatively small, about a pint or half pint.

Q. Now, when was the name adopted for this product by Eagle-Picher?

A. Well, I started using that term shortly after I became head of the division. It was a convenient abbreviation in referring to a ready to use white lead paint. We just gradually condensed that to RTU as an abbreviation, and when we finally came out with the product, that became the official designation.

Q. When was that?

A. Originally I think it was late in 1940, for a temporary period.

Q. For how long a period was that? Did you
3674 cease manufacturing the product for awhile?

We took it off the market when the early wartime shortage developed in linseed oil, which presented manufacturing complications, and then we did not resume marketing it again until 1945.

Q. How do your sales of RTU in dollar volume compare, or did they compare in 1941 with your sales of paste white lead?

Mr. Wood: I object to the dollar volume questions for the simple reason that we do not wish to tell our competition just how well we are doing with the product.

Mr. Wright: The question does not require an answer in figures. It asked for a comparison of dollar volume.

Mr. Wood: Well, I am afraid they could figure it from the answer.

Mr. Wright: I asked about the period in 1941.

Mr. Wood: That is all right for 1941.

Trial Examiner Norwood: Answer the question.

A. Well, 1941 is hardly a fair period for comparison because, as I say, the product was put on the market for a relatively short period, and then withdrawn because of unforeseen raw material complications.

By Mr. Wright:

Q. For how long a period was it on the market at that time?

A. About 90 or 120 days.

Q. So that it really has not been on the market in
3675 any substantial sense until when? 1945?

A. 1945.

Q. At what time in 1945?

A. It was early in the year. I would say February; perhaps March.

Q. In your first year of full marketing back in 1945 and the early part of 1946, what was your relative volume on paste white lead and RTU?

Mr. Wood: I object to the question as calling for confidential information.

Mr. Wright: I do not see how it possibly can be figured, because we certainly have not gotten the individual figures on paste white lead sales of Eagle-Picher Company in this time. So if it is a proportional basis, how could it be disclosing any figures?

Mr. Wood: I think Mr. Hayt did produce figures back last October.

Mr. Wright: Your Honor, if the respondent is seeking to establish on the record here that this RTU is taking the place of white lead, how can he now come in and object to showing the relative volume of both of these products? It seems to me he has to take one position or the other.

Mr. Wood: I am perfectly willing to have him testify that it is taking place. But I do not wish to give the percentage figures if I can help it.

3676 Mr. Wright: In that event, Your Honor—

Trial Examiner Norwood: You can allow him to cross-examine him on the statement that it is taking place. Will you read the question again?

(The pending question was read by the reporter.)

Trial Examiner Norwood: Objection overruled. Answer the question.

A. I would say that RTU was two to three times in dollar volume the cake lead or paste lead sales.

By Mr. Wright:

Q. Do you have figures on those volumes for that period of time?

A. I do not have them with me. They are available.

Q. They are available from the company?

A. Yes.

Mr. Wood: I might say, I would like to say that we would certainly be willing to show Mr. Wright our books and our figures on that, but we do not want them made public unless it becomes necessary. But if Mr. Wright wishes to examine the figures or have one of the investigators for the Commission examine the figures, we will extend them every courtesy.

Mr. Wright: With that statement of Mr. Wood's, I will make no further objection to that testimony. Otherwise I intended to make a motion to strike.

3677 Trial Examiner Norwood: All right, sir.

By Mr. Wright:

Q. Mr. Hayt, as I understood your direct testimony, it was to the effect that it has been your policy in white lead sales to follow generally the prices, terms and conditions of sale announced by the National Lead Company; is that correct?

A. You mean, follow them at any given time, and make our changes at substantially the same date?

Q. Generally, follow them. Was that your testimony?

A. In the sense that we meet the conditions which they established as to terms of sale.

Q. Now, is white lead in oil the commodity where price chances occur very frequently in normal times of the relatively slow pigment market?

Mr. Wood: The question is objected to as indefinite. What is meant by "normal times"?

Mr. Wright: I withdraw the question to save argument, Mr. Examiner.

Trial Examiner Norwood: Off the record.

(Discussion off the record.)

Trial Examiner Norwood: On the record.

By Mr. Wright:

Q. In your original answer this morning to those questions on direct examination where you say you gen-
3678 erally follow, you had no limitation of time on those answers, did you?

A. I do not know that I understand what you mean as to "limitation of time."

Q. You stated this morning that you generally follow the pricing practices and prices of National Lead Company?

A. Yes, sir.

Q. And you did not mean to limit that in your mind to any period of time, did you?

A. No.

Q. You are speaking now of your whole experience with the company?

A. That is right.

Q. Now, in the period of time from 1937 to 1941, or to the end of 1940, was white lead in oil a commodity on which prices changed very frequently?

A. I do not know what you mean by "frequently". I would say that during that period they probably changed three or four times a year.

Q. When you make a price change on white lead in oil, it affects your whole price structure? What mechanics do you follow to get that information out to the trade?

A. You mean, in the way of price card announcements?

Q. Yes, sir.

A. We have printed as quickly as possible and 3679 mailed immediately a price card or price change announcement to the trade at large.

Q. You have several types of price cards for several different types of trade, do you not? Or did you have in that period?

A. Two, really.

Q. What classes of trade were those?

A. There is the one that was for the distributor, indicating his cost, and then there were the other three representing the prices to the dealer; that is, the other three were on one card, representing the prices to the dealer, the painter, and the public.

Q. Did you also have price cards or quotations to railroads and industrials?

A. No.

Q. That was not handled by the card?

A. There were generally no announcements sent out to them. They determined the price by sending in inquiries and receiving quotations.

Q. My recollection of your testimony is that you have not always followed National in some cases. They have raised the price, and while you have raised it you have not raised it to the same extent that National has, and that otherwise you have not followed the lead of National in making changes in terms of conditions and prices on white lead.

3680 Is that a correct statement?

A. Yes, sir.

Q. Now did you mean that answer to be limited in time in any way? Do you have any particular period of time which was the basis of that answer?

A. No, that ranges over the period of my experience with the company.

Q. Now, taking the period from 1937 to 1941, will you cite an instance where there was such a change in price or practice by the National Lead Company which was not followed?

A. I don't think from memory that I can confine it that close as to time.

Q. Now, that is 1937 to '41, or five years?

A. Well, as I say, over those periods you have the price changes occurring at the rate of perhaps three or four a year, and it is hard for me to say specifically whether there were at that time any prices in effect which were not the same as National's.

Q. Now, I have here a document, Commission's Exhibit 656-A and B, which have been identified as a list of the changes in prices and terms and conditions of sale of white lead in oil by the National Lead Company over a period of time from February, 1930, down through January, 1944.

Will you please examine that and tell me what of the changes which are listed there—starting in January, 3681 1937, and running down through January, 1942—were not followed by Eagle-Picher Company?

Mr. DuBose: Did you identify that by exhibit number?

Mr. Wright: Yes, 656-A and B.

A. That would be difficult to do without making a direct comparison with our price changes at the same time, although this does remind me of some of these quantity prices for lots of various sizes which were in effect at that time, and I know that during that period there were occasions when we could not meet their quantity prices. They would set a price for a certain quantity, and we might have that same price, but on a lesser quantity.

By Mr. Wright:

Q. Now, to what are you referring there in that answer?

A. Well, some of these 1000 or 500 pound prices, and their reference to A, B and C.

Q. Now, I am asking from 1937 on down, and I am assuming that since you became manager of the white lead department in 1937, since you were not going to testify about things that occurred prior to that time—

A. I was the salesmanager in Chicago at that time, and was of course familiar with white lead prices.

Q. Now, I asked you particularly with reference to the period beginning with January 1, 1937.

3682 A. You would have much the same situation in here. I notice that they have some quantity prices, and

I cannot tell you specifically whether our quantity prices applied to exactly those same quantities, or not, but there were many times when our quantities prices were not the same as theirs.

Q. Now, let us get into this column under "Agents". That category of National's was the same as your distributors, was it not?

A. That is right.

Q. And on list price you had a corresponding figure. Now, comparing those two columns all the way down through January 1, 1937, are there any differences there?

A. Well, I cannot say as to that from memory, because there are a good many prices there on different dates. That would be quite a feat of memory to remember each one of those.

Q. You remembered this morning that you had not followed National Lead Company, and you stated that you had not raised the price when they had raised it. I assumed that you had some concrete instance that would be within the time which we are talking about now to illustrate that point.

A. As I recall it, there was no reference to the time this morning.

Q. Well, now, what time period did you refer to, then, this morning?

A. I was speaking generally about our practice
3683 during the period with which I am familiar.

Q. Well, now, this period that I have been talking to you about covers the first half of your experience in charge of that division, the period from 1937 through '41. Then the things that you were speaking of this morning, and on which your answers this morning were based, occurred subsequent to 1941?

A. Well, from the document you have shown me, I cannot state specifically whether any of the variations that I mentioned this morning occurred precisely during that period or not.

Q. In other words, you don't recall precise variations?

A. I recall the variations, but I don't recall exactly the time period in which they occurred.

Q. What were the variations?

A. Principally the ones that I mentioned as to differences in relationship between price and quality involved.

Q. Do you have a record of the price changes that

Eagle-Picher Company has made in its white lead in oil over the period since you have been in charge?

A. I think so.

Q. That would show all the various classifications as to quantity and dates of the changes?

A. Yes, with this exception, that oftentimes the cards
as published and when published would carry a price
3684 for a given quantity that might not later be adhered
to because it was less impractical.

Q. Will you explain that?

A. I mean that we might announce a price for a ton, and it might later develop that it was impractical to maintain that quantity, and we had to shave that and accept a thousand pounds at that price.

Q. In other words, you were departing from your announced terms and conditions of sale?

A. Because of the competitive situation.

Q. Now, it was the departures from your announced published terms and conditions that you were referring to when you said that you did not always follow National?

A. That may be. I am not too clear on that, because after the cards were out sometimes the actual schedules in effect would drift away from the announcements as made on the cards.

Q. Well, did that occur as to dealers and distributors?

A. Well, we have never had but very few dealers accounts, and I am thinking mostly of the distributors.

Q. In other words, the quantity differentials that applied to the distributors?

A. That is right.

Q. Under consignment contracts? I take it distributors were under consignment contract?

A. Now, again if you are limiting yourself to the
3685 consignment period, I don't think that that statement
would apply because the consignment contract was in
effect on any quantity contract.

Q. In other words, you did not make the quantity differentials to people under consignment?

A. That is right.

Q. Now, when did you abandon the consignment contract?

A. During the war, the early stages of the war.

Q. So then in the period that I was talking about from

1937 up to 1941 or '42 there would have been no quantity discounts to any of your distributors?

A. That is probably true.

Q. Well, don't you know?

A. Well, I cannot be specific on that particular period, because I don't have the record before me.

Q. Well, then, can you tell me what types of customers you did give those quantity discounts to in that period from '37 to 41 or '42?

A. Well, our direct sales to painters, for instance. Does that answer your question?

Q. Are there any other classes?

A. Well, that would be about the only type. We would have only those two types that amount to anything in our volume of sales, the distributor and the direct sale to the painter.

Q. In the period from '37 to '41, how would your
3686 sales volume be divided as between distributors and
painters, direct sales to painters?

A. Oh, I suppose 90 percent of it would be through distributors.

Q. So then these deviations that you have been talking about on quantity would only apply at most to about 10 percent of your business during that period?

A. That is right, during that particular period.

Q. Now, can you tell me whether there has been in your recollection any change in list price of white lead in oil, that is consumer price, by National Lead Company that has not been followed promptly by the Eagle-Picher Company?

A. Well, usually those changes would affect all classes of trade at the same time, and the same exception would apply except that the consumer or list price, as far as we as manufacturers are concerned, is a nominal price because we have very few transactions on that basis.

Q. In other words, you don't sell at that price?

A. That is right.

Q. But you do suggest that to your dealers on consignment accounts?

A. That is right.

Q. Well, then, if these prices of white lead in oil move on a whole scale, so that the list price, dealer price and
painter price would be affected by any change, can
3687 you tell me any changes now in the period up to the end
of 1945 in that scale, in that whole scale of prices,

leaving for the moment the question of quantities and quantity discounts, where such changes by National have not been followed by Eagle-Picher?

A. Not in that period that you mentioned, I don't think there were any exceptions or occasions where they didn't follow.

Mr. Wright: I have no further examination.

Trial Examiner Norwood: Are there any further questions?

Mr. Wood: Nothing further.

Trial Examiner Norwood: You are excused.

(Witness excused.)

Mr. Du Bose: Could we get off the record a moment?

Trial Examiner Norwood: Off the record.

(Discussion off the record.)

Trial Examiner Norwood: On the record.

Mr. Wright: I have discussions with counsel for Sherwin-Williams, and they advise me that they are prepared to go forward with their presentation of evidence in Cleveland, Ohio, on the 15th, 16th, and 17th of October.

I have consulted with other respondents in the case, and they have advised that following that hearing—

Trial Examiner Norwood: 15th, 16th, and 17th?

Mr. Wright: Yes, sir.

3688 Trial Examiner Norwood: All right.

Mr. Wright: Just prior to or immediately following the election in the early part of November, they are prepared to go forward and clean up the few remaining ends of the testimony so that it will all be in and complete before the 15th of November, as I understand it.

Trial Examiner Norwood: National Lead will begin in November?

Mr. Ewing: Well, whatever loose ends there are, ours and anybody else's will go in early in November.

Trial Examiner Norwood: I see.

Mr. Wood: Eagle-Picher has very little if any more testimony in the case. I have to go over the record and see whether there are loose ends.

Trial Examiner Norwood: I see.

Mr. Wood: As I have said before, Mr. Wright and I may be able to clean them up by stipulation.

Mr. Wright: We will make every effort to.

Trial Examiner Norwood: You say in October you want to go to Cleveland; is that right?

Mr. Wright: Yes; Sherwin-Williams has a number of witnesses there, and I understand it will be inconvenient to bring them all down here.

Trial Examiner Norwood: All right. Now, where do you go from there.

3689 Mr. Ewing: Either here or New York or both. We can determine that out there.

Mr. Wright: Since there are several counsel involved, perhaps it would be better to get them to determine that between now and the 15th.

Mr. Ewing: What I had in mind is that I would naturally like to suit your convenience.

Trial Examiner Norwood: Then there is no western trip involved?

Mr. Ewing: There is no western trip involved.

Trial Examiner Norwood: Off the record.

(Discussion off the record.)

Trial Examiner Norwood: On the record.

Pursuant to request from and agreement with counsel, it is ordered that the hearing in this case in now adjourned to reconvene in Cleveland, Ohio, in the Federal Building, at 10 o'clock a. m., Cleveland time, on the 15th day of October, 1947, in the Office of the Custodian of the Building or in such room as will be designated by notice posted in that office and given to the Custodian.

(Thereupon, at 2:20 o'clock p. m., the hearing was adjourned until Wednesday, October 15, 1947, in Cleveland, Ohio.)

3690 Room 125,
Federal Building,
Cleveland, Ohio,
October 15, 1947.

Met, pursuant to adjournment at 10:00 a. m.

Before:

John W. Norwood, Trial Examiner.

Appearances:

Joseph Wright, and David R. Reel, Attorneys for the Federal Trade Commission.

J. T. Welch, and T. J. Gray, (Davies, Richberg, Beebe, Busick & Richardson, 15th Street, N. W., Washington D. C.) and T. J. McDowell, (101 Prospect Avenue, Cleveland, Ohio), Attorneys for Sherwin-Williams Company.

Edmund P. Wood, Attorney for Eagle-Picher Lead Company and The Eagle-Picher Sales Company.

Eugene Z. DuBose, (Alexander & Green, 120 Broad-
3691-2 way, New York, New York), for the National
Lead Company.

John A. Duncan, (M. B. & H. H. Johnson, 1649 Union Commerce Building, Cleveland, Ohio), Attorney for The Glidden Company.

3693 PROCEEDINGS.

Trial Examiner Norwood: The hearing will come to order.

Pursuant to adjournment on September 18, the hearing in Docket 5253 is now reconvened in Room 125 of the Federal Building in Cleveland, Ohio, at 10 o'clock a. m. on the 15th day of October, 1947.

The appearances are as follows:

J. T. Welsh and T. J. McDowell and T. J. Gray, Attorneys for Sherwin-Williams Company.

Edmund P. Wood, Attorney for Eagle-Picher Company and the Eagle-Picher Sales Company.

John A. Duncan, Attorney for The Glidden Company.

Eugene Z. DuBose, Attorney for National Lead Company.

The attorneys for the Federal Trade Commission are Joseph S. Wright and David R. Reel.

Mr. Welch: I would like to note for the record the additional appearance of Mr. T. J. Gray who has not previously appeared in the case.

We will call as our first witness Mr. Brown.

Trial Examiner Norwood: Give me your full name, please, sir.

The Witness: Harry B. Brown.

Trial Examiner Norwood: Stand up and hold up 3694 your right hand.

(Witness sworn.)

HARRY B. BROWN was thereupon called as a witness for the respondents and, having been first duly sworn, testified as follows:

Direct Examination by Mr. Welsh.

Q. Mr. Brown, how long have you been employed by Sherwin-Williams Company?

A. 27 years.

Q. In what capacity have you been employed?

A. As clerk and price supervisor and at present I am manager of price lists.

Q. How long have you been employed in that capacity?

A. 15 years.

Q. Just what are the duties and functions of that position?

A. The function is to disperse price information, and see that price lists are printed correctly.

Q. Does that also involve seeing that they are sent out to your various district offices, branch offices and stores?

A. Yes, it does.

Q. Are you familiar with the type of price announcement illustrated by Commission's Exhibit 662-B, through 662-Z-26?

A. Yes, I am.

3695 Q. How long have price announcements of that type been used by Sherwin-Williams, to your own knowledge?

A. Practically as long as I have been with the company, 25 years.

Q. Does that answer also apply to the practice of designating on those cards certain shipping points at which the announced prices apply on an f. o. b. basis?

A. Yes.

Q. That has been done for the whole 25-year period?

A. Yes.

Q. Now, when different districts are involved in connection with price announcements of the type we have been discussing, where is the information as to the applicable prices and the applicable f. o. b. shipping points inserted in such announcements?

A. In the trade sales bulletin.

Q. I am afraid you don't understand me. Let me state my question again. When you prepare announcements of the type we have been discussing, 662-W to 662-Z-26, at what point is the information on those cards relative to the prices and relative to the applicable f. o. b. shipping points inserted?

A. At the district point shown on the card.

Q. In other words, you print up the card without the prices and without the shipping points?

A. Yes.

3696 Q. And you send them to the district offices?

A. Yes.

Q. And the district offices put in that information?

A. Yes.

Q. After district offices put in that information, what do they do with the cards?

A. They—

Q. (Interposing.) I am talking just of the type of card we have heretofore mentioned.

A. They send the card to the dealers, with one copy to me, for checking.

Q. Now, when you get that card sent to you for checking, what do you do?

A. I check the prices and the f. o. b. points.

Q. Have you ever had an occasion to find that some f. o. b. points were on there which were not authorized by the general offices?

A. Yes.

Q. What action have you taken in such instances?

A. We have written the district office to remove the card immediately or on the next printing.

Q. Has that been done?

A. Yes.

Q. And the general offices authorize the use of only certain f. o. b. points?

3697 A. Yes.

Q. Now, can you tell me for what purpose announcements such those illustrated by Commission's Exhibit 594-A and B, 662-C and D, 662-G and H, and 662-S and T are disseminated?

A. They are sent to our district sales staff and representatives in branches showing the prices in effect at that date.

Q. For those branches and districts?

A. Yes.

Q. Is that the sole purpose?

A. Yes.

Q. Do those announcements of that type have any bases whatever—correction, strike that. Do those announcements serve as any basis whatever for either quotation or billings to customers, as distinguished from Sherwin-Williams' own branches, districts, and stores?

A. No.

Q. When LCL shipments are made to points which are not f. o. b. points and they are not made from the nearest warehouse or shipping point, how is the freight cost handled?

Mr. Wright: May I have that question read?

Trial Examiner Norwood: Read it.

(The reporter read the question.)

Mr. Wright: I object to that question, your Honor. No basis has been laid for what his answer is based on. If it is a general statement of what the company's policy 3698 is, that is one thing. If it is a statement of their general practice in handling that billing, it is another thing.

This witness so far has not been shown to have anything to do with the actual billing and handling of freight costs.

Mr. Welch: I will withdraw the question.

Trial Examiner Norwood: Very Well.

By Mr. Welch:

Q. Mr. Brown, are you familiar with the company's announced policy as to how LCL shipments are to be handled in those situations where the shipment goes to a destination which is not one of the recognized shipping points and the shipment actually is shipped from some point other than the nearest shipping point to that ultimate destination?

Mr. Wright: Objection to that, your Honor; there is no product designated in that. This company makes many products.

Mr. Welch: Lead products.

Trial Examiner Norwood: Lead products?

The Witness: Yes.

By Mr. Welch:

Q. What is that?

A. Equalization.

Q. Just explain that.

A. Equalization from shipment to a designated 3699 point other than a warehouse would be equalized with the difference between the cost to that warehouse and to the point at which the shipment is made.

Q. And will you give us—just to clarify that, give us an illustration of that?

A. If, for example, it costs 50 cents to ship from Chicago to Kansas City, and it costs 75 cents to ship to some point within the Kansas City area, we would allow the difference between the shipment to our warehouse and to the designated point.

Trial Examiner Norwood: You would add 25 cents to the f. o. b. price in that case?

The Witness: We would add in that case 15; I said 60.

Trial Examiner Norwood: I thought you said 50.

The Witness: 15 cents.

By Mr. Welch:

Q. In other words, the shipment would originate in Chicago?

A. Yes, it would cost 75 cents to lay it down. It would originally cost 60 cents to get it to Kansas City. We would allow the—

Q. (Interposing.) That is caused by the circumstances whereby you didn't have the stock in Kansas City at that moment so you give the customer the difference in what it would have cost to have gotten it to the warehouse.

3700 A. Yes.

Q. Now, when Sherwin-Williams equalizes freight, that is not an equalization predicated upon any competitor situation, is it?

A. No.

A. I call your attention to Commission's Exhibits 662-A and B, 662-E and F, 662-I, J, K, L, M, N, O, P, Q, R, U, V, and 779-A to D. How many announcements of that type do you prepare?

A. Just a sufficient quantity for our sales staff, branches, and representatives.

Q. That is disseminated to your own employees only?

A. Yes, sir.

Q. Now, do you get those up with different prices on them, or just the one set of prices?

A. One set of prices.

Q. What type of announcements are the only ones issued by Sherwin-Williams which show different prices?

A. These small dealer cards.

Q. Is that the one that appears as Commission's Exhibit 662-W through 662-Z-26?

A. Yes.

Q. That is the type you refer to?

A. Yes.

Mr. Wright: Your Honor, I object to the leading 3701 character of that question by counsel. As I recall it, he said, "What is the only type of card which shows different prices?"

That is subject to proper testimony by the witness as to whether it is the only card. It was a double-barreled question which contained a conclusion by counsel which I don't know whether is ratified by the witness or not.

Trial Examiner Norwood: Off the record just a minute.

(Discussion off the record.)

Trial Examiner Norwood: On the record. Question withdrawn.

By Mr. Welch:

Q. What type of announcements by Sherwin-Williams show different prices?

A. The dealer price card mailed by the district office.

Q. Are you referring to 662-W, to 662-Z-26, inclusive, Commission's Exhibit?

A. Yes.

Q. Is that the only type that shows different prices?

A. Yes.

Q. Sherwin-Williams has sold pigments on an agency or assignment basis since you have been with the company, has it?

A. No.

Q. Mr. Brown, can you tell us how a determination
3702 is made as to what are f. o. b. shipping points? I am referring to the types of points referred to or identified in Commission's Exhibit 664.

A. Our own warehouse points have been shown on the dealer price card as illustrated by these exhibits.

Q. Do you have warehouses in each different district?

A. Yes.

Q. How many different districts do you have?

A. The districts change in numbers from year to year as we consolidate.

(Papers were marked Respondents' Exhibits 197-A, 197-B, 197-C, 197-D, 197-E, 197-F, 197-G, 197-H and 198-A, 198-B, 198-C, 198-D, 198-E, 198-F, 198-G and 198-H for identification.)

By Mr. Welch:

Q. Mr. Brown, I show you Respondents' Exhibits 197-A through H, inclusive. Can you tell us what those are?

A. Those are the dealer price cards issued by the district offices.

Q. Will you name the district offices which issued those?

A. Newark, New Jersey; Boston, Philadelphia, Cincinnati, Kansas City, Dallas, St. Louis, Chicago.

Q. Now, were there any other districts than those you have named?

A. The Cleveland district is missing in that group.

3703 Q. I show you Commission's Exhibit 662-Z-17; is that the comparable Cleveland card for the same date?

A. Yes.

Q. Now then, Respondents' Exhibits 197-A through H inclusive, and Commission's Exhibit 662-Z-17, does that include the price cards issued by all the various districts?

A. Yes.

Q. It does not include the Pacific Coast?

A. No.

Q. Now, I would like you to examine Respondents'

Exhibit 197-A to H, and each of the shipping points indicated thereon and tell me whether at one time or another—strike that. Tell me whether warehouse stocks were maintained in all the cities named on those exhibits for the proper sub numbers.

Trial Examiner Norwood: I think you had better offer those first. They are not in evidence yet.

Mr. Welch: I will offer Respondents' Exhibits 197-A to H, in evidence.

Mr. Wright: No objection.

Trial Examiner Norwood: They may be received.

(The papers referred to, heretofore marked for identification RESPONDENTS' EXHIBITS 197-A, 197-B, 197-C, 197-D, 197-E, 197-F, 197-G, and 197-H, were received in evidence.)

Trial Examiner Norwood: Answer the last question.

3704 (The reporter read the question.)

A. Yes.

By Mr. Welch:

Q. Now, for the period in which those cards were in effect, that is Respondents' Exhibits 197-A to H, inclusive, and Commission's Exhibit 662-Z-17, were the shipping points named on the respective cards the only authorized f. o. b. points?

A. Yes.

Q. I now show you Respondents' Exhibits 198-A to H, and ask you if you can tell me what those documents are?

A. They are cards issued for the different dates.

Q. Do they cover cards issued by all the districts except Cleveland and the Pacific Coast?

A. Yes.

Q. Is Commission's Exhibit 662-Z-1 the comparable Cleveland card for the same date?

A. Yes.

Mr. Welch: Respondents' Exhibits, for identification, 198-A to H, are offered in evidence.

Mr. Wright: No objection.

Trial Examiner Norwood: They may be received.

(The papers referred to, heretofore marked for identification RESPONDENTS' EXHIBITS 198-A, 198-B, 198-C, 198-D, 198-E, 198-F, 198-G and 198-H, were received in evidence.)

3705 By Mr. Welch:

Q. Will you now examine Respondents' Exhibit 197-A to H and Commission's Exhibit 662-Z-21, and tell us whether during the periods those price cards were in effect, warehouse stocks were maintained at each of the shipping points listed?

A. Yes, they do.

Q. That is warehouse stocks?

A. Warehouse stocks.

Q. Now, referring to Respondents Exhibit 197-A to H and Commission's Exhibit 662-Z-17, are those the only points—are ~~the~~ shipping points listed on those exhibits the only points where warehouse stocks were maintained during that time with the exception of the Pacific Coast?

A. Yes.

Q. Now, with reference to Respondents' Exhibits 198-A to H and Commission's Exhibit 662-Z-21, I will ask you the same question, whether those are the only points at which warehouse stocks were maintained?

A. Yes.

Trial Examiner Norwood: We will take a five-minute recess.

(Short recess taken.)

Trial Examiner Norwood: Come to order, please.

Mr. Welch: Your witness.

Cross-Examination by Mr. Wright.

3706 Q. Mr. Brown, how long have you held the position of manager of the price lists with the company?

A. 15 years.

Q. Were you in that work prior to the 15 years, in similar work?

A. Yes.

Q. Now, do your duties cover all the products of the company?

A. Yes.

Q. In that department?

A. Yes, trade sales and industrial.

Q. Now, you spoke of the district offices filling in these cards with the applicable prices and shipping points in their districts, and then sending the cards back to you for checking?

A. Yes.

Q. From what documents or information do they fill in those prices and shipping points?

A. Telegraphic information from Cleveland or letter if it is a week end.

Q. Now, is their basic information the so-called trade sales bulletins?

A. Yes.

Q. Does that include their f. o. b. points for the districts?

A. The trade sales bulletin covers only the billing 3707 to our own inside branches and warehouse points.

Q. Well, now, do these district offices now have any document which they keep currently showing all of this information on prices and points?

A. The document that they have is the bulletin issued by the trade sales department showing them the prices—one price which is in effect. That is the exhibit.

Q. You are referring now to Exhibits like Commission's Exhibit 662-I and sub numbers headed General Sales Department Price Bulletin?

A. Yes.

Q. That is where they get that information?

A. Yes.

Q. Now, your statement with regard to these f. o. b. points and equalization, were you referring throughout your testimony, now, to less than carload shipments?

A. Yes.

Q. What is the situation with regard to f. o. b. points on carload shipments?

A. The shipment is usually laid down at the price differential issued in the bulletin here.

Q. In other words, do I understand you then that in shipping a carload to a point which is not an f. o. b. point within a district, that the f. o. b. —that the price at the f. o. b. point would apply?

3708 A. Yes.

Q. There would be no equalization added freight, then?

A. Yes.

Q. Now, would that also apply to a mixed carload containing paint and paint materials as well as these lead pigments we have been talking about?

A. We have shipped carloads prepaid according to the price applying in the zone.

Q. What do you mean in the zone, now?

A. You are combining paint and lead in your question?

Q. Yes, sir.

A. Lead f. o. b. point has the price on this card.

Q. In other words, a mixed carload of paint and lead not at an f. o. b. point would take the same price as if it had been shipped to the nearest f. o. b. point?

A. Yes.

Q. He would pay nothing extra for freight at that point?

A. No.

Q. Even though it might only contain a hundred pounds of lead and oil in the car—so long as it was a car?

A. Carload.

Q. How do you handle truckload shipments?

A. Full truckload would be handled in the same manner, full truck.

3709 Q. In other words, then, there would be no added freight to the customer not at one of your f. o. b. points, if it were shipped in a truckload?

A. That is right.

Q. Now, these general trade sales department bulletins such as this bulletin No. 99, Commission's Exhibit 662-I, are those sent to your retail stores?

A. Yes.

Q. And those stores get their retail prices from those bulletins; is that correct?

A. They get their cost from the bulletin. The cards are used as the dealer cards.

Q. And you bill them at the same price that you would an ordinary dealer, then?

A. Yes.

Q. And they are expected to resell at the consumer prices which are set forth?

A. Yes.

Q. Now, do any of your retail stores maintain any warehouse stocks?

A. Yes, some. They are indicated on these exhibits.

Q. They are all in there?

A. Yes.

Q. No other retail store than those indicated in those exhibits then maintains any warehouse stocks?

A. No.

3710 Q. Do any stores resell—sell for resale except those which are listed in that exhibit?

A. Not to my knowledge.

Q. That is not the policy of the company?

A. Not the policy.

Q. Well, now, do you have any customers in towns where you have retail stores, dealers, now, which are not warehouse points?

Mr. Welch: Objection, your Honor. There is no showing that this witness has any knowledge of the customers' lists. He is not in the sales department.

Mr. Wright: I am laying the basis for a further question here. If the witness doesn't have any knowledge of this thing, he can certainly state it.

Trial Examiner Norwood: I think he may ask that on cross-examination. Objection overruled.

The witness: May I hear the question again?

Mr. Wright: Will you read the question?

(The reporter read the question.)

Mr. Welch: I would like to make a further objection. It was not restricted to proper cross-examination.

Mr. Wright: In answer to counsel's objection there, he has raised some issues about the general pricing policy of the company and he has covered it completely and this question is getting into the—this witness' know-
3711 ledge of that pricing policy and how it works out.

Trial Examiner Norwood: I think he may test his knowledge about it, in connection with the scope of the direct examination. Objection overruled.

(The question was again read by the reporter.)

Trial Examiner Norwood: Answer the question.

The witness: Not to my knowledge.

By Mr. Wright:

Q. Now, let me ask you this, if you know: We will assume for the purpose of this question, now, that you have a retail store in a city which is not an f. o. b. point on those cards, and that you have a dealer-customer in that same point. Would you sell to your retail store—I will withdraw that question.

When you sell to one of your own retail stores which is not at an f. o. b. point, how do you make the price to him? Do you equalize freight to him?

Mr. Welch: I object to any testimony with reference to the company and their own retail stores. That certainly isn't commerce or anything the Commission has jurisdiction over.

Trial Examiner Norwood: I think he may ask that question. It is proper on cross-examination to test him or to get further particulars about this system. Objection overruled.

3712 The Witness: Not to my knowledge.

By Mr. Wright:

Q. You sell him then at the same price as if he were at an f. o. b. point?

A. I have nothing to do with the pricing in the districts to the dealer or the inter-company transactions.

Q. Now, you make up these general trade sales department bulletins, do you not?

A. Yes.

Q. Which are supposed to govern the pricing practices of the district, do you not?

A. Yes.

Q. How do those general trade sales department bulletins instruct the district branches to bill the company-owned stores on these products?

Mr. Welch: Objection. The bulletin speaks for itself with reference to any instructions that may or may not be given.

Secondly, I want to move to strike all the testimony that has heretofore been given by this witness on cross-examination with respect to transactions between the company and its own stores because those are not sales.

Mr. Wright: It is—

Mr. Welch: (Interposing.) There is no testimony that there are sales.

3713 Mr. Wright: This record is already replete with information about the company-owned stores and the transactions there, and it is my contention that one of the issues in this case is that this Respondent has put into practice through its own retail stores these policies and matters that were agreed on as charged in the complaint through conspiracy in combination and has made effective the combination and conspiracy in that manner.

Trial Examiner Norwood: Motion denied.

Is there a question pending?

(The pending question was read by the reporter.)

Mr. Welch: Has your Honor overruled my objection to that as well as the motion to strike?

Trial Examiner Norwood: Yes. Objection overruled.

The Witness: It gives the prices in effect at some particular date and it gives the policy according to the zone differentials applying at the various branches and warehouses.

By Mr. Wright:

Q. Well, now, getting into this list of points as in Commission's Exhibit 662-C and D, will you tell us what that list of points is?

A. It states the S-W warehouses in each district branch zone points.

Q. All of these points aren't warehouses, are they?

A. No, they are not.

3714 Q. So that those points, for instance, as Bridgeport, Connecticut, there is no warehouse there, is there?

A. It would be stated on this if there is a warehouse there at the time these cards are issued.

Trial Examiner Norwood: Stated on what?

The Witness: On the dealer card; our warehouse point is stated here, and it would change as time goes on. We will make a new distributing point, and these must be compared with respect to the approximate date on our trade sales bulletins.

Trial Examiner Norwood: You mean the card like Respondents' Exhibit 197-A and so on?

The Witness: Yes.

Trial Examiner Norwood: Proceed.

By Mr. Wright:

Q. You are familiar with the warehouses the company has had during the last five or six years, are you not?

A. I might be able to remember all of them.

Q. All right. Now, can you recall approximately where the warehouses were in May, 1942?

A. I could not name them, ~~no;~~ because I am not in the stock-keeping department.

Q. Now, let me ask you this: Do you recall that the company ever had a warehouse at Bethesda, Maryland, in May, 1942?

A. They did not.

3715 Q. Did not?

A. No.

Q. At Appleton, Wisconsin?

A. In 1942?

Q. Yes.

A. I don't recall.

Q. Asbury, New Jersey?

A. No.

Q. I call your attention to the fact that Bethesda, Maryland, and—in this Exhibit 662-S, will you tell me what that letter "E" means?

A. Eastern or base price.

Q. In other words, if the letter "E" is there, it takes the base price, these is nothing added for freight to that?

A. It is sold f.o.b. our warehouses. There is nothing to—added to the cost at that point as far as there is no warehouse.

Q. In other words, even though there is no warehouse at Bethesda, the "E" after that indicates that your company-owned store in Bethesda is billed at the flat eastern zone price; is that not correct?

A. I would say that is correct. They are billed at eastern prices.

Q. And no additional freight is added from equalizing from the warehouse?

A. I am not familiar with the inter-company billing policy.

3716 Q. Can you state who in the Sherwin-Williams organization is familiar with that?

A. I believe your comptroller would have charge of that, Mr. Reese.

Q. Now, this equalization to a point that is not an f.o.b. point there, what freight rates do you use in equalizing on an LCL shipment to a point that is not an f.o.b. point?

A. I am not in the traffic freight billing department. I I am sorry, I can't answer that.

Q. I am talking now about the making of price: You state how the price is to be made and what the company policy is with reference to these prices. What is the policy as to how that is to be calculated?

A. If the price would apply at some zone point where a quarter or a half cent would apply, that price would be used f.o.b. that point, and it would be equalized as I have said, from the difference between the warehouse to the customer *vs.* the Chicago warehouse to the distant point.

Q. Didn't you state before, it would be equalized by the rate between the company and the warehouse, and the company and the customer, rather than from the warehouse to the customer?

A. I said the freight would be, but the price would apply at the warehouse point from which they normally draw their supplies.

Q. That is correct. Now, you used an illustration 3717 of a freight rate of 75 cents from the plant to the customer?

A. Yes.

Q. And a freight rate of 60 cents from the point to the f.o.b. point?

A. Yes.

Q. In that case, you said you would add 15 cents for delivery to that point other than the f.o.b. point?

A. Yes.

Q. Now, what freight rate are you using for purposes of comparison from the plant to the warehouse? Are you using an LCL freight rate, or a carload freight rate?

A. I was using the LCL freight rate.

Q. From the plant to the warehouse?

A. Yes.

Q. Well, you don't customarily ship LCL to warehouse from the plant, do you?

A. I don't know.

Q. Will you tell us what the Pacific Coast District is?

A. The Pacific Coast District receives a wire regarding price changes at the same time the other districts get their report. They usually issue their own price lists according to the market's trend at that point.

Q. Do you send them any bulletin comparable to the general trade sales department bulletins?

A. They get one copy.

3718 Q. They get that bulletin?

A. Just that one copy.

Q. Do they send you in their price lists?

A. They do not print cards similar to these, I do not get them.

Q. How do they get the prices?

A. They issue a price insert for their representatives.

Q. How many districts are there in the Pacific Coast?

A. One at present. They are having three.

Q. Where do you get the information that you put in these general trade sales department bulletins?

A. From the Executive Committee.

Q. From the Executive Committee at the company?

A. Yes.

Q. Mr. Brown, do I understand your testimony, then, that all of the towns and cities where Sherwin-Williams has retail stores are not f.o.b. points?

A. They are not considered as such. This indicates the f.o.b. points.

Q. You don't know what the actual company practice of handling transactions is in those towns and cities, though?

A. I do not.

Mr. Wright: No further questions.

Redirect Examination by Mr. Welch.

3719 Q. Mr. Brown, when you refer to the Executive Committee, do you mean the trade sales executive committee; is that the group you mean?

A. Yes.

Mr. Welch: That is all.

Trial Examiner Norwood: You may be excused.

(Witness excused.)

Trial Examiner Norwood: Call your next witness.

Trial Examiner Norwood: What is your name, please, sir?

The Witness: Kenneth J. Sutherell.

KENNETH J. SUTHERELL was thereupon called as a witness for the Respondents, and, having been first duly sworn, testified as follows:

Direct Examination by Mr. Welch.

Q. Mr. Sutherell, how long have you been employed by the Sherwin-Williams Company?

A. Nine years.

Q. In what capacity?

A. In the general traffic department.

Q. In what capacity are you now employed?

A. Assistant chief clerk in charge of the rate section.

Q. How long have you been in that capacity?

3720 A. Since January of 1946.

Q. What are the duties of that position?

A. To supervise all rates which are checked in the traffic department and to check the rates also.

Q. What previous experience with freight rates did you have before you were employed by Sherwin-Williams?

A. Two years with Master Builders Company in Cleveland.

Q. What was the nature of the freight work you did there?

A. In the general traffic department, rates and general traffic work.

Q. To what extent are you familiar with freight rates and tariffs, procedures for calculating applicable rates between various cities for lead pigments?

A. I work with them all the time, it is my job to know them.

Q. Have you ever prepared any charts or analyses for use in hearings before the Interstate Commerce Commission?

A. Yes, I have.

Q. Such charts as you prepared for that purpose have been used in the course of hearings before the Interstate Commerce Commission?

A. Yes, they have.

Q. Have you been asked to make any maps showing freight rate information relative to lead pigments, especially white lead, both dry and in oil?

A. Yes, I have.

3721 Q. What freight information were you asked to portray on those maps?

A. I was given a list of the white lead producing points and asked to show the areas to which these—within which these producing points could ship at a freight advantage, using the freight rates in effect as of January 15, 1941.

Q. Now, was the location of the white lead producing plants and the dates of the tariffs to be used the only information that came to you from an outside source?

A. Yes.

Q. That is at the time you started the project, that is all that came to you from an outside source?

A. Yes.

Q. Everything except that is a result of your own work?

A. Or under my supervision.

Q. Now, I show you Respondents' Exhibit 199 for identification.

(The document referred to was marked Respondents' Exhibit 199 for identification.)

By Mr. Welch:

Q. Who prepared that document?

A. I did.

Q. Was that entirely your own work?

A. Yes, it was.

Q. Can you tell us whether that is a map that you
3722 prepared in response to that request for information?

A. It is.

Q. Well, now, will you tell us just step by step the procedure you followed in order to get the result now reflected on that map?

A. I considered two or more producing mills of white lead and I located a town in between those mills to which the rate was equal from both or more of the mills.

I located that city or town on the map and marked it. I then checked rates to points around that town, or on either side of it, until I located another point to which the rates were equal.

Q. Just one minute. On an average, how many points would you check the rates on before you could locate one point that had those characteristics?

A. I would say 30 points.

Q. And then when you located your next point, how many would have to be examined?

A. Probably the same number, sometimes more, sometimes less.

Q. Would that general average hold?

A. I would say so.

Q. Proceed.

A. I followed the same procedure all over the country, taking one producing mill against another one. When I had
located all the points to which the rates were equal, I
3723 drew lines which indicate the areas within which the
producing mill can ship at a freight advantage.

In other words, these lines represent the boundary line on freight costs. A mill in Chicago shipping over the line would be—

Q. (Interposing.) Over which line is that?

A. Over the line running from Seelyville, Indiana, to Pewey, Nebraska. The rate over that line would exceed the rate from a mill in St. Louis.

Q. All right. Now take the line that runs from Pensacola, Florida to Detroit. What would be the situation with respect to the mills lying on the different sides of those lines?

A. The mill lying on the east side of that line running from Wayne, Michigan, to Pensacola, would be able to ship within that area cheaper than the mills in Chicago, Hammond, or St. Louis.

Trial Examiner Norwood: To any points in that area?

By Mr. Welch:

Q. What mill?

A. From the mill at Cincinnati.

Mr. Welch: Now answer the Examiner's question.

The Witness: Within that area. There might be variations, but that possibly is very remote.

By Mr. Welch:

Q. What would be the situation with reference to
3724 the St. Louis plant?

A. The St. Louis plant would be able to ship within the area bounded by this line from Seelyville, Indiana, to Pewey, Nebraska, and from Seelyville, to Pensacola, Florida, to the line from San Francisco, from Oakland.

Q. At an advantage?

A. At an advantage.

Q. Over which mills?

A. The mills located at Oakland, and—

Trial Examiner Norwood: (Interposing.) I don't think you had better go into what the map shows. You can tell us what it shows but not go further than that. You haven't offered it.

Mr. Welch: I offer Respondents' Exhibit 199.

Mr. Wright: I have some preliminary questions on this, your Honor.

Trial Examiner Norwood: All right.

Cross-Examination by Mr. Wright.

Q. Do I understand your testimony, then, substantially, Mr. Sutherell, that one of the mills or points underlined in red here would have a freight advantage in shipping to all of the territory within the lines bounding it?

A. Yes.

Q. Now, are railroad rates on a mileage basis?

3725 A. Generally speaking, they are on a mileage basis. Certain towns are grouped in certain territories.

Q. Well, now, are the tariffs based on a mileage basis; did you mean that, the official tariffs?

A. The rate scales are based on a mileage basis.

Q. That is generally true?

A. The formula for establishing rates?

Q. Now, take this area around Chicago that is bounded by these lines which appear on here, what type of rates would you consult on that? Are those commodity rates?

A. The lowest rates.

Q. I asked what rates you consulted in order to determine the lowest rates—what tariffs you consulted?

A. Consulted the applicable tariffs.

Q. Did you compare commodity rates and class rates in each instance?

A. Yes, I did.

Q. But you went down these lines, as I take it, getting these points. Did you consult rates that were within the lines, rate points within the lines 10, 15, 20 miles?

A. Yes.

Q. How far back from the lines did you go in consulting all those rates?

A. I don't know how far I went back in mileage.

Q. Did you keep any record of the rates to these 3726 points along the lines in the tariff reference?

A. Yes.

Q. So that you had documents to show what these rates are from these points and tariff sources from which you secured them?

A. The documents are available.

Q. Do you have them in your possession now?

A. I don't. I have the rates. I do not have the tariff authorities in my possession.

Q. In determining some of these rates to these points along the line, were there joint rates and routes involved in those determinations?

A. Yes.

Q. How did you determine the lowest rate in that, or did you determine the lowest rate?

A. We did. These rates are the lowest rates.

Q. You consulted, then, every possible routing and every possible combination to obtain your lowest combination rate?

A. Yes.

Q. Now, speaking as a freight rate expert, is it your opinion that there is no rate in this territory around Cincinnati which is behind the line bounding Cincinnati which is lower from St. Louis or Chicago or Philadelphia.

A. No. I won't say there is no rate. As I stated before, sometimes certain—a group of towns takes the same rate.

3727 In other words, there might be a town one mile behind that line which would be just as cheap to ship from either point.

Q. In other words, then, that can't be an absolute line, freight rates being what they are?

A. Generally speaking, it can.

Q. Will you explain yourself?

A. Within some territories, it can be. Some territories are specific mileage rates to a specific point. In other territories, those rates are grouped, those towns are grouped.

Mr. Wright: No further preliminary cross-examination.

I want to object to the offer of this exhibit, however.

It is common knowledge, your Honor, that freight rates are the matters that are subject to controversy among traffic experts and many of them will come out with different pictures of rates and routes.

Here we are given absolutely no basic data, traffic reference, or rates applicable to any of these points along the line which make up these territories.

Furthermore, I object to the document on the grounds of relevancy and materiality.

Mr. Welch: Will you read the last part of that objection?

(Objection read.)

Mr. Welch: The last part of that is easy to answer

3728 in view of the answer setting forth an affirmative defense and no motion to strike was made and the exhibit is competent on that basis.

Secondly, we have stated—the witness has stated that he does have the rates available, on his person. Mr. Wright didn't request to see them. They are here.

As to the tariffs, the witness states that information is available, but he doesn't have it here with him at the moment. He does have the rate; the tariff sources from which they were taken, he does not have.

Trial Examiner Norwood: Objection overruled. The exhibit is received, Respondents' Exhibit 199.

(The document referred to, heretofore marked for identification RESPONDENTS' EXHIBIT 199, was received in evidence.)

Mr. Wright: Your Honor, at this point, if this document is received, I want to call on Respondents to produce the list of rates and references from which this document was made up.

Trial Examiner Norwood: Well, I understood that they would be produced. That would be a condition attached to the reception of this exhibit.

Mr. Welch: We are agreeable to that.

Trial Examiner Norwood: Specified sufficiently to enable the other side to check its accuracy.

3729 Mr. Welch: We are agreeable to that.

Trial Examiner Norwood: Proceed.

Mr. Welch: I think we will be able to supply that by tomorrow, and if Mr. Wright then wants to call the witness for further cross-examination in the light of that material being furnished, we will have the witness available.

I take it, however, the exhibit is now received subject to motion to strike if we do not furnish the material, so I can proceed on the theory that it has been received?

Trial Examiner Norwood: Yes. This is a document that has required a great deal of study and work, and I should think that this witness should be subject to recall after the other side has had sufficient time to study and check it. I think that should be a condition, also.

Go ahead.

Direct Examination (Continued) by Mr. Welch.

Q. I believe at the time we were interrupted for cross-examination, we were discussing a situation as between the St. Louis, Cincinnati, and Chicago locations?

A. Yes.

Q. We had gotten to the point where we were discussing the area in which St. Louis would have an advantage. As a freight rate expert, can you tell us on a broad basis just
what this map shows concerning the freight rate sit-
3730 uation of producers of white lead located in the re-
spective cities of Philadelphia, Scranton, Perth Amboy, Cincinnati, Chicago, St. Louis, Oakland, California?

A. It shows that producers of white lead in those points which you mentioned can ship within that area—

Q. (Interposing.) That is within the area—

A. (Interposing.) Bounded by lines.

Trial Examiner Norwood: The colored triple lines.

The Witness: In some cases—at a freight advantage over a competitor in an adjoining area.

By Mr. Welch:

Q. How long did it take you to make up this study, Mr. Sutherell?

A. Approximately four months.

Q. Did you spend the major portion of that time on looking up the rates and the tariffs?

A. Yes, yes.

Q. I believe on cross-examination you stated that you had taken into account commodity rates, classifications, exceptions?

A. Yes.

Q. And it is now your testimony that those are the lowest rates in those areas?

A. Yes.

Trial Examiner Norwood: One of those boundaries is indicated by a triple line. Off the record.

3731 (Discussion off the record.)

Trial Examiner Norwood: On the record.

Mr. Welch: I will clear that up.

By Mr. Welch:

Q. Mr. Sutherell, will you explain the significance of the blue line?

A. The blue line covers rates on dry white lead.

Q. Will you explain the red line?

A. The red line covers rates on white lead in oil.

Q. Do the red and blue refer to carload or less than carloads?

A. Carload.

Q. What does the green line represent?

A. The green line represents LCL rates on both dry white lead and lead in oil.

Q. In less than carload lots?

A. Yes.

Q. Now, I notice throughout the entire part of the eastern United States and up to western North Dakota, South Dakota, Nebraska, Colorado, and New Mexico, the three lines practically coincide. Will you explain why there is a divergence between the lines in the western part of the United States?

A. Most of those rates have specific commodity rates, being based on different formulas; the carload rates and less than carload rates are based on different formulas.

3732 Q. But in the east they are based on the same or different formulas?

A. On the same formulas.

Q. And that is the reason the lines coincide?

A. That is right.

Trial Examiner Norwood: Off the record.

(Discussion off the record.)

Trial Examiner Norwood: On the record. Proceed.

Mr. Welch: I would like to have this marked.

(The map referred to was marked RESPONDENTS' EXHIBIT 200 for identification.)

By Mr. Welch:

Q. Mr. Sutherell, were you asked to make any map showing freight rates and information relative to red lead, both dry and in oil?

A. Yes, I was.

Q. What freight information were you asked to portray on that map?

A. I was given a list of red lead producing points and asked to show on a map the areas to which those producing points—within which those producing points could ship at a freight advantage.

Q. What period were you requested to use in making your calculation?

A. As of January 15, 1941.

3733 Q. Is the location of the red lead producing plants and the date of the freight rates desired the only information that came to you from an outside source at the time you started your studies?

A. Yes.

Q. I show you a map which has been marked as Respondents' Exhibit 200 for identification. Can you tell us what that is?

A. This map shows producing points of red lead and it shows the areas within which these producing points can ship at a freight advantage.

Q. Did you prepare this map yourself?

A. I did not. It was prepared under my supervision.

Q. Did you direct the procedure that was to be followed in preparing it?

A. Yes, I did.

Q. Did you personally spot check the accuracy of the work being done?

A. Yes, I did.

Q. To what extent, if any, did the procedure followed in preparing this map conform to the procedure you have detailed with reference to Respondents' Exhibit No. 199?

A. The procedure was exactly the same.

Q. Can you tell us how long the man who worked on that map took to check the rate data, tariff data, and prepare the map?

A. Approximately three months.

3734 Q. Now, as an expert on freight rates—

Mr. Welch: I will offer Respondents' Exhibit No. 200, subject to the same limitations which have heretofore been imposed by the Examiner.

Mr. Wright: I want to ask a preliminary question.

Trial Examiner Norwood: All right.

Cross-Examination by Mr. Wright.

Q. Calling your attention to the three words appearing underneath the description, "red lead," reading "same manufacturing costs," did you place that there?

A. No.

Q. Was it placed there at your direction?

A. No, it wasn't.

Q. How did that get on the document?

A. That was placed there by way of explanation of the map by the legal department.

Mr. Welch: Let him ask a question which will clear that up.

Direct Examination (Continued) by Mr. Welch.

Q. Was an assumed identical manufacturing cost one other item furnished to you at the time you prepared the two maps?

A. Yes, yes.

Mr. Wright: No further questions at this time.

3735 By Mr. Welch:

Q. In other words, you were given the location of the plants and assumed identical manufacturing costs and your studies thereafter were predicated upon rate differences; is that correct?

A. Yes.

Mr. Wright: Do you have available the basic—the rates and references that you used in making this?

The Witness: Yes.

Mr. Welch: I offer it subject to that qualification.

Trial Examiner Norwood: Received.

(The map referred to, heretofore marked for identification RESPONDENTS' EXHIBIT 200, was received in evidence.)

Mr. Wright: I would like to have the same opportunity of deferring cross-examination after a reasonable opportunity for examining this exhibit.

Trial Examiner Norwood: He offered it under those conditions.

Mr. Wright: I want the record to note my objection to the receipt of it in evidence.

Trial Examiner Norwood: Objection overruled. It is received under the conditions heretofore applied to Respondents' Exhibit No. 199.

By Mr. Welch:

3736 Q. What does the blue line represent?

A. The blue line represents carload rates on dry red lead.

Q. What does the red line represent?

A. The red line represents carload rates on red lead in oil.

Q. What does the green line represent?

A. The green line represents less than carload rates on both dry red lead and red lead in oil.

Q. They are identical?

A. The LCL rates on dry red lead and red lead in oil are identical.

Q. Will you explain to us why you have the blue lines and the red lines in the form of two arrows out in the State of New Mexico and Colorado?

A. That is to indicate that from that point on until the next beyond red and blue line is reached, the rates would be equal from both Joplin and Dallas in view of the fact that transcontinental rates are maximum rates to that territory.

Q. Now, at which point would that rate identity between Joplin and Dallas begin?

A. At Grand, New Mexico.

Q. And from that point on, they would share—would they share the same territory?

A. They would share the same territory.

Q. And that is because of what?

A. Because of the transcontinental rates being the 3737 maximum rates.

Q. In other words, they have reached the highest freight rate they can reach?

A. Yes.

Q. Now, will you explain why it is that you have a certain area marked as served by both Newark and Brooklyn, whereas you also have separate exclusive territories for those two plants?

A. Newark and Brooklyn—I will start that over. The rates from Newark and Brooklyn to nearby points are different until a certain distance is reached. From there on, they become equal from both Newark and Brooklyn.

Q. Now, as an expert on freight rates, will you tell us just what this map shows concerning the freight rate situation on producers of red lead located in the respective cities which are underscored in red ink?

Mr. Wright: I object. The document speaks for itself. It has been identified. I don't think this witness has any proper basis for testifying as an expert on the significance of the document.

Mr. Welch: All the document shows is just some lines. We want to show what the significance is from a freight rate situation. Mr. Wright has examined this witness himself and asked questions predicated upon his being a freight rate expert. It comes at a late date to object to his being such.

Mr. Wright: I am not objecting to his being an expert, I am objecting to his explaining as an expert a document which has been fully identified and put in the record. The document speaks for itself. 3738

Trial Examiner Norwood: I think if it is conceded that this witness is sufficiently qualified as an expert—if it isn't conceded, I will review the evidence on it—if it is, he may give his opinion about various points raised in this case with respect to the freight, freight advantages, but I think the question is a little too general.

You may ask his opinion about different things there, but as to the entire scope of the map and what it shows, I believe that question is too broad. I will sustain the objection.

By Mr. Welch:

Q. Mr. Sutherell, will you state what this map shows concerning the freight rate situation of the red lead producer located at Atlanta, Georgia?

A. This map shows that the red lead producer at Atlanta, Georgia, can ship to the area bounded by lines running from Houma, Louisiana, over around Wilmington, North Carolina, at a freight advantage over mills located at Dallas, St. Louis, Charleston, and Philadelphia.

Trial Examiner Norwood: Can't anybody look at that map and tell that it shows that in the light of your testimony here?

The Witness: I would say so.

3739 Mr. DuBose: Is that Charleston, West Virginia?

The Witness: Yes.

By Mr. Welch:

Q. Does this map show the same condition with respect to area surrounding each of the other points underscored as producing points?

A. It shows the same condition as the other map.

Q. Does it show the same condition as you have described with reference to the producer at Atlanta?

A. Yes, exactly the same condition.

Mr. Welch: That is all.

Trial Examiner Norwood: Anything further?

Cross-Examination (Continued) by Mr. Wright.

Q. You said Respondents' Exhibit 200 was prepared under your supervision by somebody else?

A. Mr. Leggett.

Q. What is his capacity?

A. Rate clerk.

Q. How long has he been so engaged?

A. With the Sherwin-Williams Company, for three years.

Q. Prior to that time?

A. For approximately three years, with a motor carrier.

Mr. Wright: No further cross-examination at this time.

3740 Mr. Welch: That is all.

(Witness excused.)

Trial Examiner Norwood: Call your next witness.

Mr. Welch: That is all we have for today. Our other witnesses are out of town, but I think we will finish tomorrow.

I would like to have temporary possession of Respondents' Exhibit 197-A to H and 198-A to H for the purpose of having photostats made to substitute with them.

Trial Examiner Norwood: You may have those.

We will recess until 10 o'clock tomorrow morning.

(Whereupon, at 11:55 a.m., October 15, 1947, the hearing in the above-entitled matter was adjourned.)

3741

Room 125, Federal Building,
Cleveland, Ohio;
Thursday, October 16, 1947.

Met, pursuant to adjournment, at 10:00 a.m.

Before:

John W. Norwood, Trial Examiner.

Appearances:

Joseph Wright, (and)
David R. Reel, Attorneys for the Federal Trade Commission.

J. T. Welch, (Davies, Richberg, Beebe, Busick and Richardson, Esqr's., 15th Street, N. W., Washington, D. C.), and

T. J. McDowell, (and)
T. J. Gray, (101 Prospect Avenue, Cleveland, Ohio), Attorneys for Sherwin Williams Company.

Edmund P. Wood, Attorney for Eagle-Picher Lead Company, and The Eagle-Picher Sales Company.

Eugene Z. DuBose, (Alexander and Green, 120 Broadway, New York, New York), for the National Lead Company.

3742 John A. Duncan, (M. B. & H. H. Johnson, 1649 Union Commerce Building, Cleveland, Ohio), Attorney for The Glidden Company.

3743

PROCEEDINGS.

Trial Examiner Norwood: The hearing will come to order.

Pursuant to adjournment of yesterday, the hearing is now reconvened in Room 125 of the Federal Post Office Building, Cleveland, Ohio, at 10:00 o'clock, a.m., on the 16th day of October, 1947.

The appearances are as follows:

J. T. Welch and T. J. McDowell and T. J. Gray, Attorneys for Sherwin-Williams Company.

Edmund P. Wood, Attorney for Eagle-Picher Company and the Eagle-Picher Sales Company.

John A. Duncan, Attorney for The Glidden Company.

Eugene Z. DuBose, Attorney for National Lead Company.

The attorneys for the Federal Trade Commission are Joseph S. Wright and David R. Reel.

The Court: Call your witness.

H. C. LEMKE was thereupon called as a witness for the Respondents and, having been first duly sworn, testified as follows:

Direct Examination.

Trial Examiner Norwood: Give us your full name, please.

3744 The Witness: H. C. Lemke.

By Mr. Welch:

Q. Mr. Lemke, how long have you been employed by the Sherwin-Williams Company?

A. Twenty years.

Q. And what positions have you held in that company?

A. I worked in branch offices as bookkeeper, cashier, district offices, and in the Accounting Department, assistant to the Credit Manager, in the district offices, and Auditing, and I now have charge of the Auditing Department of the Sherwin-Williams Company.

Q. How long have you had charge of the Auditing Department?

A. 1941.

Q. Continuously since that date?

A. Pardon me?

Q. Continuously since that date?

A. Yes, sir, continuously.

Q. What are the duties of that position?

A. The duties of this position are the supervising of men. As a department, we audit branches, offices, locations of the Sherwin-Williams Company.

Q. Does that include an audit of the division and district offices as well?

A. Yes, sir, district and division offices are included.

Q. What is the extent of your personal familiarity 3745 with auditing division and district invoices?

A. Well, I worked, personally checking this work, approximately five years before I became—before I became in charge of this department. And I have worked with our men, reviewing reports since I have been in charge of this department; plus the fact I visit special locations where we conduct audits.

Q. Why do you audit the invoices arising from the district and division offices?

A. Well, there are a number of reasons why we would audit invoices. It is a part—it is a phase of our procedure, and therefore we review all of our procedures in our branches district and division offices.

Q. It is the procedure in the branch, division and district offices with respect to freight policies as applied to lead products, one of the procedures which you review?

A. Yes, sir, it is.

Q. To what extent, as the result of that review of the procedures as to freight policies, to which extent, if any, are you familiar with the general freight policies of the Sherwin-Williams Company as to lead products?

A. Well, we ship lead products from various points.

Q. Just one second. My question is to what extent you are familiar with the general freight policy?

A. Well, I know what the policy is. I know what
3746 our method of shipping is and our procedure.

Q. Is there any variance in that freight policy as between the lead products, such as dry white lead, white lead and oil, dry red lead, dry red lead and oil and litharge?

A. No, it is the same policy.

Q. The freight policy is the same with respect to all of those products?

A. Yes.

Q. What is the policy with respect to carload shipments of lead products?

A. We ship from factory point to customer, and Sherwin-Williams pays the freight.

Q. Now, as far as lead products are concerned, how many factories do you have?

A. One.

Q. Do I understand, then, that all carload shipments of lead products originate in Chicago?

A. Yes.

Q. What is the policy of the Sherwin-Williams Company with respect to shipments to federal or county, municipal, governmental agencies, and agencies connected with those governmental agencies?

A. We ship freight pre-paid on such items.

Q. Why is that?

A. Because government agencies, and so forth, do
3747 not make it a practice to accept freight collect, and therefore, we can't ship it.

Q. Will they or will they not buy on any basis other than a delivery basis?

A. No. They will not, other than on delivery basis.

Q. Is your statement with respect to that policy true irrespective of the quantity involved in the shipment? In other words, does that policy apply to LCL shipments as well as carload shipments on government orders?

A. Yes, sir.

Q. Now, what is the company policy with respect to shipments of lead products to railroads and marine accounts, irrespective of the quantity shipped?

A. We deliver to their closest point of—the closest depot, pick-up depot.

Q. As far as the railroad is concerned, you deliver, or do you deliver to their nearest point on the line or to some other point?

A. To the nearest point on the line.

Q. Is that also true of marine accounts?

A. Yes, sir.

Q. Are there any cities other than Chicago where Sherwin-Williams maintain warehouse stocks for LCL shipments of lead products to purchasers?

A. Yes, there are.

3748 Mr. Welch: Just one second, Your Honor, if I may be off the record for a moment.

Trial Examiner Norwood: Yes, off the record.

(Discussion had off the record.)

Trial Examiner Norwood: On the record. We will have a five-minute recess.

(Recess had.)

Trial Examiner Norwood: Are you ready?

Mr. Welch: Yes.

Trial Examiner Norwood: Proceed.

Mr. Welch: Mr. Examiner, it is stipulated between counsel for the Commission and counsel for the Respondent, Sherwin-Williams Company, that the invoice shown on Commission's Exhibit No. 794-C, as SS Number 4544, erroneously shows that it was shipped from St. Louis, Missouri, to Kansas City, Missouri. An examination of the original invoice indicates that the origin of the shipment was St. Louis, Missouri, and the destination was St. Louis, Missouri.

It is further stipulated that on the same page, to-wit, Commission's Exhibit 794-C, the invoice identified as SL-531, erroneously shows Chicago, Illinois, as the shipping point, and Kansas City, Missouri, as the destination. An examination of the original invoice shows that the origin of shipment was Chicago, Illinois, and destination was St. Louis, Missouri.

3749 It is further stipulated that on examination of another invoice on the same page, to-wit, SL-5462, shows the origin as St. Louis, Missouri, and destination as Kansas City, Missouri. An examination of the original invoice shows that the origin was St. Louis, Missouri, and the destination was St. Louis, Missouri.

It is further stipulated that invoice number NO-29185, which appears on Commission's Exhibit 794-Z, which indicates that the origin of the shipment is Chicago, Illinois, and the destination New Orleans, Louisiana, should show the origin of the shipment was New Orleans, Louisiana, and the destination was New Orleans, Louisiana, by reason of visual inspection of the original invoice.

Is it so stipulated, Mr. Wright?

Mr. Wright: It is so stipulated.

Mr. Welch: It is stipulated between counsel for the Sherwin-Williams Company and counsel for the Commission, that in Commission's Exhibit 790, in the column under D, and opposite the listing "12½ pound kegs," the figure which apparently is "$16.50" should, in fact, be "$13.50."

Mr. Wright: I will agree to that.

Mr. Welch: Mr. Examiner, I will now offer in evidence documents which were identified as Commission's Exhibits 554, 555, 556 and 557. I offer them as Respondent's Exhibits 201, 202, 203 and 204.

3750 Trial Examiner Norwood: Any objection?

Mr. Wright: I would like an opportunity to examine them a moment, Your Honor.

Your Honor, I want to object to this correspondence. The only reason that those papers are a part of a mass of correspondence which the National Lead Company produced under a subpoena duces tecum, and which I didn't offer because they had no relevancy to the issues in this case. They are entirely unrelated matters. Several of the letters are inter-company notes between the branches of the National Lead Company and the head office, but have nothing to do with the question at issue here in Count 1 or Count 2 of the Complaint.

Mr. Welch: You don't question that the authenticity of the document has been established to the Commission?

Mr. Wright: I am not in a position to make a statement about that, because we don't have a transcript showing that portion, and I must reserve an objection on the grounds of improper identification until I have an opportunity to examine it.

Mr. DuBose: On behalf of the National Lead Company I should like also to reserve any objection that we would care to make on grounds that might appear after an examination of the record where they were identified.

I should also like to object particularly to what has been marked Commission's Exhibit No. 554, for identifica-
3751 tion, the postscript "written in pencil" which may or may not have been identified.

Mr. Welch: You can withdraw that objection.

Mr. Wright: What was the note there that you just erased?

Mr. Welch: I just wrote on that "National Lead."

Mr. DuBose: No, no. I don't mean that. I mean the—

Mr. Welch: You said a note in pencil.

Mr. DuBose: Where it says, "written in pencil—suggested to J. L. R. that we should not supply S-W nor anyone else—" which may or may not have been identified on the record. But I should like to reserve objection until we have a chance to study the record.

Mr. Wright: Counsel certainly hasn't established any purpose of this offer to show any relevancy or materiality of the documents at all, Your Honor.

Trial Examiner Norwood: Let us see what Mr. Welch has to say about their relevancy.

Mr. Welch: As to relevancy?

Trial Examiner Norwood: Yes.

Mr. Welch: We are charged with a conspiracy. I think the contents of the letter will show very definitely action which would ordinarily be incompatible to the conspiracy between National Lead and Sherwin-Williams, when National Lead in correspondence between its own two
3752 officers takes the position that Sherwin-Williams would buy National Lead and use them as loss leaders. And we offer them as showing that there is no attempted cohesion between the two companies.

Trial Examiner Norwood: Would you be satisfied with my reserving ruling on this until I can look up the record?

Mr. Welch: Perfectly all right.

Mr. DuBose: Subject to a motion to strike.

Mr. Wright: No, Your Honor, I would like to suggest that these be not admitted until counsel have had an opportunity to further examine the transcript where they were identified.

Trial Examiner Norwood: That is what I said. I will reserve the ruling.

Mr. Wright: All right.

Trial Examiner Norwood: I am reserving ruling.

Mr. Welch: All right.

Trial Examiner Norwood: Proceed.

Mr. Welch: Will you mark these for identification, please?

(The documents referred to were marked Respondents' Exhibits 201, 202, 203 and 204 for identification.)

Mr. Welch: May we be off the record?

Trial Examiner Norwood: Off the record.

3753 (Discussion had off the record.)

Trial Examiner Norwood: We will take a five-minute recess.

(Recess taken.)

Trial Examiner Norwood: You keep those other exhibits in your possession, Mr. Welch.

Mr. Welch: That is correct.

Trial Examiner Norwood: Proceed.

I am reserving ruling on the last offer in evidence of Respondents' Exhibits 201 to 204, inclusive.

Mr. Welch: Your Honor, on yesterday afternoon I asked permission to temporarily take possession of the originals which have been marked as Respondents' Exhibits 197-A through H, inclusive, and Respondents' Exhibits 198-A through H, inclusive. I have now had photostatic copies of those price cards prepared. They have been marked by the reporter with the same basic numbers, and same sub-letters, and I move the substitution of the photostatic copies, and the withdrawal of the original price cards.

Trial Examiner Norwood: Off the record.

(Discussion had off the record.)

Trial Examiner Norwood: Back on the record.

Any objection?

Mr. Wright: I have no objection to that.

Trial Examiner Norwood: That substitution will 3754 be made, and counsel may withdraw the originals and the photostats will now be the original exhibits.

Proceed.

By Mr. Welch:

Q. Mr. Lemke, I show you Respondents' Exhibit 197-A to H, inclusive, and 198-A to H, inclusive, Commission's Exhibits 662-Z-17 and Commission's Exhibit 662-Z-21, and ask you if you recognize the cities named on those respective exhibits as being shipping points, as being all of the cities except those on Pacific Coast in which Sherwin-Williams maintained warehouse stocks of lead products as of the date the price cards composing such exhibits were in effect?

Mr. Wright: Your Honor, may I have the question read?

Trial Examiner Norwood: Read the question.

(Whereupon, the question was read by the reporter.)

Mr. Wright: Your Honor, that is about a sex-tupple-barreled question.

Mr. Welch: It is a perfectly simple question, Your Honor.

Trial Examiner Norwood: Objection overruled.

Does that contain all of those cities except on the West Coast?

The Witness: Your Honor, I believe them to be the
location where we had shipping points, or points
3755 where we carried—as I say, shipping points, except
those on the west coast.

By Mr. Welch:

Q. As of the dates of the respective price cards?

A. That is right.

Q. And from an examination of all of the exhibits, Respondents' Exhibits 197-A to H, Respondents' Exhibits 198-A to H, Commission's Exhibit 662-Z-17 and 662-Z-21, do they cover all of the divisions of the Sherwin-Williams Company, except Pacific Coast divisions?

A. Yes, I believe they do.

Q. And they cover all of the proved shipping points as of the period of time in those districts with the exception of the Pacific Coast district?

A. Yes, I believe they do.

Q. Now, through your work in auditing the accounts of the various districts, have you audited the accounts of the Pacific Coast district?

A. Yes, we have. Our department has audited all locations of the Sherwin-Williams Company.

Q. As the result of that work, do you know of your own knowledge the cities on the Pacific Coast district where

Sherwin-Williams maintain warehouse stocks of lead products as of the same period of time, to-wit, September 1938, and September 1939?

3756 A. Yes, I do.

Q. Can you name those cities?

A. Spokane, Seattle, Portland, Sacramento, Santa Rosa, Oakland, Los Angeles and Phoenix.

Q. All right.

How are those two groups of cities, that is, those you have just now named as being located on the Pacific Coast, and those that you have referred to from the exhibits that I have enumerated in my previous questions; how are they designated by the company?

A. Points where we carry stock.

Q. Are they designated as shipping points?

A. Yes, sir. As shipping points.

Q. What is the freight policy of Sherwin-Williams as to less than carload shipments to purchasers located in or requesting delivery at any of the designated shipping points consisting of the cities appearing in the exhibits we have referred to and the cities on the Pacific Coast that you have specifically named?

A. We make shipments free of charge.

Q. Throughout your testimony in using the term "carload" and "less than carload", what do you mean?

A. A single shipment of a carload or truckload.

Q. Do I understand that the term "carload," then, applies either to a rail carload or to a truckload?

3757 A. We understand that.

Q. It is used interchangeably, for those two?

A. It is common knowledge.

Q. Now, in connection with your duties of auditing invoices and auditing the books of the division, district and branch offices of Sherwin-Williams, have you ever learned of any other cities which have been accorded the same freight policy with respect to lead products?

A. Yes, I have.

Q. What action, if any, did your office take to ascertain whether such action by your office making the sale on the basis of such policy had been approved by the home office?

A. In situations such as you mentioned there, we checked through our correspondence file at our various sales offices for the purpose of determining whether or not it has their approval as well as approval from headquarters.

Q. Did your office find any such approval was in existence as to some cities?

A. In some locations we have found it.

Q. Do you know, of your own knowledge, how many such cities in addition to those designated as shipping points, to-wit, those referred to and named on the exhibits that we have mentioned, and those that you have named on the Pacific Coast, have been accorded the same freight policy?

A. I beg your pardon. I would like to have that
3758 question repeated.

Trial Examiner Norwood: Read the question.

(Question read by the reporter.)

A. I missed the question. Do you want to know how many; is that the question?

By Mr. Welch:

Q. Yes.

A. Well, approximately, I think, there are five.

Q. Can you name them?

A. Washington, Gadsden, Alabama, Chattanooga, Tennessee, Pensacola, Florida, and San Diego, California.

Q. Is the freight policy of Sherwin-Williams for LCL shipments of lead products to those cities the same as it is with respect to the cities you have named on the Pacific Coast district and those that you have since identified in the exhibits we have been discussing?

A. Yes, they are the same.

Q. Can you tell me what the freight policy is for LCL shipments to all cities other than those which you have named as being shipping points of the Pacific Coast, other than those you have named as having the same freight policy accorded to them, to-wit, Washington, and San Diego, Pensacola, Gadsden and Chattanooga, and other than the cities appearing on the Commission's exhibits we have been referring to?

A. Would you repeat the question?

3759 Mr. Welch: Read the question.

(Question read by the reporter.)

A. Our policy is to ship freight collect.

Q. From what point?

A. From the closest point of shipment.

Q. Do I understand by that that you would mean the closest one of any of the cities that we have named in the three categories?

A. No, from the closest shipping point.

Trial Examiner Norwood: You mean that includes all points except those five cities you mentioned, Washington, Gadsden and Chattanooga—

The Witness: That is right.

By Mr. Welch:

Q. Those would be considered f.o.b. points, but not shipping points for other cities; is that correct?

A. That is right.

Q. Now, are there any exceptions to that policy?

A. Yes. There are exceptions when, because of not having stock at that shipping point, as mentioned in my previous answer, we may ship it from another shipping point.

Q. In that event, what do you do?

A. Well, in that event we ship and equalize the freight with the original or the—that is, the original shipping point from which the customer is accustomed to customarily
3760 draw his stock.

Q. Now, will you explain just how that equalization works?

A. Well, we determine the freight rate from the second shipping point to the—

Q. When you say second shipping point, do you mean the one from which shipment is actually made?

A. Yes, that is right. Thank you. To the first shipping point.

Q. By "first shipping point," do you mean the one which customarily supplies the purchaser?

A. Yes, sir.

Q. All right.

A. We equalize the freight charge for that particular shipment, charging the customer for the difference.

Trial Examiner Norwood: You charge that as if—

The Witness: As if—

Trial Examiner Norwood: —it was shipped from the customer's nearest shipping point; is that right, and if it is shipped from some further shipping point will you adjust that; is that correct?

The Witness: We adjust it.

By Mr. Welch:

Q. Will you give us an illustration?

A. Well, if we shipped from Dallas factory or ware-

house shipping point to a customer in Mississippi—
3761 then we will assume that the customer in Mississippi
may be at Meridian, Mississippi—I am only selecting that as a possibility—we would ship directly to Meridian instead of directly to the New Orleans warehouse where there is another shipping point. And we would determine the freight rate between Dallas and New Orleans, and also the freight rate between Dallas and Meridian, and we would charge the customer for the difference between those two rates.

Q. That is, you would charge him the difference in the rate between Dallas and Meridian and Dallas and New Orleans?

Mr. Wright: I object to this, that last question, Your Honor. That was simply a statement by counsel. I think the witness should bring out the testimony.

Trial Examiner Norwood: He is trying to clarify it.

Mr. Wright: The witness should bring out the company policy.

Trial Examiner Norwood: Objection overruled?

Have you answered that question?

The Witness: I am a little bit confused there. Would you repeat the question?

Trial Examiner Norwood: Wouldn't that price be the regular New Orleans price, plus the freight from New Orleans to the consumer, regardless of the fact that it was shipped from Dallas?

3762 The Witness: No.

Mr. Welch: Will you read back the question that I asked the witness, please?

(Question read by the reporter.)

A. Yes.

By Mr. Welch:

Q. Now, why would you make that kind of a shipment in that kind of a situation in the first place?

A. Only because in a situation, as an example, where we may not have the stock at the New Orleans shipping point.

Q. That would be one reason why you would do it?

A. Yes.

Q. Is it or is it not a fact that sometimes, under certain locations, and in view of certain rates, you find that you can avoid a trans-shipment from a smaller warehouse by shipping from some larger warehouse without there being any increase in the ultimate freight, because the freight from the two warehouses to the ultimate destination is the same?

A. Yes.

Mr. Wright: I object to that question, Your Honor. Is it or is it not a fact? Counsel is testifying here and having the witness ratify his statements. I think the witness should give us his own testimony.

Trial Examiner Norwood: It is a leading question, beyond all doubt.

3763 Mr. Wright: I realize that a certain amount of leading is necessary on this subject, but I believe that question is all out of bounds.

Trial Examiner Norwood: The objection is sustained, and the answer is stricken, and we will take a five-minute recess.

(Recess taken.)

Trial Examiner Norwood: Proceed.

Mr. Welch: Would you read back the last question and answer?

Mr. Wright: No, I believe his last question and the answer were stricken.

Mr. Welch: I am asking him to read back the last one which was answered.

Mr. Wright: Oh, I am sorry.

(Question read by the reporter as follows: "Question: Now, why would you make that kind of a shipment in that kind of a situation in the first place?

"Answer: Only because in a situation, as an example, where we may not have the stock at the New Orleans shipping point.

"Question: That would be one reason why you would do it?

"Answer: Yes.")

By Mr. Welch:

Q. Are there any other reasons?

3764 A. Yes, where we find that the freight rate is near or comparable or less if shipment is made directly to the customer which normally is served, in this particular example, from New Orleans, the shipment in the second case would then be made from Dallas, using the previous example.

Q. And in such a situation as that what freight if any would the customer have to pay?

A. If the rate is less than our rate to the New Orleans warehouse from Dallas to the New Orleans warehouse, then there wouldn't be any charge to the customer.

Q. But if he had received it from New Orleans instead of Dallas, what freight would he have been charged?

A. He would have paid the normal freight rate between New Orleans and destination.

Q. I show you the original of an invoice of a Dallas house copy bearing number 8579, which is one of the sub numbers under Commission's Exhibit—

Mr. Wright: 8579; was that the number?

Mr. Welch: Yes.

Mr. Wright: It appears on Commission's Exhibit 794-T, in line 41.

By Mr. Welch:

Q. (Continuing) —and also a photostatic copy of such document, which is one of the sub numbers under Commission's Exhibit 833—and, off the record, which specific
3765 number I do not have, but having identified the invoice number, you can later found out which sub number under 833 it is, I just don't happen to know right now.

I show you the original of that invoice. Does that illustrate the last type of situation that you discussed?

Mr. Wright: Off the record for a moment.

Trial Examiner Norwood: Off the record.

(Discussion had off the record.)

Trial Examiner Norwood: Back on the record.

By Mr. Welch:

Q. Your answer is—

A. Yes.

Q. From what point would Union, Mississippi, ordinarily be served?

A. New Orleans.

Q. Did you make any investigation as to why in this particular shipment it was shipped from Dallas to Union, Mississippi, rather than from New Orleans?

A. Will you read that question, please?

Trial Examiner Norwood: Read the question.

(Question read by the reporter.)

A. No, I did not.

Q. Are you familiar with the rates between Dallas, Texas, and New Orleans, Louisiana, and between Dallas, Texas, and Union, Mississippi?

3766 A. Yes, I am.

Q. Is that as a result of an investigation conducted?

A. Yes. I checked it.

Q. You checked those rates?

A. Yes, sir.

Q. Will you state what they were?

A. The rate from Dallas to New Orleans is $1.00, and from Dallas to Union, Mississippi, it is $1.10.

Q. To what point?

A. To Union, Mississippi.

Q. It is how much?

A. A dollar ten.

Q. Now, that situation, what freight did the purchaser pay?

A. The Sherwin-Williams paid the freight, the Sherwin-Williams Company paid the freight.

Trial Examiner Norwood: You know the rate from New Orleans to Union, Mississippi?

The Witness: Union, Mississippi?

Trial Examiner Norwood: Yes.

The Witness: Yes, $1.10.

Trial Examiner Norwood: From New Orleans?

By Mr. Welch:

Q. What did you state the rate from Dallas to New Orleans was?

A. I don't quite recall the rates, but I believe that
3767 I was wrong. The rate to New Orleans is $1.10, instead of $1.00.

Q. And the rate from Dallas to Union is how much?

A. ~~It is~~ $1.00 per hundredweight.

Q. Is it $1.00 or $1.09; do you recall?

A. I don't recall that. I think it is $1.00.

Q. Is it less than the rate from Dallas to New Orleans?

A. It is less.

Q. Then in that situation did the purchaser pay any freight whatever?

A. No, he did not.

Q. If he had been shipped from New Orleans to Union, would he have had to pay some freight?

A. Yes, sir.

Trial Examiner Norwood: Well, he would have had to pay that freight, the rate from New Orleans to Union in that case?

The Witness: Yes, he would have.

By Mr. Welch:

Q. But, actually he got it by reason of your substitution of a shipping point without paying any freight, is that right?

A. Yes.

Q. When you are equalizing freight in other types of situations, is it ever possible for the purchaser to pay more as the result of equalization than he would have paid had he been shipped from his normal supply service?

3768 Mr. Wright: May I have that question read?

Trial Examiner Norwood: Read the question.

(Question read by the reporter.)

A. No, it is not.

Q. Why is that true?

A. Because our shipping points are geographically located so that that is impracticable. That situation of that kind would require the second shipping point to be within the radius equal to the original shipping point and the destination.

Q. And in that event it would be the normal shipping point rather than the other point, is that right?

A. Yes, that is right.

Q. Now, are there any exceptions to that freight policy for making LCL shipments to all cities other than those designated as shipping points, and other than those you have named, such as Washington, San Diego, Pensacola, Gadsden and Chattanooga, other than the exceptions which involve equalizations?

A. Yes, there are exceptions.

Q. What type of an exception is that?

A. Well, there are two exceptions.

Q. All right. What are they?

A. Where we make a shipment within the same city where the point—where the warehouse stock is carried. And in those suburbs or contiguous cities which are surrounding the point of shipping city. 3769

Q. How do you describe those suburban cities, or cities that are contiguous to the shipping point center?

A. Well, our terminology is free delivery areas.

Q. Do they vary with each shipping point, depending on the size of the shipping point and the location of the contiguous cities or towns close to it?

A. Yes, it is dependent on that.

Q. Does it follow in each a standard pattern?

A. Yes, it follows a pattern that various companies follow in making deliveries.

Q. Is that a practice that is general throughout other types of industry other than the lead industry?

A. Yes.

Q. Is that a recognized method of handling deliveries?

A. Yes, it is.

Q. Is it commonly followed?

A. Yes.

Q. Now, do any other stores other than those of all the types you have heretofore named, ever make LCL shipments of lead products from their own stocks for which they charge freight from the store to the ultimate destination?

A. Yes, there are a few instances.

Q. Does that happen with any regularity?

3770 A. No.

Q. Have you recently examined the original invoices which are listed on Commission's Exhibit 794-A to 794-Z-13?

A. Yes, I have.

Q. Have you seen any tabulation which lists certain information appearing on the face of such exhibits in the same order and sequence as which those invoices are listed in Commission's Exhibit 794 with sub numbers?

A. Yes, I have.

Mr. Welch: I would like to have the documents that I now hand to the reporter, consisting of pages 1 to 23, marked, with appropriate sub numbers, as Respondents' Exhibit 205. And may we take a moment or two while he is doing that?

Trial Examiner Norwood: Yes. We will have a five-minute recess.

(Recess had.)

Trial Examiner Norwood: Proceed.

(The papers referred to were marked Respondents' Exhibit 205-A, 205-B, 205-C, 205-D, 205-E, 205-F, 205-G, 205-H, 205-I, 205-J, 205-K, 205-L, 205-M, 205-N, 205-O, 205-P, 205-Q, 205-R, 205-S, 205-T, 205-U, 205-V, 205-W, and X, for identification.)

By Mr. Welch:

Q. I show you the documents which have been
3771 identified as Respondents' Exhibit 205-A through 205-W, for identification. Is that the tabulation that you referred to in your previous answer?

A. Yes.

Q. To what extent, if any, have you verified the accuracy of such tabulation against the original invoices?

A. I checked all the invoices against this tabulation.

Mr. Welch: I now offer in evidence Respondents' Exhibit 205-A to 205-W, for identification.

Mr. Wright: Who prepared this exhibit, Mr. Lemke?

The Witness: One of our office people prepared the list.

Mr. Wright: What were his instructions?

The Witness: Well, to list the name of the customer and the order number, the origin of the shipment, the destination, and then anything relative to identifying as to the method of shipment, as far as it pertains to freight collect, or freight pre-paid, and so forth.

Mr. Wright: In other words, it purports to contain everything that appears in the invoice?

The Witness: So far as it pertains to the subject of identification as to the method of shipment pertaining to freight.

Mr. Wright: Was it prepared under your direction?

The Witness: Yes, sir.

3772 Mr. Wright: And this includes all of the invoices then listed in Commission's Exhibit 794 and the sub numbers?

The Witness: There are a few exceptions, and they are—and we marked them missing.

Mr. Wright: In so far as the other invoices, your followed the same order?

The Witness: Yes, sir.

Mr. Wright: Your Honor, I have no objection to this document. Of course, subject to my right to inspect the original documents and the information which was pulled off and put into this tabulation.

Mr. Welch: Those documents are available for inspection here this morning.

Trial Examiner Norwood: They may be received.

(The papers referred to, heretofore marked for identification RESPONDENTS' EXHIBIT 205-A, 205-B, 205-C, 205-D, 205-E, 205-F, 205-G, 205-H, 205-I, 205-J, 205-K, 205-L, 205-M, 205-N, 205-O, 205-P, 205-Q, 205-R, 205-S, 205-T, 205-U, 205-V, and 205-W and X, were received in evidence.)

By Mr. Welch:

Q. Perhaps Mr. Wright has already asked you this question, but I would like to ask it myself:

What information is shown on this tabulation?

A. The customer's name, the invoice number, the 3773 origin of shipment, the destination and the marking so far as it pertains to, identifying as to how the shipment was made with respect to freight, that is collect, prepaid, and so forth.

Q. And the listings of the invoices in Respondents' Exhibit 205-A to W, are in the same order as they appear in Commission's Exhibit 794-A to Z, is that right?

A. Yes, they are.

Mr. Welch: Your Honor, off the record.

Trial Examiner Norwood: Off the record.

(Discussion had off the record.)

Trial Examiner Norwood: Back on the record.

By Mr. Welch:

Q. Now, I notice that under the column "marking" you sometimes have a notation "Free delivery area." From where was that information obtained?

A. From the attachments that were attached to the original invoices, shipping copy.

Q. Do you know what the purpose and reason was for which those attachments were first prepared and attached to the invoices?

A. Yes, I do.

Q. Will you state what it was?

A. For the purpose of identifying these original shipments as to the various classifications listed.

Q. Was it for the purpose of supplying specific information that the Federal Trade Commission had re- 3774 quested in connection with the tabulation which has now been admitted into evidence as Commission's Exhibit 794?

A. Yes.

Q. Will you explain the meaning of the term "will call" as it is used in the column headed "Marking"?

A. A customer stopping at one of our stock points or shipping points where we carry stock for the purpose of picking up the merchandise personally, or by someone in his employ.

Q. What is meant by the term "Caller"?

A. Approximately the same thing. An individual, either the man, the purchaser himself, or someone whom he has identified to do this for him.

Q. What is meant by the term "Wait"?

A. Approximately the same as my previous answers.

Q. Now, when those terms are used, what does that indicate as to whether there was any freight involved in the shipment at all?

A. No freight charged.

Q. Do you mean no freight charged or no freight incurred by either party?

A. No freight incurred either by Sherwin-Williams Company or by the buyer.

Q. Now, what does the term "C. L." mean wherever it appears on that tabulation?

3775 A. It has reference to identification on the original invoices, including truckload and carload.

Q. The term, therefore, applies equally to truckload and carload?

A. Yes.

Q. What does the term "Pt. C. L." mean?

A. Part carload.

Q. When there is no entry in the column headed "Marking" opposite a particular invoice, does that indicate anything to you?

A. Yes, it would indicate that—one of three situations.

Q. All right, will you enumerate them?

A. Shipment made on the collect basis, or a shipment—

Q. Just one second. Will you pick out one of those?

A. Shipment made on a collect basis?

Q. On a collect basis.

A. On Exhibit R-205-C, number 9642, origin of the order was Los Angeles, destination Las Vegas, Nevada.

Q. And there is no notation?

A. No notation.

Q. What does that mean to you in that particular situation?

A. That it was shipped on a collect basis.

Mr. DuBose: On a what basis?

The Witness: Collect basis.

Q. What is the second type of situation that would 3776 be brought to your mind by the absence of any data in the column headed "Marking"?

A. A delivery made within a shipping point city.

Q. Can you illustrate that type of situation?

A. On Exhibit R-205-A, Invoice No. 5322, Kansas City, Missouri, to Kansas City, Missouri.

Q. And when there is no marking in that type of situation, it indicates what?

A. That it was shipped at Sherwin-Williams' expense, delivered locally by cartage or through the medium of their own truck.

Q. All right. What other type of situation would be brought to your mind by the absence of a marking?

A. Deliveries made to cities contiguous to the shipping point.

Q. Will you illustrate that type of situation?

A. On R-205-C, Invoice No. 9768—I am sorry, I checked the wrong one there.

Q. All right.

A. I didn't look at the marking. Do you want one without marking?

Q. That is right.

In framing my last question, in saying without marking, I mean without marking on the invoices itself, not without marking on the attachments that you have referred to.

Will you identify that one?

3777 A. In that case, on R-205-H, Invoice 39516, origin Oakland, destination Berkley.

Q. Do you know of your own knowledge whether Berkley is in a free delivery area for Oakland?

A. Yes, I do.

Q. Now, leaving that tabulation for a moment, do you know the customary method by which Sherwin-Williams ships its products including lead products to its own stores in so far as carload or less than carload shipments are concerned?

A. We require our stores to order in carload quantities.

Mr. Welch: Your Honor, may we be off the record for a moment?

Trial Examiner Norwood: Off the record.

(Discussion had off the record.)

Trial Examiner Norwood: On the record.

We will recess at this time until 1:30.

(Whereupon, at 12:00 o'clock, Noon, the hearing was adjourned until 1:30 o'clock, p. m.)

3778

Afternoon Session.

1:30 p. m.

Trial Examiner Norwood: Proceed, Mr. Welch.

H. C. LEMKE resumed the stand and testified further as follows:

Direct Examination (Continued).

Mr. Welch: Yesterday on page 3827 of the record, counsel for the Commission stated as follows: "Your Honor, at this point, if this document is received, I want to call on Respondents to produce the list of rates and references from which this document is made up," referring to two maps which are Respondents' Exhibit 199 and Respondents' Exhibit 200.

I now wish to hand to counsel for the Commission three sets of tabulations which include the rate applicable at the various points marked on the maps and which have appropriate reference to the tariffs from which the rates were obtained, there being three sets applicable to each map.

Mr. Wright: I want to thank counsel for supplying this information. I want to point out my understanding of the state of the record was that I was to have a sufficient time for examination of these documents before deciding on whether the witness who testified as to the maps should be recalled for further cross-examination. 3779

Trial Examiner Norwood: Yes.

Mr. Welch: The length of time that counsel has for that purpose is something within the discretion of the Examiner and over which we have no control.

Trial Examiner Norwood: You would be able to cross-examine tomorrow, wouldn't you?

Mr. Wright: I don't see how that is possible, sir. This data here must run some 30 pages, tariff references and rates. I understand we are to run late here today, and I have no facilities for examining this material or these tariffs which are referred to are not available to me.

Trial Examiner Norwood: Off the record.

(Discussion off the record.)

Trial Examiner Norwood: On the record. I will ask counsel to see what he can do with it overnight, and I hope it can be managed so that we will not have to have a return trip to Cleveland for cross-examining that witness.

Mr. Wright: I appreciate that consideration, your Honor. I will do my best.

Trial Examiner Norwood: Yes.

Mr. Wright: I have no optimism about being able to check this material overnight.

Trial Examiner Norwood: See what you can do.
3780 Proceed.

By Mr. Welch:

Q. I show you an original invoice from Oklahoma City which carries the number 3453, which appears on Commission's Exhibit 794-C and which is one of the sub numbers on Commission's Exhibit 833. I also show you an Oklahoma City house copy invoice issued by Sherwin-Williams Company, No. 3552, bearing date of January 16, 1943. I am showing you both of those exhibits and I want you to state whether the notation on Invoice No. 3453 that the products covered on that invoice were to be shipped prepaid and without recovery of the freight by Sherwin-Williams was in accordance with Sherwin-Williams' policy or not.

A. It was not in accordance with Sherwin-Williams' policy, inasmuch as the order was shipped prepaid.

Q. Why do you say that?

A. Oklahoma City is a shipping point. Destination on this particular order is to Ralston, Oklahoma. Therefore, we have no basis from our policy standpoint to ship that order.

Q. You are referring to No. 3453?

A. Yes.

Q. What condition exists on 3552 as to freight charges?

A. On 3552, we charge customers the prepaid freight charges.

3781 Q. That means the customer pays?

A. Yes.

Q. Is 3552 in accordance with Sherwin-Williams' freight policy?

A. Yes, it would fall in line with Sherwin-Williams' policy.

Mr. Wright: Your Honor, I am going to move to strike that testimony with regard to invoice referred to as 3552 unless counsel is prepared to offer that invoice in evidence.

It is not recorded in any previous exhibit and the testimony was about an exhibit which does not appear in the record.

Mr. Welch: We are perfectly willing to offer it.

Trial Examiner Norwood: Do you offer it?

Mr. Welch: Yes.

Trial Examiner Norwood: Mark it Respondents' Exhibit 206.

(The document referred to was marked Respondents' Exhibit 206 for identification.)

Mr. Welch: I will withdraw it to make a photostatic copy.

Mr. Wright: That is perfectly all right.

Mr. Welch: I would like that to be numbered 206-A. If I may—there will undoubtedly in the course of this examination be others and they may be carried under—

3782 Trial Examiner Norwood: (Interposing.) I think that will confuse us unless you have them here now.

Mr. Welch: Your Honor, I have them here, but as I continue this examination, there are going to be different invoices I am going to produce.

Trial Examiner Norwood: Why don't you have them all marked now and examine him on them?

Mr. Welch: Your Honor, I am doing so as fast as I can get to them. They will all be numbered with a sub letter, the other following other immediately.

Trial Examiner Norwood: Mark it 206 and show it received.

(The document referred to, heretofore marked RESPONDENTS' EXHIBIT 206, was received in evidence.)

Trial Examiner Norwood: Proceed.

You did not have any objection, did you, Mr. Wright?

Mr. Welch: I understood it was being offered at Mr. Wright's request.

Mr. Wright: I have no objection.

Trial Examiner Norwood: It has been received.

By Mr. Welch:

Q. I now call your attention to Respondents' Exhibit 205-B and the invoice carries No. 3508 and 6368, and the notation under the column "Marking" is written

3783 "prepaid," with the destination being indicated as Alexandria, Virginia. Will you tell us why, within the policy of the company, those shipments were made prepaid?

A. Washington is one of those cities which I mentioned this morning as being an f.o.b. point, and Alexandria is a suburban city of Washington, and is considered a free delivery area.

Q. Is Alexandria recognized consistently as such by the company?

A. Yes.

Q. I now refer, on the same page, to Respondents' Exhibit 205-B, to invoice 10611, where the origin is shown as Philadelphia, Pennsylvania, the destination Marlton, New Jersey, and no marks in the marking column. What was the freight situation on that invoice, based upon that information?

A. May I see the copy of the invoice?

Q. I show you Philadelphia house copy bearing No. 10611.

A. That shipment is a collect shipment.

Q. Why do you state that?

A. Because it is not indicated as any other way of handling.

Q. Is there any notation on that to the effect that you paid the freight?

A. No, sir.

Q. I call your attention to the red pencil writing 3784 and ask you the same question.

A. Oh yes; it says, "Paid by customer," which would place it in record of what I stated before, that it was shipped collect.

Trial Examiner Norwood: Let's take a five-minute recess.

(Short recess.)

Trial Examiner Norwood: Come to order, gentlemen. Proceed.

By Mr. Welch:

Q. Mr. Lemke, since Respondents' Exhibit 205-A to W, inclusive, was put in evidence, have you placed any additional marks thereon?

A. Yes, I have.

Q. Will you explain what you have done?

A. I have taken those items which have not been identified in the column headed "Marking" and determined—let me say I have classified those into three groups.

Q. What are the three groups?

A. Local city delivery, marked by "A", and free delivery area for shipping point, marked "B", and prepaid and recovered or collect freight, marked "C".

Q. Now then, on the tabulations themselves, have you inserted another column headed, "Code"?

A. Yes.

3785 Q. And what entries have you made in that column?

A. I have made the—I have used either the letters A, B, or C.

Q. And to which invoices?

A. As to those invoices which do not have an identification in the column headed by the word "Marking."

Q. As to those that are marked B throughout the entire exhibit, beginning with Respondents' Exhibit 205-A, and running through 205-W, do you know of your own knowledge that the towns therein listed to which shipments were made from the points of origin therein listed were in fact within the free delivery zones of such shipping points?

A. Yes.

Q. Do you know of your own knowledge and from your examination of the original invoices which you have classified by the code letter C, that they fall within the scope of the policy you have previously stated to the effect that in such instances the freight would either be prepaid and then collected from the customer, or else the shipment would be sent out freight collect?

A. Yes.

Q. Now, Mr. Lemke, I call your attention to two invoices appearing on Respondents' Exhibit 205-F, the same bearing the numbers 4012 and 4030.

A. All right.

3786 Q. I would like to have you examine the original invoices which I hand you and tell me whether or not carload shipments are involved.

A. These two orders were shipped at the same time, evidenced by the shipping receipt number which is the same in both cases, No. 52336.

Q. Is the poundage shown on both?

A. Yes.

Q. Which one is shown and what is the total amount shown?

A. On Invoice No. 4012, the total poundage represents approximately 76,000 pounds.

Q. Is that information shown on the first page of No. 4012?

A. Yes.

Q. And the fact that the same shipping receipt number is on both invoices indicates that they went together as a part of a truckload order?

A. Yes, sir.

Mr. Welch: May we go off the record?

Trial Examiner Norwood: Off the record.

(Discussion off the record.)

Trial Examiner Norwood: On the record.

By Mr. Welch:

Q. I now show you invoices bearing Nos. 3233 and 3260, which appear on Respondents' Exhibit 205-F.
3787 Can you examine the first sheets of Order No. 3260 and Order No. 3233, and explain the fact that No. 3233 was billed f. o. b. Oswego?

A. Invoice 3233 specifically indicates that the shipment was made prepaid, or f. o. b. Oswego.

Q. Now, look at 3260. Which of those two orders reflects the true policy of the Sherwin-Williams Company with reference to freight payment in a situation of that character?

A. Invoice 3260.

Q. Do I understand from that that the billing of 3233 is an error?

A. I would consider it such. It is not Sherwin-Williams' policy to ship that way.

Trial Examiner Norwood: That first one, 3233, was prepaid and recovered, wasn't it?

The Witness: No, there is no showing of recovery.

Mr. Welch: I would like to have 3233 marked as Respondents' Exhibit 207, and the first page of No. 3260 marked Respondents' Exhibit 208. And I would like to offer them both in evidence.

Mr. Wright: Are you offering this note that appears on here in red?

Mr. Welch: I know nothing about it.

Trial Examiner Norwood: Is there any objection?

Mr. Wright: No objection.

Trial Examiner Norwood: Received as marked.

3788 (The documents referred to were marked for identification RESPONDENTS' EXHIBIT 207 and RESPONDENTS' EXHIBIT 208 and were received in evidence.)

By Mr. Welch:

Q. I now call your attention to Invoice No. 7948 and No. 7966 on page 205-F, involving shipments from Newark to the Bronx, and to New York, respectively. Do you know whether the Bronx and New York are both or either within the free delivery area from Newark?

A. They are both in the free delivery area.

Q. I now call your attention to Invoice No. 9555 appearing on Respondents' Exhibit 205-G, and I show you the original invoice listed thereon. Can you tell us whether or not that involves a carload shipment?

A. It does involve a carload shipment.

Mr. Welch: Off the record.

Trial Examiner Norwood: Off the record.

(Discussion off the record.)

Trial Examiner Norwood: On the record.

By Mr. Welch:

Q. What is your basis for stating that that is a carload shipment?

A. The quantity through the weight indicated on the face of the invoice, plus the fact that a good number of
the items are canceled, which together would make up
3789 a required carload weight. Therefore, we would ship
it to the customer.

Q. I now call your attention to Invoice No. 14939, No. 14936, and No. 14938 appearing on Respondents' Exhibit 205-G. Can you tell us whether those shipments involve carload shipments?

A. Yes.

Q. What is the basis for that statement?

A. The weight and the fact that all three orders were shipped on the same bill of lading number.

Q. What is the approximate total weight shown, just roughly?

A. Approximately 17,000 pounds.

Q. 17,000 pounds?

A. Yes.

Trial Examiner Norwood: Three shipments together make up a carload, is that the idea?

The Witness: That is right.

By Mr. Welch:

Q. Do the faces of those invoices indicate certain other invoices were shipped at the same time on the same shipping receipt?

A. Yes. In addition to this weight indicated on the face of the invoices, we have a notation that 14929 indicates it was shipped on other invoices in addition to the 14936 and 14938.

3790 Q. Which invoices are not in the possession of the Cleveland office, are they?

A. No.

Q. I now call your attention to Invoice No. 38336 appearing on Respondents' Exhibit 205-G and show you an original invoice and ask whether that shipment involved a carload shipment?

A Yes.

Q. What is your basis for making that statement?

A. The weight indicated on the face of the invoice.

Q. What is the rough weight?

A. Approximately 18,000 pounds.

Q. I call your attention to the notation with reference to Invoice No. 46019 appearing on Respondents' Exhibit 205-H. What relationship if any does Burlingame bear to Oakland, California?

A. Burlingame is in the free delivery area.

Q. I call your attention to Invoice 4838 appearing on Respondents' Exhibit 205-K. I will show you the original of that invoice.

Mr. Welch: The document now marked Respondents' Exhibit 205-H should be changed to read Respondents' Exhibit 205-H-1.

Trial Examiner Norwood: There is nothing on the record about these letters. All you have got to do is

3791 change the letters there. You haven't asked any questions about it.

Mr. Welch: We have offered the whole thing, your Honor.

I don't want to change my total sequence of numbers because I have been referring to the entire document.

Off the record.

Trial Examiner Norwood: Off the record.

(Discussion off the record.)

Trial Examiner Norwood: On the record.

Mr. Welch: H shall become H-1 and the one that was unnumbered will become H-2.

Trial Examiner Norwood: Change those numbers, Mr. Reporter, when you get down to H. Page No. 7 is H, and mark the ones after No. 7, beginning with I. Page No. 8

is I, and so forth, which makes the entire series concluded with the letter X.

Take five minutes recess and fix them up.

(Short recess.)

Trial Examiner Norwood: The record may show that this series, Respondents' Exhibits 205 run from "A" to "X" inclusive instead of "A" to "W" as heretofore designated, and that references to that may be corrected to include "X".

By Mr. Welch:

Q. Now, I note that normally that Invoice No. 4838
3792 to which I have called your attention indicates that
there was no marking thereon with reference to freight. I show you the original Invoice No. 4838 and ask you what the facts are with reference to who paid the freight and why?

A. The invoice indicates that the Sherwin-Williams Company paid the freight.

Q. Why?

A. Because the shipment was made to a shipping point.

Q. I now call your attention to invoices No. 14767 and 48255 appearing on Respondents' Exhibit 205-L and note that the column headed "Marking" does not have a notation as to who paid the freight. I show you the original invoices No. 14767, and 48255, and ask you if you have made any investigation as to who paid the freight, and if you made such an investigation, who paid it?

A. It appears that when we have to pay the freight on both of these invoices, inasmuch as they are government agency orders.

Q. That would be in conformance with your general policy?

A. Yes.

Q. I call your attention to Invoices No. 48260 appearing on Respondents' Exhibit 205-L, and note in the column headed "Marking" the words "entire amount returned." I show you the invoice. What is the meaning of the writing "entire amount returned"?

3793 A. It appears that the shipment was either not
acceptable to the customer and he returned it, or it was shipped in error, so the merchandise was returned to the shipping point.

Q. The entire amount of merchandise was returned, is that right?

A. Yes, the entire amount.

Q. Now, when situations like that happen, what is the company's policy with reference to freight?

A. Our policy is to adjust the original freight charge.

Q. And by adjust, you mean what?

A. Credit the customer for the amount he paid on the original shipment.

Q. I call your attention to Invoice No. 1090 on Respondents' Exhibit 205-L, and the absence of any notation in the column headed "Marking." I show you the original invoice No. 1090 and ask you what the freight situation was with reference to that invoice in so far as payments are concerned?

A. This shipment appears to be a carload quantity, therefore, it was prepaid.

Q. Why is there no prepayment notation on it?

A. Because the shipment, as indicated by the shipping statement, shows that it originated at Oakland, and was shipped by boat to Seattle, where it was reconsigned
3794 to customer as verified by the shipping statement at the Seattle warehouse.

Q. And Seattle is a warehouse point?

A. Yes, sir.

Q. Who paid the freight on that invoice after it was trans-shipped from Seattle to the customer at Hoquiam, Washington?

A. It would appear that this would be shipped at Sherwin-Williams freight expense because of the quantity involved, representing 19,024 pounds.

Q. Now, I call your attention to Invoice No. 12182 shown on Respondents' Exhibit 205-N and the fact that there is no notation in the column headed "Marking." I show you the original invoice and ask you what the invoice shows with reference to who paid the freight and why?

A. The Sherwin-Williams Company paid the freight on this shipment which originated at Kensington, or Chicago factory, and was shipped direct to the Seattle warehouse or shipping point where it was re-consigned to the customer. The quantity in this case, from the standpoint of weight, would indicate that the Sherwin-Williams Company also paid the freight from Seattle to Yakima, Washington.

Q. It being a carload?

A. It being a carload.

Trial Examiner Norwood: Did that ultimately
3795 amount to more than the price from Chicago to
Seattle?

The Witness: Would you repeat that, please?

Trial Examiner Norwood: Can you tell us whether the freight from Chicago to Yakima, Washington, was more than from Chicago to Seattle?

The Witness: Yes, very much more.

Trial Examiner Norwood: Go ahead.

By Mr. Welch:

Q. Mr. Lemke—

Mr. Welch: Your Honor, I would like to state for the record, however, that this freight equalization is not a problem in connection with this invoice because the freight was paid from origin to destination and there was no equalization involved. We are offering to show that.

Trial Examiner Norwood: Very well.

By Mr. Welch:

Q. I now call your attention to Invoice No. 7968, appearing on Respondents' Exhibit 205-M, and call your attention to the fact that the column headed "Marking" bears no notation. I would like for you to examine the original invoice and tell me what the size of it was, who paid the freight and why.

A. The weight of this shipment was 19,835 pounds. The invoice indicates "Car to Seattle." Therefore, it appears
that the shipment was made from Oakland to our
3796 Seattle warehouse and re-consigned to Anchorage.
Sherwin-Williams paid the freight.

Trial Examiner Norwood: Is that Anchorage, Alaska?

The Witness: Yes.

By Mr. Welch:

Q. Now, I would like to call your attention—still referring to Respondents' Exhibit 205-M. I note that Invoice No. 8323 has as its place of origin Seattle, and its destination Juneau, Alaska, and has no marking in the column, and no code letter in the column headed "Code." Is that correct or incorrect?

A. I would have to refer to the original invoice.

Q. Is Seattle the closest shipping point to Juneau?

A. Yes, it will appear that this order was shipped collect to Juneau, Alaska.

Q. Did it amount to a carload?

A. I don't think so.

Q. I now call your attention to Respondents' Exhibit 205-C, an invoice No. 4393 which shows a sale to the Columbus & Greenvill Company, of Columbus, Mississippi, which delivery was f.o.b. Chicago. Do you have any knowledge as to whether Columbus and Greenvill Railway Company is connected with the Gulf, Mobile and Ohio, and the Alton route?

A. Yes, and they have a line.

3797 Q. The Gulf, Mobile and Ohio, and the Alton Route, have a terminal at Chicago, is that right?

A. Yes, they do.

Q. Then, does the delivery of the merchandise to the railroad f.o.b. Chicago conform to Sherwin-Williams' policy for handling railroad accounts?

A. Yes.

Q. I now call your attention to Respondents' Exhibit 205-P, Invoice 4955, showing a shipment from Dallas to Panama City, bearing the marking indicating that the shipment was f.o.b. Panama City. Please examine the original invoice and tell me whether that constituted a carload, and if it did, the basis for your statement.

A. It constitutes a carload.

Q. What poundage do you find on the first page of the invoice?

A. Approximately 21,000 pounds.

Q. I call your attention to the entry in connection with Invoice 9800 on Respondents' Exhibit 205-P, involving a shipment from Houston, Texas, to Baton; what relation exists between Baton and Houston?

A. Baton is in the freight delivery area.

Q. Now, I call your attention to Respondents' Exhibit 205-R, and the Invoice No. 7320. I will ask you to look at the second tabulation. On that page, and tell me

3798 what the invoice number is?

A. 7225.

Q. I now show you an invoice bearing the number 7325. I will ask you to say whether the one you have listed as 7225 is the same as the one, the original of which I showed you?

A. It appears it should be 7325 instead of 7225.

Q. You show it 7325. Will you make appropriate corrections on Respondents' Exhibit 205, with the consent of the Commission's counsel, to make that conform?

A. Yes, sir.

Q. Now, with respect to that exhibit, I note that the marking shows that freight was allowed to destination on that shipment. I show you the original invoice 7325 and ask you to explain why freight was allowed?

A. It appears that an original shipment was entered and shipped indicating on the face of the invoice, "A truck will call with other orders," and it appears that it is the back order, or carried forward items which we shipped.

Q. Do I understand by that that they were not available for shipment at the time the truck picked up the other items?

A. It would appear so.

Q. Now, in a situation where the company is not in a position to ship all items in connection with a carload order at the time the carload order goes out, what is the company's standard policy?

3799 A. Sherwin-Williams pays the freight.

Q. Why is that?

A. Because it would be a direct additional cost to the customer, and we assume it is our responsibility to have the merchandise on hand to be handled with the original order.

Q. In other words, you don't want to penalize them?

A. That is right.

Q. I now show you Invoice No. 11232 appearing on Respondents' Exhibit 205-R. You will note that the statement under the column "Marking" is "Freight allowed to destination." Can you state from an examination of the invoice why that price was allowed to destination?

A. It would appear that this is a carload shipment.

Q. And under such policy, who would pay the freight?

A. Sherwin-Williams would pay the freight.

Q. What is the weight?

A. It is—

Q. Roughly.

A. I think that was approximately 12,000 pounds as indicated. However, to make positive the weight, I would want to estimate the number of gallons because the actual weight doesn't appear to be given in complete picture, but so far as the notations are concerned—

Q. Could you do that in a very few minutes?

A. Yes.

3800 Mr. Welch: Your Honor, we would like a few minutes' recess to figure that out.

Trial Examiner Norwood: Very well.

(Short recess.)

Trial Examiner Norwood: Come to order, gentlemen, and proceed.

By Mr. Welch:

Q. Are you now able to calculate that figure, roughly?

A. Approximately 16,000.

Q. Does the company occasionally take a carload rate even though there isn't sufficient tonnage in it to make a carload?

A. Yes, we do.

Q. Why is that?

A. There are occasions in certain circumstances when it is less expensive, or there is less freight charge to the company by paying the minimum carload order and shipping less than the minimum quantity than shipping that portion on an LCL basis.

Q. Would an amount of 16,000 pounds fall in that area?

A. Yes, it would.

Q. Mr. Lemke, have there ever been changes in the list of cities in which warehouses or shipping points are operated?

A. I wish you would repeat that question.

Q. Strike the question.

3801 Mr. Lemke, are certain cities sometimes listed as shipping points because warehouse stocks are carried there, and at other times not listed because they do not carry warehouse stocks?

A. Yes.

Q. Is Atlanta, Georgia, a city that has been in that position—Savannah, Georgia, I mean?

A. Yes, Savannah has.

Q. Was Savannah, Georgia, a warehouse—strike that. Was Savannah a shipping point during the period from September 1942, through April 1943?

A. What was the first date?

Q. September 1942. Correction, October 1942.

A. Yes, I think it was.

Q. I call your attention to Invoice No. 8373 appearing on Respondents' Exhibit 205-R, and show you the original invoice. I call your attention to the fact that the notation in the column headed "Marking" is prepaid. Can you tell me why that shipment was prepaid?

A. Because it was a carload shipment.

Q. How much poundage was involved?

A. 22,690 pounds.

Q. How much?

A. 22,860 pounds.

Q. I call your attention to Invoice No. 7200 on
3802 Respondents' Exhibit 205-R, and note that the col-
umn headed "Marking" bears the notation "Freight allowed to destination." Can you explain to me upon examination of the original invoice why that shipment was sent freight allowed?

A. There appears to be a carload order.

Q. What is the poundage involved, roughly?

A. Approximately 20,000 pounds.

Q. I now call your attention to Invoice No. 8525 appearing on Respondents' Exhibit 205-R and show you the original invoice. I call your attention to the note appearing under the column "Marking" which is "Prepaid." Can you tell us why that shipment was prepaid?

A. Carload.

Q. What is the tonnage involved?

A. 19,662.

Q. You mean pounds?

A. Yes.

Q. I call your attention to Respondents' Exhibit 205-U and the Invoice No. 8111 showing origin, Chicago, destination, Gary, Indiana. What relation exists between Chicago and Gary?

A. Gary is in a free delivery area.

Q. I now call your attention to Respondents' Exhibit 205-V and Invoice No. 1473 showing the place of origin as
Pittsburgh, Pennsylvania, and destination as Home-
3803 stead, Pennsylvania. What relationship exists be-
tween Pittsburgh, Pennsylvania, and Homestead, Pennsylvania?

A. Free delivery area.

Q. I show you Invoice 49923 appearing on Respondent's Exhibit 205-W, and I call your attention to the fact that the column headed "Marking" bears a notation "Prepaid." Will you examine the original invoice and tell us why the shipment was sent prepaid?

A. Carload.

Q. How much poundage was involved?

A. Approximately 18,000 pounds.

Q. Would that come within the range with which the company would prepay—would prefer to pay the minimum car rate, rather than the less than car rate?

A. Yes.

Mr. Welch: We think we are finished with this witness, Your Honor, but it is our thought that we may want to ask him some questions tomorrow. Due to the lateness of the hour, we would like to state that we would like an adjournment until tomorrow morning, but we will advise counsel for the Commission that in all probability the witness will be offered for cross-examination immediately upon the convening of the session tomorrow morning.

We also would like to state for the record that we will take temporary possession of Respondents' Exhibits
3804 Nos. 206, 207, and 208 for the purpose of making photostatic copies.

Trial Examiner Norwood: Very well, Mr. Welch.

We will recess now until 10:00 o'clock tomorrow morning.

(Whereupon, at 4:55 o'clock, p. m., October 16, 1947, the hearing in the above-entitled matter was adjourned.)

3805 Room 125, Federal Building,
Cleveland, Ohio,
Friday, October 17, 1947.

Met, pursuant to adjournment, at 10:00 a. m.

Before:

John W. Norwood, Trial Examiner.

Appearances:

Joseph Wright, (and)
David R. Reel, Attorneys for the Federal Trade Commission.

J. T. Welch, (Davies, Richberg, Beebe, Busick and Richardson, Esqr's., 15th Street, N. W., Washington, D. C.), and
J. T. McDowell, (and)
T. J. Gray, (101 Prospect Avenue, Cleveland, Ohio), Attorneys for Sherwin-Williams Company.

Edmund P. Wood, Attorney for Eagle-Picher Lead Company, and The Eagle-Picher Sales Company.

Eugene Z. DuBose, (Alexander and Green, 120 Broadway, New York, New York), for the National Lead Company.

3806 John A. Duncan, (M. B. & H. H. Johnson, 1649 Union Commerce Building, Cleveland, Ohio), Attorney for The Glidden Company.

3807 PROCEEDINGS.

Trial Examiner Norwood: Pursuant to adjournment, the hearing is resumed in Room 125 of the Federal Post Office Building, Cleveland, Ohio, at 10 o'clock A. M.

The appearances are as follows:

J. T. Welch and T. J. McDowell and T. J. Gray, Attorneys for Sherwin-Williams Company.

Edmund P. Wood, Attorney for Eagle-Picher Company and the Eagle-Picher Sales Company.

John A. Duncan, Attorney for The Glidden Company.

Eugene Z. DuBose, Attorney for National Lead Company.

The attorneys for the Federal Trade Commission are Joseph S. Wright and David R. Reel.

Trial Examiner Norwood: Mr. Lemke will resume the stand for further examination.

H. C. LEMKE resumed the stand and testified further as follows:

Direct Examination (Continued) by Mr. Welch.

Q. Mr. Lemke, the testimony yesterday, you testified at length as to the policy of the Sherwin-Williams Company, with reference to handling carload and less than carload shipments to various types of purchasers. As a general policy that you described in your testimony yester-
3808 day—has it been the same over a period of 15 years?

A. Yes.

Q. The policy you described yesterday does—does it or does it not represent a departure from the policy you have maintained for 15 years?

A. It does not represent any departure.

Q. I now call your attention to Invoice No. 13050 which appears on Respondents' Exhibit 205-C, Invoice No. 2094 which appears on Respondents' Exhibit 205-D, Sherwin-Williams Invoice No. 14091 which appears on Respondents' Exhibit 205-D, and Sherwin-Williams Invoice No. 4060 which appears on Respondents' Exhibit 205-E, and I will call your attention to the notations appearing opposite each of the invoices I have referred to. The notation in each instance is either "Prepaid, freight allowed," or "Freight allowed," in the column headed, "Marking," and all of the invoices involving shipments to the Pusner paint store at Tucson, Arizona. Will you please explain why those shipments were sent prepaid or with freight allowed? Correction—will you strike that question?

When those—correction. Have you made any investigation and obtained reports as to why those particular shipments were sent either freight prepaid or freight allowed?

A. Yes, I have.

3809 Q. Tell us the result of that investigation and of those reports.

A. I learned that because of competition, these particular orders were shipped to Pusner on the basis of freight allowed.

Q. What was the competitive situation that made that necessary?

A. Well, I found that the company set up that policy at Tucson, selling customers there on the same basis.

Q. That is a competitor of Sherwin-Williams Company?

A. Yes.

Q. And how did that affect Sherwin-Williams' relationship with Pusner?

A. That we couldn't sell them on the regular Sherwin-Williams basis of freight collect which is our regular policy.

Q. Then when you found that you couldn't ship them on the regular basis, did you have to make any concession?

A. Yes.

Q. What was that concession?

A. We allowed the freight.

Q. I now show you Sherwin-Williams Invoice No. 657 which appears on Respondents' Exhibit 205-D and call your attention to the notation in the column headed "Marking" which reads, "Freight allowed;" did you con-
3810 duct any investigation and receive any report as to
why freight was allowed on that particular invoice?

A. Yes. I checked this particular invoice.

Q. What was the reason for the freight being allowed on that invoice?

A. Found that freight was allowed because we couldn't sell to the same customer represented on this invoice on our regular policy.

Q. Why was that?

A. Because of competition.

Q. Explain the competitive problem that brought that up.

A. Well, a competitor of the Sherwin-Williams Company sold this same customer on the basis of freight allowed, and therefore made it impossible for us to sell him on any other basis.

Q. I call your attention to Sherwin-Williams Invoice No. 4600 appearing on Respondents' Exhibit 205-B, being a shipment to the General Chemical Company, at Mount Claymont, Delaware, the designation in the column headed "Marking" being freight prepaid. Did you conduct any investigation and receive any reports as to why that particular shipment went out freight prepaid?

A. Yes, I checked this invoice.

Q. What did you ascertain?

A. I found that we had been shipping this customer for a long period of time on a prepaid basis. 3811

Q. Why had you been doing that?

A. Well, for a matter of competition, we were unable to sell the customer on any other basis. We therefore shipped it prepaid.

Q. Is this same customer purchasing from competitors of Sherwin-Williams?

A. Yes.

Trial Examiner Norwood: Had you been selling them prior to that time on a basis of freight charges collect and then recoverable?

The Witness: Yes, previous to the time, we had to—

Trial Examiner Norwood: (Interposing.) Then, in either case, the freight was included in the price, was it?

Mr. Welch: May we go off the record?

Trial Examiner Norwood: Off the record.

(Discussion off the record.)

Trial Examiner Norwood: On the record.

Do you understand the question?

The Witness: No; would you read it?

Trial Examiner Norwood: Read the question.

(The reporter read the question.)

Trial Examiner Norwood: Answer the question.

The Witness: Before that we didn't recover the freight which we are on the present basis. 3812

Trial Examiner Norwood: Then the only difference between the way you sold them after you met that competition and the way you sold them prior to that time was merely the matter of convenience in the matter of paying the freight, was it?

The Witness: No, we shipped them on a collect basis prior.

Trial Examiner Norwood: Did the customer own the goods at the same amount—on payment of the same amount, or at the same cost?

The Witness: Previously we shipped these customers on the basis of invoice collect delivered.

Trial Examiner Norwood: And the others were price plus the freight?

The Witness: Yes.

Trial Examiner Norwood: Now, later, when you met the competition, you lowered the price because you paid the freight; is that right?

The Witness: Yes.

Trial Examiner Norwood: I just wanted to understand the previous testimony.

Go ahead.

By Mr. Welch:

Q. In other words, before you had to meet this 3813 competition, the customer paid the freight cost.

A. Yes.

Q. And now since you have met the competition, you pay it?

A. Yes.

Trial Examiner Norwood: All right; thank you.

By Mr. Welch:

Q. I call your attention to Respondents' Exhibit 205-F and call your attention to the invoice to Henry R. Bollinger, No. 24769, No. 23535, No. 24768, No. 510, No. 521, No. 509, all of the invoices which I have referred to being invoices to Henry Bollinger, and the notations in the "Marking" column are, "F. O. B. destination," or, "Prepaid." Will you please state whether you made any investigation, obtained any report as to why those shipments were sent to Mr. Bollinger on that basis?

A. Yes, I checked all of these invoices.

Q. What did you ascertain as to the reason why those shipments were sent either prepaid or f.o.b. destination?

A. I found that all of those shipments were made on a basis of prepaid because of competitive sales to this same account. They were made on a freight paid basis delivered at these various locations, and therefore it was necessary that we had to handle on the same basis in order to sell that same account.

3814 Q. Was this a series of stores operated by the same man in several different locations?

A. Yes, I found that to be true.

Q. A chain store operator?

A. Yes.

Q. Did Sherwin-Williams formerly sell him on a freight collect basis?

A. Yes, sir.

Q. And the change was made—was the change made only after you found what the competitive situation was?

A. Yes, after we found what the situation was.

Q. I call your attention to Respondents' Exhibit 205-F and Sherwin-Williams Invoices 43996, 44126, 44122, 44228, 44312, all representing shipments from Sherwin-Williams Company to G. P. Barney and the notation in the column headed "Marking" appearing variously as "f.o.b. shipping point with 50 per cent allowance on freight," and in one instance, to-wit, 44122, entirely prepaid. All other instances being 50 per cent allowed. Did you conduct any investigation, obtain any reports as to why those shipments were sent on a 50 per cent prepaid basis and in the one instance on a hundred per cent prepaid basis?

A. Yes, I checked these invoices.

Q. What did you find out?

A. I found that the change in basis of shipment

3815 to this account to allowing 50 per cent of the freight and of course the one case allowed the complete freight.

Q. Why did you do that—did you find out why that was done?

A. Yes. The reason was that we were unable to continue selling this account on a regular basis.

Q. Had you formerly sold him on your regular basis of freight collect for less carload amounts?

A. Yes, sir.

Q. Did you find out the reason why you couldn't continue to sell on your former basis?

A. Yes, I found that a competitor of the Sherwin-Williams Company was selling on a competitive basis—on a freight allowed basis.

Q. Is that the reason that Sherwin-Williams made the change?

A. Yes, sir.

Q. I will now call your attention to Sherwin-Williams invoices, Respondents' Exhibit 205-F, Invoice No. 25714, Pelton Hardware, Middletown, New York, with a notation, "Freight allowed," and also on Respondents' Exhibit 205-G, Invoices 10620, 9269, 26649, also involving shipments from Sherwin-Williams to Pelton Hardware Company at Middletown, New York, and carrying the notation prepaid, 200 pounds or over, freight allowed, 200 pounds or

3816 over. Did you conduct any investigation and receive any reports as to why those particular shipments were shipped on a prepaid basis or freight allowed basis?

A. Yes, I checked these invoices.

Q. What did you ascertain?

A. I found that we had previously sold this account on a regular collect basis, but that at the time of these sales, we had sold them on the basis as indicated.

Q. Did you ascertain why that was done?

A. Yes. I learned that we were faced with a problem of not being able to sell this customer on the regular basis and therefore made the allowance.

Q. Why weren't you able to sell the customer on that basis?

A. Because they were able to buy from a Sherwin-Williams competitor on a basis which allowed the freight.

Q. I call your attention to Respondents' Exhibit 205-F and show you Sherwin-Williams Invoice No. 3136, addressed to Mohawk Wallpaper & Paint Company, Utica, New York, with the marking, "Prepaid." Did you conduct any investigation and receive any report as to why that shipment was made on that basis?

A. Yes, I checked this.

Q. What did you ascertain?

A. I found that we were unable to sell this cus-
3817 tomer at this time on the regular basis of collect be-
cause competitively—or because competition sold
them on the freight allowed basis.

Q. When you say competition, what do you mean?

A. A vendor who sold similar items.

Q. Had this company been sold on that basis previously?

A. On what basis?

Q. On the basis on which this order was shipped? Let me strike that. Before you ran into a competitive situation, how did you sell this customer?

A. We sold him on a collect basis.

Mr. Welch: Your witness.

Trial Examiner Norwood: Let's have a five-minute recess.

(Short recess.)

Trial Examiner Norwood: Come to order, gentlemen. You may proceed, Mr. Wright.

Cross-Examination by Mr. Wright.

Q. Mr. Lemke, how long have you been in your present position?

A. Since 1941.

Q. Since 1941?

A. Yes.

Q. What [illegible] the title?

3818 A. Manager of the auditing department.

Q. And what was your title in the position you held immediately prior to 1941?

A. Assistant to the credit and accounting manager.

Q. How long were you in that position?

A. I am sorry, that was the position before. I was traveling previous to my present assignment.

Q. Traveling?

A. Yes.

Q. In what capacity?

A. In the capacity of an auditor, investigating branches.

Q. For what period prior to 1941 were you doing that?

A. Approximately '41.

Q. That was back to 1936?

A. Yes.

Q. Prior to 1936, what was your position?

A. I was working in the district office as the assistant to the credit accounting manager.

Q. What district was that?

A. Southcentral District, now known as the Southeastern.

Q. What is the district office?

A. District office was at that time Cincinnati, now at Atlanta, Georgia.

Q. And how long were you in that position?

A. I started there in 1933.

3819 Q. Then, actually your experience doesn't go back 15 years as far as the company's policy is concerned, if you started in 1933?

A. That is right. When I worked in the assistant to the credit manager—in Cincinnati—I traveled under his supervision and those branches which were under his supervision, I reviewed and did similar work.

Q. But that was starting in 1933?

A. '33, yes.

Q. So that actually that experience doesn't go back quite 15 years. You stated that you were familiar with the policy for 15 years back?

A. Well, I worked previously to Cincinnati in the same capacity under Mr. Campbell in our district office in Cleveland.

Q. You weren't working out of headquarters and dealing with headquarters policies for all branches prior to 1936?

A. No, sir.

Q. You were in a particular branch?

A. Or district.

Q. Or district.

A. Yes.

Q. Now, regarding these transactions with Pusner and Switzer and General Chemical and Bollinger and Barney and Pelton and Mohawk, about which you were testi-
3820 fying this morning, did you participate in any of those transactions when they occurred?

A. No, sir.

Q. Now, you stated that you made an investigation of those invoices which was the basis of your testimony; is that correct?

A. Yes.

Q. What did that investigation consist of?

A. I checked with the office handling those particular transactions.

Q. And they told you that was the situation?

A. They showed reports where our sales office had approved and headquarters approved those particular sales.

Q. Based on reports that had actually been kept in the files?

A. Yes, sir.

Q. Where are those reports, do you have them?

A. No, I haven't. They are available here.

Q. Was all of the information that you gave about those transactions on the reports?

A. Reports made by them; yes, sir.

Q. No part of your answer then in any respect was based on what those officials in the districts where those customers were located had told you had been the situation?

A. I wish you would repeat that question.

3821 Trial Examiner Norwood: Read the question.

(The reporter read the question.)

The Witness: I don't quite get one sentence. I should like to have that repeated.

(The reporter again read the question.)

The Witness: My report here was based entirely on what I found through checking the situation as represented by these particular orders, the same basis our procedure would be in auditing any situation.

By Mr. Wright:

Q. Tell us just exactly what you did.

A. I checked with the county manager in the accounting of these individual offices.

Q. How did you do that?

A. By contacting them either through letter, telephone, or wire.

Q. Now did their responses come to you?

A. An the same basis.

Q. Telephone calls, telegrams or letters?

A. Yes, sir.

Q. Did they transmit to you the documents which you have referred to?

A. No, sir.

Q. You haven't seen them?

A. No, sir.

3822 Q. Then actually all your testimony on these things was based on what these gentlemen told you, either orally or in a letter?

A. Yes, sir.

Mr. Wright: Your Honor, I would like to move all the testimony of this witness at this time regarding the transactions with Pusner, General Chemical, Switzer, Barney, Pelton, and Mohawk—it didn't appear on direct examination that the investigation which the witness referred to was one purely of hearsay, and since it now appears on cross-examination that this witness has no information except what was told him on a phone or in a letter from a branch official, his testimony is clearly inadmissible and should be stricken.

Mr. Welch: Your Honor, we take the position that those witnesses testified that those reports—in the first place, he is in the auditing department. The auditing department questions all invoices which do not follow the regular policy, and in questioning those, they obtain back these reports. These reports were obtained in the regular course of business, and the company had a right to rely on them

and did rely on them. I think perhaps that the manner in which some of them may have been received may go to the weight, but not to the right of this man to testify on the basis of reports that were received by him in the
3823 regular course of his auditing functions with the company.

Mr. Wright: Your Honor, that is the point. These aren't in the regular course of his auditing functions with the company. This man called these officials to determine something for the purpose of this proceedings about transactions already recorded here. There may be documents or reports kept in the regular course of the business in the branch offices. They have never been presented here and this witness has never seen them, by his own testimony.

He made statements here to the effect that prior to that time they were sold on a freight collect basis. When this competitive situation came up—he didn't name the competitors or any of the situations which gave rise to these things.

Certainly a branch manager or an official familiar with the transaction and dealing with the customer would be competent to testify what that situation would have been and would be subject to proper cross-examination as to those situations. Here it is being brought in by hearsay which completely deprives me of an opportunity of ascertaining the proper information.

Trial Examiner Norwood: Did your reports indicate in each case who the competitor was that had been
3824 selling him lower?

The Witness: In most instances, I don't recall. I could name some of them.

Mr. Wright: Your Honor, even in that event, all he knows is what a man told him on the telephone or wrote him in a letter. It is not record kept in the regular course of business. This was an inquiry specifically for the purpose of this hearing and for the purpose of his testimony.

Trial Examiner Norwood: Well, I think that if he is going to show justification of that price variation, he would have to show more exact information than he has given us here, general information here, and he would have to show it by direct evidence rather than this investigation.

Mr. Welch: Your Honor—

Trial Examiner Norwood: (Interposing.) He received this information, not at the time that the lower price was made. It isn't information that he received in the due course of business and acted on. His report comes after the action is taken by somebody else.

Mr. Welch: Your Honor, he has testified that he obtained these reports in the same manner in which he obtains reports—in the first place, he testifies that now when a sale is made and isn't made on the recognized 3825 basis, that the auditing department checks it and makes an inquiry, just as he testified he made this inquiry, maybe by telephone, maybe by wire, maybe by letter. Why did you do this? It is reported back. The company has satisfied itself on that basis and acted on it in approving that sale and letting it go through.

This investigation was made the same way as the ones on which the company does rely in the course of its operations. It is true this one was made subsequently but it follows the pattern that the company does make them and upon which it acts.

Mr. Wright: No—

Trial Examiner Norwood: (Interposing.) It seems to me the information upon which they acted was received by this branch manager, or whoever was in immediate supervision over the salesman who reported it. He would be permitted to tell what this salesman told him, and he would be permitted to show that he had investigated and found it was a bona fide claim on the part of the customer which justified him in making the lower price, so I think this is once removed from that, and so far as this evidence relates to the making of a lower price than this Respondent made to other customers in order to meet an equally low price of the competitor, I think that I will allow the motion. The evidence can stand for other purposes.

3826 Mr. Wright: Your Honor, I want to point out now that my objection and my motion go also to an issue that has been raised here.

It has been my contention that the Sherwin-Williams Company has substantially followed the zone method of selling. The issue has been raised on that. A vice-president of the company said we don't follow the zone system, we add freight to a customer not at a shipping point. These other records were put in by the Commission to prove that they don't add freight in many instances, and it was to rebut that.

Now, he has—

Trial Examiner Norwood: (Interposing.) I think he can show that.

Mr. Wright: This witness is testifying about competitive situations here. If I cross-examine him on a point he doesn't know, all he can tell me is that the man who told him didn't tell him that. "The man that told me this story, didn't tell me what the answer was to that situation. I had nothing to do with these transactions."

Trial Examiner Norwood: He has testified that in general he has followed this policy here which it is claimed is analogous. Then he gave other testimony showing that he departed therefrom.

You don't object to the testimony showing that he 3827 departed from it, do you?

Mr. Wright: I object to trying to vary what appears on the face of written documents in the record, officials' transactions, invoices of officials' transactions of the company, by hearsay evidence, which has gotten up for the purpose of this hearing.

Mr. Welch: Mr. Wright—

Mr. Wright: (Interposing.) The actual evidence of these transactions are in the record.

Mr. Welch: I object to the statement that we are trying to vary them. We are trying to amplify them and explain them but not vary them.

Trial Examiner Norwood: I will let my ruling stand. I have allowed your motion with a qualification.

Mr. Wright: If it is hearsay and is inadmissible because it deprives me of cross-examination, how can any part remain?

Trial Examiner Norwood: It is admissible to show the fact that they did vary.

Proceed.

By Mr. Wright:

Q. Mr. Lemke, with reference to Pusner, now, where is he located?

A. He has a place at, I believe, Tucson. I am not sure, I will have to refer to the invoice.

3828 Q. Who was the competitor involved in this situation with Pusner?

Mr. Welch: Just one second. Your Honor, the motion as I understand it was allowed in so far as the competitive situation was concerned. Now, if that is true, I object to cross-examination on the competitive situation because his testimony has been stricken so far as that is concerned.

Mr. Wright: The testimony—if the testimony is to stand in the record for any purpose, I demand a full and complete cross-examination.

Trial Examiner Norwood: Overrule your objection.

Mr. Welch: Yes.

Trial Examiner Norwood: If he can bring out some further testimony from this witness that renders that admissible for all purposes, he may do so.

I understood that it is to be received only on the proposition of showing the variations and for no other reason.

Mr. Wright: I didn't understand the testimony was offered for that reason. I didn't know what was in counsel's mind.

Trial Examiner Norwood: Go ahead.

The Witness: I think the competitor in the case was Fuller Paint.

3829 By Mr. Wright:

Q. You think it was?

A. I would have to refer to a reference to make it positive.

Q. What reference?

A. Report made to me by our accounting department.

Q. You received a letter from your accounting officer?

A. I believe there is a letter.

Q. Which was the basis of your testimony?

A. Yes.

Q. Statements that were in that letter. Do you know anything else about that transaction that isn't in that letter?

A. I know the method of handling that particular transaction from the face of the invoice and the markings thereon.

Q. You have no other knowledge outside of the exhibit we have been talking about this morning and that letter you received about that particular situation involving Pusner?

A. No, except general information about our problem of selling competitively.

Q. I asked you about this particular transaction.

A. I know that we have a problem with Fuller Paint selling customers.

Q. No.

Mr. Wright: I move that be stricken as not being
3830 responsive.

Trial Examiner Norwood: Read the question and answer.

(The question and answer were read by the reporter.)

Trial Examiner Norwood: Motion denied.

By Mr. Wright:

Q. When did you first start selling on a fully prepaid basis in less than carload lots to Pusner as a result of this competition?

Mr. Welch: Will you read that question, please?

Trial Examiner Norwood: Read it.

(The reporter read the question.)

A. I don't know exactly the date.

By Mr. Wright:

Q. That wasn't in the letter?

A. I don't recall whether there was any reference made as to when we transferred it as to the exact date, but I believe it is in the letter.

Q. Now, with reference to Switzer. I believe Switzer is in Flagstaff?

A. That is right.

Q. Who was the competitor involved there?

A. I believe it was Premier Oil Company.

Q. Where are they located?

3831 A. I don't know.

Q. What is their business?

A. Selling paints and oiling and so forth, sundries, associated sundries.

Q. In other words, in some of these situations the competition would be not alone from lead pigments, lead in oil, but also mixed paint?

A. In reference to paints, I used lead and oil for paints.

Q. When did this situation first arise so that you made the departure from your stated policy with reference to Switzer?

A. I don't recall, I don't know when the change was made.

Q. Was that transaction also covered in a letter that you received as a result of your inquiry?

A. I think it was.

Q. How did you obtain the information regarding the General Chemical Company situation?

A. I checked with our manager in Philadelphia.

Q. How did you do that?

A. By letter.

Q. You received a letter back from him?

A. Yes, sir.

Q. Giving you the details?

A. Yes, sir.

Q. Do you have that letter with you?

3832 A. No, I haven't.

Q. Who was the competitor involved there?

A. I don't recall the competitor's name in that case.

Q. Do you recall whether it was listed in the letter?

A. I am not positive about it.

Q. When did this situation first arise when you changed your policy with reference to that company?

A. I don't recall the exact date.

Q. Was that in a letter?

A. Yes, there was information in the letter as to the approximate time when they started selling them, but I don't recall as to any exact dates.

Q. How about the information regarding Bollinger, who did you get that from?

A. Bollinger, from our credit and accounting manager in—

Q. (Interposing.) By correspondence, by letter?

A. By telephone, by letter, and by wire.

Q. Do you have the correspondence and telegrams? Did you receive correspondence and telegrams in response to your inquiries from him?

A. Yes.

Q. Who was the competitor involved in that situation?

A. I don't know.

Q. What time did it—at what date did it become necessary to make the change from your policy?

3833 A. In Mr. Price's correspondence he indicated the time that change had to be made in the Bollinger account, but I don't recall generally when that took place.

Q. How about the Barney, Pelton, and Mohawk situations, were they also out of the New York office?

A. Yes, they were.

Q. And they were obtained along with the Bollinger information?

A. Either with or separately, I don't recall exactly.

Q. In the same manner?

A. Yes.

Q. Do you recall who the competitors were in any of those situations?

A. No, I can't give you the names of the competitors.

Q. Can you tell me the time of any of them?

A. When they changed?

Q. Yes.

A. Not exactly: I don't recall the date of the changes.

Q. In your experience with the company, has it been the general practice that the company will adjust to meet competition in this matter of freight charges where it is necessary?

A. Yes. It has become necessary and in order to do that, we find in our auditing activity that those changes have been made and we do list them as an exception,
3834 but before accepting them, we see to it from our normal course of business that they have been properly approved by the sales office and headquarters.

Q. Now, in these situations involving these gentlemen, you didn't have any such records as those here in Cleveland at the general offices, did you?

A. Only because the period of time it covers that our records are not set up as exceptions from our auditing.

Q. Do you know what the competitive practices were in these situations which led to these situations? I am talking about the specific ones you testified about, Pusner and Switzer and General Chemical and Bollinger and Barney and Pelton and Mohawk?

A. I don't understand what you mean by competitive practices.

Q. Well, you stated that you changed your method of handling freight charges to meet competitive practices in each of those situations. Do you know what those competitive practices were?

A. Yes, it was that we were unable to meet the price that they were being sold by competitors.

Q. Do you know whether that was a matter of competitive price or the way competitors handled their freight charges?

A. Well, I think—

Q. (Interposing.) Don't tell us as to what you
3835 think in regard to these situations, tell us what you know.

A. I know that the freight collect policy was changed to freight prepaid policy, in order to meet such situations.

Q. But you don't know what the actual practices of each competitor were in each of these situations, do you?

A. I know generally from a discussion and from my investigation of certain individuals.

Q. You mean from your conversations over the phone and your letters and wires with the branch officials when you got this information?

A. Wherever an accounting manager with whom I checked on all these situations didn't satisfy my investigation from a letter, then I made it a point to telephone him and refer to records that indicated just how these situations were handled so that I was positive before accepting that, on the same basis I made any audit, that what I stated in here so far as conditions are concerned, that it was right, it was acceptable to me.

Q. But you don't know the names of the competitors in most of the situations and you don't know the exact situation that you were meeting, whether it was a change in the price or change in the method of handling freight charges by the competitors?

A. In those particular cases, I didn't concern myself
with what that practice of a competitor was so much
3836 as determining that our responsible man in charge
gave me such information, who has that responsibility to—

Q. (Interposing.) And that is what you are repeating here is the information they gave you?

A. Some, of this information I have not been able to recall and record in my mind because of the large number of items.

Q. Now, you testified yesterday and this morning, Mr. Lemke, at great length about the company's policy with reference to freight handling. When you made these marks on Respondents' Exhibit 205, with sub numbers, under the column "Code," A, B, C, and so forth—when you were marking the transactions A and B, you were doing that of your own personal knowledge of what the local city delivery areas and free delivery areas around near shipping points were, were you not?

A. Yes.

Q. That wasn't on the basis of company policy, you knew that?

A. I knew what the company policy was.

Q. But you also knew these areas of your own knowledge?

A. Oh, yes; I did.

Q. Now, those that you mark with a "C" now, those transactions in which there was no indication on any of the exhibits that we have in the record as to who paid the
3837 freight, you marked them C as having freight prepaid and then recovered, or as being sent freight collect. You don't know of your own knowledge as to each of those transactions that that was done, do you?

A. Oh, yes; I do.

Q. You have checked each one of these transactions and know that?

A. No, but we have a procedure of handling invoices that we know what the requirements are, if they were handled otherwise.

Q. Well now, it was the company's policy, in those situations where you marked them with a C to send them freight collect, or to prepay and then recover the freight? You testified to that, but isn't it correct to say that you assumed that they were handled that way, but you don't know of your own knowledge as to each transaction that they were so handled?

A. It is not right to assume that we don't know because we do know.

Q. How do you know?

A. Our orders are all sent collect by original instructions, and, by the way, they are audited carefully, that this procedure is followed. Our shipping offices do not enter a shipment on a bill of lading unless that order instructs them otherwise.

3838 Q. Didn't you testify yesterday that you discovered from time to time instances where they had prepaid the freight on transactions in less than carload at points other than shipping points where they should have sent it freight collect or recovered it?

A. Yes, sir.

Q. Couldn't that have been the situation as to some of these transactions that you marked with a C here?

A. In those cases we would find an additional charge.

Q. Where?

A. On an invoice.

Q. It couldn't happen otherwise?

A. Not unless it was an error.

Q. That is what we are talking about is errors.

A. The error would show up, though, in our accounting.

Q. It wouldn't show up on the invoice?

A. No, but it would show up on our ledger account because it was shipped prepaid and it automatically would have to be accounted for to the customer.

Q. Now, let's go back to this policy again. You state it is the policy to equalize freight with the shipping point?

A. Yes.

Q. To any customer of these lead products, located away
from a shipping point, unless the shipment is in a
3839 carload or a truckload, it is a government, railroad,
or steamship company; unless it is one of those
special points which are not shipping points, but to which free delivery is allowed, Chattanooga, Washington, and others, or unless there is a local competitive situation where you make a free delivery area. Does that substantially state it?

Mr. Welch: Will you read that question, please?

(The reporter read the question.)

Mr. Wright: I will withdraw the question.

By Mr. Wright:

Q. It is the general policy to a customer located away from a shipping point to equalize freight by charging him the difference in the freight rate from the factory to his location as compared with the freight rate from shipping point to factory?

A. The customer would only stand the freight not excessive to the freight rate which is in position to be used from the normal shipping point to his location.

Q. Well now, let's get back into another one of your illustrations. Take the situation that you were speaking of yesterday with reference to Union, Mississippi. I believe you stated that the closest applicable shipping point was New Orleans?

A. That is right.

Q. Now, if you ship him direct from Chicago in
3840 less than carload, how do you bill him?

A. We would bill him the amount of freight from New Orleans to his location, or Union, Mississippi.

Q. That would be the situation if you shipped him out of Dallas?

A. No, Dallas' rate is less to Union than it is to New Orleans.

Q. What rate do you charge him then? You don't charge him any freight at all?

A. We don't charge him any freight at all.

Q. Now, that policy, then, doesn't apply when you have got what you call a carload order?

A. There is no freight involved on carloads.

Q. And you said that the carload policy also extends to truckloads?

A. Yes, sir.

Q. What is the weight, minimum weight of a truckload under your policy?

A. Approximately 20,000 pounds. It varies, I think, depending upon length. I am not sure.

Q. You adopt for that purpose the minimum carload weights that appear in the tariffs, or do you have some company rule on that?

A. I have always taken our transportation department's weight as authentic.

3841— Q. Now, assuming you have a situation where you have an amount which is a truckload but is not a rail carload, and yet you send it by rail freight, you pay an LCL rate on that but the customer is not billed that amount?

A. It is not our custom to ship by rail in that situation, but it will go by truck.

Q. Then it would invariably go by truck?

A. Yes.

Q. That policy then doesn't apply to truckloads and carloads, doesn't apply to government agencies, is that what you testified to?

A. What policy were you—

Q. (Interposing.) This freight policy of adding freight from a shipping point.

A. Yes.

Q. You mean "Yes, it does not apply to government agencies"?

A. The freight policy of adding freight or equalizing at the shipping point does not apply to carload shipments.

Q. Does it apply to shipments to any agencies of the government?

A. Yes.

Q. Does that include local, municipal, and state governments?

A. Yes.

3842 Q. And Federal?

A. Yes.

Q. It doesn't apply to railroads or steamship lines, either?

A. No, it doesn't apply to—

Q. (Interposing.) Does it apply to what you call your industrial accounts?

A. Yes.

Q. In billing your own stores, does it apply to your billing of your own stores?

Mr. Welch: Objection, your Honor, to any testimony of intercompany billing among stores. How they handle their own financial arrangements with their own stores is not involved in this case. The practice of the stores—I understand, your Honor has held that the practice of the store in selling to other customers from their retail stores is in the case, but this is the first question of intercompany billing that has come up and I object strenuously to that testimony being received.

Trial Examiner Norwood: Objection overruled.

The Witness: I would like to have the question read.

Mr. Welch: May we have a short recess, your Honor?

Trial Examiner Norwood: Yes, take a short recess.

3843 (Short recess.)

Trial Examiner Norwood: Back on the record.

After further discussion off the record, I will reverse my ruling and sustain the objection to the question relating to the question of the policy of the Respondent with its company-owned stores.

Go ahead.

By Mr. Wright:

Q. Mr. Lemke, do the retail stores maintain warehouse stocks of lead products, under your policy of the company?

Mr. Welch: Your Honor, may I have a continuing objection without having to get up and repeat it, to any questions, any answers that relate to retail store operations, how they sell, what they do?

Trial Examiner Norwood: No.

Mr. Welch: May I have the objection?

Trial Examiner Norwood: Counsel may have his objection. I will overrule the objection.

Mr. Welch: And it will be a continuing objection?

Trial Examiner Norwood: To questions of how the retail stores sell.

Go ahead.

The Witness: I would like to have the question read, please.

3844 (The reporter read the question.)

The Witness: Yes, we carry stock for resale.

By Mr. Wright:

Q. Now, to refresh your recollection, I show you Commission's Exhibit 776 with sub numbers, which is a roster of retail stores of the Sherwin-Williams Company as of October 1, 1944. Does the company also sell lead products, white lead, white lead in oil, red lead, red lead in oil, to dealers, dealer-customers who are located in the same towns in which you have stores?

Mr. Welch: Objection, your Honor.

This witness in the first place was not questioned on direct with respect to that type of matter. I don't know what he has any knowledge of it. He is not in the sales department. He doesn't know whether dealer-customers are located in those cities or not.

Trial Examiner Norwood: He can tell it if he knows. Objection overruled.

The Witness: We ship merchandise to some of those locations where there are dealers.

By Mr. Wright:

Q. Now, is it ever a practice of the company in handling an LCL shipment to the dealer in a town in which a store is located, other than the regular warehouses of which we have been talking, to ship that order to the dealer
3845 from the store?

A. Yes, occasionally, accommodation sales.

Q. In those instances, it would be cheaper to ship a less than carload order from a factory or warehouse, would it not? In other words, delivery from a store which had a stock would be an economy to you?

A. We don't make it a practice to use our stores to service regular accounts of that sort, but we do use them for occasional accommodation, special rush orders, and only occasionally.

Q. What is the basis of sale as far as transportation charges to the customer, when that is done at a point which is not a shipping point?

A. If the shipment is made to any town outside of where a store may be located, it is shipped on a truck basis.

Q. If it is in the same town?

A. It is a local delivery, along with our regular cartage deliveries.

Q. Would that be—even though the place where the store is is not a shipping point, if it was local delivery in that town, it would be treated as if it were a shipping point?

A. Yes, on these few accommodation sales.

Q. Freight from the shipping point wouldn't be added?

A. No.

3846 Q. Now, you gave us a list of these shipping points from those price lists the other day, Mr. Lemke. I show you Commission's Exhibit 662-C and D which is a document headed "Lead and Zilo price differentials for shipments from all S-W warehouses and retail branches." That is dated 1936. Does there—there is a similar list, Commission's Exhibit 662-G and H, for 1937, and a similar list, dated May 21, 1942, Commission's Exhibit 662-S and T. Are there not on those lists many locations which were not included in your list of shipping points?

Mr. Welch: Your Honor, I object to the form of the question because it is misleading to the witness in that he has quoted the caption on one exhibit. The captions on the two other exhibits do not conform to the one quoted.

Mr. Wright: We will talk then about 662-C and D from which the caption was quoted.

The Witness: There are—

By Mr. Wright:

Q. (Interposing.) There are many points on there not included in shipping points?

A. Yes, not on the list previously discussed.

Q. This document purports to give the prices and differentials at those points. There is nothing there about addition of the freight to any of those points. Can you explain that fact?

3847 Mr. Welch: Will you read the question?

(The reporter read the question.)

A. No.

By Mr. Wright:

Q. This is in evidence. I call your attention to the fact that this is in evidence as a part of a general trade sales department bulletin by Sherwin-Williams Company, stating its prices in terms of sale, if you will examine Commission's Exhibit 662-A and B, which accompanies the list you referred to.

A. I would like to have that question read.

(The reporter read the question.)

Mr. Welch: Just one second.

Mr. Wright: The previous question.

Mr. Welch: Your Honor, I object to the question on the ground that there is no evidence that the two documents accompany each other. They bear somewhat close dates. There is no reference on one to the other.

Mr. Wright: I would like to correct counsel and point out the statement on 662-B "where the delivery point is outside the eastern territory, add to these prices the full advanced differential as shown on the attached Bulletin 16," which obviously refers to—

Mr. Welch: (Interposing.) No, this is Bulletin 18. That says Bulletin 16. There is nothing to show that this 3848 accompanied Exhibit 662-A and B.

Mr. Wright: Well, off the record.

Trial Examiner Norwood: Off the record.

(Discussion off the record.)

Trial Examiner Norwood: On the record.

Mr. Wright: I will withdraw the pending question.

By Mr. Wright:

Q. Mr. Lemke, are you familiar with the general trade sales department bulletins which are similar to Bulletin No. 37, May 21, 1942, in the record as Commission's Exhibit 662-Q and R?

A. I know about them, but I am not familiar with all of the detail.

Q. In your duties as auditor in order to determine company policy with regard to prices and so forth, you consult these general trade sales bulletins; is that correct?

A. At the current audit, we would then verify with the current bulletin, but for me to be familiar with a document I haven't seen for several years, I don't know that I would recall all the details.

Q. Now, from your use of these trade sales bulletins in your duties there, I would like you to examine Commission's Exhibit 662-R and the statement under the term "Zone differentials," and then examine Commission's Exhibit 662-S and T.

A. I don't know whether this document is a price—

3849 Mr. Welch: (Interposing.) Just a minute, he hasn't asked you a question.

By Mr. Wright:

Q. I want you to examine the two of them.

A. Yes.

Q. Do the general trade sales bulletins include a list of lead and Zilo price differentials similar to the one in the record as 662-S and T?

Mr. Welch: Read the question, please.

(The reporter read the question.)

A. I don't know. I don't quite understand your question.

By Mr. Wright:

Q. Have you seen a document similar to this, 662-S and T, as a part of your general trade sales bulletins, of which 662-Q and R are copies?

A. I have seen similar ones.

Q. Are they considered to be a part of the general trade sales bulletins?

A. Yes.

Q. Now, can you tell me how the freight is handled on less than carload shipments to customers located in the towns which appear on 662-S and T, Commission's Exhibits, which are not shipping points?

A. Yes.

3850 Q. Will you tell us how?

A. Shipments made from factory or shipping points to customers in any of these stores where there isn't a shipping point located, we would ship LCL—we would ship less than carload rates on the basis of freight collect.

Q. In other words, that ~~would be~~ handled exactly in accordance with the policy of the company you have been testifying about for the last two days?

A. Yes, it would.

Q. Will you tell me again the list of shipping points on the Pacific Coast?

A. Spokane, Seattle, Portland, Santa Rosa, Sacramento, Oakland, Los Angeles, Phoenix.

Q. Those are all there are, to your knowledge?

A. Yes.

Q. How far back would your answer go on that?

A. I don't understand your question.

Q. Over how long a period of time has that been true that those have been shipping points on the Pacific Coast?

A. As long as I have had any knowledge of them.

Q. I show you Commission's Exhibit 782-A through -S, which is a price bulletin by Sherwin-Williams Company, dated February 5, 1943, and direct your attention particularly to Bulletin No. 6 in that series—no, 5, which is Commission's Exhibit 782-D, and ask you to examine that.

3851 A. Yes.

Q. Now, directing your attention to those statements, "f.o.b. terminal points," do you know what is meant by "terminal points" in that price bulletin?

A. No, I am not familiar with that.

Q. Doesn't that indicate to you that deliveries are to be made free on board to those points in those zones?

A. Restate that question, please.

(The reporter read the question.)

The Witness: It would indicate that.

By Mr. Wright:

Q. Without the addition of any freight at those points?

A. I am a little confused about your question. You mean free on board?

Q. I mean free on board at those points, rather than being shipped freight collect to the customer.

A. I don't know what reference the "f.o.b. terminal points" is. I am not certain about that.

Q. I will let you examine the whole exhibit which is a series of price bulletins from the Sherwin-Williams office. You can perhaps refresh your recollection by examining the exhibit.

Mr. Wright: May we have a short recess while the witness examines the exhibit?

Trial Examiner Norwood: Yes. Take a short
3852 recess.

(Short recess.)

Trial Examiner Norwood: Proceed.

By Mr. Wright:

Q. Have you gotten any more light from a further reading of that exhibit, Mr. Lemke?

A. Yes, I think I understand it better now.

Q. Will you explain it now?

A. Explain what?

Q. What the term "f.o.b. terminal point" means with reference to delivery and freight charges.

A. I don't know, but it would indicate that these particular locations are considered terminal points, but I don't know that freight would be allowed to shipments in those particular points. That I don't know.

Q. I call your attention to the fact that Commission's Exhibit 782-F indicates that Salem, Oregon, is also a shipping point where no freight is added or delivered.

Mr. Welch: Just a second. Your Honor, I object to that statement.

Mr. Wright: It is not a question. I have not yet perfected the question.

By Mr. Wright:

Q. Do you recall anything about that situation at Salem?

Mr. Welch: Your Honor, I would like to have the
3853 statement read back.

Trial Examiner Norwood: Gentlemen, I am going to ask you to take seats, please. It makes for confusion.

Mr. Welch: I would like to have counsel's statement read back.

Trial Examiner Norwood: Read back the statement.

(The record was read by the reporter.)

Mr. Welch: There is no statement on there to the effect that Salem is a shipping point. There is a statement that shipments to Salem are f.o.b., but there is no statement to the effect as stated by counsel.

Trial Examiner Norwood: Doesn't that come to the same thing?

Mr. Welch: No, your Honor, this may be off the record.

Trial Examiner Norwood: Put it on the record.

Mr. Welch: All right.

We may sell customers at Salem, Oregon, and delivered to that point f.o.b. That doesn't mean that is a shipping point on which we will make shipment on any kind of basis. I object to the characterization of it as a shipping point.

Trial Examiner Norwood: I will ask the Commission's counsel to frame his question in line with that explanation.

Mr. Wright: I will withdraw the question, your
3854 Honor.

By Mr. Wright:

Q. As an expert auditor, what is the meaning of the term "f.o.b." as customarily used in business, Mr. Lemke?

A. Free of delivery.

Q. Free of delivery, did you say?

A. Well, now, I have always understood f.o.b. to mean, as an example, f.o.b. Chicago means that we delivery at that particular point.

Trial Examiner Norwood: Freight paid?

The Witness: Yes.

By Mr. Wright:

Q. Delivered to the customer freight paid at that point?

A. That is right.

Q. Now, I direct your attention on Exhibit 782-F to this statement, "Shipments to Salem, f.o.b. Salem, Oregon. Shipments to other points, f.o.b. Portland, Oregon."

A. Yes.

Q. What does that indicate to you about your practices at that time in that area?

A. Shipments to Salem, for example, would be made f.o.b. Salem.

Q. And shipments to other points in Oregon would be made where?

A. Made—I understand you—

3855 Q. (Interposing.) And shipments to other places in Oregon are made f.o.b. Portland; isn't that correct?

A. Yes.

Q. Wouldn't that indicate that a customer purchasing at Salem would not be charged any freight on that shipment, but would receive the freight paid at Salem, whereas customers at other points in Oregon would pay the freight from Portland?

A. Yes, that would be true.

Q. Wouldn't that also be a fair interpretation from your experience of Commission's Exhibit 782-D, and the f.o.b. terminal points that are set forth there?

Mr. Welch: The witness is allowed to see the exhibits? May I show him my copy?

Mr. Wright: This is a little clearer.

By Mr. Wright:

Q. Wouldn't that also indicate from your experience that the customer received the shipment at that point without paying any freight charges?

A. I am not quite familiar with the terminology there, f.o.b. terminal points.

Q. What is your definition of the word terminal?

A. Well, it is a center or a location.

Q. Wouldn't that statement there of certain localities being f.o.b. terminal points be logically interpreted 3856 to be points at which the goods were sold to the customer without the addition of freight charges?

Mr. Welch: Objection to how it would logically be interpreted.

Trial Examiner Norwood: Objection overruled, let him tell us about it.

Mr. Welch: What his interpretation is.

The Witness: It would indicate it.

Mr. Wright: Off the record.

(Discussion off the record.)

Trial Examiner Norwood: Recess until 1:30.

(Whereupon, at 12:00 o'clock, Noon, the hearing was adjourned until 1:30 o'clock, p.m.)

3857 Afternoon Session.

1:30 p.m.

Trial Examiner Norwood: All right, gentlemen, proceed.

H. C. LEMKE resumed the stand and testified further as follows:

Cross-Examination (Continued) by Mr. Wright.

Q. Now, Mr. Lemke, these Pacific Coast shipping points you spoke of, Spokane, Seattle, Portland, Sacramento, Oakland, Los Angeles and Phoenix, assume now that you were going to ship to Butte, Montana. That is in the Pacific Coast area, is it not?

A. I don't know for certain.

Q. It is the western part of Montana. I would assume it would be. Spokane, Washington, would be the geographically closest shipping point to Butte?

A. Yes, it would be.

Q. On a less than carload shipment, according to your statement of policy, to Butte, they would add the freight charges from Spokane or some one of these other points that might be closer, to Butte?

A. The closest one.

Q. To Butte?

3858 A. Yes.

Q. And that is how they would arrive at that price?

A. Well—

Mr. Welch: (Interposing.) Objection, your Honor; it isn't price. He is interchangeably using the words "freight" and "price."

Trial Examiner Norwood: I think that—

Mr. Wright: (Interposing.) I withdraw that. I had no intention of confusing the witness.

By Mr. Wright:

Q. Is that how they would handle that transaction?

A. Yes.

Q. I call your attention to the fact that in this Commission's Exhibit 782-E that we were looking at this morning in the Pacific Coast bulletins, "For deliveries to points outside par zone add the following differentials: Zone 1, 25 cents per zone higher; Zone 2, 50 cents per zone higher; Zone 3, 75 cents per zone higher." Now, I call your attention to the fact that Butte is listed on 782-D as being in Zone 3. Spokane, the shipping point you mentioned, is in Zone 2. How would the statement on 782-E of those differentials affect that transaction we are talking about at Butte?

A. I don't know, but those differentials affect prices, not the rate.

Q. In other words—how would you suggest that
3859 would be worked out according to policy? How would
you calculate the price there?

A. Well—

Q. (Interposing.) Would you add the 75 cents differential for Zone 3?

Mr. Welch: Objection, your Honor; this witness is not qualified as to price setup.

Mr. Wright: I beg to disagree with counsel. He has qualified this man as one who has gone in and audited these transactions and knows how the company's policy applies to all of them.

Trial Examiner Norwood: I will overrule the objection; you may answer.

The Witness: I don't know that.

By Mr. Wright:

Q. Now, I call your attention to Commission's Exhibit 789 which is from the confidential price book of the Sherwin-Williams Company on the Pacific Coast effective January 26, 1942, the note there, "Advance Los Angeles Schedules 25 cents per hundredweight for San Bernardino, Riverside, Pomona, and Santa Barbara prices." Do you know whether those are f.o.b. prices at those points that are contained in that note, without the collection of any additional freight from customers at those points?

A. No, I don't know.

3860 Q. I call your attention to the statement immediately above the one I read to you: "Above prices are f.o.b. Los Angeles, California"; that would indicate that freight was charged from Los Angeles, would it not?

A. Providing you shipped from Los Angeles.

Q. Los Angeles is your warehouse for southern California, isn't it?

A. Yes.

Q. Shipping point?

A. Yes.

Q. As an exception under that note that prices are f.o.b. Los Angeles is a statement that there is a 25-cent per hundredweight differential for those following places, all of which are within a hundred miles of Los Angeles. What does that indicate to you about how the prices are made at those points out there? Is it—

A. (Interposing.) I don't know but I assume that would be added to the price.

Q. And then freight from Los Angeles added in addition, under your policy?

A. Providing any of these locations are not in the free delivery area, that is right.

Q. Well, now, some of those places are as much as 60 to 70 miles from Los Angeles?

Mr. Welch: Is that a question.

3861 Mr. Wright: I was calling the witness' attention to a fact that is well known to everyone who has been in that section of the country.

The Witness: On that basis, it would be, I assume.

By Mr. Wright:

Q. In other words, what they would do would be to sell to those places and add the freight to Riverside, for instance, and still add 25 cents in addition?

A. I don't know, but that is what I would assume.

Q. In other words, you wouldn't assume that—from that note that there would be no freight addition except for that 25 cents extra which is to be added on that price?

A. I don't quite understand that question.

Q. Isn't it a reasonable assumption from the statements which are appearing in that Commission's Exhibit 789 that when a less than carload shipment is made to one of those towns in the note, that no freight is added but they are sold at a price simply 25 cents a hundredweight higher than the Los Angeles price?

Mr. Welch: Objection, your Honor. He asked him just the other way a moment ago, that freight would be added in addition to the 25 cents.

Mr. Wright: I asked the question one way, and I am trying to ask the question the other way.

3862 Trial Examiner Norwood: Objection overruled. Answer the question.

The Witness: I don't know anything about the 25 cents additional to the price. However, I do know that the freight would be collect.

By Mr. Wright:

Q. To Riverside or San Bernardino?

A. No.

Q. In other words, that is not an exception to this policy you have been talking about?

A. There is no exception so far as it pertains to freight.

Q. You stated that with reference to the item covered by Invoice No. 46019 appearing on Respondents' Exhibit 205-H that Burlingame is in the free delivery area for Oakland, California, is that correct?

A. Yes.

Q. Do you know what geographical relationship obtains between Oakland and Burlingame?

A. I don't know, but I assume around 20 or 25 miles.

Q. I call your attention to Commission's Exhibit 794-K where that same invoice, 46019, is recorded, and to the information which was filled in by the traffic department of the Sherwin-Williams Company showing that 37½ cent rate between Oakland and Burlingame. Now, are there any other areas which you consider as free delivery areas 3863 that you are talking about now which involve freight rates in excess of 25 cents a hundredweight?

A. I don't know of any.

Q. You also testified that Baton was in the free delivery area—you stated with reference to Invoice No. 9800 which appears on Respondents' Exhibit 205-P that Baton was in the free delivery area of Houston. Is that one of those contiguous suburbs that you spoke of as being in the free delivery area?

A. I know that Baton is considered in a free delivery area.

Q. I call your attention to Commission's Exhibit 794-U where that particular invoice is also recorded with the information supplied by the Sherwin-Williams traffic department showing a freight rate between Baton and Houston of 30 cents a hundredweight. Do you know how far those two areas are apart?

A. No, Baton is right in the bay area, there.

Q. Now, referring back to the transaction which you were discussing in your direct examination which is recorded on Respondents' Exhibit 205-O and also on Commission's Exhibit 794-C, you stated that you checked it—

Mr. Welch: (Interposing.) Will you identify the transaction, Mr. Wright?

Mr. Wright: The invoice number is 8579.

3864 By Mr. Wright:

Q. You stated that you had checked those rates and the rate from St. Louis to Dallas was $1 and Dallas to Union was $1.10, therefore, there had been no change in the rate from that.

Mr. Welch: I object, I believe that was changed later.

Mr. Wright: You revised that to $1.09.

Trial Examiner Norwood: Yes, I think he did.

By Mr. Wright:

Q. Now, did you check those rates in the applicable tariffs, applicable to the time the shipment was made?

A. I follow the traffic department. I am not in a position to say what checking gave me.

Q. But you didn't actually get into that yourself, into checking the tariff?

A. No, sir.

Q. Now, when you were talking about these invoices, Mr. Lemke, and your policy on freight payments and charges to customers, you were speaking of lead products, generally, were you not?

A. Yes.

Q. You testified that this Respondents' Exhibit 206, Invoice No. 3552, was in accordance with the policy?

A. Yes, sir.

3865 Q. What products does that cover?

A. Pure zinc oxide in oil.

Q. In what size container?

A. 90 pound.

Q. In a returnable drum?

A. Yes, sir.

Mr. Wright: No further cross-examination.

Trial Examiner Norwood: Any further questions?

Mr. Welch: Your Honor, will you give us a recess for a minute or two?

Trial Examiner Norwood: Yes.

(Short recess.)

Trial Examiner Norwood: All right, proceed.

Redirect Examination by Mr. Welch.

Q. Mr. Lemke, do you know whether the cartage rates for city delivery vary in the different cities?

A. Yes.

Q. Is their uniformity of local transportation companies for city deliveries as to cartage prices?

A. No, there is not uniformity.

Q. With reference to Respondents' Exhibit 206, if the product shipped under that invoice had been white lead in oil, would it have been handled the same way with reference to recovery of freight charges?

3866 A. Yes, it would.

Q. Does the fact that two different products are involved in Invoice 3453 which appears on Respondents' Exhibit 205-A and the product involved in Respondents' Exhibit 206 are different products affect your testimony that Invoice 3453 was an error in that the freight was not recovered?

A. It wouldn't change the circumstances at all.

Q. On cross-examination you were shown Commission's Exhibit No. 776, A to N, inclusive, and were questioned as to whether all the stores thereon listed maintained warehouse stocks and your answer was they maintained stocks for resale. Does that mean that they maintain—that the stores listed on that exhibit maintain wholesale stocks or warehouse stocks for resale?

A. No, not wholesale or warehouse stock in that sense.

Q. What do you mean?

A. Stock in the sense of selling retail.

Mr. Welch: That is all.

Mr. Wright: I have just one or two questions on that subject.

Recross Examination by Mr. Wright.

Q. Those stores sell to contractors and painters, do they not?

A. Yes.

3867 Q. Are those also sold direct by the Sherwin-Williams Company in some instances?

A. No.

Q. The company does not sell direct to paint contractors?

A. It is not their policy to.

Mr. Welch: I object. The question was asked contractors and painters. The question is now contract painters. Contractors and painters are different classifications, and contract painters are something else again.

Trial Examiner Norwood: Clarify that, please.

By Mr. Wright:

Q. Does the Sherwin-Williams Company sell to paint contractors direct?

A. No, it is not their policy to sell direct.

Q. Do they sell to industrial accounts for their own consumption and use in maintenance?

A. Yes, they sell direct to industrial accounts for maintenance.

Q. Do the retail stores also sell direct to industrial accounts?

A. To some of the smaller businesses.

Mr. Wright: No further questions.

Redirect Examination by Mr. Welch.

Q. Just one question. Do retail stores sell to
3868 painting contractors?

A. Yes.

Q. And do they sell to—

Mr. Welch: (Interposing.) Your Honor, will you permit us to have the recross examination repeated?

Trial Examiner Norwood: All right.

(The entire recross examination was read by the reporter.)

Mr. Welch: I believe I have no further examination.

Trial Examiner Norwood: Thank you, Mr. Lemke.

(Witness excused.)

Trial Examiner Norwood: Call your next witness.

STANLEY LANDGRABE was thereupon called as a witness for the Respondents, and having been first duly sworn, testified as follows:

Direct Examination by Mr. Welch.

Q. Will you give your full name for the record, please?

A. Stanley Landgrabe.

Mr. Welch: Will you mark this, please?

(The paper referred to was marked Respondents' Exhibit 209 for identification.)

Mr. Welch: And this the next number, please.

3869 (The paper referred to was marked Respondents' Exhibit 210 for identification.)

By Mr. Welch:

Q. Mr. Landgrabe, how long have you been employed by the Sherwin-Williams Company?

A. About 22 years.

Q. In what capacities have you been so employed?

A. Cost accountant and factory auditor.

Q. In what capacity are you now employed?

A. Factory auditor in charge of factory accounting.

Q. What is the scope of your present position?

A. To have charge of all factory accounting and audits that are necessary.

Q. To what extent, if any, does that include cost accounting for the production of lead pigments and lead products?

A. To the extent it is one of the factors of Sherwin-Williams Company, and since I have control or supervision of all of it, it is just one of my duties.

Q. You have supervision of all the cost accounting?

A. Yes.

Q. Will you give us in some detail the experience that you have had in making determinations or findings as to Sherwin-Williams' cost of producing red lead?

A. Well, a number of years back, I was lead products bookkeeper for the Chicago plant, and since that
3870 time, I have worked in the controlling end.

Q. And have you had the lead products factory cost books under your supervision in the last few years?

A. Yes, sir.

Q. What grades of red lead do Sherwin-Williams produce, or did they produce, in the period 1932-1946?

A. 95 per cent, 97 per cent, 98 per cent.

Q. What difference is there, if you know, in the three grades of lead produced by Sherwin-Williams?

A. The difference is the number of hours required to burn the pig lead before the finished product is obtained.

Q. What about oxidation?

A. In the manufacture of red lead, it is a process of oxidizing pig lead.

Q. Is there any difference in the three grades other than the degree to which they have been oxidized?

A. No.

Q. Which way does oxidation run, upwards with the percentage?

A. The longer—

Q. (Interposing.) In other words, is 97 per cent red lead oxidized to a higher extent than 95?

A. That is right.

Q. And 99 to a higher extent than 97?

A. That is right.

3871 Q. How do you obtain that difference in oxidation?

A. Through the formula given us by the local factory upon their time studies.

Q. I don't believe you understood my question, Mr. Landgrabe. How do you obtain the difference in the oxidation between the three grades?

A. By the period it is in the furnaces.

Q. And what is your common name for that?

A. Burning time.

Q. Is that the time by which that process is known?

A. Yes.

Q. Now, is there any other factor that enters into obtaining the 95 or 97 or 98 per cent grades other than the burning time?

A. No.

Q. Do you know the size of the batches of red lead burned by the Sherwin-Williams Company at a single time?

A. Yes, usually 3,000-pound batches.

Q. Did the lead plant at Chicago ever make any time studies as to the relative length of time required to burn 95, 97, and 98 per cent red lead?

A. Yes.

Q. Are the results of those studies transmitted to your office in Cleveland?

A. Yes.

3872 Q. What were the results reported?

A. The results were to produce a batch of 3,000 pounds of red lead, 95 per cent, would require 24 hours' burning time; 97 per cent, 36 hours' burning time; and 98 per cent, 48 hours' burning time.

Q. Were the reports you received from the factory of such a character that you, as a cost accountant, would accept them as an authoritative basis for making up cost analyses?

A. Yes.

Q. To what extent have they been relied upon by Sherwin-Williams, if any, in the course of years in determining the cost of producing the three grades of red lead?

A. They have been relied upon to the extent that it is the only way we have of determining the cost of 95, 97 and 98 per cent red lead.

Q. Have you recently had occasion to determine the manufacturing cost for producing 95, 97, 98 per cent red lead on a per hundred pound basis?

A. Yes.

Q. Have you prepared any report showing this information for a particular period?

A. Yes, I have prepared a report showing the burning cost.

Q. I show you Respondents' Exhibit No. 209 for identification. Is that the report that you refer to?

A. Yes.

3873 Q. Now, will you tell us in detail just how you made the determinations that are indicated on that report?

A. I took the period January 1, 1945, to June 30, 1945, or six months.

Trial Examiner Norwood: Don't tell us anything on the exhibit. Just identify it. Tell us how you made it and we will put the exhibit in and let it speak for itself.

Mr. Welch: Your Honor—

The Witness: (Interposing.) This report was reproduced from information supplied direct from the white lead factory, plus information retained in our home office.

Trial Examiner Norwood: All right.

Mr. Welch: I offer Respondents' Exhibit 209 in evidence.

Mr. Wright: I would like some preliminary cross-examination on it.

Mr. Welch: I will ask a few questions that may solve the problem.

Trial Examiner Norwood: Go ahead.

By Mr. Welch:

Q. Do you have with you the reports from the plant which indicate the items of expense that you have referred to such as maintenance and repairs, power, fuel, sundries?

A. Yes.

Q. Can you give—what did you do to get those figures?

3874 A. Yes.

Q. What does the word "service" mean?

A. Labor, productive or nonproductive.

Q. Do you have the tabulations from which that item was taken?

A. Yes.

Q. Do you have the reports from which you took the poundage for the various months of January through June, 1945?

A. Yes.

Mr. Welch: Do you want to see those before your preliminary examination?

Mr. Wright: Off the record.

Trial Examiner Norwood: All right. Off the record.

(Discussion off the record.)

Trial Examiner Norwood: On the record.

Mr. Wright: I have no objection to the exhibit.

Trial Examiner Norwood: Received as marked, Respondents' Exhibit 209.

(The paper referred to, heretofore marked for identification RESPONDENTS' EXHIBIT 209, was received in evidence.)

By Mr. Welch;

Q. Mr. Landgrabe, will you tell us first where you got the information—strike that. Will you tell us where
3875 you got the information as to the total number of pounds of 95 per cent red lead and the total number of pounds of 97 per cent red lead manufactured in the period January 1, 1945, to June 30, 1945?

A. From monthly operating reports supplied by the factory or the lead processing factory.

Q. And those reports have been reproduced here today, have they?

A. Yes.

Q. Now, when you come to the item, "Burning service and expense," what does the term "service" mean?

A. It means all labor, both productive and nonproductive.

Q. Then, the expense items are maintenance and repairs, is that right?

A. Yes.

Q. Power, fuel, and sundries?

A. Yes.

Q. Now, you have a column headed June 30, 1945, to date. Does that mean January 1, 1945, to June 30, 1945?

A. No. By that, I refer to September 1, 1944, to June 30, 1945.

Q. So then in order to get the period that you have in your third column, January 1, 1945, to June 30, 1945, what do you have to do?

A. It was necessary to deduct the period Septem-
3876 ber 1, 1944, to December 31, 1944.

Q. And what column is that series of figures in?

A. The middle column.

Q. Now, are all the figures—where did you obtain the figures that are in those two columns?

A. Directly from our monthly operating reports.

Q. Have those reports been made available in the hearing today?

A. Yes.

Q. Coming down to the item "Total service and expense," I find in the third column the figure 7,253.24. Does that represent the total service and expense for producing the total poundage of 95 or 97 per cent lead referred to in the first series of figures up in the heading "Red lead produced"?

A. It refers to the total burning cost of producing—

Q. (Interposing.) That many pounds?

A. Yes.

Q. The next item is burning or furnace hours. Will you tell us for 95 and 97 per cent lead, will you tell us just how you made that calculation to obtain the total number of furnace hours shown?

A. By using the time studies supplied by our manufacturing factory, that is 24 hours to burn 95 per cent, 36 to burn 97 per cent, and with the results of a 3,000-
3877 pound output of red lead, we converted the total quantity produced to the number of batches, multiplied by the number of hours to produce the various grades per batch to determine the total furnace hours.

Q. Now, when you come to the item headed "Burning costs per hour," how did you arrive at that figure?

A. The total burning hours divided by the total burning cost will equal the cost per burning hour.

Q. Do I understand that it is hours divided by cost, or cost divided by hours?

A. Cost divided by hours.

Q. Now, will you come to the item "Burning cost, 95 per cent lead on a hundred pound basis." How did you determine that?

A. After I secured the cost per hour, I multiplied by the number of hours to produce the 95 per cent red lead to secure the total cost of burning.

Q. Then, you reduced that to a hundred pound basis?

A. That is then reduced to a hundred pound basis.

Q. Did you follow the same formula to determine the burning cost of 97 per cent red lead?

A. Yes.

Q. Can you tell us what the variable factors are in the cost of manufacturing 95, 97, and 98 per cent red lead?

A. The variable factors are the number of hours
3878 the different grades burn.

Q. Have you entered on this report all of the items that enter into burning expense?

A. Yes.

Q. Now, do you know what the term "burden" means from an accounting point of view?

A. Yes, it is the additional expense the company has to operate aside from actual production cost. That is speaking from the manufacturing factory standpoint. As far as sales, they have their own burden, but I am speaking of from a factory standpoint.

Q. Will the burden vary with the three grades?

A. Definitely, yes.

Q. In what direction would it vary?

A. It would vary depending upon the quantity of each that can be produced. In other words, 95 per cent red lead can be made in 24 hours while 97 per cent would take 36 hours and 98 per cent would take 48 hours, or the production for 95 per cent in any given period would be twice that of 98 per cent.

Q. So your burden per hundred pounds for 97 per cent would be higher or lower than that for 95?

A. Higher.

Q. How much higher?

A. Oh, it is in proportion. That all depends on
3879 how you distribute burden, but naturally the more
you can produce, the less your cost is going to be and that cost is reflected also in the burden.

Q. Now, on a per hundred pound basis, is the burden on 98 per cent higher than the burden on 97 per cent?

A. On 98 per cent, it would be higher than 97 per cent.

Q. Now, the figures and work that you have done do not include burden, do they?

A. No, this is just the—

Q. (Interposing.) So that any difference in burden in producing the three grades would be in addition to the three figures shown on Respondents' Exhibit 209?

A. That is right.

Q. Now, based upon the work you have done in preparing this chart which is shown as Respondents' Exhibit 209—strike that, please.

Why do you not have any entries under the 98 per cent column on Respondents' Exhibit 209?

A. No 98 per cent was produced.

Q. Now, based—

A. (Interposing.) During the dates shown there.

Q. Now, based on the study that you have done, what

is your opinion as an expert cost accountant in this particular field as to the extent to which the cost of producing 98 per cent red lead would exceed the cost of producing
3880 97 per cent per hundred pounds?

Mr. Wright: Objection, your Honor. He hasn't been established here as an expert cost accountant to testify as to opinion testimony.

Trial Examiner Norwood: I think he may—

Mr. Wright: (Interposing.) It may be—

Trial Examiner Norwood: You may tell us anything you know based on your experience, but I think you can figure out some difference here from what he has already told us and this table.

Mr. Welch: I thought I would like to get it in the record in the form of his direct testimony.

Trial Examiner Norwood: I will let him tell it. Objection overruled.

Mr. Wright: Furthermore, this calls for a conclusion.

Trial Examiner Norwood: Don't just speculate on it.

Mr. Wright: He can't answer from his own knowledge by the question. The question called for his opinion.

Mr. Welch: I will modify the question to say from your own knowledge, taking into account the same formulas you used in demonstrating the difference between 95 and 97 per cent.

The Witness: Will you please read the question
3881 over to me?

Trial Examiner Norwood: Read the question, please.

(The reporter read the question.)

The Witness: I would say that from my own experience, the actual cost is more to produce 98 per cent than 97 and more to produce 97 per cent than 95 per cent.

By Mr. Welch:

Q. How much more would it cost?

A. That all depends upon the burning costs per hour.

Q. Well, on a ratio the same ratio that was used in this table, how much would it have cost you to produce it had there been the same burning expense?

A. On a ratio basis, it would cost one and a half times as much to manufacture—no, half again the manufacture 97 per cent red lead over 95, and twice as much for 98 per cent.

Q. That is, 98 per cent would cost twice as much as 95 per cent, is that your testimony?

A. Yes.

Q. That is due to the fact that the burning time is approximately twice as long?

A. That is correct.

Q. And the factors that you took into account are the factors that arise in connection with the burning?

3882 A. That is right.

Q. Now, in connection with your cost accounting work, have you made any analyses of the differences in the cost of containers?

A. Yes.

Q. Just a minute. For 100 pounds, 50 pounds and 25 pounds and 12½ pounds containers for lead in oil?

A. Yes.

Q. What was the basis for such an analysis?

A. The basis for the contracts were the—the contracts with the supplier of the containers.

Q. Do you have those contacts?

A. Yes.

Q. Did you prepare any written analysis of such contracts to show the differences per hundred pounds of lead in oil for the various containers from hundred pound kegs down to and including 12½ pound pails?

A. Yes.

Q. I show you Respondents' Exhibit No. 210 for identification and ask you if that is the analysis that you refer to?

A. Yes.

Mr. Welch: We offer it in evidence.

Mr. Wright: I would like some preliminary cross-examination.

3883 *Cross-Examination by Mr. Wright.*

Q. Do those contracts from which the figures were taken include all the terms and conditions of the transactions by which you purchased those products?

A. Yes.

Q. There are no other documents affecting them?

A. No.

Q. Or agreements affecting those contracts?

A. No.

Q. In any way?

A. No.

Q. Do those contracts cover these containers supplied with lithograph labels?

A. Some of them.

Q. In Exhibit 210?

A. Yes.

Q. With covers?

A. That is right.

Mr. Wright: I have no objection to the exhibit.

Trial Examiner Norwood: Exhibit 210 of the Respondents is received.

(The paper referred to, heretofore marked for identification RESPONDENTS' EXHIBIT 210, was received in evidence.)

3884 *Direct Examination (Continued) by Mr. Welch.*

Q. Now, for what years did you prepare this study?

A. Well, there was no specific year. The contracts are drawn up for whatever—the statement is drawn up—

Q. (Interposing.) I have one for 1942, one for 1943.

A. That is correct.

Q. And you have the cost for how many containers and covers?

A. For a hundred containers and covers.

Q. In what different sizes?

A. Twelve and a half pounds, twenty-five, fifty, and hundred pound packages.

Q. What did you do, then, after you had the cost per hundred containers to translate it into the cost of a hundred pounds of lead in oil?

Mr. Wright: Objection, your Honor. There is no statement that that is the cost of a hundred pounds of lead in oil.

Mr. Welch: The document at the head shows white lead in package cost, and the information later is the cost per hundred pounds.

Mr. Wright: There has been no explanation of whether it is a hundred pounds of cans or what.

By Mr. Welch:

3885 Q. What does the item "cost per hundred pounds" mean?

A. The cost per hundred pounds referred to per hundred pounds of material.

Q. In such containers?

A. In such containers.

Q. All right, now, how did you arrive at that amount?

A. Well, to arrive at the costs per hundred in fifties, it requires two fifty-pound containers to fill one hundred pounds of the white lead in oil; therefore, since your container cost is 37.3 cents per container, the cost per hundred pounds would be 74.7 cents.

Q. And you use the same formula throughout in arriving at the cost per hundred pounds?

A. Yes.

Trial Examiner Norwood: Now, that means that in the fifty-pound can the cost of the container and the cover is 74.7 cents?

The Witness: That would be for two fifty-pound containers of white lead in oil.

By Mr. Welch:

Q. Are there any other factors which would increase the cost of Sherwin-Williams of preparing the smaller size containers as compared to the hundred-pound container?

A. Yes, your filling and finishing would depend on the size of the container.

3886 Q. Do they increase or decrease as the size of the container decreases?

A. The cost increases as the size of the container decreases.

Trial Examiner Norwood: Off the record.

(Proceedings off the record.)

Trial Examiner Norwood: All right, go ahead.

By Mr. Welch:

Q. Why would that last answer be true?

A. Because of the simple fact that you cannot sell two pint milk bottles with water at the same time you can sell one quart milk bottle. The same applies in filling any packages, the smaller the package you wish to fill with a required amount of material—it will take longer to fill the small packages than the larger.

Trial Examiner Norwood: How about the sealing of cans, the cover of the container?

The Witness: That becomes a part of the increased cost, too.

Mr. Welch: Your witness.

Cross-Examination (Continued) by Mr. Wright.

Q. Mr. Landgrabe, speaking of burden, I believe you testified that was the same as overhead.

A. Yes.

3887 Q. You mean general administrative overhead?

A. That is right.

Q. None of that would be an organizational burden, would it?

A. That is the reason I stated that overhead, the factory cost, the supervision, fixed charges that cannot be directly pro rated to the produced article such as rents, supervision, and so forth.

Q. Why did you select this particular period represented on Respondents' Exhibit 209?

A. The reason I selected that, our regular procedure as far as monthly operating reports is to retain them only for a two-year period. That is month by month. To secure the information necessary to verify those reports—what actually happened was I had to have recourse to the only information that was available.

Q. Are you familiar with the six months' period of the red lead manufacturing operations?

A. You mean the period—

Q. (Interposing.) January, 1945, through June, 1945.

A. I am not any more familiar with that period than any other period.

Q. Did you have any occasion during that period to be familiar with the conduct of the manufacturing operations in the red lead department?

3888 A. No.

Q. Was that in every way a normal manufacturing period as far as costs were concerned?

A. Yes.

Q. There were no unusual operating or manufacturing expenses that were incurred in that period?

A. Not to my knowledge.

Q. Did you make any effort to determine whether that was the case?

A. Well, from observation of our actual costs at other times, I would say that there is no—actually no variable difference of any concern in this period.

Q. It is true, isn't it, that in a period as short as six months, your manufacturing costs in any department can vary considerably due to unusual operating conditions?

A. That is the reason I took six months' period. The differences would be better—it gives a better picture than one month.

Mr. Wright: No further cross-examination.

Trial Examiner Norwood: What does this show as to the actual cost of a hundred pounds shipped in fifty-pound containers over that same hundred pounds shipped in a hundred-pound container?

Mr. Welch: You deduct this from this 21.7 cents.

Your Honor, we have a short stipulation.

3889 Trial Examiner Norwood: All right.

Mr. Welch: It is stipulated by counsel for the Commission and counsel for the Respondent, Sherwin-Williams Company, that if the witness Sutherell who testified yesterday were recalled to the stand today, he would testify that the rate from Dallas to Union, Mississippi, on January 25, 1943, in LCL quantity would be $1.16 per hundredweight, according to Peel's ICC-3361, and Fife's ICC-28, and that the rate from Dallas to New Orleans, Louisiana, on the same date in LCL quantities was $1.17 per hundredweight per Peel's ICC-3527 and Fife's ICC-28.

Is it so stipulated, Mr. Wright?

Mr. Wright: I so stipulate.

Mr. Welch: That is all.

(Witness excused.)

Mr. Welch: We have no further witnesses that the Respondent, Sherwin-Williams Company, proposes to produce at this hearing, so at this time we are not in position to say we have closed our defense. I will state, however, if we do put in other businesses, they will be put in after the contemplated hearings in Washington and New York and as far as we now know, we do not anticipate requesting any specific hearings for the purpose of further evidence by this Respondent.

Trial Examiner Norwood: Anything further?

3890 Mr. DuBose: We have a number of out of town witnesses who can get here, get to Washington more easily in the middle of the week than they can at the beginning of the week.

Trial Examiner Norwood: Is there any further request as to these hearings?

I want to give counsel notice as I expect us to continue without further intermission until all the evidence is received in this case, that is without further intermission except for November 4 which is Election Day, and if we adjourn over from the Washington hearing, we will reconvene on the 5th and continue without any cessation.

Mr. Wright: I will endeavor to accommodate myself to that and any rebuttal witnesses that I call will be called immediately following the close of the Respondents' testimony.

Trial Examiner Norwood: I invite attention to the notice I have sent counsel about the necessity of conserving time on this case and ask them to please cooperate in every possible way.

By request and agreement of counsel, the hearing is now adjourned to reconvene the taking of further testimony in Washington, D. C., on the 29th day of October, 1947, in the office of the Federal Trade Commission, Room 332, or otherwise, as may be posted on the bulletin board, at
3891 10:00 o'clock A. M. on that date.

Mr. DuBose: Thank you, your Honor.

Mr. Welch: That will be all right with us, your Honor.

(Whereupon, at 3:30 o'clock, p. m., October 17, 1947, the hearing in the above-entitled matter was adjourned.)

3892
Hearing Room,
Federal Trade Commission,
Washington, D. C.,
October 29, 1947.

Met, pursuant to adjournment, at 10:15 a. m.

Before:

J. W. Norwood, Trial Examiner.

Appearances:

Joseph S. Wright, Attorney for the Federal Trade Commission.

E. Z. DuBose, Attorney for the Respondent National Lead Company. (120 Broadway, New York, New York.)

3893 Edmund T. Wood, Attorney for the Respondents Eagle-Picher Lead Company and Eagle-Picher Sales Company. (American Building, Cincinnati, Ohio.)

Henry E. Gardiner, Attorney for the Respondents Anaconda Copper Mining Company and International Smelting & Refining Company. (120 Broadway, New York, New York.)

James T. Welch, Attorney for the Respondent The Sherwin-Williams Company. (815 15th Street, N. W., Washington, D. C.)

3894 PROCEEDINGS.

Trial Examiner Norwood: The hearing will come to order.

Pursuant to adjournment on the 17th of October at Cleveland, Ohio, the hearing in Docket 5253 is now convened in Washington, D. C., Office of the Federal Trade Commission, Room 332 at 10 o'clock a. m. on October 29, 1947.

The appearances are as follows:

Edmund T. Wood, representing Eagle-Picher Company and Eagle-Picher Sales Company.

E. Z. DuBose, representing National Lead Company.

Henry E. Gardiner, representing Anaconda Copper Mining Company and International Smelting & Refining Company.

James T. Welch, representing The Sherwin-Williams Company.

Joseph S. Wright, representing the Federal Trade Commission.

Mr. DuBose: Mr. Matthiessen, will you resume the stand?

C. S. MATTHIESSEN was thereupon recalled as a witness for the respondents National Lead Company, and, having been first duly sworn, testified as follows:

Direct Examination (Resumed) by Mr. DuBose.

3895 Q. Mr. Matthiessen, I show you Respondents' Exhibits 165-A to O, inclusive for identification, and 166-A and B, which were identified by you at the time of the hearing in Washington on June 12 of this year, and I call your attention to the fact that at those hearings you testified as to poundage and freight, but stated that you had not checked cartage figures.

Pursuant to my request, have you recently checked the cartage figures which appear on these exhibits that I have just mentioned?

A. I have.

Q. And at that time you had in your possession these other exhibits, is that correct?

A. Yes.

Q. Now, when you refer to cartage figures, are those the figures which appear on Respondents' 166-B, among other exhibits, under the heading, "Par-T" and opposite the word, "cartage" with respect to each month.

A. Yes, sir, they are the net cartage figures for that particular month.

Q. I show you Respondents' Exhibit 165-A to O, inclusive for identification, and do the figures opposite the words, "cartage", which appear as to each month on Respondents' Exhibit 166-B for identification also appear on these work sheets, which are the work sheets for the month by month tabulations. 3896

A. That is right.

Q. Now, will you tell us from what source the cartage figures, which appear on Respondents' Exhibit 166-B for identification, were taken, from what sources?

A. They were obtained in an entirely different manner than the freights. They are an accumulation of the total costs of the operation of our trucks, plus the purchase of new trucks, plus the write-offs for those trucks each year, divided by 12, and they are the wages paid to the drivers, the helpers, the overtime, the gas, the oil, and everything else applicable to the operation of those trucks.

Q. Now, the trucks also; you say our trucks. You refer to the trucks owned by the John T. Lewis Company in Philadelphia?

A. That is right.

Q. Now, trucks also carry other materials than white lead in oil, is that correct?

A. That is correct.

Q. Do you make any allocation of the trucking costs to white lead in oil, and how do you do it?

A. That is obtained in this manner: At the end of each month, all of our figures are computed to a pound basis, and the total number of pounds are taken and divided into the total costs for the operation of those
3897 cars, thereby getting a rate of freight to charge
against the cartage. Then for white lead in oil, we have that rate, and we multiply that by that rate to obtain that cartage figure.

Q. If I understand you correctly, then, you take the monthly total poundage or production by John T. Lewis Company of all products?

A. That is right.

Q. And divide it into the figure which you have for cartage for that month?

A. That is right.

Q. And get the unit cost per pound?

A. That is right.

Q. And with that you then multiply it by the number of pounds of white lead produced that month?

A. That is right.

Q. To get the applicable cartage applied to white lead in oil.

A. That is right.

There is one other item there which we have a credit on. For all the weight that we take by our trucks to railroads, platforms or stations, we are allowed a credit of five cents, which is deducted from the cartage for white lead.

Q. In other words, the railroads give you that credit?

A. That is right.

3898 Q. Now, taking these figures opposite the word "cartage", which appears in the recapitulation of the work sheets for each month, Respondents' Exhibit 166-B, are those figures taken from any particular source?

A. Oh, yes, definitely.

Q. What is the record in your office?

A. Well, the record in our office is obtained from our distribution of expenses.

Q. And is that a record kept in the regular course of business?

A. Yes, sir.

Q. And it reflects the cartage attributable to white lead in oil, for instance, for each month?

A. For that particular month.

Q. Now, I notice that cartage charges apply only to par territory.

A. That is right, for our trucks never operate out of par territory.

Q. And the John T. Lewis Company pays no trucking costs, as such, outside of par territory, is that correct?

A. That is correct.

Q. I also note on Respondents' Exhibit 166-A for identification, under the general heading, "1941 Sale of heavy and soft paste white lead", the last column to the right is headed, "Prt. per Cwt." Should that "Prt" be "Frt"?

A. That certainly should. That is freight.

3899 Q. That is a typographical error.

A. That is a typographical error.

Q. Now, Mr. Matthiessen, have you available at John T. Lewis Company in Philadelphia, or in the company's warehouses, all of the invoices which you testified about last June, and all of the cartage figures and all of the records showing tonnage of white lead in oil sales for 1941?

A. We have.

Q. And will those records be made available to anyone in the Federal Trade Commission who wishes to examine them?

A. Yes, sir.

Q. And will you, upon reasonable notice, be able to help whatever investigator comes from the Federal Trade Commission to examine those records?

A. I certainly will.

Mr. DuBose: At this time I offer in evidence Respondents' Exhibit 165-A to O, inclusive for identification, and Respondents' Exhibit 166-A and B for identification.

Mr. Wright: I would like preliminary cross-examination for identification.

Trial Examiner Norwood: What is the purpose of these exhibits?

Mr. DuBose: I think we stated it last time, but to recapitulate, these records show what the Philadelphia branch of the National Lead Company's average freight costs 3900 for white lead in oil sales for 1941 are, and they show what the average freight per hundred pounds in par territory is, what the average freight is, plus one-eighth, and similar figures for plus three-eighths territories for white lead in oil for the year 1941, and last June this witness rather exhaustively identified all of the figures on these work sheets, except the cartage figures, and he at that time stated that he had not checked those figures, but in the meanwhile he has checked them.

Trial Examiner Norwood: Counsel may go ahead with his preliminary questions.

Cross-Examination by Mr. Wright.

Q. What is the geographical territory which is the plus three-eighths zone described in Exhibit 165-A which the Philadelphia branch ships, Mr. Matthiessen?

A. In our territory it consists of, I would say, two-thirds of North Carolina to the east; about 85 per cent of South Carolina, and the town of Augusta, Georgia.

Q. From Augusta, Georgia, east in Georgia?

A. No, the only time that—The only town that we have that we operate in is Augusta, Georgia.

Q. You don't have any other customers in Georgia except that one town?

A. That is the only town, sir.

3901 Q. Do you have any accounts in Florida that are included in that?

A. No, not with our branch. That is taken by New York.

Q. So then the three-eighths zone you are speaking of is only eastern North and South Carolina and Augusta, Georgia?

A. That is right.

Q. What is the one-eighth zone that appears on this exhibit?

A. The one-eighth zone is the state of Virginia.

Q. Do you sell in the western part of Virginia from the Philadelphia branch?

A. We sell as far over as Roanoke, Virginia.

Q. You don't sell in the plus twenty-five cent zone of Virginia?

A. No, sir.

Q. Now, getting to this Exhibit 165-A, in the column headed "Voucher", with these numbers, what are those numbers, Mr. Matthiessen?

A. Those numbers are the numbers of our vouchers where we, say, for illustration, pay the Pennsylvania Railroad, with an accumulation of possibly a week's accumulation of invoices to us, and they are gathered together and we make one check for that entire voucher.

Q. And that is a freight voucher?

A. That is a freight voucher.

3902 Q. What are the products which the John T. Lewis Company sells throughout the territories covered by this exhibit?

A. Well, in the paint industry we sell dry white lead, white lead in oil, dry red lead, red lead in oil, ready-mixed red lead, linseed oil of all descriptions, dry colors, colors mixed in oil—That is a paste color—and various other items like lead mixing oil, flattening oils, and then we have a metal department where we ship all types of babbit solders, sheet lead, lead pipe, pipes in bends, and things like that.

Q. Now, these vouchers from which you procured this information, what appears on the face of these vouchers?

A. We have a book called Disbursement of Expenses, and in this book is listed the voucher number applicable to white lead. I only picked the vouchers where we had white lead, payments of white lead accounts, and I took possibly, during the course of 1941, several thousand vouchers out and examined them, and the records that I have there are exact copies of the invoices we paid for white lead.

Q. Now, what appears on the face of these vouchers now?

A. What do you mean by the face of the voucher?

Q. What figures appear on those vouchers?

A. Well, the amount chargeable to white lead, the amount chargeable to oxide, the amount chargeable to linseed oil.

Q. Is each product separated on the face of the voucher itself?

3903 A. Yes.

Q. On the freight voucher?

A. Yes.

Trial Examiner Norwood: Well, is this all for shipments of 100 pounds or less?

The Witness: I don't quite get your question, sir.

Trial Examiner Norwood: The freight information you are giving here, and these shipments you have indicated here on these vouchers, particularly shipments in freight, are they all on shipments of 100 pounds or less?

The Witness: One hundred pounds or more?

Trial Examiner Norwood: Or more?

The Witness: Yes.

Trial Examiner Norwood: None less than a hundred pounds?

The Witness: We never ship less than a hundred pounds. We ship no less than 500 pounds.

Trial Examiner Norwood: All right, go ahead.

By Mr. Wright:

Q. Then the amount allocated to each product appears on the face of the original voucher in the Distribution of Expense book?

A. Yes, sir.

Q. And you then did not include any freight or cartage which could be allocated to any other product in the

3904 figures that were represented on this exhibit?

A. No. We checked each voucher to find mistakes, if any occurred.

Q. So that these sheets here show the amount of freight and cartage allocated to each of those vouchers, is that correct?

A. That is right.

Q. Where did you get your total figure of sales over this period?

A. That was taken from another book entirely, where we took the total pounds of white lead in oil sold for that particular month.

Q. You did not check any original invoices to determine those sales?

A. Oh, yes.

Q. You went back to the original invoices, then?

A. Yes.

Q. You did not take—

A. (Interposing.) Excuse me, please. Let me tell you this: Before we pay each freight bill, they are very carefully checked as to pounds. Then it goes to the Traffic Department to be checked as to freight rate. Then the extension is checked. If everything else is correct and that bill is correct, it is set aside for payment.

Q. But you checked, then, each original invoice 3905 to get the total pounds sold in each territory?

A. I did not check each original invoice. I checked each original freight bill.

Q. And that is where you get your figures which are on Respondents' Exhibit 165-A to O, inclusive.

Now, calling your attention to Respondents' Exhibit 166-A, where total pounds sold are set forth and compared with the figures that you derived from 165-A, exactly what document or from what document did you get those figures?

A. We got those from the sales records.

Q. Which were in what form?

A. I don't know that, sir.

Q. Did you get them out of a book that had a line showing so much pounds sold during July or August or something?

A. Yes, sir.

Q. Now, how was that broken down territorial?

A. That was not broken down territorial.

Q. How do you separate the sales in plus one-eighth and plus three-eighths from the par sales?

A. From our freight invoices, knowing the territories.

Q. Well, will you explain that in detail as to the technique you used in doing that?

A. Well, we have a set territory for par territory, which is north of Washington, D. C., including up to our upper part, which takes in Trenton over to Point 3906 Pleasant; up through Wilkes Barre and down along the Susquehanna, all through Maryland, and takes in the state of Delaware and that section of Maryland, including Washington, D. C., is our par territory.

Now, where the freights go over comes in the Virginia territory, and where the freights go higher still is in North and South Carolina and Augusta, Georgia.

Q. What I would like you to do, Mr. Matthiessen, is tell us just how you got this figure of 1,100,000 pounds sold in the plus one-eighth and the 1,231,600 pounds sold in the plus three-eighths.

A. We divided that up by the territories.

Q. Well, now, you did not look at the original invoices?

A. No, we did not look at the original invoices. They were all done right up in our office. We have all those figures right up in our office for you, sir.

Q. Well, now, I appreciate that.

What I want to know is exactly how you did this now. Where did you get these pounds? Did you get those from the freight vouchers you are talking about now?

A. No, we didn't get the pounds from the freight. They were already checked beforehand. They were definitely checked when that bill was passed for payment. That is when they were checked.

Q. Now, you stated to me that you got this figure 3907 on total pounds sold from a sales record and said, for instance, one million pounds sold during July, 1941, and that sales record did not say where those pounds were sold.

A. But they are. We have that record right up in Philadelphia.

Q. The sales record, as it is entered there, shows the locality in which those things are sold?

A. Yes.

Q. By zone or by state or in what fashion?

A. By zone.

Q. They are set up that way?

A. Yes.

Q. Kept regularly that way in the regular course?

A. Yes, sir.

Q. Over how long a period of time have you done that?

A. Since about, I would judge that was around '27 or '28 when that started, somewhere in there.

Mr. Wright: I have no further preliminary cross.

Trial Examiner Norwood: I want to ask you about this par territory. Just what does that par territory, as you have used it in these tabulations, cover?

The Witness: That covers where we do not charge any excess for freight.

Trial Examiner Norwood: I know, but I mean what states? I want to know which one of the maps which
3908 are in evidence that I can compare this to.

Mr. Wright: May we got off the record, sir?

Mr. DuBose: Commission's Exhibit 580 shows the white lead in oil.

Mr. Wright: May we go off the record, your Honor?

Trial Examiner Norwood: Off the record.

(Discussion off the record.)

Trial Examiner Norwood: Is there any objection to the exhibits?

Mr. Wright: Yes, your Honor, I want to object to the exhibits on the ground of relevance. Certainly they have nothing to do with the basic charge here of fixing and maintaining prices and monopolistic position, because they can't conceivably affect that in any way. Secondly, I want to object to their reception as to count two in the sense that they purport to show averages of many individual transactions, which certainly are no defense as to a charge of transaction in specific transactions which fall within groups and classes.

Mr. DuBose: If your Honor please, other exhibits of this same nature have been admitted in evidence, and I should think to get a complete picture, they should be admitted under the same general ruling.

Trial Examiner Norwood: I will receive them subject to connection, that is, by the addition of other information which may be taken together with that to throw some
3909 light on what the average freight is in the various zones.

Mr. DuBose: That is our purpose, your Honor; not to show an isolated branch, but to try to get all the branches and show an overall picture.

Trial Examiner Norwood: The objection is overruled, and the exhibits are received as stated.

(EXHIBITS NO. 165-A TO O, INCLUSIVE AND 166-A AND B were thereupon received in evidence.)

Mr. Wright: I have no further cross-examination.

Trial Examiner Norwood: Thank you, Mr. Matthiessen.

(Witness excused.)

Mr. DuBose: Could we have a short recess?

Trial Examiner Norwood: We will take a five-minute recess.

(A short recess was taken.)

Trial Examiner Norwood: Come to order.
Call your next witness.
Mr. DuBose: Mr. Hesselbrock recalled.

J. H. HESSELBROCK was thereupon recalled as a witness for the Respondents National Lead Company, and, having been previously duly sworn, testified further as follows:

Direct Examination (Resumed) by Mr. DuBose.

Q. Mr. Hesselbrock, I call your attention to the fact that in the hearings in New York on June 18 of this year, 3910 through you were introduced in evidence Respondents' Exhibit 169-A to N, inclusive, which you identified and explained at that hearing.

I call your attention to the fact that on the summary sheet, so-called, Respondents' Exhibit 169-A, opposite the heading or the notation "Par Plus One-Fourth", which you at that time explained was par plus one-quarter territory for white lead in oil, and under the heading, "Total Pounds Sold", opposite that notation are the figures 306,037½. Are those the total pounds sold by the Cincinnati branch in 1941 for white lead in oil in the par plus one-quarter territory for white lead in oil?
A. Yes, sir, they are.
Q. And in that connection, I call your attention to the minutes of June 18, page 3145, to the question:

"Yes. In other words, you obtained the pounds sold in the par plus one-quarter and par plus three-eighths zone, respectively, and the total of that is listed here for the par plus one-quarter zone of 3,306,370½ pounds; is that correct?
"A. That is correct."
Is that figure 3,306,370½ correct?
A. No, it is not.
Q. What should it read, and I refer you to Respondents' Exhibit 169-A.
3911 A. It should read 306,037½ pounds.
Trial Examiner Norwood: Off the record.
(Discussion off the record.)
Mr. DuBose: That is all. Mr. Hesselbrock is presented for cross-examination.

Cross-Examination by Mr. Wright.

Q. Mr. Hesselbrock, the Cincinnati branch is merely a billing branch of the National Lead Company for these products, is it not?

A. For the white lead in oil and oxide products, yes.

Q. It does not, then, ship to any of the customers?

A. Well, we warehouse in Cincinnati, and we do ship from there.

Q. Over how wide an area do you ship from that Cincinnati warehouse?

A. Well, throughout the entire territory, the Cincinnati branch territory, I should say.

Q. That would include the territory all the way down to the Gulf of Mexico?

A. No, it is a portion of Indiana, Ohio, all of Kentucky, a portion of Tennessee, a portion of Virginia and West Virginia, North Carolina, South Carolina, Alabama and Georgia.

Q. Then any LCL shipments of these products would be shipped to the customer from the Cincinnati 3912 branch warehouse rather than directly from the factory involved?

A. Not necessarily.

Q. How do you determine that as a matter of general practice?

A. Well, that is determined in an effort to save as much freight as possible.

Q. Do you have any other warehouses in the Cincinnati branch territory?

A. Just in Atlanta, Georgia, our own plant there. The warehouse has small quantity shipments into Atlanta.

Q. How do you serve the territory in Alabama, Mississippi, and other parts of Georgia?

A. Well, we make no shipments into Mississippi, but in Alabama and Georgia practically all the shipments are from another branch, direct LCL shipments.

Q. Now, going back to 169-A and this total pounds sold in the par zone during 1941, you have a figure of 3,000,794 pounds. Where did you get that figure, from what specific record?

A. That figure was gotten from a specific record. That was obtained by difference. We did obtain the par plus a quarter and par plus three-eighths figures from actual invoices into those territories. The par figure was obtained by difference.

Q. Well, difference from what?

A. From the total sales during the year 1941.

Q. In other words, the figure then of 3,000,794 is
3913 derived by deducting what you found in the par plus
a quarter and par plus three-eighths from the total
figure?

A. From the total sales.

Q. Then in your area you don't keep your sales broken down into par plus a quarter or plus three-eighths, as the previous witness testified they did in the John T. Lewis branch?

A. We do not keep them separate.

Q. What is your office technique or branch technique for handling the freight charges which have been borne by the other branches in shipping to customers in your branch territory?

A. Well, we are billed for the exact amount of freight which another branch would pay for our account for a shipment to one of our customers.

Q. Now, how are those figures reported to you, as total figures?

A. No, they are involved as individual charges on individual shipments.

Q. Well, now, suppose a shipment included flatting oil, linseed oil, and dry red lead, as well as heavy paste white lead, how does the figure come to you, say, from the St. Louis branch?

A. Each item is billed as an individual product.

Q. Separate?

A. Separately.

3914 Q. So then these figures on freights which are added here were taken from those actual billings in each case?

A. In each case, sir.

Q. Did you work out a difference on par, a quarter and three-eighths on freight factors, as you did on the pounds sold?

A. Yes, we did.

Q. You did that in the same way, then?

A. That is right.

Trial Examiner Norwood: Off the record.

(Discussion off the record.)

By Mr. Wright:

Q. What is 169-D, Mr. Hesselbrock?

A. Those are the numbers of the vouchers on which freight was recorded.

Q. In what area is that applicable?

A. That would be our complte charge for freight for 1941 chargeable to the white lead in oil department. It would cover all territories.

Q. I call your attention to the statement on 169-B, "Through agents, 3,371,397, and then the figure 89.49 per cent. What is that figure and that description?

A. I don't quite understand your question. You are referring to the pounds or to the percentage?

Q. Well, both the pounds and the percentage.

3915 A. On our net sales statement for the year 1941, which shows the total sales of white lead in oil, the sales were broken down into the sales through agents and to other purchasers.

Q. Now, in this figure appearing on 169-A, average freight per cent per hundredweight in the par zone, .514, is there included in that figure the inbound freight rate from the producing plants that serve the Cincinnati branch warehouse?

A. Yes, the inbound freight is included in that figure.

Q. In other words, in figuring your average freight per hundredweight in the par zone, in calculating that as to shipments from the Cincinnati warehouse, you went back of the actual freight incurred from the Cincinnati warehouse, and also took your inbound freight from Chicago, say, to Cincinnati?

A. That figure was obtained by difference, and the freight was originally charged against the white lead in oil department, and since that figure would not appear in the par plus quarter or par plus three-eighths zones, it would automatically appear in the par freights.

Q. Where is the Cincinnati warehouse customarily served from, what factory?

A. Well, it is served from several, St. Louis, Chicago, and in emergencies from Philadelphia.

3916 Q. And all of the inbound freight, then, on that material would appear in this tabulation which you have made here in 169-A?

A. It would.

Q. Because it is charged to the Cincinnati branch warehouse.

A. That is right.

Q. ~~Is cartage~~ included in this?

A. Well, the only cartage we would have would be in the City of Cincinnati itself, and that is par territory, and that again would automatically appear in the par freight.

Q. Is your cartage in the Cincinnati local territory now done in your own trucks, or is that in hired carriers?

A. Well, it is done in our own trucks except in cases of emergency.

Q. Now, are the cost factors for your own trucks included in this total figure, so that they are reflected in this .514?

A. They are included in the total figures, yes, sir.

Q. Do you ever in an emergency fill an order in the Cincinnati branch that might be in the territory of another branch?

A. We ~~have~~ in emergencies.

Q. Where would those pounds appear? Are they compensated in this?

A. Those pounds were not included in these sales. Those
would be included in the sales of the other branch.
3917 Both pounds and dollars of freight would be charged
to that branch.

Q. Now, your oxide calculations, then, were made in exactly the same way, I take it?

A. In the same way, yes, sir.

Q. Does your Atlanta plant ship any red lead throughout your territory direct?

A. Not in carload lots.

Q. Do they ship in less than carload lots?

A. They do if it is warehoused there.

Q. I am talking now about materials produced in Atlanta.

A. Are you speaking now of 1947 or 1941?

Q. Well, we will speak, say, of 1945.

A. Well, in 1945 they began to manufacture oxide in Atlanta.

Q. And ship and sell them throughout that area?

A. That is true.

Q. They were not in production in 1941?

A. No, sir.

Q. When did they reach production of any consequence?

A. In 1942 or 1943 that plant started to operate.

Q. Do they make a complete line of oxides?

A. Just battery oxides.

Q. What is that, litharge and red lead?

A. Uncalcined litharge and negative plate litharge.

Q. Do they make any mixture that contain a certain percentage of red lead with the litharge? 3918

A. No.

Q. They don't make what is commonly known as positive?

A. Positive, yes, but that is uncalcined litharge.

Mr. Wright: I have no further examination.

Trial Examiner Norwood: Off the record just a moment.

(Discussion off the record.)

Mr. DuBose: Nothing further.

(Witness excused.)

3919 Trial Examiner Norwood: Let's go back on the record and let Mr. DuBose make his complete proposal as to the schedule.

Mr. DuBose: Your Honor, at this time I should like to respectfully move that the hearings be adjourned until November 6, at which time we propose, subject to Your Honor's approval, to have hearings on November 6 and 7 in Washington, and thereafter to adjourn to New York for November 10, 12, 13, 14, and 15 if need be, at which time, subject to Your Honor's approval, the hearing will be held in Room 10 of the Bar Association Building, 42 West 44th Street, New York, at which time all of Respondents hope to be able, and fully expect to be able, to put in all of the remaining testimony.

Trial Examiner Norwood: Is that agreeable to you, Mr. Wright?

Mr. Wright: Yes, sir. And I might add that if there is any time remaining in that week I may be able to complete any testimony evidence that I might want to offer in rebuttal. If not, I intend to complete it in the following week.

Trial Exmainer Norwood: Now, I want to repeat what I previously said to counsel, and repeat my urgent request that if they have any appeals which they might want to make under Rule 20, to go on the record on this immediately after all the evidence has been received, and also to have their proposals so that they may be presented not longer than one week after the close of the testimony. 3920 At least I shall request that. Maybe we will have to take ten days, but I think we can do it in a week.

Is there anything further?

(No response.)

Trial Examiner Norwood: The hearing is now adjourned to reconvene in Washington, D. C. in Room 332, Federal Trade Commission, at ten o'clock a. m., Eastern standard time, on November 6.

Mr. Welch: November—what?

Trial Examiner Norwood: November 6, at ten o'clock a. m., with the understanding that we will follow the proposed schedule as far as may be possible.

(Whereupon, at 11:30 o'clock a. m., October 29, 1947, the hearing in the above-entitled matter was adjourned, to reconvene at 10 o'clock a. m., November 6, 1947, in Room 332, Federal Trade Commission, Washington, D. C.)

3921 Hearing Room 532,
Federal Trade Commission,
Washington, D. C.,
November 6, 1947.

Met, pursuant to adjournment, at 10:00 a.m.

Before:

J. W. Norwood, Trial Examiner.

Appearances:

Joseph S. Wright, Attorney for the Federal Trade Commission.

Paul R. Dixon, Attorney for the Federal Trade Commission.

3922 E. Z. DuBose and James D. Ewing, Attorneys for the Respondent National Lead Company. (120 Broadway, New York, New York.)

Edmund T. Wood, Attorney for the Respondents Eagle-Picher Lead Company and Eagle-Picher Sales Company. (American Building, Cincinnati, Ohio.)

Henry E. Gardiner, Attorney for the Respondents Anaconda Copper Mining Company and International Smelting & Refinining Company. (120 Broadway, New York, New York.)

Robert Mathis, Attorney for the Respondent The Sherwin-Williams Company. (815 15th Street, N. W., Washington, D. C.)

3923 PROCEEDINGS.

Trial Examiner Norwood: The hearing will come to order.

Pursuant to adjournment on October 29, the hearing in Docket 5253 is now reconvened for the taking of further testimony in Room 532, Office of the Federal Trade Commission, Washington, D. C., at 10:00 o'clock a.m. on the 6th day of November, 1947.

The appearances are as follows:

Edmund T. Wood, representing Eagle-Picher Company and Eagle-Picher Sales Company.

E. Z. DuBose, reperesenting National Lead Company.

James D. Ewing, representing National Lead Company.

Henry E. Gardiner, representing Anaconda Copper Mining Company and International Smelting & Refining Company.

Robert Mathis, representing The Sherwin-Williams Company.

Joseph S. Wright, representing the Federal Trade Commission.

Paul R. Dixon, representing the Federal Trade Commission.

Call your witnesses, gentlemen.

Mr. Ewing: We will recall Mr. McNair.

Trial Examiner Norwood: Mr. McNair is recalled for cross-examination, is he not?

3924 Mr. Ewing: He testified before.

Trial Examiner Norwood: Yes. Mr. McNair, you have been sworn?

Mr. McNair: Yes.

Mr. Ewing: We are recalling him not only for cross-examination but for further direct.

Trial Examiner Norwood: All right.

JOHN GORDON CRAWFORD McNAIR was thereupon recalled as a witness for the respondent National Lead Company, and having been previously duly sworn, testified as follows:

Direct Examination (Resumed) by Mr. Ewing.

Q. Mr. McNair, when you testified here last June, you identified this document, as I recall it, which I have in my hand, and which is marked Respondent's Exhibit 158 for identification, which I show you. That document, as I recall your testimony, was prepared by you, is that right?

A. Yes, sir.

Q. Now, will you tell us briefly exactly what that shows.

A. This chart goes back for a number of years and shows the various selling schedules of companies that were taken into the National Lead Company at the consolidation of the National Lead Company, and since that time is the National Lead Company.

Q. Well now, when you say companies that were 3925 taken into the National Lead Company, you are referring to the incorporation of National Lead, is that correct?

A. That is true.

Q. And when you say companies that were taken in, do you mean all of the companies that became a part of National Lead or—

A. No, sir, only those companies who were taken in and eventually became the Atlantic Branch.

Q. Now, do you know offhand what those companies were, or some of them?

A. Well, the Brooklyn White Lead Works, the Ulster White Lead Works, the Jewett White Lead Works, the Atlantic White Lead Works, Robert Colgate & Company, the Union Lead Company—that is about all, I think.

Q. Now, you have said that you prepared this chart, as you call it, yourself. From what records did you prepare it?

A. From scrapbooks that we had in the office.

Q. And have you those scrapbooks here?

A. Yes, sir.

Mr. Ewing: Off the record.

(Discussion off the record.)

Trial Examiner Norwood: Are you ready now, gentlemen?

Mr. Ewing: Yes.

3926 By Mr. Ewing:

Q. These scrapbooks, Mr. McNair, that you produced, are the source of the information set forth on Respondents' Exhibit No. 158 for identification?

A. Yes, sir.

Q Now, you spoke of Respondents' Exhibit No. 158 for identification as setting forth the Atlantic Branch and its predecessors' selling schedules, I believe. Do you mean that Respondents' Exhibit No. 158 for identification purports to set forth each and every price change?

A. No, sir.

Q. When you say selling schedules, will you tell us exactly what you mean.

A. It means the different methods they have had in selling white lead, as to whether there was a discount, a rebate, the general set-up of a selling policy.

Q. In other words, rather than setting forth the history of the selling schedules of the Atlantic Branch and its predecessors, this document which is marked Respondents' Exhibit 158 for identification purports to set forth only what you call its selling policies as they were put into effect from time to time?

A. That is true.

Q. And am I correct in understanding that all the information that appears on Respondents' Exhibit 158 for identification is taken from these scrapbooks that
3927 you have produced here this morning?

A. Yes, sir.

Mr. Ewing: I offer Respondents' Exhibit 158 for identification.

Mr. Wright: I would like some preliminary cross-examination, your Honor.

Trial Examiner Norwood: All right.

Voir Dire Examination by Mr. Wright.

Q. Mr. McNair, I note in the first column, to the left of this exhibit, that there are prices listed prior to 1890. As I understand it, the National Lead Company was organized and incorporated in 1890.

A. In 1891 and 1892, I think it was.

Q. I see. Now, whose prices are those which appear on this prior date to the date of the incorporation?

A. They appear in those books.
